ATLAS GEOGRAPHUS:

OR, A COMPLEAT

System of Geography,

ANCIENT and MODERN.

CONTAINING

What is of most Use in *Bleau*, *Varenius*, *Cellarius*, *Cluverius*, *Baudrand*, *Brietius*, *Sanson*, &c.

WITH THE

Discoveries and Improvements of the best Modern AUTHORS to this Time. Illustrated with about 100 New MAPS, done from the latest Observations, by *Herman Moll*, Geographer; and many other CUTS, by the best *Artists*.

EUROPE is Two Volumes, with Sixty eight MAPS, *Sanson's* TABLES, &c.

VOL. I.

In the *SAVOY*:

Printed by *John Nutt*; and Sold by *Benjamin Barker* and *Charles King* in *Westminster-Hall*; *Benjamin Tooke* at the *Middle-Temple* Gate; *William Taylor* at the *Ship* in *Pater-Noster-Row*; *Henry Clements* at the *Half-Moon* in St. *Paul's* Church-yard; *Richard Parker* and *Ralph Smith* under the Piazza of the *Royal-Exchange*; and *John Morphew* near *Stationers-Hall*. MDCCXI.

ADVERTISEMENT.

EUROPE being finiſh'd, except *Great Britain* and *Ireland*, which is now preparing for the Preſs; and as Informations and Accounts of Places come in, they are inſerted in their County, *&c.* It is entituled, *Britannia & Hiberniæ Antiqua & Nova*; in which will be a new and accurate Map of each County, with the Wapentacks, Laths, Hundreds, *&c.* and all the Roads exactly mark'd. In the Whole will be about 100 Maps, and many Cuts. We have receiv'd Accounts from above 100 Perſons, each giving an Account of ſome or more conſiderable Places, and many more are doing; as, a Gentleman will give a particular Account of *Eaton* College, how endow'd, what Livings in their Gift, *&c.* another that of *Winchester*, with *William* of *Wickham*'s Life, his Foundations, Charities, *&c.* and ſo of moſt other Places in *Great Britain* and *Ireland*. In leſs than Six Months we ſhall begin to print, and ſhall do the Counties in Alphabetical Order, as *Bedfordſhire*, *Berkſhire*, *Buckinghamſhire*, *Cambridgeſhire*, *Cheſhire*, *Cornwal*, &c. Gentlemen are deſired to ſend in what Accounts they think proper for this Deſign to *John Nutt*, Printer, in the *Savoy*, paying Poſtage.

Digitized by Google

THE PREFACE.

THE *Uſefulneſs of* Geography *is ſo well known, and the Study of it ſo general among all Perſons of Education, that 'tis needleſs to enlarge upon that Head, to inſiſt upon the Uſe of it to Stateſmen, Scholars of all Sorts, Merchants and Tradeſmen, or to ſay that 'tis both profitable and pleaſant to Perſons of all Ranks, who by reading a Work of this Nature may know all that is curious in the World, without the Fatigue or other Inconveniencies of Travelling.*

The Turks *have a Proverb,* That thoſe who never ſaw the World, think 'tis made like their Father's Houſe; *and they have a particular Reaſon for it, ſince one of their late great Courtiers, when he heard the Siege of* Vienna *was rais'd by the King of* Poland, *fell into a great Rage againſt the* French *King for ſuffering that Prince, as he ſuppos'd, to march thro' his Dominions, in order to do it. M.* Martineau du Pleſſis, *in the Preface to his Three Volumes of Geography, takes Notice of ſeveral groſs Errors of Authors for Want of a competent Knowledge in this Science, and eſpecially of the Ancients,* French *as well as others; ſome of whom talked of burning the* Pont-Euxin, *becauſe* Pont *in that Language ſignifies a Bridge. Some thought the* Morea *to be the Country of the* Moors; *and others, when they heard of* Venice, Genoa, *and* Lucca, *took them to be rich* Italian *Ladies. That ſame Author relates a very pleaſant Miſtake of an Ambaſſador of our own Country through Ignorance of Geography. He happened to be at the Court of* Rome *when M.* Bethancourt, *a* Frenchman, *diſcover'd the* Canaries, *which were the* Fortunate Iſlands *of the Ancients, Pope* Clement VI. *having made a Grant of them under that Name in* 1343 *to the Count* de Clermont, *Son to* Alphonſus de la Cerda, *a Prince of the Blood Royal of* France *and* Spain. *The Ambaſſador thinking there were no other Fortunate Iſlands but thoſe of* Great Britain, *left* Rome in *Diſguſt, and made Haſt to* England, *to acquaint his Maſter that the Pope had given away his Crown.*

The Want of a ſufficient Knowledge in this Science, has led even ſome late Authors into ſuch groſs Miſtakes, as to talk of Veſſels ſailing from the Caſpian *into the*

Euxin *Sea, without conſidering that they have no Communication with one another, and that the Mountains of* Elbours *lie betwixt them.*

We have Reaſon to be thankful that we live in an Age of more Knowledge, towards which the many learned Books of Geography have not a little contributed.

And we have Ground to hope, that the following Work will advance that uſeful Science further among us than any Thing which has yet appeared in Engliſh; *not that we would diſparage the Endeavours of ſuch of our Countrymen as have gone before us, which have all of them been uſeful in their Way and Time.*

But we may preſume to ſay without Vanity, That as we have taken a larger Field than any of our Predeceſſors, we have likewiſe had better Opportunities to improve it; for the greateſt Part of the modern Diſcoveries have been printed ſince any Work of this Nature was done in Engliſh. *Becauſe Geography of it ſelf is looked upon by all but the Curious to be a dry and unpleaſant Study, we have taken Care to mix it with ancient and modern Hiſtory in their proper Places; and beſides the General Hiſtory at the Beginning of each Country, we have taken Notice of the remarkable Actions that have happened in or near any of the Places we deſcribe, as well as of every Thing that is curious in Art or Nature, in order to make this Work pleaſant as well as inſtructive to the Reader; ſo that it contains a View of Univerſal Hiſtory of all Sorts, as well as of Geography.*

Some of our Subſcribers have indeed complain'd of our being too prolix; but if they conſider the great Number of Authors we had to peruſe, and that our Plan was to take in Ancient Hiſtory and Geography as well as Modern, with Natural Hiſtory, and an Account of the Religion and Government of every Country, we hope they will excuſe us, and particularly as to the ancient Geography of Germany, *the* Netherlands, France, Spain, Portugal, Swiſſerland, Italy, *and* Greece, *becauſe thoſe Countries having been the Scene of great Actions, the ancient Hiſtorians and Geographers who treat of 'em cannot be underſtood without ſuch Helps as are here afforded.*

The Learned know how much Baudrand *is valued upon that Account, tho' he has little elſe but a bare Deſcription of the Places he treats of; what Pains* Valeſius, Papyrius Maſſon, *and others, have taken upon the ancient Geography of* France; *what Eſteem* Cluverius *has juſtly acquir'd for his* Germania Italia, *and* Sicilia Antiqua. Wormius *is deſervedly praiſed for his Antiquities of* Denmark, *&c. and* Brietius *did very much oblige the learned World by his* Parallela Geographiæ Veteris & Novæ. Buno, *and the other Annotators on* Cluverius's *Introduction, have had their deſerv'd Applauſe; and* Cellarius's Notitia Orbis Antiqui *comes ſhort of none of them. The* Atlas Hiſtorique *furniſhes us with many Curioſities in Relation to Genealogy, Hiſtory and Geography, that had not been taken Notice of in other Works of this Nature; which, together with* Bleau's Atlas *in Eleven great Folio Volumes, and the Four of 'em that were done into* Engliſh *with Improvements, beſides the Geographies of* Varenius, Luyts, La Forreſt, Du Pleſſis, *&c. and the celebrated Travels of* Monconys, *Dr.* Brown, *Mr.* Ray, *Mr.* Laſſels, *Mr.* Miſſon, *Mr.* Willoughby, *Dr.* Northleigh, *Mr.* Wheeler, *and* Mr. Spon, *with the Hiſtories of the* French *Royal Academy, our own Philoſophical Tranſactions, and others whom we can't now ſtay to name, have all of them been carefully conſulted, in order to make this Work compleat.*

Particu-

Digitized by Google

Particular Care has likewise been taken to make our Descriptions agree with our Maps, a Thing too much neglected by those who went before us, which made their Descriptions the less intelligible; and where our own Maps were wanting in any Place because of the Smallness of the Scale, we always consulted those of Sanson *and* Bleau *to supply that Defect, as to the Distance and Bearing of Places; and have taken Notice of any considerable Difference betwixt their Maps and* Moll's, *which being from the latest Discoveries, and engraven on Purpose for this Work, are much more exact than theirs. We must own, that we were very much obliged to the learned Dr.* Nicholson, *now Lord Bishop of* Carlisle's *Volume of the great* English Atlas *for our Account of* Germany, *that learned Person having very much improved the Account which* Bleau *and others had given of it before him: And besides what Books the Proprietors could purchase at Home and Abroad to carry on the Design, which already amount to* 150 l. *we have been obliged to publick Libraries in this City as well as to private Ones, and particularly to those Two learned and communicative Gentlemen, Dr.* Hans Sloan, and *Dr.* Tancred Robinson, *whose Libraries are as well furnished for this Sort of Learning, as any perhaps in* Europe. *We could do no less in Justice, than to take this Way of returning our Thanks to those Two worthy Gentlemen, and to let the Publick know, how much they are obliged to them for many curious Things in this Work, which we could not be furnished with elsewhere.*

By this it appears, that our Materials are much better than ever were used for any Work of this Nature done in England, *and that we have likewise been supplied with the best that could be had for Money Abroad. The Authors we made Use of are too many to enumerate here; but when the whole is compleated, a Catalogue of them will be printed, and such as belong to the Proprietors sold by publick Auction, for which End they are carefully preserved, and lock'd up as they are done with; and those which are lent by private Gentlemen duly return'd.*

Modesty will not allow us to commend our own Performance; but this we can truly say, That we have not been wanting in Pains; and by the good Reception it has met with from the Publick, and above 100 *Letters we can produce, which commend it to be the largest and most compleat System of this Nature in all Parts yet extant, we have no Reason to doubt of the like Encouragement for the remaining Parts of the World.*

'Tis Seven Years since this Work was first undertaken; and that Mr. Moll *begun to engrave the Maps, which he has now compleated, for the Four Parts of the World.*

The Introduction which relates to the Scientifical Part, was done by the Direction of the learned Dr. Gregory, *late Astronomy Professor at* Oxon, *who likewise gave his Advice as to the Choice of Books and Materials; and for the History and Geography he recommended Two ingenious Gentlemen, who, with some others of University and liberal Education, have been employed in it; and if Health permit, will go through with the Whole.*

We are not so vain as to think our Performance without Faults; for to pretend to that, especially in a Work of this Nature, were to suppose our selves to be more than Men, but we have been as careful to avoid Errors as we could. We invited Gentle-

men from Time to Time to send us an Account of what Mistakes they found, but very few of 'em have thought fit to oblige us in that Matter. We were indeed challenged by a Gentleman for saying, the Muscovites *deny Transubstantiation; and giving this as one of the Reasons, That they had their Religion from the* Greeks, *who never believed any such Thing. Our Authority for saying so of the* Muscovites, *was the Earl of* Carlisle's *Embassy; but we own there are Writers who say otherwise. Yet that the Ancient* Greek *Church believed no such Thing, is evident from the Account we have given of their Religion in its proper Place.*

The same Gentleman complains that we say, Pag. 948. *the* English *Seminary at* Doway *is under the Conduct of Jesuits, but mistakes us; we said it was so at its first Institution by* Philip II. *and thought we had Reason, since* William Allen, *afterwards Cardinal, who founded that Seminary, wrote a Book entituled,* Apologia pro Sacerdotibus Societatis Jesu, *as appears by the* Athenæ Oxonienses. *The* English *Priests, &c. who fled thither in Queen* Elizabeth's *Time, were afterwards obliged by* D. Lewis de Requiesens, *Governour of the* Spanish Netherlands, *to retire from thence and went to* Rheims; *but what Alteration has been made in the House at* Doway *since, we know not. As to what that Gentleman says further, that we are too partial against the* Roman *Catholicks when Matters of Controversie come in our Way: We shall only reply, that we act as Historians, and not Criticks, and quote our Authors of both Communions. However, we shall always be thankful to him or any other Gentlemen that inform us of what they think Mistakes, and shall impartially consider them.*

Another Gentleman was so kind as to inform us of a Mistake and an Omission in our Accounts of the Dukes of Holstein, Pag. 549. *They were occasioned by misplacing an Insertion in the Copy; and to be corrected thus:* Col. 1. Pag. 549. *towards the Close, after* Christian Albert, *read,* Who was born in 1641, expelled his Dominions by the King of *Denmark,* his Brother-in-Law who demolished his Strong Towns, *&c. Then after the Words* on both Sides *in the last Line, add, Christian Albert* died in 1694, and was succeeded by his Son *Frederic,* who married *Hedwige Sophia,* Daughter to King *Charles* XI. of *Sweden,* was killed at the Battle of *Clissou* in *Poland, in* 1702. and succeeded by his Son *Charles Frederic,* born at *Stockholm* the 10th of *April,* 1700.

The same Gentleman took Notice that we had omitted, 1. *The County of* Weringen *in* Lower Saxony, *Pag.* 543. *and its chief Town* Elbingerode. *The Reason was, that 'tis now an obsolete Distinction, not mention'd in* Sanson's *Maps, or the* Matricula *of the Empire; the Town inconsiderable, and that this Division is included in the Counties of* Blankenburg *and* Reinstein. 2. *That we had omitted the Town and County of* Pappenheim. *To this the same Answer may serve, that Count being more noted for his Post as Hereditary Marshal of the Empire, than for his Territory, which is very small, and lies betwixt those of* Oettingen *and* Newburg *in* Franconia. *The Family has also some Lands about* Donawert *and* Memmingen. *The Town of* Pappenheim *lies about* 12 *Miles S. E. from* Donawert, *but does not merit a Description.*

We

Digitized by Google

We were obliged for gaining Time and Room to forbear giving the Long. and Lat. of every Place, but satisfied our selves with giving those of the Capital or most remarkable Towns, from which we give the Distance and Bearing of others; so that they will be as readily found by the Scale and Compass, as if the Long. and Lat. had been set down.

The Account of Great Britain *and* Ireland *is reserved for a Volume by it self, for the Reasons which have been published in several of the preceding Months. We shall begin it as soon as our Materials are all come to Hand, of which we receive more or less from Gentlemen in the Country every Post. In the mean Time we go on with* Asia, *for which the 12 following Maps are done by Mr.* Moll, *viz.* 1. Asia *in General.* 2. Turkey *in* Asia, *or* Asia Minor. 3. Arabia. 4. Persia. 5. *The West Part of* India, *or the Empire of the* Great Mogul. 6. *The East Part of* India, *or that beyond the* Ganges. 7. *Independant* Tartary. 8. China. 9. *The Principal Islands of the* East-Indies. 10. *The Isle of* Japan. 11. North Guinea. 12. North Britain, *the* Ladrones, *&c. The Maps of the Ancient Geography of* Asia, *&c. are,* 1. Asia Antiqua & Nova, Cluver. 2. Scythia & Tartaria, Cluver. 3. India Orientalis & Insularum Antiqua & Nova, Cluver. 4. Persia, Armenia, Assyria, Mesopotamia & Babylonia, Cluver. 5. Chersonesi hodie Natolia, Cluver. 6. Terra Sancta, Cluver. 7. Syria, Cluver.

Besides these, we take in Sanson's *Tables with many Cuts, and shall bring the Whole into one Volume of 12 or 14 Months.*

Africa *will be contained in such another; and* America, *with* Great Britain *and* Ireland, *will be Two Volumes more.*

To each Volume there will be an Alphabetical Table like this, and a general Index of Omissions and Errata *to the Whole; with Tables for reducing Foreign Weights, Coins, and Measures, to those of* Great Britain.

We shall take Care when the Work is finished to collect the Errata of the Whole; in the mean Time the Reader is desired to read, *Introduct. pag.* 21. *l.* 38. for 16. 61. to observe that *pag.* 235 *and* 236 are Twice number'd; and therefore if he seek for any Place referred to in those Numbers, he must look to both. And in the Table, add *Kingdom* to *Astracan.*

It would have swelled the *Index* too much to insert the Name of every particular Prince, but the Reader may easily find them in the History of the Counties to which they belong.

The

The NAMES of ſo many of the SUBSCRIBERS as have ſent them in to the Undertakers.

Note: *Thoſe that are omitted, (for we are informed ſeveral were ſent that never came to our Hand) ſhall be inſerted when* Aſia *comes out, if they pleaſe to ſend them.*

ATLAS GEOGRAPHUS:

OR, A COMPLEAT

System of Geography,

ANCIENT and MODERN.

Containing what is of most Use in *Bleau*, *Varenius*, *Cellarius*, *Cluverius*, *Brietius*, *Sanson*, &c.

With the Discoveries and Improvements of the best Modern Authors to this Time.

CHAP. I.

An INTRODUCTION to Ancient and Modern GEOGRAPHY in General.

SECT I.

The Antiquity of GEOGRAPHY.

THIS Science appears to be as ancient as the Use of Letters. The Invention of it is ascrib'd to the *Egyptians*; at least they are supposed to be among the first who made use of it, and not only wrote on this Subject, but convey'd it to Posterity by Figures and Charts. *Homer*, as he was the first noted Author among the *Greeks*, was also their first Geographer, and carefully described their Towns and Country, and that Part of *Asia* which lies on the *Hellespont*: He was followed by others of his Countrymen, who gave learned Descriptions of the World, as appears by *Strabo*, *Pliny*, *Stephen* of *Byzantium*, and others: But their Works, together with most of their Names, are lost. The Industry of the Ancients in this Matter is evident from their Tables or Charts, and Spheres. *Anaximander* the *Milesian*, Scholar to *Thales*, one of the Seven Sages, is reckoned the first who attempted to draw the Earth on a Map. *Laertius* says, he likewise drew the Sea, and prepared a Terrestrial Globe, which *Eratosthenes* corrected. *Aristagoras*, the *Milesian* Tyrant,

is said to have shewn the *Spartans* a Brass Table, in which the Circumference of the whole Earth was engraved. *Socrates* shew'd *Alcibiades* at *Athens* a Chart, containing a Description of the Earth. *Theophrastus* had several of them, which he ordered by his Will to be hung up in his Gallery.

That the *Romans* understood and practised this Science, is evident from *Varro*, who says, They had Tables or Maps in the Temple of *Tellus*; and *Suetonius* mentions a Map of the Earth in Parchment by *Metius Pomposianus*, in *Domitian*'s Reign: Nor had they only Maps of Kingdoms, and of the whole World, in those Days; but likewise Globes, the Way of Projecting which on a Plain was taught by *Ptolomy*. From *Rome* this Science was derived to the Provinces, as appears by *Eumenius Rhetor*, who mentions such Maps to be hung up in the Galleries of the School of *Autun*, in his Oration to the President of *Gaul*, exhorting him to restore the Schools, in the Reigns of *Constantius* and *Diocletian*. The Curious may see more on this Subject in *Cellarius*'s *Notitia Orbis Antiqui*, *Cap.* 1. and in *Varenius*, published by Mr. *Newton*, (now Sir *Isaac*) *Lib.* 1. *p.* 5. which is the Edition we make use of.

SECT. II.

The Definition of GEOGRAPHY.

THE Literal Signification of the *Greek* Word, implies no more than a bare Description of the Earth; and so *Cluverius* defines it to be a Description of the whole Earth, as far as 'tis known to us. In *Varenius* 'tis defin'd *to be a mix'd Mathematical Science, which teaches the Qualities of the Earth and of the Parts of it, depending on Quantity*; viz. *Figure, Place, Magnitude, Motion, the Heavenly Appearances*, and other such Qualities. But *Baudrand*, and other modern Geographers, understand by the Word *Geography* the Description of the Terraqueous Globe, as it contains both Land and Water; and 'tis now become customary to intermix with Geographical Descriptions something of the Political and Natural History of Countries, which is more instructing and diverting to the Reader than meer Geography.

SECT. III.

The Division of GEOGRAPHY.

IT differs from Cosmography as a Part from the Whole, and from Chorography as the Whole from the Part; for Cosmography implies a Description of the whole World, as composed of Heaven and Earth. Chorography is the Description of particular Countries, as *Great Britain*, *France*, &c. Topography is the Description of a particular Place or District; and some add *Topothesia* as a Special Description of the Situation of a particular Place. *Varenius* divides it into General and Special: By General Geography, he understands a Description of the Earth, and its Qualities in general, without Relation to any particular Country; and Special Geography he divides into Chorography and Topography. To General Geography he assigns Three Parts, *viz.* Absolute, Respective, and Comparative. The Absolute Part considers the Body of the Earth, and its Parts, with their proper Qualities, as Figure, Magnitude, Motion, Lands, Seas, Rivers, *&c.* The respective Part relates to those Qualities and Accidents which happen to the Earth from Celestial Causes. The Comparative Part contains an Explication of those Properties which flow from a Comparison of divers Places of the Earth with one another.

SECT. IV.

The Object and Properties of GEOGRAPHY.

THE Object is chiefly the Surface of the Earth, and its Parts. *Varenius* divides the Things which are principally

10

to be considered in every Country into *Celestial*, *Terrestrial*, and *Humane*. The Celestial are those Properties which depend on the apparent Motion of the Sun and Stars, *viz.* 1. The Elevation of the Pole, the Distance of the Place from the Equator and the Pole. 2. the Obliquity of the Diurnal Motion of the Stars over the Horizon of the Place. 3. The Quantity of the longest and shortest Day. 4. The Climate and Zone. 5. Heat, Cold, and the Seasons of the Year; also Rain, Snow, Winds, and other Meteors. 6. The Rising, Appearance, and Continuance of the Stars over the Horizon. 7. The Stars passing through the Vertical Point of the Place. 8. The Swiftness of the Motion, by which, according to *Copernicus*, each Place is wheeled about every Hour. The 9th Property, added by some Astrologers, of a peculiar Planet that rules and governs every Country, he rejects as frivolous.

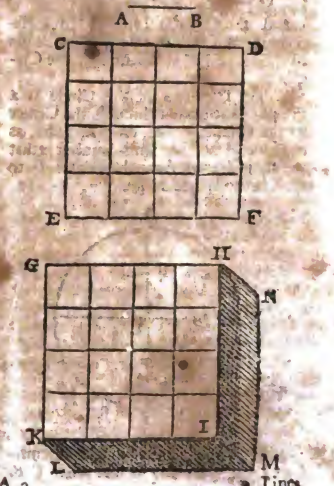
The Terrestrial Properties are reckoned 10.

1. The Limits. 2. Figure. 3. Magnitude. 4. Mountains. 5. Waters, *viz.* Rivers, Fountains, and Bays. 6. Woods and Deserts. 7. Fruitfulness and Barrenness, and the Sorts of Fruit. 8. Minerals. 9. Animals. 10. The Longitude of the Place.

The Humane Qualities he divides into 10.

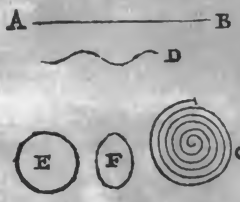
1. The Stature, Shape, Complexion, Length of Life, Origine and Diet, of the Inhabitants. 2. Their Commerce, Trades, and Commodities. 3. Their Virtues, Vices, Learning, Genius, and Schools. 4. Their Customs at Child-bearing, Marriages, and Funerals. 5. Their Language. 6. Their Civil Government. 7. Their Religion and Ecclesiastical Polity. 8. Their Towns and Places of most Note. 9. Their most remarkable Histories. 10. Their Famous Men, Artists, and Inventions.

SECT. V.



The Principles of GEOGRAPHY.

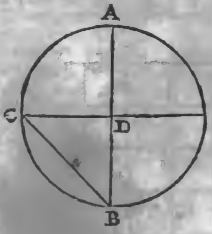
GEographers make use of Three Sorts of Principles, to confirm the Truth of their Propositions. 1. Of Geometrical, Arithmetical, and Trigonometrical Propositions. 2. Of Astronomical Precepts and Theorems. 3. Of Experience; for the greatest Part of particular Geography depends on the Experience of Men who have described the several Countries.



SECT. VI.

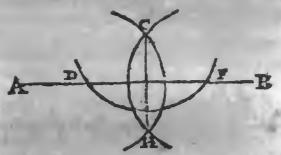
Some Things of Geometry *and* Trigonometry, *necessary to be known by those who study* GEOGRAPHY.

1. GEOMETRY has Three Species of Magnitude, by which all Things are measured; *viz. Lines*, *Surfaces*, and *Solid Bodies*, as *AB*, *CDEF*, and *GHIKLMN*.

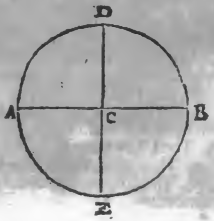


2. Lines are divided into ſtraight and crooked, as the Lines *A B* and *D*; and the crooked Line is Uniform or Circular, as the Line *E*; or different, *i. e.* of a Diſſimular Form, as Oval Lines, *F*. Conchoides and Spiral Lines, as *G*.

3. A Circle is a Space or Plain Surface and Figure included in a crooked Line; in which Space there is a certain Point, from which the ſtraight Lines being drawn to that crooked Line, which includes the Space, are all equal; and that crooked Line, including the Space, is called the Circular Line, or Circumference of the Circle; and the Point in the Middle is called the Centre of the Circle.



4. The Diameter of the Circle is a ſtraight Line drawn through the Center to the Circumference on both Sides, as the Line *A B*. The Semi-diameter is that which is drawn from the Center *D* to the Circumference *A B C*.

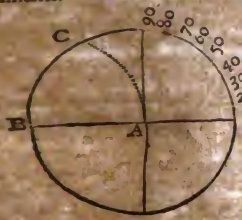


5. The Arch is a Part of the Circumference of a Circle, as the Arch *C B*. The Quadrant is the Fourth Part of the whole Circumference, as *C D A*. The Complement of any Arch, is an Arch by which it differs from a Quadrant, or falls ſhort of it. The Exceſs is that by which it exceeds a Quadrant.

PROBLEMS.

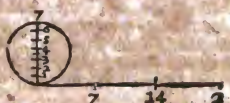
6. *A Straight Line being given, and a Point in it, or out of it, to draw a Perpendicular Line from that Point*, let the Line given be *A B*, the Point *C*: Take any open Space of the Compaſſes, put one Foot in *C*, and with the other cut the Line in *D* and *F*, then on *F* deſcribe the Arch *C H*. Likewiſe on the Center *D* deſcribe another Arch, cutting the former at *C* and *H*, and let *C H* be drawn; and this will be the perpendicular Line.

7. *To divide a Circle and Circumference into Four Parts*, draw a Diameter *A B*, and from the Center *C* raiſe a perpendicular Line upon it, *D C E*. This will alſo be a Diameter, and the Circumference and Circle will be divided into Four equal Parts or Quadrants.



Note,

Digitized by Google



Note, That Mathematicians cut a *Circumference* into 360 Parts, which they call *Degrees*. These Degrees they divide into 60 *First Minutes*, and the *First Minutes* they divide into 60 *Seconds*.

8. *To divide the Circumference of a Circle into Degrees*; first take the *Quadrant of a Circle*; then by your Compasses take the *Semi-Diameter A B of the Circle*, and by this Space of the Compasses take away the *Arch C B* from the *Circumference*. This *Arch* will contain 60 *Degrees*, and there remains in the Quadrant 30 *Degrees*; which being divided into Two Parts, you have 15 *Degrees*; and these being mechanically divided into Three Parts, you have 5 *Degrees*; and these being, again divided into Five Parts, are the *Degrees* themselves. But these Things are best performed by Mathematical Instruments.

9. *To find out the Area or Content of a Right-angled Quadrangle, two Sides of the Quadrangle being given*; multiply the one Side into the other, and the Product is the Contents. *Note*, That *Lines* are measured by *Lines*, *Surfaces* by *Measures* which are *Surfaces*, and those also square. Bodies and Solids are measured by Measures which are Bodies, and indeed solid Cubes. Thus we measure the Sides of an House by Foot-Lines, but the Floor with Square-Feet; and the Capacity or Solidity of the House with Cubick-Feet.

10. *The Half-Diameter or Diameter of a Circle being given, to find out in the same Measure the Circumference of the Circle; and on the contrary, the Circumference of the Circle being given, to find the Diameter near enough to any Geographical Purpose*, depends on the Proportion of the Diameter to the Circumference, which according to *Archimedes*'s Demonstration, is much as 7 to 22, or more exactly, as 10000000000 to 3,1415926535. So let there be given a Diameter of 12 Foot: Let it be done by the Golden Rule, as 7 to 22; so let 12 be to the Circumference of that Circle; or as 10000000000 to 3,1415926535; so 12 to the same Circumference. Contrariwise, if the Circumference be given, and the Diameter sought for, let it be worked as 22 to 7, or as 3,1415926535 to 10000000000; so a Circumference given to the Diameter sought for.

11. *The Circumference of a Circle being given in Feet or Miles, and a Diameter: Or a Circumference alone, or a Diameter alone being given, to find out the Area of the Circle in square Feet or Miles*: In the first Case, multiply the given Circumference into the 4th Part of the Diameter, or half the Circumference into half the Diameter, and the Product is the Area or Space demanded. In the Second Case, 'tis better to find out first the Half-Diameter, or Half-Circumference, by the foregoing Problem, tho' it may be done without it.

12. The

Digitized by Google

12. *The Half Diameter, or Diameter, of any Globe, ABCD, being given, to find its Surface in Square Measure, and its Solidity in Cubical Measure.* First, let the Circumference of the Circle be found out by the Diameter given, then multiply the Diameter into the Circumference, and the Surface of the Globe will be the Product in Square Measure. Further, multiply this Surface by the 6th Part of the Diameter, and the Product is the Solidity of the Globe in Cubick Measure.

13. *A Triangle is called Rectangular; one Side of which stands perpendicularly upon the other Side, or with it makes a Right Angle of 90 Degrees.* These Two Sides *AB* and *AC* are called *Cathetî*; and the Third, *CB*, *Hypotenusa*. The Measure of the Angles is the Arch described, the Center being taken in the Top of that Angle; *viz.* Of how many Degrees that Arch intercepted between the Legs of the Angle is, of so many Degrees that Angle is said to be. So a Right Angle is said to be 90 Degrees, because the Arch so describ'd is always the Quadrant or 4th Part of the Circumference of the Circle.

The *Sine* of any Arch is call'd a straight Line, which is drawn perpendicular from the Extreme of the Arch upon the Diameter, drawn through the other Extreme of the Arch.

The Tangent of an Arch is the straight Line touching the Arch at one Extremity, and terminated by another straight Line drawn from the Center through the other Extremity of the Arch: And this Line so drawn is called the Secant of the Arch.

But the *Sine* of an Angle is said to be the Sine of that Arch which measures that Angle: So the Tangent of the Angle, and its Secant.

'Tis further to be observed, That, by the Industry of Mathematicians, there are Tables made, in which the Semi-Diameter of 100000 (or of more Cyphers) being taken, the Sines, Tangents, and Secants, of all the Arches of the Circumference are found out. For Instance, 2 Degrees, 10 Degrees, 20 Degrees 32 Minutes, *&c.* These Tables are called the Mathematical Canon, and are of infinite Use in all Mathematical and Natural Sciences. Therefore 'twas proper to inform the Students of Geography of those few Things; but they are of principal Use in the measuring Spherical and Plain Triangles: Since the measuring of Spherical Triangles is attended with some Difficulty, and is only necessary for those who would dive deep into this Art, we shall only treat of Rectangular Plain Triangles, whose Dimension is easy to be apprehended by any Body.

SECT. VII.

Two Theorems of frequent Use in GEOGRAPHY.

14. *Three Angles of any Triangle whatever are equal to Two Right Angles, or* 180 *De-*

Digitized by Google

Degrees; and therefore Two Acutes in a Rectangular Triangle make 90 Degrees. Further, *If a ſtraight Line touch a Circular Line, and from the Point of Contact or Meeting, a ſtraight Line be drawn to the Center of the Circle, it makes a Right Angle with the Tangent-Line.*

The Problems of moſt Uſe are thoſe which follow:

16. I. *The Hypotenuſa, together with the Cathetus of a Rectangular-Triangle, being given, to find out the Angle contained, or the other Acute Angle:* For the finding out of this, let it be done by the Golden Rule: As the given *Hypotenuſa* is to the given *Cathetus*; ſo the whole Sine 100000 (which Number is the Semi-Diameter taken in the Table of Sines) is to the Sine of the other Angle. This Sine, ſought for in the Canon, will ſhew the Arch or Quantity of the Angle which joins to the *Hypotenuſa*. But the Angle contained is the Compliment of the Angle found out, to 90 Degrees: Therefore if you ſubſtract the Angle found out from 90 Degrees, the Remainder is the Angle ſought for.

II. *A Cathetus and the Acute adjacent Angle being given, to find out the Hypotenuſa*; Do it by the Golden Rule: As the Sine of the Compliment of the Angle given, is to the whole Sine 100000, or 10000000 in the greater Canon; ſo is the given *Cathetus* to the *Hypotenuſa* demanded.

17. III. *Two Cathetus's being given, to find the Angle adjacent to either of them*; Work thus: As one *Cathetus* is to another; ſo is the whole Sine 100000 to the Tangent of the Angle, which is adjacent to the firſt aſſumed *Cathetus*.

18. IV. *A Hypotenuſa, and one Acute Angle being given, to find out either Cathetus*; Work thus: As the whole Sine 100000 is to the Sine of the Angle, which is oppoſite to the *Cathetus* demanded, ſo is the given *Hypotenuſa* to that *Cathetus*.

SECT. VIII.

Of the different Meaſures made uſe of in GEOGRAPHY.

THE Famous Meaſure is, *The Length of a Foot*; but differs according to the Cuſtom of Nations. Mathematicians now make uſe of *Snellius*'s *Rheinlandiſh* Foot, which he ſays is equal to the ancient *Roman* Foot.

The Rod or Perch for meaſuring Land contains 10 *Rheinlandiſh* Feet; but Surveyors make their Perch of 12 ſuch Feet, or of 16 Foot and a half *Engliſh*.

The Perch and Mile ariſe from the Multiplication of Feet. A Foot is divided into Hand-breadths, Inches, and Grains: A Hand-breadth is 4 Digits or Inches, a Foot 12, and a Grain the 4th Part of an Inch; but 'tis better to divide a Foot into 10 Inches, and an Inch into 10 Grains. Theſe Meaſures are ſufficient for Modern Geography.

The Meaſures of the Ancients were thoſe of the *Egyptians, Greeks, Romans, Perſians, &c.* and the Meaſures of theſe of later Times are thoſe of the *Turks, Poles, Germans, Muſcovites, Italians, Spaniards, French, Engliſh, &c.*

The *Greek* Stadium or Furlong is reckoned 600 *Greek* Feet, which make 625 *Roman* or *Rheinlandiſh* Feet.

The *German* Mile (of which Geographers allow 15 to a Degree) contains 14000 $\frac{2}{3}$ Feet, and is reckoned 4000 Paces, or 32 Furlongs, and bears Proportion to the *Rheinlandiſh* Mile, as 19 to 15. The *Italian* or *Roman* Mile is 1000 Paces, or 8 Furlongs.

A Geometrical Pace is 5 Foot.

A Fathom is 6 Foot, and by ſome reckoned to have been the *Greek* Pace.

A Cubit is reckoned one Foot and a half.

Paraſange, or the *Perſian* Mile, is reckoned 30 Furlongs, or 300 *Perſian* Paces.

Schœnus

Digitized by Google

Schoenus, the *Ægyptian* Measure, is, according to *Herodotus*, 60 Furlongs; but, according to *Pliny*, 40; which is supposed to arise from different Customs of Places, or else is a Mistake in the Books.

The *French* League is to the *Rheinlandish* Mile, as 19 to 25. The *Spanish* League is to the same Mile as 17 ½ to 19; but because there is a Difference of Leagues both in *France* and *Spain*, these Things are uncertain.

The *English* Mile is to the *Rheinlandish*, as 19 to 55 or 60: But the *English* have Two Sorts of Miles, Computed and Measured: Of the first Sort 50, and of the last Sort 55 or 60 make a Degree.

Morden, in his Introduction to Geography, says, 'Tis a common Opinion, that 5 of our *English* Feet make a Geometrical Pace, 1000 such Paces make an *Italian* Mile, and 60 of those Miles, in any great Circle upon the Spherical Surface of the Earth or Sea, make a Degree: So that a Degree of the Heavens contains, upon the Surface of the Earth, according to this Account, 60 *Italian* Miles, 20 *French* or *Dutch* Leagues, 15 *German* Miles, 17 ½ *Spanish* Leagues, and 56 ½ *English* Miles.

But, according to several Experiments made, the Quantity of a Degree is variously accounted for thus; By *Alhazard*, an *Arabian*, 333333 *Arabian* Feet in one Degree, which reduced to our *English* Measure, is 367283 Feet, or 70 Miles and $\frac{4}{5}\frac{4}{5}\frac{3}{5}$ Parts of a Foot. By *Ptolomy*, 360000 *Rheinland* Feet, which reduced to our *English* Feet is 371900, or 70 Miles $\frac{1}{5}\frac{1}{5}$. By *Willebrordus Snellius*, *Anno* 1613, 342000 *Rheinland* Feet; in *English* 353306 Feet, or 67 Miles. *Norwood*, by his Experiment betwixt *York* and *London*, finds one Degree upon the Earth to contain 367200 Feet, which makes 69 ½ Miles. *Picart*, a *Frenchman*, makes it about 73 *Italian* Miles, and is the nearest Measure yet found by these Experiments to answer to a Degree of the Heavens.

The *Danish* or *Swedish* Miles are to the *Rheinlandish*, as 19 to 10; but in some Places the *Danes* and *Swedes* use the *German* Mile.

The *Russian* Miles, called *Versts*, are to the *Rheinlandish* Mile as 19 to 80.

The *Turkish* Miles are the same with the *Italian*.

The old *Arabian* League was reckoned the 25th Part of a Degree; but they used another Measure, 55 of which made a Degree.

Indian Miles are 100 to a Degree; for the *Indians* commonly measure their Distances by Journeys of Hours or Days.

Those of *Camboa* and *Guzarata* have a Measure called *Cosa*, 30 of which are a Degree.

The *Chinese* use Three Measures for Journeys; (1.) *Li*, the Space as far as a Man crying aloud in a Plain may be heard in a calm Day, supposed to be 300 Geometrical Paces; (2.) *Pu*, which contains 10 *Li*'s; (3.) *Uchan*, which contains 10 *Pu*'s, and by them is reckoned one Day's Journey.

The Square *Rheinlandish* Mile consists of Square Feet: The Cubick *Rheinlandish* Mile of Cubick Feet. The Amount of the Square *Rheinlandish* Mile arises from multiplying the same Mile into it self, and that of the Cubick Mile by multiplying the Square Mile by a Simple Mile. The like is to be said of Square and Cubick Feet.

For the Benefit of thoſe that read the ancient Geographers in Greek or Latin, we thought fit to ſubjoin a more particular Account of their Geographical Meaſures from *Brietius*, *Part* I. *Lib.* 3. *Cap.* 6.

The ancient Meaſures of the *Greeks* are comprehended in theſe Technical Verſes.

Quatuor ex digitis conſtabat Græca Paleſte
Illa ter in Spitame: *juſto quater in* Pede: *Senos*
Fert Orgia *Pedes*: Pelethro *centeſimus eſt Pes*:
Arvus *dimidium eſt*: Stadiumque *coercet Achivum*
Sexcentos: *Stadia Aſſyriis ignota Phariique*
Triginta antiquis Paraſanga, *&* Schoenus *habebant.*

Paleſte is tranſlated by the Latins *Palmus parvus*, and was of Two Sorts, the leſſer conſiſting of 4 Fingers, and the greater, which *Pliny* confounds with *Spitame*.

Spitame contains 12 Fingers, or Inches; is tranſlated by the Latins *Dodrans*, and ſometimes *Pedalis*, and at other times *Semipedalis*, a Foot, or half a Foot

Pes, Πους, according to *Herodotus*, *Lib.* 2. contains 4 *Paleſtes*, which is 16 *Digits*, and therefore ſomething larger than the *Roman* Foot.

Orgia, ὀργια, tranſlated by the Latins *Ulna*, from the Arms extended, contain'd 6 Foot, or 4 Cubits; and this was of Two Sorts, one called the *Juſt Orgia*, of 6 Foot; and the other, call'd the *Great Orgia*, contain'd 10, according to *Theophraſtus*.

Plethrum, or *Pelethrum*, by the Latins call'd *Jugerum*, contain'd 100 Foot.

Arvus, ἀρουρα, 50 Foot; but by ſome extended to 100 Cubits.

Stadium, σταδιον, or the proper Greek *Stadium*, meaſured by *Hercules* with his Feet in the *Olympick* Field, was 600 Foot; when doubled, it was called *Diaulos*; and the *Diaulos* doubled, was call'd *Dolichos*.

Paraſanga, a *Perſian* and *Egyptian* Meaſure, according to *Herodotus*, conſiſted of 30 *Stadia*; but this Meaſure was various, according to *Pliny*, *Lib.* 6. *Cap.* 26.

Schoenus: Of this Meaſure there are Three different Opinions; the Firſt, according to *Ptolomy*, *Pliny*, *Artemidorus*, and *Strabo*, was of 30 *Stadia*: The Second, according to *Pliny*, who ſeems to have forgot himſelf, *Cap.* 14. *Lib.* 12. is 40 *Stadia*; and this he ſays was taken from *Eratoſthenes*; though in the ſame Place he ſays it was contracted to 32 *Stadia*, which is a Miſtake, for it ought to be 30. The Third Opinion is that of *Herodotus*, who, *Lib.* 2. ſays it was 60 *Stadia*; and with this *Hermogenes* is ſaid to agree. *Strabo* ſeems to reconcile all thoſe Opinions, *Lib.* 17. when he obſerves from *Artemidorus*, That this Meaſure was various; that from *Peluſium* to *Memphis* it contain'd 30 *Stadia*; that from *Memphis* to *Thebais* it was 120; and from *Thebais* to *Syene* it was 60. He adds, That he has found it elſewhere to be 40.

The Meaſures uſed by the ancient *Roman* Geographers, are contained in the following Technical Verſes.

Quatuor ex granis Digitus *componitur unus*:
Eſt quater in Palmo *digitus*: *quater in* Pede *Palmus*.
Quinque Pedes Paſſum *faciunt*: *Paſſus quoq*; *centum*
Viginti quinq; Stadium *dant*: *at* Milliare.
Octo dabunt Stadia: *duplicatum dat tibi* Leucam.

Digitus, the leaſt of the Country-Meaſures, according to *Frontinus*, contained 4 Grains of Barley laid Longwiſe.

Uncia

Uncia was more than a Digit, and the 12th Part of a Foot. This he says was us'd in *Apulia*: But in the rest of *Italy*, they divided a Foot into 16 Digits; so that the *Uncia* answer'd to the *French* Inch.

Palmus contain'd 4 Digits, and therefore was call'd *Quadrans*.

Pes, or a Foot, of 16 Digits, or 12 *Unciæ*, *Brietius* says he finds to answer to the ancient *Roman* Foot, and is 5 *Paris* Lines less than the *Paris* Foot.

PACE, Single, Of the 1st Difference, contain'd 2 Foot.
Of the 2d Difference, 2 Foot and half.
Of the 3d Difference, 3 Foot, or the *French* Pace.
Double, Of the 1st Difference, 4 Foot.
Of the 2d Difference, 5 Foot, or the Geometrical Pace.
Of the 3d Difference. 6 Foot.

Pertica, a Perch, by *Isidorus*, *Lib.* 15. *Orig. Cap.* 15. is reckon'd 2 Paces, or 10 Foot, and seems to answer to the Measure call'd a *Reed* in Scripture.

Stadium was 125 Geometrical Paces, or 625 Foot, according to *Pliny*, *Columella*, and *Julius Frontinus*. *Bergerius* gives the Reason why 25 *Roman* Feet were added to the 600 *Grecian*, because the *Roman* was less than the *Greek* Foot.

Milliare, or *Milliarium*, a Mile, was so call'd, because it contain'd 1000 Geometrical Paces: But there are Three Opinions as to the Number of *Stadia* in a Mile; the *First* is that of *Polybius*, in *Strabo* 7 *Geogr.* who says, 8 *Stadia* make only 960 Paces, each *Stadium*, according to the *Greek* Measure, containing 600 Foot. The *Second* is that of *Plutarch*, in *Camillus*, who says, 7 *Stadia* and an half are equal to a *Roman* Mile. *Suidas*, *Phocius*, and all the Greek Authors, are of this Opinion. The *Third* is that of the *Roman* Writers, and of the *Roman* Empire it self, when the Mile-Stones were fix'd, from whence Miles were call'd *Stones*, and these Miles contain'd 8 *Stadia*; and into this Computation *Polybius* had slip'd many times unawares.

Cubitus, a Cubit, contain'd a Foot and half, that is, *from the End of the Middle-Finger to the Elbow*.

Passus, or a Pace, is the Step of a Man as he walks, and by the Ancients was divided into the lesser and the Greater; the Lesser contain'd a Foot and a half, and was call'd *Gressus*; the Greater was twice as large, and was call'd the *Geometrical Pace*, or *Pace simply*; but afterwards the Pace was thus divided:

The Measures for Voyages *and* Journeys.

The *Sea-Journey* of the Ancients.

- *Herodotus* reckons — 70000 *Orgiæ* by Day, 60000 by Night; that is, 700 *Stadia*, or 84 *Roman* Miles, by Day; and 600 *Stadia*, or 72 *Roman* Miles, by Night.
- *Polybius*, — In *Strabo*, denies that in one Day they can sail 2000 *Stadia*, or 240 Miles.
- *Aristides* — Thought, that with a fair Wind they might sail 1200 *Stadia*, that is, 144 Miles.
- *Marinus*, — In *Ptolomy*, thought they might sail 1000 *Stadia*, that is, 120 Miles, in one Day.
- *Strabo* — Thought, that in a Day and a Night they might sail 1000 *Stadia*.
- *Scylax* — Compares the Voyage of a Day and a Night to a Journey of 3 Days, which he does not compute at above 108 Miles.

Digitized by Google

The *Sea-Journey* of the Moderns.

The *Arabians* reckon'd 10000 Paces in a Day, perhaps 145 Miles. Mariners reckon'd a *German* Mile for every one of our Hours; but when the Wind was very brisk, they reckon'd 60 *German* Leagues in a Day.

In the *Mediterranean* they ſail 16 Miles an Hour; but no Ship can hold that Courſe long there without Danger.

Journeys on Foot.

Strabo in his firſt Book ſeems to hint, That one Day's Journey is 333 *Stadia*, or 20 Leagues, or at leaſt 250 *Stadia*, *i. e.* 15 Leagues; but in his 7th Book, he makes one Day's Journey 310 *Stadia*, *i. e.* 37 Miles.

Herodotus, *Lib.* 4. reckons it 200 *Stadia*, *i. e.* 12 *French* Leagues. *Polybius* and *Livius*, *Lib.* 5. reckon it 150 *Stadia*, that is to ſay, a Journey through *Cilicia*, which is ſomething above 9 *French* Leagues. *Xenophon*, in the ſame 5th Book, concerning the Way through *Armenia*, which is 120 *Stadia*, *i. e.* 7 *French* Leagues and an half, is of the ſame Opinion.

Procopius, *Lib. Rerum Goth.* reckons 100 Miles, from *Ravenna* to the *Tuſcan* Sea, to be 8 Days Journey to an expedite Man, though it ſeems to require no great Expedition to travel 12 Miles and a half *per* Day.

Military Journeys.

The *Romans* commonly reckoned this to be 20 Miles; but *Claudius Druſus Nero* reckoned it 33.

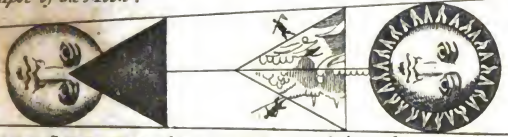
Alexander, to ſuppreſs the Rebellion of the *Arei*, travelled 600 *Stadia* in two Days, that is, each Day 72 Miles: But now, becauſe of Baggage and Artillery, an Army can ſcarce march 10 Miles in a Day.

Thoſe who have Occaſion to read ancient Authors, or thoſe of the middle Age, and ſince, for the better underſtanding them, may obſerve, That the ancient *German Raſta* contained Three Miles.

The *Arabians* make uſe of Three Sorts of Meaſures: The *firſt* contains 12000 Cubits; their Cubit 24 Inches; their Inch 6 Grains of Barley laid Broadwiſe, and 25 of this Firſt Meaſure make a Degree. The *Second* Meaſure contains 6000 Feet, or 4000 of our Cubits, and 56 of this Second Meaſure make a Degree. The *Third* Meaſure uſed by thoſe who inhabit *Arabia*, is by them called *Jom*, and contains 3 *Paraſangæ*, or 9 Miles.

The *Jews*, who are ſcattered in the Eaſt, meaſure the Diſtance of Places by *Stations*, *Paraſangæ*, *Miles*, and *Cubits*. Their *Station*, or one Day's Journey, contains 9 *French* Leagues and an half, or 150 *Stadia*. Their *Farſange*, or *Paraſangæ*, contain 4 Miles; their Mile 2000 Cubits; the common Cubit 5 Hand-breadths; the greateſt 10 Hand-breadths, or 40 Inches; their Inch is either that which is common to all Nations, or the great Inch, by which all Things are meaſured in the Law, and anſwers to the Thumb of a Man's Hand.

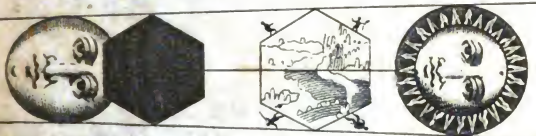
All the *Aſiatick* Moors reckon by *Paraſangæ*, each of which contains 3 *Italian* Miles.



The *Tartars*, and thoſe of *Canada*, meaſure their Journey by Days, which contain 15 *French* Leagues, or 13 where the Ways are bad.

'Tis

Hic Schema demonstrat terram esse globosam
This Scheme demonstrates ye Earth to be of a Globular form.



Si terra esset trigona umbra quoque triangulari figura in eclipsi Lunæ appareret.
If the Earth were of a Triangular form ye Shadow would appear so in the Eclipse of the Moon.

Si terra esset tetragona umbra quoque tetragona haberet formam.
If the Earth were four Square, the Shadow would also be four Square.

Si terra hexagonæ esset figuræ, cujus quoque umbra in defectu Lunari hexagona appareret, quæ tamen rotunda

If the Earth were Six-Square ye Shadow would be Six Square in the Eclipse of ye Moon, which however appears to be round.

'Tis to be obſerv'd, That the Leagues of an Hour, which are frequently ſet down in Maps, are not always alike; and the common Rule of meaſuring them is according to the Strength or Weakneſs of the People... Thus the *French*, ſays *Brietius*, reckon one of their Leagues to an Hour, and the *Engliſh* reckon two. Hence it comes to paſs, that the Leagues of ſeveral Countries are unequal; but Aſtronomers always reckon 20 Leagues of an Hour to a Degree; and ſo 'tis always to be underſtood in Geographical Maps, where the Scale of Miles is mark'd with the Leagues of an Hour.

SECT. IX.

Of the Figure of the EARTH.

THE Ancients had different and very odd Opinions concerning the Figure or Form of the Earth. *Cleomedes* ſays, ſome of the Ancients thought it to be plain; others thought it hollow, becauſe Water ſtays upon it; but both thoſe Opinions were ſoon found to be abſurd. Some were ſtill more abſurd, and thought it to be quadrangular; but *Cleomedes* tells us, in his Κυκλικῆς Θεωρίας, That all his Countrymen, the Mathematicians, and *Socrates*'s Followers, held it to be of the Figure of a Globe. *Agathemerus* tells us, there were thoſe who held it to be of an oblong Form, and that it was one half longer than broad: Others alledg'd it to be twice as long as broad; and others gave the Length a greater Proportion. *Crates* reſembled it to a Semi-Circle; *Hipparchus* to a Table; *Poſidonius* to a Sling, whoſe Breadth or Middle lay South and North, and its narrower Ends Eaſt and Weſt. The Curious may ſee more of this in *Cellarius*'s *Notitiâ Orbis Antiqui*, *Cap.* 2. *Varenius* tells us, The Vulgar commonly thought it to be a broad circular Plain. *Lactantius* and others of the Fathers were of the ſame Opinion, and thought the Earth extended downward with infinite Roots, becauſe of certain Places of Scripture which they miſunderſtood. Some thought the ancient Heathen Philoſopher *Heraclitus* to be of the ſame Opinion; and others ſay, he alledg'd it was ſhap'd like a Boat. *Anaximander* is ſaid to have aſcrib'd it to the Form of a Rolling-pin; but this is deny'd, becauſe he underſtood Aſtronomy. *Leucippus* thought it of the Shape of a Drum.

Coſma the *Egyptian*, who flouriſhed about the Sixth Century, in his *Chriſtian Topography*, thought the Earth to be twice as long as broad, and to be in Form like an oblong Square; and that the Heaven was railed in Form of an Arch over it: He conceived it to be repreſented by the Table in *Moſes*'s Tabernacle, which was two Cubits in Length, and one in Breadth: He was ſo very zealous for his Opinion, that he would ſcarcely allow thoſe who were for *Ptolomy*'s Syſtem the Name of Chriſtians. He had a particular Fancy of a certain Mountain of a prodigious Height, in Form of a Cone, round which he ſuppoſ'd the Sun and Moon to take their Courſe; and by this he endeavoured to account, for the Seaſons of the Year, the Length and Shortneſs of Days and Nights, and the Eclipſes, *&c.* He founded his Syſtem on the Authority of *Patricius*, a *Chaldean* Doctor, whom he reckon'd to be a Divine Man. Thoſe who have a Mind to ſee more of his Syſtem, may find it in his *Topography* inſerted in the Second Volume of Father *Montfaucon*'s New Collection of the Greek Fathers and Writers, lately printed at *Paris* in Folio; where that Author tells us, That *Ptolomy*'s Syſtem was not admitted into the Schools till very late; And that about the End of the 14th Century, 'twas the common Opinion of Divines, That the Earth was flat; and that even *Toſtatus*, a few Years before the Diſcovery of *Ame-*

Digitized by Google

America, rejected the Opinion of the Spherical Figure of the Earth as a raſh Doctrine, and inconſiſtent with the Chriſtian Faith.

SECT. X.

Arguments to prove that the WORLD *is round.*

VARENIUS, in his Third Chapter concerning the Figure of the Earth, rejects the Sophiſtical Arguments brought by ſeveral Authors for the Roundneſs of the Earth, and prefers *Archimedes*'s Demonſtration of thoſe of *Ariſtotle*; tho' he owns that they alſo have their Difficulties: Therefore he proves the Earth to be round, becauſe all the *Appearances*, as well *Celeſtial* as *Terreſtrial*, are moſt commodiouſly explained by the Round or Spherical Form, as is evident from the Conſideration of all other Figures. The Celeſtial Appearances he reckons to be the different Elevations of the Pole, the different Altitudes of the Sun, in one and the ſame Day in different Countries, the Proportion and Shadows, the Difference and Increaſe of the longeſt Days towards the Pole, the appearing of more or fewer Stars about the Poles, the different Times of the Riſing and Setting of the Stars, *&c.* The *Terreſtrial* he reckons to be the Directions of Navigation, the Appearing and Diſappearing of Towers and Mountains, the Diſtances of Places, the Winds, *&c.* He adds, That our artificial Terreſtrial Globe repreſents all Things ſo as they are to be really found in the Earth, which certainly could not be if the Earth were not round. Beſides, whatever other Form we chuſe, 'twill be attended with innumerable Abſurdities; for 'tis manifeſt from the Appearances, that 'tis not plain: Nor can it be hollow, becauſe the Sun and Stars muſt then appear to thoſe who inhabit the Weſt, before they appear to thoſe in the Eaſt; as we ſee the Sun illuminates the Vallies before it appears to thoſe on the oppoſite Side of the Mountains.

Some of theſe Arguments are more particularly illuſtrated thus:

The Earth is prov'd to be of a Spherical Form, becauſe the Sun and Stars riſe and ſet a great deal ſooner to thoſe who live Eaſt from us, than to thoſe who live Weſt from us; and on the contrary, to thoſe who live Weſt from us, they riſe and ſet later than to us, according to the Proportion of Time which the Diſtance of their Meridians have from ours. Thus if two Places be taken from ours, *viz.* the Diſtance of the Meridian of one towards the Eaſt 225, and the Diſtance of the other 450, then we ſhall find that in the latter the Sun riſes two Hours ſooner than with us, and in the former only one Hour. The Argument is ſtill more clear, if it be propos'd according to the Sun's Arrival or coming to the Meridians of different Places; for whatever the Diſtance is betwixt their Meridian and ours, or Proportion between the Arches of the Equator intercepted between their Meridian and ours, the different Time of the Sun's Arrival will be found to be the ſame, which is plain from the Eclipſes; for theſe Things are demonſtrated by the artificial Globe, if we aſcribe a Spherical Form to the Earth; whereas no other Form can do it.

The Globular Form of the Earth may be alſo prov'd by the Latitude of Places only, if any Difficulty be found to ariſe from their Longitude; for all Sections of the Earth, which are made according to its Latitude in different Places, are the Circumferences of Circles, and paſs thro' the ſame Point of Heaven, *viz.* the Pole of Converſion, which lies near to the Polar Star. From theſe two Reaſons it may be ſolidly infer'd, that the Figure of the Earth is Spherical; for this is a Gemetrical Propoſition which Geometricians

Digitized by Google

metricians ought to demonstrate. If any solid Body be cut with what Number of Planes you please, passing through some one Point, and that all those Sections do make Circles in the Surface of the Body, that Body is Spherical.

Another Argument of yet greater Force is brought from the Shadow, which the Earth, from the Side opposite to the Sun, casts upon the Moon; by which means she is eclips'd: For this Shadow being round and circular, it proves the Form of the Earth to be so.

Other Arguments are brought for the Spherical Form of the Earth, from the following Considerations:

1. From sailing round it. Our *Europeans* parted from *Europe* 8 times, steering directly to the West and South as far as the Streights of *Magellan*, and afterwards to the West and North, and return from the East into *Europe*; and all these *Phenomena* happen'd to them that rise from the Properties of a Globe, which could never have happen'd, had not the Earth been of a Spherical Form: For since upon this Supposition these Voyages were undertaken, the Sailors could never have succeeded in 'em, had the Earth been of another Form.

2. When either by Land or Sea we go from high Towers and Mountains, the lower Parts of them disappear first, and then they go out of View more and more, till the whole of them disappear. In the same Manner when we travel towards a Tower or Mountain, the Tops of them first appear to our View, and then the lower Parts, according as we draw nearer, until we see the lowermost Parts of them; and the appearing or disappearing of those Mountains or Towers is in Proportion to the Spherical Tumor of the Earth: Nor can this *Phenomenon* be explain'd by any other Way or Figure. The like is to be said as to Ships, which go from or come towards the Shore: When they sail from us, the Hulk first disappears, then their Sails, and at last their highest Masts, the natural Convexity of the Water appearing betwixt them and our Sight; but when a Ship comes towards the Shore, the Masts appear first, then the Sails, and at last the Hulk. To this may be added, That to those who live more or less Northward, the Pole is more or less elevated; for the Inhabitants of *Island* and *Lapland*, &c. who live about 1000 Miles more Northward than we, do see the Pole Star 15 Degrees higher than we can. And those who sail hence for those Countries, do find that this Variation comes to about a Degree and a half at the End of every 100 Miles, which could not be, except the Body on which they mov'd were Spherical. The Curious may see more of this in Dr. *Gregory*'s Learned and Elaborate Work, Entituled, *Astronomia Geometrica & Physica*; where he lays down a Method to determine the Figure of the Earth exactly.

SECT. XI.

Of the Dimensions and Magnitude of the EARTH.

THIS Noble Property of the Earth hath exercis'd the Wits of the greatest Men in all Ages. *Anaximander*, who liv'd about 550 Years before Christ, is said to be the first who described the Circumference of the Earth and Sea; and his Dimensions were follow'd by succeeding Mathematicians, till the Time of *Eratosthenes*; and therefore is thought to be the same which *Aristotle* takes Notice of in the Close of his Second Book concerning the Heavens; *viz.* That the Circumference of the Earth was 400000 Stadia. *Eratosthenes*, who lived about 200 Years before Christ, and was an expert Mathematician, assign'd 250000, or, as some say, 252000 Stadia, to the Circumference of the Earth, which according

Digitized by Google

ding to *Pliny*, makes 315000 *Roman* Miles. *Hipparchus*, who lived 100 Years after *Eratosthenes*, added 25000 Stadia to *Eratosthenes*'s Number. *Posidonius*, a learned Philosopher, and particularly well vers'd in Astronomy, who lived in the Time of *Cicero* and *Pompey* a little before our Saviour, said the Circumference of the Earth was 240000 Stadia, as *Cleomedes* relates; but 180000 according to *Strabo*, which seems to be truest. However, *Eratosthenes*'s Dimension was follow'd by most till the Time of *Ptolomy*, who lived 144 Years after Christ, and asserted the Circumference to be 180000 Stadia. *Maimon*, King of the *Arabians*, order'd some learned Mathematicians to meet in the Fields of *Mesopotamia*, and enquire into the Circumference of the Earth, which they determined to be 20660 or 20340 Miles. From that Time till our Days this Problem lay neglected; the *Arabians* follow'd their own Mathematicians, and the *Latins* follow'd *Ptolomy*. But about 60 Years ago, *Snellius*, Professor of Mathematicks at *Leyden*, a very learned Man, finding these Computations defective, demonstrated one Degree in the Earth to consist of 28500 Perches of 12 *Rheinlandish* Feet each, which make 19 *Dutch* Miles; and by Consequence the whole Circumference of the Earth to be 8640 Miles, each Mile containing 18000 *Rheinlandish* Feet. The Curious may find the several Ways of making up those Computations in Sir *Isaac Newton*'s Edition of *Varenius*, *Lib.* 1. *Cap.* 4. with his own Opinion and Animadversions upon them. The Surface of the Earth, Mr. *Keil*, in his Examination of Dr. *Burnet*'s *Theory*, makes to be 170981012 *Italian* Miles. The Circumference of the Earth, according to the *French* Measure, is 123249600 *Paris* Foot, or 24649$\frac{1}{5}$ *English* Miles. The mean Semi-Diameter of the Earth is 19615800 *Paris* Foot, or 3933 Miles, of 5000 Foot to a Mile; but the Earth is higher at the Equator than at the Poles by 85200 Foot, or 17 Miles; so that the Radius of the Earth may be taken in a round Number as 200000000 Feet. The solid Content of the Globe of the whole Earth is 30000.000000.000000.000000 Cubick Feet.

Since in Geography we not only consider the greater Circles of the Earth, as the Equator, *&c.* but also the Parallels of the Equator; therefore we must also determine how many Miles or Perches answer to one Degree in each Parallel. I took, says *Varenius*, the Computation of the Perches from *Snellius*; but I computed the Miles my self; *viz.* 1900 Perches for a *German* Mile, 1500 for a *Dutch* Mile, and 475 for an *Italian* Mile.

SECT. XII.

Of the Motion of the EARTH.

THE *Copernicans* say, That the Pythagorical Motion or Circumrotation of the Earth is the Cause of most of the Celestial Appearances; otherwise every Place would have a perpetual Constancy of those *Phenomena*. But no Property of the Earth has been more warmly disputed than this; and it was formerly condemned by the Church of *Rome*.

Every Body knows that the Sun, Moon and Stars, seem, in 24 Hours time, to be moved from East to West, and to return to the same Places of the Heaven; therefore of Necessity either they or we *must* be moved. 'Tis the common Opinion of those who follow *Ptolomy*, that the Heavens with the Stars are moved, and that the Earth stands still; yet the *Pythagoreans* maintained the contrary long ago, for which *Aristarchus* of *Samos* was accused of prophaning Religion, before the *Areopagites*, who acquitted him: Yet this Opinion lay buried in Oblivion till that eminent Astronomer *Copernicus* revived it about two or three Ages ago, wherein he was followed by many excellent Astronomers. Their Reasons in brief are these:

1. Because of the Number of Stars which seem to perform their Circuit round the Earth in 24 Hours, that it seems to be more reasonable to explain it by the Motion of the Earth, which is but one, tho' still keeping its own Place; as when we sit in a Ship, and sail near a Harbour of Ships, which seem to move towards us, tho' it be we that move towards them. And since Nature does not use to effect that by many Things which may be done by a few, we have Reason to think she observes the same Rule in this Case.

2. Because such a swift Motion of the Stars seems to be incredible, and to surpass all Imagination; for since they are almost at an infinite Distance from the Earth, and run through such a vast Orb, they must run in a Minute's Time at least 100000 Miles: If this Motion be ascribed to the Earth, it continues still in its Place; nor is there any Thing to be apprehended from its Swiftness, because it's carried round its own Axis.

3. This Argument appears yet more strong, if we compare the Vastness of the Celestial Bodies with that of the Earth; for since the Sun is at least 200 times bigger than the Earth, and the fix'd Stars above 1000 times bigger, it seems much more probable that the Earth turns round its Axis with a natural Motion, than that such huge Bodies are moved from Place to Place with that incredible Swiftness.

4. Because all the greatest Astronomers find themselves obliged, with *Tycho Brache*, to deny those solid Orbs which the Ancients made use of to maintain their Hypothesis of the Motion of the Stars, their Circumrotation about the Earth seems much more incredible: For if they should allow those solid Orbs, they must grant a mutual Penetration of those Orbs, since certain Planets are frequently found in the Sphere of another.

5. No Reason can be given why the Stars should be moved round the Earth; whereas there are some to be assign'd why the Earth and the rest of the Planets may be moved round the Sun.

6. Because neither the Pole nor the Axis is real, about which the Stars are said to move; whereas there is a Pole and an Axis in the Earth.

7. Because all the Celestial Appearances, the Rising and Setting of the Stars, and the Lengthening of Days, may be easily explain'd, if we allow the Earth to move, especially since the Convenience and Necessity of this Hypothesis is easily perceived in those admirable Properties of the Planets; to explain which

Digitized by Google

Ptolomy's Followers have been forced to invent many Excentrick Circles and Epicicles, without any Reaſon; but the *Copernicans* do ſo eaſily deduce thoſe Appearances from the Earth's ſecond Motion round the Sun, as to make them intelligible to the Unlearned; *viz.* 1. Why the Planets ſeem ſometimes to go retrograde, and *Saturn* oftner and for a longer Continuance than *Jupiter*, and *Jupiter* than *Mars*; and why ſometimes they ſeem to be carried with a more rapid Motion, and ſometimes to be Stationary? 2. Why *Venus* and *Mercury* can never be ſeen during the whole Night? 3. Why *Venus* is never at more than 60 Degrees Diſtance from the Sun, and *Mercury* no more than 30; and therefore are never ſeen oppoſite to the Sun.

Theſe Arguments, tho' not demonſtrative, yet make the Motion of the Earth more probable than the Motion of the Sun.

The Arguments brought againſt this Syſtem are;

1. That the Weight of the Earth makes it unfit for Motion.

2. That the Parts of the Earth are naturally carried in a ſtraight Motion towards the Center; therefore a Circular Motion is contrary to its Nature.

3. If the Earth were moved, a Stone let fall from the Top of a Tower could not fall at the Foot of it.

4. A Bullet ſhot towards the Weſt at any Mark, or a Bird flying Weſtward to any Place, they could not hit it, if the Mark or Place were moved with the Earth towards the Eaſt; or at leaſt they would reach it ſooner than if the Bullet were ſhot towards the Eaſt.

5. Neither Towers nor other Buildings could ſtand, but muſt be overturn'd by ſuch a Motion; and all Men would be troubled with a *Vertigo*.

6. Becauſe we ſee plainly, ſay they, that the Stars change their Place; but we do not perceive that the Earth does ſo.

7. Becauſe the Earth is in the Center of the World, and the Center is not moved.

8. Becauſe the Scriptures aſſert the Stability of the Earth.

To theſe Arguments, the *Copernicans* anſwer thus:

To the Firſt, by denying the whole Earth to be heavy; for Gravity or Weight is the Tendency of the Parts to the Whole of the ſame Nature, and ſuch a Gravity is diſcovered in the Parts of the Sun and Moon; yet neither of them is ſaid to be heavy.

To the Second they anſwer, That this ſtraight Motion is of the Parts of the Earth, and not of the Whole; and that the Circular Motion of the one does not hinder the Rectilineal Motion of the other; which is plain from the Parts of the Sun and Moon.

To the Third they give Three Anſwers: 1. That ſuch heavy Things are not primarily carried to the Center, but to the Earth it ſelf, and therefore by the Shorteſt Line to its Surface. The Shorteſt is that which anſwers to the Tower; as Iron tends not to the Center of the Load-ſtone, but to the Load-ſtone it ſelf. 2. The whole Air adheres to the Earth, and is moved with it; therefore ſuch heavy Things thrown down, do, together with the Earth, acquire its Circular Motion, and are moved, as 'twere, in a Veſſel. 3. *Gaſſendus* has demonſtrated, by frequent Experiments, That if any Thing be thrown from a moving Body, the Thing thrown is moved with the ſame Motion as the moving Body: For Inſtance; a Stone thrown from the Top of a Maſt of a Ship under Sail, falls down at the Foot of the Maſt; and a Bullet being ſhot up perpendicularly from the Foot of a Maſt, falls down again perpendicularly: So that this Objection has nothing in it.

To the Fourth Objection they give the ſame Anſwer as to the Third.

To

To the Fifth, they say, There is no Room for it, because the Motion of the Earth is equal, and it dashes against no other Body; and Buildings being heavy Bodies, of the like Nature with the Earth, are moved with it, as in a Ship; for if a Ship be moved slowly or swiftly, if the Motion be equal in calm Water without Waves, we find that erected Bodies are not overturn'd by the Motion; nor will a Cup full of Liquor on board any Ship spill one Drop.

To the Sixth, they answer, That the Change of Place in the Stars is not perceiv'd, but only the Change of their Situation, with respect to our selves; and this Change of Situation may both be observ'd, and have a Being, whether we move *with* the Earth, or whether the *Stars move*, and we continue fix'd, or *whether* both we and the Stars do so.

To the 7th, they answer, That both the Major and Minor of the Argument are false, or at least doubtful.

To the Eighth, they answer, 1. That the Scripture speaks in natural Things according to Appearance, and the Capacity of the Vulgar: For Instance, The *Moon* as *well* as the Sun is call'd a great Light, because 'twas created to give Light to the Night; tho' the Moon cannot be call'd great, if compared to the Stars; nor has it any Light of its own, or does illuminate the Earth every Night. So the Scripture says, The Sun goes from the one End of the Earth to the other, and returns again; whereas in Truth there is no such End. So in the Book of *Job* a plain and square Figure is ascribed to the Earth, with Pillars to support it; yet every body knows, that this must not be understood in the literal Sense. Other Places of the like Nature might be brought; but these are enough; for the Scriptures are design'd not to teach us Philosophy, but Piety. 2. *Ptolomy*'s Followers use to bring some Places of Scripture to prove the Earth to be unmoveable, which are not to be understood with respect to its Motion, but to its Duration and Constancy; and such is that Place of *Job* just now mention'd. Thus we have briefly explain'd the Motion of the Earth according to the *Copernican* Hypothesis; but must refer the further Explication of it to Astronomy; and this Motion being suppos'd, all those Things are to be applied to the Earth, which use to be consider'd in a Globe turn'd round; *viz.* The Axis, round which 'tis turn'd, is one of its Diameters: The Poles, or the Extremities of the Axis, are two Points which are not moved. In the Third Place we are to consider the greatest Circle or Circumference, according to which its Circumrotation is made, and its Parallels. Then as to the Quantity or Swiftness of its Motion. The First Motion, by which the Earth is turn'd round its Axis, cannot be perceiv'd in the whole Earth, but is different according to the Difference of Places; *viz.* the nearer any Place is to the Equator, with so much the greater Swiftness 'tis mov'd; and the nearer the Pole, with so much less Swiftness: For because in 24 Hours every Place of the World is turn'd round by the Space of the whole Circumference, to wit, 360 Degrees, the Space mov'd in 1 Hour is found thus; if we divide 360 by 24, the Quotient will be 15 Degrees, the Number by which a Place lying in or out of the Equator is turn'd round in one Hour: And if the Place lie in the Equator, they make 225 *German* Miles; from whence, in 4 Minutes, it is turn'd round one Degree, that is, 15 *German*, or 16 *English* Miles; and in one Minute, 3 ¾ *German*, or 15 *English* Miles.

But Places lying out of the Equator, towards either of the Poles, are in an Hour's Time turn'd round so many Degrees, but such as are, much less; for the Proportion is the same betwixt the Swiftness of the Motion, and the Distance of two Places, as it is betwixt the Sines of the Arches by which those Places are distant from the Pole: For Instance, The Distance of *Amsterdam* from the Equator, or

Digitized by Google

or the Elevation of the Pole is 52 Deg. 23 Min. therefore its Diſtance from the Pole is 37 Deg. 37 Min. whoſe Sine is 61037. Let us take another Place in the Equator, whoſe Diſtance from the Pole is 90 Deg. its Sine is 100000. But a Place under the Equator is in 4 Minutes turn'd round 15 *German* Miles, and in an Hour 225. Therefore by the Golden Rule;

As 100000 to 61037, ſo 15 to 9 Miles.
Or thus: So is 225 to 137 Miles.

Therefore *Amſterdam* is turn'd round every Hour 137 *German* Miles, and 9 Miles in every 4 Minutes of Time.

But the Diſcovery of this is much eaſier by the Table at the End of the preceding Section; for 360 Degrees being divided by 24 Hours, we find that any Place is turn'd round 15 Deg. of its own Circle every Hour, and 1 Degree in 4 Minutes: Therefore if we enter the Table with the Elevation of the Pole, or Diſtance from the Equator, we ſhall find the Number of Miles ſet down at the Degrees of the Elevation given, that the Place propos'd is turn'd round in 4 Minutes. For Inſtance, at *Stockholm*, the Elevation of the Pole is about 60 Deg. and in the Table at 60 Degrees, I find 7 *German* Miles anſwer one Degree: Therefore I ſay that *Stockholm* is turn'd round ſo many Miles in 4 Minutes.

So great is the *Firſt Motion* conſider'd in the Place of the Earth: But the *Second Motion* is that of the whole Earth from Place to Place, and all Parts or Places are mov'd with equal Swiftneſs, and by equal Circumferences. The Quantity of this depends on the Diſtance of the Earth from the Sun, and is perform'd in a whole Year; and therefore every Day the Earth is turn'd round about one Degree; and in one Hour, two Minutes and an half of a Degree.

The *Third Motion* of the Earth we leave to Aſtronomers.

SECT. XIII.

Of the Situation of the EARTH, *with reſpect to the Planets and fix'd Stars.*

PTolomy, and thoſe that follow him, place the Earth in the Center of the World, in the middle of the Stars and Planets; but the ancient *Pythagoreans* and *Copernicans* place the Sun in the Center, and the Earth as a Planet betwixt *Mars* and *Venus*, and alledge it to be carry'd round the Sun in one Year; which will be better underſtood by the following Diagrams. In this however they agree, that the Center of the Firſt Motion is in the Earth, by which the Stars ſeem to be carry'd round in 24 Hours: For both Aſtronomy and Geography require this Hypotheſis; ſo that whether you follow *Ptolomy* or *Copernicus*, it detracts nothing from the Certainty of General Aſtronomy or Geography. The Difference being only this, That *Ptolomy* aſcribes this Motion to the Stars, and *Copernicus* to the Earth.

According to *Ptolomy* the Situation of the Earth, with reſpect to the Planets and fix'd Stars, is thus: The *Earth*, the *Moon*, *Mercury*, *Venus*, the *Sun*, *Mars*, *Jupiter*, *Saturn*, the *fix'd Stars*.

According to *Copernicus*, the Sun is plac'd in the middle of the World, as the Heart; next to him, the Orb of *Mercury*, then *Venus*, the *Earth*, *Mars*, *Jupiter*, *Saturn*, the *fix'd Stars*.

If the Diſtance betwixt the Earth and Planets be demanded, it muſt be obſerv'd, that it is not always the ſame, but changes every Day: Therefore Aſtronomers reckon three Degrees of Diſtance, *viz.* the Leaſt, the Mean, and the Greateſt. The Mean Diſtance of the Earth, from the other Planets, according to moſt Aſtronomers, is thus:

From

Digitized by Google

Digitized by Google

The Figure of the World

According to the System of Ptolomee who holds that the Earth is unmoveable in the Centre of y^e World.

From the Moon, 60 of its Semi-Diameters.
From *Mercury*, 110.
From *Venus*, 700.
From the *Sun*, 1150.
From *Mars*, about 5000.
From *Jupiter*, about 11000.
From *Saturn*, 18000.

But the Distance of *Mars*, *Jupiter*, *Saturn*, and the *fix'd Stars*, is very uncertain, because of the Want of the Parallaxis. In the *Copernican* Hypothesis, the Distance is varied, not only from the Motion of the Planets, but from the Motion of the Earth. The Reasons for both Opinions are much the same with those in the preceding Section about the Motion of the Earth; for if you ascribe the Second, which is called the proper Motion to the *Sun*, the Earth, and not the Sun, will be in the middle; If otherwise, the Sun will be in the middle. The *Copernicans* offer the following Arguments for their System:

1. The Sun is not only the Fountain of Light, which, as a clear shining Torch, illuminates the Earth, the Moon, *Venus*, and the rest of the Planets; but is the *Focus* of Heat, and Vital Spirits by which the Universe is nourished and sustained: Therefore 'tis probable 'tis in the middle.

2. 'Tis more likely that the Earth turns round the Sun, that, with the rest of the Planets, she may receive Light and Heat from him, than that the Sun goes round the Earth, since he receives nothing from it.

3. The Sun being placed in the middle, furnishes us with a Reason how the Earth and the rest of the Planets are carried round him; *viz.* Because the Sun is a most vast Body, and endowed with great Force, and therefore puts the rest in Motion. This Argument will appear still more strong, if we consider *Kepler's* Hypothesis concerning the Motion of the Planets.

4. The Sun is turned round his Axis, as is proved by *Galileus* and *Scheinerus*, concerning the Spots of the Sun.

5. If we place the Earth betwixt *Mars* and *Venus*, and the Sun in the Center, the Motions of each of the Planets commodiously answer their Distance from the Center; which cannot be done by *Ptolomy's* System, as is evident from the Consideration of the Motion of the *Sun*, *Venus* and *Mercury*.

6. Those Celestial Appearances made use of in the former Section, to prove the Motion of the Earth, do likewise conclude for this Situation of it; *viz.* the retrograde Course of the Planets, and their Station, and the wonderful Appearances and Motions of *Venus*, *Mercury*, &c. For this Second Motion of the Earth presupposes the Situation of it. And this Argument, in my Opinion, is one of the chief; for from the First Motion of the Earth, nothing can be inferr'd concerning its Situation; for the Earth might be in the Center of the World, if it wanted the Second Motion, as *Origanus* has also laid down.

7. Thus also the Variation of the Distances of Planets from the Earth is commodiously explained.

The *Aristotelians*, and those who follow *Ptolomy*, offer the following Arguments to prove the Earth to be in the Center: 1. Heavy Things are carried to the Center of the World; but the Earth is the heaviest Body; therefore it is in the Center. 2. Heavy Things would descend from the Earth towards the Center of the World, except the Center were in the Earth. 3. The Center is the ignoblest Place; but the Earth is the most ignoble Place of the Universe; therefore 'tis the Center. 4. If the Earth were without the Center of the World, and of the Motions of the Stars, then the Stars and Constellations would at some Seasons and Days of the Year appear greater than at others. 5. Neither would one half of the Heaven be always conspicuous; so that when *Taurus* rises, *Scorpius* should set, *&c.* 6. Nor would there be Equinoxes. 7. Nor when the Moon

Digitized by Google

Moon rises in an Eclipse, would the Sun set, &c. 8. Nor would an equal Number of Miles in the Earth answer to every Degree of the Heaven.

To these Arguments, the *Copernicans* answer thus: The First and Second are easily refuted, because the Motion of heavy Things is not to the Center of the World, but to Bodies of the same Nature; as is proved by the Parts of the Moon, Sun, and Loadstone. The Third is false, both in the Major and Minor; for the Center is a noble Place, and the Earth not ignoble. The rest of the Arguments are easily confuted by the Diagrams; at least if this be pre-supposed, that tho' the Distance of the Earth from the Sun or Center be very great, yet if compared to the Distance of the fix'd Stars from the Sun, 'tis so small, that it bears no Proportion: And this by some is reckon'd the great *Postulatum* in the *Copernican* Astronomy.

To this Place belongs the Explication of the Theorem, that the Distance of the fix'd Stars, and superior Planets, *Mars*, *Jupiter*, and *Saturn*, is so great from the Earth, that the Semi-Diameter of the Earth bears no Proportion to it; but that the Distance of the Moon, *Venus*, and *Mercury*, is not so great. As to the Sun, 'tis still in doubt; but certainly if there be any Proportion of the Semi-Diameter of the Earth to the Distance of the Earth from the Sun, it must be very small.

The Theorem is thus proved: 1. The fix'd Stars and superior Planets appear to us to rise in the same Moment, as by Computation they would appear to rise if we were placed in the Center of the Earth. Therefore the Distance of the Place where we are from the Center of the Earth, *i. e.* the Semi-Diameter, bears no Proportion to the Distance of the fix'd Stars. 2. If we take the Meridian, or any other Altitude, of a fix'd Star, or of one of the superior Planets, with an Instrument, we find it to be the same as if we had observed it in the Center of the Earth: Therefore the Semi-Diameter of the Earth is nothing at all, if compared to that Distance. 3. If there were any Proportion, then the Distance of Two Stars would be found less about the Horizon than about the Meridian; because in this Situation, they are nearer to the Earth almost by one Semi-Diameter. The same holds as to the Sun; for his Diameter is not found to be greater in the Meridian, than when he is in the Horizon; but the Diameter of the Moon in the Meridian is observed to be something greater than when it is in the Horizon; and therefore in the Meridian 'tis nearer us almost by one Semi-Diameter of the Earth.

SECT. XIV.

Of the Substance and Constitution of the EARTH.

Proposition I. *To explain of what Simple and Similar Parts the Earth is composed.*

PHilosophers are divided in this Matter: The *Peripateticks* reckon Fire, Air, Water and Earth, to be the Four Elements of all the Sublunary World. Many of the Ancients, as *Democritus* and *Leucippus*, held, that the World consisted of little solid Particles, differing only in Figure and Magnitude. They have been followed in this by many of the Moderns; and *Cartes* lately endeavoured to explain all natural *Phenomena* by such an Hypothesis.

Chymists lay down three Principles, *viz.* Salt, Sulphur, and Mercury; to which some add, *Caput Mortuum*.

But *Varenius* is of Opinion, That there are five First Simple Bodies, *viz.* Water, Oil of Sulphur, Salt, Earth, and a certain Spirit which some call Acid, and perhaps is the Mercury of the Chymists: For all Bodies and Parts of the Earth are resolved into those Elementary Substances;

Digitized by Google

ſtances; yet he owns, that they differ not ſo much in Eſſence, as in Figure and Magnitude. Of theſe Bodies, he holds the Earth to conſiſt; and which being differently mix'd, produce ſuch a Variety of Bodies, that being compared with one another, appear different or ſimilar.

Prop. II. *The Earth is divided into dry and Liquid, or into Earth and Water; to which ſome join the Atmoſphere.*

Water in this Senſe is taken for all that's Liquid, and the Earth for every Thing that's Dry, and conſiſts of Earthy Parts; as, 1. Sand, Loam, Clay and Mineral Earths, Chalk, Cinnaber, Ochre, *Terra-Lemnia*, brought from the Iſle of *Lemnos*, called likewiſe *Terra-Sigillata*, Earth of *Samos*, *Armenia*, and many other different Species of Earth. 2. Stones, of *which* there is great Variety. 3. Metals, as Gold, Silver, Copper, Tin, Lead, Mercury or Quick-ſilver, or Metalick Ores; ſuch as of Gold, Silver, *&c.* 4. Sulphur, Salts, Nitre, Allom, Bitumen, Vitriol, Antimony. 5. Herbs and Animals.

To the Water are referr'd, 1. Seas, and the Ocean. 2. Rivers and freſh Water. 3. Lakes and Marſhes. 4. Mineral Waters, as Baths, *&c.*

The Atmoſphere is that thin and ſubtil Body which encompaſſes the Earth towards the Heavens, and comprehends the Air, Clouds, Rains, *&c.* Philoſophers differ in their Opinion as to the Height of the Atmoſphere: *Kepler* makes it 8 Miles; and *Ricciolus* makes it probable, that 'tis at leaſt 50 Miles high. The late Honourable Mr. *Boyle* makes the common Height of the Atmoſphere, when the Mercury in the Baroſcope is at 30 Inches, to be 7 Miles; upon a Suppoſition, that all our Air is of the ſame Denſity and Weight, from the Surface of the Earth to the Top of the Atmoſphere: But ſince this cannot be ſuppoſed, he ſuggeſts it muſt be much more; and in his Book againſt *Linus*, he ſuppoſes it to be probable it may be ſome Hundreds, nay Thouſands, of Miles high, in caſe the Atmoſphere be not a bounded Portion of the Air, but reaches as high as the Air.

Prop. III. *How Earth and Water cohere, and conſtitute the Earth.*

1. The dry Part of the Earth has not always a regular Surface, but many Cavities and raiſed Parts. In the Cavities, which are round the whole Earth, is contained the Sea or Ocean: Therefore Part of the Surface of the Earth is covered with Water, and Part riſes above it. The Cavities are not all equally hollow, but here and there have Rocks and raiſed Parts, and in ſome Places very deep Gulphs: So the dry Land is ſome Parts higher, and ſome Parts more depreſſed than others. Hence it comes to paſs, that the Water which encompaſſes the Earth is hinder'd from overflowing it.

2. Beſides that continued Cavity in the Surface of the Earth, there are alſo in the inner Part or ſolid Body of it many Hiatus's, Receſſes, Windings, Conveyances, Gulphs, Conduits, and vaſt Receptacles; in ſome of which there is Sea, which is join'd to the Channel of the common Sea by ſome ſecret Conveyance: In ſome of them there is freſh Water, Rivers and Streams; in ſome of them Spirit, or a ſulphurous ſmoaking Subſtance. This was alſo *Seneca*'s Opinion, and 'tis proved by the following Arguments: 1. Becauſe of the Rivers found in many Places, when the Earth is dug to any conſiderable Depth, as happens frequently in Mines. 2. Becauſe in ſome Places the Sea is of an unfathomable Depth. 3. Becauſe of Streams that are found in Caves of the Earth; particularly there is a Mountain in the Weſt Part of *Hiſpaniola* of a conſiderable Height, with many Caves, into which Streams fall with ſuch a Noiſe, that 'tis heard for 5 Miles. 4. Several Whirlpools are found in the Sea, particularly in that called *Pentland-Frith*, betwixt the

Digitized by Google

Orkney Isles, and *Caithnes* in the North of *Scotland*. 5. Because several Rivers hide themselves under Ground, such as the *Niger* and *Tygris*, &c. 6. Salt Fountains are found in many Places, which, doubtless, for the most Part come from the Sea. 7. Earthquakes prove the Existence of Subterranean Cavities. 8. In many Places the Earth shakes, as at *St. Omers* in the *Netherlands*, and *Peel* in *Brabant*.

From hence 'tis plain, That the Opinion of some ancient Philosophers was false, who alledged, That the Earth swims upon the Water. Some of them were likewise of Opinion, That the Earth was of old mix'd with the Water, so that it was of a middling Nature, betwixt Dry and Liquid, and of a Spherical Form: But at last the Watery Particles gathered together by Degrees into one Body, by that natural Property of joining together which is discerned in Water, that the Terrestrial Parts became thus condens'd, and that the Waters, as they retired, made Channels in the Earth. Some Modern Christian Philosophers defend this Opinion, and thus they understand that Text, *Let the Waters be gathered together into one Place, and let the dry Land appear*, Genesis 1. 9. But most of the Primitive Fathers thought otherwise, for they were of Opinion, That the Water at first was separated from the Terrestrial Parts, and covered the whole Earth; but upon this Saying of *Jehovah*, the Waters retired miraculously, and the Earth was discovered, and that hitherto they are hindered by the singular Providence of God from overflowing the Earth again: And thus they look upon this Constitution of the Earth and Sea to be a Miracle. But *Varenius* shews, That there is no need of having Recourse to that, because the Inundation of the Sea is hindered by the Height and Consistency of the Land, which if at any Time removed, as by Earthquakes, *&c.* the Sea immediately overflows such Parts: And as to the Opinion of the ancient Philosophers, there can no Reason be given why the Terrestrial Parts might not as well have sunk down, and have been wholly covered with Water, as that the Water should remove, and leave the Earth dry.

Prop. IV. *'Tis uncertain how those Parts of the Earth which lie towards the Centre are constituted.*

Some think there is Water about the Centre of the Earth; but 'tis more likely, that the Earth possesses that Place. Mr. *Gilbert*, an *Englishman*, was of Opinion, That the innermost Body of the Earth is a very hard Loadstone, and that those Parts which we dig, and upon which Herbs and Trees grow, is like the Bark or Crust of the Earth, wherein there happens continual Generation and Corruption. *Cartes* differs not much from this: He thinks there are Three Regions of a different Substance in the Body of the Earth; the innermost, about its Centre, like the Substance of the Sun and fix'd Stars: The Second, which is thick and opaque, consists of very minute Particles; and the Third, upon which we live, consists of Particles that have not so close a Coherence: But there is nothing certain about these Things. That there is Fire in many Subterranean Places, and Smoak which proceeds from Sulphur, is manifest from the Baths: And *Thurnheuserus* affirms, That he found by Experience, that the nearer Mines are dug to the Centre of the Earth, the less Water is found in them.

Prop. V. *The Consistency and Coherence of the Earth proceeds from Salt.*

The Artificial Dissolution of the Parts of the Earth shews, that in all of them there is a certain Species of Salt to be found, and the harder the Body is, so much the more Salt, (a few oily Parts excepted) as in Metals, Rocks, *&c.* And that the Consistency or Concretion of all Things proceeds from Salt, is manifest from the very hard Stones that are made

Digitized by Google

made of Salt by Art. If you ſeparate Salt from the Earth, it will no more ſtick together, but becomes meer Duſt, and cannot be reduced to Hardneſs without a Mixture of Salt.

Prop. VI. *The Sorts of Earth are differently mix'd among one another in the Bowels of it.*

Thus in Mines there are found Particles of Gold, Silver, and Lead, not ſeparate from other Particles, but ſometimes mutually mix'd with one another, and ſometimes with the Earth; and in ſome ſmall Particles, that Artiſts cannot diſcover at firſt Sight but by other Ways of Trial, what it is that is contained in any Mineral Earth. When at *Amſterdam* a Well was dug 232 Foot deep, the Veins of Earth appeared as follows: 7 Foot of Garden Mold; 9 of Turf, or Peat: 9 of ſoft Clay; 8 of Sand; 4 of Earth; 10 of Clay; 4 of Earth; 10 of Paving Sand; 2 of Clay; 4 of White Loam; 5 of dry Earth; 1 of muddy Earth; 14 of Sand; 3 of ſandy Clay; 5 of Sand mix'd with Clay; 4 of Sea-Sand mix'd with Shells; and then Clay of 102 Foot deep; and at laſt 31 Foot of Loam, where the Digging ceaſed.

Prop. VII. *The Cavities of the Earth, and its internal and external Diſpoſition and Situation of Parts, are not always the ſame, but differ at different Times:*

For not only the Sea makes ſeveral Changes in Parts of the Earth, by ſtopping up ſome Cavities, and enlarging others, but Spirits and Sulphureous Subſtances lurking here and there in the Earth, when they begin to kindle, and to be reſolved into Vapours, they impetuouſly move and thruſt forward the Parts of the Earth, as is plain from Earthquakes; and 'tis very probable there are ſuch Motions in the innermoſt Parts of the Earth, of moſt of which we perceive nothing.

SECT. XV.

Of the Diviſion of the EARTH *by the Ocean.*

THE Terraqueous Globe is divided into Earth covered by the Water, into Earth ſtanding out of the Water, and Water it ſelf. The Surface of the Earth ſtanding out of the Sea, is divided into theſe Four Parts by the Interflux of the Water.

I. Into great Continents, or greateſt Iſlands; of which we reckon Four:

1. The Old World, whoſe Parts are, *Europe*, *Aſia*, *Africa*. The Boundaries of this Continent, are, On the North, the Northern, Frozen, and *Tartarian* Sea. On the Eaſt, the *Pacifick* and *Indian* Sea. On the South, the South Sea. On the Weſt, the *Atlantick*.

2. The New World, or *America*, whoſe Parts are, *Northern*, and *Southern*. Its Boundaries are, On the North, *Davis*'s Streights. On the Eaſt, the *Atlantick* Sea. On the South, the *Magellanick* Streights. On the Weſt, the *Pacifick* Sea.

3. The Land of the North Pole, or *Greenland*, is every where encompaſſed by the Sea and Streights.

4. The South Land, or Land of *Magellan*, not yet diſcovered.

Digitized by Google

II. The Second Diviſion is *Peninſula's*, or *Cherſoneſi*, which are Parts of theſe Continents, and join'd to them by narrow Necks of Land: They are divided into Round, Oblong, and into ſuch as have an Affinity with *Peninſula's*.

The round ones, whoſe Latitude and Longitude are almoſt equal. { *Africa*, *Peloponneſus*, or the *Morea*; the *Cherſoneſus* of *Grecia*, *Cherſoneſus Taurica*, or *Tartaria Precopenſis*. *Cambaia*.

The oblong are many in Number. { 1. The *Golden Cherſoneſus*, or *Malacca*, adjoining to *India*. 2. *Cimbrica*, or *Jutland*, adjoining to *Holſtein*. 3. *Corea*, adjoining to *Tartary*. 4, 5. *North* and *South America*. 6, 7, 8. *California*, *Jucatan*, the *Cherſoneſus* of *Thracia*. 9, 10. *New France*, *Ionia*, *Cnidenſis*, *Myndenſis*.

Thoſe which have an Affinity to *Peninſula's*. { *Italy*, *Greece*, *Achaia*, *Spain*, *Aſia Minor*, *Arabia*, *Norway*, with *Sweden* and *Lapland*; *Beach*, a Country of *Magellan*; *New Guinea*, *Indoſtan*, *Cochinchina*, *New England*, *Monomotapa*, and *Cambaia*.

III. The Third Diviſion is Iſlands, of which there are,

Nine great ones; { *Great Britain*, *Japan*, *Iſland*, *Canada*, *Sumatra*, *Madagaſcar*, *Borneo*, *Nova Zembla*, *California*.

Thirteen middling ones; { *Sicily*, *Ireland*, *Hiſpaniola*, *Cuba*, *Java Major*. *Celebes*, *Crete*, *Laconia*, *Sardinia*, *Friſeland*, *Terra Nova* near *New France*, *Mindanao*, and *Ceilan*.

Nine little ones; { *Gilolo*, *Amboina*, *Timor*, lie among the *Indian* Iſlands. *Corſica*, *Majorca*, *Cyprus*, *Negropont*, lie in the *Mediterranean*. *Daniſh Zealand*, and *Jamaica* which lies in the Bay of *Mexico*.

Very ſmall ones; { 1. Thoſe of moſt Note which lie alone, as *Rhodes*, *Malta*, *Lemnos*, *St. Helen's*, *St. Thomas's*, *Madera*, &c. 2. Thoſe which lie together in great Numbers very near one another, *viz.* the *Canary* Iſlands, the *Caribbee* Iſlands, the *Heſperides*, thoſe in the Bay of *Mexico*, the *Maldiva* Iſlands, thoſe about *Madagaſcar*, the *Molucca's*, and Iſles of *Banda*, the *Philippin* Iſlands, thoſe of *Japan*, the Iſles of *Theeves*, thoſe of the *Ægean* Sea, thoſe about *Great Britain*, and the Iſlands of *Solomon*.

IV. The Fourth Diviſion is *Iſthmi*, or narrow Necks of Land, which are thoſe betwixt *Egypt* and *Arabia*, or betwixt *Africa* and *Aſia*; the *Corinthian Iſthmus*, betwixt *Peloponneſus* and *Achaia*; the *Iſthmus* of *Panama*, or *Darien*, in *America*, the longeſt of them all; that betwixt *Jutland* and *Holſtein*; that betwixt *Malacca* and *India*, &c.

SECT.

SECT. XVI.

Of MOUNTAINS *in General.*

TIS needless to insist on the Description of Mountains, and how they differ from little Hills, since that is known to every Body. The natural Use of them is very well described by *Kircher Lib.* 2. *Mund. Subter. viz.* That they are the same to the Earth as Bones are to the Body, and fasten the Globe so as it cannot be dissolved: For since the Earth is compos'd of Soil of different Sorts, and produces innumerable Species of different Things, as Minerals, and Mineral Fluors, these Things could not consist together, except they were kept in by the firm Structure of the Mountains. 2. Since the Sea flows perpetually round the Land, and is in continual Motion by the Winds and Tides, the Earth could not last without the Mountains, which keep the Sea within Bounds like so many Barriers; and, as *Job* expresses it, sets Bars and Doors to it. 3. Mountains are absolutely necessary to further and regulate the Course of Fountains and Rivers, since their Water would stagnate or overflow the Country, if the Surface of the Ground were altogether level: Therefore, says he, the Mountains are like Dugs in the Bosom of the Earth, and serve as the Repositories of Nature to supply the Earth perpetually with Liquor, and to fructify the neighbouring Vallies. 4. Mountains are necessary for breaking high Winds, and for producing Variety of Herbs, which could not subsist without them. 5. Mountains are the Repositories of Minerals, in whose Cavities the Subterranean Fire matures them, as in a Furnace, for humane Use. We need say nothing of the pleasant Prospects they afford, and of the useful Shade they give, at some Times of the Day and Year, to the neighbouring Valleys, to prevent their being parch'd up; and of the Heat of the Sun, which at other Times they reflect upon them, to prevent their being absolutely drowned with Moisture: And, in the last Place, they make the Air serene and healthful. Tis evident, That most Countries rise from the Shore towards the Inland Places, it being necessary that it should be so for the Course of the Rivers and Brooks: So that the Proportion of Height betwixt the Midland and Maritime Places may be known by the Declivity of the Rivers. For the Way of measuring the Height of Mountains, we refer to *Varenius, Lib.* 1. *cap.* 9.

Tis evident, by the Reasons that Author gives us, That the Height of Mountains bear so small a Proportion to the Semi-Diameter of the Earth, that they hinder its Roundness no more than a Grain of Sand does that of an Artificial Globe: For since we find by Experience, that there is no Mountain which exceeds an *English* Mile and an half in Height, and that the Semi-Diameter of the Earth is 860 *German* Miles, the Proportion betwixt the highest Mountain and that can be no more than 1 and an half to 860.

Philosophers differs as to the Origin of Mountains. Some think they were created at first: But 'tis evident, that several of them have fallen down by the Decay of the Rocks which supported them, from whatever Cause that Decay proceeded; and since there are natural Causes for their Corruption, there may be the like for the Generation, at least of some of them: For that several Mountains have been generated by Progress of Time, is inferr'd from the Shells that are found in the Tops of many of them, particularly in *Gelderland*: And their Way of Formation, seems to be by Heaps of Sand and Dust being blown together by strong Winds, and brought to a Consistency by Rain: But this must only be understood of the lesser Sort, since

Digitized by Google

since 'tis more reasonable to conclude, that the greater Sort were concreted with the Earth.

The same Author considers the Reason why there is frequently Rain, Clouds and Snow, on the Tops of Mountains, when the Air is clear in the neighbouring Valleys. He rejects their Opinion, who think that Mountains attract the Air and the Clouds, because they give no Reason for it. He gives his own Opinion thus: He thinks that the Vapours and Exhalations being condens'd into Drops in the middle Region of the Air, they begin to fall downward, and because the Tops of the Mountains are nearer them than the Valleys, those Drops which fall on the Mountains leave their Place in the Air, which is immediately filled by those that are next, being either pushed forward by what Philosophers call *Fuga Vacui*, or because the Nature of Water is such, that it flows to that Place where the Flux first begins.

In his 10th Chapter he treats of the Difference of Mountains, which are either in single or long Tracts, and particularly of burning Mountains, which we refer to the Description of those Countries they belong to, and shall only take Notice here, That he assigns the Cause of those *Vulcano's*, or burning Mountains, to be the Sulphurous and Bituminous Substance contained in them.

Every one knows, that Mountains which run into the Sea, or rise very high on the Shore, are called *Promontories*, or *Capes*.

To Mountains are opposed Gulphs, Caves, Abysses, and deep Valleys: The most remarkable of which, we shall treat of in their respective Countries; and the like as to Mines, Woods, and Deserts.

In his 12th Chapter he treats of the Division of the Ocean by the Earth, and proves, That the Ocean encompasses the Earth, and the Parts of it, by a continued Tract, and that its Surface is no where totally interrupted by Lands interposed, but only its larger Continuity, and coming together freely, a little hinder'd. This is evident from the Experience of those that sail round the Earth. As to the Seas of different Denominations, and the Division of the Ocean into particular Seas, Bays and Friths, we refer them to the particular Countries from whence they take their Name, and shall only take Notice here, That the Ocean is divided into 4 great Seas, sometimes also called Oceans, *viz.* the *Atlantick* Ocean, which lies betwixt the West Shore of the Old World, and the Eastern Shore of the New, and is commonly, though improperly, called the *Northern Sea*, and therefore is more rightly divided into Two Parts, one lying from the Equator Northward, where it joins with the North Sea, and the other Southward, where it joins with the South Sea. 2. The *Pacifick* Ocean, commonly called the *South Sea*, which lies betwixt the Western Shore of *America* and *Asia*, as far as the *Indian* and *Philippine* Islands and *China*. 3. The *Hyperborean*, or Northern Ocean, which lies about the North Pole. 4. The Southern Ocean, that lies about the *Terra Australis*, of which the *Indian* Ocean is a Part.

In his 13th Chapter he treats of some Properties of the Ocean, and its Parts, wherein he proves, That the Surface of the Ocean, and of all Liquids, is round, or a Part of the Spherical Surface, whose Center is the same with that of the Earth. He makes use of the same Arguments that were formerly brought, to prove the Roundness of the Earth, and likewise of *Archimedes*'s Demonstration, which supposes Three Things: 1. That the Earth has some Center in its Middle, and therefore is Spherical. 2. That 'tis the Nature of all Fluids, that their Parts lying equal, and continued among themselves, at an equal Distance from the Center of the Earth, that which is less press'd is

Digitized by Google

is expelled by that which is more preſſed, as is plain from Experience. 3. That every Part of a Fluid is preſs'd by the Fluid above it perpendicularly, with reſpect to the Center of the Earth, if this Fluid deſcend, or be preſs'd by another Body. For his Geometrical Demonſtration of this, we refer to the Book it ſelf.

He likewiſe proves, That the Ocean is no higher than the Shores of the Land; and therefore that the Land and the Sea are every where almoſt of the ſame Height, excepting high Mountains. This is proved *a Priori* by the preceding Propoſition; and he proves it alſo *a Poſteriori* by the following Arguments:

1. We find by Experience, that Water, unleſs it be ſtop'd, runs from higher to lower Places: Therefore if the Places about the Shores were lower than the middle of the Ocean, Part of the middle of the Sea would flow to the Shores.

2. If the Ocean far from the Shore were much higher than the Sea at the Shore, that Height would be perceiv'd at a greater Diſtance than a Spherical Surface admits of: Nay, it muſt be ſeen at the ſame Diſtance from which the intercepted Parts of the Ocean are ſeen betwixt that Height and the Shore. But we find by Experience, that 'tis not ſeen at a greater Diſtance, but that the more remote Part is gradually ſeen after the nearer Part, when we come to the Shore from Inland Places; and the nearer that any Part is to the Shore, ſo much the ſooner 'tis ſeen at the greater Diſtance from the Shore.

3. When Mariners ſail in the middle of the Ocean or deep Sea, tho' they make uſe of Mathematical Inſtruments, they find it no higher there than in the Parts next the Shore; which could not be, if the Sea were elevated like a Tower or high Mountain: For as by Inſtruments we diſcern the Height of Towers or Mountains above the lower Parts of the Earth, we muſt of Neceſſity by the ſame Inſtruments perceive the middle of the Ocean to be higher than the neighbouring Parts, if it were really ſo.

4. In the middle of the Ocean Iſlands are found here and there, and that alſo in great Numbers in ſome Parts near the Continents: Therefore the middle of the Ocean is not higher than the Earth, becauſe 'tis not higher than the Shores of thoſe Iſlands.

5. No Wave of the Ocean continues long in the Form of a Heap or Hill, but is immediately diſperſed, ſo as to make an Equality with the neighbouring Parts. Therefore there can be no ſuch Height in the middle of the Ocean above the adjacent Parts of it.

6. If the Water were higher in the middle of the Ocean, no Reaſon can be given why it ſhould not flow into the Channels of the Rivers, if their Waters were lower; for we find by Experience, that Water, wherever it is, flows into the lower Parts; and hence Inundations are occaſioned. It makes nothing againſt this, that in ſome few Places the Shores are higher than the neighbouring Inland Parts, ſince in moſt Parts 'tis otherwiſe; and 'tis evident in the main, from the Courſe of Rivers, that the Midland Places are higher than the Shores. He does not however deny, that there are Countries ſomewhat lower than the Water of the Ocean; but they are either defended by the Height of the Shores, or by Ramparts made on Purpoſe, which for moſt part are not caſt up, becauſe the Ocean is higher than that Part of the Shore in its natural and calm State; but to ſave the Country from being overflowed, when the Sea is ſwollen by tempeſtuous Weather.

From all this he concludes, That the Waters of the Ocean are no higher than the Earth; and that there is no need of having Recourſe to the miraculous Providence, which prevents the whole Earth from being overflow'd.

In the next Place, he gives us the Reaſon why the Sea, view'd from the Shore, ſeems to riſe higher and higher the more remote

Digitized by Google

remote it is; and concludes, that this proceeds from a *deceptio visus*, or rather from a Miſtake of our Conception, which led many into that Error, that the middle of the Ocean is higher by many Furlongs than the Shore; and wonders they were not convinced of this Fallacy by daily Experience: For if we look at an *Area* extended to a conſiderable Length, any Body would think that the remote Parts ariſe gradually higher than thoſe which are next us, though they be all of an equal Height. He ſays, 'tis the ſame with the Waters of the Ocean; and that if we make uſe of a proper Mathematical Inſtrument on the Shore, we ſhall find no Part of the remote Ocean to be higher than the Shore, but rather a ſmall Depreſſion; ſo that the Water ſinks beneath the Horizon of the Shores.

He explains this Fallacy of our Sight by the Opticks, and demonſtrates it by a Figure; for which we refer to the Book it ſelf.

In the Fourth Propoſition of this Chapter, he explains the Cauſes and Riſe of the Bays and Friths of the Ocean, which he thinks ought more properly to be called the Bays of the Earth, and Arms or Branches of the Sea; and that thoſe are more properly call'd Bays of the Sea, where *Peninſula's* run into it from the Land.

The Cauſe of thoſe Bays he aſcribes to the Separation of ſome Part of the Earth from others; and that thoſe ſeparated Parts are lower than the Surface of the Sea: And hence it comes to paſs, that the Water overflows thoſe depreſſed and ſeparated Parts, until it meet with a higher Land, which fixes its Boundary; and the Cauſe of Friths is the ſame.

He aſſigns the Cauſe of the Separation of the Parts of the Earth to the impetuous Motion of the Sea, by Winds or otherwiſe; which happening almoſt every Day, in Progreſs of Time ſome Parts of the Shore are ſo ſhook by the Waves, that they give Way to the Sea; and the more depreſſed the Shore is, the more eaſily Bays are form'd, eſpecially if the Matter of the Shore be ſuch as may be waſted by the Water: Yet we muſt not conclude, that all Bays and Friths have been ſo form'd; for 'tis probable, that ſome of them are as old as the Creation. We have no Account in Hiſtory of any new Bay or Frith's being formed; tho' the ancient *Greeks* tell us ſome ſuch Fables concerning the Streights of *Calix* or *Hercules*; *viz.* That *Calpe*, a Mountain on the *Spaniſh* Shore, and *Abyle*, another on the *African* Shore, were formerly one, but ſeparated by *Hercules*, from whence they were called his Pillars; and the Streights were alſo call'd by his Name.

The Opinion of the Ancients, concerning that Streight betwixt *Sicily* and *Italy*, is much more probable, becauſe 'tis but ſmall.

In the Fifth Propoſition of this Chapter, he handles that Queſtion, Whether the Sea be every where of an equal Height? That it is ſo, is proved by the Firſt Propoſition, (provided there be no Impediment or Stop) wherein he ſhews the Surface of the Ocean to be Spherical, and that it has the ſame Center with the Earth. But ſince 'tis doubted whether there are not ſome Cauſes which may make ſome Parts of the Ocean higher than others, he thinks it a Matter of Moment that deſerves Conſideration, eſpecially to thoſe who have occaſion to dig through Iſthmus's for a Communication of Trade, *&c.*

Many are of Opinion with *Ariſtotle*, That the Ocean and Earth are higher towards the North, but lower towards the Equator. The Reaſon is, that the Ocean ſeems to flow from the Northern Regions as from its Fountain; but from this he can infer no certain Concluſion, becauſe 'tis ſtill a Queſtion, whether the Northern Countries, eſpecially the Northern Channels, be higher or lower than thoſe next to the Equator? Nor is it ſufficiently proved from this Motion of the Sea, becauſe

becauſe 'tis not general, nor perceiv'd in all Northern Countries; but tho' this Motion be allow'd, it will not follow that the Ocean is higher there, becauſe to avoid this Exceſs of Height, the Ocean flows from thoſe Places to the Equator.

This Opinion, That the Northern Regions are higher than the reſt, ſeems to have taken its Riſe from this; That when we travel to the Northward, we conceive the Pole to be elevated above the Horizon, and the Place where we are; and therefore, that the Pole of the Earth and the neighbouring Countries are higher than others.

Some think, that the *Indian* Ocean, betwixt *Africa* and *India*, is higher than the *Atlantick*, and endeavour to prove it from the *Arabian* and *Mediterranean* Seas: Where, at the ſame time, we are to conſider, whether Bays be higher or lower than the Ocean, eſpecially in the extream Parts of thoſe Bays, and particularly thoſe which are join'd to the Ocean by narrow Streights.

'Tis not unlike, that the *Atlantick* and *Indian* Oceans are higher than the *Mediterranean*, eſpecially the extream Parts of it, towards *Aſia Minor*, and *Egypt*: For the *Atlantick* Ocean flows into the *Mediterranean* by the Streights of *Cadix*; and 'tis likely that the Ocean is ſomewhat higher than *Friths*, becauſe the Water has not a Free Influx into them. At the Streights, indeed, the Difference can be but ſmall; but as we advance further into that long and broad Tract betwixt *Europe* and *Africa*, this Bay ſeems to be lower depreſs'd than the Ocean, eſpecially when it is ſtop'd by Rocks, Iſlands, and Promontories, which repel the Water, and leſſen the Influx. And if it be true what credible Writers ſay of *Darius*, *Seſoſtres*, and other Kings of *Egypt*, we are not to doubt of this Inequality of Height; for thoſe Kings attempted to dig a Canal betwixt the *Red Sea* and the *Nile*, that Ships might ſail this Way from the *Indian* and *Red Seas* by *Egypt*, and from thence by the Mouth of the *Nile* into the *Mediterranean*, which would have been of vaſt Advantage to *Egypt*, and to many Countries on the *Mediterranean* Sea: but they deſiſted, upon Information by Perſons of Skill, that the *Red Sea* was much higher than the Land of *Inner Egypt*: Therefore if the *Red Sea* be higher than *Egypt*, it muſt be higher than the *Nile*, and by Conſequence than the *Mediterranean*: For 'tis plain, that the *Nile* is not lower than the *Mediterranean*, becauſe it flows into it. Therefore the *Indian* and *Red Seas* are higher than the *Mediterranean*, at leaſt than the extream Parts of it about *Egypt*, *Syria*, *Thracia*, and the *Ægean* Sea. Beſides, not only the ancient *Egyptian* Kings, but their later Sultans, and the Emperors of the *Turks*, are ſaid to have attempted the ſame Thing, and to have forborn it for the ſame Reaſons.

But what we have ſaid concerning the *Red Sea*'s being higher than the *Mediterranean*, is queſtioned by ſome, ſince they are both Bays of the Ocean, the *Mediterranean* of the *Atlantick*, and the *Red Sea* of the *Indian* Ocean. *Varenius* thinks the Cauſe to be, that tho' both of them are Bays from the Ocean, and are therefore probably ſomewhat lower than the Ocean; yet it is not ſo ſenſible in the *Red Sea*, becauſe 'tis of a much leſs Length than the *Mediterranean*, and therefore a great deal nearer to the Ocean than the extream Parts of the latter.

Therefore if a Canal were dug from the *Red Sea*, the *Indian* Ocean would ſend in abundance of Water into the *Mediterranean*; but he queſtions whether it would ſend ſo much as to overflow the Countries which lie upon the *Mediterranean*; for it might perhaps be, that if the *Indian* Ocean ſent in more through that Canal, the *Atlantick* would ſend in leſs through the *Streights*; becauſe the Height of the *Atlantick* would be leſſen'd if the Motion were from the *Indian* Ocean into the *Mediterranean*.

Digitized by Google

Therefore he thinks, thoſe Princes gave over the Attempt rather from Political Reaſons: And,

1. Becauſe of the Trouble and Charge; for the *Iſthmus* is at leaſt 40 *German* Miles broad where 'tis narroweſt; the Ground is full of Rocks; and Ramparts muſt have been caſt up in many Places by ſkilful Engineers, which thoſe Governments had not.

2. Becauſe the Chriſtians, particularly the *Venetians* and other *Italians*, the *French* and *Spaniards*, would have reap'd more Advantage by it than *Egypt*, and other of the *Turkiſh* Dominions; for the Chriſtian Merchants would have ſail'd that Way to and from *Perſia* and the *Indies*, and brought home thoſe Goods in Ships, which the *Turks* had rather ſhould be brought through their Dominions on Camels which by the Toll they pay in ſeveral Places, bring much Money into their Treaſury. *Maffe*, in his Hiſtory of the *Indies*, confirms this Conjecture, when he tells us how ill *Campſon*, the Sultan of *Egypt*, took the Navigation and Trade of the *Portugueze* to the *Indies*.

3. He ſuppoſes the Sultans and *Turks* were afraid that the Chriſtians, whom they knew to be ſtrong in Shipping, would make themſelves Maſters of that Canal, and the adjacent Countries, together with *Medina* and *Mahomet*'s Sepulchre; ſince it would have been eaſy for them to have tranſported Armies by their Fleets for that End.

Alphonſus Albuquerque, the *Portugueze* Governor of the *Indies*, is ſaid to have form'd another Deſign, *viz.* to turn the Courſe of the *Nile* from *Egypt*, and by that Means to have render'd it barren and uſeleſs to the *Turks*, by digging a new Channel for it from *Abaſſia* into the *Red Sea*; but he dy'd without doing any Thing in it.

This may be confirm'd by another Inſtance: The *German* Ocean, which is Part of the *Atlantick*, running in between *Friſland* and *Holland*, makes a Bay; which tho' comparatively ſmall in reſpect of others, yet is called a Sea, and comes up to *Amſterdam*, the famous *Emporium* of *Holland*. Not far from thence is the Lake of *Haerlem*, which is alſo call'd a Sea; 'tis as high as the Bay juſt now mentioned, and ſends out a Branch to the City of *Leyden*, where 'tis divided into ſeveral Canals. Therefore ſince neither this Lake nor that Bay overflow the adjacent Countries, except in caſe of Tempeſts, againſt which Ramparts and Dikes are provided, 'tis plain that they are not higher than the Land of *Holland*. But that the *German* Ocean is higher, the Citizens of *Leyden* found by Experience, when they attempted to dig a Canal from that City to the ſaid Ocean, near *Catwick*, which is but 2 Miles diſtant, in order to let in the Sea by that Canal, that they might have ſent Ships from thence into the ſaid Ocean; but when they dug a great Way, it was diſcovered by Obſervation, that the *German* Ocean was higher than the Land betwixt it and *Leyden*; and therefore they gave it over.

'Tis otherwiſe with thoſe Bays which flow in, not by an oblong and narrow Channel, but by one that is large and broad betwixt Lands; ſuch as thoſe of *Bengall*, *Mexico*, *&c.* for 'tis not to be doubted that they are of the ſame Height with the Ocean, from which they are not ſeparated by any Streights. I know 'tis ſaid, the *Spaniards* doubted whether the *Pacifick* Sea was higher than the Bay of *Mexico*, when they thought of digging a Canal through the *Iſthmus* of *America* or *Darien*, for the Conveniency of a free Navigation to *Peru*, *China*, and the *Indian* Iſlands; but the true Reaſons of their forbearing it were found to be Political, becauſe they were afraid leſt the *Engliſh*, *Dutch*, and other Nations, ſhould make themſelves Maſters of this Canal, fortify it at both Ends, and invade *Peru*, &c. For 'tis certain, in this Caſe, the *Dutch* had been under no Neceſſity to undertake long and dangerous Voyages by the Streights of *Magellan* and

Digitized by Google

and *Le Maire* to attack *Peru*, and weaken the Strength of the *Spaniards* in those Parts.

The continual Flux and Reflux, and other Motions of the Sea, occasion a different Height of the Ocean, in the same Part, at different Times and Hours of the Day; but these are external Causes; but we speak of the natural Constitution of the Water. Besides, they do not so much vary the Height in the Ocean it self, as they do near the Shores.

In his Sixth Proposition he asserts, That the Depth of the Ocean may be sounded in most Parts by a Line; and that there are few Places where the Bottom has not been found.

The Depth of the Sea is various, according as the Channel is more or less depressed, $\frac{1}{20}$ of a *German* Mile, $\frac{1}{12}$, $\frac{1}{6}$, $\frac{1}{4}$, $\frac{1}{3}$, *&c.* and in some Places it is found to be about a whole *German* Mile, where Lines are not long enough to found it; tho' probably it is not much deeper. We don't deny however, but that in some deep Channels there are a certain sort of Whirlpools and Subterranean Passages.

The Depth is much less in Bays than in the Ocean, because the Channel is more shallow on Account of the Nearness of the dry Land; and for the same Reason, the Ocean is shallower towards the Shore than in Places more remote, because of the hollow Figure of the Channel.

Mariners sound the Depth with a Plummet of a Pyramidical Form, weighing about 12 lb. If the Line be of 3 lb. or more, such as is sufficient for 200 Perches, the others require a Plummet of more Weight. Yet there may be a Mistake in this Observation, if the Line be hinder'd to descend perpendicularly by the Waves or Vortices of the Water.

From the Depth hitherto observ'd in most Places, 'tis manifest, that it is very near equal to the Height of Mountains and Inland Places, *viz.* As much as they are elevated above the Horizon of the Shores, so much are the Channels depressed below it; but the Depth is sometimes alter'd by the Flux and Reflux, by the Increase and Decrease of the Moon, by Winds, and by the settling of Sand and Slime in the Channels.

His Seventh Proposition is, That the Ocean has no Fountains, but is contain'd within the Cavities or Channels of the Earth.

Varenius has a long Dissertation upon this Subject, with the Arguments *pro* and *con*, but determines nothing. He takes Notice, that some of the Ancients thought the Ocean flow'd from 4 Conduits under the North Pole, and represented it so in Maps; but he accounts for the Motion of the Sea from North to South, that is often observ'd in the Northern Parts by the following Reasons:

1. The Frequency of the Northern Winds.

2. The great and perpetual Quantity of Snow and Rain in those Places, which increases the Water, and makes it flow towards the South. Upon the whole, he says, he will not controvert the Opinion of those who assert, That the Fountains of all the Rivers which disburden themselves into the Ocean, are the Fountains which supply it; nor that the Water returns again to those Fountains and Rivers by Subterranean Passages, and the Vapours rais'd from the Sea, which occasion Rain. The Curious, who would see more of it, we refer to the Book it self.

In his Eighth Proposition, he asserts, That the salt Taste of the Sea-Water proceeds from the Particles of Salt mix'd with it: But whence those Particles come, or how they are augmented and preserv'd, is doubtful.

The First Part of the Proposition is plain from Experience, and known to the Vulgar, that Salt is made by the boiling of Sea-Water, and by the Heat of the Sun and Fire. In *Germany*, and many other Places, 'tis separated from the Water by Fire: In *France*, where

the Sun is hotter, the Sea-Water is let into Pits made on purpose, where, in some Months time, the Water being dry'd up by the Heat of the Sun, there is Salt found at bottom. In the Shores of many Countries, there is found Plenty of Black Salt; for the Sea flowing frequently upon the Coast, and leaving some Particles or Moisture behind it, the Water, or more subtil Part, exhales from it, and leaves Salt behind it, the Blackness of which is cured by boiling; tho' in most Shores 'tis carried off again, and dissolv'd by the Sea, which is the Reason that 'tis not found on all Shores. Hence 'tis plain, that the immediate Cause of the Saltness of the Sea-Water is the Salt Particles contain'd in it. Therefore *Aristotle* and his Followers were in the Wrong to ascribe this Saltness to the Heat of the Sun, or adust Particles.

The chief Controversy is about the other Member of the Proposition, from whence these Salt Particles come. *Aristotle* says, That dry Exhalations of a Saline Nature, rais'd from the Earth, mix'd with moist Vapours, and meeting with Rain, fall together with it into the Sea, and there produce Salt Particles, which occasions this Saltness of the Water.

Other Peripateticks alledge, That the Saltness of the Sea is occasion'd by the scorching Heat of the Sun, because the Surface of the Water is found to be most Salt.

But both these Opinions are attended with Absurdities. *Aristotle*'s Opinion is confuted thus: 1. That the Sea-Water was never yet found without a Salt Taste; so that it cannot proceed from Salt Rains. 2. That the Sea would be less Salt when Rain is not frequent; which is contrary to Experience.

The Arguments of the other Peripateticks are answer'd thus: 1. That 'tis not true that the nearer the bottom, the Waters are the less salt; and there are but very few Places where fresh Springs are found in the bottom of the Sea. 2. Experience shews, that fresh Water, tho' long expos'd to the Heat of the Fire or Sun, does not thereby become salt. *Scaliger*'s Objection against this, That the fresh Water, because of its small Quantity, does not grow thick, but dissolve, is likewise answer'd by Experience; for tho' you take a great Quantity of Water, and set it over a gentle Fire to prevent its Dissolution, yet the Water does not grow salt. 3. Lakes and Marshes, tho' scorch'd by the Sun, do not grow salt. *Scaliger*'s Objection against this, That it proceeds from a Succession of Rain-Water, is likewise easily answered; for those Pools and Lakes which proceed from Rain and Snow, are dry'd up during a long Intermission of Rain or Snow, without growing salt.

From hence *Varenius* infers, That these Salt Particles were created with the Ocean; and that we are no more to dispute this, than the Origine of the Ocean it self, or the Origine of the Earth and Generation of the World. 2. If this seem less probable, he adds, that these Salt Particles may be deriv'd from the Earth, and dissolv'd in the Sea; for he tells us, 'tis certain there are many Salt Mountains or Rocks in the Bosom of the Ocean. The whole Isle of *Ormus* is a white hard Salt Rock, of which they build the Walls of their Houses; and there is no fresh Water found in that Island. He adds, That none can be ignorant that many Salt Mines are found on the Land; but there is no need of being particular in this, for the greatest Part of the Earth is nothing but Salt: And as the Chymical Philosophers have prov'd, that every Thing owes its Consistency to Salt, Experience makes good their Assertion; for if we take a Piece of hard Earth, and burn it to Ashes, we shall find much Salt in them. To the Objection, That those Salt Parts of the Earth could not perpetually supply the Sea with Salt Particles, but they would in Time be consumed by the Ocean; he answers, That the Salt of the Sea-Water is not consum'd in such A bun-

Digitized by Google

dance, as to need much Supply; and if any be dissolv'd, it still remains in the Bottom, and supplies the Saltness of the Sea.

In his Tenth Proposition, he asserts, That the Water of the Ocean is so much the less salt, the nearer 'tis to the Poles; and becomes more salt, the nearer it lies to the Equator or Torrid Zone. But tho' this may be understood of most Parts of the Ocean, yet he owns, that it admits of some Exceptions. He assigns Six Causes why the Ocean is more salt in some Places than others.

1. Under and near the Torrid Zone, where the Sun is hotter, the fresh Vapours are more separated by the Heat; and hence it comes to pass, that the Water is more salt there than in the Northern Places, where there is not so much *fresh* Water separated, because of the weak Heat of the Sun.

2. The Second Cause is the Heat or Coldness of the Water; for the same Numerical Water, or Salt Meat, *&c.* is more Salt to the Taste when hot, than when cold; for the Heat or Particles of Fire make the Salt more acute and sensible to the Taste; and this is the Reason why the Waters near the Equator seem more salt to the Taste, than those which are near the Poles, even though they should contain the same Quantity of Salt.

3. It proceeds from the greater or less Quantity of Salt in the different Parts of the Channel of the Ocean; for as we find that there are not Pits of Salt in all Places of the Earth, and that those Pits do not all contain a like Quantity, we must judge the same of the Channel of the Sea; and by Consequence, where there is most Salt in the Channel or Shore, there the Water is more salt. Thus the Isle of *Ormus* being all Salt, the neighbouring Ocean is very salt: But whether there be more Salt in the Channels and Shores in the Torrid Zone than in the North, is doubtful; tho' some are of Opinion, that there is more Salt in those Places, because the greater Heat of the Sun separates the Water from the Earthy and Salt Parts: But this is not to be depended on, because we have no Observations to confirm it.

4. It proceeds from the unequal Frequency of Rain and Snow. In the Northern Places, Rain and Snow is frequent. In the Torrid Zone, they are less frequent some Parts of the Year, and at other Times they are almost continual; and in the rainy Months the Water of the Ocean is less salt; as is plain from the Coasts of *Malabar*, where the Ocean is fresh, in rainy Months, because of the great Quantity of Water that flows into the Sea from the Mountain *Gatis*.

5. It proceeds from the unequal Faculty of the Water to dissolve the Salt, and unite it to it self; and since hot Water dissolves the Salt better, therefore the Ocean is more salt under the Torrid Zone.

6. It proceeds from the more or less Quantity of fresh Water that flows into the Ocean from Rivers: Thus Mariners affirm, That on the Coast of *Brasile*, where the Silver River falls into the Sea, the Ocean loses its Saltness, and affords fresh Water 15 Miles from the Shore. 'Tis the same on the *African* Coast, where the River *Zaire* discharges it self into the Ocean: And to these we may add, the fresh Water Fountains that spring up in some Parts of the Bottom of the Sea.

From hence, says *Varenius*, 'tis easy to give an Account why Salt is not so easily separated by boyling from the *German* and Northern Ocean, as from the *Spanish* Sea, and that about the *Canary* Isles and Cape *Verd*, (from whence the *Dutch* fetch great Store of Salt) because this Ocean is nearer the Torrid Zone: Yet he does not deny the Channels themselves to be more or less salt in their Constitution; for the Sea-Water at *Guinea*, in the *Ethiopian* Sea, produces Salt at one Boiling as white as Snow; such as neither the *Spanish* Ocean, nor any other

Digitized by Google

other in *Europe*, produces at one Boiling.

In his Eleventh Propoſition, he conſiders why Rain in the middle of the Ocean is ſweet, tho' it proceeds from the Vapours rais'd out of the Sea; and yet Sea-Water is continually ſalt, tho' boil'd or diſtill'd: And here he tells us, That Chymiſts have hitherto laboured in vain to extract freſh Water from that of the Ocean; for tho' both when they boil and diſtil it, they find Salt left in the bottom of the Veſſel; yet Water ſeparated either Way, is ſtill found to be ſalt, and not fit for Men to drink. The Chymiſts, he ſays, tho' it ſeems ſtrange to others, have found the Reaſon of it; *viz.* That there are two Kinds of Salts in Bodies, which tho' they agree in Taſte, yet differ in other Qualities. The one they call Fix'd Salt, the other Volatile. The Fix'd Salt, by reaſon of its Weight, is not rais'd by Diſtillation, but remains in the bottom of the Veſſel; whereas the Volatile Salt is full of Spirit, and in Reality is nothing elſe but a moſt ſubtil Spirit rais'd by a gentle Fire; and therefore in Diſtillation aſcends with the Water, and is more firmly united to it by the Subtilty of the Atoms. Nor is this Volatile Salt found only with Fix'd Salt in Sea-Water, but almoſt in all Bodies, as Chymiſts find by Experience in greater and leſſer Quantities. Thus ſharp-taſted Herbs are found to have a greater Quantity of Salt than thoſe which are oily.

He aſſigns Four Reaſons why Rain-Water is as freſh by Sea as by Land, tho' it be extracted from the Exhalations of the Sea by the Heat of the Sun, or Subterranean Fires: 1. From the Slowneſs of the Operation, by which the more ſubtil Part is only rais'd from the Ocean; which, tho' it contains a Salt Volatile Spirit, yet has it in leſs Quantity than it would have were the Exhalation occaſion'd by a ſtronger Heat. 2. 'Tis probable, that before theſe Vapours arrive at that Region of the Air where they are condens'd into Rain, the Salt Spirit is ſeparated by Degrees from the watery Parts. 3. The Mixture of other watery Particles which exiſt in the Air. 4. The cooling and condenſing of the Vapours; for theſe Exhalations, rais'd from the Ocean by Degrees, are more and more cool'd, and being join'd with other Vapours in their Way, they are condens'd into a more thick Cloud; and in this Condenſation of the Salt Spirit with the fiery Particles, they fly into the higher Part of the Air.

He gives us Two Reaſons why the ſame is not perform'd in Diſtillation, where the exalted Vapours are alſo condens'd. 1. Becauſe of the Smallneſs of the Paſſage, the Salt Spirit is too ſtraitly conjoin'd to the watery Parts. 2. Becauſe the Vapours reſtrain'd in the Veſſel allow not a free Paſſage to the Volatile Spirits.

In his Twelfth Propoſition, he lays down, That the Sea-Water is more heavy than freſh Water; and that the Water of one Sea is heavier than another. The Cauſe of this, he ſays, is manifeſt from what has been ſaid already, becauſe the Sea-Water contains a fix'd Salt, which is a heavier Body than freſh Water; and that the Sea is not equally ſalt in all Places: Yet he alledges, it does not follow, the more ſalt the Water is, the more heavy it is, becauſe Salt does not augment the Weight, but leſſens it, and yet makes the Water very ſalt.

In his Thirteenth Propoſition, he aſſigns the Reaſon why ſalt Water does not ſo eaſily freeze as freſh Water; *viz.* Becauſe in the Salt there is a certain Spirit which reſiſts Congelation, and being ſeparated from the Salt, cannot be frozen by the hardeſt Froſt, as Chymiſts very well know.

In his Fourteenth Propoſition, he gives us the Reaſon why the Ocean is not made bigger, tho' it receives ſo many Rivers. 1. Becauſe the Water returns from the Sea through Subterranean Paſſages. 2. Becauſe much of the Rain which

is

Digitized by Google

is rais'd from the Vapours of the Sea falls on the Land.

In his Fifteenth and Sixteenth Propositions he gives an Account why the Sea differs in Colour, which he assigns to the different Colours of the Sand at Bottom. Thus the *Red Sea* appears always of that Colour, because the Red Sand is kept in continual Motion by the violent Flux and Reflux of the Water there; which being taken up in a Vessel, the Red Sand sinks to the bottom. In other Places, 'tis occasioned by multitudes of small Red Worms, which Mariners call Sea-Fleas. About Cape *Verd* in *Africa*, the Sea appears Green, from a Green Herb which lies in the Surface of it, and is troublesom to Sailors. We pass by the several Things which are found in the Sea, and the different Sorts of Animals which are bred in it, till we come to the particular Countries most noted for those Animals.

In his Eighteenth Proposition he gives us the Reason why the Ocean, or rather all Water, casts Terrestrial Bodies ashore, especially in the full Moon. He ascribes this to the Motion of the Water, which if it be swift, and towards one Quarter, it carries Terrestrial Bodies with it until they come to the Shore, where the strong Motion of the Water ceasing, those Bodies are laid down; and because all Waves tend to some Coast, therefore all Terrestrial Bodies are carried to the Shore; and this happens at the Full Moon, because then the Motion of the Sea is greatest.

SECT. XVII.

Varenius, *in the Fourteenth Chapter of his First Book, treats of the Motions of the* Sea *in general, and particularly of its Flux and Reflux.*

IN the First Proposition of this Chapter, he asserts, That Water has only one natural Motion, *viz.* from a higher to a lower Place; and if the neighbouring Body or Place be either equal with, or higher than the Surface of the Water, then the Water rests, except it be put in Motion by a violent Cause. This being plain from Experience, there is no need to insist upon the Proof of it.

In his Fifth Proposition, he divides the Motion of the Sea into General, Proper, and Contingent Motions. The General Motion is that which is found at all Times in all Parts of the Ocean. The proper Motions are those by which some Parts of the Ocean are only moved, and those Motions are either perpetual or anniversary; the latter being found only at certain Months and Days of the Year. The Contingent Motions are such as begin and end without any certain Order, and these are infinite; the Cause of which is the Wind, which drives the Sea before it to an opposite Point; and from this, the Sea is never free in one Part or other.

In his Seventh Proposition, he divides the General Motion of the Sea into two Sorts: The one is continual from East to West; and the other consists of two contrary Motions, call'd Flux and Reflux.

That the Ocean moves continually from East to West, is proved chiefly from the Motion of that Sea which lies in the Torrid Zone, betwixt the two Tropicks. This Motion is plainly perceived by those who sail from *India* to *Madagascar* and *Africa*; and likewise in the *Pacifick* Ocean, betwixt *New-Spain* and *China*, and the *Moluccas*; and likewise in the Ocean betwixt *Africa* and *Brasile*. For the particular Instances of this, we refer to the Account of the several Countries, and of the Seas adjoining to them.

In his Eighth Proposition, he shews us, That the Winds frequently alter this Motion of the Sea, especially stated Winds: For because those Winds blow for most Part from South and North, or from their collateral Points; hence it comes to pass, that the Sea, which by its

its General Motion tends to the West, is carried towards the collateral Points of the West; and likewise because the General Wind blows very rarely from the East it self, but for most Part from the collateral Points of the East, it changes the General Motion of the Sea. The Northern Winds change this Motion more frequently in the Northern Sea, where the General Motion of the Ocean is sensible but in a few Parts.

In his Ninth Proposition, he tells us, That the Cause of this General Motion of the Sea from East to West is uncertain. Here he informs us, that the *Aristotelians* think it proceeds from the first Motion of the Heavens, which is not only common to all the Stars, but also in Part to the Air and Ocean, by which all Things are carried from East to West; tho' this was unknown to *Aristotle* himself, and all our *European* Philosophers, until the *Portugueze* sail'd through the Ocean under the Torrid Zone. Some of the *Copernicans*, tho' they ascribe this Motion to the Moon, yet they think the Motion of the Earth contributes much towards it; for they suppose the Water cannot follow the Circumrotation of the Earth, and that it stops towards the West, while the Earth is carried Eastward; and that so the Sea is not mov'd from one Part of the Earth to another, but that the Earth leaves Parts of the Water, one after another, behind it. Others, who are neither satisfied with *Aristotle* nor *Copernicus*'s Opinion, have Recourse to the Moon, as that which governs all Moistures; and therefore they will have it, that she carries the Sea about from East to West: But if you ask them how, they tell you, 'tis by *an occult Quality, Influence, Sympathy, her Nearness to the Earth, and such like*; which is as much as to say, they knew not how. 'Tis indeed very probable, that the Moon is the Cause of those Motions, because at the New and Full Moon the Motion is much more violent than in the Quarter Moons, when 'tis commonly very small.

The acute Mr. *des Cartes* explains, in a Mechanical Manner, how the Moon occasions this Motion both in the Water and Air: For he supposes, according to his general Hypothesis, that infinite Numbers of Atoms are carried round the Earth, by which the Space, which he calls the Vortex of the Earth, is filled up, without any *Vacuum*, as far as the Moon; *viz.* Let the Earth be FEHG, the Water 2143, the Air 6587, the Vortex of the Earth BADC, the Moon B.

If therefore in the Vortex BADC, there were no Moon, says he, the Particles of that Vortex would, without any Let, be turn'd round the Center T: But because the Moon is in it, therefore the Space by which the Celestial Matter flows, betwixt B and T, is made more strait; and hence it follows, that the Celestial Matter flows more swiftly there, (betwixt B and T) and therefore presses more both the Surface of the Air in 6, and the Surface of the Water in 2, than if the Moon were not in the Diameter of the Vortex BD: And since the Bodies of the Earth and Air are fluid, and easily give Way to that Pressure, they could not be so high above the Parts of the Earth F and H, as if the Moon were without the Diameter B D; and on the contrary they must be higher towards E and G. But while the Earth is carried from E by Way of F towards G, or from West to East, the Tumor of the Water 412, and like-

Digitized by Google

likewise of the Air 856, which now lie upon the Part of the Earth E, do move by Degrees towards more Western Parts; so that in 6 Hours Time they come to the Part of the Earth H, and in 12 Hours to the Part of the Earth G. Hence it comes to pass, that the Water and Air are carried from the East Parts of the Earth to the West, by a continual Flux. Thus, says *Cartesius*, the Force of the Demonstration lies in this; because the Earth E F G H is carried round with the Water 1234, together with the Celestial Matter of the Vortex betwixt B A D C and 6587; but the Moon being in B, makes the Space B 6 more straight; therefore the Celestial Matter, with a certain Pressure passing through the straighter B 6, the Air and Water, while F passes through below B, must be pressed forward towards H G E, and while E passes through under B, must be pressed forward towards H G F, and so on. Nor can the Part of the Celestial Matter which reaches the Moon in B D resile back, tho repell'd, because all is full of Bodies: And tho' it press the Air and Water from 62 F, not only towards the West E 15, but also towards the East 73 G. Yet because the Parts situated from 62 F towards the East 73 G, do more and more recede from those Streights, but the Parts situated towards E 15 do more and more approach 'em; therefore this Force is principally received by them.

But there are several Things wanting in this Explication of that ingenious Person.

1. It would follow from hence, That the Sea should fall as the Moon approaches it, and rise in those Parts which are a Quarter or 6 Hours distant from it; that is to say, the Tumor is in E 15; but in F 26, where the Moon is Vertical, there's the less Height: But this is contrary to Experience; for in F 26, the Sea swells; but in E 15, there's the least Swelling. How this Absurdity may be avoided, shall be observ'd in the following Proposition.

2. 'Tis not sufficiently shew'd (*Cartes* himself has plainly omitted this) why when the Celestial Matter presses the Air in the straight Space B 6, and the Water 2, that it is not equally moved towards G 37; since, with the Earth it self, both the Air and the Water, as well as the Celestial Matter, are carried towards G 37; and therefore the Water and Air are rather carried towards the East than towards the West. I doubt, says *Varenius*, whether this Objection can be sufficiently remov'd, meerly by the Subduction of the Parts from 6 B, towards G 3.

3. When the Moon approached any Sea, the Wind would be found more vehement in that Part towards the West from the East, than at another Time: But it is not so.

4. It is more manifest, that the Sun occasions that Motion in the Air, or rather General Wind, from the East towards the West, because we perceive it in the Morning, before and at the Rising of the Sun, in most Places; for then it is a Quarter distant from the Vortex of the Place. These Things deserve to be consider'd in Mr. *des Cartes*'s Explication, to say nothing of the Hypothesis it self.

Varenius doubts whether this Motion of the Ocean can be ascrib'd to a general East-Wind; for since that Wind is perpetual under the Torrid Zone, it would seem that it might also occasion that perpetual Motion of the Sea. 'Tis certain, that this Motion is encreas'd with the Highness of the Wind; but that's no sufficient Proof that the Motion it self depends on the Wind. The Connexion which this Motion has with the Moon seems to oppose this, because when the Moon approaches the Sea, it makes it swell. 2. Because in the Full and New Moon that Motion is more vehement than in the Quarter Moons. This is excellently explained by Mr. *des Carte*'s Demonstration; *viz.* because in the New and Full Moon, the Moon is nearer the Earth; and thus the Passage B 6 is made

Digitized by Google

more ſtrait for the Celeſtial Matter to paſs through, and therefore there is the greater Preſſure. And tho', when the Moon is Full, the Swelling of the Sea may be aſcrib'd to her greater Light, yet when the Mooh is New, this Reaſon ceaſes; and ſo 'tis plain, that the Light of the Moon is not the Cauſe of this Motion, but it muſt rather come from *Cartes*'s Preſſure; as we ſhall have Occaſion to ſhew in what follows.

In his Tenth Propoſition, he lays down, That the Second General Motion of the Sea is its Flux and Reflux, by which in 12 Hours and an half 'tis perceiv'd to flow and ebb; *viz.* it flows when the Moon comes to the higheſt or loweſt Meridian, and it ebbs when the Moon retires from the Meridian towards the Weſt or Eaſt.

Here he propoſes to be enquir'd, in the firſt Place, Whether the Ocean by this Motion be carried towards one certain Point, *i. e.* from Eaſt to Weſt, and from Weſt to Eaſt?

For the Shores of Bays, and the Channels of Rivers, in which the Flux and Reflux is more diſcernable than in the Main Sea, lie towards different Points; ſome from Weſt to Eaſt, as the *Mediterranean* Sea; ſome from South to North, as the *Arabian* Gulph: And in each of thoſe Bays and Shores, the Waters flow according as they lie; and by Conſequence, in thoſe different Bays and Shores, the Motion of the Ocean is towards different Points: Therefore 'tis to be enquired in the firſt Place, Whether this Motion of the Ocean obſerves no certain Point, or is in ſome Places carried to different Points, or whether it obſerves two Points, *i. e.* the Weſtern Point in the Flux, and the Eaſtern Point in the Reflux, or whether 'tis carried to the Weſtern Point both in the Flux and Reflux? He anſwers, That the whole Ocean by the Flux is carried from Eaſt to Weſt, and the like in the Reflux; but in the latter by a leſs Quantity of Water: And therefore he concludes, That the Flux and Reflux of the Sea is not to be reckon'd diſtinct from that General Motion by which it is continually carried from Eaſt to Weſt, but only as a Modification of that General Motion, and is more properly called a Riſing and Falling, than Flux and Reflux; but 'tis call'd Flux and Reflux, becauſe it ſeems to approach to, and retire from the Shore, not from the Quality of the Motion it ſelf, but becauſe of the Situation of the Shores, tho' the Ebb be not occaſion'd by that Situation, but by the Nature of the Motion it ſelf. Nor can the Motion of the Sea be conſider'd from its flowing to the Shore; for whatever the Motion of the Sea be, and to what Point ſoever it tends, the Flux is always towards the Shore, becauſe of the fluid Nature of the Water.

He ſays, That the Flux and Reflux of the Sea is prov'd to be always from Eaſt to Weſt, by the following Arguments: 1. In the Ocean remote from the Shore, under the Torrid Zone, there is no other Motion perceiv'd but that from Eaſt to Weſt. 2. In ſuch Friths as are directly extended from Eaſt to Weſt, and by which the Parts of the Ocean are join'd, as the Streights of *Magellan*, *Manile*, and *Java*, &c. the Sea riſes and falls 12 Hours; but in the Fall it does not flow back out of the Friths from Weſt to Eaſt, but flows out by the other Mouth of the Frith into the Weſt; which is a manifeſt Proof, that this Riſing and Falling of the Sea is not a peculiar Motion, but a Modification of the General Motion; and that the Sea does not flow back towards the Eaſt. But we are to obſerve as before, That when we ſay the Sea flows from Eaſt to Weſt, we underſtand not only the Cardinal, but alſo the Collateral Points.

In the Eleventh Propoſition, he explains the Cauſe of the Flux and Reflux of the Sea, or rather of its Riſing and Falling: And here he tells us, That no Phenomenon in Nature has more exerciſed the Pens and Thoughts of the Learned,

Digitized by Google

Learned, tho' for moſt Part to little Purpoſe. Some were ſo weak as to fancy the Sea and Earth to be an Animal, and that the Flux and Reflux of the Sea was occaſioned by its Reſpiration. Others fancied there was a great Vortex in the Sea near *Norway*, which ſwallowed up the Water for 6 Hours, and threw it out again as many. *Scaliger* and others aſcrib'd it to the Shores, particularly to thoſe of *America*, which repell'd the Sea when it was carried towards them by its General Motion; but moſt when they perceived the Connexion of the Riſing and Falling of the Sea with the Motion of the Moon, concluded it to depend intirely on that.

Mr. *des Cartes* deduces this Motion from his general Hypotheſis thus: Look back into the Diagram of the Ninth Propoſition, in which let A B C D be that Vortex, which has the Earth for its Center, and which, with it and the Moon, is carried round the Sun in the greater Vortex. M the Center of this Vortex, E F G H the Earth, 1234 the Surface of the Sea; by which, for the better Perſpicuity, we ſuppoſe the Earth to be every where covered, and 5678 to be the Surface of the Air which encompaſſes the Sea: Therefore if there were no Moon in that Vortex, the Point T, which is the Center of the Earth, would be in the Point M, which is the Center of the Vortex; but the Moon being towards B, this Center of the Earth T ought to be betwixt M and D; becauſe when the Celeſtial Matter of this Vortex is moved any thing quicker than the Moon and Earth, which it carries with it, except the Point T be ſomewhat more diſtant from B than from D, the Preſence of the Moon would hinder it to flow ſo freely betwixt B and T, as betwixt T and D: And ſince the Place of the Earth in that Vortex is not determined, except from the Equality of the Force of the Celeſtial Matter which flows about it; therefore 'tis evident, that it ought ſomewhat to approach towards D: And the ſame Way when the Moon is in C, the Center of the Earth ought to be betwixt M and A; and ſo the Earth always departs a little from the Moon. Moreover, becauſe by the Moon's being towards B, not only that Space by which the Celeſtial Matter flows betwixt B and T, but alſo that by which it flows betwixt T and D, is made ſtraiter. Hence it follows, that that Celeſtial Matter flows more ſwiftly there; and therefore does the more preſs both the Surface of the Air in 6 and 8, and likewiſe the Surface of the Water in 2 and 4, than if the Moon were not in the Diameter of the Vortex B D: And ſince the Bodies of the Air and Water are fluid, and eaſily ſubmit to that Preſſure, they ought to be leſs high over the Parts of the Earth F and H, than if the Moon were without this Diameter B D, and on the contrary muſt be higher towards G and E; ſo that the Surface of the Water 1, 3, and of the Air 5, 7, would be protuberant there. But becauſe the Part of the Earth which is now in F oppoſite to the Point B, where the Sea is loweſt, will after 6 Hours be in G, oppoſite to the Point C, where the Sea is higheſt, and in 6 Hours more in H, oppoſite to the Point D, and ſo on: Or rather, becauſe the Moon does in the mean time move ſomething forward from B to C, and in the Space of a Month runs through the Circle A B C D. The Part of the Earth which is now in E, oppoſite to the Body of the Moon, will be in 6 Hours and about 12 Minutes beyond the Point G, in that Diameter of the Vortex A B C D, which cuts the Diameter of the Vortex, in which the Moon will then be at Right-Angles, then the Water will be moſt high there, and after 6 Hours and 12 Minutes, it will be beyond the Point H, in the Place where the Water will be loweſt, *&c.* From whence 'tis clearly underſtood, that the Water of the Sea muſt in every 12 Hours and 24 Minutes flow and ebb in one and the ſame Place.

Digitized by Google

This is *Cartes*'s Demonſtration, in which 'tis particularly ingenious, becauſe it very aptly ſhows not only how the Afflux of the Sea is made towards a Place when the Moon is moved towards the Vortex or Meridian of it, but alſo when the Moon is mov'd below the Horizon to the Midnight Meridian.

We told in the Cloſe of the Ninth Propoſition what was wanting in this Demonſtration: And 'tis chiefly to be wonder'd at, that *Cartes* did not obſerve, that, according to his Demonſtration, the Height of the Water muſt be leaſt, and the Swelling intirely ceaſe, when the Moon came to the Meridian; as when the Moon is in B, the Water is loweſt in 2 and 4, and on the contrary the Water ſwells at the Departure of the Moon or Earth; ſo that when F is in G, that is, 6 Hours from the Moon, it will be at the higheſt: Which is manifeſtly contrary to Experience; for when the Moon approaches the Meridian, the Water increaſes, and when ſhe goes from it, it decreaſes; yet *Cartes* aſſerts the contrary, both in his Words and Diagram. But I think, ſays *Varenius*, that the Abſurdity may be removed from the Demonſtration thus: Let us ſuppoſe that the Vortex of the Earth A B C D is without the Moon, and that the Water 1234 is equally diſtant from the Center T, without any Tumor, but carried about with the Earth and Celeſtial Matter betwixt A B C D and 5678. Let the Body of the Moon approach in this Vortex; for Inſtance, in B, and thus the Space T B is made ſtraiter, and the Celeſtial Matter, as it endeavours to get through that Paſſage, will preſs the Water in 2 towards I.

Therefore whilſt the Water is preſſed from 2 towards I, 'tis to be enquired where the greateſt Swelling of the Water will be, whether in the Place E, which is a Quarter diſtant from the Place F, (to which the Moon is Vertical) or in the Place near unto, or which is next to F towards E? If we aſſert the Firſt, to wit, the Tumor, muſt be in E, Experience gainſays it; but that the Second is truly ſo, is confirm'd by Experience, and proved by Reaſon, *viz.* while the Moon is over the Place E, the Water will be expell'd from 2 towards I; but the greateſt Swelling will be in the Place next to 2, not in I; but the leaſt Increaſe will be in I. This is manifeſt from Experience, becauſe in the Weſtern Places, the Swelling of the Sea is lateſt perceived. Reaſon it ſelf, and the Nature of the Motion of the Water, require this: For if the Water be poured out into 2, that it may flow towards E, the greateſt Plenty will be in the Place E, a little leſs in the neighbouring Place, and ſtill a little leſs in the Place next to that, and the leaſt in E: Therefore when the Water is thus preſſed from 2 towards E, the greateſt Quantity of it will be in the Place next to 2, and the Tumor will be ſo much the leſs, the more remote the Tumor is from 2: For becauſe the Earth is carried round, that E might come to F, then the greateſt Tumor will be in E, and the Water will be thruſt towards H.

Therefore *Cartes*'s Diagram and Demonſtration is ſo to be chang'd, that the Tumor may be in the neighbouring Place to 2; that is, to the Place to which the Moon is Vertical.

In his 12th Propoſition, he informs us, That in the Full and New Moon, the General Motion of the Sea from Weſt to Eaſt is moſt vehement, and the Swelling of the Sea is in moſt Parts perceiv'd to be greater; but in the Quarter-Moons, the Motion and Swelling are both leaſt.

Experience proves this Propoſition; for Mariners teſtify, That the Sea ſwells at New and Full Moon, but is calmer in the Quarter-Moons. This is alſo demonſtrated eaſily, according to the Hypotheſes of the foregoing Propoſitions: For the Moon, when Full and New, is nearer to the Earth than at any other Time, and further off in the Quarters, as Aſtronomers demonſtrate: For when the Moon

Digitized by Google

Moon is nearer to the Earth, that is, when the Space B T is leſs, the Celeſtial Matter being ſtop'd, preſſes the Water with more Force from 2 to 1, (becauſe 'tis nearer;) but in the Quarters 'tis contrary.

Yet the Motion is obſerv'd to be more violent at the Full than at the New Moon, at leaſt in ſome Places; for which, ſays *Varenius*, he can ſee no Cauſe, except it be aſcrib'd to the Light of the Moon. Nor can it be otherwiſe explain'd, why at Full Moon both Trees and Animals are more impregnated with the Moiſture of the Ocean than in the New Moon, tho' the Sea does equally ſwell then. Yet he ſays, 'tis wonderful what *Twiſt*, a *Netherlander*, ſays in his Deſcription of *India*, of the Kingdom of *Guzaretb*, in which he lived many Years, *viz.* That Cockles, Crabs, and other *Shell-Fiſh*, have leſt Moiſture and Fleſh in the Full Moon, but moſt in the New Moon; which is contrary to what is perceiv'd in all other Countries. Nor is it leſs wonderful, that at the Shores next to the Mouth of the River *Indus*, in that ſame Kingdom, the Sea increaſes and ſwells at the New Moon; and that not far from thence, in *Calecut*, the Sea increaſes at the Full Moon.

In the Time of the Equinoxes, the Floods are greater and ſtronger than at other Times; but during the Solſtices, they are leſs. *Carteſius* thinks, this Phenomenon is only to be accounted for from his Hypotheſis; but his Account of it is very obſcure, and far from a Demonſtration: 'Tis probable, the Sun and General Winds contribute much towards the Swelling of the Sea during the Equinoxes, the Sun being directly over the Sea under the Torrid Zone; ſo that either through Influence of the Sun or Wind, the Sea cannot fail to ſwell more then, than at other Times: Or we may ſay, That the Swelling of the Sea, great Rains, Winds, and Inundations, at that Time, are to be derived all from the ſame Cauſe.

In ſome Bays, Shores, and Parts of the Ocean, there's a great Increaſe and Decreaſe of Water in the Ebbs and Floods: In ſome, it is very ſmall; and in others, there's no ſenſible Flood or Ebb.

Thoſe Places have the greateſt Flood and Ebb, 1. That are in the Torrid Zone, within the Tropicks. 2. Thoſe lying directly Eaſt and Weſt, or towards the Collateral Points. 3. Bays that are very long, and not broad. 4. Places that have few Iſlands or Promontories.

The moſt remarkable Flood and Ebb hitherto known is in the Bay of *Cambaia*, in one of the Mouths of the River *Indus*; for it ebbs ſpeedily, and the Water retires a vaſt Way: Whence 'tis reaſonably thought to be the Place where *Alexander the Great* arrived with his Fleet, in order to tranſport his Army; but finding the Water to retire all of a ſudden, and his Fleet to be leſt on dry Land, he judg'd it was the Mind of Heaven that here he ſhould put a Stop to his Progreſs: And this is alſo reported by the Inhabitants of *Cambaia*. For the higher the Channel is, the more it is uncover'd at the Tide of Ebb; but 'tis probable there may alſo be ſome other Cauſe.

At the Town of *Damma* in *India*, near *Surrat*, the Height of the Water is varied to Two Fathom and an half, and the Sea retires half a *German* Mile from the Shore.

In the Bay of *Cambaia*, the Water riſes ſometimes 5, and at other Times 7 Fathom high, which Strangers not knowing, do many Times loſe their Ships; which, upon the retiring of the Sea, are daſh'd againſt the Rocks.

There is a vaſt Irregularity of the Tides in the Bays and Shores of the Streights of *Magellan*; ſometimes the Tide of Ebb and Flood laſts 3 Hours, and ſometimes 12, which is aſcrib'd to the violent Irruptions of the Sea into that Frith, and to the frequent tempeſtuous Winds.

About

Digitized by Google

About *Malacca*, and the Streights of *Sunda*, there are very great Floods and Ebbs.

Some of the Ancients (as *Scaliger* informs us) said, there was so great an Ebb in the *Arabian* Gulp, or *Red Sea*, that *Moses* and the Children of *Israel* passed it without a Miracle; but this is false, because the Sea never ebbs there so much as to leave the Channel dry.

Thomas Button, an *Englishman*, when he winter'd at *Nelson*'s Bay in *Hudson*'s Streights, at 57 Degrees of Northern Latitude, observ'd, that every 12 Hours the Water rose 15 Foot and more; and next Summer he found it much the same in the 60th Degree: But in *Hudson*'s Bay, and in that of *Sirame*, the Water did not rise above Two Foot.

Along the Coasts of *China*, and in the Islands of *Japan*, the Tides are very discernable.

They have great Tides at *Panama*, a Town in *America*, upon the *Pacifick* Ocean, the Water rises very high, and immediately falls: At Full Moon, the Floods are so great, that the Water enters the Houses of the Town. Along all the Coasts of the South Sea, they have very great Floods and Ebbs; and at low Water, the Sea retires Two *German* Miles, that it cannot be seen by those who stand on the Shore.

In the Gulph of *Bengal*, upon the Coasts of *Siam*, the Water rises 10 Foot.

In the *Mediterranean*, the Floods are not perceived, because the Situation is contrary to the Point towards which the Sea is carried; therefore the Water is so little augmented by the Flood, that it is not perceptible, except in the Gulph of *Venice*, which, because of its great Length, and small Breadth, shews the Flux and Reflux of the Sea, which is not perceiv'd in the rest of the *Mediterranean*, because of its great Breadth. Hence it comes to pass, that this Flux and Reflux of the Sea was unknown to the *Greeks*, and likewise to the *Romans* in the Time of *Scipio Africanus*: So that both of them, when they perceived it in other Places, look'd upon it as a Miracle; as is evident from *Alexander the Great*'s Expedition, and *Scipio*'s Siege of *Carthage*: But in *Cicero*'s Time, it was well enough known to the *Romans*. Some small Fluxes were observ'd at *Marseilles*; and in some Coasts of *Barbary*, it is said to be remarkable enough.

But in the *Baltick* Sea, and likewise in the whole *North* Sea, beyond *Great Britain*, *Norway*, and *Greenland*, and in the Northern Shore of the *Pacifick* Sea, no Flood or Ebb has hitherto been observed. The Cause of this is not yet very well known, except we ascribe it to their being far remote from the Course of the Moon, that they are extended from the West to the East and North, and that the Tides are hindered by Multitudes of Islands and Promontories. These Three together must be assigned as the Causes which hinder the Tides in those Seas. Thus the Objection, as to the Tide in *Hudson*'s Bay, will be removed, because it lies from East to West; and when the Sea is carried to the latter, it is no wonder that the Flood is more perceptible there than in the Sea of *Norway*, the *Baltick*, and other Northern Places.

In his 16th Proposition, he shews, That in those Places to which the Moon is Vertical, the Flood and Ebb is greatest, except other Things hinder it, as we mention'd in the 14th Proposition: From whence it comes, that the more remote those Parts of the Sea are from that Place, so much the less is the Flood and Ebb.

In his Eighteenth Proposition, he shews us, That the greatest Flux of the Sea in any Place, and the Time of it, ought to be when the Moon is in the highest or lowest Meridian of that Place; but in many Parts it is found in another Situation of the Moon.

For then the Moon is nearest to any Place when she is in the Meridian of it, because the *Hypotenusa* of a Right-Angled Triangle is longer than the *Cathetus*: From whence it is inferr'd by the 16th Pro-

Digitized by Google

Proposition, That when the Moon is in the Meridian, then the Flood ought to be highest, and an Ebb immediately follows; but when the Moon is in the low Meridian, then the narrow Part of the Vortex of the Earth opposite to it is in the high Meridian, and effects the same Thing as if the Body of the Moon were there.

But here we meet with a great Difficulty; for there are many Shores of the Earth, where we find that the Flood is not highest when the Moon comes to the Meridian, (as the Philosophers of former Ages taught) but sooner or later, *viz.* as the Moon comes to a certain Vertical Circle, or to a Point that is not Cardinal. Nor is this Point constantly observ'd; but for most part at New and Full Moon the Flood is highest, and the Ebb begins before the Moon comes to this Quarter or Vertical Circle. Thus at *London*, the Water is at highest when the Moon comes to the Point betwixt the South and West, or betwixt the North and East; that is, to the South-West, or North-East Point. For *Varenius*'s other Instances to prove this Proposition, we refer to the Book it self.

It is very difficult to explain the Cause of this remarkable Difference in all Places, tho' it be incumbent on a natural Philosopher or Geographer to do it. It is probable, that the various Windings of the Shores, their Situation with respect to the Sea, the Obstructions occasion'd by Islands, the Meeting of different Tides, the Distance of Places from the Course of the Moon, the various Winds, especially the Constant and General Winds, and the Declivity of the Shores, contribute much to the remarkable Difference above-mentioned. For Instance; At the Port of *London*, the Tide flows till the Moon comes to the South-West; *viz.* she declines from the Ecliptick towards the South; for then the Water begins to ebb, but not when the Moon comes to the Meridian; therefore we must say, That while the Moon moves from the Meridian of *London* towards *Brasile*, (or from *Brasile* towards *London*) therefore the Sea does not ebb from *London*, but still flows, because the Shores of *America*, towards which the Ocean is mov'd by the Moon, repels that Water towards *England*. But why, whilst the Moon declines from the Ecliptick to the North, is the Flood greatest, and the Beginning of the Ebb observ'd, before the Moon comes to the Meridian, *viz.* in the North-East Quarter?

I answer, That it is because the Moon is much nearer *England* when she declines from the Ecliptick towards the South, and therefore hastens the Flood; but the Cause why 'tis not continued till the Moon comes to the Meridian, may be, because the Moon moves the Sea more towards the Sea of *Mexico* and *Hudson*'s Bay, where a great Flood and Ebb is observ'd. But *Varenius* owns, that these Reasons do not satisfy him; and therefore he leaves it to further Observation and Enquiry.

In his 19th Proposition, he lays down, That in most Places, the Sea flows Six Hours and Twelve Minutes, and ebbs as much.

In some few Places it flows longer, and ebbs in a shorter Time; and on the contrary, in some few Places it flows a shorter Time, and ebbs longer, but so as the Flood and Ebb together make 12 Hours, with 24 ½ Minutes; so that it flows and ebbs twice in 24 Hours and 48 ½ Minutes; that is almost 25 Hours; so that each Day High-Water happens almost a whole Hour later; because the Moon returns every Day to the same Point of the Compass so much later.

Varenius thinks it difficult to assign the Causes of this Difference: Some are of Opinion, That the impetuous Current of some Rivers is one Cause why the Time of Flux and Reflux is so unequal. For Instance; the *Garonne* flows 7 Hours, and ebbs in 5; for the Violence

lence of the Stream bears againſt the Tide, and ſtops its Moſion when it flows.

In the 21ſt Propoſition, the Hour being given when it is High Water or Loweſt Ebb in the Day of the New or Full Moon, where the Flood and Ebb is ordinary, *viz.* 6 Hours 12 Minutes, he ſhows how to find the Hour and Minute of High or Low Water any Day of the Moon.

It was ſaid before, That the Time of High and Low Water is every Day later by 48 ¼ Minutes; or, to ſpeak more accurately, 48 ½ Minutes, than it was the former Day.

If therefore the Time of High Water at any Place on the Day of the Full Moon be at 12 of the Clock, the High Water will be the following Days of the Moon's Age, according to the following Table.

Moon's Age.	*Hours.*	*Minutes.*
1	12	48
2	1	37
3	2	27
4	3	16
5	4	5
6	4	55
7	5	44
8	6	34
9	7	23
10	8	12
11	9	1
12	9	51
13	10	40
14	11	29
14½	12 at Midnight.	
15	12 of the Day.	

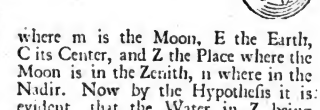
This Calculation ſuppoſes an equal Motion of the Moon from the Sun, which however is unequal; ſo that the Moon in her *Perigæum* moves much more ſwiftly from the Sun, than when ſhe is in her *Apogæum*; and then the Flood is longer than 6 Hours and 12 Minutes: But when the Moon is in her *Apogæum*, the Flood is ſooner; for ſome of the Lunar Months exceed 30 Days, and others are leſs than 29, and the Medium is reckon'd 29 Days, 12 Hours, and 44 Minutes.

But this Matter of the Tides is more clearly and accurately deſcribed by the Learned and Ingenious Captain *Edmund Halley*, in his true Theory of the Tides, extracted from Sir *Iſaac Newton*'s admirable Book, Entituled, *Philoſophiæ Naturalis Principia Mathematica*: Being a Diſcourſe preſented with that Book to the late King *James*, thus:

He explains this, and moſt of the great and ſurprizing Appearances of Nature, by the ſole Principle of *Gravity*, whereby in the Earth all Bodies have a Tendency towards its Center; and having demonſtratively prov'd the Law of the Decreaſe of Gravity, he enquires into the neceſſary Conſequences of this Suppoſition, whereby he finds the genuine Cauſe, and diſcovers the hitherto unknown Laws of the Ebbing and Flowing of the Sea.

He

Digitized by Google



He ſhews the Theory of the Motion of the Primary Planets to be nothing elſe but the Contemplation of the Curve Lines; which Bodies caſt with a given Velocity in a given Direction, and at the ſame Time drawn towards the Sun by its gravitating Power, would deſcribe; or, which is all one, that the Orbs of the Planets are ſuch Curve Lines as a Shot from a Gun deſcribes in the Air, being caſt according to the Direction of the Piece, but bent in a crooked Line by the ſupervening Tendency towards the Earth's Center; and the Planets being ſuppoſ'd to be projected with a given Force, and attracted towards the Sun after the aforeſaid Manner, are prov'd to deſcribe ſuch Figures as anſwer punctually to all that the Induſtry of this and the laſt Age has obſerved in the Planetary Motions: So that it appears, that there's no Need of ſolid Orbs and Intelligences, as the Ancients imagin'd; nor yet of Vortices or Whirl-pools of the Celeſtial Matter, as *Des Cartes* ſuppoſes: But the whole Affair is mechanically perform'd upon the ſole Suppoſition of a Gravitation towards the Sun.

He proves, That all the Inequalities of the Motion of the Moon riſes from the ſame Principles; only here the Effect of Two Centers operating on, or attracting a projected Body, comes to be conſider'd; for the Moon, tho' principally attracted by the Earth, and moving round it, does, together with the Earth, move round the Sun once a Year, and is, according as ſhe is nearer or farther from the Sun, drawn by him more or leſs than the Center of the Earth, about which ſhe moves; whence ariſe ſeveral Irregularities in her Motion.

All the ſurprizing *Phænomena* of the Flux and Reflux of the Sea, are in like Manner ſhewn to proceed from the ſame Principle.

If the Earth were alone, that is to ſay, not affected by the Actions of the Sun and Moon, 'tis not to be doubted but the Ocean, being equally preſs'd by the Force of Gravity towards the Center, would continue in a perfect Stagnation, always at the ſame Height, without either ebbing or flowing: But it being here demonſtrated, That the Sun and Moon have a like Principle of Gravitation towards their Centers, and that the Earth is within the Activity of their Attractions, it will plainly follow, that the Equality of the Preſſure of Gravity towards the Center will thereby be diſturb'd: And tho' the Smallneſs of theſe Forces, in reſpect of the Gravitation towards the Earth's Center, renders them altogether imperceptible by any Experiments we can deviſe, yet the Ocean being fluid, and yielding to the leaſt Force by its Riſing, ſhews where 'tis leſs preſs'd, and where it is moſt preſs'd by its ſinking.

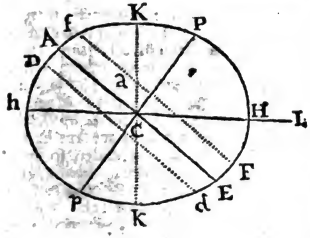
Now if we ſuppoſe the Force of the Moon's Attraction to decreaſe, as the Square of the Diſtance from its Center increaſes, (as in the Earth and other Celeſtial Bodies) we ſhall find, that where the Moon is perpendicularly either above or below the Horizon, either in Zenith or Nadir, there the Force of Gravity is moſt of all diminiſh'd; and conſequently, that there the Ocean muſt neceſſarily ſwell by the coming in of the Water from thoſe Parts where the Preſſure is greateſt, *viz.* in thoſe Places where the Moon is near the Horizon: But that this might be better underſtood, I though it needful to add the following Figure;

where m is the Moon, E the Earth, C its Center, and Z the Place where the Moon is in the Zenith, n where in the Nadir. Now by the Hypotheſis it is evident, that the Water in Z being nearer, is more drawn by the Moon, than the Center of the Earth C, and

Digitized by Google

that again more than the Water in n: Wherefore the Water in Z hath a Tendency towards the Moon, contrary to that of Gravity; being equal to the Excess of the Gravitation in Z, above that in C: And in the other Case, the Water in n, tending less towards the Moon than the Center C, will be less pressed, by as much as is the Difference of the Gravitations, towards the Moon in C and n. This rightly understood, it follows plainly, That the Sea, which otherwise would be Spherical, upon the Pressure of the Moon, must form it self into a Spheroidal or Oval Figure, whose longest Diameter is where the Moon is Vertical, and shortest where she is in the Horizon; and that the Moon shifting her Position as she turns round the Earth once a Day, this Oval of Water shifts with her, occasioning thereby the Two Floods and Ebbs observable in each 25 Hours.

And this may suffice as to the General Cause of the Tides. It remains now to shew how naturally this Motion accounts for all the Particulars that have been observ'd about them; so that there can be no Room left to doubt, but that this is the true Cause thereof.



The Spring-Tides upon the New and Full Moons, and Neap-Tides on the Quarters, are occasion'd by the attractive Force of the Sun in the New and Full, conspiring with the Attraction of the Moon, and producing a Tide by their united Forces: Whereas in the Quarters, the Sun raises the Water where the Moon depresses it, and the contrary; so as the Tides are made only by the Difference of their Attractions. That the Force of the Sun is no greater in this Case, proceeds from the very small Proportion the Semi-Diameter of the Earth bears to the vast Distance of the Sun.

'Tis also observ'd, That *cæteris paribus*, the Equinoctial Spring-Tides in *March* and *September*, or near them, are the highest, and the Neap-Tides the lowest; which proceeds from the greater Agitations of the Waters, when the fluid Spheroid revolves about a great Circle of the Earth, than when it turns about in a lesser Circle; it being plain, that if the Moon were constituted in the Pole, and there stood, that the Spheroid would have a fix'd Position, and that it would be always High Water under the Poles, and Low Water every where under the Equinoctial: And therefore the nearer the Moon approaches the Poles, the less is the Agitation of the Ocean, which is of all the greatest when the Moon is in the Equinoctial, or farthest distant from the Poles: Whence the Sun and Moon being either conjoin'd or opposite in the Equinoctial, produce the greatest Spring-Tides: and the subsequent Neap-Tides, being produc'd by the Tropical Moon in the Quarters, are always the least Tides: Whereas in *June* and *December*, the Spring-Tides are made by the Tropical Sun and Moon, and therefore less vigorous; and the Neap-Tides by the Equinoctial Moon, which therefore are the stronger. Hence it happens, that the Difference between the Spring and Neap-Tides in these Months, is much less considerable than in *March* and *September*. And the Reason why the very highest Spring-Tides are found to be rather before the Vernal, and after the Autumnal Equinox, *viz.* in *February* and *October*, than precisely upon them, is, because the Sun is nearer the Earth in the Winter Months, and so comes to have a greater Effect in producing the Tides.

Hitherto we have considered such Affections of the Tides as are universal, without Relation to particular Cases. What follows, from the different Latitudes of Places, will be easily understood by the following Figure.

Let

Digitized by Google

Let A p E P, be the Earth cövered over with very deep Waters, C its Center, P, p its Poles, A E the Equinoctial, F f the Parallel of Latitude of a Place, D d another Parallel, at equal Diſtance on the other Side of the Equinoctial, *H*, *h* the Two Points where the Moon is Vertical, and let K K be the great Circle wherein the Moon appears Horizontal. It is evident, That a Spheroid deſcrib'd upon H h and K K, ſhall nearly repreſent the Figure of the Sea, and C f, C D, C F, C d, ſhall be the Heights of the Sea in the Places *f*, D, F, d; in all which it is *High Water*: And ſeeing that in 12 Hours Time, by the Diurnal Rotation of the Earth, the Point F is transferr'd to f, and d to D, the Height of the Sea C F will be that of the High Water when the Moon is preſent, and C f that of the other High Water when the Moon is under the Earth; which, in the Caſe of this Figure, is leſs than the former C, F; and in the oppoſite Parallel D d, the contrary happens. The Riſing of the Water being always alternately greater and leſs in each Place, when it is produced by the Moon declining ſenſibly from the Equinoctial, that being the greateſt of the Two High Waters in each Diurnal Revolution of the Moon, wherein ſhe approaches neareſt either to the Zenith or Nadir of the Place: Whence it is, that the Moon in the Northern Signs, in this Part of the World, makes the greateſt Tides when above the Earth, and in Southern Signs when under the Earth; the Effect being always the greateſt where the Moon is furtheſt from the Horizon, either above or below it. And this alternate Increaſe and Decreaſe of the Tides has been obſerved to hold true on the Coaſt of *England*; at *Briſtol* by Captain *Sturmy*, and at *Plimouth* by Mr. *Colepreſſe*.

But the Motions hitherto mention'd are ſomewhat alter'd by the Libration of the Water, whereby, tho' the Action of the Luminaries ſhould ceaſe, the Flux and Reflux of the Sea would continue for ſome Time. This Conſervation of the impreſs'd Motion diminiſhes the Differences that otherwiſe would be between two conſequent Tides, and is the Reaſon why the higheſt Spring-Tides are not preciſely on the New and Full Moons, nor the Neaps on the Quarters; but generally they are the third Tides after them, and ſometimes later.

All theſe Things would regularly come to paſs, if the whole Earth were cover'd with Sea very deep; but by reaſon of the Shoalneſs of ſome Places, and the Narrowneſs of the Streights, by which the Tides are in many Caſes propagated, there ariſes a great Diverſity in the Effect, and not to be accounted for without an exact Knowledge of all the Circumſtances of the Places, as of the Poſition of the Land, and the Breadth and Depth of the Channels by which the Tide flows; for a very ſlow and imperceptible Motion of the whole Body of the Water, where it is (for Example) 2 Miles deep, will ſuffice to raiſe its Surface 10 or 12 Foot in a Tide's Time: Whereas if the ſame Quantity of Water were to be convey'd upon a Channel of 40 Fathoms deep, it would require a very great Stream to effect it in ſuch large Inlets as are the Channel of *England* and the *German Ocean*: Whence the Tide is found to ſet ſtrongeſt in thoſe Places where the Sea grows narroweſt; the ſame Quantity of Water being to

Digitized by Google

paſs thro' a ſmaller Paſſage This is moſt evident in the Streights between *Portland* and Cape *de Hague* in *Normandy*, where the Tide runs like a Sluce; and would be yet more between *Dover* and *Calais*, if the Tide coming about the Iſland from the North did not check it; and this Force being once impreſſed upon the Water, continues to carry it above the Level of the ordinary Height in the Ocean, particularly where the Water meets a direct Obſtacle, as it is at *St. Maloes*; and where it enters into a long Channel, which running far into the Land, grows very ſtreight at its Extremity, as it is in the *Severn* Sea, at *Chepſtow* and *Briſtol*.

This Shoalneſs of the Sea, and the intercurrent Continents, are the Reaſon that, in the open Ocean, the Time of High Water is not at the Moon's Appulſe to the Meridian, but always ſome Hours after; as it is obſerved upon all the Weſt Coaſt of *Europe* and *Africa*, from *Ireland* to the *Cape of Good Hope*: In all which, a S.W. Moon makes high Water; and the ſame is reported to be on the Weſt Side of *America*. But it would be endleſs to account all the particular Solutions which are eaſy Corollaries of this Hypotheſis; as, why the Lakes, ſuch as the *Caſpian* Sea, and *Mediterranean* Seas; ſuch as the *Black Sea*, the *Streights*, and the *Baltick*, have no ſenſible Tides: For Lakes having no Communication with the Ocean, can neither encreaſe nor diminiſh their Water, whereby to riſe and fall; and Seas that communicate by ſuch narrow Inlets, and are of ſo immenſe an Extent, cannot in a few Hours time receive or empty Water enough to raiſe or ſink their Surface any thing ſenſibly.

Laſtly, To demonſtrate the Excellency of this Doctrine, the Example of the Tides in the Port of *Tunking* in *China*, which are ſo extraordinary and differing from all others we have yet heard of, may ſuffice. In this Port there is but one Flood and Ebb in 24 Hours, and twice in each Month; *viz.* when the Moon is near the Equinoctial, there is no Tide at all, but the Water is ſtagnant; but with the Moon's Declination, there begins a Tide, which is greateſt when ſhe is in the Tropical Signs; only with this Difference, that when the Moon is to the Northward of the Equinoctial, it flows when ſhe is above the Earth, and ebbs when ſhe is under, ſo as to make High Water at Moon's Setting, and Low Water at Moon's Riſing: But on the contrary, the Moon's being to the Southward, makes High Water at Riſing, and Low Water at Setting; it ebbing all the Time ſhe is above the Horizon, as may be ſeen more at large in the *Philoſophical Tranſaction*, Numb. 162.

The Cauſe of this odd Appearance is propoſed by Sir *Iſaac Newton* to be from the Concurrence of Two Tides; the one propagated in 6 Hours out of the great *South* Sea, along the Coaſt of *China*; the other out of the *Indian* Sea, from between the Iſlands, in 12 Hours, along the Coaſt of *Malacca* and *Cambodia*. The one of theſe Tides, being produc'd in North Latitude, is, as has been ſaid, greater when the Moon, being to the North of the Equator, is above the Earth, and leſs when ſhe is under the Earth. The other of them, which is propagated from the *Indian* Sea, being raiſ'd in South Latitude, is greater when the Moon, declining to the South, is above the Earth, and leſs when ſhe is under the Earth: So that of theſe Tides alternately greater and leſſer, there comes always ſucceſſively Two of the greater, and Two of the leſſer, together every Day, and the High Water falls always between the Times of the Arrival of the Two greater Floods; and the Low Water between the Arrival of the Two leſſer Floods. And the Moon coming to the Equinoctial, and the alternate Floods becoming equal, the Tide ceaſes, and the Water ſtagnates: But when ſhe has paſſed to the other Side of the Equator, thoſe Floods which in the former Order

Digitized by Google

were the leaſt, now becoming the greateſt: That that before was the Time of High Water, now becomes the Low Water on the Converſe. So that the whole Appearance of theſe ſtrange Tides, is without any forcing naturally deduc'd from theſe Principles, and is a great Argument of the Certainty of the whole Theory.

For other ſpecial Motions of the Sea, we ſhall take Notice of them in the Deſcription of the particular Counties where they are obſerv'd.

SECT. XVIII.

Of LAKES.

Varenius gives it as his Opinion, That *ſuch* Lakes as are not nouriſhed by Rivers, and yet are never dried up, are fed by Rain, Snow, and Springs, which yield as much Water as the Sun exhales from them; and for Salt Lakes, ſuch as that of *Harlem*, *&c.* he ſuppoſes they have a Communication with the Sea: For thoſe Lakes and Pools that are dried up in the Summer, there can be no Doubt but they proceed from Rain and Snow, or ſmall Fountains, which are conſum'd by Drought, till again ſupplied by Rain, *&c.* For the particular Lakes which are remarkable, we ſhall treat of them in their reſpective Countries. For ſuch as ſend out Rivers, tho' they receive none, it's natural to ſuppoſe that they proceed from large, or at leaſt many Fountains; which filling up the low Ground in the Neighbourhood, form a Lake; and that overflowing its Banks at the loweſt Place, becomes a River. Such of them as ſend out large Rivers, are thought to be ſupplied by large Streams, thro' Subterranean Paſſages. Thoſe which receive Rivers, and ſend out none, muſt have what's more than ſufficient to fill them, convey'd likewiſe from them by Conduits under Ground. The few that there are of this Sort, ſhall be taken Notice of in their proper Places. Such as ſend out greater Rivers than they receive, muſt be ſupplied by Fountains, or Streams under Ground.

SECT. XIX.

Of RIVERS.

OF ſuch as proceed from known Fountains, and are encreas'd by many Brooks, Streams, and other Rivers, there is no need to ſay any thing, the Cauſe of their Riſe and Encreaſe being viſible. The like may be ſaid as to thoſe ſmall Rivers which run by Day, and are dried up by Night, becauſe they proceed from Snow melted by the Heat of the Sun: And from the ſame Cauſe it is, that ſome great Rivers encreaſe by Day, and decreaſe by Night, and are greater in the Spring and Summer than in Winter.

SECT. XX.

Of the Origine of FOUNTAINS.

THE Learned differ very much upon this Subject. Some think they proceed from Rain and melted Snow, becauſe great Rivers decreaſe, and ſmall ones are dried up by a long Drought; and becauſe in Places where it ſeldom rains, there are few Fountains and Rivers, as in *Inner Africa*: But this proceeds from a Miſtake, and Want of due Conſideration, becauſe Rivers are found where there's ſeldom any Rain, and never any Snow. Nor does Rain moiſten the Earth above 10 Foot deep; whereas many Fountains ſpring much lower. They miſtake the Queſtion, who ſay, That Water being an Element, we are no more to enquire into its Origine, than into that of other Elements; for the Queſtion is, how the Water comes to the Places from whence the Fountains ſpring.

Ariſtotle

Digitized by Google

Ariſtotle and his Followers think, That Water is generated from Air in the Bowels of the Earth, *De Meteor. Lib* 1. *Cap.* 11. as Rain is from Air above the Earth; and that the Air is condens'd in both by Cold. 2. They appeal to Experience, becauſe in the Earth ſmall Drops running together, drop down into Cavities; and that the Beginning of Rivers is from Springs of Water that run together in one Part. Thus they, who make Aqueducts, perceive it to ſweat, as it were, from the Bowels of the Earth, and to fall down into the Conduits. 3. Becauſe many Fountains, and thoſe too of the greateſt Rivers, are in Mountainous Places, and few of them in Plain Ground; which they think is a manifeſt Proof, that Water is generated from the Air and Vapours, which move to the higher Places; and that the Mountains, like Spunges, ſuck up the Moiſture from the low Grounds. To which may be added, That when the Air is cloudy and condens'd, Mineral Fountains are found to be leſs Acid; which is a Proof, that they are encreas'd by the Air.

Cardan and others think, That Fountains proceed from little Rivulets, generated by Watery Vapours, both within and without the Earth; and that Fountains alone can ſcarce make Rivers without Rain or melted Snow, becauſe, 1. Mountains are found to be moiſt in the Morning. 2. Rivers encreaſe in the Morning, and ſo much the more as the Fountains are nearer; but it is not probable, that perpetual Fountains can be thus ſupplied.

Some of the Ancients thought, That Rain being gather'd together in the Cavities of the Earth, did at laſt break out as from a Channel, and that no Water is generated; but the Water being thus gather'd together into thoſe Repoſitories during the Winter, ſerves to ſupply Fountains and Rivers; And hence they think it proceeds, that Rivers are greater in Winter than Summer, and that ſome Fountains and Rivers are conſtant, and others not: But *Ariſtotle* rejects this Opinion, becauſe he ſays, there flows a greater Quantity of Water from one River in a Year, than the Bulk of the whole Earth.

Some Modern, as well as ancient Philoſophers, think the Earth receives again from the Sea whatever Water the Rivers pour into it; and that being convey'd by Subterranean Paſſages through Sand, Clay, *&c.* as through a Strainer, it loſes its ſalt Taſt. This Opinion *Varenius* approves, tho' he will not exclude Rain, melted Snow, and Vapours, from having their Share in it; and his Reaſons are, 1. Above 1000 Rivers disburthen themſelves into the Sea, and the greater ones in ſuch Plenty, as would in one Year's Time cover the whole Earth, as the *Wolga* into the *Caſpian* Sea, and others. Were it otherwiſe, no Reaſon can be given why the Sea ſhould not encreaſe infinitely, and why Fountains ſhould not ceaſe to flow. 'Tis in vain to ſay, That as many Vapours are raiſed from the Sea, as there comes Water into it from the Rivers; for thoſe Vapours only make Rain, and are nothing in Quantity compar'd to the Water of the Rivers. 2. Becauſe Fountains near the Sea are ſalt or brackiſh, and the nearer, the ſalter, as in the Shores of *Africa*, *India*, &c. 3. Becauſe 'tis manifeſt, from the Salt-Pits of *Lunenburg* and *Hall* in *Germany*, &c. that the Sea conveys its Water into the Earth by Subterranean Conduits. 4. Becauſe, when we dig deep, we find Plenty of Water in Mines, *&c.* which we cannot ſuppoſe to proceed from the Air.

The principal Objections made againſt this Opinion are, 1. That moſt Fountains riſe in Mountainous Places, which are higher than the Surface of the Sea; therefore Water cannot flow from the Sea to thoſe Places, becauſe 'tis the Nature of Water to flow towards lower Places, and not to thoſe which are higher; as is plain from the Courſe of

Digitized by Google

of Rivers and Water-works made by Engineers. 2. If the Bottom of the Sea be clayie, ſlimy, or ſandy, ſo that the Water may ſink through it, 'tis more reaſonable to think, that it ſhould moiſten the Earth under it, than flow upwards to the Place of Fountains, eſpecially ſince that is many times full of Stones and Rocks, as appears by the Mountains of the Iſland of St. *Helena*. 3. No Reaſon can be given, why Water coming thus from the Sea, ſhould not burſt out Mid-way betwixt the Sea and the Fountain. In the deepeſt Mines, there is little or no Water found, as *Thurnheuſerus* teſtifies. 5. The Water of Fountains would be ſalt, if it came from the Sea. To which *Varenius* anſwers, 1. Thoſe who maintain the Ocean to be higher than the Earth, deny the *Aſſumption*; and, according to them, 'tis eaſy for the Water of the Sea to flow to the Tops of the higheſt Mountains. This they maintain from an Experiment made by *Olearius*, in his *Perſian* Journey, who, going to the Top of a Mountain that lies on the *Caſpian* Sea, found, by a Mathematical Inſtrument, that the extreme Surface of that Sea ſeem'd to be higher than the Top of the Mountain where he ſtood: But *Varenius* does not allow this, becauſe 'tis contrary to the frequent Obſervations of other Mathematicians, as has been mentioned already; and therefore thinks *Olearius* was deceiv'd by the Refraction or Waves, and that the Mountain he ſtood on was not ſo high as others upon the *Caſpian* Sea.

Others perceiving the Weakneſs of this Solution, argue thus; That the natural Place of the Water is about the Earth, and therefore ought to cover the whole Earth, becauſe 'tis higher than it. But becauſe 'tis hinder'd from coming to this its natural Place by Mountains, and the Height of the Earth, which riſes towards the Inland Places; therefore that Part of the Ocean which ought to be where the Mountains and high Grounds lie, not being in its natural Place, preſſes the Water that lies under it, which indeed is in its natural Place; but is preſſed by the other incumbent Water towards the Bottom, and finding no Paſſage, moves towards the Sides and Roots of the Mountain, where, being gather'd together as in a Ciſtern, 'tis thruſt by the Water of the Ocean, which preſſes it, towards the Top of the Mountain, juſt as in a Veſſel, which has a Pipe in the Side of it, that reaches from the Bottom: If we put Liquor into it, and throw a Stone into the Veſſel, the Liquor will flow out at the Mouth of the Pipe or Spout. This is a Subtilty of *Scaliger's*; but *Varenius* rejects it, becauſe Experience ſhews the contrary: And beſides, if the Water were thus preſſed towards the Tops of the Mountains, the Water of all Fountains muſt be ſalt. Moreover, what he aſſumes is falſe, *viz.* That the Water is not in its natural Place, as is plain from Experience; becauſe Water does not preſs upon the Part which lies under it, except it be higher than the neighbouring Water, and therefore reſts where the Surface of the Ocean is Spherical; and if any Motion were occaſion'd by the Preſſure, it would rather thruſt the Water to the Shore, where there is more Room, and not through the ſmall Caverns of the Earth. 'Tis certain, that Water flows into the Earth by great Cavities from the Bottom of the Sea; but they do not make a Sweet-Water Fountain, becauſe the Saltneſs of the Water ſtill continues.

Varenius thinks the Solution not difficult, if we conſider how Water comes to the Fountain, not by any Channel or Conduit from the Bottom of the Sea, or Foot of the Mountains, (for ſo 'twould retain its Saltneſs) but by a continual Progreſſion or creeping of the Water through the Earthy Matter to the Places near the Fountain, till at laſt it falls into ſome Cavity, and by a continual Succeſſion of Water forms a Fountain. This, he ſays, is found to be true, by digging the

Digitized by Google

the Earth to any conſiderable Depth, where we find little Drops of Water; which being preſſed by others, make little Streams or Veins; and if many of them come together, form a Fountain, as is very well known to thoſe who dig Wells or Conduits.

If it be objected, That many Fountains are diſcover'd in the Middle of Rocks, through which 'tis not probable the Watery Particles could creep in this Manner; *Varenius* anſwers, That in thoſe Mountains where Springs are found, the Rocks do not lie very deep, or only cover the Surface; whereas the Earth within is either more ſoft, or the Rock is of that Nature, as it may be pierced by the Water; and when it comes to thoſe Places which are more hard, there it ſtops, and forms a Fountain, which ſends forth a Stream, if it finds a Paſſage through the Rocks. He adds, That the Mountains and Rocks of the Iſland of St. *Helena*, and others, are not ſo rocky and hard in the Inſide, becauſe moſt of thoſe Mountains have ſent forth Smoak at ſome Time or other; and 'tis likewiſe plain from the Aſhes of Earth or Sulphur found in thoſe Places. To this he ſubjoins, That the Fountain, as has been already mention'd, is not always in that Place where it ſeems to be, but comes by ſome Subterraneous Paſſage from a higher Place to that from whence it flows out: And hence it comes, that many Wells break out with great Force.

He anſwers the Second Objection thus; That the Water does not ſo much deſcend into the Earth under the Sea, becauſe 'tis found by Experience, that the Earth in the Bottom of the Sea is more hard, and full of Metal; but where 'tis not ſo hard, there the Water penetrates: And this he thinks to be the Reaſon why, in ſome Places at the Bottom of the Sea, there are found ſometimes Rivers, and at other Times Lakes, of freſh or ſalt Water. But becauſe there are few ſuch Cavities in the Bottom of the Sea, it cannot but continually imbibe the Water, and then it proceeds towards higher Places. This he thinks to be much promoted by the different Height of the Sea, ſometimes here, and ſometimes there, occaſion'd by Waves and Tempeſts; for the Water being thus made higher, preſſes that which lies under it ſo much the more, and promotes its Paſſage through the Earth to Fountains; but this he thinks cannot effect much.

To the Third Objection, he anſwers, That the Moiſture is carried to the Fountains, and does not break out at any other Place betwixt them and the Sea, becauſe of the Nature and Situation of the Places.

He thinks the Solution of the Fourth Objection to be ſomewhat more difficult, becauſe it would ſeem, that the Saltneſs could not be remov'd meerly by the Water's being ſtrain'd thro' the Earth: For tho' that might ſtrain away the Fix'd Salt, it could not remove the Volatile Salt; which we find by Experience cannot be remov'd by Diſtillation, how frequent ſoever repeated: But he thinks it a ſufficient Anſwer, 1. That 'tis ſo in Fact, tho' we do not know the Manner how 'tis done; and therefore 'tis not to be denied, becauſe we find the Separation made by Nature in thoſe freſh Rains which fall into the Middle of the Ocean, tho' they were generated by Vapours rais'd from the Sea. 2. Thoſe Particles of Sea-Water which enter the Earth, are, before they reach the Fountain, mix'd here and there with other freſh Moiſtures, proceeding from Rain and Vapours; and ſo the ſmall Saltneſs which they retain becomes imperceptible. 3. 'Tis not true, that the Saltneſs is wholly imperceptible in all Fountains, becauſe, as has been already mentioned, ſome of them are ſenſibly ſalt, and ſo much the more as they lie nearer the Sea. Therefore there is a Neceſſity of a long and very ſlow Straining and Evaporation, to ſeparate the Water from the Volatile Salt, ſince 'tis known, that by Art we can make the Sea-Water leſs ſalt; and 'tis pro-

Digitized by Google

probable, that this is alſo the Reaſon why Rain that falls into the middle of the Ocean is ſometimes found to be more ſalt than at other times, becauſe the Vapours rais'd from the Sea had not Time enough to evaporate the volatile Salt.

From all this *Varenius* concludes, That the Water of Fountains comes partly from the Sea, partly from Subterraneous Waters, and partly from Rain, Snow, and Dew, which moiſten the Earth; and that the Water of Rivers proceeds partly from Fountains, and partly from Snow and Rain.

Such Rivers as hide themſelves under Ground, and flow out again in another Place, we ſhall account for in the reſpective Countries where they are found.

In his 18th Propoſition, he gives an Account of many Rivers which carry down with them Particles of ſeveral Metals, and of oily or fat Bodies; and ſome of them have Gold Duſt mix'd with their Sands, becauſe they flow through Places in which there are Gold Mines: But we refer the Particulars to the Deſcription of their reſpective Countries.

Rivers that carry down Particles of Silver with their Sand, are not taken Notice of by Writers, becauſe of the Difficulty to diſtinguiſh the Sand from the Silver, and partly becauſe it would not be worth while to ſeparate the one from the other. From the ſame Cauſe, thoſe Rivers which carry down Particles of Iron, Copper and Tin, have been omitted by Authors, except a very few; and where Men perceive their wonderful Effects, they are amazed, and Philoſophers ſtraitways have Recourſe to occult Quality. We ſhall only take Notice at preſent of a River in *Upper Germany*, which changes Iron into Copper, as is commonly thought; ſo that if you put a Horſe-ſhoe of Iron into it, you find it immediately transform'd into Copper, as the Vulgar think; whereas the Particles of Copper and Vitriol in the River, with the Help of the Water, corrode the Iron, and ſucceed in its Place; which our modern Natural Philoſophers and Chymiſts have found out by another Experiment.

Water thus impregnated with different Particles has different Effects. Some Waters give all Things boil'd in it a black Colour; Some will never boil Peaſe ſoft, *&c.* becauſe ſuch Water is full of Particles of Iron or Vitriol, and has no Mixture of oily Subſtances. This Variety proceeds from the Difference of the Soil the Rivers run through.

In his 19th Propoſition, he ſhews, That Waters differ in Colour, Weight, and other Qualities, from the ſame Reaſon: The Inſtances we refer to the particular Countries, and ſhall only obſerve here, That the Water of the *Ganges* is ſo light and wholeſom, that the Great Mogul carries ſome of it always with him wherever he is.

In the 20th Propoſition, he diſcourſes of ſome Rivers which overflow their Banks at ſtated Seaſons; among which the *Nile* is moſt remarkable. The particular Inſtances we refer likewiſe to the reſpective Countries.

In the 21ſt Propoſition, he gives us an Account how Fountains break out, thus: 1. If there be a Cavity in any Place, the Water drops into it till it be full, and then forces its Paſſage. 2. The Spirits mix'd with the Water remove the Earth, and the Water being rarified in the Earth, makes further Room to it ſelf; and Subterraneous Fires contribute alſo towards this. 3. Rains do ſometimes make Way for Fountains, by opening the Pores of the Earth. 4. Fountains are ſometimes open'd by Earthquakes. 5. A Paſſage is frequently open'd by the Induſtry of Men. 6. They are ſometimes diſcover'd by Animals, who open the Ground by digging with their Snouts. Thus the ſalt Fountains of *Lunenburg* were diſcover'd by a Hog, which having dug up the Ground, the Water iſſued, and making a Puddle, the Hog, as is uſual with thoſe Creatures, laid down and wallowed in it, and when its Back was dry'd by the Heat of the Sun, the

Digitized by Google

People perceived Salt upon it; upon which they went to the Place, and, by digging, diſcover'd ſeveral other ſuch Fountains. In Memory of this, they kill'd the Hog, and having dry'd his Quarters, hung them up in the Town-Houſe, where they are ſtill kept, as a Memorial of this Diſcovery; but by Length of Time are reduc'd to meer Skins.

In his 22d Propoſition, he gives us an Account, from *Vitruvius*'s Architecture, *Lib.* 8. *Cap.* 1. how to diſcover where Water or Fountains may be found; which in brief is thus: Lie down, ſays he, upon your Face on the Ground, before the Sun riſe, and fixing your Chin upon the Earth, look about, and where you perceive Vapours gathering together, and riſing in the Air, 'tis a certain Sign of Water in the Place. Small Ruſhes, Willows, Elder-Tree, Withies, Reeds, Ivy, are alſo Signs of Water. But where there are none of thoſe Signs, he adviſes to dig a Hole 3 Foot broad, and 5 deep, and about Sun-ſet to place in it a Baſon of any Metal, anointed with Oil in the Inſide, and its Mouth turn'd downward: Cover the Hole with Reeds, or Leaves of Trees, throw Earth over them; open the Hole next Day, and if you find in the Veſſel Drops of Water reſembling Sweat, 'tis a Sign of Water. A Veſſel of Chalk, not bak'd, put in the Hole, and found to be moiſt or diſſolv'd next Day, is alſo a Sign of Water. A Fleece of Wool, if put into the Hole, and found to be ſo moiſt next Day, as you may preſs Water out of it, is a Sign of a plentiful Fountain. If a Lamp full of Oil, and lighted, be put into the Hole, and cover'd, and found next Day not to be quite ſuck'd up, it is likewiſe a Sign of a Fountain. If when a Fire is made upon any Place, the Earth, when it's heated by the Fire, ſends out a Cloudy Vapour, 'tis a Sign of a Fountain.

In this Propoſition, and likewiſe in the 23d, he lays down Rules for judging if Water be wholeſom; the chief of which are as follow: 1. If the Soil be chalky, the Water is thin, in no great Plenty, and ill taſted: The like if the Soil be a looſe Sand. 2. Water found in low Places is generally ſlimy, and ill taſted. 3. If the Soil be black, the Water has a very good Taſte. 4. If the Soil be full of Pebbles, the Water is not very plentiful, nor certain, but very ſweet. 5. If it be gravelly, and mix'd with Slates and Sand, the Water is more plentiful, and very good. 6. Where there are red Rocks, the Water is generally plentiful and good. 7. That which flows from the Roots of Mountains, and flinty Rocks, is cold and wholeſom: But Fountains in Plains or Champion Places are generally brackiſh, hot, and ill taſted, except they proceed from the Roots of Mountains, and break out in the neighbouring Fields, ſhaded with Trees; in which Caſe they are generally ſweeter than thoſe which immediately proceed from the Roots of Mountains. 8. If the People who dwell near Fountains be of ſtrong Bodies, good Limbs, and a clear Complexion, 'tis a Sign that the Water is very good. 9. If the Water be put into a Veſſel of *Corinthian*, or other good Braſs, and leave no Stain behind it, 'tis a Sign that 'tis very good. 10. If the Water be heated in a Kettle, and poured out when ſettled, and leave no Sand or Slime behind it, 'tis very good. 11. Water which ſpeedily boils Peaſe or Beans, is certainly good. 12. When Fountains are clear, and the Streams which flow from them have no Moſs or Ruſhes in them, 'tis a Sign that the Water is pure and wholeſom.

On this Occaſion, he takes Notice of dangerous Vapours that proceed from the Earth, and ſometimes kill thoſe who dig Wells and Mines. The Earth, he ſays, as other Things, is compos'd of Four Principles; the Firſt is the Terrene Part; the Second is the Moiſt Part, which produces Fountains. It has likewiſe Heat, from whence proceed Sulphur, Allum, Bitumen, and great Spirits of the

Digitized by Google

the Air, which, when they pierce thro' the porous Part of the Earth that lies betwixt the Veins, kill the Diggers, and ſtop their Breath by theſe Vapours, if they do not make a ſpeedy Eſcape. The Way to avoid this Danger, he ſays, is to let down a burning Lamp, and if it continue burning, the Workmen may deſcend without Danger; but if the Lamp be put out, they muſt dig other Holes on the Right and Left of the Well, which will let out thoſe Vapours.

In his 17th Chapter, he treats of Mineral Waters, Baths, and thoſe properly call'd Medicinal Waters; and becauſe their Effects are much admir'd, he undertakes to treat of them, and of their Cauſes, with more Clearneſs and Exactneſs than former Geographers.

In his firſt Propoſition, he lays down, That there is no Water ſo pure but is mix'd with ſ Particles, ſuch as are found in Earthy Bodies; yet thoſe Particles are not Earth, but Spirits, Oils, *&c.* He calls that Mineral Water, which has ſo many Particles of a different Nature from the Water as endow it with ſome remarkable Quality perceptible to our Senſe.

The Truth of the Propoſition is manifeſt from Experience, and proved by the Difference of Taſtes and Diſtillation. The Cauſe of the Difference is the various and perpetual Agitation of the Particles; but the Mixture is not alike in all Waters: Therefore he calls thoſe only Mineral Waters, which have ſome remarkable Quality beyond common Water.

In his Second Propoſition, he divides Mineral Waters into Three Sorts; the Firſt he calls *Corporeal*, for Want of a better Word; the Second he calls *Spiritous*; and the Third *Corporeal* and *Spiritous*. He calls thoſe Mineral Waters *Corporeal*, which contain ſolid and fix'd Parts of Minerals, that may be ſeparated from the Water, and diſcerned by the Eye. Theſe he divides into Two Sorts; the Firſt contains thoſe Particles of Minerals, ſo large, that they may be eaſily ſeen in the Water, and, properly ſpeaking, are not mix'd with it, nor do any way impregnate the ſame: Such are thoſe in whoſe Sand Gold and other Minerals are found. To this laſt, Bituminous Fountains muſt be reduced.

Therefore thoſe are more properly call'd *Corporeal* Mineral Waters, which contain indeed ſolid Mineral Particles, but ſo ſmall, and ſo much mix'd with the Water, that they are not ſtraitway to be diſcover'd by the Eye, but by Art; or when, after a long time, they ſettle to the bottom, and grow together, as in Salt and Sulphureous Fountains, and Chymical Waters, in which Metal is diſſolv'd.

Theſe he calls *Spiritous* Waters, which contain only a Volatile Spirit, ſuch as is found in Minerals; but no fix'd Particles that are to be ſeen.

Thoſe he calls both *Corporeal* and *Spiritous* which contain Solid and Volatile, or Spiritous Particles of Minerals.

In his Third Propoſition, he explains how Mineral Waters are generated. 1. If Water be carried with a rapid Stream by Subterraneous Paſſages, in which Metallick Earths and Minerals are not very thick, the Water may eaſily carry with it Grains of thoſe Minerals. 2. If Water come through Minerals that are imperfect, and not very thick, as Vitriol, Sulphur, Salts, *&c.* which are eaſily united to Moiſture, it muſt neceſſarily be mix'd with the Atoms of thoſe Minerals. There are ſome indeed who call this in Queſtion, becauſe the Mineral Particles being hard and ſolid, are not eaſily united to Water: But *Varenius* thinks, that it may eaſily be done, not indeed by meer Water, but by that which is mix'd with Vitriol and a Spiritous Salt, and is like the *Aqua-Fortis* of the Chymiſts. For as *Aqua-Fortis* diſſolves Metals into Atoms, and unites them to it ſelf, ſo that they do not fall to the bottom, except they be ſeparated

Digitized by Google

by Art: In the ſame Manner, Water, which flows through Mineral Earth, may diſſolve Mineral Particles into Atoms, and unite it to it ſelf. 3. In the Bowels of the Earth, before Metals be generated, Vapours and Fumes are conden's'd upon the Corners of the Rocks to which they adhere; ſo that if Water flow through thoſe Places where ſuch Vapours are, they are impregnated by them, and become Spiritous Mineral Waters. But imperfect Minerals make Mineral Waters of the ſame Nature with themſelves, in another Manner thus: Thoſe Minerals being heated by a Subterranean, or their own proper Heat, ſend forth Spirits and Vapours, as Sulphur, Vitriol, Salt, Coals, *&c.* And ſuch Fumes and Exhalations are conſtantly found where ſuch Minerals are; by which Means, Water which flows through thoſe Places is impregnated with thoſe Spirits.

Varenius rejects the Opinion of thoſe who think, that ſuch Spiritous Waters may be generated by Waters meerly flowing through that Metallick Earth, or ſtanding long upon it in Mines, *&c.* becauſe he ſays, 'tis contrary to Experience, by which we find, that Water receives no Quality by Minerals, how long ſoever they may be ſteep'd in it; and therefore he ſays, that Water is impregnated, 1. By the Seeds of Metals. 2. That Water being already impregnated by other ſubtile Spirits, as of Vitriol, Salt, *&c.* by their Aſſiſtance the Spirits are extracted from hard Metals; yet he is not poſitive in this, becauſe the Queſtion will ſtill recur, how thoſe Waters are impregnated with the Spirits of Salt or Vitriol, *&c.*

In his Fourth Propoſition, he gives an Account of the innumerable Species of Mineral Waters, which 'tis needleſs to inſiſt on, ſince 'tis obvious to every body, that the Difference ariſes from their being impregnated with one or more of thoſe Minerals, which we ſhall have occaſion to treat of in the Deſcription of thoſe Countries where ſuch Mineral Waters are found. He reduces them into 11 Claſſes. 1. Acids. 2. Bitter. 3. Hot. 4. Very Cold. 5. Oily and Fat. 6. Poiſonous, or Deadly. 7. Thoſe which are Coloured. 8. Thoſe which boil up. 9. Such as make Things which are leſs hard more hard, or that change or die Things thrown into them. 10. Salt. 11. To theſe may be added ſuch as are endowed with ſome other wonderful Qualities. To theſe Claſſes may be reduc'd all the Waters which are deſcrib'd by Authors. We ſhall briefly ſhew their Generation and Difference, and give ſome Inſtances.

In his Sixth Propoſition, he accounts for the Cauſes, Difference, and Species, of Acid Waters.

They proceed from a Mixture of the Spirit of Vitriol, Salt, Allum, *&c.* His Reaſons are; 1. Wherever ſuch Waters are found, Mines of Vitriol, Salt, and Allum are found. 2. Becauſe the Spirit of Vitriol, Salt, and ſome Sort of Sulphur, is Acid. 3. Becauſe no Acid Body can be ſeparated from thoſe Waters, but only Spirits very like thoſe of Vitriol, *&c.*

There are reckoned in *Germany* alone about 1000 Springs of Acid Waters: They abound moſt where there are Mines.

The Difference of thoſe Waters is very great: Some are nothing ſhort of Vinegar in Sharpneſs, and are uſed inſtead of it. Of this Sort, there is a Fountain in *Sicily*. Some have much the Taſte of Wine: Near *Lions* in *France* there is ſuch a Fountain, called *Fontaine forte*, which ſometimes ſupplies the Want of Wine; ſo that if a Fourth Part of it be mix'd with Three Parts of Wine, the Strength of the Wine is nothing abated: It ferments when Meal is mix'd with it. Meat cannot be boil'd in it, for it evaporates, becauſe of its great Subtilty. 'Tis ſo very healthful, that the People there ſeldom make uſe of Phyſicians.

Some are Aſtringent, and contract the Pallat, which is a Sign that they are mix'd.

mix'd with Particles of Iron, Vitriol, or Allum. If they be expos'd to Heat, or not covered close, they lose that Acidity, which shews, that it proceeds from a subtile Spirit.

He thinks, the Reason why they are seldom found in Countries far North, is the Want of Subterranean Fires, and the Thickness of the Earth; and this he takes also to be the Reason why there are no Gold Mines in those Countries.

In his Seventh Proposition, he gives us the Causes of Hot Baths.

In *Japan*, there is a Fountain so prodigiously hot, that no Water can be made so hot by the most violent Fire: The Natives call it Hell. The Hot Fountains of *Baden* in *Switzerland*, and those at *Buda*, are remarkable: In the latter, they boil Eggs to any Degree of Hardness they please.

The Cause of the Hotness of those Fountains, according to *Varenius*, is a Mixture of Sulphur. 2. The Fumes, Vapours, and Exhalations of Sulphur, Coal, Amber, *&c.*

In his Eighth Proposition, he says, That Oily and Bituminous Fountains proceed from Sulphureous and Bituminous Matter, melted in the Bowels of the Earth by Heat and Spirits, and their Difference proceeds from the different Matters they flow through, as Ambergreece, Amber, Petroleum, Pitch, Naphtha, Bitumen, *&c.*

In his Ninth Proposition, he says, That Bitter Waters proceed from a Sort of impure Sulphur, Bitumen, Nitre, Vitriol, and Copper.

His Tenth Proposition is about very cold Springs. Near *Vienne* in *Dauphiny*, there is a Spring so extraordinary cold, that no Man can endure to put his Hands in it, and it makes the Faces of those who drink it swell. This proceeds from a Mixture of Nitre, Allum, Mercury, or Iron. Sometimes it proceeds from the Deepness of the Spring, and the Want of the Heat of the Sun and Subterranean Fires. Some Fountains are hot and cold by Turns. The Cause of this, he says, is, That the Pores of the Earth being open in the Summer, the hot Spirits evaporate; but being shut in the Winter, they make the Water warm: And thus some Fountains are hotter by Night than by Day.

In his Eleventh Proposition, he treats of those Waters which change the Nature of Things thrown into them.

In the Province of *Ulster*, in the North of *Ireland*, there's a Lake which, in Seven Year's time, turns Timber thrown into it into Stone. Some again don't change the Timber into Stone, but the stony and salt Particles in the Water cleave to the Wood, and cover it with a Crust of Stone. Others don't change the Timber, but make it as hard as Stone. *Varenius* thinks, the Change of Timber into Stone is effected thus: The Mineral Waters entring the Pores, dissolve, or at least alter, the Form of the long Fibres by which the Parts of the Timber cohere; and at the same Time condense the Timber more, and communicate to it their Mineral Particles. For such as change Iron into Copper, his Opinion is, That they communicate Particles and Spirit of Copper and Vitriol to the Iron.

In his 12th Proposition, he explains the Cause of poisonous Waters, and says, they flow through Soil mix'd with Arsenick, Mercury, and Antimony.

The Thirteenth Proposition treats of the different Colours of Waters, which proceed from the different Colours of the Soil.

The Fifteenth Proposition is about Fountains that boil up, and send forth a great Quantity of Spirit. *Varenius* says, this is occasioned by Sulphureous and Nitrous Spirits; that such of them as are hot, are impregnated with Sulphur; and those that are cold, with Nitre. In *Westphalia*, there is a Fountain of this Sort, which, because of the Noise it makes as it bubbles up, is call'd *Bolderborn*.

Mr. *Edmund*

Mr. *Edmund Halley*, in his Eſtimate of the Quantity of Vapours rais'd out of the Sea, together with an Account of the Circulation of thoſe Vapours, and of the Cauſe of Springs, preſented to the Royal Society, ſays, This Matter has not been any where well examined, tho' it ſeems to be one of the moſt neceſſary Ingredients of a Real and Philoſophical Meteorology: Therefore he made the following Experiment:

He took a Pan of Water about 4 Inches deep, and 7 Inches $\frac{7}{8}$ Diameter, in which he placed a Thermometer, and by means of a Pan of Coals brought the Water to the ſame Degree of Heat with our Air in the hotteſt Summer, the Thermometer nicely ſhewing it; then he fix'd the Pan of Water, with the Thermometer in it, to one End of the Beam of a Pair of Scales, and exactly counterpois'd it with Weights in the other Scale; and by the Application or Removal of the Pan of Coals, 'twas eaſy to maintain the Water in the ſame Degree of Heat preciſely. He found the Weight of the Water ſenſibly to decreaſe; and at the End of two Hours he obſerv'd, that there wanted half an Ounce Troy all but 7 Grains, or 233 Grains of Water, which in that Time had gone off in Vapours, tho' one could hardly perceive it ſmoak, and the Water was not ſenſibly warm. This was little leſs than 6 Ounces in 24 Hours, from a Circle of 8 Inches Diameter. He quotes the Experiment to have been made in the *Oxford* Society, by Dr. *Edward Bernard*, That the Cube Foot *Engliſh* of Water weighs 76 Pound Troy: This, divided by 1728, the Number of Inches in a Foot, will give 253 $\frac{1}{2}$ Grains, or $\frac{1}{3}$ Ounce 13 $\frac{1}{2}$ Grains, for the Weight of a Cube Inch of Water: Wherefore the Weight of 233 Grains is $\frac{233}{253\frac{1}{2}}$ or 35 Parts of 38 of a Cube Inch of Water. Now the Area of the Circle, whoſe Diameter is 7 $\frac{7}{8}$ Inches, is 49 Square Inches; by which, dividing the Quantity of Water evaporated, *viz.* $\frac{1}{38}$ of an Inch the Quote $\frac{1862}{1862}$, or $\frac{1}{53}$ ſhews, that the Thickneſs of the Water evaporated was the 53d Part of an Inch; but he ſuppoſes it only the 60th Part, for the Facility of Calculation. If therefore Water, as warm as the Air in Summer, exhales the Thickneſs of a 60th Part of an Inch in Two Hours, from its whole Surface in 12 Hours it will exhale $\frac{1}{5}$ of an Inch; which is abundantly ſufficient to ſerve for all the Rains, Springs, and Dews, and to account for the *Caſpian* Sea's being always at a ſtand, neither waſting nor overflowing; as likewiſe for the Current ſaid to ſet always in at the Streights of *Gibraltar*, tho' thoſe *Mediterranean* Seas receive ſo many and ſo conſiderable Rivers.

In eſtimating the Quantity of Water ariſing by Vapours out of the Sea, he conſiders it only for the Time the Sun is up, becauſe the Dews return in the Night as much, if not more, Vapours than are then emitted; and in Summer, the Days being longer than 12 Hours, this Exceſs is ballanc'd by the weaker Action of the Sun, eſpecially when riſing, before the Water be warm'd: So that he allows $\frac{1}{10}$ of an Inch of the Surface of the Sea to be rais'd *per Diem* in Vapours, as a probable Conjecture. Upon this Suppoſition, every 10 Square Inches of the Surface of the Water yields in Vapour *per Diem* a Cube Inch of Water, and each Square Foot half a Wine Pint; every Space of 4 Foot Square a Gallon; a Mile Square 6914 Tuns; a Square Degree, ſuppoſe of 69 *Engliſh* Miles, will evaporate 33 Millions of Tuns. It is fit to obſerve, That when Mr. *Halley* made the ſaid Experiment, the Water he made uſe of was ſalted to the ſame Degree with common Sea-Water, by the Solution of about a 40th Part of Salt.

Having thus ſhew'd, by Experiment, the Quantity of Water rais'd in Vapour from the Surface of the Sea in a Day's Time, he was order'd by the *Royal Society* to enquire how Nature returns thoſe Vapours again to the Sea, which he ſays is

ſo

Digitized by Google

so justly perform'd, that in many Hundreds of Years we are sufficiently assur'd, that the Sea has not sensibly decreas'd by the Loss in Vapour, nor yet abounded by the immense Quantity of fresh it receives continually from the Rivers. Upon this he gave the Society what to him seem'd the most satisfactory Account of this grand Phenomenon, in Substance thus: He attempted in another Place to explain the Manner of the Rising of Vapour by Warmth; by shewing, That if an Atom of Water were expanded into a Shell or Bubble, so as to be 10 times as big in Diameter as when it was Water, such an Atom would become specifically lighter than Air, and rise so long as that *Flatus* or warm Spirit, that first separated it from the Mass of Water, shall continue to distend it to the same Degree; and that Warmth declining, and the Air growing cooler, and withal specifically lighter, the Vapours consequently stop at a certain Region of the Air, or else descend, which may happen on several Accounts: Yet he does not assert, that this is the only Principle of the Rise of Vapours, or that there is not a certain Sort of Matter whose *Conatus* is contrary to that of Gravity; as is evident in Vegetation, wherein the Tendency of the Sprouts is directly upwards, or against the Perpendicular. But whatever is the true Cause, 'tis certain in Fact, That Warmth doth separate the Particles of Water, and emit them with a greater Velocity, as the Heat is more and more intense, as is evident in the Steam of a boiling Cauldron, wherein likewise the Velocity of the Ascent of the Vapours does visibly decrease, till they disappear and are dispersed, and assimulated with the ambient Air.

Now the Ocean being divided with wide and spacious Tracts of Land, and high Ridges of Mountains, which surpass the usual Height to which the aqueous Vapours of themselves ascend, and on the Tops of which the Air is so cold and rarified, as to retain but a small Part of those Vapours brought thither by Winds. Those Vapours therefore that are rais'd copiously in the Sea, and by the Wind are carried over the low Land to those Ridges of Mountains, are there compelled by the Stream of the Air to mount up with it to the Tops of the Mountains, where the Water presently precipitates, gleeting down by the Crannies of the Stone; and Part of the Vapour entring the Caverns of the Hills, the Water gathers into the Basons of Stone it finds, which being once fill'd, the Overplus runs over at the lowest Place, and breaking out by the Sides of the Hills, forms Springs. He says, This Theory of Springs is not a bare Hypothesis, but founded on Experience; for when he was at St. *Helena*, on the Tops of the Hills, at Night, making his Celestial Observations, his Glasses were covered with Drops, so that he was oblig'd to wipe them each half quarter of an Hour; and his Paper was so wet with Dew, that it would not bear Ink.

Thus one Part of the Vapours is return'd by Rivers into the Sea, and the greatest Part by the Cool of the Night falls into it by Dew or Rain before it reaches the Land; and this is the Reason why Rivers do not return so much into the *Mediterranean* as is extracted into Vapour. A Third Part falls on the low Lands, and is the *Pabulum* of Plants, where yet it does not rest, but is again exhal'd in Vapour by the Heat of the Sun, and is either carried by the Winds to the Sea in Rain or Dew, or else to the Mountains, where 'tis form'd into Springs: And thus, after several Vicissitudes, each Particle of the Water is return'd to the Sea from whence it came. Add to this, That the Rain-Waters, after the Earth is fully sated with Moisture, does, by the Vallies, find its Way into Rivers, and so is compendiously sent back to the Sea. After this Manner, he says, Circulation is perform'd; and he doubts not but this Hypothesis is more reasonable than that which derives all

Digitized by Google

all Springs from Rain, tho' many of them be perpetual, and without Diminution, even when no Rain falls for a long Time. He thinks it also more reasonable than that Hypothesis which derives them from the Sea through certain imaginary Passages within the Earth, where they lose their Saltness: This, besides many others, labouring under this principal Absurdity, That the greatest Rivers have their most copious Fountains fartheſt from the Sea, whither so great Quantities of fresh Water cannot reasonably be deriv'd any other Way than in Vapour. This, if we may allow final Causes, seems to be the Design of the Hills, That their Ridges being plac'd through the midst of the Continents, might serve, as it were, for Alembicks, to distil fresh Water for the Use of Man and Beast, and their Heights to give a Descent to those Streams to run gently like so many Veins of the Macrocosm, to be the more beneficial to the Creation.

Varenius, in his 18th Chapter, gives an Account how the Earth and Water may change their respective Places.

In the Third Proposition, he advances a Conjecture about the Quantity of Water and Earth the Globe may contain; but several Things hinder a demonstrative and satisfactory Account of this Matter, as, the Uncertainty of the Deepness of the Sea in different Places, our Ignorance of what Water may be contain'd in the Abyss, and what Proportion the Water may bear to the Earth: But upon Supposition that the Water covers the one half of the Surface of the Earth, and that the Sea may, by a Medium, be computed at a quarter or half a Mile deep, the Calculation may be thus; Substract from the Semi-Diameter of the Earth a quarter or half a Mile, and the Solidity of the Sphere may be found, whose Semi-Diameter is equal to the Remainder: Let this Solidity be substracted from the Solidity of the Earth, the one Half of the Remainder will be the Quantity of Water: The same Half being substracted from the Solidity of the whole Earth, there will remain the Quantity of the Earth; to which, upon the Account of the Height of Mountains, must be added a Fourth or Fifth Part of the Quantity of the Water, or of the former Half: But this Calculation is very uncertain, tho' it may be near the Truth.

The Fourth and Fifth Propositions are concerning the deserting of their former Channels, by Seas, Rivers, and Lakes. Many Lakes have been drein'd by the Industry of Men; of which, 'tis needless to give Instances. Rivers change a Part of their Channel, 1. When they carry down with them Quantities of Earth and Mud, which settling to the bottom of the Channel, makes it as high as its Banks. 2. When they take another Course, by Inundations, Winds, or Earthquakes. 3. The Mouths of Rivers are sometimes stop'd by violent Tempests, which choak them up with Sand.

In the Seventh Proposition, he acquaints us, That Friths are dried up sometimes, and turn Isthmus's, or Parts of the Continent. Thus 'tis probable, That the Isthmus of *Suez*, which divides the *Red Sea* from the *Mediterranean*, was formerly Sea. So the *Zuider-Zee* in *Holland* is shallower than formerly; which seems to presage, That some time or other it will be quite dried up.

In the Ninth Proposition, *Varenius* gives the Reasons why the Sea sometimes retires from the Shore. 1. If the Shore be of a rocky hard Substance, that the Sea can wash nothing away from it, but brings Slime and Sand, *&c.* towards it, the Shore cannot fail to become higher than the Sea. 2. If the opposite Shore be of a soft porous Soil, then what the Sea washes away from that, it will restore to another, and overflowing the Shore so wasted, leaves the opposite Shore dry. 3. When great Rivers bring down vast Quantities of Mud, Earth, *&c.* it subsides, and makes the Shores higher.

Digitized by Google

higher. 4. If great Storms and Winds blow from the Sea to the Shore, and if the Shore be hard and rocky, or of firm Earth, it muſt be enlarged by Slime and Sand from the Sea. 5. If the Flood be ſwift, and the Ebb ſlow, then the Slime and Sand ſettles on the Shore, and adds to the Land.

Thus *Homer* and *Ariſtotle* were of Opinion, That *Egypt* formerly was almoſt all cover'd with Sea, but at laſt was made higher than the Sea, by the Mud and Slime that the *Nile* left Annually behind it. Ancient Hiſtories tell us, That a great Part of *Holland*, *Guelderland*, and *Zealand*, were formerly under Water. The Shells of Sea-Fiſh, found in the Hills above *Nimeguen*, ſeem to be a Proof of this.

In the 19th Propoſition, he enquires into the Reaſons why there are more Iſlands near the Continent than in the middle of the Ocean. In the *Pacifick* Ocean there is ſcarce an Iſland to be ſeen. In the Ocean betwixt *Africa* and *Brazile*, there's few, except the Iſlands of St. *Helena* and *Aſcenſion*. The *Azores* are the only Iſlands betwixt *Europe* and *America*.

The Cauſe of this, he ſays, is, becauſe the Ocean, by its Irruptions, ſeparates Parts from the Continents, which become Iſlands; but the Ocean not being high enough to cover thoſe ſeparated Parts, therefore great Numbers of them are about Continents: Others again are form'd of the Slime and Mud brought down by Rivers, or of that which the Sea waſhes from the neighbouring Continent, but ſettles down again, and by the Addition of Slime, *&c.* riſes higher than the Surface of the Water: Some Iſlands have likewiſe been raiſed in the Sea by Earthquakes, and Mines of Sulphur, which have taken Fire, as one lately in the *Archipelago*.

SECT. XXI.

Of the ATMOSPHERE *and* WINDS.

VARENIUS, in his 19th Chapter, gives an Account of the Atmoſphere and Winds: He deſcribes the Atmoſphere thus; That 'tis a Space round the whole Earth, which contains the Exhalations that are rais'd from it; but 'tis uncertain whether it contains any other Body beſides. 'Tis alſo taken for the Exhalations themſelves; and, by no mean Philoſophers, is confounded with the Air; beyond which they immediately place what they call the Etherial Subſtance. That Vapours are continually exhaled both from Earth and Water, is too evident to be denied; and theſe Exhalations are occaſioned, 1. By the Heat of the Sun, Moon and Stars. 2. By the Heat of the Earth, mix'd with its Parts, or by Subterranean Fires: For we perceive, that Fire put to any Body, cauſes it to ſend out Exhalations; and Experience ſhews us, that by Night, when the Moon ſhines, Vapours are rais'd from Water. But other Philoſophers ſuppoſe, that, beſides thoſe Exhalations in the Space about the Earth, there is ſome peculiar and ſimple Body, which they call Air; altho' they freely grant, that Exhalations may be changed into Air; and on the other hand, that Air may be changed into Clouds, and thicker Vapours. Exhalations are more or fewer, according to the different Elevation of the Sun above the Horizon, or its Depreſſion under it, according to the different Age and Elevation of the Moon, according to the Riſing, Setting, and Conſtitution, of the Stars above the Horizon, and according to the Nature of the Soil; for moiſt Places ſend forth more than dry, and the

Digitized by Google

Exhalations are of different Kinds, *viz.* Watery, Salt, Sulphurous, Earthy, Spiritous, *&c.* according to the Bodies they are rais'd from. From those Sulphurous Particles, fiery Meteors, Lightening, *Ignis fatui*, and Thunder, proceed. And the Difference of Air is occasion'd by those different Vapours.

He affirms in the Sixth Proposition, That Exhalations don't ascend of their own Nature, but by a violent Motion from another Cause; or that Air is not light, but heavy, absolutely speaking; and proves it thus: Every Thing is to be call'd heavy, which moves towards the Center of the Earth, except it be hinder'd: But Air does so; for if a Hole be dug in the Earth, Air descends into the Hole; and the Reason of its being carried upwards, is, 1. Because 'tis rarified by the Heat, which makes it seek for a larger Space. 2. Because it is thrust upwards by other Vapours. Hence 'tis, That in cold Places, such as *Nova Zembla*, and with us in the Night-Time, Clouds don't ascend; but when the Sun approaches, they are rarified, so as one Part pushes another forward.

In his Seventh Proposition, he proves, That the uppermost Parts of the Atmosphere are more subtle than the lower Parts; yet it may so happen, that the middle Parts are more gross than the lowermost Parts which are next the Earth, because the lighter Parts tend naturally to the higher Place; but those in the Middle may easily come together again, and so be more gross, the hot Particles which were carried up with them having left them, and the Beams of the Sun reflected from the Earth having no Power in the middle Region, because of their Distance. Hence it is, that the middle Air is more clear after Rain, because the grosser Parts are separated.

In his Eighth Proposition, he proves, That the Atmosphere or Air, when warm, takes up a greater Space than before; and the colder it is, the more 'tis contracted, and requires the less Space. This is plain from the Thermometer; for the colder the Air is, the less Space it takes up in the Glass; and the warmer it is, the more. The Cause is this, the warm Particles of the Beams of the Sun, or of any other Fire, are the most subtile Particles of the World, and in continual Motion. Therefore while they are mix'd with the Atmosphere, they separate those Particles with great Force, and make more Pores; but when those fiery Particles are gone, the Particles of the Air, being left to themselves, do again unite.

In his Tenth Proposition, he asserts, That a clear Air may be so rarified by a violent Fire, as to take up 70 times more Space than it did before, and may be so condens'd in an Air-Pump, as only to take up the 60th Part of what it did before; but the Heat of the Sun never occasions a Rarefaction, nor the Coolness of the Air a Condensation, to that Degree. This is prov'd by the *Æolopila*, which being made hot by the Fire, will contain 13 Ounces of Water; but when cold, contains half a Dram over: Therefore the Air, while warm, took up so much more Space in the *Æolopila* when hot, than when it was cold; which answers to the Quantity above-mention'd.

In the Eleventh Proposition, he gives the Reasons why in the Frigid Zone, when they have no Sun, the Air is sometimes clear, but for most Part thick and cloudy. The latter, he says, proceeds from the small Subterranean Heat of the Earth, and of the Moon and Stars, which continue, while the Sun is absent, many Days and Nights above the Horizon; and that the Air is sometimes clear, is either because the thick Vapours fall down to the Earth, or are carried elsewhere by the Winds.

In his Twelfth Proposition, he gives the Reason why, many times in the coldest Days of Winter, the Air is clear, and not condens'd by the Cold. A Middling Cold,

Digitized by Google

Cold, he says, does not make the Air clear, but cloudy; because the small Heat still left in the Air raises the Vapours, but does not dispel them; but a vehement Cold makes the Air clear. 1. By making the gross Matters yet more gross; by which means they settle and fall to the Earth. 2. By shutting up the Pores of the Earth, so that the Vapours cannot rise.

In the Eighteenth Proposition, he gives an Account of the Three Regions of the Air. The First is that in which we live, and reaches to the Middle Region. The Middle is that wherein Snow, Rain, and Hail, are generated. The Third is that which begins at the highest Part of the Middle Region, and reaches to the highest Part of the Surface of the Air; above which the *Aristotelians* place what they call the Sublunary Fire.

The Middle Region is reckon'd colder than the First and Third. 'Tis colder than the First, because the Earth reflects the Beams of the Sun, and so doubles the Heat, besides what it receives from the Particles of the Subterranean Fire. 'Tis colder than the Third, because that contains the more subtile fiery and sulphureous Parts of the Exhalations, which are carried thither from the Place of the watery Particles. The Middle Region is colder, because it is neither reach'd by the Beams of the Sun reflected from the Earth, nor by the fiery Particles, *&c.* of the Upper Region.

In his 41st Proposition, he gives us the Observation made by one *David Frelichius* upon the Mountain *Carpathus* in *Hungary*, which is the highest in that Country, and gives Name to all that Tract of Mountains which divide *Hungary* from *Poland*, *Moravia*, *Silesia*, and that Part of *Austria* which lies beyond the *Danube*. He thinks this Observation very proper to help us to make a Judgment concerning the Height of the Air, and the Constitution of its Regions.

In *June* 1615, he went up with Two Companions to view those high Mountains, and when, with great Fatigue, he came to the Top of the first Rock, which, from the low Ground, he thought was as high as he needed to go, he perceived another Rock much higher, which he also climb'd up, through vast loose Rocks; of which, if any fell down, it carries Hundreds of others with it, of a much larger Size, with such a terrible Noise, as if the whole Mountain were tumbling down. When he came to the Top of that, he still found another higher, till at last he came to the Top of the highest. When from the lower Hills he look'd down to the Vallies, which were full of large Trees, he could perceive nothing but what either resembled dark Night, or the blue Sky in a clear Day, the visible Species were so much extenuated by the vast Declivity. Whilst he climb'd up the higher Mountain, he found himself encompass'd with thick Clouds. When he got through them in some Hours time, and drew near the highest Summet, he sat down and view'd the Place, where he was encompass'd with Clouds, and there he saw thick white Clouds moving; over which, for some Miles, he had a pleasant Prospect, and perceiv'd some Clouds higher, some lower, and some that mov'd at an equal Distance from the Earth; from whence he inferr'd these Three Things: 1. That he was enter'd the Middle Region of the Air. 2. That the Distance of the Clouds from the Earth was not equal, but some higher, and others lower, according to the Nature of the Vapour. 3. That the Distance of the Clouds nearer the Earth was much less than some Natural Philosophers say, and, instead of 72 *German* Miles, is only half a *German* Mile. When he came to the highest Summet, he found the Air so calm and subtile, that it did not so much as move a Hair; whereas in the lower Mountains there was a very high Wind. From this he conjectur'd, That this Summet was a

Ger-

Digitized by Google

German Mile from the Root of the loweſt Hill, and that it reach'd above the Region of the Air where the Winds come. He fir'd a Piſtol on the Top of it, which at firſt made no greater Report or Noiſe than if he had broke a little Stick; but in a ſmall Time the Sound increaſed, and fill'd the lower Parts of the Mountain, the Vallies, and the Woods. As he came down through Snow, which had lain ſome Years in the Diſtances and Clefts of the Mountains, he fir'd another Piſtol, which made a greater Noiſe than the largeſt Gun. This put him in Fear that the Mountain would fall with him. The Noiſe continued half a Quarter of an Hour, and went through all the Caverns of the Mountains, which multiplied it; there being no ſuch Cavities in the Top of the Mountain, the Sound at firſt was very ſmall; but meeting with Reſiſtance in the Caves and Diſtances between the Rocks, it became louder. He adds, That in thoſe high Mountains, there is Snow and Hail in the middle of Summer, as often as it Rains in the neighbouring Vallies: And he perceiv'd, by the Colour and Hardneſs of the Snow in ſeveral Parts, that it had lain there for ſome Years.

Varenius, in his 20th Chapter, treats of Winds in general, and of the Quarters of the World, or 32 Points of the Compaſs; of which he gives us the following Table, with their Diſtances from each Pole, *viz.* of the firſt 16 from the *Antartick*, and of the reſt from the *Artick*.

Brietius, *lib.* 2. *p.* 32. gives us the following Account of the Winds, according to the Ancients. *Ariſtotle de Meteor. lib.* 1. *Cap.* 13. ſays, ſome Philoſophers allowed only one Wind, becauſe Wind was only the Motion of the Air. *Therialces*, in *Strabo*, makes only Two, oppoſite to one another, according to the Poles, *Boreas*, *Notus*. The Greek and Latin Poets allow Four, which they place thus; *Auſter* or *Notus*, oppoſite to *Aquilo* or *Boreas*; *Eurus*, oppoſite to *Favonius* or *Zephyrus*. The latter, in Time of a Tempeſt, they call *Africus*.

Andronicus Cyrrheſtes, in *Strabo*, drew Eight, upon an Eight-corner'd Tower in *Athens*, pointed out by a Triton, with a moveable Rod.

Pliny, *Seneca*, and *Ariſtotle*, make 12, which *Seneca* collected from the Points of the Tropicks, of the Polar Circles, and of the Meridian interſecting the ſaid Circles; and *Vitruvius* made 24.

SECT. XXII.

The Causes of WINDS *in General.*

Varenius, Cap. 20. Prop. 10. gives an Account of the Causes of Wind thus: The First and General Cause is the Sun, who by its Heat rarifies the Air, which obliges it to seek a greater Space, and one Part of the Air to thrust forward another. Thus, when the Sun moves from East to West, the principal Impulse of the Air is towards the West. A Proof of this is, That in most Places by Land, under the Torrid Zone, and every where by Sea, the Wind blows continually from the East; that is to say, the Sun thrusts the Air from East to West, but does not exceed the Torrid Zone. The Rarified Air is indeed thrust forward toward all Quarters, *viz.* N. S. E. W. and the intermediate Points; but 'tis not admitted in all Points, the greatest Impulse or Protrusion being to the West, because the Sun moves that Way. It is almost continually so in the Torrid Zone; but in ours it blows generally before the Rising of the Sun, and after it, when most other Winds cease. Some Points are sometimes more disposed to receive this Impulse of the Air than others; and thus, when the Impulse is most towards the North, it is call'd a South Wind, *&c.* Here it is to be observ'd, That when this Impulse is towards any of the Points without the Four Cardinal Ones, then in different Countries the Wind seems different; for tho' that Point be one with respect to the Place to which the Sun is vertical, yet in respect to the other Places it is different; and this is the Reason why the same Wind is call'd by different Names in different Countries: But this is either assisted or hinder'd by other Causes; if it be assisted, then the Wind becomes violent; but if hindered, it becomes less violent from that Quarter, and frequently another Wind blows then, which is rather assisted by the General Cause. The Second Cause of Winds, he says, is frequent Exhalations rais'd plentifully from the Sea and Earth with great Force; but they scarcely occasion a Wind till they begin to be rarified. The Third Cause is the Rarefaction of greater and lesser Clouds, either by the Sun and other Stars, or by the Fiery and Sulphureous Particles contain'd in themselves. The Fourth is the Dissolution of Ice and Snow, especially in Mountainous Places; for they are not altogether dissolv'd into Water. The Fifth is the Rising and various Situation of the Moon, and of the rest of the Stars. The Sixth is the Condensation and Rarefaction of the Air and Vapours by any Heat or Cold. The Seventh is the Descent of Clouds, by which the Air is pressed. These Things are better understood by the Consideration of the Instrument call'd *Æolopila*, in which Water being inclos'd, and the Instrument put to the Fire, it sends forth Wind with a great Force, until all the Water be exhal'd. He thinks, the Part of the small Orifice of the *Æolopila* is perform'd, 1. By the thicker neighbouring Air. 2. If that Air be pressed or hindered to give Way by other Vapours or Clouds. 3. If the Air be more condensed towards one Quarter, and so make Way for Blasts or Gusts of Wind.

In Prop. 11. he accounts for the Winds blowing so as to form a perpendicular Line above the Horizon. He says the Cause is, because the Air goes round the Earth in a Spherical Form, and the Protrusion is for most part made through the greatest Circle of the Sphere; but this will be better apprehended, if we consider the First Cause of the Wind: For the Sun thrusts the Air towards all those Quarters of the Places to which it is vertical; but the Impulse is not receiv'd in all those Places, as has been said already. Then if we consider the greatest Circles drawn from that Place, and among those such as receive the Protrusion and Impulse of the Air, all those Places of the Earth, situated in this Circle or Semi-Circle, will have the Wind perpendicular; because every great Circle of the Earth passing thro' any Place of it, is perpendicular to the Horizon of that Place. 'Tis the same when a Gust of Wind breaks out from a Cloud; but the Places situated without those Circles are not sensible of the Wind, tho' the Air be moy'd above their Horizon, because it is not perpendicular to that Horizon, but oblique: Yet he owns, 'tis not generally true that the Wind moves perpendicularly to the Horizon, because we many

Digitized by Google

times perceive the Wind to blow Croſswiſe in the Air; and thus Smoak from a Chimney is ſometimes carried to different Points by the Wind at the ſame time.

In Prop. 12. he gives the Reaſon why, during a Wind, the Blaſts ſometimes ceaſe, and of a ſudden renew their Force; and thinks, it's occaſion'd by the ceaſing of the Cauſe, and that Time is requir'd for collecting the Vapours to break thro' the Air with ſuch Force: Therefore the Wind is more continued at Sea, becauſe the Exhalations there are ſo.

The Cauſe why Weſterly Winds are leſs frequent than the Eaſterly, is accounted for in the 10th Propoſition.

The Cauſe why North and Eaſt Winds are more ſtrong than the South and Weſt Winds, he accounts for thus: The Northern Air is more thick, becauſe of the Cold; and the Southern Wind in our Zone is thinner, becauſe the Air is rarified by the Heat of the Sun, *&c.* But it muſt be obſerv'd, That the South Winds are as dry, cold and impetuous, in the Temperate Zone, oppoſite to ours, as the North Winds are to us; but the Eaſt Wind is ſtronger for another Reaſon, becauſe it riſes for moſt part from the Rarefaction of the Air by the Sun, which being continually carried from Eaſt to Weſt, blows the more ſtrong; tho' there may be other Cauſes which either further or hinder it.

In Prop. 16. he gives the Cauſe why the South and Weſt Winds are warmer than thoſe of the Eaſt and North: But he ſays, this is only to be underſtood of the Places in our Zone; for in the other Temperate Zone, ſituated from the Equator towards the South, it is contrary, becauſe in thoſe Places the North Winds are more warm, and the South Winds more cold. This, he ſays, muſt be ſo, from the Nature of the Thing; for the South Winds are more warm to us, and the North Winds colder, becauſe our South Winds come from the Places which are nearer to the Torrid Zone, or the Courſe of the Sun; but it is otherwiſe as to the Northern Winds. In Places ſituated from the Equator towards the Antartic, 'tis juſt the contrary, becauſe the North Wind blows upon them from the Torrid Zone, and the South Wind from Places which are nearer the Antartic Pole.

But we muſt anſwer otherwiſe as to the Eaſtern and Weſtern Winds, becauſe the Diverſity of the Places of ours and the oppoſite Zone has no room here. In the firſt Place, 'twas ſaid in the former Propoſition, That the Weſtern Winds are leſs frequent, and they are more warm, becauſe they blow for moſt part by Night, after the Sun ſets; and the Air which comes from that Quarter is warmer than ours, becauſe we are further from the Setting Sun. Here's another Cauſe (which holds alſo in the Difference betwixt the North and South Winds) why the Weſtern Winds are leſs ſtrong; for 'tis known, that any Air or Wind is found to be the more or leſs cold, according as it blows more or leſs ſtrong; tho' it be in Reality neither colder nor hotter, as we may perceive by our own Breath, which we can blow both hot and cold, as we pleaſe.

In Prop. 17. he gives us the Signs of approaching Wind. When Mariners ſee a pale or blackiſh little Cloud, they look upon it as a Sign of Wind from that Quarter; for Clouds of that Colour are a Sign that they are forthwith to be diſſolv'd into Blaſts, or the Clouds themſelves ſettling downwards, becauſe of their Weight; and being ſeparated from other Clouds, they preſs the Air which is under them, and ſo occaſion it to blow. Other Signs are; 1. If the Sun when it riſes appear with Spots, and lurk under a pale or black Cloud, it foretels either Wind or Rain. 2. If the Riſing Sun appear Concave, ſo that it ſhines in the middle, and caſts out Rays, it foretels a Moiſt and Windy Tempeſt: The like if the Setting-Sun look pale. 3. But if it look red, the Air will be calm and clear next Day. 4. If the Sun look pale, and ſet in a black Cloud, it preſages a North Wind. 5. If the Moon be of a Gold Colour, it's a certain Sign of Wind, according to the Verſe:

Pallida Luna pluit, rubicunda flat, alba ſereuat. i. e.

A Pale Moon Rain foretels, the Red brings Wind;
But when there's White, the Air is clear we find.

6. A Circle round the Moon. 7. If the Horns of the Moon be ſharp. 8. If the Nor-

Digitized by Google

Northern Horn of the Moon be longer than the other, it preſages a North Wind; but if the Southern Horn be more erected, a South Wind. 9. The Riſing of the Moon and more noted Stars, as *Arcturus*, *Orion*, and of thoſe little Stars call'd *Hædi*, with the Sun. 10. If the little Stars in *Cancer*, which are call'd *Aſſes*, be cover'd with a ſmall Cloud, eſpecially if the Northermoſt of the two be cover'd, it preſages a South Wind; but if the other, a North Wind. 11. When Rain ceaſes, Wind begins to blow for moſt part. 12. When a Sound or Noiſe, like bubbling up of Water, is heard in the Sea. 13. The Ancients took Marks of approaching Winds from Animals, as the Crow, the Dolphin-Fiſh, *&c.* 14. From Fiery Meteors and Lightning.

In Prop. 18. he gives the Reaſons why Winds are more frequent in Spring and Autumn, and blow harder than in a hot Summer or cold Winter.

This happens in the Spring, partly from the Diſſolution of Snow, eſpecially in Mountainous Places, partly becauſe the Pores of the Earth are then open, and ſend forth more Exhalations, and partly becauſe the Air and Vapours are then more rarified than in Winter. Add, That in the Month before the Spring begins, and in the Spring it ſelf, there happens for the moſt part to be much Rain, becauſe the moiſt Conſtellations are in thoſe Places of the Zodiac; into which, when the Sun enters, we reckon the Spring begins. The ſame Frequency of Rain and Exhalations is the Occaſion of Wind in Autumn, becauſe the middling Heat of the Sun does indeed raiſe the Vapours, but thick, and not enough rarified: But in a hot Summer, Winds and Rains are leſs frequent, becauſe the Sun attenuates the Exhalations too much, and does not ſuffer them to come together in ſuch Plenty as is required to the Generation of Wind. In a hard Winter, the Winds are more ſeldom, becauſe the Pores of the Earth being ſhut, there are few Vapours rais'd: and ſuch as are, do either condenſe into Snow, or are hinder'd by the Froſt from rarifying ſo much as to occaſion Wind.

In Prop. 19. he gives an Account how high in the Air Winds blow, or in what Region of the Air they begin. Some think, that Winds don't go above the Lower Region of the Air, becauſe none is perceiv'd in the Tops of high Mountains, ſuch as *Olympus*, *&c.* But *Varenius* doubts of this, becauſe Smoak iſſuing from the Top of Mount *Ætna*, is carried about by the Wind.

In Prop. 20. he gives an Account how far one and the ſame Wind may extend, and tells us, there's a great Diverſity in this Matter: For Winds which blow from Eaſt to Weſt, under the Torrid Zone, ſeem to go round the whole Earth; and thoſe which blow from South and North, Mariners find to continue many Days, and to blow thro' a great Space of the Globe. The ſame ſeems to hold of Collateral Winds, but with this Diverſity, that the ſame Wind is different in different Places, as was mention'd in the 10th Propoſition.

SECT. XXIII.

Varenius, Cap. 21. *Treats of* Winds *in Particular, and of* Tempeſts.

THE Second Propoſition treats of General and Particular Winds.

A General or Trade Wind is ſo call'd, becauſe it blows from the ſame Point in many Places at the ſame time over large Tracts of the Earth, and for moſt part of the Year; but is moſt diſcernable at Sea. A Particular Wind is juſt the contrary.

The General Wind at Sea is interrupted ſometimes by an oppoſite Land-Wind from Places near the Sea; ſo that this Wind is moſt conſtant in the middle of the Sea: Such Winds are found only in the Seas under the Torrid Zone, or in Seas within the Tropics, and ſometimes 7 Degrees without the Tropics. All theſe General Winds are from the Eaſt, and its Collateral Points, *viz.* Eaſt. North-Eaſt, and South-Eaſt. They are moſt conſtant in the *Pacifick* Ocean; ſo that Ships bound from *Aquapulco* in *New-Spain* to the *Philippine* Iſlands, which lie from Eaſt to Weſt, frequently perform this great Voyage of 1650 Leagues in 60 Days, without ſhifting their Sails, the Wind being all that time at Eaſt or North-Eaſt; ſo that the Seamen ſay, they may ſleep ſecurely all that Voyage, till they come in Sight of the *Philippine* Iſlands, where this Wind is interrupted by others. The ſame General Wind

's observ'd betwixt the Cape of *Good Hope* and *Brasile*, betwixt whom lies the Island of St. *Helena*. They sail from this Island to the Cape of *Good Hope* (which is 350 Leagues) very often in the Space of 12 or 16 Days; but if they fail beyond this Island the 8th Part of a League, they cannot tack about to make it again, the Wind blows so hard from the East.

The Causes of these Winds are accounted for thus: Some are of Opinion, That the Motion of the Sun from East to West carries the Air along with it, and with more Force in the Torrid Zone than in other Places. Those who are of Opinion, That the Earth moves round the Sun, say, The Air, when carried about with the Earth, moves slower than the Earth. Hence it is, That when we are carried with the Earth from West to East, the Air moving with less Swiftness, seems to be against us, and to move from East to West. *Cartes* advances a new Solution of this Phenomenon, Part 4. Prop. 49. of his Principles, where he ascribes this to the Moon, as well as the Motion of the Sea from East to West.

In the 3d Prop. *Varenius* discourses of Fix'd and Periodical Winds, and of such as are unconstant; some are Anniversary, some return every six Months, some once *per* Month, and some every Day. The most remarkable are the *Monsons*, (as the *Dutch* call them) or Trade-Winds, for their Usefulness in Trade. In the *Indian* Ocean, they have this Wind constantly for some Months, and when they cease, a contrary Wind begins, and lasts as long; and sometimes there is a Cessation of both for some Days: During which, sometimes there are Calms and variable Winds, and frequent Storms. In that Part of the *Atlantick* which lies in the Torrid Zone, and sometimes in the Temperate Zone, the North Wind blows during *October*, *November*, and *January*, which is therefore a fit Time for a Voyage from *Europe* to *India*. *Varenius* thinks, the Dissolution of Snow, the Plenty of thick Vapours, and the continual Pressure of heavy Clouds, during those Months, many occasion the said Winds, especially since they blow for most part from the North and South Quarters; but refers the Matter to further and more accurate Observations of the Seasons of the Year, and the Mountains in those Places.

In the 4th Proposition, we have an Account of those Winds the *Greeks* call'd *Etesiæ*, or Anniversary: They were of Two Sorts; the Summer Winds, which blow from the North, begin about the 6th or 15th of *July*, and last 40 Days, or longer: They blow only in the Day-time; nor do they begin early in a Morning. This Wind is observ'd not only in *Greece*, but in *Thrace*, *Macedonia*, in the *Archipelago*, *Egypt*, and *Africa*. *Varenius* thinks they proceed from the melted Snow and Rain in the neighbouring Mountains; and the Reason why they don't blow in the Night-time, is, because the Snow does not melt then, or at least not so much, because of the Absence of the Sun. The South Winds begin after Winter, and are very low. The *Greeks* call'd the former *Etesiæ*, by way of Eminence, because they are the strongest; and the latter they call *Chelidonius*, or *Ornithias*, because they foretel the coming of the Birds call'd *Chelidonæ*, or Swallows. He thinks those Winds proceed from the melting of the Snow in the Mountains of the Moon in *Monomotopa*, it being Summer there when it is Winter in *Europe*. These Winds begin in *Congo* and *Guzarate* in *September*, and continue till *March*. He is doubtful how to give Reasons why these Winds are not equally observable in *Italy*, *Germany*, *France*, &c. as in *Greece*, &c.

In the 6th Proposition, he gives an Account of some Winds that are peculiar to some Places, *viz.* On the Coasts of *Peru*, *Chili*, and the adjacent Sea, the South Wind, or South-West Wind, is perpetual. It begins at 46 Degrees of Latitude, and reaches beyond *Panama*, in the Isthmus of *America*. Hence it is, That Ships from *Lima* to *Panama*, in a very few Days compass their Voyage; but from *Panama* to *Lima*, much more Time is requir'd. This Wind blows only near the Coasts of *Peru*. Upon the Coasts of the *Terra Magallanica*, or *del Fuego*, about the Frith of *Le Maire*, the West Winds are very frequent. On the Coasts of *Malabar* in *India*, the North and North-East Winds blow all the Year. Our Author believes his former Hypothesis of the melting of Snow in the Mountains, will answer this, and all other Difficulties of that Sort.

In the 7th Proposition, he speaks of Winds that blow at certain Times of the Day and Night;

Digitized by Google

Night; as on the Coasts of *Malabar*, from *September* to *April*, the Wind begins to blow at East from Midnight till Noon from the Land; but from Noon till Midnight, there blows from Sea a Westerly Wind.

On the Coasts of *New Spain*, they have Land-Winds all Night, and Winds from the Sea all Day. In the Kingdom of *Congo*, they have Winds from the Land all Night, but cool refreshing Breezes from the Sea all Day; which is a great Comfort to the Inhabitants of those sultry Countries.

In the 8th Proposition, he observes, the nearer we come to the Equator from the North Pole, the North Winds are the less violent; and when we pass the Equator, in Part of the *Terra Australis*, we find the South Winds strong, which are cold and dry in those Places, especially in *Chili* and *Peru*. He thinks the Cause of both to be the same, because they come from the Polar Places.

In the 10th Proposition, he discourses of Winds remarkable for their fatal Effects, as Whirl-Winds, Hurricanes, *&c.*

The Winds which Mariners call *Travado's*, break out suddenly from a Cloud; and while they last, carry all before them: They are very frequent betwixt the Cape of *Good Hope* and *Brasile*, and on the other Side of *Africa* as far as the Country of *Natal* and *Guinea* under the Equator. Mariners, as soon as they observe the black Clouds gather together, they know it is their immediate Concern to provide against the Storm; upon which they furl their Sails. Before the Mariners knew the Signs and Travado's, many Ships were lost. The *Portuguese* were first acquainted with these Winds, being the first *Europeans* who sail'd over the *Ethiopick* Ocean. Upon the Discovery of the Way to the *Indies* by the Cape of *Good Hope*, by *Vasco de Gama*, the King of *Portugal* set out 13 stout Ships of great Burden in the Year 1500, which was the first Fleet from *Europe* that arriv'd at *Brasile*. They continu'd there during *April*, and sail'd in *May* for the Cape of *Good Hope*: Tho' they saw the Signs of the approaching Storm, they did not understand them. Before the Storm, they were becalmed, and spread all their Sails, to gather what Wind they could; but all of a sudden a furious North-Wind blew, and sunk 4 of their Ships immediately. The whole Fleet had been irrecoverably lost, if they had not straightway furl'd their Sails. In the Ocean betwixt *America* and *Africa*, under the Equator, these Winds are very frequent, especially in *April*, *May*, and *June*. They are also observ'd upon the Coasts of *Guinea*. In the *Arabian* Gulph, in *Arabia* it self, and *Ethiopia*, those Winds are frequent; so that in one Year's time 6000 Travellers, with their Camels, have been buried under vast Mountains of Sand. 'Tis probable the Mummies are nothing else, but such Corps which are immediately dried by the scorching Sand.

Varenius thinks these Winds may be produc'd, 1. By the sudden falling down of Clouds, because of their Weight. 2. By the sudden breaking out of Spirits, Fire, or Sulphureous Matter; as Spouts proceed from Watery Clouds, which fall down with great Force perpendicularly when they become too weighty to be supported by the neighbouring Air.

Hurricanes are very frequent in the Eastern Ocean. In the Seas of *Japan* and *China* they begin at West, and go over all the Points of the Compass in 24 Hours. This makes Voyages from the *East-Indies* to *Japan* extreamly dangerous; so that they reckon it a prosperous Voyage if one Ship in three returns safe. These Winds have prodigious Effects, pull up Trees by the Roots, overturn Houses, and throw huge Ships quite out of the Water a great way into the Land. *Varenius* thinks, the Cause of these Whirlwinds and Hurricanes to be a Wind which breaks out with great Violence from some Quarter, and meeting with a Stop, is whirl'd round into it self, as we see Water in a Whirlpool; or that they proceed from opposite Winds, which blow fiercely at one and the same time.

Prop. 13. He thinks that Wind may proceed from the Earth and Water: For since there are Cavities in both, with Spirits and Sulphureous Substances, he sees no Reason why we may not think, that strong Blasts of Wind are generated there; that is to say, if it be hinder'd from coming out by Degrees as it generates, or if so much be generated at once as is sufficient to form a Wind. Thus when Wind is stop'd in the Bowels of the Earth, it occasions Earthquakes; and the same is the Occasion of Smoak's rising frequently out of the Sea in fore-

Digitized by Google

ſeveral Places of the World: But he owns, he never read of any Winds breaking out of the Sea.

Prop. 14. Upon the Queſtion, Whether Wind riſes from the Flux of the Sea and Rivers? He ſays, 'tis plain from Experience, That when the Sea flows and ebbs, if the Air be free from other ſtronger Winds, there's generally a Wind from the Sea with a Tide of Flood: Therefore he thinks 'tis probable that the Air, becauſe of its Contiguity, is carried towards the ſame Quarter with the Water; or, he thinks, the Air may be thruſt from its Place by the flowing Water; for the Air is mov'd with a very ſmall Impreſſion.

Prop. 15. He gives the Reaſon why *Ignes-fatui*, *Caſtor*, *Pollux*, and *Helena*, are perceiv'd during Tempeſts. The *Portugueſe* call 'em *Corpo Santo*; the *Spaniards*, St. *Elmo*. Many of them are ſometimes ſeen moving about the Maſts of Ships, with a wandering and uncertain Motion, like other *Ignes-fatui*; tho' at other times they reſt upon the Maſts and Sails, and give a faint Light, like a Candle that burns dark. If 5 of them be ſeen together, the *Portugueſe* call them, *Our Lady's Crown*, and take them as a certain Token that the Tempeſt will immediately ceaſe. The Cauſe of theſe Fires he thinks to be a Sulphureous Bituminous Matter, thruſt downward by the great Motion of the Air, and being gather'd together, is ſet on fire by the Agitation and coming together of the Particles.

Prop. 16. He thinks the Cauſe of the frequent and long Calms in the Sea near *Guinea*, and under the Equator in the *Atlantic*, eſpecially in *April*, *May* and *June*, to be, that there's no Snow upon the Mountains in thoſe Parts, which, by its Diſſolution, may generate Winds.

SECT. XXIV.

HEre 'tis fit to add what Mr. *Edmund Halley* ſays, in his *Hiſtorical Account of the Trade Winds and Monſoons obſervable in the Seas between and near the Tropics; with an Attempt to aſſign the Phyſical Cauſe of the ſaid Winds.*

He ſays, This is a Part of Natural Hiſtory, no leſs deſirable and uſeful, than hard to obtain: That *Varenius*'s Account of it is not accurate, but full of Miſtakes, which he will endeavour to rectify, from the Accounts of experienc'd Sailors, and his own Obſervations whilſt he liv'd between the Tropics.

The Subſtance of what he had collected, is briefly as follows:

The Univerſal Ocean may moſt properly be divided into 3 Parts, *viz.* 1. The *Atlantic* and *Ethiopic* Sea. 2. The *Indian* Ocean. 3. The great South Sea, or the *Pacifick* Ocean. And tho' theſe Seas do all communicate by the South yet, as to our preſent Purpoſe of the Trade-Winds, they are ſufficiently ſeparated by the Interpoſition of great Tracts of Land; the firſt lying between *Africa* and *America*; the ſecond between *Africa* and the *Indian* Iſlands, and *Hollandia Nova*; and the laſt between the *Philippine* Iſles, *China*, *Japan*, and *Hollandia Nova*, on the Weſt, and the Coaſt of *America* on the Eaſt. Now following this Natural Diviſion of the Seas, ſo will we divide our Hiſtory into 3 Parts in the ſame Order.

I. In the *Atlantic* and *Ethiopic* Seas, between the Tropics, there is a general Eaſterly Wind all the Year long, without any conſiderable Variation, excepting that it is ſubject to be deflected there from ſome few Points of the Compaſs towards the North or South, according to the Poſition of the Place. The Obſervations which have been made of theſe Deflections are the following:

1. That near the Coaſt of *Africa*, as ſoon as you have paſs'd the *Canary* Iſles, you are ſure to meet a freſh Gale of N. E. Wind, about the Latitude of 28 Degrees North, which ſeldom comes to the Eaſtward of the E. N. E or paſſes the N. N. E. This Wind accompanies thoſe bound to the Southward to the Latitude of 10 North, and about 100 Leagues from the *Guinea* Coaſt, where, till the 4th Degree of North Latitude, they fall into the Calms and Tornado's: Of which more hereafter.

2. That thoſe bound to the *Caribbe* Iſles, find, as they approach the *American* Side, that the aforeſaid N. E. Wind becomes ſtill more and more Eaſterly, ſo as ſometimes to be E. ſometimes E. by S. but yet moſt commonly to the Northward of the Eaſt a Point or two, ſeldom more. 'Tis likewiſe obſerv'd, That the Strength of theſe Winds does

Digitized by Google

does gradually decreaſe as you ſail to the Weſtward.

3. That the Limits of the Trade and variable Winds in this Ocean are farther extended on the *American* Side than the *African*; for whereas you meet not with this certain Wind till after you have paſs'd the Latitude of 28 Deg. on this Side, on the *American* Side it commonly holds to 30, 31, or 32 Degrees of Latitude: And this is verified likewiſe to the Southward of the Equinoctial; for near the Cape of *Good Hope*, the Limits of the Trade-Winds are 3 or 4 Degrees nearer the Line than on the Coaſt of *Braſile*.

4. That from the Latitude of 4 Degrees North, to the aforeſaid Limits on the South of the Equator, the Winds are generally and perpetually between the S. and E. and moſt commonly between the S. E. and E. obſerving always this Rule, That on the *African Side* they are more Southerly, on the *Braſilian* more Eaſterly, ſo as to become almoſt due Eaſt; the little Reflection they have being ſtill to the Southward. In this Part of the Ocean it has been my Fortune to paſs a full Year, in an Employment that oblig'd me to regard more than ordinary the Weather, and I found the Winds conſtantly about the S. E. the moſt uſual Point S. E. by E. When it was Eaſterly, it generally blew hard, and was gloomy, dark, and ſometimes rainy Weather: If it came to the Southward, it was generally ſerene, and a ſmall Gale next to a Calm; but this not very common: But I never ſaw it to the Weſtward of the South, or Northward of the Eaſt.

5. That the Seaſon of the Year has ſome ſmall Effect on theſe Trade-Winds; for that when the Sun is conſiderable to the Northward of the Equator, the S. E. Winds, eſpecially in the Streight of this Ocean, (if I may ſo call it) between *Braſile* and the Coaſt of *Guinea*, do vary a Point or two to the Southward, and the N. E. become more Eaſterly: And on the contrary, when the Sun is towards the Tropic of *Capricorn*, the South-Eaſterly Winds become more Eaſterly, and the North-Eaſterly Winds on this Side the Line vere more to the Northward.

6. That as there is no general Rule that admits not of ſome Exception, ſo there is in this Ocean a Tract of Sea wherein the Southerly and S. W. Winds are perpetual, *viz.* all along the Coaſt of *Guinea*, for above 500 Leagues together, from *Sierra Leona* to the Iſle of St. *Thomas*; for the S. E. Trade-Wind having paſs'd the Line, and approaching the Coaſt of *Guinea* within 80 or 100 Leagues, inclines towards the Shore, and becomes S. S. E. and by degrees, as you come nearer, it veres about to S. S. W. and in with the Land S. W. and ſometimes W. S. W. which Variation is better expreſs'd in the Map hereto annex'd, (*Vide Map*) than it can well be in Words. Theſe are the Winds which are obſerv'd on this Coaſt when it blows true; but there are frequent Calms, violent ſudden Guſts call'd *Tornado's*, from all Points of the Compaſs, and ſometimes unwholeſome foggy Eaſterly Winds, call'd *Hermitan* by the Natives, which too often infeſt the Navigation of theſe Parts.

7. That to the Northward of the Line, between 4 and 10 Degrees of Latitude, and between the Meridians of Cape *Verde* and of the Eaſtermoſt Iſlands that bear that Name, there is a Tract of Sea wherein it were improper to ſay there is any Trade-Wind, or yet a variable; for it ſeems condemned to perpetual Calms, attended with terrible Thunder and Lightning, and Rains ſo frequent, that our Navigators from thence call this Part of the Sea the Rains: The little Winds that are, be only ſome ſudden uncertain Guſts, of very little Continuance, and leſs Extent; ſo that ſometimes each Hour you ſhall have a different Gale, which dies away into a Calm before another ſucceed; and in a Fleet of Ships in ſight of one another, each ſhall have the Wind from a ſeveral Point of the Compaſs. With theſe weak Breezes, Ships are oblig'd to make the beſt of their Way to the Southward thro' the aforeſaid 6 Degrees, wherein 'tis reported ſome have been detained whole Months for want of Wind.

From the 3 laſt Obſervables, is ſhewn the Reaſon of two notable Occurrents in the *Eaſt-India* and *Guinea* Navigations: The one is, why notwithſtanding the narroweſt Part of the Sea between *Guinea* and *Braſile* be about 500 Leagues over, yet Ships bound to the Southward ſometimes, eſpecially in the Months of *July* and *Auguſt*, find a great Difficulty to paſs it. This happens becauſe of

Digitized by Google

of the S. E. Winds, at that time of the Year commonly extending ſome Degrees beyond the ordinary Limit of 4 Degrees North Latitude; and withal, they come ſo much Southerly, as to be ſometimes South, ſometimes a Point or two to the Weſt: There remains then only to ply to Windward; and if on the one Side they ſtand away W. S. W. they gain the Wind ſtill more and more Eaſterly; but there is Danger of not weathering the *Braſilian* Shore, or at leaſt the Shoals upon that Coaſt. But if upon the other Tack they go away E. S. E. they fall into the Neighbourhood of the Coaſt of *Guinea*, from which there is no departing, without running Eaſterly as far as the Iſle of St. *Thomas*, which is the conſtant Practice of all the *Guinea* Ships, and which may ſeem very ſtrange without the Conſideration of the 6th Remark, which ſhews the Reaſon of it: For being in with the Coaſt, the Wind blows generally at S. W. and W. S. W. with which Winds they cannot go to the Northward for the Land; and on the other Tack they can lie no nearer the Wind than S. S. E. or S. With theſe Courſes they run off the Shore; but in ſo doing they always find the Winds more and more contrary: So that when near the Shore they could lie South, at a greater Diſtance they can make their Way no better than S. E. and afterwards E. S. E. with which Courſes they fetch commonly the Iſle of *St. Thomas* and Cape *Lopez*, where, finding the Winds to the Eaſtward of the South, they keep them favourable, by running away to the Weſtward in the South Latitude of 3 or 4 Degrees, where the S. E. Winds are perpetual.

For the Sake of theſe General Winds, all thoſe that uſe the *Weſt-Indian* Trade, even thoſe bound to *Virginia*, count in their beſt Courſe to get as ſoon as they can to the Southward, that ſo they may be certain of a fair and freſh Gale to run before it to the Weſtward: And for the ſame Reaſon, thoſe homeward-bound from *America* endeavour to gain the Latitude of 30 Degrees as ſoon as poſſible, where they firſt find the Winds begin to be variable; tho' the moſt ordinary Winds in the Northern Part of the *Atlantic* Ocean come from between the S. and W.

As to thoſe furious Storms call'd Hurricanes, which are, as it were, peculiar to the *Caribbe* Iſles, and which ſo dreadfully afflict them in the Month of *Auguſt*, or not much before or after, they do not ſo properly belong to this Place, both by reaſon of their ſmall Continuance and Extent, as likewiſe becauſe they are not Anniverſary; ſome Years having more than one, and ſometimes, for ſeveral Years together, there being none at all. But their Violence is ſo unconceivable, and their other *Phænomena* ſo ſurpriſing, that they merit well to be conſider'd apart.

What is here ſaid, is to be underſtood of the Sea-Winds at ſome Diſtance from the Land; for upon and near the Shores, the Land and Sea Breezes are almoſt every where ſenſible; and the great Variety which happens in their Periods, Force and Direction, from the Situation of the Mountains, Vallies and Woods, and from the various Texture of the Soil, more or leſs capable of retaining and reflecting Heat, and of exhaling or condenſing Vapours, is ſuch, that it were an endleſs Task to endeavour to account for them.

II. In the *Indian* Ocean, the Winds are partly General, as in the *Ethiopic* Ocean partly Periodical; that is, half the Year they blow one Way, and the other half near upon the oppoſite Points; and theſe Points, and Times of Shifting, are different in different Parts of this Ocean: The Limits of each Tract of Sea, ſubject to the ſame Change or Monſoon, are certainly very hard to determine; but the Diligence I have us'd to be rightly inform'd, and the Care I have taken therein, has, in a great Meaſure, ſurmounted that Difficulty; and I am perſwaded, that the following Particulars may be rely'd upon.

1. That between the Latitudes of 10 Degrees and 30 Degrees South, between *Madagaſcar* and *Hollandia Nova*, the General Trade-Wind about the S. E. by E. is found to blow all the Year long, to all Intents and Purpoſes, after the ſame Manner as in the ſame Latitudes in the *Ethiopic* Ocean, as it is deſcrib'd in the 4th Remark aforegoing.

2. That the aforeſaid S. E. Winds extend to within two Degrees of the Equator, during the Months of *June*, *July*, *Auguſt*, &c. to *November*; at which Time, between the South Latitudes of 3 and 10 Degrees, being near the Meridian of the North-end of *Madagaſcar*, and between 2 and 12 South Latitude,

Digitized by Google

tude, being near *Sumatra* and *Java*, the contrary Winds from the N. W. or between the N. and W. set in and blew for half a Year, *viz.* from the Beginning of *December* till *May*: And this Monsoon is observed as far as the *Molucca* Isles; of which more anon.

3. That to the Northward of 3 Degrees South Latitude, over the whole *Arabian* or *Indian* Sea, and Gulph of *Bengal*, from *Sumatra* to the Coast of *Africa*, there is another Monsoon, blowing from *October* to *April* upon the N. E. Points; but in the other half Year, from *April* to *October*, upon the opposite Points of S. W. and W. S. W. and that with rather more Force than the other, accompanied with dark rainy Weather; whereas the N. E. blows clear. 'Tis likewise to be noted, That the Winds are not so constant, either in Strength or Point, in the Gulph of *Bengal*, as they are in the *Indian Sea*, where a certain and steady Gale scarce ever fails. 'Tis also remarkable, That the S. W. Winds in these Seas are generally more Southerly on the *African* Side, more Westerly on the *Indian*.

4. That as an Appendix to the last described Monsoon, there is a Trade of Sea to the Southward of the Equator, subject to the same Changes of the Wind, viz. near the *African* Coast, between it and the Island *Madagascar* or *St. Lawrence*, and from thence Northward as far as the Line. Likewise, from *April* to *October*, there is found a constant fresh S. S. W. Wind, which, as you go more Northerly, becomes still more and more Westerly, so as to fall in with the W. S. W. Winds, mention'd before in those Months of the Year to be certain to the Northward of the Equator. What Winds blow in these Seas for the other half Year, from *October* to *April*, I have not yet been able to obtain to my full Satisfaction; for that our Navigators always return from *India* without *Madagascar*, and so are little acquainted in this Matter. The Account that has been given me is only this, That the Winds are much Easterly hereabouts, and as often to the North of the true East, as to the Southward thereof.

5. That to the Eastward of *Sumatra* and *Malacca*, to the Northward of the Line, and along the Coast of *Cambaia* and *China*, the Monsoons blow North and South, that is to say, the N. E. Winds are much Northerly, and the S. W. much Southerly. This Constitution reaches to the Eastward of the *Philippine* Isles, and as far Northerly as *Japan*; the Northern Monsoon setting in, in these Seas, in *October* and *November*, and the Southern in *May*, blowing all the Summer Months. Here it is to be noted, That the Points of the Compass, from whence the Wind comes in these Parts of the World, are not so fix'd as in those lately describ'd; for the Southerly will frequently pass a Point or two to the Eastward of the South, and the Northerly as much to the Westward of the North; which seems occasion'd by the great Quantity of Land which is interspers'd in these Seas.

6. That in the same Meridian, but to the Southward of the Equator, being that Tract lying between *Sumatra* and *Java* to the West, and *New Guinea* to the East, the same Northerly Monsoons are observ'd, but with this Difference, That the Inclination of the Northerly is towards the N. W. and of the Southerly towards the S. E. but the *Plage Venti* are not more constant here than in the former, *viz.* variable 5 or 6 Points: Besides, the Times of the Change of these Winds are not the same as in the *Chinese* Seas, but about a Month or 6 Weeks later.

7. That these contrary Winds do not shift all at once; but in some Places the Time of the Change is attended with Calms, in others with variable Winds: And it is particularly remarkable, That the End of the Westerly Monsoon on the Coast of *Coromandel*, and the two last Months of the Southerly Monsoon in the Seas of *China*, are very subject to be Tempestuous. The Violence of these Storms is such, that they seem to be of the Nature of the *West-India* Hurricanes, and render the Navigation of these Parts very unsafe about that Time of the Year. These Tempests are by our Seamen usually term'd, *The Breaking up of the Monsoons*.

By reason of the shifting of these Winds, all those that sail in these Seas, are oblig'd to observe the Seasons proper for their Voyages; and so doing, they sail not of a fair Wind, and speedy Passage: But if so be they chance to out-stay their Time till the contrary Monsoon set in, as it frequently happens, they are forc'd to give over the

Digitized by Google

Hopes of accomplishing their intended Voyages, and either return to the Port from whence they came, or else put into some other Harbour; there to spend the Time till the Wind shall become favourable.

III. The 3d Ocean, call'd *Mare Pacificum*, whose Extent is equal to that of the other Two, (it being from the West Coast of *America* to the *Philippine* Islands not less than 150 Degrees of Longitude) is that which is least known to our own or the neighbour Nations: That Navigation that there is on it, is by the *Spaniards*, who go Yearly from the Coast of *New Spain* to the *Manilha's*, but that but by one beaten Track; so that I cannot be so particular here, as in the other Two. What the *Spanish* Authors say of the Winds, they find in their Courses; and what is confirm'd by the old Accounts of *Drake* and *Candish*, and since by *Schouten*, who sail'd the whole Breadth of this Sea in the Southern Latitude of 15 or 16 Degrees, is, That there is a great Conformity between the Winds of this Sea, and those of the *Atlantic* and *Ethiopic*; that is to say, That to the Northward of the Equator, the predominant Wind is between the E. and N. E. and to the Southward thereof there is a constant steady Gale between the E. and S. E. and that on both Sides the Line with so much Constancy, that they scarce ever need to attend the Sails; and Strength, that 'tis rare to fail of crossing this vast Ocean in 20 Weeks time, which is about 130 Miles *per Diem*. Besides, 'tis said, That Storms and Tempests are never known in these Parts; so that here is the very best of Sailing, no Want of a fresh fair Wind, and yet no Danger of having too much; Wherefore some have thought it might be as short a Voyage to *Japan* and *China*, to go by the Streights of *Magellan*, as by the Cape of *Good Hope*.

The Limits of these General Winds are also much the same as in the *Atlantic* Sea, *viz.* about the 30th Degree of Latitude on both Sides; for the *Spaniards* homeward-bound from the *Manilha's*, always take the Advantage of the Southerly Monsoon, blowing in there in the Summer Months, and run up to the Northward of that Latitude, as high as *Japan*, before they meet with variable Winds, to shape their Course to the Eastward. And *Schouten* and others, that have gone about by the *Magellan* Streights, have found the Limits of S. E. Winds much about the same Latitude to the Southward. Besides, a farther Analogy between the Winds of this Ocean, and the *Ethiopic*, appears in that upon the Coast of *Peru*, they are always much Southerly, like as they are found near the Shores of *Angola*.

Thus far Matter of Fact, wherein if the Information I have receiv'd be not in all Parts accurate, it has not been for want of Enquiry from those I conceiv'd best able to instruct me; and I shall take it for a very great Kindness if any Master of a Ship, or other Person, well inform'd of the Nature of the Winds in any of the aforemention'd Parts of the World, shall please to communicate their Observations thereupon; so that what I have here collected, may be either confirm'd or amended, or, by the Addition of some material Circumstances, enlarged. 'Tis not the Work of one, nor of few, but of a multitude of Observers, to bring together the Experiments requisite to compose a perfect and compleat History of these Winds. However, I am not much doubtful that I have err'd in, or omitted, any of the principle Observables, whatever lesser Particles may have escap'd my Knowledge.

To help the Conception of the Reader in a Matter of so much Difficulty, I believ'd it necessary to adjoin a Scheme, shewing at one View all the various Tracts and Courses of these Winds; whereby 'tis possible the Thing may be better understood, than by any Verbal Description whatsoever.

The Limits of these several Tracts are design'd every where by prick'd Lines, as well in the *Atlantic* and *Ethiopic*, where they are the Boundaries of the Trade and variable Winds, as in the *Indian* Ocean, where they also shew the Extent of the several Monsoons. I could think of no better Way to design the Course of the Winds on the Map, than by drawing Rows of Strokes in the same Line that a Ship would move, going always before it; the sharp End of each little Stoke pointing out that Part of the Horizon, from whence the Wind continually comes: And where there are Monsoons, the Rows of the Strokes run alternately backward and forward; by which Means

Digitized by Google

Means they are thicker there than elsewhere. As to the great South Sea, considering its vast Extent, and the little Variety there is in its Winds, and the great Analogy between them and those of the *Atlantic* and *Ethiopic* Ocean; besides that the greatest Part thereof is wholly unknown to us; I thought it unnecessary to lengthen the Map therewith.

In the foregoing History are contain'd several Problems, that merit well the Consideration of our acutest Naturalists, both by reason of the Constancy of the Effect, and of the immense Extent thereof; near half the Surface of the Globe being concern'd. The chief of these Problems are, 1. Why these Winds are perpetually from the E. in the *Atlantic* and *Ethiopic*, as likewise in the *Pacific* Ocean, between the Latitudes of 30 N. and 30 S? 2. Why the said Winds extend *no farther* with Constancy than to the Latitudes of 30 Degrees? 3. Why there should be a constant South-Westerly Wind upon and near the Coast of *Guinea*? 4. Why in the North Part of the *Indian* Ocean the Winds, which for one half Year do agree with those of the other two Oceans, should change in the other half Year, and blow from the opposite Points, whilst the Southern Part of that Ocean follows the General Rule, and has perpetual Winds about S. E? 5. Why in these General Trade-Winds it should be always true, That to the Northward of the Equator, it is inclined to the Northward of the East; and in South Latitudes, to the Southward thereof? 6. Why in these Seas of *China*, there should be so great an Inclination from the E. to the N. more than elsewhere? With many more, which it would be much easier to propose, than answer.

But lest I should seem to propose to others, Difficulties which I have not thought worth my own Time and Pains, take here the Result of an earnest Endeavour after the true Reason of the aforesaid *Phænomena*: wherein if I am not able to account for all Particulars, yet 'tis hoped, the Thoughts I have spent thereon will not be judged wholly lost by the Curious in Natural Enquiries.

Wind is most properly defin'd to be the Stream or Current of the Air: and where such a Current is perpetual and fix'd in its Course, 'tis necessary that it proceed from a permanent unintermitting Cause. Wherefore some have been inclin'd to propose the Diurnal Rotation of the Earth upon its Axis, by which, as the Globe turns Eastward, the loose and fluid Particles of the Air, being so exceeding light as they be, are left behind; so that in respect of the Earth's Surface, they move Westward, and become a constant Easterly Wind. This Opinion seems confirmed; for that these Winds are found only near the Equinoctial, in those Parallels of Latitude where the Diurnal Motion is swiftest; and I should readily assent to it, if the constant Calms in the *Atlantic* Sea near the Equator, the Westerly Winds near the Coast of *Guinea*, and the Periodical Westerly Monsoons under the Equator in the *Indian* Seas, did not declare the Insufficiency of that Hypothesis. Besides, the Air being kept to the Earth by the Principle of Gravity, would acquire the same Degree of Velocity that the Earth's Surface moves with, as well in respect of the Diurnal Rotation, as of the Annual about the Sun, which is about three times swifter.

It remains therefore to substitute some other Cause, capable of producing a like constant Effect, not liable to the same Objections, but agreeable to the known Properties of the Elements of Air and Water, and the Laws of the Motion of fluid Bodies. Such an one is, I conceive, the Action of the Sun-Beams upon the Air and Water, as he passes every Day over the Oceans, consider'd together with the Nature of the Soil, and Situation of the adjoining Continents. I say therefore, 1. That, according to the Laws of Statics, the Air, which is less rarified, or expanded by the Heat, and consequently more Ponderous, must have a Motion towards those Parts thereof which are more rarified, and less Ponderous, to bring it to an *Equilibrium*: And, 2. That the Presence of the Sun continually shifting to the Westward, that Part towards which the Air tends, by reason of the Rarification made by his greatest Meridian Heat, is with him carried Westward; and consequently the Tendency of the whole Body of the lower Air is that Way.

Thus a General Easterly Wind is form'd, which being impress'd upon all the Air of a vast Ocean, the Parts impel one the other,

Digitized by Google

and so keep moving till the next Return of the Sun, whereby so much of the Motion as was lost, is again restor'd; and thus the Easterly Wind is made perpetual.

From the same Principle it follows, That this Easterly Wind should, on the North Side of the Equator, be to the Northward of the East, and in South Latitudes to the Southward thereof; for near the Line, the Air is much more rarified than at a greater Distance from it, because of the Sun twice in a Year vertical, and at no Time distant above 23 Deg. and a half; at which Distance the Heat, being as the Sine of the Angle of Incidence, is but little short of that of the perpendicular Ray. Whereas under the Tropics, tho' the Sun stays long vertical, yet he is as long 47 Deg. off; which is a kind of Winter, wherein the Air so cools, as that the Summer-Heat cannot warm it to the same Degree with that under the Equator. Wherefore the Air to the Northward and Southward being less rarified than that in the middle, it follows, that from both Sides it ought to tend towards the Equator: This Motion, compounded with the former Easterly Wind, answers all the *Phenomena* of the General Trade-Winds; which if the whole Surface of the Globe were Sea, would undoubtedly blow all round the World, as they are found to do in the *Atlantic* and *Ethiopic* Oceans.

But seeing that so great Continents do interpose and break the Continuity of the Oceans, Regard must be had to the Nature of the Soil, and the Position of the high Mountains, which I suppose are the two principal Causes of the several Variations of the Winds, from the former General Rule: For if a Country lying near the Sun prove to be flat, sandy, low Land, such as the Deserts of *Lybia* are usually reported to be, the Heat, occasion'd by the Reflexion of the Sun's Beams, and the Retention thereof in the Sand, is incredible to those that have not felt it; whereby the Air being exceedingly rarified, it is necessary that the cooler and more dense Air should run thitherwards to restore the *Equilibrium*. This I take to be the Cause why, near the Coast of *Guinea*, the Wind always sets in upon the Land, blowing Westerly instead of Easterly; there being sufficient Reason to believe, that the inland Parts of *Africa* are prodigiously hot, since the Northern Borders thereof were so intemperate, as to give the Ancients Cause to conclude, That all beyond the Tropic was made inhabitable by Excess of Heat: From the same Cause it happens, that there are so constant Calms in that Part of the Ocean call'd the *Raines*, (describ'd in the 7th Remark on the *Atlantic* Sea:) For this Tract being plac'd in the middle, between the Westerly Winds blowing on the Coast of *Guinea*, and the Easterly Trade-Winds blowing to the Westward thereof, the Tendency of the Air here is indifferent to either, and so stands in *Equilibrio* between both; and the Weight of the incumbent Atmosphere being diminish'd by the continual contrary Winds blowing from hence, is the Reason that the Air here holds not the copious Vapour it receives, but lets it fall into frequent Rains.

But as the cool and dense Air, by reason of its greater Gravity presses upon the hot and rarified, 'tis demonstrative, that this latter must ascend in a continued Stream as fast as it rarifies; and that being ascended, it must disperse it self to preserve the *Equilibrium*; that is, by a contrary Current, the upper Air must move from those Parts where the greatest Heat is: So by a kind of Circulation, the N. E. Trade-Wind below will be attended with a South-Westerly above, and the South-Easterly with a N. W. Wind above. That this is more than a bare Conjecture, the almost instantaneous Change of the Wind to the opposite Point, which is frequently found in passing the Limits of the Trade-Winds, seems to assure us. But that which above all confirms this Hypothesis, is the *Phenomenon* of the Monsoons, by this Means most easily solv'd, and without it hardly explicable.

Supposing therefore such a Circulation as above, 'tis to be consider'd, That to the Northward of the *Indian* Ocean, there is every where Land within the usual Limit of the Latitude of 30, *viz. Arabia, Persia, India, &c.* which for the same Reason as the *Mediterranean* Parts of *Africa* are subject to unsufferable Heats when the Sun is to the North, passing nearly vertical; but yet are temperate enough when the Sun is remov'd towards the other Tropic, because of a Ridge of Mountains at some Distance within the Land, said to be frequently in

Winter

Winter cover'd with Snow; over which the Air, as it passes, must needs be much chill'd. Hence it comes to pass, That the Air coming according to the general Rule, out of the N. E. in the *Indian* Seas, is sometimes hotter, sometimes colder, than that which by this Circulation is return'd out of the S. W. And by Consequence, sometimes the under Current of the Wind is from the N. E. sometimes from the S. W.

That this has no other Cause, is clear from the Times wherein these Winds set in, *viz.* in *April*, when the Sun begins to warm those Countries to the North, the S. W. Monsoon begins, and blows during the Heats till *October*; when the Sun being retired, and all Things growing cooler Northward, and the Heat encreasing to the South, the N. E. Winds enter, and blow all the Winter, till *April* again. And it is undoubtedly from the same Principle, That to the Southward of the Equator, in Part of the *Indian* Ocean, the N. W. Winds succeed the S. E. when the Sun draws near the Tropic of *Capricorn*: But I must confess, That in this latter occurs a Difficulty, not well to be accounted for, which is why this Change of the Monsoon should be any more in this Ocean than in the same Latitude in the *Ethiopic*, where there is nothing more certain than a S. E. Wind all the Year.

'Tis likewise very hard to conceive, why the Limits of the Trade-Wind should be fix'd about the 30th Degree of Latitude all round the Globe, and that they should so seldom transgress or fall short of those Bounds: As also, That in the *Indian* Sea, only the Northern Part should be subject to the changeable Monsoons, and in the Southern there be a constant S. E.

These are Particulars that merit to be consider'd more at large, and furnish a sufficient Subject for a just Volume, which will be a very commendable Task for such, who, being us'd to Philosophical Contemplations, shall have Leisure to apply their serious Thoughts about it.

SECT. XXV.

An Account of Meteors, from Monsieur Bion's *Use of the* Globes; *approv'd by Monsieur* de la Hire, *the* French *King's Professor of Mathematicks, and one of the Royal Academy of Sciences.*

Of DEW.

DEW is occasion'd thus: The Cold which is upon the Surface of the Earth during the Winter, covers it on all Parts, and concenters the Heat in low and subterraneous Places; and in the Spring, the Cold being abated, and the Pores of the Earth open, it has a Sort of Sweat or Perspiration: From whence it is, That many Vapours must then of Necessity flie up into the Air; and the Nights of that Season being still cold, condense those Vapours and Exhalations that are rais'd by Day, and change them to a very small and insensible Rain, of a short Continuance, that falls early in the Morning, and is found in Drops of Water like Pearl upon the Tops of Herbs and Flowers. But the Exhalations which are easily rais'd with those Vapours, are more subtile, and less corrosive: Whence it is, that they make a very healthful Water upon the Tops of tender and blooming Flowers, which is indeed so very healthful, that it is gather'd to be made use of on many Occasions.

Of MISTS, *or* FOGS.

The Mists in Winter are form'd of Vapours rais'd in that Season, and condens'd by the Cold in the lower Region of the Air: Whence it comes, That tho' fewer Vapours are then rais'd than in other Seasons, we have yet more frequent Mists.

Mists in Summer are partly form'd of Vapours, and partly of Exhalations, rais'd in the Day-time by the Heat of the Season; and because the Mist, by reason of the Grossness

Groſſneſs and Weight of the Exhalations, cannot eaſily mount to the higher Region, where the Air is more ſubtile; and ſo the Coldneſs of the Night condenſes thoſe Exhalations and Vapours, which in the Morning appear to be Miſts. But the Air which has been cool'd in the Night, and but little warm'd by the Morning-Sun, has then only a ſmall Heat; which if it have Force enough to raiſe the Fog, then we have either bad Weather, or many Clouds: But if the Morning Sun cannot draw it up, the Miſt falls down again upon the Earth by its natural Gravity, and is a Sign of fair Weather.

Of MILDEW.

This is a kind of Fog that happens in the middle of Summer, when, by the Heat of the Seaſon, many corroſive Exhalations are rais'd with the Vapours; which falling upon the growing Corn, blaſts and ſcorches it, eſpecially if heated by the Sun, which makes them ſtill more corroding. Therefore skilful Countrymen kindle great Fires of Straw on that Side of their Corn from whence the Winds blow, to protect it from the Mildew.

Of FROST *and* ICE.

Froſt comes from a violent North Wind that brings a colder Air with it than what we had, which, by the Violence of that Wind, only glances upon the Surface of the Earth: It ſtops the Motion of the ſmall Particles of the Earth and Water, and by this Means hardens and condenſes them. Ice comes from the ſame Cauſe, but with this Difference, That the Air which the Wind brings from the North is very cold; and it being the ſame in the Place where it comes, thoſe two concurring Winds freeze the Water.

Of CLOUDS.

They are form'd when Vapours being drawn up into the Air from all Parts, their Motion is leſſen'd, and their Parts come nearer together, and reaching the middle Region of the Air, they become more united, and form thoſe Clouds which we ſee move in the Air when driven by Winds.

Of RAIN.

Rain comes from Clouds driven from one Point of the Air to another more cold, or from Vapours elevated from the lower to the middle Region of the Air, which is more cold: Theſe Clouds being condens'd by this Cold, turn to Water, which, by its Gravity, falls to the Earth in ſmall Parcels call'd Drops, form'd by the Agitation of the Air. Hence it is, That Rain for moſt part follows a South, but ſeldom a North Wind; tho', from particular Cauſes, it may happen, that the Air is more warm ſometimes in a more Northern, than in a more Southerly Place. In *France*, they have ſeldom Rain when the Wind is in the Eaſt, but frequently when in the Weſt; becauſe the Sea is on that Quarter, from whence a great Quantity of Vapours ariſe, which form Clouds, and are brought into *France* by that Wind.

Rain is alſo form'd from Clouds elevated to the middle Region of the Air, which is more cold than ordinary at ſome times. Hence it is, that thoſe Vapours are haſtily condens'd as they riſe, and before the other Vapours can arrive there. Thus they form little Clouds heap'd one upon another, that makes the Sky look as if it were curdl'd. This ſhews, that Vapours are riſing from the Earth; that the middle Region is more cold than ordinary, and preſages Rain. When that Part of the Horizon where the Sun riſes or ſets is of a pale or yellowiſh Colour, it ſhews, that there are many Vapours in the Air, and foretels bad Weather: But when the ſame Parts of the Horizon are of a bright Red, there are few Vapours in the Air, and thoſe very ſubtile; the Rays of the Sun coming then to us Horizontally, they meet the better with thoſe few ſubtile Vapours and Exhalations, which denotes a Continuation of good Weather, eſpecially if the Wind in the South or Weſt Points has not begun to blow.

Of

Digitized by Google

Of SNOW.

Snow comes from this, That in the Winter, the Regions of the Air are altogether cold, and the Clouds meeting that great Cold every where, paſs very ſoon from that Degree of Condenſation which is requiſite to change them to Rain, to that which is neceſſary to change them to Ice; ſo that in Winter, as ſoon as the Clouds begin to change into Rain, the ſmall Particles of Water immediately freeze, and turn to Snow, which touching upon one another, make Flakes; and having ſmall Intervals, like ſo many Pores, are therefore very light.

All theſe Flakes continuing for moſt part together, have ſtill Intervals betwixt one another, and together form a Cloud, which, tho' it appear thick, yet, becauſe of thoſe *ſmall Intervals*, is eaſily carried about: Therefore thoſe Flakes take ſome Time before they fall to the Ground.

The Snow is not chang'd into a ſenſible Body of Ice during that Time, becauſe when it is once form'd, the ſmall Intervals, which are only fill'd with a ſubtile Air, hinder it to be chang'd into any other Form.

It falls when the Wind divides its Flakes into other ſmaller ones, which then fall to the Ground, not ſo much by their Gravity, which is very little, but becauſe they are driven towards the Ground by the Air of the middle Region, which is repelled it ſelf by the Wind which blows beneath the Cloud.

And as the ſmall Particles of the Ice that compoſe theſe Flakes are hard, ſolid, tranſparent, and all of different Figures and Poſitions, they reflect the Light from every Part, ſo appear white, juſt like white Sand, which is only a Heap of little tranſparent Bodies, as we perceive by the Microſcope; but with this Difference, That Snow being form'd of Vapours, and having no Mixture of Earthy Parts; therefore it is of a very bright White.

If it happen that the Coldneſs of the Air that form'd the Snow be abated, then ſome of the Flakes melt, and dividing thoſe that are not melted, inſinuate ſome Water into the Intervals, which freezing, they become heavier; then both the Snow which is melted, and that which is not, fall: And thus it both ſnows and rains at the ſame time.

Of HAIL.

Hail is form'd under the Clouds, thus: The Air of the middle Region is very cold in Summer, and in the temperate Seaſons; and when that Air is under a great and thick Cloud, which deprives it of the Rays of the Sun, by this means it grows cold to a great degree. Hence it is, That if that Cloud fall down in Rain, it neceſſarily happens, that the Drops of Water, as they paſs thro' the cold Air under that Cloud, muſt freeze, and fall down in little Particles of Ice, much of the Figure and Greatneſs with the Drops of Rain.

Of THUNDER.

Thunder is form'd of Exhalations, which are rais'd in great Abundance by the Heat of Summer. Theſe Exhalations cannot be rais'd, eſpecially in that Seaſon, but their Particles muſt receive agitation, and begin to grow warm; ſo that being in the middle Region, among the Vapours which are there chang'd into Clouds, theſe Exhalations being mix'd with them, diſperſe the Vapours hither and thither, and gathering together in the Center of the Clouds, they continually grow more and more hot, to that degree, that they ſwell thoſe Clouds; and if other Clouds beat againſt them, they burſt out with great Force: And this is always followed by a great Noiſe, and with Lightning, which appears to us before the Noiſe; becauſe Light, being more ſubtile than the Air which occaſions our Hearing, reaches our Eyes ſooner than that does our Ears.

The Continuation and Repetition of the Noiſe of Thunder is from a ſort of Echo in the Clouds. Sometimes we ſee Lightning without Thunder, becauſe that Cloud has no Vapours; tho' enough to condenſe the Circumference, ſo as to make it uneaſy to burſt: Not but that at the ſame time it makes

Digitized by Google

makes a Noise, but so small, that we cannot hear it at so great a Distance.

Lightning without Thunder happens ordinarily in a Time of great Heat, because then there are more Exhalations than Vapours rais'd: And hence we observe, That when there is Lightning without Thunder, there is no Rain, because there is not Vapours enough to make Rain.

But when Lightning is accompanied with great Thunder, 'tis a Sign there are a great many Vapours condens'd round the Circumference of the Cloud, and almost form'd into Rain already; because the Heat concentring in the Center of the Cloud, leaves a greater Cold to the Vapours in the Circumference. Thus we find every time the Thunder shakes and bursts the Cloud, the Rain encreases the more: For these Reasons, the Water being almost form'd, falling by the shaking of the Cloud, must needs fall in very great Drops; which passing thro' the middle Region of the Air, are many times, by the great Cold there, immediately turn'd to very big Hail, which frequently makes terrible Devastations.

The more thick and condens'd the Circumference of the Cloud is by the Vapours, the Exhalations burst out with the greater Force; the Lightning is carried further, and sometimes touches the Surface of the Earth; and then it is call'd a Thunder-bolt, and burns and overturns Buildings, sets all in a Flame where it comes, and kills Men and Beasts.

Lightning has frequently surprizing and prodigious Effects, as melting the Blade of a Sword in the Scabbard, and Money in one's Pocket, without hurting the Scabbard or Pocket. This happens when the Particles that compose the Lightning are so subtile and small, as to make no Impression upon Bodies that have large Pores, to give a Passage to them; so that they spend their Force upon those Bodies that resist them. On the contrary, sometimes it burns Men's Clothes and Hair, without hurting their Flesh: The Reason of which is, That the Particles and Exhalations which compose that Lightning, are more gross, fat and oily.

SECT. XXVI.

The Definition of the GLOBE, *and its Parts.*

THE Terrestrial Globe is a Spherical Body, made by Art, upon whose Surface the Parts of the Earth, and their Situation with respect one to another, are represented as they really are, according to the Proportion the Surface of the Terrestrial Globe bears to that of the Earth.

A Map, Chart, or Geographical Table, is a plain Figure, in which the Parts of the Earth are placed, according to their real Situation, *viz.* their Situation as to North, South, East and West, and their Distance from other Places. The Advantage of Maps is this, That they lay the Globe of the Earth before us at once. In all Maps, the Places on the Right Hand lie East, and those on the Left lie West, the Top of the Map is the North, and the Bottom the South. But the Terrestrial Globe most naturally shews the different Situations of Places, the Motion of the Sun, the Difference of Climates, the Inequality of Days, and many other Parts of pleasant and useful Learning, which cannot be understood without it. The Difference betwixt a Map and a Globe, is much the same with that betwixt a Picture and a Figure in *Basso-Relievo*.

Maps are either General or Particular; the General Map shews us the whole Surface of the Earth; and a Particular Map is that of a particular Kingdom or Country.

The Poles of the Earth are two fix'd Points, Diametrically opposite to one another, directly under the Poles of the World. The Pole of the Earth, under the Constellation of *Ursa Major*, is call'd the North or Artic Pole: It is represented in the Heavens by the Polar Star, in the Extremity of the Tail of *Ursa Minor*, and is distant from the true North Pole about 2½ Degrees. This Star may easily be known; for it makes almost a Right Line with the two last Wheels

Wheels of *Charles's Waine*, in the Conſtellation of *Urſa Major*.

The South or Antartic Pole is known by 4 Stars in the Southern Hemiſphere. The Mariners, who lately diſcover'd them, call them the *Croiſade*, becauſe they are in Form like a Croſs. Theſe two Poles are 180 Degrees diſtant from one another. The People who live under the Poles have but one Day of 6 Months length, and one Night of the ſame: This is eaſy to be conceiv'd; for when the Sun takes his Courſe to the North of the Equator during thoſe 6 Months, it is above the Horizon of thoſe who live under the N. Pole; and for the ſame Reaſon, the Stars that are near the Pole never ſet. The Doctrine of the Poles is eaſily underſtood by the Terreſtrial Globe; for when it is turn'd round, we ſee the two Poles fix'd. If we conceive a Line to be drawn through the Center of the Earth from one Pole to another, this is call'd the Axis, becauſe the Heavens and the Stars move round that Line, as a Wheel does round its Axle-Tree. This Motion may be eaſily explain'd by the familiar Experiment of piercing a round Orange through the middle with a long Needle: The Needle repreſents the Axle-Tree of the World; its two Extremities repreſent the two Poles; and if you move the Orange round the Needle, it reſembles the Motion of the Earth.

The Globe is ſurrounded with many imaginary Circles, which are divided into Greater and Leſſer: The Greater have the ſame Center with the Globe, and divide it into two equal Parts, as the Equator, the Zodiac, the Horizon, the Meridian, and the two Coluri: The Leſſer Circles have a different Center from that of the Globe, and divide it into two unequal Parts; they are the 2 Tropics, and the 2 Polar Circles. They are alſo divided into 5 Parallel and 3 Oblique Circles: The Parallels are the Equator, the two Tropics, and the two Polar Circles, ſo call'd, becauſe all the Parts of theſe Circles are equally diſtant from one another, and becauſe they have the ſame Poles with the World. The 3 Oblique Circles, ſo called, becauſe their Poles are not the ſame with thoſe of the World, are the Zodiac, the Meridian, and the Oblique Horizon.

Of theſe Circles, ſome are call'd Right Circles, becauſe they make Right Angles with the Equator; *viz.* the two Coluri, the Meridian, and the Horizon when Right.

The Equator is the greateſt Circle of the 5 Parallels, and is equally diſtant from both Poles: Seamen call it the *Line*. This Circle divides the World into two equal Parts, of which the one is called the Northern, and the other the Southern Part: The Extent of the Northern is from the Equator to the North Pole, and that of the Southern from the Equator to the South Pole: It is call'd the Equinoctial, and the Equator, becauſe it ſhews when the Equinoxes are to come, *viz.* when the Sun comes to that Part of the Ecliptic where the Ecliptic and Equator interſect each other.

There are two Equinoxes, one in Spring and the other in Autumn; the firſt is about the 20th of *March*, when the Sun enters the firſt Degree of *Aries*; and the ſecond is when the Sun enters the firſt Degree of *Libra*, which is about the 12th of *September*. All the People of the World, except thoſe under the Poles, have at the ſame time of the Year their Day and Night of an equal Length; for at that Time the Sun moves in a middle Courſe, betwixt the two Poles. Thoſe who live under the Equator, have equal Days and Nights all the Year, becauſe their Horizon divides all the Diurnal Circles of the Sun into two equal Parts. The Equator is the Meaſure and Rule of the Diurnal Motions of the Stars; for every Star, by its Diurnal Motion, deſcribes a Circle parallel to the Equator. When they aſcend 15 Degrees of the Equator above the Horizon, we reckon it an Hour; for by this Account, the Sun runs through all the 360 Degrees in 24 Hours. The Equator has mark'd upon it the Degrees of Longitude from W. to E. Places under the Equator have no Latitude.

The Parallel Circles are of great Uſe to ſhow the Latitude of Places, and for this Reaſon are called the Circles of Latitude.

The Tropics are the two greateſt Circles parallel to the Equator, which touch the Ecliptic in the Signs of *Cancer* and *Capricorn*: They are diſtant from the Equator 23 Deg. and a half. The Sun, on the 11th of *June* and 11th of *December*, deſcribes thoſe Circles. The Tropic of *Cancer* is neareſt us. When

Digitized by Google

the Sun comes to the first Degree of *Cancer*, then we have the longest Day, and shortest Night: It is also call'd the High-Solstice; for then the Sun is in his greatest Height with regard to us. Some call it the Tropic of Summer, or the Northern Tropic. The other is call'd the Tropic of *Capricorn*, because when the Sun enters the beginning of that Sign, he returns, and goes no further Southward from the Equator. Some call it in regard to us, the Low-Solstice; for the Sun being then at the greatest Distance from our Zenith, we have the shortest Days.

The Tropics are the Boundaries of the Course of the Sun, and have their Name from a Greek Word, which signifies to return; for whenever the Sun touches those Points, he returns towards the Equator, and goes no further either Northward or Southward. The Tropics do likewise shew the Place in the Ecliptic where the Solstices are celebrated; and in the Horizon, they shew the greatest Eastern and Western Amplitude of the Sun: In the Meridian, they discover the least and greatest Distance of the Sun from the Zenith of those who live in an Oblique Sphere. They also shew the Breadth of the Torrid Zone, which is 47 Deg Betwixt them and the Equator lies the Torrid, and betwixt the Polar Circle and Tropics lie the Temperate Zones. The Northern Parts of *Africa*, some Places of *Asia*, and North *America*, are under the Tropic of *Cancer*. The Southern Places of *Africa*, *Terra Magellanica*, and South *America*, are under the Tropic of *Capricorn*.

The Polar Circles are the two least of the Parallel Circles, and neareſt the Poles, being distant from them 23½ Degrees, and 66½ Degrees from the Equator, and are call'd the Artic and Anrartic Polar Circles, from those two Poles: They terminate the Frigid and Temperate Zone. They who live under those Circles, or (which is the same thing) are 66. Degrees distant from the Equator, have their longest Day 24 Hours, and their longest Night the same. If the North Pole be elevated 66½ Degrees, by this Position we may see, That the Artic Polar Circle passes through the Zenith, and the Antarctic through the Nadir, the Tropic of *Cancer* will be entirely above the Horizon, and the Tropic of *Capricorn* quite below it; so that the Sun, when in the Tropic of *Cancer*, will be 24 Hours above the Horizon.

The Meridian is a great Circle, passing through the Poles of the World, and takes its Name from the Latin Word *Meridies*, Mid-day, or Noon: For whenever the Sun touches the Meridian of any Place, then it is Noon to the Inhabitants. We change Meridians when we go from E. to W. or from W. to E. but if we go streight N. or S. we are still under the same Meridian, though we change our Zenith and Nadir. Globes have a great Brazen Meridian fix'd to them, having the same Poles with those of the World: It divides the Globe into two equal Parts, *viz.* the Eastern and Western: It shews the Latitude of Places, or their Distance from the Equator.

To know the Latitude of any Place, or the Altitude of the Pole in that Place, turn the Globe about, till the Place whose Latitude you want touch the right Side of the Meridian. Observe the Figure upon the Meridian which the Place given touches, and you have its Degrees of Latitude. One half of the Meridian is above the Horizon, and the other half below, which shews the same thing in that Hemisphere.

Geographers have invented a First Meridian, to be the Boundary and Measure of all other Meridians. Authors are not agreed which is the First, so that every one may follow their own Judgment in this Matter; but they generally plac'd the First Meridian in the most Westerly Place of our Continent. *Ptolomy*, and others of the Ancients, plac'd the First Meridian in the *Canary* Islands; but *Ptolomy* was mistaken, when he thought all those Islands to be of one Longitude. The *French* King, *Lewis* XIII. by an Edict of the 25th of *April*, 1634. order'd his Subjects to place the First Meridian in the Island of *Fer*, the most Westerly of all the *Canaries*, by the Advice of the ablest Mathematicians of *Europe*, who came to *Paris*, at the Invitation of Cardinal *Richlieu*. The *Hollanders* make it the Pic of *Teneriff*, which is two Degrees more to the E. Others make the First Meridian to pass thro' the Islands of *Corvo* and *Flores*, part of the *Azores*. The Reason they give, is, That they observe the Needle of the Compass has no Decli-

Digitized by Google

Declination in that Place. Aſtronomers ordinarily make the Places of their Obſervations the Firſt Meridian; as *Ptolomy* made *Alexandria*; *Tycho Brahe* a ſmall Iſland belonging to *Denmark*, call'd *Uranibrug*; but moſt People make the Cape of *Teneriff* their Firſt Meridian. Mr. *Moll* makes it at *Ferro* Iſland, the ſame that the *French* call *Fer*.

In general Maps, all the different Meridians meet in one Point in the Poles of the World. The nearer thoſe Meridians are to the Poles, the leſs Diſtance they have from one another; ſo that one Degree of Longitude near the Equator contains many more Miles than one Degree of Longitude near the Poles. Tho' Meridians might be drawn through every Point of the Equator, yet for Orders-ſake the Makers of Maps have contracted them to 36, 10 Degrees diſtant from each other, of which they give *18* to the Upper, and as many to the Lower *Hemiſphere*.

The Meridian touches the Horizon in two Points, *viz.* the N. and S. and the Equator interſects the Horizon at E. and W. which are the 4 Cardinal Points.

The Meridian is of Uſe to ſhow the Elevation of the Pole above the Horizon, which is an Arch of the Meridian from the Horizon to the Pole; and as many Degrees as the Pole is above the Horizon, ſo many it is *ſaid to have* of Altitude.

The Meridian and the Horizon divide the Heavens into 4 Parts, *viz.* the E. and W. of the higheſt Hemiſphere, and the E. and W. of the lower.

This Circle is alſo of Uſe to ſhow the greateſt Height or Aſcenſion of the Sun and Stars, and the Beginning of the natural Day. Aſtronomers begin the Day when the Sun is in the Meridian; but moſt Nations of *Europe*, with *Copernicus*, begin the Day at Midnight: The *Jews* begin theirs at the Setting of the Sun; and the *Greeks* begin theirs at the Riſing of it. This Circle divides alſo the Day into the Morning before the Sun comes to the Meridian, and the Afternoon after it has paſs'd the ſame.

The Meridian ſhows alſo the Latitude of Places, which is nothing but an Arch of the Meridian from the Zenith of the Place where we are, to the Equator.

The Meridians are reckon'd from W. to E. and ſhow the Longitude of Places, which is their Diſtance Eaſtward and Weſtward from one another. The more Eaſtward any Place is, the ſooner the Sun and Stars come to the Meridian. If one Place be 15 Degrees more to the E. than another, it will be Noon there an Hour ſooner than at the Place more Weſterly: And if one Place be 90 Degrees more E. than another, it will be Noon there 6 Hours ſooner. Thus if two Ships ſail round the Earth, one of them ſteering E. and the other W. and if they meet at the 180th Degree of Latitude, the Ship that ſail'd E. reckons one Day more than the Ship that ſail'd W. The Reaſon is plain; for the Eaſtward-bound Ship ſails towards the Day, and has the Sun-riſing and ſetting every Day ſooner; whereas the other has them every Day later, and by Conſequence loſes Time.

The Zodiac is ſo call'd, becauſe the 12 Parts it is divided into have their Names from living Creatures; for the ancient Aſtronomers thought the Stars which compoſe the Conſtellations of *Aries*, *Taurus*, &c. had ſomething of the Reſemblance of thoſe Creatures.

The Zodiac is the only Circle in the Sphere which has Breadth aſſign'd it, and is reckon'd 16 Degrees broad, *viz.* 8 on each Side the Ecliptic: It is in Form more like a Girdle than a Circle. The Ecliptic divides the Equator obliquely; ſo that theſe 2 Points of it which are moſt diſtant from the Equator are 23½ Deg. diſtant from it. The Equator interſects the Zodiac in the Points of *Aries* and *Libra*; and by this the Zodiac is divided into two Parts, the one N. and the other S. This Circle is plac'd obliquely betwixt the two Poles, and touches the Tropics in two oppoſite Points. The Breadth of the Zodiac is of uſe to terminate the Courſe of the Planets: But upon the Globes and Maps, the Zodiac is repreſented by a Line in the middle of it, call'd the Ecliptic; becauſe the Eclipſes of the Sun and Moon are upon the Plain of it.

The Sun makes his Annual Courſe upon the Ecliptic without ever leaving it, and every Day runs over almoſt one Degree of this Circle; but not one intire Degree, otherwiſe he would run thro' all the 360 Degrees of the Ecliptic in ſo many Days: Whereas he requires 365 Days and 5¼ Hours to compleat his Courſe. The Cir-

Digitized by Google

cle the Sun makes every Day upon the Globe is not a perfect one; for he changes every Day the Place of his Rising and Setting in the Horizon, as he does his Place in the Meridian.

The Northern Part of the Zodiac has 6 Signs, and the Southern Part the like. The Names and Figures of these Signs, upon the Horizon of the Globe, are thus:

The 6 Northern Signs, and their Characters, are these:

Aries.	♈
Taurus.	♉
Gemini.	♊
Cancer.	♋
Leo.	♌
Virgo.	♍

The 6 Southern Signs, and their Characters:

Libra.	♎
Scorpius.	♏
Sagittarius.	♐
Capricorn.	♑
Aquarius.	♒
Pisces.	♓

Each of these 12 Signs has 30 Degrees.

The Sun runs through one of these Signs every Month: The Constellations which formerly answered to these Signs do not so now; for they are 28 Degrees more Eastward than anciently. Thus the Constellation of *Aries*, which formerly answer'd to the first Sign of the Zodiac, is now 28 Degrees more towards the E. in the Place where *Taurus* was formerly.

When the Sun is in the Northern Signs we have the longest Days, and the shortest when he is in the Southern.

When the Sun is in *Aries*, *Taurus*, and *Gemini*, we of the Northern Hemisphere have Spring; when in *Cancer*, *Leo*, and *Virgo*, we have Summer: When in *Libra*, *Scorpius*, and *Sagittarius*, we have Autumn; when the Sun is in *Capricorn*, *Aquarius*, and *Pisces*, we have Winter: But in the Southern Hemisphere our Winter-Signs are those of their Summer; and *vice versa*, our Autumn is their Spring.

The Obliquity of the Ecliptick is the Cause of the Variety of Seasons, and of the Inequality of Days and Nights.

The Horizon is so call'd from a Greek Word, signifying to limit or bound, because it bounds our Sight, when we view the Heavens round from any Part of the Earth or Sea. This Circle in the artificial Globe is of Wood, supports the Globe, and has usually 3 Circles on its Surface: The innermost represents the Figures of the Signs of the Zodiac, with their Names and Degrees: That in the middle has the Months of the Year, and the Days of every Month, according to both *Julian* and *Gregorian* Accounts; and the outermost has the Quarters of the World, and the Names of the principal Winds.

The Horizon is either Rational or Sensible: The Rational, so call'd because we conceive it only by our Understanding, is a great Circle, which we apprehend to pass through the Center of the Earth, and by Consequence divides the World into two equal Parts or Hemispheres; the one above, and the other below. The sensible Horizon is a small Circle parallel to the Rational Horizon, that touches the Surface of the Earth in a Point, which is that where our Feet stands. This is the Reason that it does not divide the Heaven into two equal Parts, as the Rational Horizon does: But the Difference of those two Horizons is insensible, being only occasion'd by the Semi-diameter of the Earth, which is only a Point, compar'd to the immense Extent of the Firmament, since we see the half of the Heaven above the Surface of the Earth, the same as if we were at its Center.

The Rational Horizon, with respect to the Equator, may be divided into Right, Oblique, and Parallel.

Both the Sensible and Rational Horizon have the same Poles, which are call'd Zenith and Nadir, the Names given them by the *Arabians*, under whose *Kaliphs* Astronomy and other Sciences flourish'd. The Zenith is the Point of the Heavens which is over our Head; the Nadir is that below our Feet, and is at the same time the Zenith of our Antipodes: The Meridian and Horizon are both changeable Circles; for every different Place hath a different Horizon and Zenith.

The

Digitized by Google

The Right Horizon passes through the Poles of the World, and has its Zenith in the Equator, which it divides at Right Angles, and into equal Parts. The Oblique Horizon has its Zenith betwixt one of the two Poles and the Equator; so that one Pole is nearer its Zenith than the other: It cuts the Equator obliquely. The Parallel Horizon has one of the Poles for its Zenith, and the Equator for its Horizontal Circle.

The 3 different Horizons make 3 different Positions of the Sphere, *viz.* the Right, Oblique, and Parallel Position, which are useful to explain the different Appearances of the Sun, as to its Rising and Setting, Length of Days, Heat, *&c.* The Right Sphere has a Right Horizon, because the Equator, Tropics, and Polar Circles, cut the Horizon at Right Angles. This Position belongs to those who live under the *Equator*: They have always their Days and Nights equal, and the Sun is twice a Year perpendicularly over their Heads, *viz.* the 11th of *March*, and the 12th of *September*. All the Stars rise and set to them, and are the same Number of Hours above as below the Horizon.

The Oblique Sphere has an Oblique Horizon; and all the Circles, as the Equator, Tropics, and the Polar Circles, cut this Horizon at Oblique Angles. It agrees to those who live betwixt the Equator and the Poles: They have equal Days and Nights only during the Equinoxes. In the Summer their Days are shorter than their Nights, because the Horizon doth not divide the Tropics into equal Parts. In this Position some Parts of the Heavens are never seen, and some Parts are always visible.

The Parallel Sphere has the Horizon parallel to the Equator, and all the Circles and Revolutions are parallel to the Horizon. This Position agrees to those who live under the Poles, (if there be any such) and they have only one Day and one Night in the Year of 6 Months each; because the Sun never rises with them, but at one of the Equinoxes, and sets not till the other. The Axis of the World in this Sphere is perpendicular, one of the Poles the Zenith, and the other the Nadir of the Place. When the Sun enters *Aries*, he rises to those under the North Pole, and sets when he enters *Libra*. The Moon is 15 Days above their Horizon, and so many below it; *Saturn* 15 Years, and *Jupiter* 6.

From what has been said, it appears that the Horizon has many Uses; 1. It divides the World into two Hemispheres, *viz.* those of the Day and Night. 2. It shews us the Elevation of the Pole; for so many Degrees as the Pole is above the Horizon, so many Degrees it is said to be elevated. 3. It shews us the Place and Time of the Rising and Setting of the Sun, Moon, and Stars; for when they come to the East Part of the Horizon, they are said to rise; and when they go below the Western Part, they are said to set. It determines the ending of the Morning *Crepusculum*, or Dawning of the Day, which is before the Rising of the Sun; and of the Evening *Crepusculum*, or Twilight, when the Sun is about 18 Degrees below the Horizon. This Circle is the Seat of the 4 Cardinal Points, North, South, East, and West, which are 90 Degrees distant from each other. The South is the Point the Sun is in when it is Noon: The true East is that Point of the Horizon where the Sun rises in the time of the Equinoxes: The true West is the Point where the Sun sets at the same time. These Points make 4 Collateral Points, *viz.* the Place where the Sun rises in the Summer Solstice, which is N. E and where it rises in the Winter-Solstice, which is S. E. The Place in the Horizon where the Sun sets in Summer, which is N. W. and the Place where it sets in Winter, which is S. W. The Sun's rising in the N. E and setting in the N. W. shows us that Part of the Tropic of *Cancer* that is above our Horizon; and his rising in the S. E. and setting in the S. W. shows his Motion in the Tropic of *Capricorn*.

The ZONES.

The 4 small Circles, *viz.* the two Tropics, and the Polar Circles, divide the Globe of the Earth into 5 Parts, call'd Zones by the Ancients, from a Greek Word which signifies a Girdle. The Space betwixt the Tropics is call'd the Torrid Zone, and is divided by the Equator into two equal Parts. The Ancients, because little of the World was discover'd in their Time, thought the Zone.

Digitized by Google

Zone was not habitable, because of the violent Heat of the Sun; but 'tis now found to be otherwise. 'Tis true, the Heat of the Sun there is violent; but the Length of their Nights, frequent Rains, Winds and Dews, make it supportable. The Sun raises a great Quantity of Vapours, which occasion those frequent Rains, Dews, and Winds; so that after the setting, and before the rising of the Sun, they have constantly fresh Breezes, which make their Nights cool. The Dews do likewise contribute towards it; which, with the Rains, refresh the Inhabitants, and make the Soil produce abundance of Provisions. They have two Summers, *viz.* when the Sun enters the Equinoctial Signs. Their Winters are, when the Sun is in the Tropics, because then he is at the greatest Distance from their Zenith. The Air under the Tropics is more violently hot than that in the Torrid Zone, because the Sun is longer above their Horizon. They who have their Zenith betwixt the Equator and the Tropics, are in an Oblique Sphere: Therefore all the Places of the Heavens do not rise and set to them; and having one of the Poles above their Horizon, their Days and Nights are unequal, except in the Time of the Equinoxes. They who have their Zenith in the Tropics, have but one Summer, because the Sun is but once vertical to them, *viz.* when he is in the Tropic they live under, and when the Sun is in the opposite Tropic, it is 47 Degr. from their Zenith; so their shortest Day is 10½ Hours, and their longest Day 13½ Hours: But to those who live betwixt the Tropics, the Sun is twice a Year in their Zenith.

The two Zones betwixt the Tropics and Polar Circles are call'd the Temperate Zones, because they are not liable to such excessive Heat and Cold as the other Zones: One of these is betwixt the Tropic of *Cancer*, and the Artic Polar Circle; and the other Temperate Zone is betwixt the Tropic of *Capricorn*, and the Antartic Polar Circle. They have their Zenith betwixt the Tropics and the Polar Circles: Their Sphere is extreamly oblique, and so are all the Revolutions of the Heavens. A great Part of the Heaven is never seen in their Hemisphere: They have their Days and Nights more unequal than in the Torrid Zone; the Sun is never in their Zenith; and they have four Seasons in the Year. The Air is more temperate than in the Torrid Zone, because the Beams of the Sun fall more obliquely upon them; whereas in the Torrid Zone they are more perpendicular.

The People who live under the Polar Circle, or, which is the same, are 66 Degr. and a half distant from the Equator, their Pole is of the same Altitude above the Horizon: They have a more oblique Sphere than any of the other preceding Zones: They have one Tropic entirely above the Horizon, and the other Tropic altogether below it. Therefore they have one Day in the Year, *viz.* when the Sun is in the Tropic next to them, of 24 Hours; and one Night of the same, when the Sun is in the opposite Tropic. They have 4 Seasons in one Year. Having a very oblique Sphere, the opposite Places of the Heavens are never seen by them: The greatest Ascension of the Sun at Noon, when it is in the Tropics, is only 47 Degrees; and so is 43 Degrees from their Zenith. From the 5th of *April* to the 9th of *September*, they have Twilight all the Night over, because the Sun, during that Time, is never 18 Degrees perpendicularly below their Horizon.

They who have their Zenith betwixt the Polar Circles and the Poles, are in the Frigid Zone: Their Sphere is more oblique than any of the former; so that their Days and Nights are more unequal. In the Summer they have many Days without any Night at all; and likewise many Nights without any Day. Since they want little of having a Parallel Sphere, they never see the opposite Part of the Heavens. Their Air is warmer in Summer than under the Polar Circles, because the Sun is longer above their Horizon.

They who have for their Zenith the Poles of the World, are in the middle of the Frigid Zones: Their Sphere is parallel. And hence it is, that all the Revolutions of the Heavens are parallel to the Horizon. They have 6 Months of Day, and as much Night: The Sun, when in the Tropic nearest them, is in its greatest Height only 23½ above the Horizon, which is the same Height the Sun makes with us an Hour and an half after his rising. They constantly see the same

ſame Half of the Heavens; and the ſame Fix'd Stars, which never ſet with them.

The CLIMATES.

The Zones being only of uſe to diſtinguiſh the Places of the World with regard to their different Degrees of Heat and Cold, ancient Geographers invented Climates, to determine the Difference of the Length of Days. The Climates are reckon'd from the Equator to the Poles. Under the Equator, their Day is always 12 Hours in Length: Under the Polar Circle, the longeſt Day is 24 Hours. Geographers have made 24 Climates betwixt the Equator and each of the Polar Circles, becauſe there are 24 half Hours of Difference betwixt the Length of the Day under the Equator, and the longeſt Day under the Polar Circles: So that any Place having its longeſt Day half an Hour longer or ſhorter than that of another Place, is of a different Climate. The firſt Climate begins at the Equator: The ſecond begins where the longeſt Day is 12 hours and an half; and the third where the longeſt Day is 13 Hours: And ſo on.

The firſt Climate begins at the Equator, and ends at 8 Degrees 34 Minutes of Northern Latitude: The longeſt Day is $12\frac{1}{2}$ Hours. It comprehends the *Moluccs*, *Maldivs*, and *Sumatra* Iſles, in the *Eaſt-Indies*.

The 2d Climate begins at 8 Deg. 34 Min. of Northern Latitude, and reaches to 16 Deg. 43 Min. Their longeſt Day is 13 Hours. It comprehends *Abiſſinia*, *Aden*, *Siam*, *Coromandel*, and the Iſle of *Ceilon*.

The 3d Climate reaches from 16 Deg. 43 Min. to 24 Deg. 11 Min. Their longeſt Day is $13\frac{1}{2}$ Hours. It contains *Mecca*, *Arabia Fœlix*, *Bengal*, *Mexico*, and *Tunquin*.

The 4th Climate is betwixt 24 Deg. 11 Min and 30 Deg. 47 Min. Their longeſt Day is 14 Hours. It paſſes over *Ormus* in *Perſia*, *Agra* belonging to the great Mogul, *Fochen* in *China*, *Alexandria* in *Egypt*, and the *Canary* Iſlands.

The 5th Climate is extended from 30 Deg. 47 Min. to 36 Deg. 30 Min. Their longeſt Day is $14\frac{1}{2}$ Hours. It comprehends *Babylon*, *Tunis* in *Barbary*, *Niceſia* in the Iſle of *Cyprus*, *Nankin* in *China*, *Rhodes*, *Iſpahon* in *Perſia*, and *Pekin*.

The 6th Climate begins at 36 Deg. 30 Min. and ends at 41 Deg. 22 Min. The longeſt Day is 15 Hours. To this Climate belong *Lisbon* in *Portugal*, *Palermo* in *Sicily*, *Madrid* in *Spain*, and *Meshet* in *Perſia*.

The 7th Climate is from 41 Deg. 22 Min. to 45 Deg. 29 Min. Their longeſt Day is $15\frac{1}{2}$ Hours. It comprehends *Marſeilles*, *Rome*, *Conſtantinople*, and *Tanchut*.

The 8th Climate is from 45 Deg. 29 Min. to 49 Deg. 1 Min. The longeſt Day is 16 Hours. *Paris*, *Vienna*, the *Crim Tartars*, and the *Eaſtern Tartars*, are in this Climate.

The 9th Climate is from 49 Deg. 1 Min. to 51 Deg. 58 Min. Their longeſt Day is $16\frac{1}{2}$ Hours. *London*, *Prague* in *Bohemia*, *Cracow* in *Poland*, *Rouen*, *Amiens*, *Francfort*, belong to this Climate.

The 10th Climate is from 51 Deg. 58 Min. to 54 Deg. 29 Min. Their longeſt Day is 17 Hours. This Climate contains *York*, *Dublin*, *Amſterdam*, *Warſaw*, and *New France*.

The 11th Climate is from 54 Deg. 29 Min. to 56 Deg. 37 Min. Their longeſt Day is $17\frac{1}{2}$ Hours. It contains *Edinburgh*, *Vilna* in *Lithuania*, *Smolenſko* on the *Boriſthenes* in the Weſt of *Muſcovy*, and the *Tartars* of *Mordwa*.

The 12th Climate begins at 56 Deg. 37 Min. and reaches to 58 Deg. 26 Min. Their longeſt Day is 18 Hours. *Aberdeen*, *Copenhagen*, and *Riga*, are in this Climate.

The 13th Climate is from 58 Deg. 26 Min. to 59 Deg. 59 Min. Their longeſt Day is $18\frac{1}{2}$ Hours. *Stockholm*, and *Revel* in *Livonia*, are in this Climate.

The 14th Climate is from 59 Deg. 59 Min. to 61 Deg. 18 Min. The longeſt Day is 19 Hours. This Climate paſſes thro' the *Orkney* Iſlands of *Scotland*, *Anſtoie* in *Norway*, and *Muſcovy*.

The 15th Climate is from 61 Deg. 18 Min. to 62 Deg. 25 Min. Their longeſt Day is $19\frac{1}{2}$ Hours. *Bergen* in *Norway*, *Nottemburg* in *Finland*, and *Ouſtioug* in *Muſcovy*, are in this Climate.

The 16 Climate begins at 62 Deg. 25 Min. and ends at 63 Deg. 23 Min. Their longeſt Day is 20 Hours. *Perma Wellick*, a Town of *Muſcovy*, belongs to this Climate.

The 17th Climate is from 63 Deg. 23 Min to 64 Deg. 16 Min. The longeſt Day is $20\frac{1}{2}$ Hours. This Climate paſſes thro' the Country of *Finland*, belonging to the *Swedes*.

The

Digitized by Google

The 18th Climate is from 64 Deg. 16 Min. to 64 Deg. 55 Min. Their longeſt Day is 21 Hours. *Dronthein* in *Norway* belongs to this Climate.

The 19th Climate is from 64 Deg. 55 Min. to 65 Deg. 25 Min. Their longeſt Day is 21½ Hours. *Tobol* in *Siberia* belongs to it.

The 20th Climate is from 65 Deg. 25 Min. to 65 Deg. 47 Min. The longeſt Day is 22 Hours. The North of *Finland* belongs to it.

The 21ſt Climate is from 65 Deg. 47 Min. to 66 Deg. 6 Min. The longeſt Day is 22¼ Hours. *Torna* in *Botnia*, a conſiderable Harbour belonging to the *Swedes*, is in this Climate.

The 22d Climate is from 66 Deg 6 Min. to 66 Deg. 20 Min The longeſt Day is 23 Hours. *Caienbourg* in *Muſcovy* belongs to this Climate.

The 23d Climate is from 66 Deg. 20 Min to 66 Deg. 28 Min. The longeſt Day is 23½ Hours. *Skaibot* in *Iſland* is in this Climate.

The 24th Climate is from 66 Deg. 28 Min. to 66 Deg. 31 Min. Their longeſt Day is 24 Hours. This Climate paſſes thro' *Hola*, a ſmall Town of *Iſland*.

To know what Climate any Place is in, ſee how many Hours the longeſt Day of that Place is more than 12, the Number of half Hours contain'd in the Difference, is the Number of Climates that Place is diſtant from the Equator.

There are alſo 24 Climates in the Southern Hemiſphere: The Ancients did not reckon ſo many Climates, becauſe they thought the Places beyond their own Number of Climates were quite deſolate; little of the World being then known. They had only 7 Climates; their firſt Climate paſs'd thro' *Meroë*, an Iſland and City in the *Nile* in *Africa*; the 2d Climate went by *Siene*, a City of *Egypt*; the 3d Climate by *Alexandria*, a City of *Egypt*; the 4th Climate by the Iſland *Rhodes*; the 5th Climate by *Rome*; the 6th Climate by the *Euxine* Sea; and the 7th by the Mouth of the *Boryſthenes*. *Strabo* adds two more: He tells us, the 8th Climate went thro' the *Palus Meotis*; but does not tell us where the 9th ended.

Near the Equator, the Climates are very much larger than towards the Polar Circles; the firſt Climate is 8 Deg. 34 Min. broad; the 24th Climate is but 3 Min in breadth. To explain this Inequality, it muſt be obſerv'd, That in a Right Sphere, which is under the Equator, the Half of the Tropic of *Cancer*, which is below the Horizon, is divided into 48 equal Parts; each of theſe Parts conſiſt of 3 Deg. and 45 Min. which make one Quarter of an Hour: The Tropic of *Cancer* has one of theſe Parts, which is neareſt the Horizon on the Eaſt Side, and another neareſt the Horizon on the Weſt Side. Theſe two Parts together make up one half Hour, which is the Diſtance of one Climate from another. This being laid down, it is eaſie to conceive, That the Inequality of the Extent of the Climates proceeds from the more or leſs oblique Interſection of the Tropic by the Horizon, according to the different Elevation of the Pole. The Ancients made no Account of the Climates on the S. Side of the Equator, becauſe they had no Knowledge of thoſe Places. There are 48 Climates in all, *viz.* 24 betwixt the Polar Circle and the Equator in the Northern Hemiſphere, and as many betwixt the Equator and the Polar Circle in the Southern Hemiſphere, which are called Climates of Hours.

The 12 Climates betwixt the Polar Circles and the Poles are call'd Climates of Months, becauſe the longeſt Day in the ſecond Climate is one full Month longer than the longeſt Day of the firſt Climate.

The firſt Climate begins at 66 Deg. 31 Min. Northern Latitude, and ends at 69 Deg. 48 Min. The longeſt Day is 1 Month, or 31 Days, without Night. This paſſes thro' *Lapland*, belonging to *Muſcovy*.

The 2d Climate begins at 69 Deg. 48 Min. and ends at 73 Deg. 37 Min. They have Day without Night for 2 Months, or 62 Days. This Climate paſſes thro' *Greenland*, a Country ſo cold, that the Sea is almoſt conſtantly frozen there.

The 3d Climate begins at 73 Deg. 37 Min. and ends at 78 Deg. 30 Min. They have a Day of 3 Months, or 93 Days. This Climate belongs to the South Part of *Nova Zembla*.

The 4th Climate begins at 78 Deg. 30 Min. and ends at 84 Deg. 5 Min. They have a Day of 4 Months continuance, without

Digitized by Google

without any Night. This Climate passes through the North Part of *Nova Zembla*.

The 5th Climate begins at 84 Deg. 5 Min. and ends at 90. They have a Day of 5 Months, or 155 Days.

The 6th Climate is at 90 Deg. The Day there is of 6 whole Months, *i. e.* 186 Days, or 4464 Hours.

SECT. XXVII.

Of the Longitude *and* Latitude *of Places.*

THE Earth being a Globe, in a ſtrict Senſe, it can neither have Longitude, nor Latitude; yet Geographers, for very good Reaſons, have introduc'd the Doctrine of *Longitude* and Latitude: The Uſefulneſs of knowing the Longitude and Latitude of a Place, is great; for when we know that, we know the Situation of it by Sea or Land.

The ancient Geographers knew more of the World from Weſt to Eaſt, than they did from South to North; therefore they had more Degrees of Longitude than Latitude. In *Ptolomy*'s Time, there were only 80 Degrees of Latitude, taking in all then known on both Sides the Equator; whereas they had 180 Degrees of Longitude.

The Latitude of a Place is its Diſtance from the Equator; or, properly ſpeaking, an Arch of the Meridian from the Zenith of a Place to the Equator; or, which is the ſame, it is the Elevation of the Pole above the Horizon of any Place. They who are under the Equator, have no Latitude; for none of the Poles are elevated above their Horizon: But when we go from the Equator towards any of the Poles, one of the Poles aſcends above the Horizon, and the other deſcends. The Latitudes of Places are reckon'd from the Equator to the Poles; tho' in every Point of the Meridian, and in every Point of the Equator, different Degrees of Latitudes and Longitudes may be reckon'd: Yet Geographers, to avoid Confuſion, have reckon'd 90 Degrees from the Equator to the North-Pole; and from the North-Pole to the Equator, in the ſame Hemiſphere, 90 Degrees, which make 180. And the ſame Way they reckon 180 Degrees for the Southern Hemiſphere, which make up 360, the Number of Degrees every Circle contains. But the Degrees of Longitude are reckon'd from the firſt Meridian, from Weſt to Eaſt, quite round the Globe; and the Reckoning ends at the firſt Meridian where it began, at 360 Degrees. The Degrees of Longitude are reckon'd upon the Equator; tho' they might alſo be reckon'd on the parallel Circles of Latitude.

The Longitude of a Place is an Arch of the Equator betwixt one Place and another, or the Diſtance of one Place from another, from W. to E. The Places more Eaſtward have Noon ſooner than the Places more to the Weſt, becauſe they have different Longitudes. A Place 15 Degrees more to the Eaſt than another, will have Noon one Hour ſooner than another Place. From what has been ſaid before, this Queſtion, which to many appears very unaccountable, may eaſily be anſwer'd; *viz.* If Twins born at the ſame Hour, and both dying at the ſame Minute, one of theſe Children can, at his Death, be two Days older than the other: For if the one be carried round the World in a Ship from W. to E. and the other from E. to W. the Child which went the Eaſtern Voyage will be two Days older than the other, for the Reaſons before given.

One Degree of Longitude under the Equator is reckon'd about 60 *Italian* Miles; but the further you go from the Equator, either Northward or Southward, a Degree of Longitude contains fewer Miles: For Inſtance, under the Equator, one Degree of Longitude contains 25 *French* Leagues; but at *Paris*, one Degree of Longitude contains only 16 *French* Leagues. Under the Poles, they have no Longitude, becauſe all the Meridians or Circles of Longitude meet there in a Point. We refer to the Table, *Page* 17. to ſhew the Number of Miles a Degree of Longitude contains, with Regard to the different Latitude of Places.

The Knowledge of the Longitude of Places is very neceſſary, and of great Uſe in Navigation and Geography: The Longitude is not ſo certainly known as the Latitude. For this Reaſon, the greateſt Part of the People in *Europe* concern'd in Trade, as the *Engliſh*, *French* and *Dutch*, have offer'd a Reward of 10000 Florins to thoſe who ſhall

Digitized by Google

find out the Way to adjuſt the Longitude of Places by Sea with equal Exactneſs to what we have of the Latitude of Places. Many who have attempted this, gave out they had ſucceeded, and laid down a great many Rules, which, upon Trial, did not anſwer Expectation. This may be owing in part to the great Difficulty in taking Obſervations at Sea; for Inſtruments of a neceſſary Length cannot be us'd there with that Steadineſs requiſite to compaſs the Deſign. The Longitude of Places at Land may be found out to a ſufficient Degree of Exactneſs, by obſerving the Eclipſe of the Moon, and the Eclipſe of the firſt Satelles of *Jupiter*. The *French* Miſſionaries to *Siam*, &c. from their Obſervations of the Eclipſes of the Satellites of *Jupiter*, are poſitive that *China*, *Siam*, and *Japan*, and thoſe Eaſtern Countries, are plac'd in all our Globes and Maps many Degrees more Eaſtward than they ought to be.

To find out the Longitude of any Place, is not to find, as ſome imagine, the Eaſt and Weſt of it, for that may be known by the Compaſs; for if your Face be towards the North, the Eaſt will be on your Right Hand, and the W. on your Left: But it is to know the Diſtance any Place of the Land or Sea is from another from Weſt to Eaſt, or the Diſtance of any Place from the firſt Meridian.

The moſt ſure Way to know the Longitude of any Place, is from the Appearances of the Stars: Ephemerides are a great Help in this Matter; for when we know the Hour and Minute of the Eclipſe in a certain Place, and by Obſervations find that the Eclipſes of the Moon, Satellites of *Jupiter*, &c. are ſooner or later than in the Place given, we infer, that the one Place is more Eaſtward or Weſtward than the other.

Obſervations from the Motions of *Saturn* are altogether unſerviceable on this Head, becauſe he does not move above 5 Seconds in an Hour; for which Cauſe we can make no comparative Judgment betwixt the Time of his Appearance in one Place and another.

Obſervations from the Motion of the Sun are not to be depended upon; becauſe the Sun, by its diurnal Motion, moves only one Degree in the Ecliptic in 24 Hours. This Motion is too ſlow to anſwer the Obſervations above-mention'd, which ought to be ſo accurate, that in a Minute we may obſerve a ſenſible Motion in that Star from which we make our Obſervations; otherwiſe we may miſtake the $\frac{1}{4}$ of a Degree of Longitude. So Obſervations muſt be taken, 1. From the Beginning, Middle, and End, of the Eclipſe. 2. From the Moon's Place in the Zodiac. 3. From the Moon's Diſtance from a Fix'd Star. 4. From the Moon's Entrance into the Ecliptic. 5. From the Eclipſes of the Satellites of *Jupiter*, which are obſerv'd by the Help of a Teleſcope.

To know the Longitude of any Place by the Eclipſes of the Satellites of *Jupiter*, Two Things muſt be obſerv'd; 1. The Manner of obſerving the ſaid Eclipſe. 2. The preciſe and exact Time of the Obſervation of thoſe Eclipſes. The Satellites of *Jupiter* are ſmall Planets, which are turn'd round *Jupiter*, according to theſe Periods:

	Days.	*Hours.*	*Min.*
The firſt Satelles of *Jupiter* makes its Revolution in	1	18	29
The 2d, in	3	13	19
The 3d, in	7	4	0
The 4th, in	16	18	5

Jupiter being an opac groſs Body, like the Earth or the Moon, muſt neceſſarily occaſion an Eclipſe of his Satellites ſometimes, as the Earth occaſions an Eclipſe of the Moon.

When the Satellites of *Jupiter* are in his Shadow, they ſuffer an Eclipſe of a longer or ſhorter Continuance, according to the ſlower or ſwifter Motion of each of the Satellites. Their Eclipſe commences when they enter the Shadow of *Jupiter*, and ends when they go out of it. The Entry of theſe Satellites into the Shadow is call'd Immerſion, and their going out of it Emerſion. The fitteſt Time for obſerving the Immerſion is, when *Jupiter* riſes after the Sun; and their Emerſion is beſt obſerv'd, when *Jupiter* ſets before the Sun.

That theſe Obſervations may be more eaſie, M. *Caſſini*'s Tables are neceſſary, which tho' calculated for the Meridian of *Paris*, yet may anſwer any other Meridian, by knowing the Difference betwixt the Meridian of *Paris*, and that of the other Place given.

But

But to prevent being surpriz'd and unprepar'd for these Observations, it is most advisable to be ready an Hour before the Time given by the Tables. As the first of the Satellites is the swiftest of 'em all, it is by much the more fit for Observation of the Longitude of Places; for being 16 times swifter than the Moon, its Motion is so many times the more sensible. Telescopes from 18 to 21 Foot in Length are us'd for this purpose. By reason of the great Rapidity of the Motion of the first of the Satellites of *Jupiter*, it is easie to observe the first Moment of its Immersion or Emersion. Pendulum Clocks exactly rectified, having the Minutes and Seconds, must be us'd in this Matter. Such Clocks are of great use in all Astronomical Observations: The Length of the Pendulum ought to be 36 $\frac{1}{2}$ Inches. The Way of regulating Pendulum Clocks, is known to those who are acquainted with Astronomical Observations.

All these Precautions being taken, it is very easie to know the Longitude of a Place: Let there be two Observers in two different Places, they must both observe the Hour and Minute of the Immersion and Emersion of the first of the Satellites of *Jupiter*. The Difference of the Time of the two Observations shews the different Longitude of Places; for if the Immersions, and Emersions are at the very same Minute then these two Places are of the same Longitude, or under the same Meridian: But if two Persons, the one at *Paris*, the other at *Lisbon*, with Pendulum Clocks well rectified, observe at the same time the Immersion or Emersion of the first Satelles of *Jupiter*; if the Immersion or Emersion be at *Paris* at 10 at Night, and as *Lisbon* at 9, we may conclude, That *Paris* is more Eastward than *Lisbon* by one Hour, which answers to 15 Degrees: So that if the Longitude of Paris be 23, the Longitude of *Lisbon* must be 8 Degrees.

To find the Longitude of Places by the Eclipses of the Moon, we must observe, by the Assistance of a Telescope, the Beginning, the Continuance and End of the Eclipse, and the Elevation of the Pole. The Hour and Minute being known by the Altitude of any Fix'd Star, or if a Star be in the Meridian of the Place, we may easily know the Hour and Minute: But now Pendulum Clocks rectified are us'd in such Matters. Then compare the Time of the Beginning of the Eclipse in one Place, with that of another, for whose Meridian Ephemerides are calculated; for if the Eclipse begin in one Place $\frac{1}{4}$ of an Hour sooner than in the other, that Place must be 3 Deg. 45 Min. more Eastward than the other; But if the Eclipse of the Moon begin one Hour sooner in one Place, that where the Eclipse is sooner by an Hour is 15 Deg. more Eastward than the other. This has been the ordinary Way to find the Longitude of Places; which tho' useful by Land, yet it will not answer the Seamens Purpose, because the Eclipses of the Moon seldom happen. Astronomers make use of another Way to find out the Longitude of Places: When the Moon is in the Meridian of a Place, whose Longitude we want, then find what Hour this happens at, by the Altitude of any Fix'd Star then in the Meridian of the Place; the Hour being found, we may know what Part of the Ecliptic is in the Meridian of the Place we are in: So by knowing the Place of the Zodiac the Moon is in at that Time by Ephemerides, we know at what Time the Moon comes to that Place of the Zodiac for which the Ephemerides were calculated. By this means we have two different Times of the Moon's coming to a Place in the Zodiac; and by the former Principles, the Longitude of the Place where we are may be found out. Some are of Opinion, That if Watches and Clocks were made with that Equality and Justness of Motion as is requisite, we might easily know the Longitude of Places. When Ships are to go off from any Port, let the Watch or Clock be exactly 12 when the Sun is in the Meridian of the Place the Ship parts from; keep the Clock or Watch a going: When you want the Longitude of any Place, observe exactly when the Sun is in the Meridian of that Place; compare the Difference of Hours and Minutes betwixt the Times of the Sun's being in the Meridian of the Place you left, and in the Meridian of the Place you are then in: By the former Principles you will easily know the Difference of Longitude.

The Distance of Places in particular Maps, is easily known by a Scale of Miles which such Maps always have: Take the Distance

Digitized by Google

of two Places by your Compaſs, then bring the Diſtance taken to the Scale of Miles or Leagues; if the Diſtance be greater than the Scale, then by another Pair of Compaſſes you may take the Exceſs, and bring it to the Scale, and adding it to the Number of Miles or Leagues the Scale contains, you have the Diſtance of one Place from another. But upon Planiſpheres, if the Diſtance of two Places be only in Latitude, then allowing 60 *Italian* Miles for one Degree, the Number of Miles the two Places are diſtant may be known. If two Places differ in Longitude, knowing their Latitude, and obſerving by the Table of the Diminution of Longitude, how many Miles one Degree of Longitude contains in ſuch a Latitude; by this means you have the Diſtance of theſe two Places. But when Places differ both in Longitude and Latitude, the ordinary Method is to take their Diſtance by your Compaſſes: Bring this Diſtance to the Side or Circumference; if the Map be a Planiſphere, then reckon how many Degrees that Diſtance makes, and for every Degree allow 60 *Italian* or *Engliſh* Miles.

SECT. XXVIII.

Of the Aſcii, Heteroſcii, Periſcii, Amphiſcii, Periæci, Antiæci, *and* Antipodes.

THE Inhabitants of the Earth are thus diſtinguiſh'd, with regard to the Points their Shadows go to, when the Sun is in the Meridian: This Difference proceeds from the Obliquity of the Ecliptic, and from the Spherical Figure of the Earth.

The *Aſcii* are thoſe who live betwixt the Equator and the Tropics, who ſome Days in the Year, when the Sun is in the Meridian, have no Shadow at all. Thoſe under the Equator, the two Days of the Equinoxes, have no Shadow at Noon, the Beams of the Sun falling then perpendicular. Thoſe under the Tropic of *Cancer*, when the Sun is in the firſt Degree of that Sign, have no Shadow at Noon: The Tropic of *Capricorn* the like. At other Times, under the Tropic of *Cancer*, their Shadow at Noon points to the North; but under that of *Capricorn*, towards the South; and then they are call'd *Heteroſcii*. The ſame in both the Temperate Zones.

The *Periſcii* are thoſe whoſe Shadow, in 24 Hours, is carried round all the Points of the Compaſs. The Inhabitants of the Frigid Zones, the Sun being ſome time of the Year all the 24 Hours above their Horizon, are ſo call'd.

The *Amphiſcii* have their Shadow at Noon, ſometime towards the North, and ſometime towards the South. The Inhabitants of the Torrid Zone, are therefore call'd by this Name.

The People of the Earth, with reſpect to their Situation, are *Periæci*, *Antiæci*, and *Antipodes*.

The *Periæci* are thoſe who dwell in the ſame parallel Circle of Latitude, but in oppoſite Points of the ſame, *viz.* in oppoſite Meridians. Hence it is, That when the one, *viz.* thoſe who are 180 Degrees of Longitude further Eaſt have Noon, the other have Midnight, their Days are of equal Length, their Seaſons are the ſame, becauſe the ſame Pole is equally elevated in both Places: But in Places that belong to the Frigid Zone, this Difference of Day and Night is not obſerved, becauſe the Sun is 24 Hours or more above their Horizon.

The *Antiæci* are thoſe who live under the ſame Meridian, but in oppoſite Parallel Circles of Latitude, and they are equally diſtant from the Equator; ſo if one live in a Northern Latitude, the other live in a Southern, and have the ſame Elevation of different Poles, they have Noon and Midnight at the ſame time; but 'tis not ſo as to the Riſing and Setting of the Sun. The Seaſons of the Year are alſo oppoſite; for when it is Winter in the one Place, it is Summer in the other; and when the one has the longeſt Days, the other has the ſhorteſt.

The *Antipodes* are the People who are Diametrically oppoſite to one another, at the Diſtance of one half of the Circumference of the Earth: They have contrary Parallels and Meridians. If the one Place have ſo much Southern Latitude, their *Antipodes* have the ſame Northern Latitude; their Meridians are 180 Degrees diſtant. Hence it is, That when the one have Night, the other have Day; when the one have Summer, the other have Winter. Our *Antipodes* can

Digitized by Google

can see no more of our Stars than we can of theirs; and the Stars that never set to us, never rise to them.

The Ancients could not believe the Doctrine of the *Antipodes*; so that whoever maintain'd that Opinion in the first Times of Christianity, were accounted Hereticks. *Virgilius*, Bishop of *Saltzburg*, in 745, upon the Complaint of *Bonifacius*, Archbishop of *Mentz*, to the Duke of *Bohemia*, and afterwards to Pope *Zachary*, was by him condemn'd of Heresie on that Account; as *Aventinus* says. *Annal Boicit*, *Lib.* 3.

The Venerable *Bede* reckon'd the Opinion of the *Antipodes* a meer Fable. *Lactantius* and *Augustine* were of the same Mind; and 'tis no Wonder, since they thought the Earth was shap'd like a Table.

Those who live under the Equinoctial, have no People who are their *Antiaci*. *Periœci* and *Antipodes* under the Equator are the same.

SECT.

SECT. XXIX.

Of the Uſe of the Terreſtrial GLOBE.

HAving explain'd the Circles of the Sphere, we come now more particularly to the Uſe of the Terreſtrial Globe: Some few Things belonging to it, which could not fall in ſo naturally before, are firſt to be explain'd.

The Horary Circle is a ſmall Circle of Braſs, and ſo affix'd to the Brazen Meridian, that the Pole (or End of the Axis) is its Center. The 24 Hours of the Natural Day are at equal Diſtances from one another; the 12th Hour for Noon being in the upper Part of the Circle towards the Zenith, and the other 12th Hour for Midnight in the lower Part towards the Horizon: So that from 12 to 12 on the Eaſt-Side, are the Hours from Midnight to Noon; and from 12 in the upper Part to 12 in the lower on the Weſt Side of that Horary Circle, are the Hours from Noon to Midnight. The Index to this Circle is fix'd upon the End of the Axis, and turns round with the Globe. The Uſe of this Circle will appear afterwards.

The Quadrant of Altitude, or the Vertical Circle, is a narrow thin Plate of pliable Braſs, exactly anſwerable to a fourth Part of the Equinoctial. Upon this Quadrant are inſcrib'd 90 Degrees, each of them being according to the ſame Scale with thoſe upon the Equator. Of its Uſe, we ſhall ſpeak afterwards.

The Semi-Circle of Poſition is a narrow ſolid Plate of Braſs, exactly anſwerable to one half of the Equator. Upon this Semi-Circle are inſcrib'd 180 Degrees, exactly the ſame with thoſe upon the Equator. We may term it a double Quadrant of Altitude: Its greateſt Uſe is in Aſtronomy.

The Mariners Compaſs, Horizontally fix'd upon the Pedeſtal of the Globe, is frequently needful for the Solution of ſeveral Problems, and for placing the Poles North and South.

Prob. I. *To rectifie the Globe.*

The Globe being upon a true Plain, elevate the Pole above the Horizon, according to the Latitude of the Place given; fix the Quadrant of Altitude in the Zenith, the Mariners Compaſs upon the Pedeſtal, the Brazen Meridian ſtanding due North and South.

Prob. II. *To find the Longitude and Latitude of a Place.*

Turn about the Globe, 'till the Place whoſe Longitude and Latitude you want touch the Eaſt-Side of the Brazen Meridian: Obſerve what Degree of the Equator touches the ſaid Meridian, and that Degree is the Longitude of the Place. See what Degree of the Meridian touches the Place, and the Degree found is the Latitude of the Place. When the Longitude and Latitude of a Place is known, to find the Place upon the Globe, turn the Globe, 'till the Meridian touch the Equator in the Degrees of Longitude of the given Place; find upon the Meridian the Degrees of Latitude of the Place, and the Place you want is exactly under the Latitude found. For Inſtance; To find *Paris* on the Globe, its Longitude is 23¼ Deg. and Latitude 48 Deg. 51 Min. I turn the Globe round till the Meridian touch the Equator in 23¼ Deg. then I trace up the Meridian till I come to 48 Deg. 51 Min. and the Place of the Globe exactly under that Deg. of the Meridian is *Paris*.

Prob. III. *To find the Diſtance of two Places, as of* Amſterdam *and* Conſtantinople.

Set one Foot of the Compaſs in the Point of the Globe that ſhews *Amſterdam*, open your Compaſs till the other Foot touch *Conſtantinople*, bring the Compaſs thus open'd to the Equator, and count the Deg. it contains, you will find 21 Deg. Or, inſtead of Compaſſes, it may be known by the Quadrant of Altitude, thus: Bring to the Meridian one of the Places, as *Amſterdam*, put the Quadrant of Altitude upon that Place, extend it to *Conſtantinople*, and you will find 21. Deg. of Diſtance. When Places differ only in Latitude or Longitude, the Way to know their Diſtance has been ſhewn before.

Prob. IV. *The Latitude of a Place being given, to know all the Places on the Earth that have the ſame Latitude.*

Find the Latitude in the Brazen Meridian, then turn the Globe round, and all

Digitized by Google

Places touching the Deg. of Latitude in the Meridian are of the ſame Latitude.

Prob. V. *The Longitude of a Place being known, to find all Places upin the Globe that have the ſame Longitude.*

Bring the Longitude of the Place upon the Equator to the Brazen Meridian; then all Places that touch the Meridian quite round the Earth are of the ſame Longitude.

Prob. VI. *To find the Sun's Place in the Zodiac on the 18th of* Auguſt, *N. S.*

Seek for the Day of *Auguſt* in the Wooden Horizon: In the Circle of Months, obſerve the Difference betwixt the *Julian* and *Gregorian* Calendar, and you find over againſt it, in the Circle of the Signs, the 25th Degree of *Leo*; find that Degree of *Leo* in the Ecliptic of the Globe, and that is the Place of the Sun the 18th of *Auguſt*: But in Leap-Year, for the 29th of *February*, you muſt ſeek the firſt of *March*.

Prob. VII. *To know on what Day of the Year the Sun is at Noon perpendicular above any Place given in the Torrid Zone.*

Let the Place be *Goa*, which is in the 16th Deg. of Northern Latitude; mark upon the Brazen Meridian that Latitude; turn the Globe quite round, and obſerve what Signs of the Zodiac paſs under that Latitude of the Meridian, and you will find two that touch that Deg. of the Meridian, *viz.* the 13th Deg of *Taurus*, and the 18th of *Leo*: Look on the Wooden Horizon, and you will find the Days that anſwer thoſe Degrees, *viz.* the 3d of *May*, and the 11th of *Auguſt*, N. S.

Prob. VIII. *The Month and Day, and Time of the Day, being known, to find thoſe Places on the Globe, in whoſe Meridian the Sun is at that Time.*

The Pole being elevated according to the Latitude of the given Place, bring the ſaid Place to the Brazen Meridian, ſet the Index of the Horary Circle at the Hour of the Day of the given Place, turn the Globe till the Index point at the upper Figure of 12; which done, fix the Globe in that Situation, and obſerve what Places are exactly under the upper Semi Circle of the Brazen Meridian, and thoſe Places have the Sun in their Meridian at that Time.

Prob. IX. *To know the Length of the Day and Night in any Place of the Earth at any Time.*

Elevate the Pole according to the Latitude of the Place whoſe Length of Day you ſeek for; find the Sun's Place in the Ecliptic at that Time; which being brought to the Eaſt-Side of the Horizon, ſet the Index of the Horary Circle at the upper Figure of 12; and turning the Globe about till the ſaid Place of the Ecliptic, where the Sun is at that Time, touch the Weſtern Horizon, reckon the Number of Hours the Index of the Horary Circle has paſs'd from the Figure of 12, and that is the Length of the Day.

Prob. X. *To find on the Globe the* Antiſci, Periæci, *and* Antipodes.

Bring the Place whoſe *Antiſci* you want to the Brazen Meridian, by which you will know its Northern Latitude; ſee what Place touches the ſame Deg. of Southern Latitude, and that Place is the *Antiſci*: Bring the Place given to the Brazen Meridian, in the ſame Parallel Circle of Latitude, and that Place that touches the oppoſite Part of the Meridian, in the ſame Hemiſphere, is the *Periſci* of the Place: Or add 180 Deg. to the Longitude of the Place given; turn about the Globe till that Deg. of Longitude upon the Equator touch the Meridian, and under that Latitude, upon the Meridian of the Place given, the *Periſci* are to be found; Or having brought the Place given to the Brazen Meridian, obſerve the Place of the Meridian it touches, ſet the Index of the Horary Circle at 12, and turn the Globe till the Index come to the oppoſite 12, the Place that touches the ſame Deg. of Latitude in the Meridian is the *Periſci*.

Prob. XI. *To find the Antipodes of any Place; for Inſtance, the Antipodes of* London.

Turn the Globe round, either towards the Eaſt or Weſt, till *London* touch the Horizon; count upon the Horizon the Deg that that Place of the Horizon which *London* touches is diſtant from the Brazen Meridian, if *London* touch the Horizon in the Eaſt-Side of the Meridian, reckon the ſame Number of Deg. from the Weſt-Side of the Meridian, and where the Reckoning ends, that Place is the Antipodes of *London*. Or having found out the Latitude of the Place, by bringing

Digitized by Google

bringing the Place to the Brazen Meridian, ſet the Index of the Horary Circle at the upper 12, turn round the Globe till the Index touch the lower 12; then whatever Deg. of North Latitude the Place given has, ſeek in the Brazen Meridian for the ſame Deg. of South Latitude; which being found, is the Antipodes of the given Place.

Prob. XII. *To find the Sun's Declination.*

The Sun's Declination is its Diſtance from the Equator, either Northward or Southward; firſt ſeek, according to the former Directions, the Place of the Sun in the Ecliptic for that Day; the Sign and Deg. of it being found for that Day, bring that Sign and Deg. to the Brazen Meridian, then ſee what Deg. of Latitude it touches; which being found, is the Sun's Declination from the Equator. Take the Sun's Declination from the Latitude of the Place, the Remainder will be the Diſtance of the Sun from the Zenith of the Place given at Noon: But if the Sun is not on the Side of the Equator we are on, then add the Sun's Declination to the Latitude of the Place, and this makes the Diſtance betwixt the Sun and the Zenith of the Place.

Prob. XIII. *To find the Time of the Sun's Riſing and Setting in Places that are betwixt the Equator and the Polar Circles.*

Elevate the Globe according to the Latitude of the Place: For Inſtance; *Amſterdam*, the 30th of *July*, N. S. Seek the Sun's Place in the Wooden Horizon, according to the former Directions, and you will find it to be then the 7th Deg. of *Leo*: Bring that Place of the Zodiac to the Brazen Meridian, ſet the Index of the Horary Circle at the upper 12, turn the Globe from W. to E. till the Place of the Ecliptic, where the Sun is for that Day, touch the Eaſtern Horizon; ſee what Hour the Index of the Horary Circle points at, which is 4 Hours 17 Min. in the Morning; and this in the Place ſought for is the Hour of the Sun's Riſing. Turn the Globe Weſtward, till the ſame Point of the Ecliptic touch the Weſtern Horizon; obſerve what Hour the Index of the Horary Circle points at, which is 7 Hours 43 Min. in the Evening; and that is the Hour of the Sun's Setting.

Prob. XIV. *To find the longeſt Day of any Place betwixt the Equator and the Polar Circles.*

Elevate the Pole according to the Latitude of the Place, *viz. Paris*; if it be of Northern Latitude, the longeſt Day is when the Sun enters the firſt Deg. of *Cancer*, which bring to the Brazen Meridian; ſet the Index to the upper 12, turn the Globe round Eaſtward, till the firſt Deg. of *Cancer* touch the Eaſtern Part of the Horizon; ſee what Hour the Index points at, which is 4 Hours for the Riſing of the Sun; turn the Globe Weſtward, till the ſame Degree of *Cancer* touch the Weſtern Horizon, the Index will point at 8, which is the Hour of the Sun-ſetting for the longeſt Day at *Paris*: So the longeſt Day there is 16 Hours, which is 8 half Hours longer than their Day under the Equator, by which we know, that *Paris* is in the 8th Climate. Obſerve the ſame Way of Operation for Places that have Southern Latitude, whoſe longeſt Day is when the Sun is in the firſt Deg. of *Capricorn*.

Prob. XV. *To find in what Climate any Place, lying betwixt the Polar Circles and the Poles, is.*

Elevate the Pole according to the Latitude of the Places, *viz.* 69 Deg. 30. Min. Northern Latitude; turn the Globe Eaſtward, till the Ecliptic touch the Northern Point of the Horizon; obſerve the Deg. of the Ecliptic that touches the Horizon, and you will find it to be the firſt Deg of *Gemini*; count how many Deg. there are from that to the firſt Deg. of *Cancer*, and you will find it 30 Deg. which doubled, makes 60, the Number of Days without any Night for their longeſt Day; and you find that Place to be the End of the ſecond Climate of Months.

Prob. XVI. *To know what Hour it is in one Place, when it is Noon in another.*

Let the Example be, to know what Hour it is at *Conſtantinople*, when it is Noon at *Paris*: Bring *Paris* to the Brazen Meridian, ſet the Index at the upper 12, move the Globe from E. to W. (becauſe *Conſtantinople* is E. from *Paris*) till *Conſtantinople* touch the Brazen Meridian; obſerve what Hour the Index touches, which is 2 in the Afternoon, and that is the Time of the Day when it is

is 12 at *Paris*, becauſe *Conſtantinople* is 30 Deg. more Eaſtward than *Paris*, and ſo has Noon two Hours ſooner.

Prob. XVII. *To know what Hour it is in all Places of the Earth, when you know what Hour it is in a particular Place.*

When it is 10 in the Morning at *Paris*, to know what Hour it is at that Time all the World over; Bring *Paris* to the Brazen Meridian, ſet the Index at 10 of the Morning, turn the Globe round; the Index will mark what Hour it is in all Places that come under the Brazen Meridian. If you turn the Globe towards the Weſt, you will find, for Example, that when it is 10 of the Morning at *Paris*, it is Noon at *Conſtantinople*; 2½ in the Afternoon at *Iſpahan*, the Capital City of *Perſia*; 4¼ after Noon at *Siam*; and 7 at Night at *Meaco*, the Capital of *Japan*. If you turn the Globe towards the Eaſt, you will ſee, that when it is 10 of the Morning at *Paris*, it is only 9½ at *Lisbon*; 5½ of the Morning at *Quebec*; 4½ of the Morning at *Carthagena* in *America*; and 2½ at *Compoſtella* in *Mexico*.

Prob. XVIII. *To find the Beginning and Ending of the Twilight in any Place, and at any Time of the Year.*

The Twilight is before the Sun's riſing, and after its ſetting. When the Sun is 18 Deg. perpendicularly below the Horizon in the Morning, the Twilight begins; and when the Sun is 18 Deg. perpendicularly below the Horizon after its ſetting, the Twilight ends. In a direct Sphere near the Equator, the Twilights are of ſhorter continuance, becauſe the Sun then goes below the Horizon in a perpendicular Line. But in an oblique Sphere, the Twilight is longer; and longeſt of all in a parallel Sphere. For Inſtance:

To know when the Twilight begins and ends at Amſterdam *the 5th of* October.

Elevate the Pole according to the Latitude of the Place; ſeek the Place of the Sun for that Day, according to the Directions above, which is the 12th Degree of *Libra*; bring this to the Meridian, and ſet the Index to 12 at Noon; turn the Globe towards the Eaſt, till the 12th of *Aries*, which is diametrically oppoſite to the Place the Sun is then in, be elevated 18 Deg. above the Weſtern Point of the Horizon; which done, you will ſee, 1. That the Place of the Sun is 18 Deg. below the Eaſtern Horizon. 2. That the Index points at 4 Hours 26 Min. after Midnight for the Beginning of the Morning Twilight. Turn about the Globe till the 12th of *Aries* be elevated 18 Deg. above the Eaſtern Horizon; which Elevation is known by the Quadrant of Altitude: Then the Index ſhows 7 of the Clock and 37 Min. after Noon for the End of the Evening Twilight.

Prob. XIX. *To find theſe Places that have Twilight all the Night at a certain Day.*

Seek, by the Directions above, the Declination of the Sun from that Day; elevate the Pole ſo many Deg. above the Horizon, as the Declination of the Sun is Deg. from the Equator; which being done, all the Circles of Latitude that are not 18 Deg. below the Horizon, have Twilight all the Night over.

Prob. XX. *To find the Hour of the Day by the Globe at any Time when the Sun ſhines.*

Divide your Equinoctial Line into 24 equal Parts, and in ſmall Figures ſet down the Hours of the natural Day after the following Manner: At the Interſections of the Ecliptic and Equator, place the Figure 6, and bring theſe Places to the Brazen Meridian, one being in the upper, and the other in the lower Hemiſphere; which done, place the 12 Figures in the Weſtern Hemiſphere in this Order following; 6, 7, 8, 9, 10, 11, 12, 1, 2, 3, 4, 5, 6; then beginning at the ſame Figure of 6, and proceeding Eaſtwards, ſet down the other 12 Figures thus; 6, 5, 4, 3, 2, 1, 12, 11, 10, 9, 8, 7, 6. The Equator being thus divided and mark'd, elevate the Globe according to the Latitude of the Place where you are, and bring the Interſection of the Vernal Equinox to the upper Part of the Brazen Meridian; and placing the Globe duly South and North, obſerve exactly that half of the Globe upon which the Sun doth actually ſhine; for the laſt Part of the enlighten'd Hemiſphere doth always ſhew the Hour of the Day upon the Equinoctial Line.

Digitized by Google

Prob. XXI. *The Latitude of the Place, and Height of the Sun, being known, to find thereby the Hour of the Day.*

The Pole being elevated according to the Latitude of the Place, and the Height of the Sun being found by an exact Quadrant, mark his Place in the Ecliptic for the given Day, and bring the ſame to the Brazen Meridian; after this, fix the Quadrant of Altitude at the Zenith, and mark in the ſaid Quadrant the particular Degree of the Sun's Altitude; ſet the Index of the Horary Circle at Noon; move the Globe, together with the Quadrant of Altitude, till the Sun's Place mark'd in the Ecliptic, and his Deg. of Altitude mark'd upon the Quadrant of Altitude, do come both in one: Which done, obſerve what Hour the Index pointeth at, and that is the Hour wanted.

Prob. XXII. *The Latitude of the Place being given, as alſo the true Bearing of the Sun in the ſaid Place at any Time, to find thereby the Hour of the Day.*

The Pole being elevated according to the Latitude of the Place, and the Sun's Place in the Ecliptic for that Day being found and mark'd, fix the Quadrant of Altitude to the Zenith, and by the Mariners Compaſs obſerve the true Bearing of the Sun; and then bring the Quadrant of Altitude to the obſerv'd Point of the Compaſs upon the Wooden Horizon, and move the Globe till the Sun's Place in the Ecliptic coincide with the ſaid Quadrant: Which done, and the Globe continuing in that Poſition, the Index of the Horary Circle will point at the Hour of the Day at the Time deſir'd.

Prob. XXIII. *The Latitude of a Place, and the Sun's Place in the Ecliptic, being given, to find thereby the Hour of the Day.*

Elevate the Pole according to the given Latitude, and place the Globe directly South and North by the Mariners Compaſs; then fix a ſmall Needle perpendicularly in the Sun's Place in the Ecliptic, and bringing the ſame to the Brazen Meridian, ſet the Index at Noon; turn the Globe till the Needle caſt no Shadow; and then what Hour the Index points, is the Hour of the Day.

When any Place is 90 Deg. above the Horizon, the Wooden Horizon is the Horizon of that Place.

Prob. XXIV. *To find the Meridian Line by the Globe in any Place, and at any Time of the Day.*

The Latitude of the Place being known, and the Pole elevated anſwerably, obſerve the Height of the Sun above the Horizon at that Time, and draw upon a true Horizontal Plain a ſtreight Line in, or parallel to, the Shadow of a Stile perpendicularly erected upon that Plain; in which deſcribe a Circle at any opening of the Compaſſes, and finding the Sun's Place in the Ecliptic, mark his obſerv'd Height in the Quadrant of Altitude; then move the Globe, together with the ſaid Quadrant, till that Mark in the Quadrant, and the Sun's Place in the Ecliptic, come both in one; which done, count upon the Wooden Horizon the Number of Degrees between the Quadrant of Altitude and the Brazen Meridian, and ſet off the ſame Number of Degrees upon the aforeſaid Circle drawn upon the Plain, by making a viſible Point in the Circumference, where the Reckoning ends, (beginning ſtill at the Side towards the Sun, and proceeding E. or W. according to the Time of the Day;) then draw a Line from that Point in the Circumference through the Center of the ſaid Circle, and the ſame will prove the true Meridian Line of that Place, at what Time ſoever the Obſervation is made.

Prob. XXV. *The Month and Day being given; to find by the Globe thoſe Places of the North Frigid Zone, where the Sun begins to ſhine conſtantly without ſetting; as alſo thoſe Places of the South Frigid Zone, from which the Sun begins at that Time totally to abſent himſelf.*

Find the Sun's Place in the Ecliptic, bring it to the Brazen Meridian, and reckon the ſame Number of Degrees on the Meridian from the North Pole to the Equator, as the Sun's Place in the Ecliptic is Degrees from the Equator: Obſerve, that in all Places, when the Globe is turn'd round, that touch that Degree of the Meridian, the Day in thoſe Places begins to be continual.

Prob. XXVI.

Digitized by Google

Prob. XXVI. *A Place being given in the North Frigid Zone, to find by the Globe what Number of Days the Sun doth conſtantly ſhine upon the ſaid Place, and what Days it is abſent; alſo the firſt and laſt Days of its Appearance.*

Bring the given Place to the Brazen Meridian, and obſerving its Latitude, elevate the Pole accordingly; then turn the Globe about, till the firſt Deg. of *Cancer* come under the Meridian, and count the ſame Number of Deg. upon the Meridian from each Side of the Equator, as the Place is diſtant from the Pole; and making a Mark where the Reckoning ends, turn the Globe round, and carefully obſerve what two Degrees of the Ecliptic paſs exactly under the two Points mark'd in the Meridian; for the Northern Arch of the Circle, (*viz.* that comprehended between the two mark'd Degrees) being reduc'd to Time, will give the Number of Days that the Sun doth conſtantly ſhine above the Horizon of the given Place; and the oppoſite Arch of the ſaid Circle will give the Number of Days that he is abſent. The Pole continuing in the ſame Elevation, bring the beginning of *Cancer* to the Brazen Meridian, and obſerve the two Points of the Ecliptic, which in the mean time coincide with the Horizon; then ſearch upon the Wooden Horizon for thoſe Days that the Sun doth enter into the aforeſaid Degrees of the Ecliptic, and theſe are the Days of his firſt or laſt Appearance in the given Place.

Prob. XXVII. *The Hour of the Day being given, according to our Way of Reckoning in* England, *to find thereby the* Babylonick *Hour at any Time.*

The *Babylonians* of old, and the People of *Nuremberg* now, commence their Hours from the Appearance of the Sun in the Eaſtern Horizon. For the finding this Hour at any Time, and at any Place, elevate the Pole according to the Latitude of the Place; note the Sun's Place in the Ecliptic at that Time, bring the ſame to the Brazen Meridian, and ſet the Index of the Horary Circle at Noon: After this, turn the Globe either Eaſtward or Weſtward, according to the Time of the Day, till the Index point the given Hour; then fix the Globe in that Poſition, and bring back the Index to Noon, and move the Globe from Weſt to Eaſt, till the Sun's Place mark'd in the Ecliptic coincide with the Eaſtern Horizon: Which done, reckon upon the Horary Circle the Number of Hours between the upper Figure of 12, and the Index; for that is the Number of Hours from Sun-riſing for that Day in the given Place, or the true *Babylonick* Hour deſir'd.

Prob. XXVIII. *The* Babylonick *Hour being given, to find the Hour of the Day at any Time, according to our Way of Reckoning in* England.

Elevate the Pole according to the given Latitude, and marking the Sun's Place in the Ecliptic, bring the ſame to the Brazen Meridian, and ſet the Index of the Horary Circle at Noon; then turn the Globe Weſtward, till the Index point at the given Hour from Sun-riſing; and fixing the Globe in that Situation, bring the Index back again to Noon, and turn the Globe backwards, till the Sun's Place mark'd in the Ecliptic return to the ſame Semi-Circle of the Brazen Meridian from whence it came: Which done, obſerve what Hour the Index of the Horary Circle points at, and the ſame is the Hour deſir'd.

Prob. XXIX. *The Hour of the Day being given, according to our Way of Reckoning in* England, *to find thereby the* Italick *Hour at any time.*

The *Italick* Hour is the Number of Hours from Sun-ſetting at all Times of the Year, to Sun-ſetting the next following Day: For the finding ſuch Hours, elevate the Pole according to the Latitude of the Place; and noting the Sun's Place in the Ecliptic upon the given Day, bring the ſame to the Brazen Meridian, and ſet the Index of the Horary Circle at Noon; then turn the Globe either Eaſt or Weſt, according to the Time of the Day, till the Index point at the given Hour; and fixing the Globe in that Situation, bring the Index back to Noon: Which done, turn the Globe Eaſtward, till the Mark of the Sun's Place in the Ecliptic coincide with the Weſtern Horizon, and obſerve how many Hours there are between the upper Figure of 12 and the Index (reckoning them Eaſtward as the Globe mov'd) for theſe are the Hours from Sun-ſet, or the *Italick* Hour deſir'd.

Prob. XXX. *The* Italick *Hour being given, to find thereby the Hour of the Day at any Time, according to our Reckoning in* England.

Elevate the Pole according to the Latitude of the Place; note the Sun's Place in the Ecliptic, bring the ſame to the Weſtern Horizon, ſet the Index at Noon, turn the Globe Weſtward, till the Index point at the *Italick* Hour given; then fixing the Globe in that Poſition, bring the Index back to Noon, and turn the Globe backward, till the Mark of the Sun's Place return to the Semi-Circle of the Brazen Meridian, from whence it came: Which done, obſerve how many Hours there are between Noon and the Index, (reckoning them from W. to E.) for thoſe are the Hours deſir'd, according to our Way of Reckoning in *England*.

Prob. XXXI *The Hour of the Day being given, according to our Way of Reckoning in* England, *to find thereby the* Judaical *Hour at any Time.*

The *Jews* divided their Artificial Day into 12 Hours, which muſt be unequal according to the Length of the Days in the particular Places: For finding which, elevate the Pole according to the Latitude of the Place, mark the Sun's Place in the Ecliptic at that Time, bring it to the Eaſtern Horizon, and ſet the Index at Noon; then turn the Globe about, till that Place mark'd in the Ecliptic come to the Weſtern Horizon, and obſerve the Number of Hours betwixt Noon and the Index, theſe being the Hours of which the given Day doth conſiſt; which Number you are to note down, and to find what Hour from Sun-riſing correſponds with the given Hour, or from Sun-ſetting, if the given Hour be after Sun-ſet: Which done, work by the following Proportion: As the Number of Hours whereof the Day given conſiſteth (*viz.* thoſe noted down) is to 12; ſo is the Number of Hours from Sun-riſing, (if it be an Hour of the Day) or from Sun-ſetting, (if an Hour of the Night) to a 4th Proportional; which is the Number deſir'd, *viz.* the *Judaical* Hour at the Time given.

Prob. XXXII. *The* Judaical *Hour being given, to find thereby the Hour of the Day at any Time, according to our Way of Reckoning in* England.

Elevate the Pole according to the Latitude of the Place, find the Sun's Place in the Ecliptic at that Time, bring the ſame to the Eaſtern Horizon, and ſet the Index at Noon; then turn the Globe Weſtward, till the Sun's Place coincide with the Weſtern Horizon; then the Index points at the Number of equal Hours whereof the Day conſiſteth; which Number you are to note down, and bring the Sun's Place to the Brazen Meridian, and ſetting the Index again at Noon, turn the Globe till the Sun's Place coincide with the Eaſtern Horizon, and the Index will point at the Hour when the Sun riſeth in the given Place. Which done, work by the following Proportion: As 12 is to the given Number of *Judaical* Hours; ſo is the Length of the Day in equal Hours (formerly found out) to a 4th Proportional; which is the Number deſir'd, *viz.* the Hour of the Day according to our Way of Reckoning in *England*: Only note, That if the 4th Proportional be leſs than 12, you are to add the ſame to the Hour of Sun-riſing, and the Product will give the Number of Hours before Noon for that Day; but if it be more than 12, then ſubſtract it from 12, and the Remainder will give the Hour of the Day for Afternoon.

Prob. XXXIII. *The Day and Hour of either a Solar or Lunar Eclipſe being known, to find by the Globe all thoſe Places in which the ſame will be viſible.*

Mark the Sun's Place in the Ecliptic for the given Day, as alſo the oppoſite Point thereunto, which is the Place of the Moon at that Time; then find that Place of the Globe to which the Sun is vertical at the given Hour, and bring the ſame to the Vertical Point or Pole of the Wooden Horizon, and fixing the Globe in that Situation, obſerve what Places are in the upper Hemiſphere; for in moſt of them the Sun is viſible during his Eclipſe. As for the Lunar Eccliplſe, you are to find the Antipodes of that Place, which hath the Sun vertical at the given Hour, and bringing the ſame to the Pole of the Wooden Horizon, obſerve, as formerly, what Places are in the upper Hemiſphere of the Globe, for in ſuch will the Moon be viſible during her Eclipſe, except thoſe that are very near unto, or actually in the Horizon.

Digitized by Google

Prob. XXXIV. *To know all the Places that have Day, or the Sun shining upon them, at the same Time.*

The Globe being rectified, *i. e.* the North Pole standing due North, and elevated according to the Latitude of the Place, bring the Place you are in to the Brazen Meridian, expose the Globe to the Sun; all Places on the Globe that are illuminated, have Day at that Time, and those that are not, have Night at that Time: Then bring the Index of the Horary Circle to Noon; bring that Point of the Equator, where the Sun's shining ends, to the Brazen Meridian, the Index shews how many Hours the Sun is distant from the Meridian.

Prob. XXXV. *A Place being given, to find the Situation of another, according to the Angle of Position.*

Let the given Place be *Paris*, to know what Point the Cape of *Good Hope* is in regard to it; elevate the Globe according to the Latitude of *Paris*, which is 49 Deg. bring *Paris* to the Brazen Meridian, fix the Quadrant of Altitude in the Zenith, *i. e.* upon *Paris*, and make the Quadrant touch the Cape of *Good Hope*; then you will find that the Arch of the Horizon, betwixt the Zenith of the Cape of *Good Hope* and that of *Paris*, or the Brazen Meridian, is 18 Deg. for the Angle of Position; so that we find that the said Cape is in a Point a little less Easterly than South South-East.

It being troublesome to quote Authors for every Particular, we think it proper to acquaint the Reader, That in the Description and Use of the Globes, we have made use of *Blaw*, *Varenius*, *Oxenam*, *Brietius*, *Brion*, *Martineau de Plessis*, besides *English* Authors who have wrote on that Subject.

CHAP. II.

Of the Origine of Mankind, *and Peopling the* World.

THAT Mankind had their Original at the Time so particularly accounted for in the sacred History, can be doubted by none who believe the Divine Authority of the Scriptures. But abstracting from that unquestionable Authority, we may prove the Truth of it, as Men, by the following Arguments: 1. That in all Ages, and among all Nations, there has been a constant Tradition, That Mankind had its Original from some first Parents, not begot in the common Way, but immediately created by God. 2. That by Observation, we find the Increase of People daily exceeds their Decrease: From whence 'tis, That Nations usually double their People in 360 Years, or sooner. If we enquire into the Original Invention of Arts and Sciences, we shall find by History, That they all had their Rise within the Compass of 5 or 6000 Years. 4. By consulting the Histories of the most ancient Times, it will appear, That we have no Authentic Account of any Originals of Kingdoms, Wars, Institutions of Laws or Governments higher than that Time; but that the Plantations of all the known Parts of the World, nay, even of the Original and Apotheoses of the Heathen Deities, do all fall within that Period. By Consequence 'tis evident, That *Moses*'s History, abstracting from its Divine Authority, is not only the most ancient, but the most valuable Piece now extant: For 'tis plain, That to him alone we are indebted for our Knowledge of the Time and Manner of the Beginning of the World; of our first Parents; of the Frailty and Depravation of humane Nature; of the Inventors of Arts; of the Original of Nations; of the first Founders of Empires and Kingdoms; and of the Institutions of Laws and Government. These Things in all other ancient Histories are so blended with Fables and ridiculous Stories, that we may easily perceive the Authors knew nothing of the Matter,

Digitized by Google

Matter, but what they ſtole from him, or had conve,'d to them by uncertain Tradition.

Moſes's Account of the Situation of *Paradiſe*, the Original Seat, and Dwelling-Place of our firſt Parents, is very Particular. He tells us, That it was in *Eden* Eaſtwards; *i. e.* Eaſtwards from *Judea*, or from the Deſart of the *Amorites*, where he wrote his Account. Some are of Opinion, That the Name *Eden* is deriv'd from the Pleaſantneſs of the Place. We read of the Country of *Eden* in ſeveral Places of Scripture, as in 2 *Kings* 19. 12. *Iſa.* 37. 12. *Ezek.* 27. 23. and this lay Eaſtwards of *Judea*. That it was Part of the Kingdom of *Aſſyria*, ſeems plain from 2 *Kings* 19. 12. and that Kingdom contain'd anciently not only the Country then call'd *Aſſur*, but alſo *Meſopotamia*, *Babylonia*, &c. And Dr. *Patrick*, Biſhop of *Ely*, in his Commentary on *Geneſis*, alledges, That *Paradiſe* was ſituated in Part of the latter; tho' moſt Authors think it was in *Meſopotamia*.

Moſes ſays, a River went from *Eden*, and from thence was parted into two Heads. This River, according to the beſt Accounts, was a Conjunction of *Euphrates* and *Tigris*, which meet in *Apamia*, according to *Ptolomy*; which the Learned *Bochart* ſays, is the Place now by the *Arabians* call'd *Alcatfar*, about 45 Miles from *Bagdat*; and then they run together for a great Way. 'Tis probable, this united Stream ran through the Country of *Eden*, and that the Garden lay on the Eaſt-Side of it, and its Southern Boundary at the parting again of the two Rivers.

This River, *Moſes* ſays, became into 4 Heads, which Sir *Walter Raleigh* underſtands to be Streams; and theſe 4 Streams were *Tigris* and *Euphrates* before they join'd, and *Piſhon* and *Gihon* afterwards. *Piſhon* was probably the Weſtern River *Paſitigris*, the ſame with *Orontis*, according to *Salmaſius*, Sir *Walter Raleigh*, and *Bochart*. Mr. *Carver* obſerves from *Xenophon*, That this River was call'd ſimply *Phyſcus*; and *Bochart* ſays, There was a Place call'd *Paſimum* lying near *Euphrates*: In all which Names, there are ſome Footſteps of the Name *Phiſon*, or *Piſon*. *Moſes* informs us in the 2d of *Geneſis*, That this River encompaſs'd the whole Land of *Havilah*: And in the 10th of *Geneſis*, he mentions two *Havilah*'s, one deſcended from *Joktan*, v. 29. but this cannot be the *Havilah* here mention'd, becauſe his Poſterity were planted Eaſtward: But the other *Havilah*, mention'd *v.* 7. is ſaid to be deſcended from *Cuſh*, and gave Riſe to a more Weſtern People, ſeated on that Part of *Arabia Felix* which borders on this Stream; for we read, *Gen.* 25. 18. That the *Iſhmaelites*, who were certainly Inhabitants of *Arabia Deſerta*, are bounded by *Shur* towards *Egypt*, and by *Havilah* in the Way to *Aſſyria*: And after this, we read, 1 *Sam.* 15. 7. That *Saul* found *Havilah* in the ſame Situation. The next Stream *Moſes* calls *Gihon*, of which Name there are ſcarce any Footſteps left; but by the Country 'tis ſaid to encompaſs, muſt be the Eaſtern Diviſion of the River after its parting at *Eden*. This Country he calls *Ethiopia*, or *Cuſh*, by which we are not to underſtand that *Ethiopia* in *Africa*, but *Ethiopia* in *Aſia*: For the Ancients mention two *Ethiopia*'s, as *Bochart* informs us; and *Steph. Morinus*, in his Treatiſe of *Paradiſe*, proves it to be the Country of *Suſiana*, which the *Greeks* call *Kiſſia*; and the *Perſians* at this Time call it *Chuzeſtan*, or the Country of *Chus*.

The Name of the 3d River *Moſes* ſays is *Hiddekel*, which, *Dan.* 10. 4. is call'd the great River, and therefore muſt be *Tigris*. *Rauwolf*, in his Travels, *P.* 11. *Ch.* 9. ſays, That in his Time, the River *Tigris* was by the People of *Carnch*, on the Confines of *Media*, call'd *Hiddekel*. *Plin. Lib.* 6. *Cap.* 27. ſays, That *Tigris* is ſo call'd from its Swiftneſs; but where it runs ſlower, 'tis call'd *Diglito*; and the *Arabians* call it *Deglat*, and *Degela*: All which are evident Corruptions of the Name *Hiddekel*, which the Targum of *Onkelos* and *Jonathan* render *Diglat*.

The 4th River, *Euphrates*, is only mention'd by *Moſes*, becauſe it was well known at the Time when he wrote. The Seat therefore of *Paradiſe* was thus: The Rivers *Euphrates* and *Tygris*, i. e. *Hiddekel*, joins ſomewhere in ancient *Babylonia*, or, as ſome call it, *Meſopotamia*, in one great Stream; on the Eaſt-Side of whoſe Banks lay the Garden of *Eden*; at the South End of which the River parted again into two Streams, then call'd *Piſhon*, and *Gihon*, but in Proceſs of Time *Euphrates* and *Tigris*, as before their Conjunction; and this Name we find given them both in *Greek* and *Roman* Authors. Mr. *Whiſton*, in his new Theory of the Earth, *Pag.* 104. ſuppoſes the ancient *Paradiſe* to be

Digitized by Google

be at the Confluence of the *Tigris* and *Euphrates*, either before they fall into the *Perſian* Gulph, where they now unite, and ſeparate again, or rather where they anciently divided themſelves below the Iſland *Ormus*, where the *Perſian* Gulph under the Tropic of *Cancer* falls into the *Perſian* Sea: So that the exact Place of *Paradiſe*, according to him, is now under Water. For his Reaſons, we refer to the Book it ſelf.

There is little more of Geography taken Notice of before the Deluge, but *Cain*'s going out of the Preſence of the Lord into the Land of *Nod*, on the Eaſt of *Eden*; his dwelling there, and building a City, which he call'd *Enoch*, after his Son's Name. *Nod*, which is as much as to ſay, the Land of Vagabonds, probably took its Name from his wandering up and down in it. *Junius* thinks, the firſt *Nomades* liv'd in this Country, and perhaps took their rambling Way of Living from this firſt Vagabond *Cain*; and he ſuppoſes it lay near *Suſiana* or *Chuzeſtan*.

There is nothing certain of the Hiſtory of thoſe before the Deluge, but what's to be found in the 6 firſt Chapters of *Geneſis*. This Period of Time is ſaid to have conſiſted of 1656 Years, which is prov'd from the Hiſtory of *Geneſis*, by taking the Years which *Adam* and his Deſcendants liv'd before they had thoſe Children, which make up the Liſt of the Patriarchs till *Noah*, *Gen.* 5, 6, and 7. *viz.*

Noah's Age at the Time of the Flood	600
In all	1656

Moſes tells us, That after the Flood, the Ark reſted on the Mountains of *Ararat*, which the Learned agree is that long Ridge of Mountains now call'd *Taurus*, as it was in the Time of *Pliny*, and runs through *Armenia*, *Aſſyria*, *Meſopotamia*, *Media*, *Suſiana*, &c. from *Cilicia* to *Parapomiſus*. The Ark is thought to have reſted on the higheſt and more Eaſterly Part of this Tract of Hills, call'd by *Epiphanius* and *Bochart* the *Gordiean* Mountains; and obſerv'd by *Tavernier*, on *Iſai.* 16. and 13. to have been always reckon'd the higheſt in the World. *Portius Cato* ſays, That about 250 Years before *Ninus*, the Earth was drown'd by a Deluge, and that Mankind was reſtor'd again in *Scythia Saga*, which, according to Sir *Walter Raleigh*, is under the Mountain *Parapomiſus*. Dr. *Heylin* mentions a Tradition of the Inhabitants of that Country, That near the Foot of Mount *Caucaſus*, there was a large Vineyard in *Margiana*, of *Noah*'s planting. Mr. *Whiſton*, in his New Theory of the Earth, thinks it plain from the Text and the Nature of the Thing, That the Ark reſted on the higheſt Hill of *Aſia*; for the Water was 15 Cubits above the Tops of all the other Mountains, when the Ark reſted on Mount *Ararat*: Therefore *Parapomiſus*, the ancient *Caucaſus*, muſt be the Place. *Bochart* ſays, theſe Mountains were not above 200 or 300 Miles from *Eden*, and probably about half as far from the Place where *Noah* built the Ark. The Courſe of the Rains, and the Riſe of the Water coming from the South, might gently drive the Ark ſo far Northerly, as to ſet it down on the Top of thoſe vaſt Hills. That it was the moſt Eaſterly Part of thoſe Mountains on which the Ark reſted, ſeems plain from the Account which *Moſes* gives us of the firſt Removal after the Deluge, which was from the Eaſt to the Plains of *Shinar*, *Gen.* 11. 2.

The Waters being aſſwag'd, and the Earth become dry, we are not to doubt that *Noah*'s Family ſeated themſelves in the Neighbouring Country, where they judged it moſt for their Conveniency, and ſpread as their Poſterity encreas'd, till they came to repleniſh the whole Earth; as *Moſes* informs us, *Gen.* 9. 19. 'Tis more than probable, that from *Ararat* they mov'd firſt towards the South, Peopling by degrees *Aſſyria*, *Babylon*, *Syria*, *Egypt*, and *Ethiopia*: So that the *Egyptians* were in the Wrong to pretend to be the moſt ancient People of the World. *Bochart* takes notice of the Difficulty Interpreters meet with to reconcile this with the Scripture Account;

Digitized by Google

Account, in *Gen.* 11. 2. where those who came from the Mountains of *Ararat* into the Valley of *Sinnar* are ſaid to journey from the Eaſt, becauſe thoſe Mountains do not lie to the Eaſt, but to the North of *Babylon*; and on this Occaſion he gives us the Opinion of thoſe who think *Noah*'s Family firſt came down into the Plains of *Aſſyria* and *Suſiana*, and afterwards mov'd Weſtward to *Babylon*. He acquaints us alſo with the Solution of this Difficulty, by *James Cappell*, his Kinſman, in his Notes on *Geneſis*, which were not then publiſh'd; *viz.* 'That the Poſterity of *Noah* went from the Mountains of *Armenia* into that Country afterwards called *Kedem*, from *Kedma*, *Iſhmael*'s youngeſt Son, *Gen.* 25. 15. *Iſhmael*'s ſecond Son was *Kedar*; and that thoſe two Brothers liv'd near one another, is inferr'd from *Jer.* 29. 48. *Ariſe ye, go up to Kedar, and ſpoil the Men of the Eaſt.* So that when *Moſes* ſays, Gen. 11. 2. 'They journey'd from *Kedem*, or the Eaſt, and found a Valley in the Land of *Shinar*, he thinks this Place is to be underſtood in this Manner.' *Bochart* adds his own Conjectures thus: 'That he thinks the Scripture ſpeaks here according to the Cuſtom of the *Aſſyrians*, who call'd that Part of their Empire beyond the *Tigris* the Eaſt, and that on this Side of it the Weſt: And therefore, according to this Diviſion, the Mountains of *Ararat* are rightly ſaid to be in the Eaſt. The firſt Thing they undertook after their Arrival here, was to build a Tower, whoſe Top might reach to Heaven. The Town is by *Moſes* call'd *Babel*, *Gen.* 11. 9 which all agree to be *Babylon*. *Bochart*, *Lib.* 1. *Cap.* 8. takes Notice of the Miſtake of thoſe who confound *Babylon* with *Suſa*, the Metropolis of *Suſiana*; and of ſuch as will have it to be *Nineveh*, from the Authority of an Anonymous Writer in *Suidas*, who ſays, That *Semiramis* firſt encompaſs'd *Nineveh* with Wals, and then chang'd its Name into *Babylon*. He likewiſe confutes thoſe who will have *Bagdad* to be *Babylon*, an Error which many Learned Men fell into; but the Miſtake is evident from the different Situation of the Places, *Babylon* being on the *Euphrates*, and *Bagdad* on the *Tigris*. And *Teixeira*, an Eye-Witneſs, ſays, That the Ruins of *Babylon* were to be ſeen in his Time, and were 40 Miles diſtant from *Bagdad*. For the Way how they came to fall into this Miſtake, we refer to the Book it ſelf; and likewiſe for his exact Deſcription of the Situation of the ancient *Babylon*, and of the Diviſion of the *Euphrates* into many different Streams in that Country. In his 9th Chapter he proves, That the Tower was built in the City, and made Part of it; and Chap 10. he proves, that it was built in the 101ſt Year after the Deluge, becauſe it's ſaid, *Gen.* 10. 25. That to *Heber* two Sons were born, one of whom was call'd *Phaleg*, becauſe in his Time the Earth was divided; which is the ſame as if he had ſaid, This happen'd when *Phaleg* was born, becauſe his Father gave him this Name at his Birth: And that *Phaleg* was born in the 101ſt Year after the Deluge, appears from *Gen.* 11. 10. to the 16th Verſe. This firſt Century is what the Poets call the *Golden Age*, becauſe the Earth not being then divided, they enjoy'd all Things in common; and *Noah*, who was the Saturn of the Heathens, govern'd Men not as a King does his Subjects, but as a Father does his Children; not ſo much by Fear, as by Love, and the Reſpect which is due to a Parent.

Bochart is not of their Opinion, who think that the Tower was immediately deſtroy'd by ſtrong Winds, or Fire from Heaven; but believes it ſtood long after the Diſperſion; that it was the ſame which was conſecrated to *Belus*, and is deſcrib'd at large by *Herodotus*, *Lib.* 1. Nor does he think that *Noah*, or any of his Religious Poſterity, was concern'd in this impious Undertaking, but that it was ſuch of his Poſterity as had caſt off the Fear of God; becauſe *Gen.* 11. 5. they are call'd the Children of Men, in the ſame manner as *Gen.* 6. 2. The Sons of God are oppos'd to the Daughters of Men, as Believers to Unbelievers: And hence it came to paſs, That all thoſe who were Partakers of the Covenant, *i. e. Abraham*'s Forefathers, as high as *Noah*, were exempted from the Puniſhment inflicted upon the reſt; for when the Language of others was confounded, they retain'd their own Language in its Purity, *viz.* the Hebrew, ſo call'd from *Heber*, and was tranſmitted to his Poſterity. In like manner, when the reſt were diſpers'd, they continu'd in their ancient Habitations.

At

At leaſt 'tis plain, that *Ur* of the *Chaldees* where *Abraham*'s Anceſtors liv'd, *Gen.* 11.28. was not far from *Corduena*, where *Noah*'s Ark reſted. This is plain from *Ammianus*, *Lib* 5. where he ſays, the *Romans* paſs'd the *Tigris* about 100 Miles from *Corduena*, and after 6 Days Journey came *to a Perſian Caſtle call'd Ur*; from whence they march'd firſt to *Thilalpata*, and then to *Niſibis*: Therefore *Ur* muſt lie about *Niſibis*, and nearer at leaſt to the *Tigris* and *Corduena* by two Stations. He is alſo of Opinion, That *Nimrod* was not among the Builders of this Tower, otherwiſe he muſt have been obliged to remove with the reſt. Therefore he thinks that the Plain of *Shinar* lay deſolate for ſome Years, the Memory of ſuch a Diſperſion having frighted Men from repoſſeſſing it, till obſtinate *Nimrod* ventur'd to go thither with a great Number of *Cuſhites* to *continue and* perfect the Work, and to *make that very* Place, from whence Mankind was diſperſed, the Metropolis of his Kingdom: To which he was perhaps induc'd by the extraordinary Fruitfulneſs and Pleaſantneſs of the Country.

As to the Confuſion of Tongues, *Bochart* is of Opinion, That 'tis not to be taken as if every one concern'd in that Attempt ſpoke a diſtinct Language, and then none of them could underſtand another; for by that Means all *Societies* muſt have periſh'd, if the Huſband could not have underſtood the Wife, nor the Children the Parents, and *vice verſa*. But he thinks every Family had a diſtinct Language. He is alſo of Opinion, That there is nothing certain to be determin'd as to the Number of Languages then ſpoke, tho' they are commonly ſaid to be 70, or 72, but without any good Foundation, as the Curious may ſee by his Book, to which we refer. 'Tis enough that the Confuſion was ſuch as made them give over the Work; for when they could not underſtand one another, and when one ask'd for Brisk, another brought Mortar, it muſt needs occaſion Contention, and make them think they were mock'd, which muſt be attended by an Alienation of Mind, and mutual Averſion; from whence a Diſperſion muſt naturally enſue.

He confutes the Opinion of *Epiphanius*, who thinks they divided the World among them by Lot in the Town of *Rhinocolura*, and judges rather that they were drove aſunder into the remoteſt Parts of the World by the ſecret Impulſe of the ſame Spirit which confounded their Tongues. Nor is it likely, after they were Barbarians to one another in Language, that they could agree to meet together in one Place to divide the World among them by Lot: But there is nothing more certain, than that they could not meet at *Rhinocolura*; for *Diodorus* tells us, *Lib.* 1. *Cap.* 38. That that Town was not built till many Ages after, by *Artiſanes*, King of *Ethiopia* and *Egypt*.

In his 16th Chapter, he deſcribes the Boundaries of the Diſperſion thus: On the North, *Thracia*, where *Thiras* fix'd; and *Caucaſus*, where *Magog* ſettled: On the South; *Lybia*, where *Phut* planted himſelf; *Æthiopia*, whither *Ludim* went; and *Arabia the Spicey*, where *Jeſſan* and his Children choſe their Seats. On the Weſt, *Gaul*; where *Rhodanim* poſted himſelf; and *Spain*, the Habitation of *Tharſis*. On the Eaſt, *Media*, the Country which *Madai* took for the Place of his Abode; *Perſis* and *Elymais*, where *Elam* pitch'd his Tents; and *Carmania*, the Country where *Sabthaca* dwelt. He diſſents from thoſe who, following *Joſephus*, alledge thoſe Colonies went as far as *India*. He adds, That ſince many of *Cham*'s Poſterity went into *Africa*, and many of *Japhet*'s Poſterity into *Europe*, it was peculiar to the Poſterity of *Sem*, that they did not go out of *Aſia*. Yet he does not think that this was done by joint Conſent, or any fix'd Purpoſe, but that each of them poſſeſſed themſelves of ſuch Countries as firſt fell in their Way. This does not agree very well with his fixing *Rhodanim* in *France*, and *Tharſis* in *Spain*, at the firſt Diſperſion; for they muſt have travelled thro' many Countries before they came thither: Therefore 'tis more probable, that the firſt Colonies which went from *Babylon* ſettled themſelves much nearer it than either *France* or *Spain*, eſpecially conſidering how little they underſtood of Navigation.

'Tis plain from the Writings of the ancient Heathens, both Poets and Hiſtorians, That they knew of the Deluge, and of the Diſperſion after it; tho' they mix their Accounts of it with Fables, and give *Noah* and his Sons other Names. *Bochart* proves this undeniably, *Lib.* 1. *Cap.* 1. by the following

Digitized by Google

Arguments: 1. *Noah* was the common Parent of Mankind after the Deluge; and ſo *Saturn* is call'd in *Orpheus*'s Hymns the Father of all Men, and his Wife *Rea* their Mother. 2. *Noah* is call'd in *Scripture* a juſt Man, and a Preacher of Righteouſneſs. *Diodorus* and *Aurelius Victor*, and *Juſtin*, &c. ſay much the ſame of *Saturn*. 3. *Noah* was a Husbandman, and planted a Vineyard; and the Poets aſcribe the Teaching of Agriculture to *Saturn*, and make his Wife *Rea* and *Tellus*, *i. e* the Earth, the ſame Thing. 4. *Noah* was overtaken with Drink, and the Heathens make *Saturn* to preſide over Drunkenneſs; from whence came their Debauches call'd *Saturnalia*. 5. *Noah* curs'd his Son *Cham*, for looking upon his Nakedneſs when drunk. The Poets ſay, *Saturn* made a Law to puniſh thoſe who look'd upon the Gods naked. 6. *Noah* and his Family eſcap'd the Deluge. The Poets make *Saturn* and his Wife *Rea* the Children of the Sea, which they call *Oceanus* and *Thetis*; and the old *Romans* made a Ship the Symbol of *Saturn*; and the *Aſſyrians*, as *Alexander Polyhiſtor* in form us, ſaid that *Saturn* foretold the Deluge, and order'd an Ark to be built for preſerving ſo many Men, and other living Creatures. 7. *Noah* foretold the Deſtruction of Mankind by the Deluge, and accordingly none were ſav'd but himſelf and his Family. The Heathens ſay, *Saturn* deſtroy'd all his Children but three, *viz.* *Jupiter*, *Neptune*, and *Pluto*, which anſwers to *Noah*'s three Sons, *Shem*, *Cham*, and *Japhet*. We refer the Curious, who would ſee more of this, to the Book it ſelf.

CHAP. III.

Of the WORLD *in General.*

HAving accounted for the Peopling of the World after the Deluge, and how much of it appears then to have been known according to the Scriptures, we come next to conſider how much of it was taken notice of by the ancient Heathen Writers.

Their Knowledge of it appears to have been very indiſtinct, and their Sentiments about it very different. *Agathemerus* and others thought there was not above a 4th Part of it habitable; as we find in his Geography, *Lib.* 1. *Cap.* 6. Moſt of them agreed, That the Temperate Zones were only habitable; and of this Opinion was *Strabo*, *Lib.* 1. *P.* 44. They were not ignorant, that the World was inhabited as far South as the Tropic of *Cancer*; but how far it was habitable Northward, they were altogether uncertain, becauſe neither the *Greeks* nor *Romans* had gone far that Way. *Saluſt*, in his *Jugurthin War*, *Cap.* 19. ſays, That beyond *Numidia*, the *Getuli* dwelt, ſome in Cottages, and others wander'd up and down. Next to them are the *Ethiopians*, and beyond *Ethiopia* are the Places which are ſcorch'd with the Heat of the Sun. Thus it appears he thought *Ethiopia* to be on this Side the Torrid Zone; but *Ptolomy*, *Lib.* 4. *Cap.* 6, and 9. places the *Ethiopians* for moſt Part in the Torrid Zone, and not only as far as the Equator, but ſome of them beyond it; tho' by why Authority, we are not certain.

They were yet more in the Dark as to the Northern Parts, which is plain from this, That *Strabo*, *Dionyſius*, *Periegeta*, *Pomponius Mela*, *Pliny*, and *Solinus*, took the *Caſpian* Sea to be a Bay of the *Scythian* Ocean; tho' they might have been better inform'd by *Herodotus*, *Lib.* 1. *Cap.* 203. where he ſays, That it has no Communication with any other Sea. Nor do they write with any greater Certainty as to the Places beyond the *Black Sea*, or beyond *Germany* in *Scandinavia*: And what they write concerning the further Parts

Digitized by Google

Parts of *Scythia*, is equally doubtful and fabulous. *Agathemerus* and *Ptolomy* indeed seem'd to have had better Information, and perhaps from some of the Inhabitants; but that they knew all *Scythia*, we cannot be perswaded, because the Eastern Part of it, or *Great Tartary*, is not fully known to us *Europeans* at this very Day. So far as *Alexander* carried his Arms to the East, was pretty well known: But what the Ancients wrote of Places beyond the Limits of that Expedition, is altogether fabulous and uncertain; which is the Occasion of their differing so frequently from one another, as we find in *Strabo*, *Lib.* 2. and 15. They are plain and clear enough as to the Western Boundary of the World in *Mauritania*, *Spain*, *Gaul*, the *British* Isles, the *Atlantic*, *Aquitain*, and *British* Ocean; but they were at no Certainty as to the Places which lay further South or North of those Boundaries.

And tho' the Form of this Part of the World known to them had much more Length than Breadth, yet the Latin Writers call it always *Orbis Terrarum*: Nor are we to wonder at it, since they frequently call lesser Divisions by the Name of *Orbis*. as *Europæus Orbis*, *Africanus Orbis*, *Orbis Persicus*, and *Orbis Iberus*, &c. 'Tis known, That the *Romans* call'd their Empire *Orbis Romanus*; and so 'tis call'd in the 2d of *Luke*, and not undeservedly, since it comprehended the greater and more noble Part of the then known World. And thus *Augustin* elegantly calls the Church of Christ, dispers'd through the World, *Orbis Christianus*.

The Navigation of the Ancients is as imperfect and full of Errors, as their Geography: Nor could it be otherwise, since they knew not the Use of the Compass, and never durst venture far from Shore. 'Tis not certain when Men began first to sail in the *Atlantic*, which lies betwixt *Europe*, *Africa*, and *America*. The Scriptures mention the sailing to *Ophir* by the Kings, *Solomon*, *Hiram* and *Jehosaphat*; and *Job* speaks of the Gold of *Ophir*. St. *Jerom* and *Strabo* mention Voyages from *Egypt* into *India*. *Pliny* says, The Trade of *Egypt* was thereby much augmented; and describes the Way of travelling to the *Indies*, *Lib.* 6. *Cap.* 23. *Reiskius*, in his Notes on *Cluverius*, *Lib.* 1. *Cap.* 13. thinks that the Voyage to *Ophir* in *Solomon's* Time was only made by Coasting; and that it is not to be doubted, if we place *Ophir* in the *Golden Chersonesus*, or *Taprobam*: Nor could the Voyage from *Egypt* to *India*, mention'd by St. *Jerom* and *Strabo*, be perform'd otherwise, if there were any such Thing. *Bochart. Lib.* 2. *Cap.* 27. takes Notice of two *Ophirs*, one in *Arabia*, the other in *India*. He takes the former to be that mention'd by *Job*, because in his Time, which was much about that of the Patriarch *Jacob*, *India* was not known to the People of *Judea*, or at least they had no Commerce with it. He is likewise of Opinion, That the 3000 Talents of the Gold of *Ophir*, given by *David* towards the building of the Temple, came from *Arabia*, where there was great Plenty of excellent Gold, as is plain from *Strabo*, *Diodorus*, and others. He owns however, that *Ophir* to which *Solomon* and *Hiram* sent Ships, was That in the *Indies*, because there were three Years spent in the Voyage; whereas *Arabia* was near him, and the Journey must have been perform'd by Land: Nor was there any Ivory there, because no Elephants. He is not positive in what Part of *India* this *Ophir* was; but, after having given the different Opinions of the Learned about it, he thinks it most probable to be *Taproban*, which he elsewhere proves to be *Ceilon*, where 'tis very well known there is Plenty of Gold, Ivory, Jewels, abundance of Peacocks and Apes, which are mention'd to be brought from *Ophir* by *Solomon's* Ships.

The *Phœnicians* are reckon'd by the Ancients to be the first who understood Navigation; and of them, the *Tyrians* are said to be the first who taught the Art of Sailing, according to that of *Tibullus*.

Prima Ratem Ventis credere docta Tyros.

Sidon however is with good Reason thought to have produc'd the first Navigator's; for in *Joshua's* Time, *Cap.* 11. 'tis called the *Great Sidon*; and this is reckon'd to be the 2500th Year after the Creation. 'Tis also mention'd to be famous for Trade in *Isaiah* and *Ezekiel*, and was so considerable, that *Artaxerxes Ochus*, King of *Persia*, about the Year of the World 3590, could not take it with a mighty Land Army, 300 Gallies, and 500 Ships of Burden, till they were betray'd by *Tennis*, the chief Man of their Republick, and *Mentor* their General, as we are inform'd by *Diodorus Siculus*. *Tyrus* came

Digitized by Google

next to it in Reputation, and is ſuppoſed to have been built by the firſt Inhabitants, to ſecure themſelves from the *Iſraelites*, under the Conduct of *Joſhua*, there having been firſt a Town of that Name on the Continent; but the People thought they would be more ſecure by removing to the neighbouring Iſland: 'Tis call'd by the Name of the *Strong City*, *Joſhua* 19. and by *Iſaiah*, *Cap.* 23. *a Crown of Glory*, whoſe Merchants were Princes, and her Traffickers the Honourable of the Earth. The Power of that City muſt needs have been very great, ſince they gave *Alexander* a Repulſe, and held out 7 Months Siege before he could take it: Both thoſe Cities flouriſh'd again afterwards by their Navigation, till they fell under Arbitrary Government. *Bochart*, in his *Canaan*, *Lib.* 1. *Cap.* 2. gives an Account of a Multitude of Colonies planted by the *Phœnicians* in *Europe*, and of their Navigation as far as the *Caſſiterides*, now call'd the *Scilly* Iſlands; or, as ſome ſuppoſe, the County of *Cornwal*, where he and other Authors ſay, they traded for Tin.

Pliny, *Lib.* 11. *Cap.* 69. ſays, That in his Time, the *Romans* ſail'd round *Spain* and *France*; and that in *Auguſtus*'s Time, they ſail'd as far North as the Promontory of the *Cimbri*, now called *Scagen*, in *North-Jutland*, about 9 Miles Weſt from *Norway*: And *Velleius*, in his 2d Book, ſays, That in *Tiberius*'s Time, they ſail'd as far North as the *Scythian* Country, now *Tartary*; but this latter is very improbable, and may as juſtly be exploded as the Voyage of *Hanno* the *Carthaginian*, and that of *Eudoxus*, who is ſaid to have ſail'd from the *Red Sea* round *Africa*, to have doubled the Cape of *Good Hope*, and afterwards arriv'd at *Cadiz*. Nor can we give any Credit to the Story, That the King of the *Suevi* ſent ſome *Indians* (who were drove aſhore on the Coaſt of *Germany* by Storm) to *Quintus Metellus Celer*, the *Roman* Conſul; tho' all theſe Things be aſſerted by *Cornelius Nepos*, ſince the *Engliſh* and *Dutch*, tho' incomparably beyond the *Romans*, or any of the Ancients, in Navigation, have never yet been able to find out a Paſſage to the *Indies* by the North-Eaſt; ſo that 'tis next to impoſſible the *Indians* could in thoſe Days find a Paſſage that Way from their own Country to the North of *Germany* on the *Baltick*, which was the Seat of the ancient *Suevi*.

But that the Miſtakes of the ancient Geographers may the better appear, we ſhall give the following Account of their moſt remarkable Errors from *Strictius*.

The firſt and moſt groſs Miſtake was of thoſe who plac'd the New World, the Habitation of the *Antichtones*, or *Antipodes*, below *Africa*: So *Pomponius Mela*, *Macrobius*, *Manilius*, and moſt of the Ancients. They made *Taproban* the Beginning of this New World, and fancied the *Nile* had its Fountains there; which paſſing thro' the Ocean by ſecret Conduits, broke out again in *Africa*. And they run into the like Miſtake, who let the Ocean in between the two Tropics, and fill'd it with Monſters, which hinder'd any further Navigation that Way; of which Opinion were many of the Ancients. Their 2d Miſtake was, That they ſeparated the *Arabian* Gulph from the Ocean, and made it a Lake full of Trees and wild Shrubs; as *Damaſtes* does in *Strabo*. Their 3d Error was, That they denied the *Mediterranean* Sea to have any Communication with the Ocean towards *Spain*; and alledge, That what is now called the *Mouth of the Streights*, was a Canal dug by Humane Induſtry. Moſt of them were of the like Opinion as to the *Black Sea*, as we find in *Strabo*, *Lib.* 1. But thoſe Fictions, together with the Fables, That *Italy* and *Sicily*, and *France* and *England*, were formerly one Continent, are eaſily refuted by the Courſe of the Rivers which fall into thoſe Friths on both Sides; of which, *Cluverius* diſcourſes at large in his Deſcription of *Sicily*. Their 4th and moſt abſurd Error is, That they join the *Mediterranean* Sea with the *Perſian* Gulph; So *Diotimus*, in *Strabo*, *Lib.* 1. who pretended, That when he went Ambaſſador from *Athens*, he ſailed up the *Cydnus*, a River in *Cilicia*, and by that means falling into *Coaſpe*, a River of *Perſis*, ſailed down the ſaid River to *Suſa*. Their 5th Error is, That they join'd the North Sea with the *Caſpian* Sea, by a narrow Canal or River; which Miſtake they were led into by one *Patrocles*, an Admiral of the *Macedonian* Fleet; for before his Time *Ariſtotle* and *Herodotus* divided the *Caſpian* from the other Seas: But after that fabulous Author ſaid, he ſail'd from the *Caſpian* Sea into the Northern Ocean, all the Geographers, till *Ptolomy*'s Time, fell into that Error. Their 6th

Miſtake

Miſtake was, That they made *Scandia* and *Fennigia* two Iſlands, both divided from *Europe*, the former more to the Weſt, and the latter more to the Eaſt, according to *Pliny*. Their 7th Error is, That they brought the River *Tanais* from the remoteſt Places of the North, as *Strabo*, *Pliny*, and almoſt all of them do. An 8th Miſtake was, That ſome of the Poets made the *Ganges* fall into the *Mare Euxum*; whereas it certainly falls into the Southern or *Indian* Sea.

Time diſcover'd theſe and many more Errors, as Colonies remov'd into unknown Countries; for it was not ſo eaſy for a Multitude to agree in a Lie, as ſingle Travellers, who by thoſe Fables think to acquire Glory to themſelves. *Strabo* is in the right, when he ſays, Thoſe Diſcoveries were perfected by the Conqueſts of Princes; that the Eaſt was made known by *Alexander the Great*, the Weſt by the *Romans*, the North by *Mithridates Eupator*, and the South by the Kings of *Alexandria*.

The Ancients, who fell into theſe Miſtakes, drew the Map of the World in an Oval Form; the Length of which lay from E. to W. the *Mare Euxum* being the Eaſtern, the *Atlantic* the Weſtern, the *Mare Cronium* the Northern, and the Mountains of the Moon the Southern Boundary; and betwixt *Africa* and the *Antichtones*, they brought the Ocean into the Torrid Zone, for the Boundary betwixt themſelves and the Southern People, or Antipodes, as we find by *Macrobius*, *Lib* 1. in *Somnio Scipionis*. This is the oldeſt Map of the World now extant. The Curious may find it in *Brietius*, *de primo Orbis Notitia*, *Part.* 1. *Lib.* 5. *Cap.* 2.

We come next to the Miſtakes of *Ptolomy*, who corrected many of thoſe before him, and yet fell into other very great ones, which they had avoided.

All the ancient Maps being loſt, there remain'd only one of *Agathidæmon* of *Alexandria*, compos'd from *Ptolomy*'s Obſervations, which is neceſſary to be taken notice of by thoſe who would compare the Ancient and Modern Geography.

Ptolomy's firſt Error, and which appears by this Map, is, That he repreſents *Africa* as a Country that was not to be ſail'd about, tho' ſome of his Predeceſſors had juſtly repreſented it otherwiſe. Beſides, whereas he ought to have drawn it decreaſing, in Form of a Wedge, he enlarges it on the South Side; and towards the Equator, he ſtrangely alters the Form of it, and omits ſome of the greateſt Rivers; tho' he ought to have been better inform'd of thoſe Parts, which were ſo near his own Country. The 2d Error is, That whereas he ought to have extended *Albion* or *Scotland* towards the North, he brings it Eaſt towards *Germany*: and aſſigns the ſame Elevation of the Pole to *Ireland*, as he does to *Scotland*. The 3d Error is, That inſtead of placing the *Cherſoneſus Cimbrica*, now *Jutland*, Weſtward, he makes its Situation lie Eaſt, and too much contracts the *Sinus Venedicus*, now the Gulph of *Dantzick*. His 4th Miſtake is, That he repreſents *Scandia*, now *Sweden* and *Norway* a very large *Peninſula*, as a ſmall Iſland; to which he joins three leſſer ones on the Eaſt, quite contrary to the true Situation of the Country. A 5th Miſtake is, That he thinks the Northern Parts of *Europe* and *Aſia* terminate in the *Terræ Incognitæ*, or unknown Countries; tho' many of the Ancients own'd there was a Sea on the Northern Parts of both, as in Truth there is. His 6th Miſtake is, in placing *China* South from *India*, and bringing it beyond the Equator, does, by a very groſs Miſtake, thereby join *Africa* and *Aſia*; whereas *China* lies North from *India*. This occaſion'd ſome People, out of Reſpect to the Name of this great Author, to ſtrike this Miſtake out of his Geography, *Lib.* 7 *Cap* 3. His 7th Miſtake is, That he extends *Taproban* too much, whether we take it to be *Ceylan* or *Sumatra*; and the leſſer Iſlands he places about it, neither agree in Situation nor Number with the late Diſcoveries made by the *Portugueſe* and *Dutch*. His 8th Miſtake is, in repreſenting the Southern Tracts and Coaſts of the *Indies*, quite otherwiſe than they are. He divides *India* on this Side the *Ganges* into two Promontories, tho' there be but one large one, call'd Cape *Commorin*; and that this Place was then well known to the *Romans*, who had traded thither ever ſince *Claudius*'s Time.

'Tis fit to obſerve further, That his Map of the World has 180 Degrees of Longitude, about 60 of North, and ſomewhat more than 10 of South Latitude.

Others

Others of the Ancients divided the World in Six different Manners.

The first we find in *Strabo*, where *Eratosthenes* confutes those who divided the whole World into *Greeks* and *Barbarians*; and therefore advis'd *Alexander* to use the *Greeks* as his Friends, and the *Barbarians* as his Enemies. But whether the *Greeks* accounted the *Romans* Barbarians, is not clear; yet *Plutarch*, in the Life of *T. Flaminius*, seems to be for the Negative.

The 2d Division is that of *Ephorus*, in *Strabo*, who divides the World into four People, *viz.* the *Indians*, *Ethiopians*, *Celtæ*, and *Scythians*. *Scymnus*, who formerly went under the Name of *Marcennus Heracleota*, was of the same Opinion; but *Cluverius* was in the wrong to join *Dionysius Halicarnassensis* with him: And some are of Opinion, That this Division was only to be understood of the *Barbarians*, and not unjustly, since *Homer* makes no mention of it.

The 3d was of those who divided it only into two, calling the Northern Part *Europe*, and the Southern *Asia*. This we find in *Varro*, *Lib.* 1. *De Re Rustica*, where he commends *Eratosthenes* as the Author of it. *Isocrates*, in his Panegyrick, hints this to have been the Opinion of the *Persians*; and the same is mention'd by *Silius Italicus*, *Lucan*, *Augustin*, *Orosius*, &c. But these again are divided in their Opinion; some of them join'd *Africa* to *Asia*, as we find in *Pliny*, *Lib.* 3. *Cap.* 1. And *Silius*, *Lib.* 3. expresses it thus:

Æstivo Libye torretur subdita Cancro,
Aut lugens Asiæ latus, aut Pars tertia rerum.

Others again join'd *Africa* to *Europe*, as we find in *Sallust. De Bello Jugurthino*, which *Lucan*, *Pharsal.* 9. expresses thus:

Tertia Pars rerum Libye, si credere famæ
Cuncta velis, at si ventos, cælumque sequaris
Pars erit Europæ.

A 4th Division was into *Asia*, *Europe*, *Africa* and *Egypt*, which is mention'd by *Ortelius* and *Cluverius*; but they do not give their Authors. It may also be inferr'd from *Pliny*, *Lib.* 5 *Cap.* 9. who divides *Egypt* from *Asia* by the Eastern Mouth of the *Nile*, called then *Ostium Pelusiacum*, and now *Carabes*; and from *Africa*, by the *Ostium Canopicum*, the Western Mouth of the *Nile*, now call'd *Bochir*: And the Reason why they call so small a Country a 4th Part of the World, seems to be, that there were then more Towns in it than in all the rest, as *Eusebius* testifies. *Pliny* says, it had 2000 Towns in the Reign of *Amasis*; and *Diodorus Siculus* says, there was 3000 remaining when he wrote.

The 5th Division was likewise into four Parts; but they made *Gracia* one instead of *Egypt*. This we find by *Herodotus* in *Melpomene*, where he divides *Crete*, which is a Part of *Greece*, from *Europe*; and *Aristotle* more plainly in his *Republick*, *Lib.* 7. divides the *Greeks* from the *Europeans* and *Asiaticks*.

The 6th and most common Division, which was generally receiv'd by all, is into *Europe*, *Asia*, and *Africa*. *Europe* they represented lying West and North; and sometimes they divided it from *Asia* by the River *Tanais*; and at other Times, enlarging its Boundaries, they parted them by the River *Carambyce*, now call'd *Oby*, and by *Constantinople*.

To *Asia*, was ascrib'd the Eastern Part of the World, extending far North and South, and equal almost to both *Africa* and *Europe* in Breadth.

Africa was divided from *Europe* by the *Mediterranean*; from *Asia*, by the *Arabian* Isthmus, according to the Learned; but by the River *Nile* according to the Vulgar.

Whether *America* was known to the Ancients under the Name of *Atlas*'s Island, or an Island in the *Atlantic*, shall be consider'd when we come to treat of *America*.

Of the Roman *World, or* Empire.

POets and Flatterers gave out, That the *Romans* possess'd the whole World; That they seiz'd what Part of it they thought fit, and rather despis'd the rest than despair'd of reducing it. History tells us, That they set the following Boundaries to their Empire, *viz.* the *Rhine*, the *Tigris*, or, as others say, the *Euphrates*, and the Mountain *Atlas*. We shall give the following succinct Account of it from *Brietius*, and the *Notitia Imperii*.

This Empire increas'd to so great a Bulk thus: The *Romans* having struggled 600 Years

Digitized by Google

Years with their Neighbours, firſt reduc'd *Sicily* into a Province, when call'd into that Country as Auxiliaries; *Sardinia* and *Corſica* follow'd the Example of *Sicily*. *Gallia Narbonenſis* opened *Julius Cæſar*'s Way into the other Parts of *Gaul*, call'd *Aquitania*, *Celtica*, and *Belgica*. He likewiſe attempted *Britain*, moſt of which was conquer'd by ſucceeding Emperors, and ſeparated from the *Scots* and *Picts*, whom they call'd *Barbari*. *Agrippa* conquer'd *Spain* in the Reign of *Auguſtus*, and divided it into *Boetica*, *Luſitania*, and *Tarraconienſis*. *Juba* being conquer'd, they became Maſters of both the *Mauritania's*. *Antiochus* loſt to them moſt Part of *Aſia Propria*. *Nicomedes* yielded *Bithynia*. *Mithridates* on his Death-Bed left 'em *Pontus*. *Auguſtus* took all or moſt of *Galatia*, *Cappadocia*, and *Armenia Minor*, from *Antony*'s Favourers. The Barbarity of the Inhabitants gave them *Thracia*. The Covetouſneſs of *Perſeus* brought them *Macedonia*. The Raſhneſs of the *Ætoli* poſſeſs'd them of *Epirus*, *Hellas*, and *Peloponneſus*. The Credulity of *Gentius* made them Maſters of *Illyricum*. Their Victory over *Jugurtha* ſubjected *Numidia*. The demoliſhing of *Carthage* added *Africa Propria*. They obtain'd *Cyrenaicum* by the Liberality of *Ptolomy Apion*. They poſſeſs'd themſelves of *Egypt* after *Cleopatra's* Death. And *Pompey* made a very eaſy Conqueſt of all *Syria* and *Armenia*, with *Colchis*, *Iberia*, and *Albania*.

When they came to have Emperors, and that the Empire ſubſiſted chiefly by the Army, the Adminiſtration was committed to the *Præfecti Pretorio*, who were a Sort of Lieutenant-Generals. At firſt there was no certain Number of them, nor was the Time of their Government fix'd; but *Conſtantine* made four of them, whoſe Office was to be perpetual. When the Empire was divided betwixt *Honorius* and *Arcadius*, each of them had two of thoſe *Præfecti* under them. Their Juriſdictions were as follow:

The Weſtern *Empire.*

1. The *Præfectus Pretorio* of *Italy* had under his Juriſdiction,

The Dioceſe of *Italy*.		Conſul.		*Latium & Campania*, *Roma*, now *Rome*.
	The *Vicarius*, or Lieutenant of *Roma*.	Conſul.		*Tuſcia & Umbria*, *Sena*, now *Sienna* in *Tuſcany*.
		Conſul.		*Picenum*, *Suburbicarium*, *Ancona*.
		Præſes.		*Valeria*, *Reate*, now *Rieti*.
		Præſes.		*Samnium*, *Corfinium*, the Ruins of *Corfinium* near *Pentmia*.
		Corrector.		*Apulia & Calabria*, *Brunduſium*, now *Brindes*.
		Corrector.		*Lucania & Brutium*, *Conſentia*, now *Conſenza*.
		Conſul.		*Sicilia*, *Syracuſæ*, now *Syracuſe*.
		Præſes.		*Sardinia*, *Caralis*, now *Caglieri*.
		Præſes.		*Corſica*, *Aleria*, where there are now the Ruins of *Aleria*.
		Conſul.		*Venetia & Iſtria*, *Aquileia*.
		Conſul.		*Æmilia*, *Bononia*, now *Bologna*.
	The *Vicarius* of *Italy*.	Conſul.		*Flaminia & Picenum Annonarium*, where *Ravenna* lies; and *Senagallica*, now *Senigaglia*.
		Conſul.		*Liguria*, *Genua*.
		Præſes.		*Alpes Cotiæ*, *Auguſta Taurinorum*, now *Turin*.
		Præſes.		*Rætia prima*, *Curia*, now *Coire*. (*burg*.
		Præſes.		*Rætia ſecunda*, *Auguſta Vindelicorum*, now *Augs*
The Dioceſe of *Illyricum*.	*Vicarius*.	Præſes.		*Noricum*, *Ripenſe*, *Arelape*, now *Paklarn* on the *Erlap*.
		Præſes.		*Noricum Mediterraneum*, *Juvava*, now *Saltzbourg*.
		Præſes.		*Pannonia prima*, *Sabaria*, now *Saricuar*.
		Conſul.		*Pannonia ſecunda*, *Sirmium*, now *Sirmich*.

The

The Diocese of *Illyricum*.	*Illyrici.*	Dux Limit.	*Valeria, Aquincum*, now *Buda.*
		Corrector.	*Savia, Siscia*, now *Sisseg.*
		Præses.	*Dalmatia Salona*, now *Spalatto.*
		Præses.	*Liburnia, Jadera*, now *Zara.*
	Proconsul *Africæ.*		*Africa, Carthago*, now the Ruins of *Carthage*, near *Tunis.*
The Diocese of *Africa.*	The Lieutenant of *Africa.*	Consul.	*Numidia, Cirta*, now *Constantine.*
		Consul.	*Byzacium, Adrumetum*, now *Souse.*
		Præses.	*Tripolitana, Tripolis*, now *Tripoli* in *Barbary.*
		Præses.	*Mauritania, Sitifensis*, now *Sitif*, or *Esseso.*
		Præses.	*Mauritania Cæsariensis, Julia Cæsarea*, now *Algier.*

2. The *Præfectus Prætorio* of *Gaul.*

The Diocese of *Gaul.*	The Lieutenant of *Gaul.*	Consul.	*Lugdunensis prima, Lugdunum*, now *Lions.*
		Præses.	*Lugdunensis secunda, Rotomagus*, now *Rouen.*
		Præses.	*Lugdunensis tertia, Cæsarodunum*, now *Tours.*
		Præses.	*Lugdunensis quarta, Agendicum*, now *Sens.*
		Præses.	*Maxima Sequanorum, Visontio*, now *Besançon.*
		Consul.	*Belgica prima, Augusta Trevirorum*, now *Trevez.*
		Consul.	*Belgica secunda, Durocortorum*, now *Rheims.*
		Consul.	*Germania prima, Moguntia*, now *Mentz.*
		Consul.	*Germania secunda, Colonia Agrip.* now *Cologne.*
		Præses.	*Aquitania prima, Avaticum*, now *Bourges.*
		Præses.	*Aquitania secunda, Bourdegala*, now *Bourdeaux.*
		Præses.	*Novem Populania, Augusta Auscriorum*, now *Auch.*
		Consul.	*Viennensis prima, Vienna, Vienne* in *Dauphine.*
		Præses.	*Viennensis secunda, Narbo*, now *Narbonne.*
		Præses.	*Viennensis tertia, Aquæ Sextiæ*, now *Aix.*
		Præses.	*Alpes Maritimæ, Ebrodunum*, now *Ambrun.*
		Præses.	*Alpes Gratæ, Tarantasia*, now *Moustier* in the *Tarentaise.*
The Diocese of *Spain.*	The Lieutenant of *Spain.*	Consul.	*Bætica Hispalis*, now *Seville.*
		Consul.	*Lusitania, Emerita*, now *Merida.*
		Præses.	*Mauritania Tingitana, Tingis*, now *Tangier.*
		Consul.	*Gallæcia, Braccara*, now *Bragues.*
		Præses.	*Tarragonensis, Cæsaraugusta*, now *Saragossa.*
		Præses.	*Carthaginiensis, Carthago Nova*, now *Carthagena.*
		Præses.	*Baleares, Palma, & Majorca.*
The Diocese of *Britain.*	The Lieutenant of *Britain.*	Præses.	*Britannia prima, Londinium, London.* (ned.
		Præses.	*Britannia secunda, Isca Silurum, Caerleon*, now ruin-
		Præses.	*Flavia Cæsariensis, Verolamium*, now *St. Albans.*
		Consul.	*Maxima Cæsariensis, Eboracum*, now *York.*
		Consul.	*Valentia, Alata Castra*, now *Edinburgh.*

The Eastern *Empire.*

3. The *Præfectus Prætorio* of the East.

		Asiæ Ephesus.	
The Diocese of *Asia.*	The Proconsul of *Asia.*	Consul.	*Hellespontus, Cyzicus*, now *Cyzico.*
		Præses.	*Insula Rhodus*, now *Rhodes.*

  - Præses. — *Old Epirus*, or the *Inferior Nicopolis*, now *Prevexa.*
  - Præses. — *New* or *the Upper Epirus*, and Part of *Macedonia Salutaris*: *Dyrrachium*, now *Durat.*

This was the Division of the *Roman* World or Empire. By the Map that was made of it, according to the *Notitia Imperii*, it was extended from the 14th to the 75th Degree of Longitude; *viz.* from *Atlas Major* in *Africa*, to *Arabia Felix*; from *Spain* in *Europe*, to the *Tigris* in *Asia*, it was extended from the 14th Degree of Longitude to the 75th: From *Atlas Major* in *Africa*, to the *Thule* in *Europe*, which they place where the *Schetland* Isles, now belonging to *Scotland*, lie, it reach'd from the 25th to the 61st Degree of North Latitude; and on the East, from *Arabia Felix* to the Head of the River *Euphrates*, it reach'd from the 25th to the 45th Degree of the same Latitude.

The Modern Division of the World is well enough known to be into *Europe*, *Asia*, *Africa*, and *America*; and, according to the receiv'd Custom among Geographers, we shall begin with the first.

CHAP. IV.

Of EUROPE *in General.*

Ortelius, *Maginus*, *Merula*, and others, think it was formerly called *Japetia*, because most of it fell to *Japhet*'s Lot. *Theocritus* says, it was call'd *Tyria*, from the *Tyrian* Damsel, who, the Poets say, was ravish'd by *Jupiter*. *Diodorus Siculus* says, it was call'd *Galatia*, and that most of its Inhabitants had the Name of *Galatians*. *Ptolomy*, *Lib.* 2. *Op. Quadri-partit.* says it was call'd *Celtica*, because the *Celtæ* were spread through the most part of it, which is confirm'd by *Ortelius* and *Cluverius*. As to its present Name *Europe*, some derive it from *Europa*, the *Tyrian* Damsel above-mention'd: Others from *Europus*, a King mention'd by *Troges*, who perhaps was the King of the *Scicyonians*, spoken of by *Pausanias* and *Eusebius*. Others derive it from the Beauty of the Country.

The Extent of ancient *Europe* was reckon'd by old Authors thus: *Strabo* accounts it about

Digitized by Google

about 30000 Stadia in Length, which is about 3750 *English* Miles. *Pliny* reckons it 8414000 Paces; *i. e.* 8414 Miles and *Ptolomy* 24000 Stadia, or 3000 Miles.

Strabo reckons the Breadth of it 14100 Stadia, about 1712 Miles. *Pliny* makes it 618000 Paces, or 6018 Miles; and *Ptolomy* 14000 Stadia, or 1750 Miles.

As to the Qualities of *Europe*, the Ancients reckon'd a very remarkable. 1. That it was the wholesomeſt of all the Diviſions of the World. So *Varo de re Ruſtica*, *Lib.* 1. reckons it wholſomer than *Aſia*, becauſe it lies more to the North; and *Strabo*, *Lib.* 2. ſays, 'tis every where habitable. 2. That it abounded with all Neceſſaries for Life: So *Herodotus*, *Varo*, and *Strabo*. The latter adds, That it communicates its Product to the other Parts of the World, and needs nothing from them but what her Inhabitants may very well want. 3. That her People excel the reſt in Learning, Valour and Politicks, as appears by *Manilius*, *Strabo*, and *Ariſtotle*, who aſſerts it of the *Greeks*; and every one knows, the *Romans* deſerv'd the Character as well. The 4th Quality they aſcribe to *Europe*, was, That in it only Amber was found. They ought to have added a 5th, That it gave Riſe to two of the greateſt of thoſe call'd Univerſal Monarchies, *viz.* the *Grecian* and *Roman*; and a 6th, That for many Ages, it has been the chief Seat of the Chriſtian Religion.

For the Boundaries of Ancient *Europe*, they reckon'd them thus: *Pliny*, *Mela*, and *Stephanus*, own'd, That on the North, it was bounded by the Northern Ocean, tho' *Herodotus* and *Ptolomy* doubted it. On the Weſt, it had the Weſtern Sea, beſides Part of the North Sea, elſewhere call'd the *Britiſh*. On the South, it was bounded by the *Mediterranean*, as at preſent. On the Eaſt, it was divided from *Aſia* as at preſent, by Part of the *Mediterranean*, call'd the *Mare Ægeum*, the *Helleſpont*, *Propontis*, the *Thracian Boſphorus*, and the *Euxine* Sea. But as to the other Boundaries towards the North, the Ancients were divided into Five different Opinions. 1. *Herodotus*, *Dionyſius*, and others mention'd by *Euſtathius*, thought *Europe* to be bounded on the Eaſt by the Conjunction of the Northern and *Caſpian* Sea; and others divided *Europe* from *Aſia* by an Iſthmus between the *Caſpian* and the *Euxine*. 2. Some made the River *Phaſis*, call'd otherwiſe *Hypanis*, the Boundary of *Europe* on that Side: So *Herodotus*, *Procopius*, and others. 3. *Seneca*, *Lib.* 4. *Nat. Quæſt.* makes the River *Danube* the Eaſtern Boundary of *Europe*; but this perhaps is to be underſtood of the River *Tanais*, which is ſometimes called the *Danube*, as *Acron* obſerves in his Notes on *Horace*, which *Ortelius* ſeems to approve: And this is alſo favour'd by *Iſid. rus*, *Orig. Lib.* 17. *Cap.* 9. where ſpeaking of Rhubarb, he ſays, that it grows in the Country of the Barbarians beyond the *Danube*; ſince 'tis known, that that Plant is now found on the *Volga*, which lies near the *Tanais*. 4. Some added to the *Euxine* Sea the *Boſphorus Cymmerius*, the *Palus Mæotis*, and all the River *Tanais*, with a Line drawn from its Fountains Northward; and of this Opinion were moſt of the Ancients. 5. Some take in only Part of the *Tanais*, and add to it a Line as far as the River *Rha*, now the *Volga*; and from hence they draw another Line to the River *Caramlyce*, by moſt now reckon'd the *Oby*; and they take in all this River as far as the Mouth of it, above the Iſland *Elixona*, which moſt think to be *Nova Zembla*. *Ortelius* and *Cluverius* in his *Germania Antiqua*, endeavour'd to fix this Opinion on *Pliny*, becauſe he makes the Promontory *Litarmis* and *Caramlyce* the Boundary of *Celtica*, which is the ſame with *Europe*: And this River is now call'd *Oby*; and, according to *Stephanus*, above *Caramlyce* lies the Iſland *Elixona*, equal in Extent with *Sicily*: And here there is none, except *Nova Zembla*, which lies almoſt at the Mouth of the *Oby*. They argue likewiſe, That *Pliny* places the End of the *Riphæan* Mountains on the River *Caramlyce*; and theſe Mountains are now called by the *Ruſſians*, *Kameny Poyas*, which end at the Mouth of the *Oby*, To this they add from *Pliny*, That thoſe who come from *Aſia* into *Europe*, muſt paſs the *Ryphæan* Mountains, which cannot be, except *Europe* be extended to the River *Oby*.

Brietius having diligently conſider'd the Matter, gives his Opinion thus: That *Carambyce* is the River *Dwina*; near the Mouth of which lies *Archangel*, where the Line drawn from the Fountains of the *Tanais* towards the North by the Ancients commonly ends. His Reaſon is, becauſe the Ancient:

Digitized by Google

cients did always call *Tanais* the Boundary of *Europe*, which would have been very improper, had the leaſt Part of that River only ſeparated *Europe* from *Aſia*: And he thinks *Pliny*, *Lib.* 4 *cap. ult.* to be of his Opinion, ſince he reckons the Length of *Europe* from *Cales* to the *Tanais*; for 'twould have been a very groſs Error in him to have extended *Europe* as far as the *Oby*, and then to have out off the Country betwixt the *Tanais* and the *Oby*: Beſides, what Occaſion had there been for the Diviſion of *Sarmatia*, made uſe of by moſt, into *European* and *Aſian*, if *Sarmatia* had been all in *Europe*?

To the Objection which *Cluverius* makes from the *Riphæan* Mountains, he anſwers, That the Ancients ſpeak of their Situation with very great Uncertainty, as he himſelf confeſſes; and that *Pliny*, *Lib.* 4. *Cap.* 12. brings the *Tanais* from thoſe Mountains, which cannot agree with the Stone Girdle, or *Kameny Poyas*: And *Mela*, *Lib.* 3. *Cap.* 5. places the *Hyperborei* on the *Aſian* Shore, tho' he extends them above the *Riphæan* Mountains. How then can the *Hyperborei* be in *Aſia*? As to the *Elixona* of *Stephanus*, ſome think it not improbably to be that Iſland which we firſt meet with as we go out of the *Sinus Granducus*, now the *White Sea*; for 'tis large enough to have given the Ancients, who were ignorant of that Country, Ground to compare it with *Sicily*; but certainly no Man of Senſe will think *Stephanus*'s *Elixona* to be the *Nova Zembla* of the Moderns: And for the Promontory *Lytarmis*, no body will place that out of *Europe*, ſince *Ortelius* thinks that call'd *Kibarnes*, near the Iſland *Wardhuys*, to be the ſame. Others do more probably take it to be Cape *Orloganar*, in the Mouth of the *White Sea*.

The Languages of Ancient *Europe* were reckon'd Four, of which the reſt were only Dialects. 1. The *Sermatian* Tongue, or, as ſome call it, *Riphæum*; from whence they derive the *Sclavonic*. 2. The *Celtic*, from whence came the *German* or *Tutonic*, the *Gaulic* and *Britiſh*, which ſome ſay are one, and the *Illyric*. 3. The *Latin* Tongue, the Ancient call'd *Oſca*, and the New call'd *Romana*. 4. The *Greek*, with its 5 Dialects, *viz.* 1. The *Common*, made up of them all. 2. The *Attic*, from whence came the *Bœotic*, *Calcydic*, *Pamphylian*, and *Cyprian*. 3. The *Ionic*, from whence, mix'd with the *Doric*, came the *Theſſalian*, and from it the *Macedonian*. 4. The *Æolic*, from whence *Dion Halicarnaſſeus* thinks the *Latin* took its Riſe. 5. The *Doric*, from whence the *Peloponneſian* ſubdivided into the *Common*, *Argive*, *Laconic*, or *Spartan*, the *Libyc*, and by thoſe of *Cyrene* and *Pentapolis*. The *Rhodian*, *Cretian*, and *Sicilian*, ſubdivided into the *Common*, and thoſe call'd *Rhegina* and *Tarentina*.

The Ancients divided *Europe* into Weſt, North, and South: In the Weſt, they placed the *Britiſh* Iſles, *Spain* and *Gaul*; in the North, *Germany* and *Sarmatia*; in the South, *Dacia*, *Illyricum*, *Greece* and *Italy*.

According to the ancient Map of *Europe*, exhibited by *Brietius*, it lay betwixt 35 and 70 Degrees of North Latitude; but the Longitude was very uncertain.

The Deſcription of EUROPE, *according to Modern Authors.*

AS to its ancient Name, it has ſtill retain'd it, none of the greateſt Princes that ever rul'd in it having attempted a Change. Tho' this holds among our ſelves, yet thoſe of *Aſia* and *Africa* call us by ſeveral Names. The *Aſiatics* call us in general *Franks*, becauſe the *French* made the greateſt Appearance of any of the Chriſtian Princes who attempted the Recovery of the *Holy Land*. At preſent, the *Turks*, who follow the *Latin* Way of Speaking in that reſpect, call us *Romei*; and thoſe who follow the *Greek* Way of Speaking, call us *Franki*. The *Ethiopians* call us *Alfranguez*; and ſome of the *Turks* call us *Cauri*; *i. e.* Infidels, becauſe we do not believe in their *Mahomet*: And others call us *Dzinzis*, which ſignifies a Pagan, as *Brietius* informs us.

The Boundaries and Extent of Modern EUROPE.

TOwards the North, it is bounded by the Northern or Frozen, call'd by the Ancients the *Hyperborean* Ocean. On the Weſt, by the *Atlantic*: On the South, by the *Mediterranean*: On the Eaſt, 1. By the *Archipelago*, anciently call'd the *Ægean* Sea, from a Greek Word ſignifying Goats, becauſe the Iſlands ſcatter'd up and down in it

Digitized by Google

it resembled a Flock of Goats. 2. By the *Hellespont*, where were *Cestos* and *Abydus*, on the opposite Shores, now call'd the Streights of *Gallipoli*, or of the *Dardanelles*. 3. By the *Propontis*, now the Sea of *Marmora*, or the *White Sea*. 4. By the *Bosphorus Thracius*, now the Streights of *Constantinople*. 5. By the *Pontus Euxinus*, now the *Black Sea*. 6. By the *Bosphorus Cimmerius*, now the Streights of *Caffa*. 7. By *Palus Maotis*, or the Sea of *Zabaque*. 8. By the *Tanais*, or River *Don*. 9. By a Line drawn from the most Easterly Turnings of that River to the *Obi*. 10. By a Line from the *Obi* to the Northern Ocean.

The Length of *Europe* is variously calculated by Geographers. *Cluverius* says, That from the Cape of St. *Vincent* to the Mouth of the River *Obi*, it is 900 *German* Leagues, or 3600 *Italian* Miles. *Morden* says, there is but 50 Degrees of Longitude from the Cape of St. *Vincent* to the Mouth of the River *Obi*; but *Sanson* makes the Distance 55 Degrees, and Mr. *Moll* 68.

Cluverius reckons the Breadth of *Europe* from the Cape of *Matrapan*, a Promontory in the *Morea*, or ancient *Peloponnesus*, to the North Cape in *Norway*, to be 550 *German* Leagues, or 2200 *Italian* Miles. *Morden* says, from the most Southerly to the most Northerly Parts of *Europe*, there are only 35 Degrees of Latitude; *Sanson* makes them 38; the Great Atlas makes them 44; and Mr. *Moll* makes them 42.

Europe, in respect of Government, is divided into Empires, Kingdoms, Republicks, and Principalities. Of the first, there are Three, *viz.* The Empires of *Germany*, *Muscovy*, and *Turky*. The Kingdoms are Nine: 1. *Spain*. 2. *France*. 3. *Portugal*. 4. *Britain* and *Ireland*. 5. *Hungary*. 6. *Bohemia*. 7. *Poland*. 8. *Swedeland*. 9. *Denmark* and *Norway*. The Commonwealths are, *Venice*, *Genoa*, *Lucca*, the *Swiss Cantons*, the *United Netherlands*. Some add *Ragusa*, *St. Marino*. The Principalities are, the *Patrimony of the Church*, the Great Dukedom of *Tuscany*, the Dukedoms of *Savoy*, *Modena*, *Parma*, *Mantua*, *Mirandola*, *Transilvania*, *Moldavia*, *Walachia*, *Malta*, *Lorrain*, *Curland*, and *Lesser Tartary*. Some add the Nine Electorates, *viz.* *Mentz*, *Treves*, *Cologne*, *Bohemia*, *Bavaria*, *Saxony*, *Brandenburgh*, Palatinate of the *Rhine*, *Hanover*.

The principal Languages spoke now in *Europe* are, the *Latin*, *Greek*, *Teutonic*, and *Sclavonic*. The *Teutonic* is of Three Sorts; *High Dutch* in *Germany*, *Saxon* in *England*, *Danish* in *Denmark*, *Sweden*, and *Norway*: The *Latin* is corrupted into *French*, *Italian*, and *Spanish*: The Modern *Greek* is much different from the School *Greek*: The *Sclavonic* Language is used in *Sclavonia*, *Bohemia*, *Poland*, *Muscovy*, and *Turky* in *Europe*: The *Tartarian* Language is a Dialect of the *Sclavonic*. There are several Languages of less Note which are used in *Europe*: The *Albanian* or *Epirotic* in *Epirus* and *Macedonia*: The *Cossack* and *Tartarian* in Part of *Poland* and *Tartary*: The *Hungarian* or *Bulgarian* in *Servia*, *Bosnia* in *Bulgaria*, and *Hungary*, &c. The *Finnick* in *Finmark* and *Lapland*: *Irish* in the Highlands of *Scotland*, and amongst the ancient *Irish* in *Ireland*: The *British* is spoken in *Cornwall*, *Wales*, and *Britany* in *France*: The *Biscaian* is spoken only in *Biscay*, near the *Cantabrian* Ocean or Bay of *Biscay*; and *Arabic* in Part of *Spain*.

The Religions in *Europe* are the *Christian*, which is divided into *Papists* and *Protestants*; the *Jewish*, the *Mahometan* and *Pagan*. There are some of the last in *Lapland*.

Of the Quality of EUROPE, *according to the Moderns.*

THE Ancients having been much too short in the Account they give of the distinguishing Qualities of this most famous Part of the World, we think it proper to enlarge a little upon it.

Bochart says justly, That though it be the least of the Principal Divisions of the World, it is by far the best cultivated, and most populous; has for many Ages been the Seat of Civility or good Breeding, as well as of polite Learning; and was the Mother of the *Greeks* and *Romans*, who extended their Empire to the remotest Parts of *Asia* and *Africa*. To which we may add, That she has likewise brought the far greatest Part of what is known in *America* under her Subjection, and introduced Civility and the Christian Religion among the Inhabitants of that Part of the World. Which, taken all together, is by *Bochart* and other Interpreters understood to be the Accomplishment of that Prophecy, *Gen.* 9. 27. That

Digitized by Google

That *God shall enlarge* Japheth, *and he shall dwell in the Tents of* Shem, *and* Canaan *shall be his Servant*. *Bochart* agrees with those who think the Meaning of this to be, That in the Diviſion of the Earth, *Japheth* ſhall have the largeſt Share; which he ſays every one muſt own to have been abundantly fulfilled, when they conſider, That, beſides *Europe*, which fell to *Japheth*'s Lot, his Poſterity likewiſe inhabited *Aſia Minor*, *Media*, Part of *Armenia*, with *Iberia* and *Albania*, and thoſe vaſt Countries towards the North, formerly inhabited by *Scythians*, and now by the *Tartars*. To ſay nothing of the new World, or *America*, into which 'tis very probable the *Scythians* ſent a Colony by the Streights of *Anian*.

Dr *Heylin* is of the ſame Opinion in his General Deſcription of *Europe*, as to the Enlargement of *Japheth*'s Borders, and the dividing the Iſles of the *Gentiles* among his Sons, which he takes to include all the Continent of *Europe*, and the Iſles adjacent: And he further obſerves, That the great Countries of *Anatolia*, *Greece*, *Spain*, and *Italy*, all which did fall to the Poſterity of *Japheth*, are but ſo many Peninſula's, inviron'd round almoſt with one Sea or other. Nor was, ſays he, the Name and Memory of *Japheth* ſo much forgot by the Children who deſcended of him; but that the *Greeks*, who were the firſt Colony they ſent into *Europe*, retain'd it a long Time in their *Japetus*, whom they make to be the Son of *Celum* and *Terra*, and the Father of *Prometheus*, whom *Ovid* therefore calls *Satus Japeto*, in the Firſt Book of his Metamorphoſis.

The Doctor adds, That the Second Part of the Propheſy, *That he ſhould dwell in the Tents of Shem*, though it was long before it came to the Accompliſhment, yet it was fulfilled at laſt, and that both in the literal and myſtical Senſe: 1. In the literal Senſe, when the Poſterity of *Japheth*, both *Greeks* and *Romans*, made themſelves Maſters of *Judea*, and of the Land of *Canaan*, and the Eaſtern Parts promiſed to him, and poſſeſſed by the Seed of *Shem*. Next in the myſtical, when God was pleaſed to break down the Partition-Wall, and to incorporate the *Gentiles* of the Houſe of *Japheth* into the Body of the Church, which for a long time was reſtrained to the Line of *Shem*.

We may add to the other Qualities of *Europe*, eſpecially of its Northern Parts, what *Jornander*, an ancient *Gothick* Writer, ſays of it deſervedly, *viz. Eſſe Officinas Gentium & velut Vaginas Nationum*; *i. e.* That they are the Nurſeries and Seminaries of Nations and People, becauſe of their being ſo extraordinary Prolific.

Ortelius alſo takes Notice, That *Pliny* called *Europe*, *Altricem Victoris omnium Gentium Populi*, *Terrarumque pulcherrimam*; the Nurſe of that People (the *Romans*) which have conquer'd all the reſt, and the moſt beautiful of all Lands that are known. And tho' it is certainly the leaſt of all the Four great Parts into which the World ſtands now divided; yet, as *Ortelius* goes on, it is of great Fertility, naturally temperate, (being ſeated in the Northern Temperate Zone) and therefore enjoying the Bleſſings of a temperate Air, and its Soil producing Fruits of all Sorts, Wine and Trees equal to the beſt, which make it extreamly pleaſant to the Eye. It is alſo adorn'd with Cities, Towns and Villages, and a numerous Progeny of Men beyond any of the reſt. Its Inhabitants are not only more numerous in Proportion, but much more civil and ingenious; ſo that tho' it is leſs than any of the other Three in Extent, yet it is, and ever was, thought much more excellent than any of the other; and beſides its preſent Grandeur, it is venerable on the account of the *Macedonian* and *Roman* Empires. Thus far that great Man.

There are many other Authors who have given *Europe* the Preference of the other Diviſions of the World, particularly *Boiſſardus*, in his Epigrams, *Lib.* 2. *Epig. ult.* who writes concerning the Four Parts of the World thus:

Artium Genetrix, Scientiarumque
Europa, *ut fuit, eſtque, erit que ſemper.*
Rerum Stamine fulgido celebris.
Et dente Indo, Aſia *eſt, ordoribuſque.*
Auro fertilis atque Margaritis
Eſt, & Murice dives, Afra Tellus.
Balſamum Americi *legunt*, *Piperque*
Thus & Zinziber, & fragrans Amomum.

Brietius tells us, the *Saracens* own Four remarkable Qualities in *Europe*: 1. That 'tis very fruitful; 2. That it breeds Warlike Inhabi-

Digitized by Google

habitants; 3. That they are very Religious; 4. That they are fit to govern the reſt of the World.

As to its *Fruitfulneſs*, he obſerves, That there is ſcarcely any Country of *Europe*, which is not commendable for ſome Product or other; yet he might have excepted, as to the general Qualification of Fertility, ſome of thoſe Countries which lie near the North Pole, as well as he does Part of *Spain*. 'Tis true however, with reſpect to thoſe which he calls the moſt cultivated Nations, *viz. Greece*, *Italy*, *France*, and Part of *Spain*. What he ſays of *England*'s Fruitfulneſs in Corn and Cattle, every one knows to be true; but he might have extended it to the whole Iſland in general, and ought not to have omitted its Naval Strength, our Materials for building of Ships, our Fiſhery, Mines, and Fruit-Trees; and *Ireland* ought at leaſt to be allowed its Share of thoſe Qualifications.

What he ſays of the Fruitfulneſs of *Germany*, is true, as to many Parts of it; but he has omitted their Forreſts, Vines, and Minerals. That 'tis a Nurſery of Soldiers, and has maintained many great Armies at one and the ſame time, is not to be denied.

To what he ſays of *Poland*, That in time of a Famine it furniſhed Proviſions to a great Part of *France*; he might have added, That it has been juſtly eſteemed the Granary of *Europe*, tho' it has ſuffered much in that Reſpect by the preſent War, which obſtructs their Cultivation.

He takes Notice of the Fruitfulneſs of *Hungary*, though ſubject to frequent Devaſtations by the *Turks* and *Germans*.

He obſerves of *Europe* in general, That for the Advantage of mutual Commerce, and publick Society, *Spain* furniſhes Iron, dry Fruits, and fine Wool; *England*, Hides, Wool, Tin, and Lead; *France*, among other Things, furniſhes Corn, Salt, and very fine Oil; *Germany*, Horſes, Arms, Iron, and Silver; the *Netherlands*, Manufactures; *Italy* and *Greece*, Silks; the Northern Kingdoms, Hides, Tallow, Copper, and Timber for Shipping; *Poland* and *Ruſſia*, rich Furs and Skins, Honey, and Wax. He concludes this Head of *Europe*'s Fertility thus; That it produces all Things neceſſary for Life, except Drugs; the Reaſon of which he alledges to be, That it is not ſo obnoxious to Diſeaſes as other Parts of the World, except ſuch as are introduced by Intemperance and Luxury. What he ſays as to its Want of Drugs, may be juſtly diſputed, ſince in general it produces many excellent Simples, which are of Uſe in Phyſick.

For his other Defects in the general Deſcription, they ſhall be ſupplied in the particular Accounts of the ſeveral Countries.

As to the Second Head, That the *Europeans* are a Warlike People, he ſays 'tis plain from this one Inſtance, That though they be all good Soldiers, and have each had their Share in Military Glory; yet hitherto none of the Warlike Nations, of which 'tis compoſed, have been able to obtain the Sovereignty of the whole: And when the *Turks* and *Saracens* have joined their Forces againſt them, yet they were not able to ſtand before them in *Europe*, *Aſia*, or *Africa*.

He likewiſe takes Notice of the particular Military Virtues of its ſeveral Nations thus: The Inhabitants of *Great Britain* deſpiſe Dangers; the *French* are quick and fierce; the *Spaniards* are extraordinary patient; the *Germans* are ſtedfaſt; the *Netherlands* are ſagacious; the *Hungarians* vigilant; the *Poles*, *Ruſſians* and *Swedes*, tenacious; and all of them are ready to conquer or die: Only the *Grecians* and *Italians*, formerly the Glory of War, do now underſtand better to obey than to fight, ſome of them excepted: Yet both of them, he ſays, ſeem to be born for Empire, would they reſume their ancient Courage. He adds, That 'tis certain, ſince the *Ottomans* fixed the Seat of their Government in *Europe*, and choſe their Janizaries from among the *Europeans*, they have had much braver Armies than before, and make very little Account of their *Aſian* Troops.

In his Account of the *Religion* of the *Europeans*, he governs himſelf by the Principles of the Church of *Rome*, and is very liberal of his Cenſures upon *Luther* and *Calvin*, and thoſe who are called their Followers.

The Proteſtant Religion has its chief Seat in the Empire, *Switzerland*, the Vallies of *Piedmont*, the *United Netherlands*, *Great Britain* and *Ireland*, *Denmark*, *Norway*, and *Sweden*. It had formerly a very large Footing in *France*, *Bohemia*, *Hungary*, and *Poland*; but has loſt much of it (at leaſt as to the external Profeſſion in thoſe Parts) by the violent Perſecution of Popiſh Princes.

The

Digitized by Google

The principal Seat of Popery, is *Italy*, *France*, *Spain*, *Portugal*, and in thoſe Parts of the Empire which are the Hereditary Dominions of the Houſe of *Auſtria*, the Electorate of *Bavaria*, the Dominions of the Three Eccleſiaſtical Electors, and the *Spaniſh Netherlands*.

As to that which is called the *Greek* Church, the principal Seat of their Religion is *Greece* it ſelf, with ſome of the neighbouring Iſlands, and ſuch Parts of the *Muſcovite* Dominions as are in *Europe*. 'Tis obſerved by ſome, That the prevailing Languages in thoſe Parts, which are the principal Seat of Popery, are derived from the *Latin*: The Langnages of thoſe who have chiefly embraced the Reformation, are derived from the *Teutonic*; and where the *Greek* Church prevails, the *Sclavonic* Language is moſt in Uſe. There are ſome Exceptions however to theſe Generals, which ſhall be taken Notice of in the particular Countries.

Though it muſt be owned, That there is more true Religion in *Europe* than in all the reſt of the World; yet 'tis juſtly obſerved by ſome, That the Luſtre of Chriſtianity is very much eclips'd by the unnatural Diviſions among Proteſtants, about Things of leſſer Moment, by the groſs Idolatry and Superſtition among the Papiſts, and by the ſcandalous Lives of too many of both: And had it not been for thoſe Things, *Europe* might truly have been accounted the Temple of Religion, the Court of Policy and Government, and the Paradiſe of Human Felicity.

The *Mahometan* Religion is only profeſſed in ſome of thoſe Parts of *Europe*, which are ſubject to the *Turks*.

The *Jewiſh* Religion is in a vagabond State like themſelves, the viſible Effects of the Curſe of God upon them for their blaſpheming and crucifying our Saviour; which being foretold ſo many Ages ago, as appears by the Hiſtory of the Goſpels, is, together with the Apoſtacy of the *Roman* Church, foretold likewiſe ſo expreſly in other Parts of the New Teſtament, an undeniable Proof of the Truth and Divine Authority of the Chriſtian Religion.

As to the Fourth Head, which is *Policy*, *Brietius* inſtances, 1. In the *Spaniards*, who, he ſays, in the Memory of our Fathers, did with admirable Prudence govern a large Empire, diffus'd through the World, and made up of disjointed Parts, and carried War every where, while they themſelves were at Peace. His 2d Inſtance is that of the Commonwealth of *Venice*, than which he ſays there can be nothing better conſtituted; and that their Senators reſemble ſo many wiſe and prudent Kings. His 3d Inſtance is of the *Dutch*, who being, according to him, nothing at firſt but a Mob of rebellious Fiſhermen, have ſpread their Commerce and Victories thro' the World, to the great Damage of the *Spaniards*; which is a plain Argument, that the latter had declined very much in the Politicks and Prudence that he aſcribes to them, when they provok'd the *Dutch* to revolt by their Bigotry and Tyranny. His 4th Inſtance is of the *Greeks* and *Italians*, who, by their too great Prudence, (which he ought rather to have call'd Effeminacy and ſlaviſh Principles) are kept from knocking off their Shackles. His 5th Inſtance is of the *French*, who, in his own Time gave a ſufficient Proof of what they were capable to do in Government under the Adminiſtration of the Great Cardinal. The Book being publiſhed in 1648, 'tis ſuppoſed he meant Cardinal *Mazarin*. 'Tis evident however, That he might have very well allow'd Cardinal *Richlieu* a Share; tho' the Adminiſtration of *Henry* IV. commonly call'd the *Great*, ſeems to be a more proper Inſtance than either of them. But 'tis probable, a few Years will demonſtrate to the World, That the *French* have been guilty of as great a Failure in Politicks, in graſping at the univerſal Monarchy, and perſecuting their Proteſtant Subjects, as the *Spaniards* were before them: And had not our Author been carried away with Partiality towards his own Country, he might have added the Inſtance of the Great *Guſtavus Adolphus*, who gave ſignal Proofs of his Ability both for Government and War: And we may add, for the Honour of our own Country, without Flattery, (ſince 'tis known to all the World) That *Great Britain* has oftner than once held the Ballance of *Europe* in her Hand, and is always capable of doing ſo, under a good Government, as is evident (to go no higher) from the Inſtances of *Henry* VIII. Queen *Elizabeth*, the late King *William*, and Her preſent Majeſty Queen *Anne*.

CHAP. V.

CHAP. V.

Of GREENLAND.

HAving given a Deſcription of *Europe* in General, we come now to the particular Countries; and, according to the Method of *Blaeu*'s Atlas, ſhall begin with thoſe which lie next the North-Pole, and firſt with *Greenland*.

GREENLAND.

'TIS ſuppoſed this Country was ſo called by the *Engliſh* Diſcoverers, becauſe the Water of the neighbouring Sea appear'd to them as green as Graſs. The *Dutch* call it *Spitsbergen*, becauſe of its ſharp-pointed Rocks and Mountains. What Part of it is yet diſcovered, lies from 76 to 82 Deg. N. Lat. and from Long. 30 to 50. How much further North it runs, or whether it be an Iſland or Continent, is not known. Our Mariners take it to be an Iſland; but the *Dutch* think it goes much further North, becauſe they found the Ice not floating as at Sea, but firm and ſtable, as it uſes to be near the Shore. The South Part of it looks towards the Promontories of *Finland* and *Lapland*, *North Cape*, *North-Kin*, &c. On the Weſt lies the large Country of *Groneland*; and on the Eaſt *Nova-Zembla*.

The *Dutch* aſcribe the firſt Diſcovery to Three of their Pilots, and have given Names to the Bays, Creeks and Promontories, according to their own Fancy. They oblige their Maſters of Ships to make Charts of the Places they diſcover; and had we done the like, ſeveral of our Diſcoveries had been aſcertain'd, which are now diſputed. *Purchas* obſerves, That the *Dutch* have given Names to Places long before diſcovered by the *Engliſh*, as if they themſelves had been the firſt Diſcoverers.

The *Dutch* ſay, That *Jacob Heemskirk*, *Barents* and *Cornelius Ryp*, ſearching for a N. E. Paſſage, diſcovered *Greenland* in 1596; tho' Sir *Hugh Willoughby* was the firſt Diſcoverer of it in 1553, as is probable by the ſhort Notes found upon his Table after his Death, which tells us, That *Aug.* 14. they were 160 Leagues N. and E. from *Seynam*: They continued ſailing till the 14th of *September*, when they landed on a Country, high, rocky, and uninhabited; from whence, by Cold and Ice, they were forced to return more S. till they came to *Arzina* River in *Lapland*, where next Spring they were found all frozen to Death in their Ship. Captain *Stephen Burroughs*, afterwards Comptroller of the Navy to Queen *Elizabeth*, in 1556, ſearching a N. E. Paſſage to the *Indies*, arrived in 112 Deg. of Long. and 76 of Lat. and ſailed to 80 Deg. 11 Min. of N. Lat. where he ſays the Country was deſolate, the Ice of a blue Colour, and great Store of Fowls, which can be no other Place but *Spitzbergen*.

The beſt Account of this Country, is the Voyage of *Frederic Martens*, an *Hamburger*, who ſailed from the *Elb April* 5. 1671. and arrived at *Charles-Iſle*, 70 Miles long, and 10 Miles broad, ſeparate from *Greenland* by a narrow Streight, called *Foreland's-Ford*.

The External Appearance, or Face of the Country, is in general Rocks and Mountains, riſing above one another, from the Shore to the Inland Parts, to a prodigious Height: And thoſe next the Shore, tho' ſo high, that the talleſt Ship with her Maſts is no more, when compar'd with them, than a little Cottage to a Steeple, are as much inferior to thoſe which riſe higher in the Country behind them. The Rocks being red, the Foot of thoſe Mountains look like Fire, eſpecially before a Storm. The Tops of them are cover'd with Fogs and Snow; and the latter is marbled as if it were

Digitized by Google

Branches of Trees, and gives as glorious a Light by Reflexion on the Sky, as if the Sun ſhin'd on them. Below, at the Foot of thoſe Mountains, there are others of Ice, of a great Height, which increaſe continually by the Rain and Snow that falls and freezes upon them: And during the Summer, when the Snow melts elſewhere, it continues in the Clefts, which makes thoſe Mountains appear at a Diſtance like dry Trees, with Branches, and Twigs; and when new Snow falls upon them, at firſt it reſembles Leaves. There are 7 of thoſe Icy Mountains in a Line, that lie betwixt the high Rocks, are reckoned the higheſt Mountains in the Country, and appear of a glorious blue Colour, with abundance of Cracks and Holes in them. Some of the Rocks are one continued Stone from Top to Bottom, look like a decay'd Wall, and ſmell very ſweet, as the green Fields do with us after Rain in the Spring. The Stones for moſt part are vein'd like Marble, with white, red, and yellow. They ſweat at the Alteration of Weather, which gives the Snow upon them a red Colour; and the Rain does the like when it runs down from the Rocks. At the Foot of the Mountains, where there are no Hills of Ice, there lie great looſe Rocks, as they had fallen by Chance upon one another, which form Caves and Holes, ſo that 'tis very tickliſh walking upon them. They are mix'd with Stones of a grey Colour, with black Veins, and glifter like Silver Ore. They ſeem to be much of the Nature of our Pebbles, with which we pave the Streets. Thoſe Mountains look as if there were Earth on the Tops of them, becauſe of their great Height; but are found to be Rock at Top as well as Bottom. Stones flung down from them, or Pieces that fall off, make a Noiſe like Thunder. Thoſe Mountains are full of Cracks, where the Birds build their Neſts. They are very difficult and dangerous to climb or walk up, and thoſe who do ſo, mark the Way they go with Chalk, that they may find it again when they return. They are ſo high, that when the Day is not clear, one half of them ſeem to be above the Clouds; and ſome of them look as if they would tumble down every Moment. The Sharpneſs of the Rocks, looſe Pieces of Ice, and Want of Paths, do ſoon fatigue and heat thoſe that travel on them, be it ever ſo cold, and quickly wear out their Shoes.

Great Pieces break off many times from the Ice Hills, fall into the Sea, are far more firm and compact than the other Ice, and are form'd by the Water of the Sea into ſeveral Shapes: Some of them reſemble Churches with arch'd Windows, and Doors and Pillars within of a curious Blue: Others reſemble round and ſquare Tables with blue Pillars underneath, and Icicles on the Sides, and look like fring'd Table-Cloths; ſmooth and white on the Top with the Snow, and ſometimes Pieces of Ice of various Shapes lying upon them. The Country at a diſtance looks like a Cloud, and is ſcarce to be diſtinguiſhed from the Air.

The Soil, ſo far as yet diſcovered, is in moſt Places nothing but Rock, Heaps of big Stones and Slates ſtanding Edge-wiſe. What Mould there is, comes from Moſs, waſh'd down from the Hills, and the Dung of Birds: It bears Heath, Moſs, Graſs, and ſome Plants. The Herbs produc'd here are fit for the Diſtempers of the Climate. In *June* and *July* they grow up to bear Seed: The moſt remarkable are, ſmall Houſe-Leek, 4 Sorts of Crow's-Foot, Sorrel, Scurvy-Graſs in great Quantities, but ſo mild, that they eat it for Sallads; Snake-Weed, an Herb like Mouſe-Ear, another like Periwinkle, Cabbage-Lettice, which taſtes like Creſſes; Ranunculus's of ſeveral Sorts, Sempervives, Herbs like Aloes, Wall-Pepper, Prick-Madam, and others unknown to our Climate.

The Sun appears about the Middle of *February*, and leaves them the Firſt of *October*; but they have a Twilight when the Sun comes near their Horizon. From the Beginning of *May* to the Firſt of *Auguſt*, the Sun never ſets; yet they reckon Night and Day all that Time, thus; when the Sun is Weſt, they call it Night; and when it comes about to the Eaſt, they call it the Beginning of another Day. *Martens* obſerves, That the Light of the Sun is then like that of a clear Moon, and Men may look on it without dazzling their Eyes. It riſes no more than 33 Deg. above their Horizon, and ſo is not warm enough totally to melt the Snow and Ice, nor to raiſe the Vapours ſo high as to make the Air tempe-

Digitized by Google

temperate; ſo that they hang for moſt part in thick dark Miſts, and to that Degree ſometimes, as a Man cannot ſee from one End of a Ship to another. The Cold is ſo violent here, that it immediately freezes dead Corps; and ſome ſay, they have found them entire after having been buried 30 Years.

No Springs of freſh Water are yet diſcover'd in the Country; ſo that what freſh Water they have comes from melted Snow and Ice, that runs down from the Mountains.

The AIR.

THE Air here is ſo cold, that the Froſt is almoſt continual, and ſtrongeſt in *April* and *May*, when Men can hardly keep Heat within them: Their Teeth chatter, and their Appetite is greater than in other Countries. During thoſe Two Months, the Weather is very unconſtant. When the Wind blows hard from North and Eaſt, it's ſcarce poſſible for Men to live. Weſt and South Winds, if any Thing conſtant, bring much Snow, ſometimes Rain, and moderate the Cold. In *June*, *July*, and *Auguſt*, the Air is for moſt part pretty calm. The Winds are ſtrangely chang'd by the Clouds, ſo that when it is South-Weſt in one Place, at a few Miles diſtance it blows quite another Way. The Air over thoſe Places called Ice-fields appears white, and by this Mariners know where the fix'd Ice lies. In the Two laſt Months of the Summer, eſpecially in *July*, the Sun ſhines ſo warm, ſays *Martens*, as to melt the Tar of the Ships betwixt the Seams, where the Wind cannot come at it. There is hardly any Difference of Cold betwixt Night and Day. The Meteors generated in the Air fall down like ſmall Needles of Snow into the Sea, and cover it as if it were ſprinkled with Duſt, or a tender Ice, which taſtes freſh. This is eaſily perceiv'd in a clear Sun-ſhine, when one looks towards a ſhady Place, and they ſparkle like Diamonds; but the Particles are ſo ſmall, as not to ſtick to or wet ones Clothes. When the Sun ſhines warm towards Noon, they melt in the Air, fall like Dew, and ſometimes occaſion a Reflexion like a Rainbow. They have another which they call a Sea-Bow, that appears in the Atmoſphere of the Water, blown up by the Wind. In the Clouds near the Sun, they have *Parelia*, or Mock-Suns, which the Seamen call Weather-Galls. They move about with the Sun Day and Night, and are much bigger in the Morning, Evening, and Night, than in the Day-time. When the Cold increaſes, the Sea and other Waters ſend forth a Vapour, which is turn'd into Rain or Snow in the Air, and ſmells like Fog. When great Vapours riſe conſtantly during the Shining of the Sun, 'tis a Sign the Cold is remitting. When the Air is over-burthen'd with them, they laſt a great while with a conſtant Wind. From thoſe ſmall Vapours, the Snow is firſt generated, and falls down in various Shapes like Needles, Croſſes, Roſes, and Stars, according as the Cold is more or leſs ſtrong; but if not diſpers'd by Wind, it falls down in Cluſters.

Their HARBOURS.

1. *South-Haven*, where they commonly repair their Ships: It is large and commodious, ſo that ſometimes 40 Ships at a Time have Anchor'd conveniently in it. Here they take in freſh Water, which runs plentifully from the melted Snow and Ice on the Mountains; for the Rivers, as far as has yet been diſcovered, are brackiſh. It has high Mountains on both Sides, eſpecially on the Left, there is one call'd the *Bee-Hive*, and another the *Devil's-Huck*, which is commonly covered with a thick Miſt, that darkens the Haven when driven into it by the Wind. Within this Harbour lies the Iſland of *Deadmen*, ſo called, becauſe it is the Burying-place for ſuch as die there: They dig no Graves, but heap Stones upon the Coffin. Here are ſeveral others call'd *Fowl-Iſlands*, becauſe of the vaſt Multitude of Fowls that breed there.

Maurice's-Bay, where ſome People have Winter'd. Near this are the only Houſes in the Country, being a few Cottages and Warehouſes built by the *Dutch* for making their Oil, where they have a great Gun to defend them. This Place they call *Smearbourg*, and the *Harlingiſh Cookery*. All other Nations burn their Houſes when they leave the Place.

Digitized by Google

3. The Northern Bay, in which there is an Iſland by the *Dutch* called *Vogel-Song*, becauſe of the great Noiſe which the Fowls make there. This, with *South-Haven*, and one called *Safe-Harbour*, are the moſt known of any Harbours of the Country.

4. *Monyers-Bay*, which lies furtheſt North on the Weſt Part of *Greenland*.

5. *Roſefield*, ſo call'd, becauſe it abounds with Deer.

6. *Muſcle-Haven*, which lies at the Mouth of the *Weygatt*: North of which, *Martens* ſays, he ſail'd to 81 Deg. and ſaw 7 Iſlands further North, but could not approach them becauſe of the Ice. The loweſt Part of the Country lies about this Harbour.

7. Alderman *Freeman's Inlet*, by the *Dutch* called *Walter Thymen's Port*: It is the large Mouth of a River, which is not yet diſcovered.

The Voyages mention alſo the *Engliſh*, *Hamburg*, *Daniſh*, and *Magdalen* Havens, with one called the *Bay of Love*; but not ſo diſtinctly as to enable us to judge whether they be different from thoſe already mention'd with *Dutch* Names. They take Notice likewiſe of the Haven of *Weygatt*; as to which, they do not know whether it goes through the Country, but ſay it is not the Streights of *Weygatt*, of which ſo many Things are writ: They call it by this Name, becauſe of the Winds which frequently blow there: And about this Place, they tell us the Country is low, and adorn'd with ſmall Hills.

The whole Country is encompaſſed with Ice, which makes the Approach difficult.

Their BEASTS.

1. WHite Bears, which are quite otherwiſe ſhap'd than thoſe commonly ſeen with us: They have long Heads like Dogs, and bark like a hoarſe Dog: They are ſlenderer, and much ſwifter than other Bears. Their Hair is long and ſoft, like Wooll; their Noſes, Mouths and Talons, are black. Their Skins make comfortable Clothes for thoſe that travel in the Winter, and are dreſs'd at *Spitzbergen*, by treading them in hot Saw-Duſt, which ſucks up the Fat, and dries them. The Fat of their Feet melted out is uſed for Pains in the Limbs, and given to Women in Child-bed to haſten Delivery. It likewiſe occaſions plentiful Sweat. It is ſpungy, and feels very ſoft, and is beſt when tried up there; for if it be long kept, it grows foul and ſtinking. Their other Fat is like Sewet; when tried up, it becomes thin like Train-Oil, and the Skippers many Times ſell it as ſuch; yet it is nothing ſo good, and is chiefly uſed for Lamps, becauſe it does not ſtink ſo much as the other. *Martens* ſays, if it were tried up with Orris Root, it would keep better, and ſmell well. Their Fleſh is whitiſh and fat, like that of a Sheep. The Seamen ſay, That it makes the Hair of thoſe who eat it grey. The Milk of the Females is very white and fat, and they are ſo fond of their Young, that they will rather be kill'd than leave them. Their Teeth burn'd and powder'd, and taken inwardly, diſperſes congeal'd Blood. They feed upon the Carcaſſes of Whales, and likewiſe upon Birds and Eggs. They eat Men alive when they can maſter them; ſo that when Sailors travel any where in the Country, they carry Guns and Lances for their Defence. Their Heads are very ſtrong, and when ſtruck with ſuch Cudgels as would knock down a Bullock, they don't matter it. They roll away the Stones of Burying-places, tear up the Coffins, and eat the dead Men. They dive under Water when purſued, or in Search of their Prey at Sea.

Some of them are 6 Foot high, and 14 Foot long. An Hundred Pound Weight of Fat has been taken out of one of them. When any of them are killed, and not carried off, others run away with them in their Mouths, and eat them. When they are attacked, they run to help one another, and the old Ones will rather ſuffer themſelves to be killed, than leave their Young. The largeſt are thoſe called Water Bears, which live upon what they catch at Sea, and have ſometimes been ſeen 12 Miles from Shore. The Story, That they lick their Young into Shape, is falſe; for the Cubbs are found in the Bellies of their Dams perfectly form'd.

2. Deer of a greyiſh yellow Colour, with Cloven Feet, and Horns like a Hart or Elk: They have three or four Branches on each Side about two Inches broad, and a Foot long. They have long Ears, and ſhort Tails.

Digitized by Google

Tails. When they ſee Men, they run away; and if you ſtand ſtill, they do ſo, which is the Time to fire at them. They feed on Graſs and Moſs, and grow very fat in three Months time, which enables them to hold out during the Winter; yet many of them are then ſtarved; and in the Spring they are generally lean. They are very good Meat when roaſted.

3. Foxes, which don't much differ in Shape from ours; ſome of them have their Heads black, and their Bodies white; and they make a Noſe at a Diſtance as if a Man laugh'd: They feed generally upon Birds and Eggs, but for moſt Part have ſhort Commons.

4. Sea-Dogs, called Rubbs or Seals: They are reckon'd among Beaſts, becauſe they live by Land as well as by Water. On their Feet they have 5 Claws, like Fingers join'd together, with a thin Skin like that on a Gooſe's Foot. The moſt known is the Seal, called Sill-Dogs and Rubbe by the *Germans*. Their Heads are like that of a Dog with cropp'd Ears, but not all of one Shape. They have Beards about their Mouths, and Hair on their Noſes and Eye-Lids, but ſeldom above 4 on the latter. Their Eyes are large, hollow, and clear; their Skins cover'd with ſhort Hair, and of ſeveral Colours; ſome of them ſpotted like Tygers: They have ſharp Teeth, with which they will break a Stick as thick as one's Arm. Their Tails are ſhort; they bark like a hearſe Dog, and their young ones mew like Cats. They are very numerous in ſome Places of this Country, and lie in Multitudes on the Ice-Fields. Where they abound moſt, there are but few Whales, becauſe there is no Food for them. The Seals live on ſmall Fiſh and Sea-Worms. They will ſtand upon their Defence, purſue and bite Men. The biggeſt are from 5 to 8 Foot long, and ſome of them yield half a Barrel of Fat, which lies about Three Inches thick betwixt the Skin and Fleſh, and makes the beſt Train-Oil. Their Fleſh is black, and they abound with Blood. They have large Livers, Lungs and Hearts, which the Sailors eat ſometimes, after they draw out the Rankneſs with Water; but it is loathſome Food. They are hard to be killed, and are generally knock'd down with long Poles upon the Ice-Fields: The Sailors firſt raiſe them with a Shout, upon which they ſtretch out their Necks like Dogs, and bark, which gives them the better Opportunity to fell them. When they run away, they ſquirt out a yellow Dung, and ſtink abominably.

Their BIRDS.

THey ſaw no Land-Fowls here, but one of the Bigneſs of a Lark, with a ſquare Bill, which feeds upon Worms; and another they call Snow-Fowl, of the Size and Colour of a Sparrow, with a white Belly: Being almoſt ſtarv'd, they flee to the Ships in great Numbers, and are ſo tame, that the Mariners take them as they pleaſe; but as ſoon as they are fed, they flee away. There is great Variety of Water-Fowl, and in ſuch Numbers, that when they ſlie they darken the Sun; and at riſing make ſuch a Noiſe, that one cannot hear another ſpeak: The moſt remarkable are, 1. One by the *Dutch* call'd *Raadtjheer*, white as Snow, except his Bill, Feet and Eyes. 2. A *Diver*, almoſt as big as a Duck, with a thin crooked ſharp Bill Two Inches long, black Feathers, and red Legs and Feet. They ſwim very faſt: They have little Horns above their Eyes, and a croſs one underneath them; continue a long Time under Water, and are tolerable Meat. 3 The *Lumb*, much like the other, but his Belly is white, and he croaks like a Frog: They build in the Mountains, and carry their Young Ones in their Beaks to the Sea, to teach them to ſwim and dive, and will be kill'd rather than abandon them. They are not good Food. 4. A *Mew*, with a crooked Bill, and a Bunch under it, a white Belly, grey Wings and Back, black Pinnions, Legs and Feet, and a red Ring about his Eyes: The Seamen take them with Hooks baited with Whales Fleſh. 5. The *Dung-hunter*, that purſues the *Mew* for his Dung, which, as ſoon as he drops, the other eats it, and leaves him: 6. The *Allen*, which purſues and beats the other Birds, till they vomit their Prey, which he eats. 7. *Mallemucks*, which feed on dead Whales, and are ſo greedy of their Prey, and loth to leave it, that they ſuffer the Seamen to fell them with Sticks in great Numbers. They eat till they vomit, and tumble about in it. 8. *Mountain-Ducks*, which

Digitized by Google

which are very good Meat, but their Fat is thrown away, becauſe it taſts like Train-Oil, and makes Men ſick. The Birds of Prey are not ſo good to eat as others, till they be hung up by the Legs, that the Train-Oil may run out, and the Air blow through them. All theſe Birds come at certain Times, and abide here as long as the Sun ſhines, and then return to their former Places altogether in great Flocks.

Of their Fish, *and the* Whale.

THE Whale-Fiſhing being the chief Occaſion of People's going to *Greenland*, we ſhall give a brief Account of them from *Martens*. He ſays, they differ from other Whales in their Fins and Mouths, which are without Teeth; but inſtead of them, have long black horny Flakes, all jegg'd like Hair, and ſomewhat broad: They differ from the Fin-Fiſh in their Fins; the Fin-Fiſh has a great Fin on his Back, where the Whale has none; but he has Two behind his Eyes, cover'd with a thick black Skin, delicately marbled with white Strokes, or Repreſentations of Trees, Houſes, *&c.* With theſe he ſteers himſelf, as a Boat is row'd with Oars. He ſays, in the Tail of one of them, there was marbled very delicately and exactly the Number 1222. Their Tails don't ſtand up as the Tails of moſt other Fiſh, but lie Horizontally, as thoſe of the Fin-Fiſh and Dolphin, and are from 3 to 4 Fathoms broad. The Head is the 3d Part of the Fiſh, and ſome of them more. Their Lips are plain, ſomewhat bended like an S, and end underneath the Eyes before the Two Fins: They are ſmooth, and quite black, round like the Quarter of a Circle; and when they draw them together, they lock in one another. Within, in the uppermoſt Lip, is the Whale-bone, of a brown, black, and yellow Colour, with Streaks of ſeveral Colours. The Whale-bone of one of the young ones is blue. Juſt before, in the under Lip, there is a Cavity or Hole, which fits the upper Lip exactly as a Sheath does a Knife, and through this Hole he draws the Water he ſpouts out. The Whale-bone hangs down on both Sides within his Mouth, all hairy, like a Horſe's Hair. The Whale-bone of ſome of them is bended like a Scymiter, and in others like a Half-Moon: In one Side, all on a Row, there are 250 Pieces of Whale-bone, and as many on the other, beſides the ſmall Whale-bone which is not regarded, becauſe they cannot well come at it to cut it out. The middlemoſt is the greateſt and longeſt, and is ſometimes two or three Mens length: It lies in a flat Row, one Piece by another, is broad at Top, where it ſticks to the upper Lip, and towards the Root cover'd with white Sinews; which, when boil'd, ſmells pleaſantly. There grows ſmall Whale-bone at the Root of the greater, and they make of it Boxes, Handles for Knives, Walking-Sticks, *&c.* *Martens* is of Opinion, That Packthreads and Clothes might be made of their Hair, as the *Spaniards* do of the *Sempervive Aloes*, which they dreſs like Hemp. It is a peculiar Trade to cut out the Whale-bones, and requires abundance of Iron Tools. The Tongue lies among the Whale-bones, is cloſe fix'd to the under Chop, is very large and white, with black Spots at the Edges; it has a ſoft ſpungy Fat, and cannot be eaſily cut, ſo that it is generally flung away, tho' it would yield 6 or 7 Barrels of Train Oil: It is pleaſant Food to the Sword-Fiſh, the Whale's mortal Enemy. Upon his Head there is a Bump. Before his Eyes and Fins, at the Top of this Bump, on each Side, there is a Spout-hole bended like an S, out of which he blows the Water ſo fiercely, that it roars like a great Wind. When he is wounded, his blowing reſembles the Roaring of the Sea in a great Storm. His Head is ſomewhat flat, and ſlopes downward like the Ridge of a Houſe to the under Lip, which is broader than any Part of the Whale's Body, and broadeſt in the Middle behind the Bump; and between that and the Fins are his Eyes, not much bigger than thoſe of a Bullock, with Eye-lids and Hair like Men's. The Chryſtal of the Eye is not much bigger than a Pea, clear and tranſparent, and in ſome white, and in others yelloviſh. The Eyes lie low, almoſt at the End of the upper Lip. He does not hear when he ſpouts the Water, and is eaſieſt ſtruck at that Time. His Belly and Back are quite red; but under the Belly they are commonly white, and ſome of them Coal-Black. They look very beautiful when the Sun ſhines on them, and the

ſmall

Digitized by Google

ſmall clear Waves over them gliſter like Silver: Some of them are white all over, and ſome of them are half white; but they loſe much of their beautiful Colour when they grow dry. The outward Skin is thin, like Parchment, and is eaſily pulled off when the Fiſh grows hot, which they frequently do by hard ſwimming, and then ſtink alive. The Yard of the Whale is a ſtrong Sinew, and from 6 to 8 Foot long. Where the Yard is fix'd, the Skin is doubled, ſo that it lies like a Knife in a Sheath. The *Pudenda* of the Female is ſhap'd like that of Four-leg'd Beaſts: They have Breaſts, with Nipples at the Sides of it, like thoſe of a Cow. When they couple, they ſtand upright, with their Heads out of the Water. How long they carry their Young, is uncertain. They are never obſerv'd to have more than two young ones at a time. Their Sperm, when freſh, ſmells like Wheaten Flower boil'd in Water, and may be drawn out in Threads, like hot Sealing-Wax, or Glue. When cold, it turns to a Muſk Colour, and ſmells ſtrong. *Martens* ſays, he has try'd ſeveral Ways to keep it ſweet and freſh, but could never make it like that *Sperma Ceti* which the Apothecaries ſell in their Shops. He ſays, they may take whole Pails full of it out of the Water, for it ſwims upon the Sea like Fat; as does that of the Sea-Horſes and Seals. The Seamen make twiſted Whips of the Sinews of the Yard. The Bones of the Whales are hard, like thoſe of great Four-footed Beaſts; but porous like a Spunge, and fill'd with Marrow; and when that is conſum'd, the Holes are as big as thoſe of a Honey-Comb. They have Two great and ſtrong Bones, which hold up the under Lip: They lie againſt one another in Form of a Half-Moon: Some of them are 20 Foot long of a Side. The Fleſh of the Whales is coarſe and hard, like that of a Bull, mix'd with many Sinews: It is very dry and lean when boil'd, becauſe their Fat lies wholly betwixt the Fleſh and the Skin. When the Sailors have a mind to eat of it, they cut great Pieces off before the Tail, which is tendereſt, and boil it: Some of it looks green and blue, like powder'd Beef: The Fat is mix'd with Sinews, which holds the Oil as a Spunge does Water. The other ſtrong Sinews are chiefly about the Tail, with which he turns and winds himſelf as a Rudder does a Ship. He ſwims as ſwiftly as a Bird flies, and makes a Track in the Sea like a great Ship under Sail. The middling Sort of Whales here are about 50 or 60 Foot long, and commonly yield 70, 80, or 90, Kardels of Fat. *Martens* mentions one Whale that yielded 130. Beſides the uppermoſt thin Skin, there is another of about an Inch thick, and of the ſame Colour with the other; but both are ſo brittle when dry, that they are of no Value; and the Softneſs of the Skins is reckoned to be the Cauſe why the Whale, tho' the ſtrongeſt and biggeſt of all Creatures in the Water, cannot make much Uſe of his Strength. He ſays nothing of the inward Parts, but only that the Guts are of a Fleſh Colour, and the Dung within them yellow. Their Food is Sea-Snails, Herrings, and other ſmall Fiſh. They are not very couragious, conſidering their Strength; for when they ſee a Man, or a Long-Boat, they dive and run away: But when he is in Danger, he values a Man no more than a Straw, and frequently beats the Long-Boats to pieces; but great Ships are too hard for him, and when he ſtrikes againſt them with his Tail, he receives more Hurt than he does. Sometimes he runs away with Thouſands of Fathoms of Rope-Line, a great deal ſwifter than a Ship can ſail, or a Bird fly. In the Spring they keep Weſtward from *Spitzbergen*, near *Old Greenland*, and the Iſland of *John Mayen*, and then run Eaſtward to *Spitzbergen*. After them come the Fin-Fiſh, and then the Whales do probably retire to warmer Seas. They have Ailments as well as other Beaſts, and are mightily tormented by Lice, and ſometimes leap out of the Water as if they were in an Agony. Before a Tempeſt, they beat the Water about with their Tails like Duſt. They are obſerv'd to have the greateſt Strength when they ſtrike Side-ways. If they eſcape, their Wounds are ſoon heal'd, becauſe of their Fat; but the Wound always leaves a white Scar behind it.

The young ones, when brought forth, are as big as an Hogſhead, and they ſuck their Dams, whoſe Milk is very white and ſweet, but taſtes Fiſhy.

Of

Of the Taking of the WHALE.

WHEN the Fiſhermen hear a Whale blow or ſpout, they call into the Ship, *Fall, Fall*; then every one gets into their Long-Boats, which for moſt part contain 6 or 7 Men: They tow till they come near; then the Harponier takes his Harpoon, or ſharp Iron, which reſembles an Arrow fix'd to a Stick, and ſtrikes him. They take Care to have Rope enough, otherwiſe, when the Whale dives ſtraight down, as he frequently does, he would ſink the Boat: And to prevent the Rope's ſetting the Boat on Fire when it is drawn quick, they take Care to Water it ſufficiently; for he draws many Hundred Fathom of Rope under Water with incredible Force. The Line faſten'd to the Harpoon is 6 or 7 Fathom long, and called the Forerunner: It is made of the fineſt and ſofteſt Hemp, and not Pitch'd, that it may the more eaſily follow the Harpoon. Join'd to this, there's a whole Heap of Lines, divided into 3, 4, or 5 Parts, of 80, 90, and 100 Fathoms each, made of ſtrong Hemp well Tarr'd. If the Whale run under Water, they tie more and more to it, and if there be not enough in one Long-Boat, they make uſe of that which is in the next; and they take ſpecial Care that they don't entangle and overſet the Boat. The Steerſman obſerves which Way the Rope goes, and ſteers the Boat accordingly, that it may run exactly out before; for the Whale runs away with the Long-Boat as faſt as the Wind, and would overturn it, if the Line be not kept ſtraight. If the Harpooner can, he darts the Harpoon juſt behind the Spout-hole, or in the thick Fat of the Whale's Back, which makes him ſpout more Blood, and dye ſooner than when wounded in the Belly, or through the Guts, except they be wounded in the Privy-Parts, which puts them to extream Pain; and even when they are almoſt dead, if they be wounded there, it cauſes their whole Body to tremble. About the Head, the Harpoon does them but little Hurt, of which the Whale ſeems to be ſenſible: And therefore when ſtruck at, rather expoſes his Head than any other Part, becauſe the Harpoon gets out eaſier there, and ſo he eſcapes. When the Whale is ſtruck, the other Long-Boats row before, and take Notice which Way the Line ſtands, and ſometimes pull at it. If they find it ſtiff, 'tis a Sign the Whale ſtill pulls with Strength; but if it hang looſe, and the Long-Boat lie equally high before and behind in the Water, they pull it in, but lay it in Order, that the Whale may have it eaſily again if he recover Streagth. If he run on a Level, they take Care not to give him too much, leſt he ſhould entangle himſelf about a Rock, and pull out the Harpoon, which he does ſometimes. 'Tis obſerv'd, That the fat ones don't ſink immediately when dead, but the lean do, and come up again after ſome Days. When dead, they immediately begin to ſtink, and their Fleſh ferments like Beer or Ale, and the Steam enflames Men's Eyes if they be weak. When he runs under Ice, where he cannot be follow'd, they cut off their Line, if they cannot pull out the Harpoon; for they always retire to the Ice if it be near, and frequently endanger the Boats. When they are wounded, they ſpout ſo loud, that one may hear them as far as a Cannon; but when he grows feeble, the Noiſe decreaſes, and ſounds like the bubbling of an empty Bottle in the Water, which is a Sign of his being juſt a dying. Some of them ſpout Blood to the laſt, cover the Men and Sloops, and tinge the Sea with it. They likewiſe fling up a fartiſh Subſtance, which looks like Sperm, and is greedily devour'd by the Birds call'd *Mallemucks*, and others, who eat them while alive. Sometimes they are ſurrounded with Boats, and kill'd with Lances; but this is a dangerous Way for the Men and Boats. The Females, when with Young, are the moſt dangerous, and make the longeſt Defence.

2. The Fin-fiſh is as long as a Whale, but ſcarce ſo bulky by two Thirds: He is known by the Fins on his Back near his Tail. The Knob on his Head has a long Hole, thro' which he blows up the Water higher, and with more Force, than the Whale. His Back is not ſo much bended as that of the Whale. His Lips are brown, and twiſted like a Rope, and the Whale-bone hangs to the upper Lip. He is not black like the Whale, but colour'd like a Tench. He is not ſo fat as the Whale, yet is more dangerous to take, becauſe he moves quicker, and

Digitized by Google

and is ſooneſt kill'd by Lances. 'Tis dangerous to ſtrike him with a Harpoon, eſpecially near the Ice; for by his quick Motion, he ſometimes pulls the Boat and Men under it. When thoſe Fiſh appear, there are no more Whales to be ſeen.

The Ships that go a Whale-fiſhing carry 30 or 40 Men, and ſometimes more, and have generally 5 or 6 Sloops apiece. The largeſt Ships hold from 800 to 1000 Cardels or Barrels of Fat, and the leſſer from 400 to 700. In each Ship there are 60 Lances, 6 Sea-Horſe Lances, 40 Harpoons, and 10 long ones to ſtrike Whales under Water, 6 ſmall Sea-Horſe Harpoons, and 30 Lines of 80 or 90 Fathom each. The Scurvy is the common Diſtemper in this Voyage, beſides Fevers and Impoſthumes; and the Surgeons provide accordingly.

3. The *Sea-Horſe*, by ſome call'd the *Morſe*, *Mahruſh*, and *Horſe-Whale*, is ſhap'd much like the Seal, but as big as an Ox. Their Legs and Claws are like the Seals, but their Nails ſhort. Their Head is thicker, rounder and ſtronger: Their Skin an Inch thick, chiefly about the Neck, cover'd with ſhort Hair. They have two great long Teeth in their upper Jaw, about a Foot and two Foot long, and ſometimes longer: They hang below their under Lips. They are more eſteem'd than Ivory, as being whiter, firmer and heavier, and fit for Handles of Knives, Boxes, &c. The *Jutlanders* make Buttons of them, and uſe them againſt Poyſon and malignant Diſeaſes, wherein they excel that called the *Unicorn's Horn*. Their Mouth is broad before, like a Bullock's, with Briſtles above and below, hollow within, and as big as a Straw: The Seamen make Cramp-rings of them. He has two Semi-circular Noſtrils, from which he blows the Water like the Whale, but with leſs Noiſe. Their Eyes are at a good diſtance from their Noſe, and red like Blood. Their Eye-lids are like thoſe of Four-footed Beaſts. Their Eyes are like the Seals: Their Tongues as large as a Neat's-Tongue, and when new boil'd, eatable; but if kept two or three Days, taſts like Train-Oil. Their Necks are thick, ſo that they ſeldom turn their Head about. Their Fleſh is like that of a Hog, and their Heart and Liver eatable. Of their Yards, which are hard Bone, Handles of Knives are made. They feed upon Herbs and Fiſh. They lie in great Numbers upon the Ice, and roar moſt terribly. They ſleep and ſnore either upon the Water or Ice, and dive like the Seals. They are ſtout, undaunted Creatures, and ſtand by one another as long as they have Life; and tho' wounded, make to the Boats, endeavour to get in, purſue them a great way, and ſometimes ſtrike Holes in them with their Teeth, or jump in and overſet them. They defend their Young as long as they have Breath. They are chiefly taken for their Teeth, of which there are many that are hollow, and worth nothing. When they lie upon the Ice in Numbers, one of them keeps Watch, and when Boats come near, he ſtrikes the next Morſe with his Tooth, and ſo the Signal goes round; upon which they riſe up, ſtand on their fore Foot, look and roar terribly, and make to the Water. The Skin about their Neck is thicker than that of an Elk, and if dreſſed, would be as good as the beſt Buff, and very light. They frequently ſleep on the Shore, and if they can, get up to high Places. They ſcarcely value Shot, or Blows, but are eaſieſt kill'd with Javelins. Sometimes Sailors make a good Voyage with their Oil and Teeth, when the Whale-Fiſhing does not anſwer.

4. The *Dragon-Fiſh* has two Fins on his Back, the foremoſt of which has long Strings, about two Inches high above the Back. He has no Gills, but blowing Holes in his Neck, and on each Side of them two ſhort Fins, and underneath a broad one. Beneath his Belly he has a long narrow Fin, that reaches to his Tail. His Head is oblong, compoſed of many Bones. He has a raiſed Part before his Noſe. His Tail is about an Inch broad. His Body is long, thin and round; and his Skin is greyiſh, and ſhines like Silver.

5. The *Butskopf*, or *Place's-Head*: His Head is blunt, with a Beak of an equal bigneſs all along, and of a brown Colour marbled. His Fins are like the Dolphin's: His Tail like a Whale's. He has a Spout-Hole above in his Neck, out of which he ſpouts Water. They are from 16 to 20 Foot long. His Back brown, and his Belly white. They run near the Ships, and keep Company with them a long time.

Digitized by Google

All theſe Fiſhes ſwim againſt the Wind, as do the Whales, Fin Fiſh, and Dolphins, Mr. *Martens* is of Opinion, That when they tumble, it is not by Way of Play or Diverſion, but that they run away before the Storm, and are ſenſible of it by ſome Pain in their Bodies a while before it comes, becauſe they generally continue to tumble till the Eaſt Wind, which torments them, ceaſes. They ſaw another Fiſh here reſembling the Butſkopf, but larger, and with a Fin three times as high, by which they may eaſily be taken as they tumble.

6. *White-Fiſh*, as large as a *Butſkopf*, ſhap'd like a Whale, without Fins on his Back, but two on his Belly, and a Tail like a Whale's. He has a Spout-Hole on his Head, is of a yellowiſh Colour, and one of them yields a Barrel of Fat, which is ſoft, and not much valued. When there's Plenty of them, 'tis a Sign of a good Whale-Fiſhing, for their Food is the ſame.

7. The *Unicorn*, has no Fin on his Back, but a Spout-Hole in his Neck. When they ſwim ſwiftly, they ſay they hold up their Horns, or rather Teeth, out of the Water, and go in great Shoals. They are ſhap'd like a Seal. Their undermoſt Fins and Tail are like the Whale's; ſome of them are white, others a dappled grey. Their Bellies are white, and they are from 16 to 20 Foot long.

8. The *Saw-Fiſh*, or *Sword-Fiſh*, has a long broad Bone fix'd to his Noſe, with ſharp Teeth like a Saw on each Side of it. He has two Fins on his Back; that next the Tail is hollow, like a Sickle. He has four underneath his Belly, *viz.* two on each Side. His Tail is like a Piece of Board pointed behind and underneath, but not divided. His Shape, from Top to Tail, is like a Man's Arm. His Eyes ſtand high out of his Head. His Noſtrils are oblong. His Mouth is directly under his Eyes; and the Fiſhes are from 2 to 20 Foot long. They are mortal Enemies to the Whale and Fin-Fiſh, about which they gather in great Numbers, and when they kill them, eat only their Tongue. Sometimes they will ſing'y attack a Whale; and in calm Weather the Whale-Fiſhers lie by till they kill the Whale; and upon the Approach of the Boats, the Sword-Fiſh being frighted, retires.

9. The *Hay*. Of this Fiſh there are ſeveral Sorts: They have two Fins on their Backs, and 6 underneath their Belly. Their Tail is of a peculiar Shape, one Part like half of that of the Sword-Fiſh, and the other ſhap'd like a Lilly. He has a long Noſe. His Mouth is ſhap'd like the Sword-Fiſh, is full of ſharp Teeth, of which there are three Rows above and below. His Eyes are oblong, and very clear. He has 5 Gills on each Side. His Skin is hard and thick, and rough if ſtruck upwards. They are of a grey Colour, and from one to three Fathom long. They bite great Pieces from the Whale, as if they had been dug out with Shovels, and they devour all the Fat of the Whales under Water; whence Seamen take them up ſometimes half devour'd. The Hays have large Livers, which yield Oil. The Fleſh of their Backs being cut off, and hung up ſome Days in the Air, the Seamen think good Meat, and boil or roaſt it when ſcarce of other Proviſions. The leaſt are beſt. They devour and eat Men if they catch them ſwimming in the Sea. They are caught by a great Hook baited with Fleſh, and faſten'd to a ſtrong Iron Chain.

The other Fiſh here are the *Craw-Fiſh*, without a Tail, otherwiſe call'd the *Sea-Spider*. They are ſhap'd like Lobſters, and eatable. They have alſo *Garnels* or *Prauns*; and a Fiſh call'd the *Louſe of the Whale*, with Scales as hard as Prauns. Their Head is like that of a Louſe, with 4 Horns. The two ſhort ones, which ſtand out before, have Knobs like the Sticks of Kettle-Drums. They have 6 Plates on their Backs: Their foremoſt Legs are crooked, like a Half-Moon, with ſharp Points, by which they faſten in the Skin of the Whale, and bite pieces out of them. Whales are moſt annoy'd with them in warm Weather. They have alſo thoſe call'd the *Star-Fiſh*, of two Sorts, ſome larger, and ſome leſſer, of a reddiſh Colour, with 15 Rows of Knobs, which together make the Form of a Star of 5 outward bended Points.

They have alſo Fiſhes here call'd *Rotz-Fiſh*, *Sea-Qualms*, or *Slime-Fiſhes*, of ſeveral Sorts: They ſeem to be nothing elſe but Slime, and are tranſparent. Some of them reſemble flat Snails, and inſtead of Fins, have Stalks like Feathers. Some call them *Sea-*

Digitized by Google

Sea-Nettles, becauſe they occaſion a burning Pain like a Nettle. They cleanſe the Sea mightily, for all ſort of Filth ſticks to them, as a Bur does to Cloth. The firſt of them is call'd a *Sea-Mayfly*, are tranſparent, and diſſolve, if held in one's Hand. They have two Fins under their Neck, reſembling thoſe of Whales. They are ſhap'd like white Rowls, broad and thick in the middle. The Head is broad and round, ſplit in the middle, and has ſmall Horns of the breadth of a Straw. They have 6 little red Knobs on their Heads, ſuppoſed to be Eyes. Their Mouth is ſplit, and from thence to the Belly are its Guts, which are eaſily ſeen, becauſe he is tranſparent. The Colour of the Fiſh is like the White of an Egg: It moves in the Water like a Sea-Nettle, and the Birds feed on them. The 2d is call'd the *Snail-Slime-Fiſh*: He is tranſparent, flat and round about, like a Snail; and upon the Land are found Shells of ſuch flat Snails; on each Side are Stalks, with which he moves in the Sea. They are of a brown Colour, and are as numerous in thoſe Seas, as Atoms of Duſt in the Sun. 'Tis ſuppos'd, the Whales feed on them, as well as the Birds. The 3d is the *Hat-Slime-Fiſh*; his upper Part reſembles a Toad-ſtool. They go up and down perpendicularly in the Water, and have a blue Knob in the middle. The 4th is call'd the *Roſe-Slime-Fiſh*, being round as a Circle, and indented on the Edges. There is another call'd the *Slime-Fiſh like a Cap*; and a 6th call'd the *Slime-Fiſh like a Fountain*, reſembling a Fountain with 8 Streams or Spouts. Their Body is as white as Milk; but their Streams ſometimes change into all the Colours of the Rainbow.

Of the SEA.

THE Colour of the Sea changes here according to that of the Sky: If the Air be clear, the Sea is as blue as Saphir; if cloudy, it is green as an Emerald; if foggy with Sun-ſhine, 'tis yellow: if it be dark, it looks like Indigo. In ſtormy and cloudy Weather, 'tis of the Colour of black Lead. The Stream among the Ice is obſerv'd to run Southward, and at the *Muſcle-Haven* it runs Northward. There is nothing certain as to its ebbing and flowing; but when the Winds are high, the Water is obſerv'd to be higher about the Land than at other Times. The Water in a Calm is very clear, ſo that one may ſee 12 or 14 Fathom deep. The Waves begin to riſe firſt from a ſmall Breeze of Wind; and as the Wind increaſes, they grow higher and bigger, till they grow as high as Mountains, and break with Foam, which in a hard Wind blows like Duſt, and the Waves fall over one another with great Noiſe. At Night, when it daſhes much, it ſhines like Fire.

Of the ICE.

THE Weſt-Ice begins to break in *April* and *May*. The Ice here is not ſo ſmooth as to ſlide on, nor tranſparent, but looks like Loaf-Sugar. Where 'tis fix'd on the Sea, it reflects a Snow-white Brightneſs on the Sky. The Sea daſhes againſt thoſe Ice-fields, which occaſions ſeveral fine Figures, like Mountains, Tables, Chapels, and all ſorts of Beaſts. They are much deeper under the Water than high above it, and as hard as Stone. The ſmall Ice-fields are dangerous for Ships, and many times break them to pieces; but they faſten themſelves to the greater ones with large Ice-hooks fix'd to ſtrong Cables. Their beſt Defence againſt the ſmaller Pieces of Ice are dead Whales, or their Tails and Fins hung round their Ships; and ſometimes they keep them off with long Poles and Hooks. The Ice riſes ſometimes 16 Fathoms above the Water, and often freezes to the bottom, and at other times about 35 Fathoms under Water; and that below is more ſalt, and eaſier melted than that above. It makes a terrible Noiſe when it freezes or breaks, is ſometimes of a delicate blue Colour, and the deeper the bluer.

The Trade from *England* to thoſe Parts, begun a little before. *Stephen Burroughs* had been there in ſearch of a N. E. Paſſage to the *Indies*: For we find, That in 1553, King *Philip* and Queen *Mary* gave Commiſſion to certain Merchants to trade to *Ruſſia*, and made them a Corporation, which not only begun a profitable Trade to thoſe Northern Countries, but employ'd ſeveral Ships

Digitized by Google

to find out a N. E. Paſſage to the *Indies*, particularly *Arthur Pett* and *Charles Jackman* about 1580, who 'tis probable were alſo upon *Greenland*. None but the *Engliſh* frequented thoſe Seas till 1578, that a *Dutch* Ship came to *Cola*, and a Year or two after another to *St. Nicholas*, by the Advice of an *Engliſhman*, who oppos'd the Company. In 1594, the *Dutch* employ'd *Barents* and others to find out a Paſſage to the *Indies*; and in 1596, they ſent 3 Pilots upon the ſame Deſign, who firſt came to *Bear* Iſland, and then to *Greenland*. In 1603, *Stephen Bennet* went as far as *Cherry* Iſland, from whence he brought Lead-Oar. In 1608, *Henry Hudſon* was ſent to diſcover the North Pole, went to 82 Deg. where he ſaw ſeveral Iſlands beyond that, and gave Names to ſeveral Places of *Greenland* formerly diſcover'd.

The Company being inform'd of the great Number of Morſes and Whales in thoſe Parts, they ſent two Ships thither, which kill'd many Morſes. In 1610, they ſent out the Ship *Amity*, *Jonas Pool* Commander, a Whale-fiſhing, who ſell upon the Land formerly diſcover'd, tho' not regarded, and call'd it *Greenland*, either becauſe of the green Moſs, or becauſe the Sea about it look'd green. He call'd it alſo, *King James's New Land*; but that Name was ſoon forgot. He ſeiz'd the Country for the Uſe of his Maſters, and for that end ſet up a red Croſs, with Writing upon it. He made ſome Oil there, and brought home one of thoſe called *Unicorn's Horns*. In 1611, the Company ſent two Ships more thither, where they killed ſeveral Whales, and 500 Morſes. In 1612, they ſent two more, which killed 17 Whales, with ſome Morſes, and made 180 Tun of Oil. That ſame Year, a *Dutch* and a *Spaniſh* Ship were conducted thither by two *Engliſh* Pilots, who were threaten'd by the *Engliſh* Ships; but notwithſtanding made a good Voyage. In 1613, the Company ſent 7 Ships, with a Patent to prohibit all Strangers to fiſh there, except the *Muſcovia* Company. They found 15 *Dutch*, *French* and *Flemiſh* Ships there, with ſome *Engliſh* Interlopers: To ſome of them the General gave Liberty, with others he compounded for half their Fiſh, and others he drove away, after taking the *Engliſh* Sailors from them. This Year they diſcover'd *Hope* Iſland, and others to the Weſt, but returned home not very well laden. In 1614, the Company ſent 13 great Ships, and two Pinnaces well arm'd, and the *Dutch* ſent 18, 4 of which were Men of War; ſo that being ſtronger than we, they ſtay'd and fiſh'd, as we alſo did; but both return'd poorly laden. Our Men diſcover'd the Country then to 80 Degrees. They took poſſeſſion of ſeveral Parts of the Coaſt for the King, and ſet up a Croſs with his Arms upon it in Lead; and the *Dutch* did the like afterwards in the ſame Places for the Prince of *Orange*. In 1615, the Company ſent two great Ships and two great Pinnaces; but the *Dutch* having 14 Ships there, ours had not their full Loading. That Year the King of *Denmark* ſent 3 Men of War there, with an *Engliſh* Pilot, to demand Cuſtom for fiſhing on his Iſland, as he call'd it; but it was deny'd him, and the Right of the *Engliſh* aſſerted. In 1616, the Company ſent 8 great Ships, and 2 Pinnaces, which being appointed to ſeveral Harbours, they return'd full laden. The *Dutch* ſent 4 Ships, which made but a bad Voyage. In 1617, the Company ſent 14 Ships and 2 Pinnaces. They met 11 Sail of *Dutch* in *Horn-ſound*, from whom they took their Fiſh, and their *Engliſh* Sailors, and then forc'd them away. This Year the Company's Ships made 1900 Tun of Oil. In 1618, the *Engliſh* forc'd the *Dutch* again from *Horn-ſound*, and took from them ſome of their Goods, with Ordnance and Ammunition, which were afterwards reſtor'd.

A new Company of *Engliſh*, *Scots* and *Zealanders*, procur'd a Grant to fiſh in thoſe Parts: Upon which the former Adventurers join'd with the *Eaſt-India* Company, and ſent out 13 Ships and 2 Pinnaces; but they were worſted by 23 *Zealanders*, which made it an unfortunate Voyage. In 1619, the Company ſent 9 Ships; but the *Dutch* being there before them, they made a loſing Voyage; and one of their great Ships lying at Anchor under a Mountain, a great Piece of Ice fell down from it, kill'd and wounded ſeveral of their Men, and ſhatter'd their Ship ſo much, that ſhe was with Difficulty repair'd. The *Dutch* at the ſame time being fully laden, did ſo much underſell them, that they gave over trading thither as a Company.

But

But Mr. *Ralph Freeman*, and others of the Company, continu'd it, and in 1620 ſent 7 Ships, who return'd but with half Loading. In 1621, they ſent 8 Ships, which, notwithſtanding the Harm done them by the *Dutch*, brought home 1100 Tun of Oil. In 1622, they ſent out 9 Ships, one of which was loſt in the Ice, and the reſt brought home 1300 Tun of Oil.

We find nothing more worth relating till 1630, when the Company ſent a Ship commanded by *William Goodler*, who quickly made up his Lading; and ſending 8 of his Men on Shore to kill Deer, they loſt their Way in a Fog; and the Ships going off becauſe of the Ice, they were forc'd to Winter there, and took up their Habitation in the Couper's Tent, within which they built another with 4 Cabbins, which they furniſh'd with the Skins of Bears, Deer and Foxes, and Pieces of old Sails. Having loſt their Sloop, with the Deer they had formerly kill'd, in the Ice, they went out a hunting for more, and kill'd 2 Morſes, which they roaſted, and eat at leiſure.

Finding that their Proviſions were not enough for half the Winter, they made it up with Fritters of Whales, and reſerv'd their Deer for Sickneſs and Holy-days, which they preſerv'd by roaſting, and ſtowing it in the empty Casks they found there. The Want of Light was a great Hindrance to their getting Proviſions; for from the 14th of *October* to the 3d of *February*, they ſaw not the Sun; but in clear Weather, they had Moon-light; and the Bears coming towards their Tent, at ſeveral times they kilPage_rotation value="0" />led 8 of them: They found their Fleſh wholeſome; but when they eat their Liver, it made their Skins peel off. When the Sun began to appear, the Fowls and Foxes came abroad, for which they ſet Traps. They catch'd abundance of Fowl, and about 50 Foxes, which being roaſted, were good and pleaſant Meat, and reliev'd them much againſt the Scurvy. The firſt of *May*, the Weather being ſomewhat warm, they went abroad for Proviſions, and found great Quantities of Willocks Eggs, which were very refreſhing. That ſame Day two *Engliſh* Ships arriv'd in the *Sound*, which took them on board, and brought them ſafe to *England*. The Cold was ſo ſevere during the Winter, that it rais'd Bliſters on their Fleſh, as if they had been burnt. If they touch'd Iron, it ſtuck to their Fingers; and while they ſat by a great Fire, which they made of broken Sloops, *&c.* tho' their Stockings were burnt, their Feet were numb'd with Cold, and their Backs frozen, ſo that they were forc'd to heat Stones at the Fire to apply to their Feet, and other Parts of their Bodies, to keep them from freezing.

'Tis proper here to obſerve, That the *Dutch*, in order to deprive Sir *Hugh Willoughby* of the Honour of firſt diſcovering *Greenland*, call an imaginary Iſland by his Name, alledging that was the Place he diſcover'd: They place it near *Nova-Zembla*. But tho' *Hudſon* ſail'd in queſt of it, he could never find it.

CHAP. VI.

NOVA-ZEMBLA.

NOva-*Zembla* is ſeparated from *Samoieda* by the Streights of *Weygates*. On the N. E. is the *Stilla Sea*, into which the River *Oby* runs. The Lat. is from 68 to 78 Deg. and the Long. from 70 to 98. *Morden* ſays, in all the Maps he ever ſaw, it is plac'd 120 or 150 Deg. too far E. and thinks this Miſtake was the chief Cauſe of Captain *Wood*'s failing in his Search of a N. E. Paſſage to *China*. It was firſt diſcovered by the *Engliſh* in 1556, and has oft been viſited both by them and the *Dutch*, to find out a N. E. Paſſage; but this Deſign has always been

Digitized by Google

been defeated, by the Flakes of Ice. The Misfortune of that worthy Pilot *William Barents* has alſo been diſcouraging to others: He adventur'd ſo far, that his Ship was firſt hemm'd in, then frozen and broken in the Ice, ſo that he was forc'd to Winter upon the Land, where he loſt his Life.

Thoſe that Winter'd in *Nova-Zembla* in 1596, in 76 Deg. on *Nov.* 2. N. S. ſaw the Sun not fully above the Earth: It roſe S. S. E. and ſet S. S. W. After *November* 4, they ſaw it no more; but the Moon, from the firſt Quarter to the laſt, is to be ſeen Night and Day. *January* 24, they ſaw the Edge of the Sun above the Horizon; and the 27th, they ſaw his whole Body: He was in 5 Deg. 25 Min. of *Aquarius*. They farther obſerv'd, by an Ephemerides they carried with them, that at *Venice* there would be a Conjunction of the Moon and *Jupiter* that very Day at One a Clock in the Morning, which they in *Nova-Zembla* ſaw at Six in *Taurus*: So that the Difference of Longitude of thoſe two Places is 5 Hours, or 75 Deg. *Venice* being in Long. 37 Deg. 25 Min. *Nova-Zembla* muſt be 112 Deg. 25 Min. But theſe Obſervations are contrary to the Opinion of all Aſtronomers. There is publiſh'd lately in *Holland* a new Chart of *Nova-Zembla*, which places the N. of it in the ſame Parallel with Part of *Greenland*. A late *French* Traveller, who was Chirurgeon in a *Daniſh* Ship, affirms, That *Nova-Zembla* is join'd to *Samoieda* on the South by the *Pater-Noſter* Mountains, and on the North to *Greenland*; But this is contrary to the Obſervations of both *Engliſh* and *Dutch* Mariners. *Nova-Zembla* ſignifies in the *Ruſſian* Language a *New Land*. Some *Daniſh* Seamen, ſent out by their King's Order in 1653, ſay, they paſſed the *Weygats* Streights, and found ſome Inhabitants of *Nova-Zembla* in their Canoes. They add, That they are very nimble Footmen; That their Clothes were made of the Skins of great Birds, like Penguins and Pelicans, with the Feathers on them. Their Boots were of the Hides of Morſes, or great Seals: That they had Quivers at their Backs full of Arrows, with a Hatchet of Fiſh-Bones: That their Temper is untractable and indocil; and they abhor our Beer, Spirits and Meat. The *Dutch*, who Winter'd there, mention no other Beaſts than Bears, Foxes, and ſuch others as live upon Prey. They add, That there is neither Leaves nor Graſs for other Beaſts to feed upon. But Mr. *Huaſon*, who was there in the Summer, ſaw ſome green Places, and Deer feeding in them. 'Tis probable, upon the Approach of Winter, the Deer retire to *Samoieda*, or other neighbouring Places. Our Merchants who have liv'd in *Ruſſia* ſay, That in *Nova-Zembla* there is a great Lake, where a great Number of Geeſe and Swans breed, which moult about St. *Peter's* Day; and then the *Ruſſes* go thither to gather the Feathers, and kill the Fowls, which they dry and bring home for Winter Proviſion.

CHAP. VII.

Of Attempts to diſcover a North-Eaſt Paſſage to China, *&c. by* Nova-Zembla.

WE ſhall paſs by the Attempts of others, and only take Notice of thoſe mention'd by Captain *John Wood*, beginning with that made by himſelf in the Ship *Speedwell*, by the Order of King *Charles* II. *of Great Britain*. The Captain was induc'd to this by ſeveral Relations ſent from *Holland* and elſewhere, which made him believe that ſuch a Paſſage had been found, and in a great meaſure diſcover'd by others. Therefore he ſet out with the *Speedwell*, and another Ship call'd the *Proſperous* Pink, fitted for the Voyage at the Charge

Digitized by Google

Charge of the Duke of *York* and others, the 28th of *May*, 1676. On the 29th of *June* after, the *Prosperous* struck on a Ledge of Rocks, and sunk, and the Men escap'd with Difficulty on Shore in *Nova-Zembla* with part of their Provisions; but were brought off by Captain *Flaws*, after having stay'd on Shore some Time. Captain *Wood* gives the following Account of the Voyage, and of the Reasons of their Miscarriage. He says, it was their following the Opinion of *William Barents*, which was to steer directly N. E. from the North Cape, and to fall in betwixt *Greenland* and *Nova-Zembla*, which he attempted accordingly. He continued coasting the Ice sometimes with great Hopes of a clear Sea, and then again was disheartened by more Ice; but at last lost all Hopes, when he saw *Nova-Zembla*, and the Ice join'd to it; by which he found that *Barents* was mistaken, and that all the *English* and *Dutch* Relations, which encourag'd him to the Undertaking, were meer Forgeries; for he could get no further than 76 Deg. and found the Sea frozen without Intermission, which would have taken some Centuries of Years to thaw it. He concludes *Nova-Zembla* and *Greenland* to be the same Continent; for had there been a Passage, there would have been some Current, which he could not find, but only a small Tide, which rises about 8 Foot. He thinks 'tis not certainly known whether *Nova-Zembla* be an Island, or join'd to the Continent of *Tartary*; but says, 'tis no great matter, since 'tis the most miserable Country upon Earth, most of it always cover'd with Snow; and what is not so, is not to be walk'd on, being like Boggs, with a Moss on the Surface, that bears a small blue and yellow Flower, which is all the Product of the Earth here. Upon digging two Foot deep, they came to a firm Body of Ice, the like of which he thinks was never heard before; and shews their Mistake, who think Men might preserve themselves there during the Winter, by digging Caves in the Earth. The Snow lies there contrary to what it does in other Climates, where it melts soonest near the Sea; but here it washes under the Snow a prodigious way, and the Snow hangs over in a manner fearful to behold. The Mountains are cover'd all the Way up with Snow, which he thinks has lain there ever since the Creation. On the Top of the Mountains they found it bare, and had indifferent good walking upon Slates; but they durst not go far, lest they should have lost their Way in the Fogs. The Beasts of the Country, he says, are large white Bears and Deer, with some Foxes, a little Creature resembling a Cony, but not so big as a Rat; and they saw no Fowls, but little Birds about the Size of a Lark. Every quarter of a Mile, there runs down from the Hills into the Sea a small River of very good Water, melted from Snow; and where those Rivulets fall into the Sea, they found black Marble with white Veins. The Westermost Point of *Nova-Zembla*, where he lost his Ship, he call'd *Point-Speedill*. It lies in 74 Deg. 30 Min. N. Lat. and in Long. E. from *London* 63 Deg. The Tide rises 8 Foot, and sets directly upon the Shore, which, he says, is a certain Sign that there is no Passage to the Northward. The Sea about the Ice and Land is the saltest that ever he tasted, and the heaviest and clearest Water in the World; for he could see the Bottom with Shells upon it at 80 Fathom Water, which is 480 Foot deep.

The Captain takes Notice of the like Attempts made formerly by others, as follows:

The First that ever attempted the said Voyage was Sir *Hugh Willoughby*, in the Year 1553, with 3 Sail of Ships, and he sail'd to the North-Cape of *Finmarke*, and then into the Lat. of 72, where he says he saw Land; but to this Day it cannot be found again; And I am of Opinion, says the Captain, That it was some Fog-Bank that he saw; for in my Return home, I run over the same Place where our Chart-makers lay down that Land: But certain it was, that by foul Weather he was forc'd into a Harbour in *Lapland* call'd *Arzena*, whence, by the continuance of bad Weather, he could never return out, but was there frozen to Death with all his Ship's Company: So that by this Voyage, there was no Light given to find a Passage that Way.

The Second that attempted it was one Capt. *Stephen Burroughs*, afterward Comptroller of the Navy to Queen *Elizabeth*. In the Year 1556, he set forward, and passed the North-Cape; and sailing farther Easterly, discu-

Digitized by Google

diſcover'd the *Weygates*; that is, the Streight that runneth between the South Part of *Nova-Zembla*, and the *Samoieds* Country, where he entred; and believing that *Sinus*, or by the Eaſtward of the Streights, to be a free and open Sea, he return'd with Hopes of Paſſage that Way to *China* and *Japan*.

The Third that attempted it was Captain *Arthur Pett*, and Captain *Charles Jackman*, in the Year 1580. being ſent out by Queen *Elizabeth* to follow the Track of *Burroughs*: So ſetting forwards, they came to the *Weygates*, paſſed the Streights, and came into the Sea to the Eaſtward, where they met with ſuch a vaſt Quantity of Ice and bad Weather, that they with great Hazard, Peril, and Labour, were forc'd to return; but by foul Weather loſt one the other, and *Pett* was never heard of ſince: So the Paſſage through the *Weygates* was in *England* laid by, as thought not poſſible that Way; and then the *Hollanders* undertook it.

The Fourth that attempted it was *William Barents*, a well experienc'd Navigator and Artiſt, ſent out of *Holland* by Prince *Maurice* in the Year 1606. He ſailed into the *Weygates*; but being entred, he found the ſame Incumbrance with Ice that *Pett* and *Jackman* had done before: So taſting of the Water, and finding it freſh, which neither *Burrough*, *Pett*, nor *Jackman*, had obſerv'd, he return'd without any Hope or Probability of a Paſſage that Way: But this not diſcouraging him, he reſolv'd a ſecond Adventure to the Northward of *Nova-Zembla*, to ſee what might be perform'd that Way.

So in the Year 1607, he ſet forward, and arriv'd on the Coaſt of *Nova-Zembla* in the Lat. of 73, where he met with Ice; and ſo coaſted the Shore till he came to the Lat. of 76, where he could get no farther, and by the Ice was there driven on Shore, and his Ship broke in pieces by it, and he confin'd to Winter there, where they all endur'd the greateſt Extremity of Cold that ever Mortals did. The Winter being paſt, they with Difficulty, in two Boats, got to *Cola* in *Lapland*; but before their Arrival there, *William Barents* dy'd, to the great Grief of all his Company.

The next that attempted it, was that famous Diſcoverer of our Nation, Mr. *Henry Hudſon*, in the Year 1610; but he being diſhearten'd by the Voyage of *Barents*, attempted but little.

So the Thoughts of a Paſſage by the N.E. was wholly laid aſide, till Captain *Wood* undertook it again; of whoſe ill Succeſs, we have heard already.

Cherry Iſland.

THis Iſland lies in 74 Deg. 30 Min. N. Lat. and in Long. 40. It was firſt ſo call'd, and diſcover'd to be of any Profit, in 1603. A Ship then ſet out at the Charge of Sir *Francis Cherry* touch'd upon it, and call'd it by his Name.

May 1. 1604. *Stephen Bennet* ſail'd from *London*, and *July* 8. came in Sight of this Iſland; and going aſhore, one of his Men with a Gun kill'd as many Fowls as almoſt laded the Boat: They found likewiſe many Foxes. In another Bay, they ſaw an incredible Number of Morſes ſwimming in the Sea, and 1000 lying on the Ground like Hogs. They kill'd 15, and found as many of their Teeth as fill'd a Hogſhead.

In 1605, the ſame Perſons flew there abundance of Morſes with Lances, which they found did greater Execution than Guns. They made 11 Tun of Oil of their Blubber. In 1606, they return'd, and in 6 Hours flew 800 Morſes, and 2 great Bears: Of which they made 22 Tun of Oil, and 3 Hogſheads of Teeth. In 1608, they flew 900 Morſes in 7 Hours, which made 31 Tun of Oil. They brought one Male Morſe to *England*, which liv'd 10 Weeks, and was taught many Things. In 1610, two Ships arriv'd there, and found three Lead-Mines. They ſet up an Enſign, as a Token of their taking Poſſeſſion of the Iſland for the *Ruſſia* Company. Three other Ships kill'd 800 Morſes there that ſame Year.

It is worth Obſervation, That both the Whale and Morſe-fiſhing was known and practis'd 800 Years ago, as appears by the Relation which *Other* the *Norwegian* made to *Alfred* King of *England*, when he acquainted him, that the Morſes were hunted for their Teeth, which were then mightily eſteem'd.

Mayen's *Iſland.*

John Mayen's Iſland has its Name, as the *Dutch* pretend, from the firſt Diſcoverer, their Countryman. Some take it to be what the *Engliſh* call *Hope* Iſland. It is of no great Conſequence now, ſince the Whales have left it; but formerly it was frequented in the Summer-time on the Account of Whale-fiſhing, and was well known to moſt of the Northern Adventurers of *Europe*. On the Weſt-Side 'tis not ſo much inclos'd with Ice as on the North, and therefore Mariners ſteer their Courſe to the Weſt-Side; but if by Miſtake they come to the Eaſt-Side, they are forc'd to ſail North about the Iſland, which is very dangerous, by reaſon of the Ice and high Winds. The Sea flows here from S. to N. and ebbs from N. to S. At the North-End lies *Bears* Mountain, which takes up the whole Space betwixt the two Shores: 'Tis very ſteep, and ſo high, that 'tis ſeen 30 Miles off at Sea. It derives its Name from the many Bears ſeen upon it. There are ſeveral Bays in this Iſland, to which the *Dutch* have given Names; one of them is call'd the *Engliſh* Bay. The Sea is 60 Fathom deep about a Musket-ſhot from the Shore; but a little further, the Sounding-Line cannot reach the Bottom. It lies from S. W. to N. E. and the further it ſhoots in Length, the narrower it grows. The Northermoſt Point of it lies in 71 Deg. 23 Min. N. Lat.

CHAP. VIII.

GRONELAND.

CAll'd alſo *Groinland*, *Groenland*, and anciently *Engroenland*, lies (as the Iſlanders ſay) like a Half-Moon, about the North of their Country, at the Diſtance of 4 Days ſailing; yet it ſeems not to lie ſo much Eaſt, but rather on the North of *America*. The Lat. of it, from Cape *Farewil* to the moſt Southerly Point, is 60 Deg. 30 Min. It is unknown how many Deg. it lies North. The Eaſt and Weſt are encompaſſed by two great Oceans; but at what Deg. of Longitude, is not yet diſcover'd: Only Mr. *Fotherby* found it near the Coaſt of *Groneland* in 71 Deg. and the South of *Groenland* to be above 200 Leagues. Common Maps place the moſt Eaſtern Parts in 15 Deg. of Longitude.

It is ſaid to have been firſt diſcover'd by a *Norwegian* nam'd *Eric Rotcep*, who having committed a Murder in *Iſeland*, reſolv'd to fly to ſome ſtrange Country. He landed here, and, becauſe of its Greenneſs, call'd it *Groenland*. He ſent his Son to *Olaus Trygger*, King of *Norway*, to get his Pardon, which was obtain'd. Upon this, many Gentlemen adventured to plant there, ſettled Chriſtianity, and built two Towns, called *Garde* and *Albe*. The King ſent thither a Vice-Roy, who had his Seat at *Albe*, which was alſo made a Biſhop's See, and had a Cathedral. They write alſo of a Monaſtery dedicated to St. *Thomas*, which they pretend was built of Pumice-Stone, and that it had a Spring ſo hot, as to boil their Meat, and being convey'd into the Rooms by Pipes, warm'd them as well as Stoves; but this ſeems fabulous. This ſmall Colony fail'd about 1349, whether by a Diſeaſe they call'd the *Black Plague*, or the Barbarity of the Natives, is not certain. In 1406, the Biſhop of *Dromtheim* ſent one *Andreas* to bring an Account of the State of Chriſtianity there; but he never return'd.

The late Voyages to thoſe Coaſts were to find out a N. W. Paſſage to *China*, after the N. E. Paſſage had been long ſought in vain.

Digitized by Google

Martin Frobisher was the first who set out for that Design in 1576, and he came to a great Inlet in 62 Deg. call'd by him *Frobisher's Streights*. He sail'd 60 Leagues into it, and had main Land on either Side. He found an Oar, which he thought to be Gold, but it prov'd only Black Lead. They found a Silver Mine; but it lay so deep in the Rocks, that they could not dig it. They melted also Gold, but in very small Quantities, out of Stones they found in *Smith's* Isle. They found a dead Fish 12 Foot long, not unlike a Porpus, with a Horn growing out of his Snout like that call'd the *Unicorn's Horn*, which is still kept at *Windsor*. In 1578, he took Possession of the Land in the Name of Queen *Elizabeth*, and call'd it *Meta Incognita*.

In 1585, 1586, and 1587, Mr. *John Davis* was employ'd in this Design. He enter'd a Streight on the West-Side of *Groenland*, call'd after him, *Davis's Streights*; then into a wide Sea, 72 Deg. 12 Min. Westward, where there was 40 Leagues betwixt Coast and Coast. Mr. *Hudson*, in 1610, went to the S. W. of *Davis's Streights*, 100 Leagues further than any had done, which he call'd *Hudson's Streights*. And in 1615, and 1616, Mr. *Baffin* discover'd that there was no Passage in the North of *Davis's Streights*. He found Rocks of white Stone, finer and purer than Alabaster, and Plenty of Angelica, which the Natives us'd to eat.

In 1605, the King of *Denmark* set out 3 Ships, *John Cuningham*, a *Scots-man*, was Admiral: They went a great way up *Davis's Streights*. In a Place they call'd *Cuningham-Ford*, they found Stones, out of 100 Weight of which they extracted 26 Ounces of fine Silver. They brought with them 3 of the Natives of *Groenland* to *Denmark*.

In 1619, *John Munch*, with 2 Ships, was sent thither by the King of *Denmark*. They arrived at Cape *Farewell* in 60 Deg. 30 Min. They could not handle their Tackle for Icicles. He call'd that Part of *Hudson's Bay* towards *Groenland*, *Mare Christianum*; and the South Part of the Bay he call'd, *Mare Munum*. As to the 3 *Groenlanders* transported at several times to *Denmark*, the King commanded them to be treated with all possible Humanity. They lov'd Flesh and Fish raw better than all other Meats. They abhorr'd Wine and Brandy. Train-Oil was their favourite Drink; but no Offices of Kindness or Care could take off their Melancholy and Chagrin, for the Want of their belov'd Country. Two of 'em were dextrous at rowing. They often had a Design to make their Escape home, and were excellent in diving for Pearl-Muscles; but the Governor's Covetousness and Cruelty, in making them dive in Winter, kill'd one of them. The other never enjoy'd himself after: He was resolute to go home, and told those who dissuaded him, That he would go Northward so far, and then the Stars would direct him to his own Country.

The Country is almost all high Land, cover'd with Snow. It has little or no Wood, except some few Bushes, and not many Plants or Herbs. They live upon Fish, and have but few Beasts. The Country is subject to Earthquakes, but healthful. The Natives neither plant nor sow, tho' the Soil seems to be fertile and pleasant betwixt the Mountains. The North Parts are undiscover'd, because of the Ice; and the Southern Part consists of many Islands, which occasion Variety of strong Currents.

Their Beasts are Foxes, Bears, Black Rain-Deer, and Dogs; the bigger Sort of which draw their Sleds; the lesser kind they feed for Meat. All those who have been there talk of a North Light, as they call it, because it appears in that Point. They say it resembles a great Pillar of Fire, darts out Streams every way, moves from Place to Place, leaves behind it a Mist or Cloud, appears usually about the Time of the New Moon, enlightens the whole Country, and continues till it be hid by the Beams of the Sun.

Their Fish are Whales, Dog-Fish, and Sea-Unicorns; the Horns, growing in their Snouts, are kept as Rarities in Princes Cabinets. The Natives use them to head their Darts and Arrows, and when sharpen'd and ground on Stones, are as piercing as ours. This Creature fights the Whale with his Snout.

They have Fowls here in great Number, particularly *Solan* Geese, such as are in the Island of the *Bass* near *Edinburgh*. The Natives use their Skins for Clothes, with the Feathers inwards in Winter, and outwards in Summer. Two or Three of our Men kill'd 150 of these Geese with their Guns in

Digitized by Google

in one Day. Their Skins are thicker, and their Flesh worse tasted, than those elsewhere.

The *Norwegians* found several Nations there, govern'd by different Kings, who all join'd in War against them. Our late Discoverers found a Country in 66 Deg. 50 Min. the Natives call themselves, as they thought, *Scraanga*, and said they had a great King call'd *Cachico*, who was carried on Men's Shoulders.

Their RELIGION.

THey seem to worship the Sun; for when our Men invited them to Conversation, they held up their Hands toward it, crying, *Totan*, and would not come near till they did the like. Yet some, who have been further in the Country, say, they found such Images as we make of the Devil, with Altars, and the Bones of many Beasts by them. The Natives are given to Inchantment and Sorcery, and when they worship the Devil, lie flat on their Bellies, and mutter their Prayers into the Ground, under which they conceive the Devil to have his Abode. In some Diseases they tie a Stick to a great Stone, and pray to it, and if they can lift it up easily, they think their Prayers are heard.

Their STATURE *and* TEMPER.

THey are generally low, have black Hair, flat Noses, broad Faces, Lips turn'd up, of a ripe Olive Colour, and some of them quite black. The Women stain their Faces with blue, and sometimes with black Streaks, which they let into the Skin, by pricking it with a sharp Bone, so as it can never be taken out again. They very much resemble the *Samoeids* and *Laplanders*. They are active, strong, courageous, and desperate, so that many of them chuse rather to throw themselves Head-long from the Rocks, than be taken by our Men. They are theevish, revengeful, and treacherous, and not to be gain'd by any Civilities; so that frequently after they have been kindly entertain'd, they would shoot at, sling Stones, and kill our Men if they could. They delight exceedingly in Musick, and keep Time to it with Voice, Hands and Feet. They are so very affectionate one to another, that meeting a *Danish* Seaman, who looked somewhat like them in his Features, they gave him all possible Demonstration of Kindness.

Their HABITATIONS.

IN the Summer, when they fish, they have Tents, which they remove from Place to Place in their Boats: They consist of 4 Poles, which they cover with Skins. In the Winter, they retire to the Vallies, and their Houses are round Caves at the Foot of an Hill, near together, and Passages from one to another within. Their Doors open to the S. and, with the Entries, stand without the Caves, and are made artificially with Ribs of Whales, cover'd with Seal-Skin. The Place where they lie is rais'd higher than the rest, and cover'd with Moss.

Their Way of TRADING.

THey make two Heaps, one of such Things as they want, and the other of what they would part with, and they ballance the Account, by adding or taking away from the respective Heaps.

Their CLOTHES.

THey wear either the Skins of Birds, as has been mention'd already, or those of Seals, Dog-Fish, *&c.* with the Fur outward, the better to deceive the Seals when they fish for them. They sow their Clothes with the Sinews of Beasts, and with Needles made of Fish-Bones.

Their BOATS.

THey make them of Whale-Bone, stitch'd with Sinews of Beasts, and cover'd with Seal-Skins. They are shap'd like a Weaver's Shuttle, so that they can row 'em either way. In the middle are the Ribs, to keep the Sides asunder, and to make a Hole

Digitized by Google

in the Covering where the Rower ſits. They have a Deck of the ſame Materials. In the middle there's a Hole as big as a Man's Waiſte. When he goes to Sea, he ſets himſelf in that Hole, ſtretching his Feet forward into the Hollow of the Boat, and ſtops the Hole ſo cloſe with his Frock, that no Water can enter, tho' it were at the bottom of the Sea. His Frock is ſtreight ty'd at the Wriſts and to his Neck, and his Capouch is alſo ſew'd cloſe to it; ſo that if his Boat be overturn'd in the Sea, he riſes again without any Wet, either upon his Skin, or in his Boat. They have but one Oar, 6 Foot long, with a Paddle 6 Inches broad at either End. This ſerves both to ballance his Boat, and to move it, which he does with ſuch incredible Swiftneſs, that one of our Boats with 10 Oars is not able to keep Company with them. The *Daniſh* Relation ſays, they row'd ſo ſwift, that they dazzled the Eyes of the Spectators; and tho' they croſs'd frequently, they never interfered or hit one another. They fiſh ordinarily with long barb'd Darts, with Bladders ty'd to them, that when they have ſtruck the Fiſh, he may ſpend himſelf by ſtruggling to get under Water, which yet he cannot do, and ſo is eaſily taken. Their Fiſhing-Boats are from 10 to 20 Foot long, and their larger Boats are 30 or 40, with 10 or more Seats for Rowers. *Bembus*, in his *Venetian* Hiſtory, ſays, That one of theſe Boats, with 7 Perſons in it, was by Storm caſt upon the Coaſts of *Britany*.

CHAP. IX.

FREESLAND.

SOme ſay, this Iſland lies 60 Deg. more Weſtward than any other Part of *Europe*. Mariners are not agreed about its Extent: Some ſay, it is not much leſs than *England*. There are Maps which place it from Lat. 60 to 63, 30 Min. and in Long. from 340 to 347.

It was firſt diſcover'd by *Nicolao* and *Antonio Zani*, two *Venetian* Gentlemen, that were ſhipwreck'd here.

They ſay, the Inhabitants are very good Chriſtians, and civil, govern'd by a great Lord call'd *Lichamay*. The People our Men ſaw reſembled the *Groenlanders* in every thing, and were perſwaded it join'd to *Groenland*; in which they were confirmed, by the many Iſlands of Ice they ſaw there; which coming from the North, ſhews that there is Land that way. There is ſome pale Coral here, and little Stones, clear as Chryſtal, in a Place they call *Weſt-England*. There is good fiſhing every where upon the Coaſt, which is ſo full of Ice, that 'tis almoſt inacceſſible. The Land is rugged and high, and the Mountains cover'd with Snow.

CHAP.

CHAP. X.

Of ISELAND, *or rather* ICELAND.

THis Country, according to ſome Maps, lies from 64½ Deg. to 68 N. Lat. and from Long. 345 to 4. *Moll* from 355 to 8. *Buno* on *Cluverius* ſays, it is 144 *German* Leagues long, and 65 broad. It lies 420 Miles W. from the Coaſt of *Norway*, and 360 N. from *Scotland*.

It was firſt diſcover'd by *Nadoccus*, a Privateer of *Norway*, in 860, who, becauſe of the great Quantity of Snow there, call'd it *Snowland*. Some Years after, *Flacco*, another *Norway* Privateer, gave it the Name of *Iceland*, from the great Quantity of Ice he found there.

It was firſt inhabited by the *Norvegians* in 874, who were led thither by *Ingulphus*, one of their Lords.

Their Government was an Ariſtocracy till the Year 1262, that the Kings of *Norway* ſubdued them.

They continued in Idolatry till the beginning of the 11th Century, that *Olaus Trygger the Pious* planted Chriſtianity among them, which occaſion'd 20 Years Civil War with the Natives. *Chriſtian* III. about 1550, introduc'd the Reformation. *Chriſtian* IV. cauſed the Scriptures to be tranſlated for the Uſe of the Illanders into their own Language.

Of the AIR, SOIL, *and* PRODUCT.

THE Air is very cold, and the Country Mountainous; but in the Southern Parts of the Iſland, where it is more level, the Meadows are ſo rich, that Beaſts put into them muſt be fed by Meaſure, otherwiſe they would burſt themſelves. The Natives love the Fleſh of Bears, Wolfs and Foxes, which they catch upon the Ice, better than Beef. The Oxen of this Iſland have no Horns. There are ſcarcely any Trees, ſave low Birch, and Juniper Buſhes. Horſes and Cows are their only Cattle, which feed on dry'd Fiſh when they want Hay. They have excellent little Dogs, not unlike thoſe of *Malta*. They have alſo Falcons and White Bears. There is a ſmoaking Fountain, whoſe Exhalations turn every thing into Stone, without altering the exteriour Form. There is alſo another Fountain, whoſe Water kills all that drink of it. It has 3 very high Mountains, cover'd with Snow at Top, which at Times vomit Fire: The moſt noted is *Heela*, in which there are rich Mines of Brimſtone. It often throws out Flames and Stones at a prodigious diſtance, ſo that thoſe who adventure too near, are frequently ſwallow'd up in Gulphs of Brimſtone, which are ſo cover'd with Aſhes, that one cannot perceive them. The Natives call this Place the *Mouth of Hell*: And the frequent Apparition of Ghoſts there, (if we may believe *Olaus Magnus*) confirms them in that Opinion. *Groſius* thinks, that *Mexico* was Peopled from this Place. In 982, *Ericus Rufus* Peopled *Greenland* from hence.

The Inhabitants were formerly accounted nothing inferior in Wit and Underſtanding to any of the Northern Countries, and were ſaid to be skill'd in the Greek. They have writ the Hiſtory of their Country in their own Language. They are very ſtrong, but of low Stature, the talleſt not above 5 Foot high. *Olaus* ſays, They have Spirits that ſerve the Natives in their ordinary Affairs. The People are long liv'd, ſome of them living to 150 Years.

Their TRADE.

THeir principal Traffick conſiſts in Butter, Tallow, Sulphur, dry'd Fiſh, and ſmall Cod, of which Stock-Fiſh is made. They

Digitized by Google

They have Whales, but not of ſuch Value as thoſe about *Greenland*. An Ancient Poem, writ about 1449, call'd, *The Engliſh Policy*, ſays, That we then drove a conſiderable Trade by fiſhing there.

The Inhabitants dwell in Caves, and, for want of Wood, build their Tents of Fiſh-Bones, which they alſo grind, and make Bread of.

Of the Diviſion of ISELAND.

THis Iſle is divided into 4 Parts, nam'd according to the 4 Quarters of the World they lie towards. The Inhabitants call them thus: The North Quarter, *Nordlendinga Fiordung*; the Southerly, *Sudlendinga Fiordung*; the Weſterly, *Weſtlendinga Fiordung*; the Eaſterly, *Oſtlendinga Fiordung*. Thoſe 4 Parts are ſubdivided into 12 Bailiwicks, which contain about 330 Pariſhes, and have their particular Governor, ſubordinate to the Governor-General of the Iſle, under the King of *Denmark*.

1. *North-Quarter.*

Is the greateſt and beſt Peopled of the whole Iſle. *Holar*, or *Hola*, ſeated upon the Gulph *Skaga*, is the chief Town here, and a Biſhop's See. 'Tis a ſmall Town without Walls, and has a good and well frequented Harbour.

2. *The Eaſt-Quarter.*

The chief Town is *Kurbar*, which is but ſmall.

3. *The South-Quarter.*

The chief Town of this Quarter, and of the whole Iſle, is *Shalbot*, which lies in 66 Deg. 25 Min. The longeſt Day is 23 ¼ Hours. 'Tis ſituated among Mountains, and has no manner of Fortifications. It is a Biſhop's See, and the chief Court of Juſtice for the whole Iſle is kept here. It is 160 *Engliſh* Miles from *Hecla*. *Haner* and *Keplawick* are two commodious and well frequented Harbours. *Beſtede*, or *Coningſgard*, is a ſmall Fortreſs, where the Governor keeps his Court.

4. *The Weſt-Quarter.*

Gils, a ſmall Hamlet, is the Chief of this Diviſion.

CHAP. XI.

Of the THULE of the ANCIENTS.

THis Country having by many Authors been taken for the *Thule* of the Ancients, we think proper to ſay ſomething in this Place as to the Opinions both of the Ancients and Moderns about it. Some derive the Name from the *Arabian* Word *Tule*, which ſignifies Far off. This is ſupported by ſome Authorities; for the *Carthaginians* ſeem to have called *Ireland* by that Name, becauſe it was the fartheſt of their Diſcoveries: But the Opinion of *Bochart*, as to the Name *Thule*, ſeems to bid faireſt for the Truth: He thinks *Thule* is a *Phœnician* Word, (the *Phœnicians* being the firſt Diſcoverers of the Place) which ſignifies an Iſland of Darkneſs, becauſe of the Length of their Nights. Both Greek and Latin Authors were of Opinion, That Northern Places were condemn'd to perpetual Darkneſs, as *Pliny* and *Solinus*, &c. *Tibullus* ſpeaking of the Frigid Zone, ſays,

Illic & denſâ Tellus abſconditur Umbrâ.

In thickeſt Darkneſs, there the Earth's involv'd.

Strabo

Digitized by Google

Strabo tells us, That in *Homer*, the North and Darkneſs are the ſame thing. The *Arabians* alſo call the Northern Sea the Dark Sea. The Poet *Statius*, ſpeaking of *Thule*, has the ſame Notion of its Darkneſs, in his 3d Book, *Heſperiæ vada caligantia Thules*; *i. e.* the dark Friths of Weſtern *Thule*; and in his 4th Book to *Marcellus*, *Nigræ Littora Thules*; *i. e.* the Coaſts of dark *Thule*.

Authors are not agreed where the *Thule* of the Ancients was; ſome are for having *Iſland* to be it. *Pythias Maſſilienſis* ſeems to favour this Opinion, for he places *Thule* under the Polar Circle; but the Character that *Polybius* and *Strabo* give him, leſſens his Credit, for they call him a trifling lying Author. It is not probable, that the *Romans* durſt loſe the Sight of the Land, and venture into thoſe dangerous and frozen Seas; far leſs could they be acquainted with the Inhabitants of *Iſland*, and defeat them in Battles, as we find by their Authors they did thoſe of *Thule*. Others maintain, That *Ireland* was the *Thule* of the *Romans*; but tho' the *Phœnicians* have been in *Ireland*, it is certain the *Romans* never were there. The *Glacialis Ierne*, *i. e.* the Frozen *Ierne*, of *Claudian*, in Verſe 33, of the 4th Conſul. of *Honor.* cannot be *Ireland*, becauſe it deſerves not the Epithet of *Glacialis*, or *Icy*; for their own Writers ſay, That Froſt and Snow don't continue long there: But *Claudian* in this Place gives an Account how *Theodoſius* paſs'd the Friths of *Forth* and *Clyde* in *Scotland*, which are his *Hyperboreæ Undæ*, the *Hyperboreum* Seas; and *Theodoſius* upon that Account is call'd *Veſtator Boreæ*, *D. bellatorque Britanni Littoris*; *i. e.* the Conqueror of the North, and the Subduer of the *Britiſh* Coaſts. That he enter'd *Strathern*, which to this Day bears the Name of *Ierne*, the *Roman* Medals, Camps, and Military Ways, ſtill to be ſeen there, put it beyond Controverſy; whereas *Ireland* has no Monuments to prove that ever the *Romans* were in that Country.

Others, with greater Probability, think that *Schetland*, or ſome of the *Orkney* Iſlands, was the *Thule* of the Ancients. *Marinus* was of this Opinion, and alſo *Ptolemy*, who ſays *Thule* was a little Iſland in 62 Deg. of North Latitude, not above a Day's Voyage from *Britain*, where the longeſt Day is 20 Hours, which agrees to *Schetland*. *Agathemerus* agrees with this. *Stephanus Byzantin* allows only 20 Hours to the longeſt Day in *Thule*. The Learned *Cambden* is poſitive in this Matter, and obſerves, That Mariners call *Schetland*, *Thylenſel*, which is deriv'd from *Thyle*, or *Thule*.

This Opinion ſeems to be ſupported with very good Reaſons. *Tacitus*, in the Life of *Julius Agricola*, ſays, when the *Roman* Navy ſail'd about *Britain*, *Deſpecta eſt & Thule quam hactenus Nix & Hiems abdebat*; i. e. *Then* Thule *was diſcover'd, which hitherto was unknown, becauſe of its Snow and conſtant Winter.* This puts it out of doubt that it could not be *Iſland*, which was impoſſible to be ſeen by the *Roman* Fleet when ſailing about *Britain*. Further, *Silius Italicus* gives the ſame Deſcription of the Way of Fighting by the Natives of *Thule*, that *J. Cæſar*, *Mela*, *Martial*, and *Tacitus*, give of the Old *Britains*. In his 17th Book he ſays,

Cærulus haud aliter cum dimicat Incola Thules,
Agmina falcifero circumvenit eſſeda covino.

The Thule-*Men, whoſe Face has a blue Dy,*
With Chariots hook'd ſurround their Foes that fly.

Seneca calls alſo one of the Tribes of the *Scots*, *Cæruleos Scoto Brigantes*; the Blue *Scoto Brigantes*: And *Claudian*, in the above-mention'd Place, ſtrengthens this Opinion, by joining the *Orcades* and *Thule* together; for he ſays,

——— *Maduerunt Saxone fuſo*
Orcades? Incaluit Pictorum Sanguine Thule.

The Orkney *Iſles were drench'd with* Saxon *Gore,*
And Pictiſh *Blood did thaw cold* Thule's *Shore.*

The Circumſtances of the Story make it plain, that *Thule* can only be in ſome of the Northern Places of *Scotland*. Beſides, *Claudian* in many Places makes the *Orcades* lie over againſt *Thule*. We refer the curious Reader to Dr. *Wallace*'s Deſcription of the Iſlands of *Orkney*, where there are ſtrong Arguments to prove, that the *Thule* of the *Romans* was the Eaſtern Coaſt of *Sutherland*, and the adjacent Country in the North of *Scotland*.

C. H. A. P.

CHAP. XI.

Of MUSCOVY.

The Ancient and Modern EXTENT.

Muſcovy is a great Part of the Old *Sarmatia Europea*, the ancient Boundaries of which were upon the Weſt, 1. The River *Viſtula*. 2. The Gulph of *Finland*. 3. A Line from that Gulph to the *White Sea*. The Northern Limits were the *Sarmatian* or Frozen Sea. Upon the Eaſt, it had the ſame Boundaries with *Europe*, *viz.* the *Palus Meotis*, the Iſthmus of *Taurita Cherſoneſus*, now called *Crim-Tartary*. On the South, it had the *Euxine Sea*, the *Iſter* or *Danube*, the River *Hieroſus*, now *Prut*, and that Part of the *Carpathian* Mountains betwixt the River *Patiſſus*, now *Teys*, and the *Danube*.

The Length of the *European Sarmatia*, from the Conflux of the Rivers *Iſter* and *Patiſſus*, to the Mouth of the *Obi*, is 540 *German* Leagues. Its Breadth, from the *Wolga* to the *White Sea*, 360.

It comprehended Part of the Modern *Moldavia*, lying betwixt the Rivers *Nieſter*, *Danube*, and the *Prut*; a Part of *Hungary* betwixt the *Danube* and the *Teys*; and that Part of *Poland* beyond the *Viſtula*. It comprehended *Pruſſia*, *Livonia*, *Lithuania*, and *Muſcovy*.

The ancient *Greeks* knew little or nothing of the old *Sarmatians*; but becauſe they reſembled the old *Parthians* in Manners, they thought they were of the ſame Origine: The Inhabitants of *Sarmatia Europea* were the *Iſtrici*, ſo call'd from the River *Iſter*: the *Boriſthenitæ*, from the *Boriſthenes*; the *Neuri*, living near that River; the *Alani*, who dwell above the Sea of *Sabach*, near the *Tanais*, or *Don*; the *Roxalani*, who lay to the Weſt of them; the *Geloni*, who inhabited Part of *Mazovia* and *Podolia*; the *Agathyrſi*, who liv'd about the *Palus Meotis*; and the *Hyperborei*, a Name us'd for all Northern Places, Seas and People, that the Ancients were not acquainted with.

The Modern *Muſcovy*, otherwiſe call'd *Ruſſia Alba*, from the white Caps worn by the Natives, is bounded on the N. by the Frozen Sea, by *Great Tartary* on the E. by *Poland*, *Turky*, *Georgia*, and the *Caſpian* Sea, on the S. *Sweden* and *Livonia* on the W.

The Latitude is from *Aſtracan* in 46 Deg. to 73, which reckoning 60 Miles to a Degree, makes 1620 *Engliſh* Miles. The Longitude is from the outmoſt Boundaries of the Dutchy of *Pleſkow*, in 47 Deg. to *Wiatka*, a Biſhoprick, in 80, which makes 1980 *Engliſh* Miles. Others reckon the Extent of *Muſcovy* from the the N. W. to the S. E. *viz.* from the outmoſt Parts of *Muſcovite-Lapland*, to the moſt Eaſterly winding of the *Donn*, 589 Leagues; and from the S. W. to the N. E. *viz.* from the Shore of the *Boriſthenes* or the *Nieper* in *Ukrania*, to the Mouth of the River *Oby*, 460 Leagues. The Czar's Dominions reach to *Argunſkoi* in *Aſia*, upon the Borders of *China*, Lat. 50. Long. 125. according to the Account of *Tybrant Ides*, Ambaſſador to *China* from his Czariſh Majeſty. Some place *Aſtracan* in Long. 90; but Mr. *Moll*, whoſe Maps we follow, places it in 73, and *Morden* in 78.

Of the ORIGINE *of the* Muſcovites.

Some, from the Similitude of the Name, fancy that *Meſech*, or *Moſoc*, the Son of *Japhet*, Peopled this Country. We find alſo in *Strabo* frequent Mention of the *Moſchi*, tho' he is not poſitive where their Country was. *Mela* places them near the *Caſpian* Sea; *Pliny* near *Iberia*, which is now call'd *Georgia*:

Digitized by Google

Georgia: *Lucan*, and after him *Sidonius*, ſay, they dwelt near the *Sarmatæ*: So that the *Moſchi* were ſome of thoſe many Nations that dwelt in the Southerly Parts of the *Ruſſian* Empire. But their old Hiſtories ſay, they were moſt anciently call'd *Ruſſes*. *Pliny* and *Ptolomy*, as well as ſome Modern Latin Authors, call them *Roxalani*, and think they are the Poſterity of the ancient *Roxalani*, who dwelt about the *Taurica Cherſoneſus*. Others ſay, this Country was call'd *Roſſia*, which ſignifies Diſperſion, or Scattering, becauſe they liv'd diſpers'd, without any certain Government, in continual Quarrels and Diſſentions one with another, till *Genareta Daniel*, or *Ivan* his Son, ſirnam'd *Caleta*, gather'd and join'd them together in one Government and Body; and for their better Union, he built almoſt in the middle of the Country the City *Moſcow*, upon a River of that Name, and made it the Metropolis of the Empire; from whence they began to be call'd *Muſcovites*. *Bochart* thinks, in *Phaleg. Lib.* 3. *Cap.* 13. they are from ראש משך, i. e. *Rhos* and *Meſech*. *Ezech. Cap.* 38. *v.* 2. who were the ſame with the *Roſſi* and *Moſchi*, People that dwelt near the River *Araxes*. He quotes the *Nubian* Geographer and *Tzetzes* for this, who call the *Scythians* of *Taurica*, *Rhos*. *Strabo* and *Pomponius Mela* call them the *Aſiatick Moſchi*. The *Sclavonian* Hiſtories ſay, they have the Name of *Ruſſes* from one *Ruſſus*, the Brother of *Lechus*; but the *Muſcovites* themſelves boaſt that they are deſcended from the ancient *Greeks*.

The PRODUCT.

THE Commodities of this Country are *Sturgeon*, *Pot-Aſhes*, *Hemp*, ſuch Plenty of *Honey* in the Woods, that hollow Trees are filled with it; *Salt-Fiſh*, *Soap*, *Ruſſia-Leather*, *Elkes-Hides*, Fine *Furs*, as *Ermins*, *Martens*, *Sables*, *Black Foxes-Skins*, *Beavers*, *White Bears*, *Squirrels*, *Welvarin*, and *White Foxes-Skins*; as alſo that of a *Water-Rat*, which ſmells like Muſk. *Siberia* is the moſt famous Province of *Muſcovy* for Furs: The Czar has the Monopoly, and makes Preſents of them. *Wax*, of which they have Ship'd in one Year 50000 Pood Weight, each Pood containing 40 lb. Weight. *Tallow*, of which in one Year they have exported 100000 Pood. *Hides* of *Black-Cattle*, of which they have ſold in a Year 100000, beſides 30000 Hides of *Loſh* (*Lozzi*) and *Buff*; with multitudes of *Goat-Skins*, and others: *Train-Oil*, made of *Seals*; *Caviar*, made ordinarily at *Aſtracan* of the Roes of *Sturgeon* and *Beluga*, a Fiſh 15 Foot long, much like a *Sturgeon*, but without Scales. They ſalt and preſs the Roes, and put them up in Casks. In one Fiſh, they find ſometimes 150 or 200 lb. Weight of Spawn. The *Caviar* of *Sturgeon* is ſmall, black, and waxy: That of *Beluga* is darkiſh, grey, and the Grain as large as Pepper. This Spawn they cleanſe from its Strings, ſalt it, and drein away the oily Part, by laying it on ſhelving Boards; then they put it into Casks, and preſs it till it grow hard. *Iſinglaſs*, or *Ichthyocolla*, made of the Sounds of Fiſh. This Trade is reſerv'd to the Emperor himſelf. *Salt*, of which they have great Plenty: *Tar*: *Morſes-Teeth*, tranſported into *Turky* and *Perſia*: *Slude*, which is a ſoft Rock in *Corellia*, that they cut out in Lumps, and afterwards into ſmall Pieces, we call it *Muſcovy-Glaſs*; it can neither be broken nor burnt: 'Tis the *Lapis Specularis*, and is us'd for Lanthorns, Windows, *&c.* *Salt-Petre*, and *Maſts*, better than thoſe of *Norway*. The Commodities of this Country are tranſported by the Way of *Archangel* to all Parts of *Europe*; and by *Aſtracan* and the *Caſpian* Sea to *Perſia*, and other Places in *Aſia*.

Their AIR, *and* SOIL.

THey differ according to the Situation of the Places; ſome are in the 8th Climate, and ſome beyond the Polar-Circle. It is generally marſhy, full of Forreſts, Pools, and Lakes, which hinders its being populous. Towards the North, the little Corn they ſow never comes to Perfection; for they have 9 or 10 Months Froſt and Snow. Towards the South, they have Plenty of Corn, with which they furniſh *Lapland*, and the North of *Sweden*. The *Dutch* alſo tranſport Corn from this Place. The Heat is intolerable in Summer, being reflected from the Sandy Ground. This likewiſe makes their Corn to ripen very ſoon. They ſow in the end of *May*, and reap in

Digitized by Google

July. In Winter, the Froſt is ſo violent, that the Rain freezes as it falls, and the Earth chaps, by reaſon of Cold, ſometimes above 20 Fathom long, and a Foot broad: Travellers are found dead in their Sleds, and ſometimes are frozen to Death, ſtanding like Statues. Their Houſes are lin'd with Furs, and they are obliged to make uſe of Stoves. When they travel on the Road, they rub their Noſes and Ears with Snow, as a Remedy againſt their freezing. The *Turk*'s Ignorance of this, occaſion'd that of 70000 Men who invaded *Muſcovy*, 40000 were deſtroy'd by the Cold. In Winter, they lay the Bodies of their dead Friends on Heaps in the Belfries of their Churches: But when they deſign to bury them immediately, they put a great Fire of Wood for a long time upon the Place where they are to dig their Graves. Becauſe of the great Cold, they never putrify nor ſtink; but their uſual Time of burying after Winter is in the beginning of *April*, when the Earth is fit for digging. It is ſurprizing to Strangers to ſee Fields all covered with Graſs and Plants, that a few Days before were cover'd with Snow and Froſt. In Winter, they travel conveniently on Sledges, wrapt up in Furs. In Summer, they have prodigious Quantities of Gnats and other Inſects, which are very troubleſome. The Heat in Summer is extraordinary, for nothing leſs can melt their Ice and Snow. Sometimes their Corn is burnt up by the Heat. The Country is in general overgrown with Wood. Parts of the great *Hercinian* Forreſt, which anciently over-run all the North, are more viſible here than in other Places. This proceeds either from the Idleneſs of the People, or becauſe the Country is not populous enough to cut it down. The talleſt Trees of the World grow here. Their Forreſts conſiſt moſt of Firs and Birch, which love a light ſandy Soil. They have Apples, Pears, Plumbs, Cherries; yet they are never quite ripe, nor can they be preſerved as in other Places. Fruits and Herbs of ſudden Growth are very good here, as all ſorts of Berries, Gourds, Melons, which are exceeding large, and eat well; ſome of them weigh 40 lb. *Olearius*, and other Authors, ſpeak of a certain Melon and Gourd found near *Aſtracan*, *Samara* and *Caſan*, called by the Natives *Boranetz*, or a Lamb, that grows upon a Stalk. Others call it *Zoophyton*, which ſignifies the Animal Plant. It withers, or, as ſome ſay, eats up all the Graſs within its reach; after which the Stalk withers, and the Fruit ripens. The outward Rind of this Melon is cover'd with a kind of Hair, which they uſe inſtead of Fur.

They ſhew'd us, ſay the *Holſtein* Ambaſſadors, ſome of thoſe Skins, which were cover'd with a ſoft frizling Wool, not unlike that of a Lamb newly taken out of a Sheep's Belly, and ſwore that they came from that Fruit. *Julius Scaliger* ſays, the Wolf is the only Beaſt that will feed upon this Lamb, and therefore 'tis us'd as a Bait to catch him. The *Muſcovites* affirm the ſame.

In the Time of the Great Duke *Michael Federowitz*, who began his Reign in 1613, and was a great lover of Gardening, Flowers and Sweet-Herbs, were firſt tranſported into *Muſcovy*, and planted there; and it is but few Years ago ſince the firſt *Provence*. Roſes were brought hither by *Peter Marcellis*, the *Daniſh* Commiſſary. Some of the *Germans* and *Dutch* have lately ſhow'd them the Way of managing the *Aſparagus* Beds; ſo that they grow now to the Thickneſs of 2 Inches. The *Muſcovites* were averſe to all Sallad-Herbs till of late.

Their TRADE *of* IMPORT.

THE Commodities imported to them, are *Silk*, *Suffi*, *Cloth of Gold*, *Cloth of Silver*, *Engliſh Cloth*, *Tapeſtry*, *Pearls* and *Precious Stones*, *Spices*, *Wine*, *Brandy*, and *Hot Liquors*. In 1634, the Emperor diſcharg'd, by an Edict, the Uſe or Importation of any Tobacco, on Pain of being whip'd, or having their Noſtrils bor'd; but the preſent Czar has allowed the *Engliſh* and *Dutch* to import it into his Dominions. Their Trade is always by Barter. They are not allow'd to buy Foreign Goods with Money, and muſt not export Coin. Before the Diſcovery of the Paſſage by Sea to *Archangel*, their Trade was carried on by Way of *Narva* and *Revel*; which tho' nearer, yet Merchants chuſe to go to *Archangel*, to avoid the great Impoſts by the *Swedes* and *Danes*.

The

The ESTABLISHMENT *of the* Engliſh Ruſſia *Company.*

THE firſt Diſcoverers of the Way by the North Cape were the *Engliſh*. In the laſt Year of *Edward* VI. *viz.* 1553, *The Company of Merchants Adventurers for the Diſcovery of unknown Places* ſet forth 3 Ships, under the Command of Sir *Hugh Willoughby* and *Richard Chancellour*. Sir *Hugh* and the other Ship put into a River on the Deſart-Coaſts of *Lapland*, where they were ſoon frozen in, and their Bodies were found dead next Summer by *Ruſſian* Fiſhermen. Mr. *Chancellour* purſued his Voyage, and firſt diſcover'd the Bay of St. *Nicholas*. The Fiſhermen there were frighted at the Greatneſs of his Ship, and endeavour'd to fly from him; but he overtook them, and was inform'd the Country was call'd *Ruſſia*, and the Duke's Name was *Juan Vaſſilwick*. He was honourably conducted to Court, and ſplendidly entertain'd by the Duke; and having obtain'd a Privilege written in *Ruſſe*, with the Great Duke's Seal, they return'd in 1554. In 1555, the ſame Emperor granted the firſt Privileges to the *Engliſh* Merchants, *viz.* That they ſhould not be liable to the Payment of any Toll or Subſidy for ever; That they ſhould not need to ask any Licence or ſafe Conduct; That they might ſell their Goods to whom they pleas'd, of whatever Country; That all *Engliſhmen* there ſhould be under the Company's Government; That no *Engliſhmen* ſhould be impriſon'd for Debt, upon finding Bail; That he would aſſiſt the Governor and Chief Factor, if any rebell'd, and refus'd to obey their Commands; And that they ſhould have Diſpatch and ſpeedy Juſtice when cited to *Ruſſian* Courts. The ſame Year *Philip* and *Mary* granted a Charter to the *Ruſſian* Company, by which they were empower'd to make Conqueſt of undiſcover'd Places; and all others not of that Company were diſcharg'd, and prohibited Trading to *Muſcovy*. In 1556, the Company ſent two Ships: At their Return, they brought with them an Ambaſſador from the Czar. The *Edward* on the 10th of *November*, arrived in the Bay of *Pitſlego*, in the North of *Scotland*, where ſhe was ſplit upon Rocks in the Night: Mr. *Chancellour*, with 7 *Ruſſes*, and divers Mariners, were drown'd, the Ambaſſador hardly eſcaping. Many of the Preſents deſign'd for the King and Queen were loſt, *viz.* 6 Timbers of rich Sables; 1 Timber is 80 Skins; 20 entire Sables, with Teeth, Ears, and Claws; 4 living Sables, with Chains and Collars; 30 large and beautiful Luſorns; 6 large and great Skins, ſuch as are only worn by the Emperor; a large and fair white Jer-Faulcon, for the Wild-Swan, Crane, Gooſe, and other great Fowls; with a Drum of Silver, us'd as a Lure to call the Hawk. Theſe Privileges from the Czar were ſometimes renewed and augmented, with the Excluſion of all other Nations from that Trade: Sometimes they were retrench'd and leſſen'd, according to the Intereſt of the Czar. Upon the Murther of King *Charles* I. the then Czar revok'd all the former Privileges granted to our Merchants, the *Dutch* having aggravated that Matter to our Loſs, and their own Advantage.

Of the MANNERS *of the* Muſcovites, *from the Travels of the* Holſtein *Ambaſſadors, and the Earl of* Carliſle, *&c.*

MOſt of them are very barbarous: They deſpiſe all Arts and Sciences. They look upon a Mathematician as a Sorcerer. A *Dutch* Surgeon, for having a Skeleton in his Room there, was accu'd of Magic, and in great Danger of Death; and, after all could be done by his Friends, he was baniſh'd the Country, the Skeleton dragg'd thrô the Streets, and afterwards burnt. Dr. *Fletcher* ſays, ſome of them have very good Parts. A Merchant there is not thought to underſtand his Buſineſs, if he be not Crafty, and well skill'd in Cheating. A *Dutch* Merchant, noted for this Quality, was the more valued for it by the *Ruſſians*; ſo that many of them deſir'd to be his Partners, that they might be perfected in the Way of Cheating. They are much given to Lies and Calumny; inſolent both to Foreigners and one another. They are very quarrelſome, and liberal of

Digitized by Google

their brutiſh Reproaches. Their Reſentments never go the Length of Blood, but end in a Kick or two. Their *Boiars*, or Noblemen decide their Differences upon Horſe-back with Whips. 'Tis but of late they made uſe of Phyſicians, Garlick and Strong-Waters were then their only Remedies for all Diſeaſes; and they are not aſham'd to belch the Exhalations of their Garlick and Onions into the Faces of People of whatever Quality. Their Ignorance of Sciences, and of the World, makes their Converſation run generally upon nothing but Brutality and Vices not to be nam'd, which they commit when Drunk. Men and Women are not aſham'd to come to the Streets ſtark naked from Brothel-Houſes. Drunkenneſs is ſo modeſt a Vice here, that none are free from it, Men or Women. The Wives, after their Husbands are fallen aſleep on the Floor with Drink, ſit upon them, and continue drinking till they themſelves tumble alſo down. They bow their Heads to the Ground to their Superiors, after they have been ſoundly cudgell'd, which is a Demonſtration of the Lowneſs of their Spirits. The greateſt *Boiar*, when he writes to the Czar, expreſſes his Name in the Diminutive, as, *Petrunke twoy Golop, I Petrillo your Slave*, inſtead of *I Peter*. They are perſwaded Phyſicians can cure all Diſeaſes if they pleaſe, and puniſh them ſeverely if their Patients die. The *Boiars* keep great Numbers of Slaves both in City and Country, which commit great Diſorders, and frequently murther People in the High-Ways. Becauſe they us'd to approach their Images with their Breaths ſtinking of Tobacco, the Patriarch obtain'd from the Czar a Prohibition of it. All Strangers admire, that from ſweating in a hot Stove, they frequently go out naked, and wallow in Snow, and return to it again without any Harm.

Reading and Writing is the heigheſt Degree of Learning among them: They count by Forties and Nineties; ſo that their Arithmetick can be none of the beſt. Their Prieſts go no further in Learning than to be able to read a Chapter in the Bible. They have their Characters from the *Greeks*, but have much alter'd and augmented them, for they have 39 Letters. They reckon their Years from the Creation of the World, and maintain that Chriſt was born in the Year 5508, after the Creation. Our preſent Year 1708 is their 7216. Their Year commences the firſt of *September*. They begin their Day at Sun-riſing, and end it at Sun-ſetting. They write upon long Scrolls of Paper glu'd together, ſometimes 25 or 30 Ells. Endeavours have been us'd to reform them from this ſcandalous Ignorance. *Ivan Beoiſſowitz Cirkaſi* got divers Hiſtories and Books of Learning tranſlated into the *Ruſſian* Language, and after that a *Greek* and *Latin* School was erected in *Moſcow*. The preſent Czar gives Leave to his Nobility to acquire the Liberal Sciences, particularly the Mathematicks, to acquaint themſelves with Foreign Countries, and has ſet them an Example in his own Perſon, with a Deſign to underſtand Sea-Affairs and Shipping. The *Muſcovites* are jealous. Some ſay, they uſe *Italian* Locks, to enſure the Chaſtity of their Wives. They are cruel and bloody minded, inſolent in Proſperity, and cowardly in Adverſity; yet have ſuch an Opinion of their own Abilities and Merits, that you can ſcarce ever pay them enough of Reſpect.

The *Muſcovites* in general are of a very healthful Conſtitution, and long liv'd: Their Bodies are robuſt, and ſtrong built, but not tall.

They are frugal in their Houſe-keeping: They live in wretched Wooden Houſes; but their Merchants and Lords have of late built Houſes of Stone. Their Houſhold-Stuff conſiſts in 2 or 3 Pots, and as many Wooden or Earthen Diſhes. Some of the better ſort have Pewter. They hang their Rooms with Mats, and ſleep on Benches. The whole Family is ſqueez'd together into the ſame Room. In the Country, the Pigs and Poultry are lodg'd in the ſame Place with the Family. Their Food is Turnips, Colworts, and Cucumbers. Their Salt Fiſh, tho' it ſmell ſtrong, becauſe not well ſalted, is to them a great Rarity. Their Beef is good, but their Mutton indifferent. The greater Part of the Year is ſpent in Faſts, and then they eat Fiſh and Pulſe, but no Fleſh: Therefore they dreſs Fiſh better than Fleſh. Their ordinary Drink is a ſort of ſmall Mead call'd *Quaz*. They brew ſtrong Beer in *March*, and make a Bed of Ice and Snow mix'd together, upon which they

Digitized by Google

they lay Barrels. Over them they lay another Bed of Ice, and then another Row of Barrels. They cover all with Straw and Planks, for their Cellars are not cover'd. They prefer Metheglin to *French* and *Rhenish* Wines. The put one lb. of Honey to every three lb. of Water, and add the Juice of Raspberries, Cherries, and Strawberries. They make it ferment with a Toaſt dip'd in the Dregs of Beer: Some put into in a Bag with Cloves, Cinnamon, and Grains of Pepper.

All *Muſcovites*, of what Quality ſoever, muſt have their Afternoons Sleep. They are all fond of hot Baths, and diſcover'd the Impoſture of the falſe *Demetrius*, by his Averſion to thoſe Cuſtoms.

There are ſome Authors, and particularly Dr. *Fletcher*, who ſoften this Character, and ſay, That among the Nobility, there are very many of excellent Parts, Courage and Diſcretion; and among the People, ſome who are not Strangers to thoſe Qualities; but they own, that many of thoſe Things they are charg'd with proceed from their Want of Education, and the Oppreſſion of their Superiors.

Their RELIGION.

BEfore Chriſtianity was known in *Muſcovy*, the *Ruſſians* were involv'd in the thickeſt Darkneſs of Paganiſm; for, beſides ſuch Gods as *Jupiter*, *Saturn*, and *Mars*, known to the ancient Pagans, they ador'd their peculiar Idols of monſtrous and terrible Shapes, under the Names of *Pioruni*, *Stribi*, *Corſi*, *Mecoſti*, all ſet on Pedeſtals. The firſt reſembles a Dog with two big Breaſts, his Tongue hanging out, and his Ears long. The 2d is like a Satyr, with two Feet like a Horſe: It has 4 Horns, and a Tail. The 3d is alſo like a Satyr ſitting, and has two Feet like a Horſe, the Body like a Man's, with an open Mouth, flaming Eyes, and 4 Horns; in one Hand holding ſomething like a Scepter, and the other Hand is like the Claws of a Fowl. The 4th is a big Head, with a wide Mouth, glaring Eyes, and Ears reſembling Wings.

P. Wolodimer, who married *Anna*, the Siſter of *Baſilius Porphyrogenneta*, about the Year 989, introduc'd the Chriſtian Religion into this unpoliſh'd Nation; but they themſelves boaſt that their Nation was converted by St. *Andrew*; upon which Account the preſent Czar hath erected an Order of Knighthood, called, the *Order of St.* Andrew's *Croſs*. When they embrac'd Chriſtianity, it was much allay'd with a mixture of Superſtitions and Follies, which are ſince improv'd by the modern *Muſcovites*. They are of the *Greek* Church, becauſe converted by the *Grecians*. Their Monks are all of the Order of St. *Baſil*. Their Sermons are from St. *Chryſoſtom*, tranſlated into their own Language. The Patriarch of the *Greek* Church reſided formerly at *Conſtantinople*; but being forc'd from thence by the *Turk*, he remov'd to the Iſle of *Scio*, whither the Emperors of *Ruſſia* and their Clergy were wont to ſend Gifts every Year, in Acknowledgment of their Spiritual Subjection. In 1588, one *Hieronymo* came to *Moſcow*, pretending to be Patriarch of *Conſtantinople*, and that he was baniſh'd by the *Turks*. Some ſay, he was depos'd by his own Clergy. He came by the Way of *Italy*; and the Pope, by his Practices and Intrigues, engag'd him in a Deſign to reconcile the Church of *Ruſſia* with that of *Rome*; but this not ſucceeding, he propos'd the Tranſlation of the See of the Patriarch from *Scio* to *Moſcow*, and to reſign his Patriarchate. This was very well receiv'd by the Czar. The Reaſons *Hieronymo* alledg'd for removing this See, were theſe: 1. Becauſe *Scio* was under the *Turk*. 2 Becauſe the *Ruſſian* Church was the only natural Daughter of the *Greek* Church; and agreeing with her in Doctrine and Ceremonies, 'twould be a great Honour to the Emperor and the Country of *Ruſſia*. The Reſignation in Writing, and the Patriarchal Staff, were delivered to the Metropolitan of *Moſcow* with great Solemnity, before the Clergy of *Ruſſia*, on the 25th of *January*, 1588. who by this became Patriarch, and was immediately inaugurated. *Hieronymo* got a deal of Money by the Bargain; upon which Account the *Ruſſians* think it valid. The Patriarch of *Conſtantinople* never quarrels at it; and to bribe him to Silence, a Preſent of 500 Crowns is ſent him every Year: Beſides, the *Greeks* ſend frequently conſecrated Toys and Relicks to *Moſcow*, for which they get conſiderable Gifts.

The Invocation of Saints is a principal Part of their Devotion; every Family has the

Digitized by Google

the Picture of ſome Saint in their Houſes, and a Wax Candle before it lighted in the Time of Worſhip. The Pictures are flat, and wretchedly done. They uſe none in *Baſſo-Relievo*. The Picture of St. *Nicholas*, and of the Virgin *Mary*, is over their Church-Porches, and City-Gates, through which no *Muſcovite* paſſes without bowing to them. They bow likewiſe to all Croſſes, and frequently make the Sign of the Croſs. When they purchaſe an Image, they will not ſay they bought it, but exchang'd it for Silver. When they are old, they bury them under Ground, or throw them into Rivers. They go thrice to Church on *Sundays* and Holidays, and attend Divine Service ſtanding. Their Churches have no Seats. The Women ſtand in the Porch, becauſe they reckon them all impure. They know not what Preaching is. Their Service conſiſts only in reading Pſalms or Chapters in the Bible, ſome of *Chryſoſtom*'s Homilies, and *Athanaſius*'s Creed. They ſing certain Hymns. When they ſay the *Goſpels*, i. e. *Lord God have Mercy on me*, they beat their Foreheads to the Ground. They have 15 Feſtivals: and beſides their ſtated Faſt-Days, as *Wedneſdays*, *Fridays*, and the *Eves* before Holidays, they have four ſevere *Lents*, in which the Uſe of Butter, Milk, and Eggs, is forbidden, except the firſt Week of their great *Lent*, in which they commit all manner of Debaucheries; and to make Amends for this, all the reſt of that *Lent* they live upon Pulſe, Herbs, Garlick, and Onions. During their *Lents*, the Husband is not to converſe with his Wife, on Pain of Excommunication for a whole Year. Their Penance conſiſts, 1. In abſtaining from hot Liquors. 2. From the Pleaſures of Matrimony. 3. To ſay the *Goſpels* with the uſual Reverence: (The Emperor *Ivan Baſilowick* had his Forehead ſwell'd by knocking it on the Floor upon this Occaſion.) 4. To ſtand in the Porch during Divine Service. 5thly, and chiefly, To waſh with Holy Water, conſecrated on the *Epiphany*; the ſelling of which is Part of the Clergy's Perquiſites. That they don't believe Tranſubſtantiation, is evident, 1. Becauſe on all Occaſions they ſpeak of the Abſurdity of that Doctrine. 2. They never adore the Hoſt. 3. The *Greeks*, from whom they had their Religion, never believ'd any ſuch thing. As Followers of that Church, they deny the Holy Ghoſt to proceed from both Father and Son. They deny Purgatory, but pray for the Dead. They communicate in both Kinds, with Leaven'd Bread, and with Wine mix'd with Water. They mix the Bread and Wine together, and make uſe of Spoons when they communicate. Some ſleep after it, to prevent any Occaſion of ſinning. Children of Seven Years of Age are admitted to the Sacrament in both Kinds, becauſe, according to them, they begin then to ſin. Before that Age, they communicate only in one Kind. They forbid Extreme Unction, and puniſh fourth Marriages with Death. They admit none to Orders but thoſe who are married. They divorce their Wives upon ſlight Occaſions, and never fail to do it if a Woman be barren, and then ſend her to a Monaſtery, which they call ſending her to her Prayers. They hate the *Roman-Catholicks*, *Jews* and *Turks*: Therefore the *Ottoman* Ambaſſadors are not admitted to kiſs the Czar's Hands. Whoever embraces the *Ruſſian* Religion, muſt be re-baptized. The Czar gives great Gifts to Proſelites. *Lutherans* and *Calviniſts* are tolerated, and have Churches in his Dominions.

If any Stranger enter their Churches, they think them polluted, and afterwards purify them with ſtrange Ceremonies. It is a known Story at *Moſcow*, That a Monky belonging to an *Engliſh* Ambaſſador entred a Church, and tore an Image of St. *Nicholas*. The *Muſcovites* were perſwaded that it was an old Heretick, and, by a particular Order from the Patriarch, it was carried in Shew through the Streets, and afterwards put to Death.

They look upon Baptiſm as abſolutely neceſſary to Salvation: They baptize in the Church, and have two Godfathers, who are obliged to be ſo to all Children as long as they live. They conſecrate the Water firſt, then the Father and Godfathers renounce the Devil and all his Works; and at naming the Devil, they ſpit upon the Ground. The Prieſt exorciſes the Child at the Church-Door, becauſe they believe all Children are poſſeſſed with the Devil: Therefore they are not allowed to enter the Church till the Devil is thrown out. The Prieſt hangs a Croſs of Gold, Silver, or Lead, about the Child's Neck, which it muſt wear till Death; and

Digitized by Google

and ſuch as want this, cannot have Chriſtian Burial. The Prieſt aſſigns a Saint to the Child, whom he muſt ever after reverence as his Patron. They dip the Child three times in the Water, put ſome Salt in his Mouth, make the Sign of the Croſs on his Forehead, Hands, Breaſts and Back, with conſecrated Oil, and put a clean Shirt on him, ſaying, *Thou art as clean and as clear of Original Sin as this Shirt.* They plunge Proſelytes over Head and Ears in Water.

Their MARRIAGES.

THE young People are not allow'd to ſee one another; but the Relations of the Bridegroom ſee the Bride naked, and give an Account of their Remarks to the Bridegroom. Young Women are not allow'd to come abroad. The Nuptial Bed is made upon 40 *Sheaves* of Rye, laid in good Order, and encompaſs'd with ſeveral Barrels of Wheat, Barley, and Oats. The Bridegroom near Night goes from his own Houſe to the Bride; the Prieſt leads the Van on Horſeback; a Piece of Taffeta is held betwixt the Bride and Bridegroom, that they may not ſee one another; then the Bride is painted, has her Hair ty'd up in two Knots; and, if a Perſon of Note, has a Coronet of Leaf-Gold, or of *Silver-gilt*, lin'd with Silk, put upon her Head, having on both Sides near the Ears 5 or 6 Rows of Pearls hanging down in Strings to her Breaſt: The upper Garment ſometimes coſts 1000 Crowns, and is richly embroider'd. Then the Bridegroom is painted: After that they go to Church, and there a Canopy of Taffeta is put over them. When they have made the uſual Offerings, the Prieſt gives them his Bleſſing, by holding Images over their Heads, and taking the Man by the Right, and the Woman by the Left Hand, asks them three times, If they be willing to be married? When both anſwer, Yes, the whole Company join Hands; then the 128th *Pſalm* is ſung, the Prieſt ſinging one Verſe, and the Company the next; and they dance all the time. Then he puts a Garland of *Rue* upon their Heads, and about their Shoulders, if they have been married before, and ſays, *Multiply and Increaſe*; and diſmiſſes them, ſaying theſe Words, *Whom God hath joined together, let no Man ſeparate.* One of the Company gives a Glaſs of Wine to the Prieſt, and he drinks to the married Couple. The Bridegroom throws down the Glaſs on the Ground, and they both tread upon it, and ſay, *May they thus fall under our Feet, and be trod to pieces, who ſhall endeavour to ſow Diviſion between us.* Then the Women throw ſome Flax and Hemp-ſeed at the young Couple, wiſhing them much Proſperity: Others pull the Bride by the Robe; but ſhe embraces the Bridegroom, and will not part from him. She is conducted home in a Sledge, with an old Woman in Company, who entertains her with ſmutty Converſation. As ſoon as the Marriage-Feaſt is done, they go to Bed. The Gueſts in the mean time uſe many Charms, which they think advantagious to the Conſummation. An old Servant of the Houſe, that attends at the Door, asks the Bridegroom if the Buſineſs is done. As ſoon as the Bridegroom anſwers, Yes, the Trumpets and Timbrels ſound till they have conducted them to the Stoves; then the Bride ſends the Bridegroom a Shirt richly embroider'd. The two next Days they ſpend in Merry-making. If the Husbands happen to be drunk, the Wives never fail to improve that Time to vicious and lewd Purpoſes. The Wedding-Day may be ſaid to be the laſt Day of Pleaſure to the Women, for after that they muſt not ſtir abroad, except on extraordinary Occaſions. They know nothing of Houſe-keeping, but are employ'd in embroidering, or making Purſes, or ſuch Toys. Their Diverſion within Doors is in ſwinging. Their Wives are hardly uſed, and ſometimes beat. The Husbands excuſe themſelves, alledging, that they are addicted to ſtrong Liquors, have lewd Tongues, and are not chaſte. They have no other Notion of Adultery, but marrying another Man's Wife. Tho' they be much given to Luſt, they will not lie with a Woman till ſhe take off the Croſs from her Neck, and the Images in the Room be cover'd, leſt they ſhould inform againſt them.

Of their CHURCHES.

THoſe of their Churches that are built of Stone, are round, and vaulted, that they may reſemble the Heavens. They have

Digitized by Google

have no Seats nor Organs, nor any other Inſtruments of Muſick. Their Patriarch, in 1636, forbad the Uſe of Muſical Inſtruments in private Houſes, and order'd 5 Waggons full of them to be burnt. Each Church has a Tower, with a triple Croſs at Top. If a Dog chance to get into the Church, they not only ſweep it, but purify it with Incenſe. Nor are any allow'd to make Water in the Church-Yards. Their Bells are not hung in the Steeples, but in certain Engines built for that purpoſe near the Church, and are commonly ſmall, of 150 or 200 Pound. They toll them at the beginning of the Service, and the Elevation of the Chalice, which is done but once, becauſe they put the Bread into it immediately after the Conſecration. Every Church has an Image over the Door. The Corners of the Streets, and the very Gates of the Cities, are beſet with Images, which the *Muſcovites* reverence as they paſs along, as well as the Croſſes on their Churches, and never forget at ſuch Times to ſay their *Goſpods*.

Of their BURIALS.

WHen a Man dies, the Kindred and Friends are ſent for by the Widow, who ask the Deceaſed, Why he would die? Whether he wanted any thing? Whether his Wife was not young and handſome enough? Whether ſhe had been inconſtant? Then they waſh the Body, and put on it a clean Shirt and Shrowd, with a new Pair of thin Shoes on his Feet. They lay him with his Arms acroſs in his Coffin. The Prieſt is to pray for his Soul, and to purifie the Corps with Holy Water and Incenſe. The Burial is perform'd thus: The Prieſt goes firſt with the Image of the Saint, Patron of the Deceas'd; then 4 Virgins that are neareſt of Kin to the Deceas'd, who make mournful Lamentations; next comes the Body, carried by 6 Men upon their Shoulders; but if a Monk, he is carried by thoſe of his own Profeſſion: The Corps is ſurrounded by Prieſts, who burn Incenſe, to keep off evil Spirits. When they come to the Grave, the Coffin is uncover'd: The Widow ſtill asks the Former Queſtions; and the Prieſt, with an Image in his Hand, repeats often theſe Words, *Lord, look upon this Soul in Righteouſneſs*. The Friends take their Leave, by kiſſing the Corps or Coffin; then the Prieſt puts a Piece of Paper betwixt his Fingers, which is his Paſs to the other World, certifying St. *Peter*, That upon ſeeing this, he may open the Gates of Heaven to him. The Certificate is ſign'd by the Metropolitan or Patriarch, and Confeſſor: It ſhews, That the Bearer has behav'd himſelf like a good Chriſtian of the *Greek* Religion, and that he was abſolv'd of his Sins; then the Coffin is put in the Grave; after which, the Friends drown their Sorrow in good Liquor. Prayers are made for the Deceas'd 40 Days, at which Time the *Muſcovites* believe their Sins are expiated.

Of their CLERGY.

THE Patriarch is oblig'd to reſide conſtantly at *Moſcow*: He is next in Dignity to the Czar, who leads his Horſe by the Head at the Proceſſion on *Palm-ſunday*. He determines all Eccleſiaſtical Affairs, wears a long black Robe, and always has a Croſs carried before him. They have 4 Metropolitans, and 7 Biſhops, who dare not reſide in their Dioceſes, becauſe the Czar is jealous leſt they ſhould excite the People to Rebellion. Next to them are the Prieſts, call'd by them Popes, or *Papa's*. No other Qualification is requiſite for this Office, but ſome ſmall Skill in Reading, Writing and Singing. As a Badge of their Office, a *Calot*, or Cap, is put upon their Heads at their Conſecration, and they are obliged to wear it while they are Prieſts. When Laymen deſign to beat a Clergyman, they firſt ſecure his Calot, beat him to purpoſe, and then put it on again. The Prieſts bleſs the People as they paſs along the Streets with the Sign of the Croſs. This Country ſwarms with Monks.

The Biſhops live upon Tithes; but the Prieſts have no other Maintenance except what private Perſons think fit to beſtow upon them; yet by what they get at Baptiſms, Marriages, Burials, by Prayers for the Dead, or upon People's undertaking any Journey, and by bleſſing of Houſes, they obtain a competent Livelihood.

Of

Digitized by Google

The Czar's TITLES, *from* Ysbrant Ides's *Dedication of his Travels to his Czariſh Majeſty.*

THE moſt Serene and moſt Potent Sovereign Czar, and Great Prince *Peter Alexewitz*, by the Grace of God, Emperor of the *Whole, Great, Little,* and *White Ruſſia*, Monarch of *Moſcow, Kiow, Wolodimer*, and *Novogorod*, Czar of *Caſan*, Czar of *Aſtracan*, Czar of *Sibiria, Dawr, Samoiedia*, Lord of *Pleiskow*, Great Duke of *Smolenſko, Twere, Jugoria, Permia, Wiatka, Bulgaria*, &c. Lord and Great Prince of *Novogorod*, of the *Nederigen* Countries, *Czernikow, Rezan, Poloſko, Roſtkow, Jarollaw, Bigla-Ozara, Udoria, Obdoria, Condoria*, and of the whole *North Sea*, Commander and Lord of the *Iwerſkian* Countries, the *Kartalinſkian, Gruſinſkian Czars, the Kabardinſkian* Dominions, the *Czarkaſſian* and *Gorſkian* Princes, and many other Countries and Territories Eaſt, Weſt, and North, the Inheritance of his Anceſtors.

Thoſe who treat with his Ambaſſadors, have the greateſt Trouble in the World to give him his Titles, becauſe of his extraordinary Pretenſions. In 1654, to give ſome Colour to his making War upon *Poland*, and to aſſiſt the *Coſacks*, the Czar pretended that ſome of the *Poliſh* Lords had not given him his due Titles, and that they had printed Books in *Poland* in Derogation of his Honour. One of his Predeceſſors was ſo cruel, that he caus'd the Hat of a *French* Ambaſſador to be nail'd to his Head, becauſe he refus'd to be uncover'd in his Preſence.

Of the Czar, *and his Method of Government.*

THE *Moſcovites* have a great Reverence and Regard to the Czar, and look upon his Will as the Will of Heaven. They call him *God Almighty's Chamberlain*, ſo that it is a Proverb among them, *God only knows it, and the Great Duke.* Perſons of the chief Rank in the Empire approach him with the ſame Reverence they do God. If he gives them the leaſt Mark of his Diſpleaſure, they are ready to expiate their Faults with the Loſs of their Lives. He is Arbitrary in all Parts of his Government, and abſolute Lord of the Lives and Eſtates of his Subjects.

His REVENUES.

1. THE Crown-Lands are 136 Towns with their Territories, of which ſome pay Money, and others Corn and Proviſions: This being more than is ſpent in his Houſhold, the Surplus is ſold at 230000 Rubles *per Ann.* a Ruble being a Mark Sterling; and commonly pays his Servants 2. An Impoſition upon every Meaſure of Grain that grows in the Kingdom, and a Tax on every Town and Precinct, which is commonly 400000 Rubles *per Ann.* 3. The Cuſtoms, which riſe or fall according to Trade; thoſe of *Archangel* amount ſometimes to 600000 Rubles *per Annum*, and the Cuſtoms of other Towns to about 340000. Theſe are levied by the Court of the *Great Income*, which alſo levies the Tax on Bath-Stoves and Publick-Houſes. There are 3 in *Novogorod*, which pay 4000 Rubles *per Annum*; and it is ſaid, there are 1000 ſuch in the Empire, which pay the like in Proportion. They collect alſo 10 *per Cent.* upon thoſe that are caſt in Law-Suits, and an Impoſt for every Name contain'd in Writs that paſs out of the Courts, amounting commonly to 3000 Rubles *per Ann.* 4. The Half of Felons Goods, the other Half going to the Judge and Informer. 5. Rents of Lands, allow'd for maintaining Soldiers. Theſe Branches of the Revenue abovemention'd were ſometimes reckon'd to bring in 1400000 Rubles *per Annum*. 6. The Monopoly of *Caviare, Iſinglaſs*, and Fiſhing, for which he pays the Labourers, and ſometimes farms the fiſhing of Rivers and Lakes. 7. By Furs from all Parts of his Dominions, which he ſells by his Merchants, and no other muſt ſell till all his be diſpoſed of; ſo that he rates them as he pleaſes. 8. The Preemption of all Goods that come to his Country, which he ſells as he thinks fit. He generally purchaſes with his own Commodities, and ſeldom ſuffers Gold or Silver to be carried out of his Dominions. 9. Sables, the beſt Trade of his Country, are all his own, as Tribute, or purchas'd by him at a ſmall ſet Rate. 10. Five *per Cent.* of all Goods exported and imported.

Digitized by Google

His Expences are answerable to his Revenues, his Family being at least 1000 Persons, besides 16000 Muſquetiers, and 5000 Horſe, for his Guards, and 100000 Men in Gariſons. His Table conſiſts uſually of 50 Diſhes. He defrays the Charges of all Ambaſſadors from their entring his Country till they go out.

The vaſt Extent of his Dominions, his unlimited Power, and the Splendour of his Court, make ſuch Impreſſions upon his Subjects, that they glory in their Chains, and deſpiſe all other Nations. 'Tis common to hear them ſay, *I have had, or ſhall have, the Honour of ſeeing the bright Eyes of his Czariſh Majeſty.*

His tyrannical Government is ſupported by the following Methods: 1. His Subjects are not allowed to travel, leſt having ſeen and taſted Liberty abroad, they ſhould not reliſh Slavery at home. 2. The Czar never marries a Foreign Princeſs, for fear ſhe ſhould introduce Cuſtoms deſtructive to his abſolute Power. 3. Their Ignorance contributes much to this, for they know nothing of the Foundations of Government, and the Privileges of Human Nature.

The famous Tyrant *John Baſilowitz* was the firſt Inventer of the Czar's Arms, in Imitation of the *German* Emperors: He bears a Spread-Eagle, but the Wings ſomewhat leſs than the Imperial Eagle, having on the Breaſt, in an Eſcutcheon, one on Horſeback fighting with a Dragon, repreſenting St. *Michael*, or rather St. *George*. Above and between the Eagles-Heads, are 3 Crowns, ſignifying *Muſcovy*, and the two *Tartarian* Kingdoms, *Aſtracan* and *Caſan*.

Their POLICY.

THE Czar himſelf beſtows all Places of Honour and Profit on whom he pleaſes. This breeds a Dependance on him, that he may oblige more of his Subjects, and hinder them from growing too powerful. No Governor is to keep his Poſt above 3 Years. Tho' the Czar may, yet he ſeldom takes the Lands of Fathers from their Children. Dr. *Fletcher* ſays, They paſs their Lands by Deſcent of Inheritance to which of their Sons they pleaſe, and commonly after our Gavel kind, and diſpoſe of their Goods by Gift or Teſtament, without any Controul: Yet they pay the Czar an Acknowledgment after the Nature of an Herriot or Releef.

Their LAWS.

NO Law of any Conſequence is determined without the Approbation of the Czar: The Chief Juſtice receives Appeals from all Places, and acquaints his Majeſty with them. In 1647, the Czar, with the Advice of his Counſellors, publiſh'd a Code, containing the Laws the Judges were to obſerve in all their Sentences, which are printed in Folio, by the Title of, *Soborna Uloſſenia*, or Univerſal Right. The Czar makes Peace or War, and ſends Ambaſſadors ordinarily of the richeſt of his *Boiars*, who are able to bear their own Charge. When they are recall'd, he takes to himſelf what he pleaſes of the Preſents that are given them. When extraordinary Laws or Conſtitutions are to be made, the Czar ſummons a Meeting of the Clergy, and ſuch of the Nobility as he pleaſes. One of the Secretaries propoſes the Matters that are to paſs into Acts; the Clergy are firſt aſk'd their Opinions: If all agree, the Propoſals paſs into a Law. When the Czar conſents, the Secretaries draw them up into the Form of a Proclamation, and ſend them to the great Cities, with Charge to the Governors to ſee them obſerv'd.

The Great COUNCIL.

THE Czar gives the Title of Counſellors to many that never come to Council. Thoſe that belong to the Council, are called *Dumney-Boyaren*, and are ſuch as the Czar pleaſes to call. The Great Officers of State belong to this Council. He has alſo his Privy-Council, who for the moſt part rather conſent and approve of the Czar's Reſolves, than argue or give their Opinion. The Patriarch's Advice is aſk'd in Matters of Conſequence.

Particular COUNCILS.

THE Principal Councils are ſix; the firſt is for Ambaſſadors, and Foreign Affairs; the 2d for Matters of War; the 3d for the Revenues of the Crown; the 4th for Trade and Merchandize; the 5th for Determination

Digitized by Google

tion of Civil Affairs among themſelves; the 6th for Criminal Matters. Every Province is aſſign'd to a certain Council. They uſe Tortures if the Criminal deny the Fact. Oaths there are perform'd in the Church, by kiſſing a Croſs; but ſuch as ſwear thus frequently, become infamous, are prohibited Entrance into the Church, and Perſons of Condition will not converſe with them. Falſe Swearing, and frequent ſolemn Oaths, are very ſcandalous here.

Their PUNISHMENTS.

A Robber is broke on the Wheel; a Sacrilegious Perſon impal'd; a Traytor and Servant that murthers his Maſter, beheaded: Thoſe in Debt, are kept Priſoners to the Time appointed for paying the Debt: If they fail then, they are every Day brought into the Court, and beat for an Hour upon the *Shins* and the Calves of their Legs, ſent back to Priſon againſt Night, and ſo on till the Debt be paid; but if they be unable to pay it, they are made Slaves to the Creditor.

OFFICERS *of* STATE.

1. THE Chancellor preſides in the Office of Ambaſſadors, preſents Petitions to the Czar, and returns the Anſwer, which muſt be in the Czar's own Words. 2. The Treaſurer, takes Care of the Revenue. 3. The Conſtable, who looks after Military Affairs. 4. The Maſter of the Horſe, who, beſides commanding the Czar's Guards, overſees his Stables. 5. The Chief Juſtice, who is always preſent with the Czar.

Inferior MAGISTRATES.

IN all great Frontier Cities, they have Weywodes, who are Governors of great Quality and Experience. In leſſer Cities, the Czar appoints Governors, by delivering them, as a Badge of their Power, a Staff, which at their Return they reſtore to him again.

Of their COIN.

THeir Coin is Silver only, and of an Oval Figure: (No Gold is coin'd here, except Medals upon extraordinary Occaſions) It is very ſmall, ſo that the biggeſt Piece, called a *Copee* or *Deening*, is worth no more than a Penny. This Money is very troubleſome, by reaſon of its Smalneſs: 'Tis mark'd with the Arms of *Muſcovy*, and has on the other Side the Name of the Reigning Czar, and of the City where it was coin'd. Four Cities only enjoy this Privilege, *viz. Moſcow*, *Novogorod*, *Twere*, and *Pleskow*. Rix-Dollars of all ſorts, *Joachim* Dollars, and *Spaniſh* Reals, paſs current in *Muſcovy*.

Of their NOBILITY.

THE Nobility were formerly younger Branches of the Royal Family, and had great Power; but ſince the Days of *Ivan Baſilowick*, they have been mortified and kept under. Now the chief Degree of Nobility is that of the *Boiars*, or *Boiarens*, who are of the Emperor's Council, and delight in having great Bellies, as generally all *Muſcovites* have; by tying their Belts below their Bellies. They who have born any Office in War, as General, Governor, *&c.* leave ſomething of Title to their Poſterity. They alſo carry a Kettle-Drum at the Pummel of their Saddles, and beat with the End of their Whip, to make Way for them in Crouds in the Streets; and in Wars, to give Notice of Marching, Halting, or the like: The firſt that bears the Command, beats, and all the reſt anſwer him. The Czar obliges them to conſtant Attendance at Court, leſt they ſhould foment Inſurrections among the Subjects.

Of their MILITARY DISCIPLINE.

IN Field-Battles and Sieges, they were formerly reckon'd nothing, being ſoon brought into Confuſion; ſo that they own'd other Nations were their Maſters in this Point: But they defend a Fortreſs to the utmoſt, not only becauſe they are able to undergo Hardſhips of all Sorts, but becauſe they know it is preſent Death for them if they return home, after they have ſurrendred a Fortreſs by Capitulation; ſo that their Women ſometimes fight ſtoutly upon the Works, and defend Breaches. They endeavour now to bring the Soldiers under better Diſcipline; for which End they

Digitized by Google

make uſe of a great many *Scots* and *German* Officers, who inſtruct them in all the War-like Exerciſes that are practis'd by other *European* Nations. The Martial Genius of the preſent Czar has accuſtomed them more to the Uſe of Arms, than any of his Predeceſſors. He has alſo improv'd their Naval Affairs. They fight beſt under the Command of Strangers. They have four Potent Enemies, the *Turks*, *Tartars*, *Polanders*, and *Swedes*. The Czar maintains 16000 *Strolitzes*, or Guards, and 4 or 5000 Foot, in the City of *Moſcow*, and 100000 Men upon the Frontiers. He has alſo a Militia, who are to rendezvous and march as he ſhall command them. They are maintain'd by a great Part of the Empire, let out to thoſe call'd *Sinabaieresky*, on Condition that they themſelves, their Sons and Farmers, ſhall ſerve him with Horſe and Arms at their own Chage in the Wars. All their Sons are *Sinbeiars*, or Gentlemen, and as ſoon as able to bear Arms, enter themſelves in the Great Conſtable's Office, petition for Maintenance, and are frequently put into mean Employments, till they can be better provided. When the Empeſor makes War in Perſon, he has a ſelect Guard of 15000 Horſe, who have from 12 to 70 Rubles *per Annum* each, according to their Degree, beſides their Lands. His Nobles and Officers maintain alſo 60000 Horſe at their own Charge, who Muſter once a Year on the Borders of *Tartary*: So that beſides 200000 Men in Garriſon, he has 300000 Horſe ready on all Occaſions. Their Foot have a Gun, a Sword, and an Ax behind them: Their Horſe have Helmets, Corſlets, Bows, Arrows, Iron Maſſes, Scymeters, Targets, Lances; and now they have Fire-Arms. They had formerly a great Drum, carry'd upon 4 Horſes, faſten'd together, and 8 Men to beat it. They had in their Wars with the *Tartars* a double Wall, or Fortification of thick Pales, ſo contriv'd, that it might in a ſhort Time be ſet up 7 Miles in length, with Holes for their Muſquets to fire through. This defended them from the Arrows of the *Tartars*, who had no Fire-Arms. Hiſtory informs us, That in ſome Invaſions, the *Tartars* have carried off 400000 Captives from that Country.

Of their HISTORY.

ALL that we can be inform'd of as to this vaſt Monarchy, is, That it was formerly divided into ſeveral Principalities and Governments; which being united, brought it to its preſent Bulk. As to the Origine of their governing Families, Authors are at an Uncertainty; ſome derive their firſt Governors from *Beala*, a King of *Hungary*; and 'tis certain, their Imperial Family bore that Name. Queen *Olga*, one of them, went to *Conſtantinople* in 876, where ſhe embrac'd Chriſtianity, brought it into *Ruſſia*, and is now one of their Saints. They keep her Anniverſary on the 11th of *July*. To her ſucceeded ſeveral other Princes; but the firſt, of whom we have any Certainty, is, Prince *Woladimer*, who, in 988, married *Anna*, the Siſter of *Baſilius Porphyrogeneta*, introduc'd the Chriſtian Religion into this unpoliſh'd Nation, was baptized at *Conſtantinople*, in the Preſence of the two Emperors, and nam'd *Baſil*. Their Hiſtory is very confus'd after this; till they became a Prey to the *Tartars*, when their Prince *George* was defeated by the *Tartarian* King *Batte* in 1223. The whole Country was miſerably enſlav'd, and burden'd with an inſupportable Tribute for about 300 Years. This *Batte* impos'd very hard Terms on the *Moſcovites*, *viz.* That the *Tartars* ſhould chuſe from Time to Time the Princes of *Muſcovy*; That when the *Tartars* ſent an Ambaſſador, the Prince ſhould go to meet and wait upon him on Foot, offering the Ambaſſador a Platter of Mare's-Milk; That if the Ambaſſador let any of the Milk fall upon the Mane of his Horſe, the Prince of *Muſcovy* ſhould lick it up; and that he ſhould be bare Headed, and give the *Tartarian* Ambaſſador's Horſe his Provender out of his Cap. But the hardeſt of all was, That the *Tartars* had a Houſe and Guard in the Caſtle of *Moſcow*. But in 1450, *John*, the Son of *Baſilius the Blind*, became their Deliverer, and erected the numerous ſcatter'd Provinces into a great Principality. After a bloody War with the Great Maſter of the *Teutonick* Order in *Livonia*, he made a Truce with him for 50 Years. He ſubdued the Dukes of

of *Tver* and *Great Novogorod*, in which City it is ſaid he got a Booty of 300 Cart-load of Gold and Silver: He built *Ivanogorod*, a Caſtle near *Narva*. In 1509, his Son *Baſilius* took *Pleskow* from the *Poles*: He afterwards took *Smolensko*; but was beat by the *Caſan Tartars*, who at the ſame time ranſack'd the City of *Moſcow*. His Succeſſor was his Son, *John Baſilowitz*, or *Baſilides*, who rais'd the Empire of *Muſcovy* to its Height, ſubdued the Kingdoms of *Caſan* and *Aſtracan*, which alarm'd his Neighbours, eſpecially *Selimus*, the Emperor of the *Turks*, who in 1569 ſent 340000 Men to recover *Aſtracan*, which was bravely defended by *Serebrine*, the *Muſcovite* General: So that this vaſt Army was partly by their unſucceſsful Rencounters with him, and chiefly for Want of Proviſions, for moſt part conſum'd, and the remainder of them was caſt away in the *Black Sea* as they return'd; ſo that few of them eſcap'd. He alſo obtain'd a Victory over the Maſter of the *Teutonick* Order, *William Von Furſtenbourg*, whom he took, and ſuffer'd to periſh in a miſerable Priſon; which was the Occaſion that the City of *Revel*, and all *Eſtein*, ſurrender'd themſelves to *Sweden*, as the reſt of *Livonia* did to *Poland*. He was at firſt victorious over the *Poles*; but afterwards *Stephen Batori* took *Plotzko*, and ſeveral other Places, from him. He died in 1584, and was one of the moſt cruel Tyrants that ever liv'd. To him ſucceeded his Son *Theodore Juanowitz*, a mild and ſimple Prince, againſt whom the *Swedes* wag'd War about *Ingermanland*. He left the Nation involv'd in grievous Troubles.

This *Theodore*, who was the laſt of the Houſe of *Baala*, dying without Iſſue, his Siſter's Husband, *Boris Gudenow*, did, by his clandeſtine and unwarrantable Intrigues, obtain the Empire, but reign'd with very indifferent Succeſs. Before he was Emperor, by his covetous and oppreſſive Practices, he had gathered together an Eſtate of 93700 Rubles *per Annum*; upon which, and other Accounts, many did afterwards favour the falſe *Demetrius*. After his Death, his Son *Fedor Boriſſowitz* took the Title of *Grand Duke*, when the Impoſtor *Demetrius* (whoſe true Name was *Gregorius Uttrepeja*) perſonated his murther'd Brother *Demetrius*, and carried the Matter ſo far, thro' the Aſſiſtance of *Poland*, that he took *Fedor* Priſoner, and cauſing him to be ſtrangled, proclaim'd himſelf Czar, *July* 29. 1605. And the better to eſtabliſh himſelf by Foreign Alliances, he married *Maria*, the Daughter of *George Minzack*, Weywode of *Sendomir*, ſoon after. This alienated the Affections of the *Muſcovites*, becauſe by this Alliance they thought he deſign'd to bring in Popery: And they likewiſe ſuſpected him of being an Impoſtor, becauſe he did not conform himſelf to their Cuſtoms of ſleeping after Dinner, *&c.* So that a few Days after, *Baſilius Ivanowitz Zuski*, (a *Ruſſian* Prince, of the Royal Family by the Mother's Side) with 20000 Men, ſurpriz'd and cut in pieces the Bridegroom, impriſon'd the Bride, with ſeveral of the Nobility, and was proclaim'd Czar, *June* 1. 1606. but ſoon after was oppos'd by another Counterfeit *Demetrius*, (*Gregorius Schacopski*, formerly Secretary of *Moſcow*) who pretended to be *Demetrius*: That he had eſcap'd from *Baſilius*, inſtead of being kill'd, as the other reported, and claim'd his impriſon'd Wife. All theſe Diviſions were fomented by *Charles* IX. King of *Sweden*, who at length offer'd his Aſſiſtance againſt the ſecond *Demetrius*. *Zuski* at firſt refus'd to accept it; but when the other began to grow powerful, he earneſtly deſir'd it, and promiſing to deliver *Keckholm* to *Charles* as an Acknowledgment, purſuant to his Requeſt, the King ſent to his Aſſiſtance *Pontus de la Gardie*, with ſome Thouſands of Men, that were very ſerviceable to the *Muſcovites*; who refuſing, upon ſeveral frivolous Evaſions, to deliver up the Places ſtipulated to *Charles*, he took them by Force, and by ſo doing, annex'd *Carelia*, and the reſt of *Ingermanland*, to the Kingdom of *Sweden*. Then the *Swedes* were defeated by the *Poles* near *Cluſin*; the Effects of which were the depoſing of *Zuski*, whom they ſhav'd, and ſhut up in a Monaſtery, and offer'd the Crown of *Muſcovy* to *Uladiſlaus*, the Prince of *Poland*, who accepted it, on Condition of delivering up *Zuski*. Soon after this, the *Poliſh* Army being admitted into the City, they quarrell'd with the Inhabitants, and in diſpight of their General plunder'd and burnt it; at which Time 200000 Perſons periſh'd, the Treaſury was pillag'd, and the Wealth of the Emperor was divided amongſt the

Poles.

Digitized by Google

Poles. In this miserable Condition, a *Muscovite* Butcher gave out among the People, That if they could find an honest Treasurer, they would soon get good Officers and Soldiers of their own Nation to recover their Country. The People laying hold of this, bid him name a General; and accordingly he nam'd a very worthy, but mean Gentleman, whom they approv'd, and made himself Treasurer. They paid him all that was in Arrear to the Emperor, and what else they could, with which he rais'd an Army, attack'd the *Poles*, and forc'd them to leave the Country. After this, the Nobility chose *Michael Feodorowitz*, (the Son of *Feodor Mikilowitz*, the Patriarch of *Moscow*) Nephew to the Tyrant *John Basilides*, who, by his Accession to the Throne, began the Race of *Alexiewitz*, the present Royal Family: He began to Reign in 1613: and by making Peace with *Sweden* and *Poland*, and a long Reign of 33 Years, he settled the Country in a prosperous Condition. He was succeeded by his Son *Alexius Michaelowitz*, who, in 1653, falling upon the *Poles*, took from them *Smolensko* and *Kiow*, and committed great Depredations in *Lithuania*. Then invading *Livonia*, he took *Dorpt*, *Kokenhusen*, and several other Places of less Note; but was oblig'd to raise the Siege of *Riga* with great Loss. Soon after a Peace ensu'd, by which he restor'd to the *Swedes* all the Places he had taken from them. In 1669, one *Stephen Ratzin*, a Seditious Rebel, disturb'd the Repose of his Government, and made him very uneasy; for having master'd *Casan* and *Astracan*, he committed great Depredations all over *Muscovy*, till at last he was taken, and brought to condign Punishment; upon which all the Countries he had overrun return'd to their Obedience. Soon after this, many of the *Cossacks* submitted themselves to the Protection of *Alexius*, who was thereby engag'd in a War with the *Turks*; but not to his Advantage. He died in 1675, leaving his Empire to his Son *Theodore Alexowitz*, a sickly Prince, who was succeeded in 1682 by his Brother *Peter Alexiowitz*, the present Czar, who govern'd in Conjunction with him before, and narrowly escap'd the treacherous Designs of his Sisters *Sophia* and *Maria*, with their Confederate *G. Galtzin*. He at present sways the Scepter alone, and vigorously endeavours, as much as possible, to polish his rude Subjects, by Introduction of Learning and Arts among them.

Their LANGUAGE.

THeir Language has nothing common with the *Greek*, but comes so near to the *Sclavonian* and *Polish*, that whoever knows the one, may understand the other.

A SUPPLEMENT, *from the Travels of the Baron* de Mayerberg, *the Emperor's Ambassador into* Muscovy, *Printed at* Leyden *in* 1688.

Of their MANNERS.

HE says, there is great Impurity of Crimes among 'em, and that prodigious Villanies are not punish'd there according to Merit. He gives an Instance of a Criminal, who was apprehended in the very Act of Sacrilege; and, when brought before a Judge, he frankly own'd the Fact, and without the least Concern laid the Blame upon the Infirmity of Human Nature, and told, that a Priest was his Accomplice. He also own'd what he had done; upon which he was sent to a Monastery, to bolt Flower for 6 Weeks; and after that, when he said *Gospodi* for some Time, he was absolv'd. The other Fellow was deliver'd to his Master, who was oblig'd to pay the Value of what he had stole.

The Czar washes his Hands after he has saluted Ambassadors of the Popish Religion, because he looks upon them as Pagans, and thinks the Touch of them defiles him.

The *Muscovites*, from their Cradles, are so addicted to Lying, that it is not safe to trust any of them. Not only the Boors and meaner sort are addicted to this Vice, but their Ministers of State. They maintain one Lie with a Hundred; and if they happen to be convicted, they don't blush at it, but smile, as if they had done some worthy Action.

The People drink in Publick-Houses till their Money is gone, and frequently sell all their

Digitized by Google

their Clothes to pay their Reckoning. Their Prieſts outdo the People in Drunkenneſs. It is very ordinary for them, when drunk, to wallow in a Kennel, and then Hackney-Carmen or Coachmen carry them off to ſome By-way, and rob them.

Their People of Note have many Servants, but are at ſmall Charge for their Maintenance or Cloathing. Their Drink is Water, unleſs on ſome Holiday, when they mix a little Leaven with it. They have no Wages, becauſe they are for the moſt part either Slaves, or the Sons of Slaves. They are much inclin'd to Drunkenneſs, and ſet Fire to Houſes, that in the Time of the Hurry and Confuſion they may have Occaſion to rob; and frequently the Guards or Watch go Shares with them in their Robberies and Murthers by Night; ſo that every Morning almoſt the Corps of murther'd People are found in the Streets.

Their Beggars ordinarily ſteal Children, break their Arms and Legs, and ſometimes dig out their Eyes, to move the People to Compaſſion, by pretending they were born ſo. Their uſual Stile of begging is, *For the Sake of God, and the Great Duke.*

The greateſt Part of their Knowledge of the Affairs of *Europe* comes from *Pruſſian* or *Dutch* Gazets, which Merchants bring ſometimes to *Moſcow*; and they implicitely believe them as Articles of Faith. Sometimes they uſe this Method to know the Secrets of State of Foreign Kingdoms. When they take any Priſoners, tho' but common Soldiers, they threaten to torture them, if they will not diſcover the preſent State of Affairs in the Countries they belong to; tho' poor Souls they know nothing of the Matter themſelves; but underſtanding the Simplicity of the *Muſcovites*, they tell them any thing they know will pleaſe them. When their Affairs are proſperous, they are unſufferably inſolent; but when otherwiſe, they are as much dejected; which makes the Negociations at the Czar's Court very troubleſome and uncertain.

No Man is advanc'd to any Buſineſs or Command in the Army for Merit and Abilities, but on Account of his Birth, how inſufficient ſoever for the Poſt. This damps all Courage and Bravery in the Vulgar, becauſe they have no Hopes of raiſing their Fortune.

Foreign Ambaſſador are in effect Priſoners here; all Commerce with their Acquaintance by Letters is forbid, and the Letters from their Maſters to them are intercepted.

Of their WOMEN.

THey have more Monaſteries for divorc'd Wives than for Maids. The Carriage of both is very ſcandalous; for after their *Matins*, they walk abroad, and having no Guardians of their Chaſtity, upon the firſt Temptation they comply with any lewd Propoſal, and gratify their own vicious Inclinations.

The Women have not that Regard and Reſpect paid them here as in moſt other Nations of *Europe*. No Man here will undervalue his Sex ſo much as to bow to any Woman, of what Quality ſoever. There is nothing heard in *Muſcovy* of admiring the Female Sex, or of adoring their Divine Beauty and Charms; for they are not liberal in beſtowing Incenſe of that ſort.

The Czar's Siſters and Daughters are for moſt part ſhut up in Monaſteries, or in the Palace, where they are forc'd to continue in Virginity. The Reaſon is, becauſe the Czar will not marry them to any Prince that is not of their Faith, for all ſuch they reckon Pagans, and all the Children begot of ſuch Marriages they think Baſtards. Neither are they allow'd to marry any Subjects, for they are accounted the Czar's Slaves.

The *Muſcovite* Women are not aſham'd to be ſeen naked by Men when in the Bath, and very often go naked into the ſame Bath with them.

The Czar does not ſuffer his Wife, Sons or Daughters, to eat with him; nor are his Wife, Siſters and Daughters, ſeen by any. Tho' he has above 1000 Courtiers, yet ſcarce any one of them ever ſee them. If the Grand Dutcheſs be ſick, when a Phyſician comes into the Room, the Windows are all ſhut, that he may not ſee her. If he wants to feel her Pulſe, ſhe holds out her Arm, cover'd with a Veil of fine Silk.

Of

Of their RELIGION.

ON *Wednesdays* and *Fridays* they abſtain from Eggs, Fleſh and Milk. Some of the more Religious will not on thoſe Days uſe refin'd Sugar, becauſe they are inform'd that it is purified with the White of an Egg.

The Week after *Eaſter*, they abandon themſelves to all ſorts of Riots and Extravagancies, and commit the maddeſt and moſt fooliſh Things imaginable. All Buſineſs is then at a ſtand, their Shops are ſhut; but the Taverns, Publick-Houſes, and Stews, are open. The Air reſounds with their confus'd Cries; and when they meet one another, one ſays, *Chriſt is riſen again*; and the other anſwers, *He is certainly riſen.* The Prieſts have their large Share in the Debaucheries of that Time: They have a young Man who goes before them with a Crucifix. They viſit their Friends and Acquaintance, and are ſure to be drunk. Their Bells toll Day and Night, for they are perſwaded that it contributes to the Eaſe and Comfort of the Souls of their deceas'd Friends.

Their Prieſts account all thoſe Pagans who are not of the *Muſcovite* Faith. A Curate, ſays the Ambaſſador, refus'd to give us his Hand, leſt by touching us he ſhould be defil'd. None of their Boors, and but very few of their Citizens or Monks, can repeat the *Lord's-Prayer*.

When a *Muſcovite* enters a Room, he takes no Notice of the Company, but looks about till he perceives an Image; then he bows to it three times, makes the Sign of the Croſs, and afterwards ſalutes the Company. If any be found worſhipping ſecretly an Image erected at the Charge of another, the Owner upbraids him with Injuſtice, in deſigning to have a Share in the Favour of that Image, which is only due to the Proprietor; and they are often oblig'd, by way of Puniſhment, to pay the Owner ſome Part of the Money he has laid out for the Image.

When a Man is excommunicated by the Church, his Saint muſt alſo partake of the Diſgrace, and is allow'd no Place in the Church till the Man be reſtor'd to Communion, and then the Image is replac'd. Our Landlord, ſays the Ambaſſador, took all the Images out of our Rooms, for fear they ſhould be provoked, if he ſuffer'd them to lodge with Pagans.

They allow no Preachers, leſt they ſhould teach the People Hereſie. They are oblig'd to confeſs before they receive the Sacrament, but are ſure to conceal their greateſt Sins.

Many of the *Muſcovites* are not call'd by the Names they receiv'd in Baptiſm, for their Parents conceal their true Names, and give them others, leſt Magicians, or other wicked Perſons, knowing their true Names, ſhould make uſe of them to their Ruine.

Of the RIVERS *of* Muſcovy.

Ptolmy ſays, the *Rha* is the greateſt River of *Sarmatia Aſiatica*, and has its Riſe in *European Sarmatia*. The *Muſcovites* now call it *Wolga*: the *Tartars*, *Edel*; the *Armenians*, *Thamar*. Its Source is in the Province of *Reſchow*, from the Lake *Fornow* in the Forreſt of *Volkonk*. Out of this Lake runs a ſmall River, which, after a Courſe of 8 *Engliſh* Miles, falls into a Lake call'd *Volga*, with which it joins its Waters for 30 *Engliſh* Miles, comes out greater than it enter'd, and has the Name of *Volga* from that Lake: Then it runs E. and waters *Jeroſlaw* and *Niſi-Novogorod*, where the *Occa* falls into it: It alſo runs by *Caſan*. A little lower, the great River *Koma*, that divides *Europe* from *Aſia*, falls into it. Then its Courſe is S. till it reach *Samara*, and runs S. W. to the City *Saratoff*. Then it runs S. and waters *Zarina* and *Aſtracan*. The *Volga* there is 2216 Foot broad. Twelve Leagues below this, it falls into the *Caſpian* Sea, by 25 Mouths, in Lat. 46. Long. 76 ½. and makes it leſs brackiſh for many Leagues. From its Source to the *Caſpian* Sea, it runs 2900 Miles.

Occa. The Source of this River is not far from the Borders of the *Precopian Tartars*, about Lat. 49. It runs N. till it comes to *Kolm*, in Lat. 55. and Long. 56. Then it turns E. and waters *Roſan*, *Caſigored*, and *Niſi-Novogorod*, where it falls into the *Volga*, in Long. 64.

Duina, ſignifies in the *Ruſſian* Language Two, from two Rivers of which it is made up,

Digitized by Google

up, *viz.* *Suchina* and *Juga*: The firſt riſes in the Province of *Vologda*, and waters the City of that Name; then it runs N. to the City *Uſtiugh*, where the *Juga* falls into it, whoſe Courſe is from S. E. to N.W. At this Place it is call'd *Duina*, from the Conflux of thoſe two Rivers. A little lower fall into it the River *Wizegda*, whoſe Courſe is from N. E. to S. W. the *Waga*, that runs from S.W. to N. E. and the *Pinega*, that runs from E. to W. Then it waters *Archangel*, and falls below it into the *White Sea*, in Lat. 64½. and Long. 58.

Oby. *Ptolomy*, and others of the Ancients, call'd it *Corambucis*; and their Iſland *Corambyce* is now call'd *Nova-Zembla*. It has its Source from the Lake *Oſero-Kankiſan*, in Lat. 48. and Long. 95. and runs from S. W. to N. W. 'Tis the moſt conſiderable River in *Siberia*. In ſome Places 'tis half a League, and in other Places a whole League broad. This River has many Cataracts, which makes the Navigation of it very troubleſome. Many great Rivers fall into it, as the *Keta*, which riſes in Lat. 51. and Long. 98. It runs N. to *Makoſikoi*, in Lat. 56. and Long. 97. From thence it takes its Courſe W. and falls into the *Oby* at *Keetskoi*, in Lat. 55. and Long. 90. This River has Plenty of Fiſh, and walhes conſiderable Towns, as *Tomsko*, *Narum*, *Surgut*, *Kozkoſa*, and *Bereſowa*. It falls into the *Icy-Sea* by ſix Mouths, in Lat. 68. and Long. 83. The Way by this River to the Sea is ſeldom paſſable, becauſe of the Mountains of Ice that for moſt part choak up the Mouth of it.

Irtu, has its Riſe from the Lake *Oſero-Suſan*, about Lat. 46. and Long. 92. It runs from the S. to the N. W. till it joins with the *Tobol*: From thence, till it falls into the *Oby*, it runs N. E. Its whole S. E. Shore is all high Hills, on which grow ſome Cedars. The N. W. Shore is low Paſture Ground; and on this Side there's a prodigious Number of great Black Bears, Wolves, Red and Grey Foxes. It falls into the *Oby* N. from *Samaroſikoy*, in Lat. 64. and Long. 84. *Tura*, *Tobolika*, and *Samaroſikoy*, are ſeated on this River.

Tobol, has its Source in Lat. 51. and Long. 80½. It runs N. W. till it joins with the River *Tura*, near *Tumeen*: Then it takes its Courſe N. E. till it falls into the *Irtis* at *Tobliko*, in Lat. 56½. and Long. 81.

Jeniſia, riſes out of the *Kalmachian* Mountains, in the S. of *Tartary*, in Lat. 40. Long. 101. and runs N. almoſt in a ſtraight Line to the *Icy-Sea*. The Water of this River is white and light; but it does not much abound in Fiſh. It falls into the *Icy-Sea* in Lat. 70. and Long. 92. None have travelled further, either by Water or Land, than to the River *Tarſida*, on the E. of *Jeniſia*, becauſe Ice from the Sea drives into it, and makes it utterly unnavigable. Moſt of the Inhabitants between *Tarſida* and *Jeniſia* are *Samoiedes*, and *Tunguzian Tartars*. Three very fine Rivers fall into the *Jeniſia*, which are, the *Werguaja-Tunguska*, *Podkamenna Tunguſk*, and *Niſnaja-Tunguska*; on all which dwell great Numbers of a barbarous wild ſort of *Tunguzians*, which may be ranked with the *Samoiedes*; but are of a leſs Size, and weaker.

Lena, riſes in Lat. 56. and Long. 114. N. from the Lake *Baikala*, and falls into the *Icy-Sea* in Lat. 73. and Long. 123. It is a great River. Small Barks coaſt it along by the Shore, and go through the Cape to *Sabazia*, *Onodieskoy*, and *Kamſatka*, in ſearch of Sea-Calves, Teeth, and Train-Oil. The neighbouring *Tartars* make uſe of little Leathern Boats on this River, which ſail very ſwift. The Rivers which run from the S. and fall into the *Lena*, are, the *Wittim*, which riſes in Lat. 55. Long. 121. and falls into the *Lena* in Lat. 63½. and Long. 115. Its Courſe is to the N. W. The *Olockma* has the ſame Courſe, riſes in Lat. 60. Long. 124. and falls into the *Lena* in Lat. 65¼. and Long. 118. *Maia* has alſo the ſame Courſe, and riſes in Lat. 63. Long. 126. and falls into the *Lena* in Lat. 70. and Long. 120. All theſe Rivers fall into the Right Side of the *Lena*.

Theſe are the moſt remarkable Rivers belonging to the vaſt Empire of *Muſcovy*; concerning which 'tis obſerv'd, that moſt of them have their Source from Lakes, are broad and ſhallow, full of Iſlands, Flats, and deep Holes.

Of the LAKES.

Uan-Oſero, is a great Lake, 8 Miles E. from *Tula*, in the Province of *Reſan*: It is near 500 *Engliſh* Miles long. From this the *Donn* takes its Riſe.

Bielosera, is 64 Miles long, and 48 broad: It lies S. from *Archangel*, in Lat. 60. The River *Schexma*, which falls into the *Wolga*, 4 Leagues below *Mologa*, rises from this Lake.

Ilmin, is 48 *English* Miles long, and as many broad, and ends about 2 Miles from *Novogorod-Weliki*. It receives the River *Schalona*, and the *Lowat*, which rises in the Forreſt of *Wolkowsky*, from a Lake call'd *Fornow*.

Ladoga, is 400 *Engliſh* Miles long, and 240 broad, is full of Iſles. The *Neva*, which falls into the *German* Ocean, riſes from this Lake.

Muſcovy is divided by ſome into 4 Parts, *viz. Weſt-Muſcovy*, or *Ruſſia*, bordering on *Poland*, containing 22 Provinces. 2. *Eaſt-Muſcovy*, or *Ruſſia*, which reaches to the Streights of *Weygates*, and contains 7 Provinces. 3. *Muſcovian-Tartary*, comprehending the Kingdom of *Aſtracan*, the Kingdom of *Bulkar*, the Kingdom of *Caſan*, the Kingdom of *Siberia*, the Country of the *Samoieder*, the *Tartarian* Fortification *Aſoph*, and all its Dependencies, with the demoliſh'd Places *Towan* and *Kaſikermen*, and has a free Commerce with the *Black Sea*; all which were confirmed to the Czar, by the Peace with the *Turks* in 1700. 4. The *Muſcovite-Lapland*, extending along the *White Sea* to the *Swediſh* Borders.

Some divide *Muſcovy* into Southern and Northern: The Northern Part contains 16 Provinces, *viz.*

1. *Lapland*, belonging to *Muſcovy*; chief Town *Kola*.
2. *Kargapol*, S. E. from *Lapland*, near *Archangel*; chief Town *Kargapol*.
3. *Duina*, N. E. from *Kargapol*; chief Town *Archangel*.
4. *Condora*, E. from *Archangel*; chief Town *Wrzaturia*.
5. *Juhorski*, N. from *Condora*, near *Weygates* Streights; chief Town *Juhora*.
6. *Petzora*, E. from *Condora*, near the *Samoieder*; the chief Town *Petzora*.
7. *Obdora*, N. E. from *Condora*, near the Mouth of the *Oby*; chief Town *Bereſof*.
8. *Permski*, S. E. from *Condora*, near *Siberia*; chief Town *Perma Weliki*.
9. *Wiatka*, S. from *Permski*; chief Town *Wiatka*.
10. *Niſi-Novogorod*, S. W. from *Wiatka*, near the *Volga*; chief Town *Niſi-Novogorod*.
11. *Onſtiough*, W. from *Wiatka*; chief Town *Onſtiough*.
12. *Wologda*, S. W. from *Onſtiough*, near the Lake *Onega*; chief Town *Wologda*.
13. *Biela-Ozera*, S. from *Wologda*, near the *Wolga*; chief Place *Biela-Ozera*.
14. *Novogorod-Weliki*, on the E. of the Lake *Ladoga*; chief Town *Novogorod-Weliki*.
15. *Pleskow*, near *Riga* in *Livonia*; chief Town *Pleskow*.
16. *Czeremiſſet-Logowey*, W. from *Caſan*, upon the *Wolga*.

The Southern Provinces are alſo 16.

1. *Reſchow*, S. E. from *Pleskow*; chief Town *Reſchow*.
2. *Bielka*; chief Town *Bielka*.
3. *Smolensko*, S. from *Reſchow*, upon the *Nieper*; chief Town *Smolensko*.
4. *Novogorod-Sewierski*, S. E. from *Smolensko*; chief Town *Novogorod-Sewierski*.
5. *Czernikow*, W. from *Novogorod-Sewierski*; chief Place *Czernikow* River.
6. *Ukrain*, belonging to *Muſcovy*, S. from *Smolensko*, upon the *Nieper*; chief Town *Kiow*.
7. *Worotin*; chief Town *Worotin*.
8. *Rezan*, S. from *Wolodimer*; chief Town *Reſan*, on the S Side of the *Wolga*.
10. *Moſcow*, N. E. from *Reſchow*; chief Town *Moſcow*.
10. *Twer*, N. from *Reſchow*; chief Town *Twer*.
11. *Roſthow*, N. from *Moskow*; chief Town *Roſthow*.
12. *Jaroſlaw*, N. from *Roſthow*, on the N. Bank of the *Wolga*.
13. *Suſdale*, E. from *Roſthow*, upon the *Wolga*; chief Town *Suſdale*.
14. *Wolodimer*, E. from *Suſdale*, upon the S. Bank of the *Wolga*; chief Town *Wolodimer*.
15. *Czerimiſſet-Nawornay*, S. W. from *Caſan*, betwixt the *Wolga* and *Donn*.
16. *Mordwa*, W. from *Czerimiſſet-Nagornay*, upon the *Donn*.

Of LAPLAND.

The *Muſcovite-Lapland* is much leſs than that belonging to *Sweden*. On the Weſt, it has *Swediſh Lapland*: On the N. and N. E. the *Frozen Sea*; and on the S. and S. E. the *White*

White Sea. Its Latitude is from 64 to 72 Deg. N. Lat. and its Long. from 43 to 58. It is divided into 3 Parts, *viz.* 1. *Mourmansky-Leporie*, the moſt Northern Part, in which lies *Kola*, a Sea-Port Town, upon a River of the ſame Name, which runs into the *Frozen Sea* a little below it. This Port is well known to the *Engliſh* and *Dutch*, who buy Furs here. 2. *Terskoy-Leporie*, N. from the *White Sea*. In this Part, there's a little Town call'd *Warſiga*. 3. *Bellamoreſky*, S. W. from the *White Sea*. In this are the Towns of *Kandalax* and *Ombay*. This Country is barren; the Inhabitants are the wickedeſt of all the *Laplanders*. We refer the particular Account of the Manners, Cuſtoms, Religion, and Natural Hiſtory, &c. of the *Laplanders*, till we come to treat of *Swediſh Lapland*, which is larger by much than the other two *Laplands*.

KARGAPOL. This Province is deſart, and has a Town of the ſame Name. The Lake *Onega* is on the W. of it: The Town is on the River *Onega*, which runs into the *White Sea*.

DUINA. This Country is ſo called from the River *Duina*, that runs through it. It abounds with Iſinglaſs and Pitch; but is otherwiſe barren, and ill inhabited, tho' 100 Leagues long: 'Tis very cold, which hinders their having any Corn. The People live on dry'd Fiſh and Veniſon, and their chief Commodity is Salt. *Archangel* is the chief Town, and lies upon the *Duina*, which runs into the *White Sea* 6 Miles below it. It has a good Trade with the *Engliſh* and *Dutch*, and is the greateſt Staple-Port belonging to the *Muſcovites*, which makes it populous, tho' but ſmall: 'Tis ſo called from the Archangel St. *Michael*. Cuſtoms are very heavy here upon all Commodities. *St. Nicholas* is a Sea-Port, on the Left Branch of the *Duina*, ſo call'd from a Saint of that Name, in whom they truſt more than in St. *Peter* or St. *Paul*, becauſe he is their Countryman.

CONDORA. We know little of it, but that it is over-run with Woods. On the North, it has the *Frozen Sea*. This Country and *Obdora* receiv'd the Chriſtian Faith in 1618, and were not amongſt the Czar's Titles till the Reign of *Ivan Baſilowick*. Some ſay, the Inhabitants are *Samoiedes*, and barbarous Cannibals. *Wergaturia* is their chief Town.

JUHORSKI. It is uncertain where it is ſituated; but ſome Maps place it on the *Frozen Sea*. *H. Smith*, who liv'd in *Petzora* in 1580, ſays, That it lies over againſt the Streights of *Weygates*. The Baron of *Herbeſtein* thinks, 'twas from this Place that *Attila* over-ran *Europe*, and call'd *Pannonia*, *Hungary*, from the Name of their own Country. He thinks it is evident from this alſo, that the Remainder of the ancient *Hungarians*, who live betwixt the *Danube* and *Tibiſcus*, ſpeak the ſame Language with the Natives of *Juhorski*. They live after the Manner of the *Samoiedes*. *Jubora* is their chief Town.

PETZORA. It is bounded by a River of the ſame Name, and is on the W. of *Obdora*. *Petzora* is their only Town, which has 3 Churches: They are a ſort of Chriſtians ſince 1581, and live chiefly upon Geeſe and other Fowls, which they catch in the Spring and Summer. They ſell the Feathers to Merchants; the Fleſh they dry and ſalt for Winter: They are deſcended of the *Samoiedes*, but civiliz'd a little by the *Muſcovites*. They have many Salmon, and great Plenty of Sables.

OBDORA. It has the River *Oby* on the E. and is inhabited by *Samoiedes*, who are Idolaters and Savages. The *Muſcovites* have ſome Caſtles built there, to keep them in Subjection, and ſecure their Tribute.

PERMSKI. They have little Bread here, live upon Hunting, and have their Sleds drawn by Dogs, in which they ſlide over the Snow with great Expedition. *Perma-Weliki*, their chief Town, was formerly very conſiderable, but now is ruinous: 'Tis a Biſhop's Seat. The People have a peculiar Character and Language, and pretend to be very ancient.

WIATKA. It abounds with Honey, Wax, and Furs. *Wiatka* is the Capital. The Country in general is marſhy and barren.

NISI-NOVOGOROD: Is one of the beſt Countries belonging to *Muſcovy*. The chief Town is of the ſame Name, and lies upon the S. Side of the *Wolga*, at the Conflux of that River, and the *Occa*, 100 *German* Leagues from *Moſcow* to the N. E. 'Tis

Digitized by Google

great City, fortifi'd with ſtrong Stone Walls, has a Caſtle built of Stone, and a famous Church, built like that of St. *Sophia* in *Conſtantinople*. *Vaſſilgorod* is a ſmall Town upon the *Volga*, and belongs to that Province.

OUSTIOUGH. The Natives there had a Language of their own; but the Czar introduc'd the *Ruſſian*, the People being willing to uſe it, becauſe it is more advantagious to their Trade. They have Black Foxes, and famous Fairs and Marts. The chief Town is *Ouſtiough*, a noted Place for Trade in Furs.

WOLOGDA. This Country is marſhy, and full of thick Woods. They ſell much Tallow to Strangers. The chief Town is of the ſame Name, and fortified with a Stone-Wall. The Czar, in Time of Danger, uſes to ſecure Part of his Treaſure here. Many Places of this Country are unpaſſable, except on Sleds, during the Winter. It formerly belong'd to the Dutchy of *Novogorod*.

BIELA-OZERA. This is the moſt ancient Dutchy of *Muſcovy*: It has its Name from a Lake, in the middle of which the Capital is built: They think it impregnable, being advantagiouſly ſituated, and having ſtrong Fortifications. The Czar keeps his Treaſures here, under the Guard of his principal Officers, and a ſtrong Gariſon. It is one of the Titles of the Czar, and is diſtant from *Moſcow* and *Novogorod* 100 *German* Miles.

NOVOGOROD-WELIKI. 'Tis fertile in Flax, fine Hemp, and has Honey, Wax, and Leather. The Capital is of the ſame Name, well built, ſtrong, and has a good Caſtle. It is ſituated upon the River *Wolkou*, in a great Plain. It was formerly an Independent Republick, under its own Prince, and then was ſo wealthy and ſtrong, that it became a Proverb, *Who can do any thing againſt God and* Great Novogorod? The *Hanſe-Towns* drove a great Trade here; and the River being navigable, contributed much to its Strength and Riches. *Ruſſia* Leather is better dreſs'd here than any where elſe. The Cauſes of its Decay were, 1. That in 1477, *Ivan Vaſili Groſdein* forc'd them to receive a Governor; after which, pretending a Pilgrimage, he pillag'd it, and carried away 300 Cart-load of Jewels, Gold and Silver, beſides many others fill'd with rich Stuffs and ſumptuous Moveables. He tranſported the Inhabitants, and ſent *Muſcovites* to dwell in their Place. 2. *Ivan Baſſilowick*, in 1569, upon Pretence of a Revolt, cut off the greateſt Part of the Inhabitants; upon which there follow'd a great Plague; and then a Famine, ſo that they eat one another: Then, pretending to puniſh their Inhumanity, he deſtroy'd the greateſt Part of thoſe that were left. In 1611, the *Swedes* took it by Storm, but it was redeliver'd by Treaty to the *Muſcovites*. There are about 100 Monaſteries, Churches and Chapels here, that have their Steeples and Towers cover'd with gilt Copper. The Cathedral Church is that of St. *Sophia*. On the other Side the River, there's a ſtrong Stone Caſtle, join'd to the City by a large Bridge.

PLESKOW. It abounds with Wax and Honey: The chief Town is *Pleskow*. It is 36 *German* Miles S. W. from *Novogorod*, and 27 E. from the Borders of *Livonia*. In 1509, it came under the Power of the *Muſcovites*, by a Civil War among the Citizens, and was once the only Town in *Muſcovy* that had Walls. It is divided into three Parts, every one of which is ſurrounded with ſtrong Walls. It was beſieged by *Stephen* King of *Poland* in 1581, when ſome ſay the Gariſon conſiſted of 70000 Foot, and 7000 Horſe, beſides the Citizens.

Southern *Muſcovy* has the 16 Provinces following:

RESCHOW. The *Volga* begins in this Province, in Lat. 55. Long. 55. and falls into the *Caſpian* Sea, Lat. 46. Long. 76¼. It has alſo the Fountains of the *Duina*, *Nieper*, and *Lowat*, all great Rivers. The Hares in this Province are White. Some ſay, That all Beaſts brought hither turn of that Colour. The Inhabitants have a Language proper to themſelves. The chief Town is *Reſchow*, on the Borders of *Lithuania*, 40 *Engliſh* Miles from *Twer* to the S. W. and 50 from *Bielka* to the E. *Wyſchkyeluki* and *Toropyecz*, large Cities with Caſtles, are alſo in this Country.

BIELKA. This Country has *Lithuania* on the W. and S. and *Twer* on the E. The chief Town is *Bielka*, with a Caſtle, ſeated on a River of the ſame Name.

The

The Dukedom of SMOLENSKO. It belong'd formerly to *Lithuania*; but has been ſubject to the *Muſcovites* ſince 1654, that the Czar *Alexius Michaelowitz* took from the *Poles* the chief Town of the ſame Name, and united it to *Muſcovy*. It was taken in 1611 by the *Poles*, after a Siege of 2 Years, with the Slaughter of 200000 *Muſcovites*. The *Muſcovites* beſieg'd it in 1633, but were defeated before it. 'Tis 150 Miles E. from *Warſaw*, 100 Miles from *Vilna*, and 150 N. from *Kiow*. 'Tis a great City, but not populous: The Walls are 6 Cubits broad, and have 52 Towers. There's a ſtrong Caſtle in the middle of the City. They have Plenty of Wild Beaſts, whoſe Skins are much valued. Here the Czar once a Year diverts himſelf and the Foreign Ambaſſadors by Hunting. *Drohobus*, *Wieſma*, and *Muſaisko*, are Cities belonging to this Province.

NOVOGOROD-SEWIERSKI. It has *Worotin* and *Reſan* upon the E. *Lithuania* on the W. from which the *Nieper* divides it, and *Smolensko*, to which it formerly belong'd, on the N. The chief City is of the ſame Name, and is diſtant from *Moſcow* 150 Leagues. The Inhabitants are Warlike, being kept in conſtant Exerciſe of their Arms by the neighbouring *Tartars*. The City and Caſtle are well fortified after the *Ruſſian* Manner.

CZERNIKOW. It belong'd once to *Lithuania*, and is ſo call'd from its chief Town on the River *Denza*, N. from *Kiow*, two *Poliſh* Miles from the *Nieper*, and 17 W. of *Novogorod-Sewierski*.

The Muſcovite UKRAIN: Was formerly a Part of the *Lower Volhinia*, and is divided in the middle by the *Nieper*. The chief Town is *Kiow*, which was given by the *Poles* to the *Muſcovites* for 700000 Florins. *Little Tartary* is on the S. of it.

WOROTIN. Its chief Town is *Worotin*, with a Caſtle, upon the River *Occa*.

REZAN. *Wolodimer* lies N. of this Province, and *Ukrania* and the *Precopian Tartars* to the South. It is ſituated betwixt the *Don* and the *Occa*: It had formerly a Prince of its own, but is now ſubject to the *Muſcovites*. The River *Don* has its Source in this Province, which is fruitful in Corn, Honey, Wax, Fiſh and Fowl, beſides Ermins, Beavers, and other Furs. The chief Town is *Reſan*, 36 Miles N. W. of *Muſcow*. It was formerly conſiderable, but is now ruin'd by the Neighbourhood of the *Tartars*. *Perejlow*, *Colluga*, and *Tulla*, are Cities in this Province; and *Czirpac*, where they have Iron Mines.

MOSCOW. This Province is bounded on the N. by *Roſthow* and *Suſdale*, on the E. by *Reſan*, on the W. by *Bielka*, on the S. by *Worotin*. It is ſo healthful a Country, that they reckon it a Wonder to hear of any Epidemical Diſeaſe here. The great Number of navigable Rivers contribute much to their Plenty of Proviſions in Summer; and their Sledges, drawn by Deer or Horſes upon the Ice, bring them all Neceſſaries at eaſie Rates in the Winter. The Deer are fed with Moſs, of which they have abundance in their Woods. Their Horſes travel 50 of our Miles without baiting; ſo that a Countryman will conduct one 11 or 1200 Miles for 4 Crowns, beſides the paſſing and repaſſing of ſo many Governors to and from their Poſts, for their Commiſſions laſt only for two or three Years, makes Travelling both ſafe and cheap. The chief City of this Province, and of all the Empire, is *Moſcow*. It is in Long. 59. Lat. 56. Some ſay, That in 1571, when it was burnt down, 80000 Souls were deſtroy'd in the Flames. It was twice as large then as now. In 1611, 41000 Houſes were reduc'd to Aſhes, and 200000 Perſons ſlain by the *Poles*. It is ſituated upon the River *Moskua*, which begins to be navigable 6 Miles above it. It is 16 Miles in Compaſs, but not Peopled in Proportion; for within the Walls, they have many Gardens and Meadows. The Streets are not pav'd, except in ſome Places with round Fir-Trees. People of Faſhion ride here in Summer, and are carry'd in Sledges in Winter. Their Houſes are ill contriv'd, built of Fir-Timber, ſquar'd and Dovetail'd one into another. The Chinks between are ſtopt up with Moſs, and the Rooſs are cover'd with Bark. Many *Tartars*, *Greeks* and *Perſians*, live here. Some reckon the Number of the Inhabitants to be about 700000. The *Lutherans* and *Calviniſts* are allow'd the Exerciſe of their Religion here. Their Houſes are liable to Fire, becauſe built of Wood, and by the Drunkenneſs of the People. To prevent

ics

its ſpreading, thoſe upon the Guard are provided in the Night-time with Pole-Axes, to break down the next adjoining Houſes. New Houſes are purchas'd here at an eaſie Rate. The Great Duke's Palace, called *Cremelena*, takes up one half of the City: It is fortified with 3 Walls, and a good Ditch, and well provided with Cannon. All the Steeples within the Caſtle are cover'd with Copper-gilt: One of them, called *Ivan-Veliki*, i. e. *Great John*, is remarkable for its great Height; and another for its Bell, which weighs 33600 lb. and what is more ſurprizing, was caſt by a *Ruſſian* Founder: 'Tis bigger than the great Bell of *Peking* in *China*; than that in *Rouen*, called *George d'Amboiſe*, and is probably the greateſt in the World: Its Height 19 Foot, its Diameter within 18, the external Circumference 64, and the Thickneſs 2. It was caſt in 1653, in the Reign of *Alexis Michaelowitz*. 'Tis never toll'd but upon extraordinary Occaſions, when 24 Men pull the Rope below, and ſeveral others above. There is a very fine Piece of Architecture of Stone, built after the *Italian* Manner, for the young Prince; but the Czar continues in his Wooden Palace. On the South-Side of the Caſtle-Gate, without the Walls, there's a Church dedicated to the Bleſſed *Trinity*, and by ſome called *Jeruſalem*, built by the famous *Ruſſian* Tyrant *John Baſilowitz*, who caus'd the Architect's Eyes to be put out, to prevent his undertaking any thing like it for the future. Every Trade have their own Station and Place in this City.

The 2d Quarter is call'd *Czar-Gorod*, or the City-Royal: It encompaſſes the other like a Semi-Circle, and is walled about with white Stone. The Arſenal, and the Place where the great Guns are caſt, are here. The *Muſcovites* are now as expert in caſting Guns as other Nations.

The 3d Quarter, which encompaſſes the former from the E. along the N. to the W. is call'd *Skeradam*: The River *Jaguſa* paſſes through it. Here they have a Market for Houſes ready built, which are taken to Pieces, and tranſported to any Place in the Town.

The 4th Quarter, which lies to the S. on the oppoſite Side of the River *Moſcua*, is fortified with Wooden Walls and Ramparts. It is the Habitation of the Czar's Guards. The Chapels and Churches in this City are 2000, and, by Order of the Patriarch, are now all built of Stone. This City lying betwixt *Narva*, *Archangel*, and *Aſtracan*, makes it a Place of great Trade.

TWER: Is ſituated betwixt the Provinces of *Reſelow* and *Novogorod-Weliki*. Near this Province riſes the *Wolga*, which runs 2400 Miles before it falls into the *Caſpian* Sea. This Province is rich in Corn and Merchandize, and very populous. They can furniſh their Prince with 40000 good Horſes, and 80000 Foot. The Capital City is *Twer*, 140 Miles from *Moſcow*, and ſituated on the River *Twertza*, where it runs into the *Volga*. It has about 60 Churches, is a Biſhop's See, and has a Mint.

ROSTHOW. It has *Suſdale* on the E. and *Twer* on the W. This Province was the Inheritance of ſome Princes of the Blood of *Ruſſia*; but they were entirely rooted out, and the laſt Heir murther'd in 1565, by *John Baſilowick*. They have Plenty of Salt. The chief Town is of the ſame Name, lies 26 Miles S. from the *Wolga*, 36 *Poliſh* Miles from *Moſcow*, and 48 S. of *Jaroſlaw*. *Pereſlaw*, *Uglitz*, and *Chlopigrod*, are Towns in this Province.

JAROSLAW. It is ſituated betwixt *Wologda* to the N. and *Roſthow* to the S. The chief Town is of the ſame Name; lies upon the River *Volga*. They had Princes of their own, till *John Baſilowick* deſtroy'd them. Some ſay, the City is well fortified, and contains about 40000 Inhabitants: It is 45 *Poliſh* Miles N. of *Moſcow*. They have a great Trade in Leather, make much Linen, and abound with Corn, Cattle, and Honey. They have an eaſie Paſſage to *Archangel*. *Romanowa* belongs to this Province, and lies alſo upon the *Volga*.

SUSDALE. It has *Roſthow* on the W. and *Wolodimer* on the E. The chief Town is *Suſdale*, an Archbiſhoprick, 80 Miles N. E. from *Moſcow*, and 130 Miles S. W. from *Niſi-Novogorod*. It has a famous Nunnery.

WOLODIMER. *Suſdale* is on the W. *Mordwa* on the E. *Reſan* on the S. and *Niſi-Novogorod* on the N. of this Province. The principal Town is of the ſame Name. It is 190 Miles S. from *Niſi-Novogorod*, and was formerly the Metropolis of *Muſcovy*, and the

Digitized by Google

the Reſidence of the Great Dukes, till the Seat of the Empire was tranſlated to *Moſcow*, by *John* the Son of *Daniel*, becauſe *Wolodimer* was too near the *Tartars*. It is now the ſecond City of the Empire. The Czar ſtiles himſelf Duke of this Place. 'Tis an exceeding fruitful Country, and yields frequently thirty for one. It abounds with Honey and Wax.

CZEREMISSES-NAGORNAY. They are People who live on the E. of *Muſcovy*, and on the S. of the *Wolga*. Some of them are Mahometans, but moſt of them Pagans. They live on Mountains; and thoſe called *Logoway* live in Champaign Countries.

The MORDWA TARTARS: Are planted betwixt the *Volga* and the *Don*, where it begins to turn Weſtward towards the *Euxine* Sea. They have the *Czeremiſſes-Nagurnay* to the E. *Wlodimer* to the W. and are near *Little Tartary*, and the Provinces of *Roſan* and *Worotin*. They are ſavage idolatrous People: They practice Polygamy, and divorce when they are wearied one of another. When a rich Man dies, they kill his beſt Horſe to ſerve him in the other World, and then they eat the Horſe. Both Men and Women are good Archers. They pay Tribute to the Czar.

Having thus given an Account of the Provinces belonging to the *Muſcovites* in *Europe*, we come now to thoſe they poſſeſs in *Aſia*, which formerly belong'd to *Tartary*, as the Kingdoms of *Coſan* and *Aſtracan*, *Samoieda*, *Siberia* and *Daiiria*.

SAMOIEDA.

THE Lat. and Long. of this Country is not very certain. *Iſaac Maſſa* makes it to lie both on the W. and E. Side of the *Oby*. *Petzora* lies on the W. but what Countries are to the E. is not known. The Northern Boundaries are, the Streights of *Weygates*, and the *Frozen Ocean*. Their Country extends to Lat. 72. The Ambaſſadors from the Duke of *Holſtein*, in their Travels to *Muſcovy* in 1643, tell us they had occaſion to diſcourſe in the Czar's Anti-Chamber with two of the Deputies of the *Samoiedes*, who underſtood the *Ruſſian* Language; and from them they give us this Account: They were anciently comprehended under the ancient *Scythæ*. Their preſent Name ſignifies *Cannibals*, or Man-Eaters; but the *Hollanders*, who were ſhipwreck'd on their Coaſts, ſpeak much of their Humanity and Kindneſs.) The *Muſcovites* call'd them ſo, becauſe they us'd to mix the Fleſh of their deceas'd Friends with Veniſon. Their Huts have Paſſages under Ground, by which they converſe one with another during the Winter, when the Sun leaves them for ſeveral Months; for their Huts being then cover'd with Snow, they cannot walk abroad, but viſit their Friends by thoſe ſubterranean Walks. The Want of Light they ſupply by Lamps, fed with the Oil of Fiſh they take in Summer. This gives Riſe to the Fable, That they ſleep ſix Months in Winter, and riſe again in the Spring. They don't cultivate the Ground, nor have any Cattle. They eat dry'd Fiſh inſtead of Bread. They have alſo Veniſon and Honey. They cloath themſelves with the Skins of Rain-Deer. They are low of Stature, with broad flat Faces, little Eyes, ſhort Legs, and wear their Hair long, not unlike the *Greenlanders*. When the Sun returns, they creep out of their Huts by the Tops of their Chimnies. They wear large Caps made of Furs, or Pieces of Cloth of divers Colours, which fall down about their Shoulders. Their Shirts are made of the tender Skins of Rain-Deer, and are ſofter than Linen, under which they wear Drawers, and over their Shirts certain Caſſocks, reaching down to their Mid-leg, with Furs on the outſide. They put them on in very cold Weather over their Heads, ſo that their Faces appear only thro' the Cleft at the Neck; which has occaſion'd ſome Hiſtorians to ſay, They were without Heads, and had Faces on their Breaſts. The *Samoiedes*, as well as the *Laplanders* and *Finlanders*, wear a kind of Pattins, of an Ell and an half long, made of the Barks of Trees, with which they ſlide on the Snow without ſinking. The *Laplanders* and *Finlanders* have theirs as long behind the Heel as before the Toe; but the *Samoiedes* have them only turn'd forwards. Colonel *Porter*, Governor of *Riga*, gave the *Holſtein* Ambaſſadors the Diverſion of ſeeing two *Finlanders* belonging to his Gariſon run down a Hill with thoſe Pattins; which they did with ſo much Swiftneſs, that a Horſe in a Gallop could ſcarcely keep Pace with them.

They

Digitized by Google

They uſe the Nerves and Veins of the Rain-Deer inſtead of Thread, and the Shavings of Beach-Bark ſerves them for Napkins. When one of thoſe *Samoiedes* was ask'd, What he thought of *Muſcovy*? He anſwer'd, That tho' *Muſcovy* was a Country pleaſant enough, yet he was confident, if the Czar was ſenſible of their ſecure and quiet Life, he would chuſe their Retirement before all his Grandeur. They were all Pagans till within theſe few Years, that they were converted by a *Muſcovite* Biſhop of *Wolodimer*. They pay Tribute in Furs to the Czar, who has Gariſons there. *Stephen Burroughs*, an *Engliſhman*, in 1556, firſt diſcover'd them in his Voyage to find out a N. E. Paſſage. *Richard Johnſon* was alſo there: His Relation of them is in *Hackluit*. Afterwards, in 1596, *William Barents* gave ſome Account of them.

Pitt's Atlas has this further Account of them. They have different Languages, but how many, and the Place where each Language is ſpoken, is not ſo well known. When the Weather is tolerable, they go from Place to Place, where they can find beſt Paſture for their Rain-Deer, by which they are carried in Sleds, and can travel 200 *Italian* Miles in one Day. This frequent ſhifting of their Quarters enables them to be Guides to Merchants; and they ſeldom miſtake their Way in the greateſt Miſt. They are very nimble, and excellent Archers. Some of them at *Moſcow*, for an Eſſay of Skill, ſet up a ſmall round Piece of Tin, from which they retir'd as far as they could diſcern it, yet never fail'd to hit it with their Arrow. The Women have the ſame Garments with the Men, and are not eaſily diſtinguiſh'd from them: Only they have on either Side a Lock of Hair hanging down below their Ears, and make blue Lines in their Faces, by drawing a Thread dip'd in blue Paint lightly under the Skin. The Faſhion of their Habits is not the ſame in all Places. They have no Bread, or any thing like it. Their Food is Train-Oil and Honey, with raw Fleſh and Fiſh; but they uſually dry it in the Sun and Wind.

Their QUALITIES *and* CUSTOMS.

THey are ſtrong and healthful: The Husbands are their Midwives: The Mother waſhes the Child as ſoon as born in cold Water or Snow, and next Day is able to wait upon her Rain-Deer and Sleds. They are ſtout, though not quarrelſome. Their Weapons, beſides Bows and Arrows, are long Spears, and ſhort Swords. Thoſe who are not ſubject to the Czar, are under no Government. They conſult the moſt ancient Perſons in Affairs of Difficulty, who are alſo their Prieſts. They aſk them, which Way they ſhall move? What Succeſs they are like to have in Hunting, or in Journies? They have but few Controverſies, which are determined by a ſort of Oath, in this Manner: They make an Image of a Man in Snow, and lay before it a Wolf's Snout: He who is to ſwear takes a Sword, and tells over the Names of his Wives, Children and Friends; wiſhes, if he ſwear falſly, they may be all cut to pieces, as he cuts that Image with his Sword, which he immediately performs. He alſo wiſhes, That the Wolf may deſtroy his Rain-Deer; That hence-forward he may never kill any Beaſt. Then he cuts the Wolf's Snout to pieces; and ſo the Controverſy is ended.

Their MARRIAGES *and* BURIALS.

THey buy as many Wives as they can purchaſe for Deer. Perſons of Note have 4 or 5. He is reckon'd the richeſt Man that has moſt Deer and Daughters, and they ſell both to thoſe that bid moſt. Their Marriages are celebrated without much Ceremony. The Bridegroom makes a Feaſt, which ſometimes laſts 7 Days. After this the Bride, adorn'd with many Braſs Rings and Bells, Fiſh-Bones, *&c.* is deliver'd to her Husband: Then all the Friends depart from their Tent till next Morning. If they like not their Wives after half a Year or a Year's Trial, they return them to their Friends, and receive back the Deer they paid

Digitized by Google

paid for them. When a rich Man dies, they ſtrangle one of his Slaves, and bury him beſide his Maſter, to do Drudgery for him in the next World; and they kill 3 of his Deer, with which they feaſt themſelves. If a Child die under 7 Years of Age, they hang it by the Neck on a Tree, and ſay, it muſt ſlee to the other World.

Their RELIGION.

THey ſeem to acknowledge a God, but repreſent him by ſuch Things as they receive moſt Benefit from. In a Morning, as ſoon as they go out, they fall on their Knees, and hold up their Hands to the Sun. They have Images, reſembling Men as near as they can make them, to which they ſacrifice, and beſmear them with Blood. Many Bones and Aſhes lie before them; and there's a Chopping-Block by them, on which they kill and divide the Beaſts that they ſacrifice; as *Richard Johnſon* tells us in *Hackluit*, *Page* 283. The Prieſt wears on his Head a Garland, and a Piece of a Coat of Mail, with Fiſh-Bones and other Trinkets faſten'd to it. He firſt beats upon an Inſtrument like a Half Drum with a little Mawl; after that he whoops and hollows as our Hunters do, and the People anſwer him. He roars with great Violence, till he becomes hoarſe, and lies as if he were dead for ſome time. When he recovers, he riſes up, and commands 3 Deer to be killed; then he takes a Sword of near a Yard long, and ſeems to thruſt it ſeveral times into his own Belly, but without any Wound. He afterwards heats it in the Fire, thruſts it in at his Navel, and out at his Fundament; when, ſaith *Johnſon*, I laid my Finger upon it, but no Wound was to be ſeen. The Prieſt being wearied, repoſes himſelf, whilſt they heat a Kettle of Water; which being hot, they ſing again, and bring a Thing like the Frame of a Sedan, into which the Prieſt, putting off his Clothes and Shirt, ſits down, and puts a Rope about his Neck, and under his Left Arm, with a Slip-knot, gives one End to one luſty young Fellow, and the other End to another: Then they ſet the boiling Water before him, and cover both the Frame wherein he ſits, and the Kettle, ſo as no Man can ſee thoſe dreadful Myſteries. The People begin again to ſing furiouſly, and the two young Men draw the Cord cloſe: Whereupon, hearing ſomething fall into the Water, I aſk'd, ſaid *Johnſon*, what it was? They told me it was the Prieſt's Head and Left Shoulder, which the Cord had cut off; but they would not ſuffer me to go and ſee if it was ſo. After more furious ſinging, the Prieſt comes from behind the Curtain ſafe and well. I demanded what their God had ſaid, and whither they were to go? They anſwer'd, That it was not for them to know what their God had ſaid, but they were to obey what the Prieſt commanded. This was before their Submiſſion to the Czar; but ſince that Time, he has ſent Preachers amongſt them to convert them. We leave the Readers to judge whether theſe Things be fabulous, if perform'd by Juggling, or by the Aſſiſtance of the Devil.

Their Submiſſion to the Czar.

IN the Time of *Ivan*, or *John Baſilowitz*, there liv'd a Husbandman call'd *Onyka*, on the River *Witzogda*, who by his Induſtry became rich. Among other Children, he had 3 Sons, nam'd *Jacove*, *Grégory*, and *Simon*, who were Partners in Trade. They dwelt chiefly with the *Samoiedes*, that came Yearly to the Fairs of *Oſel* and *Ouſting*. *Onyka* had not only a Deſign to carry on his Trade, but had alſo the Curioſity to enquire from whence they came, and prevail'd with them that 12 of his Servants might go home with them, to whom he gave Orders how they ſhould behave themſelves, and make their Obſervations. At their Return, he treated the *Samoiedes* very kindly, and forbad his Servants to diſcover what they had obſerv'd. The next Year he ſent more Servants, and ſome of his Relations, with Goods that the *Samoiedes* wanted, at very low Rates. They went as far as the River *Oby*, and found Furs there to be of ſmall Price; That the People were barbarous, without Cities or Bread, without Laws or Property. Thus *Onyka*, with his Sons and Kindred, manag'd this Trade till they were extream rich. They built many Churches, and ſome Towns, and acquir'd 300000 Rubles or Marks in Money. They had conſtantly at work 10000 Men, beſides 5000 Slaves, and paid the Emperor Yearly 23000

Rubles for Cuſtoms. They alſo maintain'd ſeveral Gariſons on the Confines of *Siberia*. At length they diſcover'd this Trade to *Boris Godenow*, the Emperor's Brother-in-Law, the Advantage that might be reap'd from it, and the Way to thoſe Countries. The Emperor *Theodor Juanwitz* was ſo well pleas'd, that he granted *Onyka* and his Family all the Privileges and Honours that Subjects were capable of, and ſent him in Quality of Ambaſſador to *Samoiedes*, with ſome Soldiers and Gentlemen, who had Toys of ſmall Value to give the Natives, in order to gain their Affections. They behav'd themſelves with ſo much Kindneſs and Humanity towards the *Samoiedes*, and gave them ſuch an Account of the great Power of the Czar, that they perſwaded them at length to give him a Yearly Tribute of a Pair of Sables for every Perſon that could ſhoot. Tho' this was a ſmall Matter to the *Samoiedes*, it turn'd to a vaſt Advantage to the Czar. Some of the Natives came to ſee the Czar's Court at *Moſcow*, and thought the *Muſcovites* were happy under ſuch Government.

Tybrant Ides, in his Travels, gives this further Account of the *Samoiedes*:

They are under the *Siberian* Government, and ſubject to the Weyvode of *Pelum* as far as the Sea. There are ſeveral Sorts of them, different both in Language and Cuſtoms, as the *Berefofskians*, ſo called from *Berefowa*, a Town on the *Oby*, Lat. 64. and Long. 85. and *Puſtoſerſians*, who ſay they are of the ſame Nation. Another Sort live on the Sea-Coaſt beyond the E. Side of the *Oby*, as far as *Truckanſkoy* or *Mangazeiskoy*. Others reſide for the greateſt Part of the Year about *Archangel*, near the River *Duina*; and in Summer live in Huts. There are other *Samoiedes* who inhabit the Icy-Coaſt of the Province of *Siberia*, which has the *Icy* or *Frozen Sea* on the N. and extends to the *Holy Cape* in the Eaſtern Ocean, which lies in Lat. 73. Long. 147. They can ſcarce pretend to any thing of Men, but Face and Shape, have little Underſtanding, and, like Wolves and Dogs, eat the dead Carcaſſes of Horſes, Aſſes, Dogs or Cats, Whales, Sea-Cows, Sea Calves, and Sea-Horſes, raw. Their Country abounds however with Fowls, Fiſh and Fleſh; but they are too idle to furniſh themſelves with it.

Their Governors receive their Tribute of Furs, and are obliged to carry the ſame to the Czar's Cities or Gariſons. A Gentleman who had been among them told the Ambaſſador, That their Hart-Sleds were very convenient, and they run prodigiouſly faſt over Mountains cover'd with Snow. Their Clothes are Buck-skins, with the Hair outward. Their Governors travel in Sleds drawn by 6 or 7 harneſs'd Bucks, and are cloath'd in Scarlet. The Arrows of the Natives are pointed with the Bones of Sea-Calves, or ſome other Animal.

They make a very diſagreeable Figure, inſomuch that ſuch ill-look'd People are not to be found in the whole Earth. Their Stature is ſhort, their Shoulders broad, their Faces flat, with broad Noſes, great hanging Lips, and frightful Eyes, like thoſe of the Linx. Their Complexion is brown, their Hair diſhevell'd; ſome of them have it red or pale, but moſt of them black as Pitch. They have very ſmall Beards, and are ſwift Runners. The Roebucks, which draw their Sleds in Winter, are horn'd and ſhap'd like Harts, but have crooked hanging Necks like Dromedaries: They are as white as Snow in Winter, and greyiſh in Summer. They feed on Moſs, which grows in Woods.

The *Samoiedes* are groſs Idolaters; they worſhip the Sun and Moon: Their Tents are cover'd with Birch-Barks ſew'd together, and their Fire is in the middle of their Tent, round which both Men and Women lie naked in the Night. They lay their Children in Boxes or Cradles made of Birch-Bark ſew'd together, fill'd with Shavings of Trees, which are as ſoft as Wool; and they cover them with Buck-skin. When they deſign to be merry, they ſtand in Couples oppoſite to each other, throw up one of their Legs, and clap the Soles of one another's Feet ſo hard with their Hands, that it may be heard at a good diſtance. Inſtead of ſinging, they howl like Bears, neigh like Horſes, or chirrup like young Birds. They marry within the Degrees of Conſanguinity; they buy their Wives with Bucks and Hides, and marry as many as they can keep. They have Conjurers, that play all ſorts of Diabolical and Juggling Tricks.

Near

Digitized by Google

Near this Coaſt, as far as the Streights of *Weygates*, their Beaſts are Wolves, Bears, Foxes and Hares, *&c.* The Fowls are Ducks, Partridges, *&c.* that are as white as Snow in Winter, which is ſo ſevere, that Rooks and Magpies fall down dead as they fly.

Of the Streights of Weygates.

A Great deal has been ſaid on this Subject by *Engliſh*, *Dutch*, and *Danes*, who have twice paſſed this Icy Channel, to find out a N. E. Paſſage to *China* and the *Indies*, but were forced to return by the great Fields of Ice; ſo that from *Weygates* to the *Icy* or *Holy Cape*, the Sea is utterly unnavigable. The Sea of *Siberia* is ſo full of Ice, that no Ship can come to the Mouth of the River *Jeniſea*, which lies 15 Deg. further E. than *Weygates*: Much leſs can they go farther Northward, or by the Way of the *Icy Cape* ſail round *Japan* and *Jedzo*.

The Ambaſſador adds what he had learn'd from the *Ruſſians*, who have ſeveral times ſail'd through thoſe Streights, which lie in Long. 75. to the Mouth of the *Oby* in 84.

We go, ſay they, with our Barks to *Weygates*, to fiſh for Sea-Calves: If we meet with great Quantities of them, we ſail directly into *Weygates*; But if the Wind blows from the Sea, the whole Coaſt is cover'd with Ice; ſo we are obliged to put into ſome Creeks or little Rivulets, where we dare not venture too far, but ſtay till the Wind blows from the Shore, which clears the Streights of Ice, and drives it ſeveral Miles out to Sea: And if we find not ſuch a Creek, our Barks are ſhatter'd to pieces by the Ice. This Sea, as far as the *Icy Cape*, is ſometimes frozen up two or three Years ſucceſſively, as it was from 1694 to 1697.

About 50 Years ago, the *Ruſſians* that dwelt in *Siberia*, had free Liberty to fetch their Proviſions from the Sea-Ports, and to carry their *Siberian* Commodities thither through the *Weygates*, provided they paid the Toll to the Czar: But they brought great Quantities of Goods by Stealth into *Ruſſia* by other Ways and Rivers, whereby the Czar ſuffer'd much in his Revenues; for which Reaſon the Importation of Goods to *Ruſſia* thrô the Streights of *Weygates* has been prohibited ever ſince.

Of SIBERIA.

IT has on the W. the River *Kama*: *Wirgaturia* is the firſt conſiderable City on that Side, in Lat. 55. Long. 73. and the N. Parts reach to Lat. 73. the N. E. Parts to Long. 140. The Lake of *Baikala*, which borders on the Province of *Dauri*, and the Town of *Jeknitskoy* near that Lake, are the furtheſt Places towards the S. E. This Town lies in Lat. 54. Long. 110. The Places furtheſt to the S. W. border upon the *Kalmuck Tartars*, in Lat. 50.

Father *Avril*, a Jeſuit, ſent by Order of the *French* King to diſcover a Way by Land to *China*, gives the following Account of the firſt Diſcovery of *Siberia*:

The *Zaporagian Coſſacks*, who liv'd beyond the *Nieper*, being ſubdu'd by the *Muſcovites*, were reſolved to ſhake off that Yoke. In order to this, they advanc'd by the Way of *Kaſan*, near the River *Kama*; from thence to the River *Iriſh*, at the Conflux of which with the River *Tobol* they built *Tobolski*, the chief Town of *Siberia*, which is 3000 Miles from *Moſcow*. They extended their Conqueſts to the River *Oby*. The adjacent Country they call'd *Siberia*, from *Sibor*, which in the *Sclavonick* ſignifies North. But after all, to carry on their Fur-Trade to the greater Advantage, they thought fit to ſubmit to the Czar. As ſoon as the *Muſcovites* got Poſſeſſion of this Country, they improv'd it to great Advantage, by ſending their Sable-hunters, and baniſhing their Priſoners of State to this Place. The Deſire of getting Sables brought thoſe Hunters by degrees to the River *Yamour*, that runs into the *Amoerſham* or *Japan* Sea. Upon this River liv'd thoſe *Tartars* that conquer'd *China* in 1644. So that now the Way to *China* by Land is perfectly known by the *Muſcovites*.

Tybrant Ides's Account how *Siberia* became ſubject to the Czar, is thus:

About 100 Years ago, *Jeremak Timiefwitz*, a Robber in the Reign of *Ivan Baſilowitz*, plunder'd the neighbouring Countries ſubject to the Czar; and being purſued, he and his Companions fled up the River *Kama*, and from thence to the River *Juzawaja*, which falls into the *Kama*, where are the

Lands of *Stroginoff*, famous for his vaſt Eſtate, which take up the greateſt Part of the Shore, and reach 70 *German* Miles in Length. The Robber apply'd himſelf to this rich Man's Grandfather for Protection, beg'd his Intereſt to procure him the Czar's Pardon, and offer'd at the ſame time, by way of Atonement, to reduce the whole Province of *Siberia* for his Czariſh Majeſty. Purſuant to this, he obtain'd from *Stroginoff* Barks, Arms, and Men. Being thus provided, and accompanied with his Fellow-Robbers in light Barks, he ſail'd up the River *Serebrenkoy*, which runs N. E. of the *Wergaturian* Hills, and falls into the *Iucawaja*; thence he convey'd his Equipage by Land to the River *Tagin*, on which he ſail'd to the *Taura*, took the Fort of *Tumeen*, that lies upon it, raz'd it to the Ground, and advanc'd up the *Tobol* to *Tobolsko*, the Reſidence of a *Tartarian* Prince, aged about 12 Years, whoſe Name was *Altani Kuxzumowitz*, whoſe Grandſon at preſent lives at *Moſcow*, and is honour'd with the Title of the *Siberian Czarewitz*. This City he took with ſmall Loſs; ſent the Prince to *Moſcow*, and put the conquer'd City into a better Poſture of Defence.

After this he went down the River *Jetiſch*, but was attack'd in the Night by a Party of *Tartars*, not far from *Tobolsko*, who cut off a great many of his Men; and as he endeavour'd to ſtep from one Bark to another, he fell into the River, and was drown'd. In the mean while *Stroginoff* had obtain'd the Czar's Pardon for *Jeremak*; and ſeveral Hundreds of *Muſcovite* Officers arriv'd, who fortify'd and gariſon'd the Places he had taken, which compleated the Reduction of the Country.

He ſays, That the Frontiers of *Siberia* in general are every where well gariſon'd; That the Circuit of this Kingdom is very large; That he took the Latitude of Places with a Mathematical Inſtrument, and was the firſt *German* that ever went through this vaſt Country to *China*. He owns that the Learned World is obliged to *Nicholas Witzen*, Burgher-Maſter of *Amſterdam*, who firſt drew a Map of thoſe Countries, and diſcover'd to the *Europeans* all *Siberia*, the *Calmuckan*, *Mugalian*, and other Provinces, as far as the *Chineſe* Wall.

The Natives of *Siberia* are Pagans; but the Cities are fill'd with *Ruſſians* and *Coſſacks*. They pay Yearly 200000 Rubles in Sables, Martens, and Black Fox-Skins, found no where but here and in *Kitay*. They are ſold from 20 to 30 Rubles apiece. They catch the Ermins in Traps, but ſhoot the Sables with Arrows in the Noſe, for fear of ſpoiling their Skins. They alſo make Fire under Trees where the Sables haunt, and being ſtifled with the Smoak, they fall down and are catch'd. Thoſe who are baptiſh'd hither, muſt ſtay 7 Years. The Czar's Officers, to encourage the People's Diligence, allow them to kill ſome Sables for their own Advantage.

Ysbrant Ides's *Account of the Country and People of* Siberia.

THE Weſtern Part of this Country lies on the E. Side of the *Kama*, which is a pleaſant and beautiful River: It ſeparates *Europe* from *Aſia*, and abounds with all ſorts of Fiſh. The Banks of it are very populous, and noted for Salt-works. The firſt *Siberian Tartars* are call'd *Wogulskoi*: They live on the Banks of this River, which are the moſt charming in the World: The Hills are covered with beautiful Flowers and Plants, and all Sorts of great and ſmall Wild-Beaſts in great Numbers. The Inhabitans are ſtupid Heathens. They are naturally ſtrong, and have large Heads. Their Worſhip conſiſts in having once a Year an Offering. Then they go to the Woods, and kill one of each Species of Beaſts, but prefer the Horſe and Tyger: They flea off their Skins, and hang up the Carcaſſes on Trees, and pray to 'em, falling proſtrate to the Earth; then they eat the Fleſh together, and return home, and at once finiſh one whole Year's Devotion. They own a God, that made the World: They deny Devils, becauſe they ſay they never ſaw them: They acknowledge a Reſurrection, but know nothing of the Rewards or Puniſhments of a future State. They bury Money, Apparel and Ornaments, with the Body of the Deceas'd. They cry over their Dead in a diſmal manner, and the Husband is obliged to continue a Widower a whole

a whole Year. If a favourite Dog die, that has been a good Hunter, they erect a Hut to his Memory. They marry as many Wives as they can keep, and when any one is near her Time, she muſt retire to a Hut in the Wood, and there be delivered. Her Husband muſt not come near her for two Months. When any one deſires to marry, he is to buy his Wife from her Father. They have no Prieſts, and marry no nearer than the Fourth Degree of Conſanguinity. The Ambaſſador recommended the Chriſtian Religion to them, as the Way both to ſecure their Temporal and Spiritual Welfare; but they told him, They daily ſaw ſome *Ruſſians* who were in a ſtarving Condition; and as for Things of another Life, they would adhere to the Opinion of their Forefathers.

Their Dwellings are ſquare Wooden Huts. As ſoon as the Wood upon the Hearth is burnt to a Coal, they cover the Smoak-hole in the Roof with Ice, which reverberates the Heat into the Room, and alſo lets in Light.

Their chief Game is Elks, of which they have whole Herds: They cut them in pieces, and hang them round their Houſes to dry. If they ſtink by the falling of Rain upon them, they dry them again, and eat them as a great Delicacy. They don't eat Cocks, Hens, nor Hogs. Their Way of catching Wild-Beaſts is very pleaſant, for they plant a ſort of Bows in the Woods, faſtening a String to them, to which they fix ſome Corn or other Bait, leaving only a Place for the Game to enter; ſo that the Beaſt that comes in cannot paſs without touching the String, which makes the Bow diſcharge the Arrow, and it enters the fore Part of their Body. They alſo dig Pits in the Woods, which they cover with Reeds and Graſs; ſo that if any Beaſt comes thither, he is ſure to fall in. They live along the River *Juzawaia* to the Caſtle of *Utika*, 240 *Engliſh* Miles S. E. from *Kama*. Their Country reaches Northward to the *Samoiedes*. This Caſtle is a Frontier Gariſon againſt the *Bankirian* and *Uffimiſchian Tartars*. The latter live upon the *Wolga*, as far as *Saratoff*, in Lat. 52. and along the Banks of the River *Kama*, to Lat. 58. the Czar is oblig'd to keep them in awe by Gariſons, otherwiſe they would not pay their Tribute of Furs and Honey. They are ſometimes join'd by a Clan of their own Nation near *Aſtracan*, and together rob *Siberia* N. from the Conflux of the *Kama* and *Juzawaia* lies *Solikamskoi*, in Lat. 59. Long. 70. 210 Miles from that Confluence, and 211 N. W. from *Werganuria*. Travellers to *China* muſt lie here all the Summer, becauſe of the Moraſſes, till they freeze in the Winter. Here are many Salt-Works or Pits, beſides above 50 Salt-Springs, from 25 to 35 Ells deep. Great Quantities of Salt are boil'd there, and ſtow'd in long Ships, mann'd with 800 Sailors each, and carry 1600 or 2000 Tun. They ſail down the *Kama*, till it fall into the *Wolga*, and from thence go to *Caſan*, *Niſna*, &c. Thoſe Veſſels have Kitchins, Bagnio's, and other Conveniencies on board.

Neuianskoi, is 240 Miles S. E. from *Utka*. The moſt charming Fields in the World are betwixt theſe Places: The Ground is fertile, well cultivated, and inhabited by *Ruſſians*. *Tumcen* is 180 Miles N. E. from *Neuianskoi*; the Country all along pleaſant and fruitful: The Town lies in Lat. 55. Long. 76. is ſtrong and populous, moſtly inhabited by *Ruſſians*; the reſt are *Mahometan Tartars*: They drive a Trade with *Bulgaria*. The *Kamack* and *Coſſack-Orda Tartars* make frequent Irruptions into *Siberia*, lay the Villages waſte, and cut the Inhabitants in pieces. This and the neighbouring Places afford red Foxes, Bears, and Wolves-Skins. *Heetkoy Wolluck*, a Wood 5 Miles diſtant from this Place, abounds with the very fineſt grey Squirrels, which keep their Colour both Summer and Winter: They are as large as common Squirrels, and are no where in the *Muſcovite* Empire but here. They are all kept for the Czar's Uſe, and none muſt ſell them to Merchants.

Tobolsko, is ſeated upon the Confluence of the *Tobol* and *Irtis*. The Courſe of the *Irtis* is N. W. to *Tobolsko*, and from thence till it fall into the *Oby* N. E. *Tobolsko* lies in Lat. 58. Long. 81. It is the chief City of *Siberia*, and its Juriſdiction of a vaſt Extent. This Province is every where well Peopled by *Ruſſians*, *Tartars*, Heathens, and all ſorts of Nations, who pay Tribute to the Czar. An Hundred *German* Pounds of Rye may be bought here for 16 Stivers, a fat Ox for 11 Shillings Sterling, a large Hog for 30 Stivers. The River *Irtis* produces ſuch a

a prodigious Quantity of Fish, that a Sturgeon of 40 Pound Weight may be had for 5 Stivers: When boil'd, their Fat swims above the Water an Inch thick. Elks, Stags, Deer, Hares, and other Wild-Beasts, abound here, as do Pheasants, Partridges, Swans, Wild-Geese, Ducks, Storks, &c. which are cheaper than Beef. This City is naturally strong, and is seated on a Hill: They have a strong Garison of well arm'd Soldiers, and can bring 9000 Men to the Field, besides some Thousands of *Tartars* on Horseback, when the *Kalmuck*, *Kosack-Orda*, *Bucharian*, and *Bakirian Tartars*, invade them. The Metropolitan of all *Siberia* and *Dauria* resides here.

The *Tartars* that live round *Tobolsko* are all Mahometans, and the Mufti is an *Arabian*.

The Countries betwixt the *Tobol* and *Oby*, as far as the *Jamuschowa-Ofer* Lake, which lies about Lat. 48. and Long. 93. 900 Miles from *Tobolsko* to the S. E. are inhabited by *Kalmakians*. This Lake abounds with hard Salt, which is dug like Ice from the Shore. The *Russians* come here in a Military Way, and load their Vessels in spight of the Natives.

Tora, upon the River *Irtis*, in Lat. 56. Long. 83. is 300 Miles S. E. from *Tobolsko*: It is inhabited by a People call'd *Barabinskoy*. Their Country is extended Eastward to the River *Oby*, and the City of *Tomskoi*. They are a sort of the *Kalmakian Tartars*, and pay Tribute to them and to the Czar.

They have great Numbers of Cattle, as Camels, Horses, &c. They don't eat Hogs. Their Country abounds with fine Sables, Martens, Squirrels, Ermins, Foxes, Hyæna's, Beavers, Minks, Otters, &c. of all which they pay a Tribute.

When they hunt, they carry their Idols with them, and if they have good Luck, their *Saitan*, or Image of Wood, carv'd with a Knife, is set up in a high Place of the House, and cover'd round with fine Furs, which must stay there till they rot; for to take any of them away, would be thought great Sacrilege. This is their Way of Gratitude to their Gods.

Their Drink is *Arak*: They eat the Bulb of yellow Lillies, dry'd, stamp'd, and boil'd with Milk. *Tora* is their Frontier Place. The *Kalmakians* live on the S. and S. W. of it.

Tomskoi lies on the River *Tom*, which falls into the *Oby*, a little below it, in Lat. 52. Long. 95. 660 Miles S. E. from *Tora*, and 200 N. E. from the Lake *Jamisowa-Ofera*. It is a Frontier Place belonging to the Czar, and garison'd by *Russians* and *Cossacks*, to prevent the Incursions of the *Tartars* into *Siberia*.

Samorofskoy-Jami, lies on the River *Irtis*, N. E. from *Tobolsko*, in Lat. 63. Long. 83. *Kasanka*, a Rivulet that runs into the *Oby*, not far from this Town, affords fine grey Squirrels. Most of the Inhabitants are *Russian Jemskicks*, and supply the Weyvodes, and other Persons concern'd in the Czar's Affairs, with Carriages over the Ice in Winter, and by Water in Summer, at reasonable Rates. They draw their Sleds with Dogs, of a strange sort, which couple with Wolves and Foxes. Horse-Sleds are unserviceable here, because the Snow on the Oby is sometimes more than a large Fathom deep. The Sleds are light and thin, and can carry from 2 to 300 *German* Weight. Two yoked Dogs draw one. They run very swiftly, and leave only a Track of an Inch deep in the Snow. If they be inclin'd to hunt, their Master unyokes them, takes his Gun, and puts on his long sliding Shoes, and sometimes in the Woods kills fine black Foxes, which he flea's, and gives the Flesh to his Dogs.

Surgut, lies in Lat. 62. Long. 84. It is seated on the famous River *Oby*, 300 *English* Miles N E. from *Tobolsko*, and 180 S. E. from *Samorofskoy-Ami*. Here are great Numbers of those call'd Cross-Foxes, whose Skins are of a mix'd black and grey, but few black; They have red Foxes, and Hyæna's, that are very mischievous, and live by Prey. They place themselves in the Trees, like the Linx, and lie very still, till a Hart, Elk, Doe, or Hare, runs under the Tree, from which they leap upon him, and eat a Hole in his Body, which by the Pain forces it to lie down. One of the Weyvodes there kept a Hyæna, which he put into the Water, and let two Water-Dogs loose at him: He held one of them so long under Water, till he drown'd him, and would have done so by the other, if he had not been interrupted by throwing Wood at him. They have great Plenty of Beavers, of which the Inhabitants tell incredible Stories:

Digitized by Google

ries: For which, we refer the Reader to the Ambaſſador's Travels.

Narym, lies on the E. Side of the *Oby*, 300 Miles E. from *Tobolsko*, and 270 S. E. from *Surgut*, in Lat. 58. Long. 89½. It has a ſtrong Gariſon of *Coſſacks*, and a Caſtle. All the neighbouring Country abounds with Croſs and Red Foxes, Beavers and Sables, ſome of which are pale, others as black as Pitch, and the fineſt and largeſt Ermins in all *Siberia* and *Ruſſia*; but above all, Black Fox-Skins, which are the fineſt and richeſt in the World; the beſt are reſerv'd for the Czar: Some are valued from 2 to 300 Rubles a Skin, and are ſo very black, that the blackeſt *Daurian* Sable is not comparable to them. Theſe Foxes are caught by Dogs.

The Southern Banks of the *Oby*, as far as this Place, are inhabited by a People call'd *Oſtiacks*: They worſhip Gods of Wood and Earth, of the Shape of Men and Women, and ſometimes dreſs them in Silks after the *Ruſſian* Faſhion: They are plac'd in their Huts, made of the Barks of Trees, ſew'd together by Hart's Guts. On one Side of the Idol hangs a Bunch of Humane and Horſe Hair, and next that a Wooden Veſſel with Milk-Pap, which they thruſt into its Mouth with a Spoon, till it runs out in ſuch a manner as is enough to make one vomit. When this cleanly God is to be ador'd, they ſtand upright, and toſs their Head up and down without bending their Back, and chirrup or whiſtle through their Lips, as we do when we call a Dog.

They call their God *Saitan*. Several of 'em came aboard our Ship to ſell Fiſh, ſays the Ambaſſador, where one of my Servants had a *Nuremberg* Bear in Clock-work, which he wound up, and made him drum, and turn his Head backwards and forwards, and move his Eyes. As ſoon as the *Oſtiacks* ſaw it, they perform'd their wonted Religious Worſhip, and danc'd exceſſively to the Honour of the Bear, nodding their Heads, and whiſtling at a great rate. They all ſaid, our Bear was a right *Saitan*, crying out, *What are our* Saitans *which we make? If we had ſuch a* Saitan, *we would hang him all over with Sables and Black Fox-Skins*. They ask'd if the Bear was to be ſold; but the Ambaſſador order'd it out of ſight, to avoid their Idolatry.

They marry their neareſt Relations without any Scruple, and have as many Wives as they can keep. They are a poor People, and live in ſorry Huts: They are lazy, and lay up no more Fiſh or Fleſh than will barely ſuffice them in Winter. All Places here about the *Oby* abound with rich Furs. They have Plenty of Fiſh, and ſometimes ſell 20 great Sturgeons for 3 Pennyworth of Tobacco.

They are of a middle Stature, their Hair yelloviſh or red, their Faces and Noſes agreeably broad: They are weak, and not inclin'd to War, being utterly uncapable of Military Exerciſes. Their Weapons are Bows and Arrows, with which they ſhoot ſome Beaſts. Their Clothes are of Sturgeon and other Fiſh-Skins: Their Shoes and Stockings are faſten'd together; and their Shoes are of Fiſh-Skins. If they are overtaken with a ſevere Froſt when a Hunting, which is frequent on the *Oby*, they immediately throw off their Clothes, and leap into the deep Snow, and ſo freeze to Death. They pull off their Coats, that they may die the ſooner, and with leſs Pain. The Women's Clothes are like the Men's.

Their greateſt Diverſion is Bear-hunting: Their Arms on this Occaſion is a large Knife fix'd to a Stick of a Fathom long.

They have ſome petty Princes; one of whom is call'd *Knetka*, whoſe Authority extends over ſome Hundreds of Huts, and he levies the Tribute which they pay to the Czar's Weyvodes. This Prince came aboard the Ship, and invited the Ambaſſador to his Palace, which was made, as the reſt of the Houſes, of the Barks of Trees ſew'd together. He had four Wives, two old, and two young: One of the young ones had a Red Cloth Coat, and was adorn'd with Glaſs Corals about her Neck and her Middle, and in the Curls of her Hair, which hung down on both Sides of her Head in two Rows. She had in her Ears great Thread Rings, with long Strings of the ſame Coral hanging at them. Each of the old ones preſented the Ambaſſador with a Barrel of Birch-Bark ſew'd together, full of dry Fiſh. The youngeſt gave him a Barrel of Sturgeon-Fat, as yellow as Gold. The Ambaſſador treated them with Brandy and Tobacco, which is to them a great Delicacy. The whole Furniture of the Palace was ſome-

Digitized by Google

ſome Cradles and Cheſts, of Barks of Trees ſew'd together, in which the Bed-Clothes lie, being of Wood-Shavings, yet almoſt as ſoft as Feathers. The Children lie naked in the Cradles. They ſmoak Tobacco thus: Inſtead of Pipes, they uſe a Stone Kettle, in which they ſtick a Pipe made for that purpoſe. They take ſome Water in their Mouths, then ſuck out at once a whole Pipe, and ſwallow the Smoak; upon which they fall down as if they were dead; their Eyes are diſtorted, and their Hands and Feet tremble for half an Hour; they foam at the Mouth, and are like People in an Epilepſie. We could not ſee, ſays he, where the Smoak vented it ſelf. Some of them loſe their Lives this way, by falling into the Water when they travel, or into the Fire when at home; and thoſe of weak Conſtitutions are frequently ſuffocated with the Smoak.

They don't till their Land, and have neither Temples nor Prieſts. Their Shipping or Boats are of Barks of Trees ſew'd together; the inſide Ribs are of very thin Wood, two or three Fathom long, and one Ell broad. They can ſecure themſelves in the greateſt Storms in thoſe Boats. In Winter, they live under Ground in Caves; the Entrance is a Hole in the Surface of the Earth, which alſo lets out their Smoak. The Snow ſometimes falls two or three Inches thick upon that Part of their Bodies which is furtheſt from the Fire when they are aſleep, and when they awake, they turn that Side to the Fire, and warm it by turns.

When an *Oſtiack* is jealous of his Wife, he offers the ſuſpected Perſon ſome of the Hair of a Bear-Skin: If he be innocent, he takes it; but if not, he confeſſes; for they are perſwaded, if a guilty Perſon take that Hair, the Bear whoſe it was will revive, and within 3 Days tear them to pieces, and revenge the Affront for taking his Hair, in order to deny the Truth. They alſo offer Bows and Arrows, Knives and Axes, to the ſuſpected Perſon, and believe, that if they be guilty, and take any of them, they ſhall die by that individual Inſtrument. The Eaſtern Shore of the *Oby* is all untill'd, from the *Icy-Sea* to the River *Tom*, (on which lies the City *Tomiksi*) by reaſon of the extream Cold; ſo that there's no Honey, Corn or Fruit, here, except a few Nuts, which grow on the Cedar-Tree.

The Ambaſſador ſail'd up the River *Xeta*, which falls into the *Oby* near *Narim*: The moſt Eaſterly Winding of it is near the great River *Jeniſa*, which runs into the *Icy-Sea*, in Lat. 70. and Long. 92. The City *Makoikow* is 360 *Engliſh* Miles E. and by S. from *Narim*. The Inhabitants are *Oſtiacks*. Here are great Numbers of Woodcocks, Pheaſants, Partridges, and other Wild-Fowl, which come in flocks to the River to drink. About the Banks of it grow Strawberries, black and red Currans, and Blackberries.

The City *Jenizeiskoy* is 60 Miles E. from *Makoikow*, in Lat. 57. Long. 99. on the River *Jeniſa*. Below the City, the River is the third Part of a Mile broad. This City is large and populous; the Citadel indifferent ſtrong. All Proviſions are plentiful here; but they have no large Fruit-Trees, by reaſon of the Cold, only ſome Strawberries, Gooſeberries, Currans, *&c.* From this City to the Lake *Baikal*, there's a continu'd Ridge of Hills, where there are Sables and Cabandines.

The City *Illimskoy* is in Lat. 56. Long. 105. 360 Miles S. E. from *Jenizeiskoy*. It lies on the River *Ilym*, which runs from the S. S. W. to the N. N. W. and falls into the *Tunguſka*. Some few Days Journey from hence, is the great Rocky Water-fall, call'd *the Negromantick-Fall*, becauſe a Conjurer lives there, who deludes the People. It is a Deſcent of half a Mile long; the Shore and Ground of the River is rocky: The Noiſe it makes, may be heard in calm Weather 3 *German* Miles. They cannot perform the Voyage againſt the Stream in leſs than 5, 6, or 7 Days; the Ships muſt be empty, and are frequently obliged to caſt Anchor, and in ſome Places they muſt tow a whole Day, before they can get forward the Ship's Length; but they ſail down this Torrent in 12 Minutes; the Ships muſt have Rudders fore and aft, and Rowers on both Sides: The Pilots give their Orders by a Handkerchief, for no Voice can be heard; the Ships are cloſely ſhut up, that the raging Waves may not enter and ſink them. Many Ships are caſt away here every Year.

The

The Natives are call'd *Tunguſians*: Their Country reaches 600 Miles further North and Eaſt to *Argunskoy*. They pay a Tribute of Furs to the Czar for every Bow. The Men are tall and ſtrong, have long black Hair, which is bound up like a Horſe's Tail, and hangs down upon their Backs: They are broad Fac'd, have flat Noſes; but their Eyes are larger than thoſe of the *Kalmachians*. Both Men and Women go naked in Summer, except only a Leathern Girdle of 3 Hand-breadths, that they cut in the Shape of Ribands, and wear it about their Waſte. They carry a Pot on their Left Arm full of old Smoaking-Wood, to prevent the biting of the Moskitoes. They admire Beauty in their own Way; and to improve it, they adorn their Forehead, Cheeks and Chins, with ſeveral Figures, which they make by running a Needle with Threads greas'd with black Greaſe thrô the Skin, and leave the Threads there for ſeveral Days; which, when drawn out, leave Marks behind them. Some of thoſe Figures are Lozenge-wiſe, and others Semi-circular.

Their Winter-Habits are of Doe-Skins, border'd with Dog-Skins: Their Breaſt-Piece is hung with Horſe-Tails: They know not the Uſe of Flax or Wool. Their Nets and Sowing-Thread are of Fiſh-Skins: Their Caps are a Roebuck's-Skin, with the Horns ſticking out on the Crown of their Heads. By this means, and by creeping on the Graſs, they deceive the Beaſts, and get near enough to ſhoot them. They lay their Dead upon Trees, and after they are rotten, burn their Bones.

The Conjurers are their only Prieſts. In their Huts they have Wooden Idols, of half an Ell long, of a Humane Figure, which they feed as the *Oſtiacks*. Their Huts are made of Birch-Bark, and are hung round with Horſes-Mains, Tails, and other Baubles. Before the Doors they hang their Bows and Quivers, and young dead Dogs by 'em. Their Boats are made of the ſame Materials with their Houſes, are long, ſlender, and without Benches. They ſit upon their Knees, and can bear up againſt violent Streams. They ſubſiſt chiefly by Hunting and Fiſhing. There's another Clan of them near the Borders of *China*.

They marry as many Wives as they pleaſe, buy them one of another, and think nothing the worſe of 'em for having liv'd with another Man. They acknowledge a God, but perform all their Worſhip to their *Saitans*, in the Night-time, by beating Drums, and Exorciſms, when they are to go a Hunting or Robbing. They fuddle themſelves now and then with *Arak*, a ſort of Brandy, made of diſtill'd Mare's-Milk. Men, Women and Girls, drink it to that Exceſs, that they become inſenſible for a long while. Both Sexes ride on Horſeback, arm'd with Bows and Arrows. Their Bread is a refin'd Flower, of the Bulbs of yellow Lillies, of which they make alſo a ſort of Pap; and ſometimes eat the Bulbs dry. They know nothing of Agriculture: Their Trade is by bartering Furs with the *Targafinians* and *Xixigarthians*, who live under the *Chineſe*, for Blue Callicoes, Linen and Tobacco.

The City *Buratskoy* is S. from *Ilimskoy*, upon the River *Angora*. *Bulaganski* is on the ſame River, 90 Miles S. from *Ilimskoy*. The *Buratians* live here. Their Country reaches S. from this Place 360 Miles. They have great Plenty of Cows: Their Bulls are more hairy than Goats. Their Dwellings are low, made of Wood join'd together, and cover'd with Earth, and are commonly near Rivers. They have nothing of Agriculture. In Spring and Harveſt, they go a Hunting by Hundreds together. When they have found out their Game, as Wild-Sheep, Stags, or Roebucks, they form themſelves into a Circle, ſurround the Beaſts, and ſhoot them; each Hunter having 30 Shot. When the Hunting is over, every one finds his own Arrows by his Mark. Both Men and Horſes are frequently wounded by this confus'd Method. They hunt no more till all their Proviſions be done. Their Hills are full of Wild-Sheep, as white as Snow. They furniſh Travellers to *China* with Oxen and Camels of an extraordinary Size. They deal by Barter, and truck Pale-Sables for Pewter and Copper Baſins, Red *Hamburgh* Cloths, Otters-Skins, *Perſian* Shaggy Silk of all Colours, and Gold and Silver Bullion. An Ox of 800 or 1000 *German* Pound Weight, is valu'd at 5 Rubles; a Camel at 10 or 12. One of their Rubles

is two Rix-Dollars. The Men are robuſt, large, and have handſome Faces, as Beauty goes here. They are ſomething like the *Chineſe Tartars*.

In Winter, both Sexes wear Coats made of Sheep-Skins, and in Summer of Red Cloth. They never waſh their Face, or any Part of their Body, nor do they cut the Nails of Hands or Feet; ſo that they look ſtrangely. The Hair of their young Women ſticks cloſe together in Plaits, and ſtands on End, which makes them look as Envy is repreſented by Painters. Married Women have two Plaits that hang down on each Side their Head, adorn'd with Tin-Figures. When they die, they are buried with their Ornaments, Clothes, Bows and Arrows.

Their Religion conſiſts in worſhiping dead Bucks and Sheep, ſtuck on Poles before their Doors, till they be putrified, and then they put others in their ſtead. Their Adoration is perform'd by bowing their Heads, and ſitting on their Knees with their Hands join'd, without ſpeaking a Word.

They have ſome Prieſts, whom they kill now and then, and bury them with their Clothes and Money. The Reaſon they give for it is, That they need Prieſts to go before them to the other World, and pray for them. When they take an Oath, they go to the Lake *Baikal*, near which there's a Hill, which they account Sacred. There they take the Oath, and are perſwaded, that thoſe who ſwear falſly, can never come down alive. To this Hill they offer up all ſorts of Cattle, and have done ſo for many Years.

They have Store of Musk-Cats, which look like young Bucks without Horns, only their Hair is ſomewhat black, and their Head much like that of a Wolf. The Musk is contain'd in a Swelling at their Navel, like a little Purſe, of a thin Skin, cover'd with very fine Hair. The *Chineſe* call it a Musk-Hart, becauſe it reſembles that Creature. It has two Tusks, like thoſe of a Wild-Boar. *Philip Martinus*, in his *Chineſe* Atlas, ſays, this Animal is found chiefly near the City of *Lao*, in the Province of *Xanxi*, and in *Xenxi*, but eſpecially in that of *Hanching-Fu*. He deſcribes it thus: It is like a young Doe or Hart, but more brown, ſlow and unactive; ſo that the greateſt Difficulty is to put him up; but when that is done, he ſuffers himſelf to be tamely ſhot. His Blood is drawn off and reſerv'd. They take off a Bladder near his Navel, which is fill'd with Blood, or ſome other odoriferous Liquor that gathers naturally there; after which they flea and cut him to pieces.

When the *Chineſe* deſign to make the beſt Sort, they take the hinder Part of the Animal, beginning from the Kidneys, which they ſtamp and bruiſe to a Jelly; then they dry it, and put it in ſmall Bags, which they make of his Skin.

But if they deſign a coarſer Sort, which is ſtill very good, and not ſophiſticated, they beat all the Parts of the Animal together to a Jelly in a Mortar, with a little of his Blood, and put in Bags as before.

There's yet another Sort of Musk, highly valued, tho not ſo good as the former: This is prepared from the fore Part of the Animal to the Kidneys, which they particularly lay by, in order to make the common Musk; ſo that none of this Creature is thrown away, all Parts of it being good for Musk. But whether the Barbarians make the ſame Uſe of the Musk-Cat as the *Chineſe* do, is not known.

Jekutſkoi, is ſituated on the River *Angora*, whoſe Courſe is from N. to S. Its Source is from the Lake *Baikala*, 8 Miles from this Place, in Lat. 54, Long. 110. This City is lately rebuilt, and ſtrongly fortified; the Suburbs are large, and there is great Plenty of all Grain here; ſo that 100 *German* Pound Weight of Rye is ſold for 7 Stivers. On the E. of this City, there's a burning Cove, which flam'd very much formerly; but now is almoſt extinguiſhed, and little or no Smoak iſſues out of it at preſent. In Harveſt, Earthquakes are frequent, but not very prejudicial in this Country. A *Mogalian* Baron reſides here, who embrac'd the *Grecian* Faith, under the Protection of the Czar. His Siſter was a Pagan Devoto, and well nigh perſwaded to receive the Chriſtian Faith. She ſaid, The Chriſtians God muſt neceſſarily be a ſtrong God, ſince he hath beat their God out of Heaven; but alledg'd, he would return thither, and be beat out the ſecond time. The Rules of her *Order* would not allow her to ſalute any body. She had a *Roſary*, or String of Beads, which

Digitized by Google

which ſhe inceſſantly turn'd round her Fingers. I found a Prieſt with her, ſays the Ambaſſador, who by the ſame Practice had his Thumb worn up to the Knuckle; which rubbing off by Degrees, did not at all pain him.

Of the Province of DAURI.

THE Lake of *Baikala* is the Weſtern Frontier of this Province, and the River *Gobritza* the Northern. The W. and N. Side of this River belong to the Czar, and the Eaſtern to *China*; but the Southern Boundary is not ſo well known. The River *Argun* is its Boundary on the S. E. 'Tis a fine Country, well water'd with Brooks: The Hills and Vallies abound with the moſt charming Herbs and Flowers; and in ſome of the Vallies, there's long Graſs about half a Man's Height. Tillage is not much practis'd here, the People being lazy: They are *Tartars*, ſubject to his Czariſh Majeſty.

The Lake *Baikala* is 6 *German* Miles broad, and 40 long. The Ice about the beginning of *March* was full two *Dutch* Ells thick, and dangerous, when Paſſengers are overtaken with a great Snow or high Wind. The Ice is ſlippery, ſo that the Horſe muſt be ſharp ſhod. The Camels have a high Shoe or Boot ty'd about their Legs, and ſharp at Bottom. The Oxen have Irons ſtruck thro their Hoofs. The Ice of this Lake is ſometimes tore open for ſeveral Fathoms by ſtormy Winds, with a Noiſe as loud as Thunder-Claps; but after a few Hours, the Ice joins cloſe as before. About this Lake, there are very fine Black Sables and Caberdines.

The Water of the Lake taſts freſh, is clear, and of a deep green Colour, where the Ice is open. Sea-Dogs appear blackiſh here, and not variegated as in the *White Sea*. They have great Plenty of Jacks and Sturgeon, ſome of which weigh 200 *German* Pounds.

Ilunskoy, lies on the S. E. of the Lake, Lat. 53 ½. Long. 116. It is a very large Town. Moſt of the Inhabitants are *Ruſſians*. In Winter, they go a Sable-hunting, and till no more Ground than Neceſſity requires. The Caſtle of *Tanzienskoy*, near this Place, is provided with a ſtrong Gariſon of *Coſſacks*, to cover this Country from the Incurſions of the *Mongalians*, who border on it. *Udinskoy*, a Fortreſs N. E. from *Ilunskoy*, is ſituated on a Hill; but moſt of the Inhabitants live at the Foot of it. This Place has alſo a ſtrong Gariſon of *Ruſſian Coſſacks*, becauſe they border on the *Mongalians*, who in Summer carry off their Horſes. No Trees are to be ſeen here: They have abundance of Carrots, Cabbage, and Turneps.

Jarauna, is 120 *Engliſh* Miles S. E. from *Udinskoy*. The Country betwixt them is uninhabited: It is alſo gariſon'd with *Coſſacks*, and inhabited by *Ruſſians*, who live by Sable-hunting. The Heathens here are called *Koni-Tunguzi*. When any one dies, he is buried, with his Clothes and Bows, under Ground. Stones are laid upon his Grave, and a Pole erected, to which they tie his beſt Horſe, being firſt ſhot to Death.

A *Tunguſian* Prince came to viſit me, ſays *Tybrant Ides*, who had prodigious long Hair, bound up with Leather, tied three times about his Shoulders. I was very curious to ſee if his Hair was really ſo long as I was told, and drunk him with Brandy, for which Favour he allow'd me to looſe his Hair. I found it to be all natural, and 4 *Dutch* Ells long. He had a Son of 6 Years of Age, whoſe Hair was near an Ell long. They live on the Hills, and grow rich by catching fine and beautiful black Sables, inferior to none in the Province of *Siberia*. Here are alſo very fine Linxes, and a ſort of Squirrels, for which the *Chineſe* are their chief Merchants.

Nerzinskoy, lies on the River *Nerza*, (that runs N. N. E.) in Lat. 53. Long. 124. 540 Miles from *Jekutskoi*. 'Tis the chief City of *Dauria*, is pretty ſtrong, with Braſs Guns, and a great Gariſon of *Daurian Coſſacks*, both Foot and Horſe. The Fields about it are very fruitful. Above and below the City, for ſome Miles, dwell ſeveral *Ruſſian* Gentlemen and *Coſſacks*, that live by Tillage, grazing of Beaſts, and Fiſhing. Among the Hills, and round the City, there are very fine Garden-Trees and Plants, as *Baſtard-Rhubarb*, of an extraordinary Thickneſs and Length, fine White and Yellow *Lillies*, vaſt Quantities of Red and Snow-

Digitized by Google

white *Pæonies*, which have a fragrant Scent. Here's Plenty of *Marjoram*, *Roſemary*, *Lavende*, *Thyme*, and ſeveral other odoriferous Plants and Flowers, unknown to our Authors. Their Fruits are only Red and Black Currans.

The *Konni-Tunguzians* are obliged to be ready on Horſeback at the Command of the Weywode, when the roving *Tartars* make any Incurſions on the Frontiers; and the *Olenni-Tunguzians* muſt be ready on Foot when there is any Occaſion in the City. The Prince of the former was under the Emperor of *China*; but falling into Diſgrace, he and his Clan retir'd to *Dauria*, put himſelf under the Protection of the Czar, and embrac'd the *Greek* Religion. He can in one Day raiſe 3000 well appointed Horſemen. They are good Soldiers, and 50 of them will rout 400 *Mongalians*. They live chiefly by grazing; but thoſe on the River *Schilka* and *Amur* maintain'd themſelves by hunting Black Sables.

Their Religion is much the ſame with the other *Daurian* Heathens; for throughout all *Great Tartary*, to the beginning of the *Mongalian Tartars*, there's a great Similitude in Religion.

Their common Drink is Water; but the better Sort drink Black Tea: They boil it in Mare's Milk and Water, to which they add a little Butter or Lard: They alſo uſe *Arak*. None of the Cows in *Siberia* or *Dauria* will ſuffer themſelves to be milk'd; for which Reaſon Mare's Milk is much uſed by thoſe People.

In Spring and Harveſt, they go a hunting to provide Fleſh againſt Winter, which they dry in the Sun. They gather the Pulp of yellow Lillies, and when dry'd and beaten to Meal, they make 'em into ſeveral ſorts of Diſhes.

They are dextrous at ſhooting Fiſh in the Water, with a ſort of Arrows that are heavy, round, ſolid, and about 3 Fingers thick at the Head. At the End of 'em, under the Iron Point, there's a Ball of Bone bored through, that makes a loud whiſtling Noiſe as the Arrow flies, which is commonly no more than 15 or 20 Fathom. When they hit the Fiſh, they make a very large Orifice.

Their Way of Exculpation by Oath is very extraordinary: The accus'd Perſon takes a live Dog, lays him on the Ground, pierces him in the Belly with a Knife, claps his Mouth to the Wound, and ſucks out the Dog's Blood as long as he can; after which he lifts him up on his Shoulders, and claps his Mouth to the Wound, in order to ſuck out the remaining Blood. When he has gone thrô this Trial, he is ſet at Liberty, and the Accuſer is puniſh'd for his falſe Accuſation.

Argunskoy, is on the River *Argun*, which runs from S. W. to N. E. and falls into the *Amur*. By a Treaty betwixt the Czar and the Emperor of *China* in 1689, this River was made the Boundary of their Dominions on that Side. The W. of the River belongs to the Czar. On the E. of it, begins the great uninhabited *Tartarian* Wilderneſs: It lies about Lat. 50. and Long. 125. This Country is very populous. The *Tunguzians* pay a voluntary Tribute to the Czar of Linxes and grey Ferrets, which are very fine here.

The Country betwixt the Rivers *Tugur* and *Uda*, and further North, belongs to the Czar. There's great Plenty of Black Sables here. The Natives are *Tunguzians*, *Jakutiſians*, *Alemurians*, and *Korliziens*. They are under the Juriſdiction of the Governor of *Jekutzkoy*, on the River *Lena*, which is the Capital of thoſe Northern Provinces. All the Woods here are ſtrongly guarded, to prevent the *Chineſe Tartars* from hunting Sables.

The Country on the Rivers *Lena* and *Amga* is inhabited by a ſort of People called *Jakutiſians*: Their upper Coats are Furs of different Colours, border'd with Buck-Skin. They have long Hair, and wear no Shirts. They believe there is a great Being above in Heaven, who gives them Wives and Food. They celebrate a great Feſtival in the Spring, when they offer *Arak* to that Being. During this Feaſt, they dont drink themſelves, but make great Fires, and continually ſprinkle the *Arak* towards the E. When any of them dies, his neareſt Relation is buried alive with him. About one half of their Language agrees with that of the *Mahometan Tartars* near *Tobolskoy*, which

is

Digitized by Google

is derived from the *Bulgarian*. They take as many Wives as they can maintain. Stags are their chief Beasts of Burden, upon which they also ride, and make great Journies in a little Time. They are a valiant quick-witted People, and seem to be great Lovers of Truth. When the Governors of *Jekutzkoi* are remiss, they do one another all possible Mischief. They say, their Ancestors came from *Kalmuckia*, from whence they were driven by the *Russians*, and were forc'd to take up their Abode in that cold District. They are much afflicted with the Scurvy, which they soon drive away by eating raw Fish, and a sort of Tar.

The *Jugogayers* are Heathens, and inhabit Part of this Country. They cut off all the Flesh of their dead Relations, dry the Skeleton, hang it with Glass-Corals of all Colours, carry it round their Huts, and worship it.

To the Shores of *Tugur* and *Uda*, come Yearly a tall People out of the Island in the Neighbourhood, well dress'd in fine Fur-Surtouts, under which they have Silken Coats, as rich as those of *Persia*. They come in small Barks to the *Siberian Tartars*, buy Girls and Women of them, and give 'em in Exchange rich Sables of Black Fox-Skins, which they have in great Quantities in their Islands. These two Rivers fall into the *Amurschoan* or *Chinese* Ocean, Long. 150. The Mouth of the *Uda* lies in Lat. 58.

Northwards of those two Rivers rises the *Ogola*, which runs N. E. and falls into the *Chinese* Ocean, in Lat 64. and Long. 145. All the Coast from the Mouth of this River to the *Icy-Cape* abounds with Whales, Sea-Horses, and Sea-Dogs.

KAMSATKA,

Lies in Lat. 71. and Long. 146. near a River of that Name, that falls into the *Chinese* Ocean. The People are call'd *Xuxi* and *Kooliki*, and have each a peculiar Language. Those who live near the Sea are cloath'd in Seal-Skins, and dwell in Caves. Those who inhabit the Inland Country, are generally rich. They hunt Harts, eat Flesh and Fish raw, and wash themselves with their own Urine. They are a false and treacherous People.

CASAN.

THis Province reaches on the Left of the *Volga* as far as *Siberia* to the North, and to the *Nagayan Tartars* on the East. It was formerly under the *Crim Tartars*, and was capable of bringing 60000 Men to the Field. The Great Duke *Basil Juanowitz*, Father to the famous Tyrant *John Basilowitz*, after a Victory over these *Tartars*, made one *Sheale*, a weak Man, their Governor, whom the *Casan Tartars*, join'd by the *Crim Tartars*, obliged to quit the Country, and give up all their Conquests. Not contented with this, they march'd their Army into the Heart of *Muscovy*, under the Conduct of two Brothers, called *Mendigleri* and *Sapgeri*, forced the *Muscovite* Lines near the River *Occa*, and had the Chase of them to *Nisi-Novogorod*. Having thus master'd all Difficulties, they marched streight to *Moscow*, which they besieged, took and plunder'd. The Castle was also obliged to capitulate on scandalous Terms, *viz.* That the Czar and his Subjects should be Tributaries to them for ever; and as a Sign of their Subjection, the Great Duke should be obliged to smite his Head before the Statue of *Mendigleri*, erected in the Market-place of *Moscow*, as often as the Tribute should be paid to the *Tartars*; and these Articles were sign'd and sworn to by the Czar; so the Kingdom of *Casan* fell to the Share of *Sapgeri*, and *Crim Tartary* to *Mendigleri*; who proposing nothing less than the entire Conquest of *Muscovy*, they invaded the Country again, sat down before *Resan*, summoned *Kowar*, the Weywode of the Castle, to surrender, and told him the Czar himself was now his Subject. The Weywode pretended Ignorance, desired to be satisfied about it, and then promised to surrender. *Mendigleri* sent him the Instrument of Subjection, sign'd and seal'd by the Czar. *Kowar* having gain'd this Point, he sent him Word, That he would keep both the Czar's Original Letters and the City to the last Drop of his Blood; which he did accordingly,

Digitized by Google

dingly, and obliged the *Tartars* to raiſe the Siege with great Loſs. He ſent the Original Letter to the Czar; upon which the Statue of *Menaiglovi* was broke down; and the Czar afterwards laid Siege to *Caſan*: But after much Bloodſhed on both Sides, he was forced to raiſe it. His Son *John Baſilowitz*, to revenge this Affront, began his Reign with the Siege of that Place. He batter'd the City furiouſly two Months, and offer'd 'em honourable Terms, if they would ſurrender; which they rejected, in hopes of being relieved by the *Crim-Tartars*. Upon this he immediately order'd his Mines to be ſprung, buried a vaſt Number of *Tartars* in the Ruins, and ſo took it by Storm on the 9th of *July*, 1552. The *Tartars* defended themſelves with the utmoſt Bravery in two Intrenchments within the City, after the *Muſcovites* made themſelves Maſters of the Breach, and at laſt forced their Way at one of the Gates through the *Muſcovite* Camp to the other Side of the River *Caſanka*. The Czar order'd the Breaches to be immediately repaired, becauſe the whole Province depended on the Fate of this City, which has remained in the Poſſeſſion of the *Muſcovites* ever ſince.

Caſan is ſituated in a large Plain on the River *Caſanka*, about 7 Verſts from the *Volga*, in Lat. 55½. Long. 69½. This City is conſiderable for its Extent and Situation, as well as its Strength: The Caſtle and its Fortifications are of Stone, well provided with Artillery, and a good Gariſon of *Muſcovites*. The *Tartars*, who are allowed to live here, are forbid, on pain of Death, to ſet a Foot between the Walls of the Caſtle. The Country is fertile, eſpecially of all Sorts of Fruits, and Melons of an extraordinary Taſt, as big as our Pompions; but it is not populous, becauſe frequently ravaged by the *Coſſacks*. The Duke of *Holſtein*'s Ambaſſadors obſerve, That the Courſe of the River *Volga* from *Niſi-Novogrod* to *Caſan* is E. and S.E. but from *Caſan* to *Aſtracan*, and to the *Caſpian* Sea, it runs from N. to S. Seventy Miles from *Caſan* ſtands *Rockſchagra*, and 130 to the N. *Malmiſch*, on the *Caſanka*. On the W. Side of the *Volga* lies *Tetuc*, on the Borders of *Bulgaria*. 'Tis irregularly built, and reſembles a Village rather than a City.

BULGARIA.

THis *Tartarian* Province is South from *Caſan*. *Bulgar* is the Capital; and the River *Ulka* riſes in its Neighbourhood. The Ruins of many Cities deſtroyed by *Tamerlane* are to be ſeen all along the Banks of the *Volga*. *Samara* lies on the E. Side of the *Volga*, about two Miles from the Shore, Lat. 52 ⅔. and Long. 70 ⅔. about 200 Miles S. from *Caſan*. It is ſquare, and built all of Wood, except the Churches and Monaſteries. The River *Samar*, from whence it has its Name, falls into the *Wolga* 3 Miles below it.

They have Plenty of Fiſh and Caviar in this Country. The Soil is fruitful: They have fine Meadows and Paſtures, and Plenty of Apple-Trees in the Vallies, of which they make Cyder. Their Mountains are cover'd with Pine-Trees; but much infeſted by the *Coſſacks*, who lurk there.

ASTRACAN.

THE Kingdom of *Aſtracan* has the *Caſpian* Sea on the S. the Kingdom of *Bulgaria* on the N. the *Nogaian Tartars* and the River *Don* on the W. and the *Kalmuck Tartars* on the N. E. The Duke of *Holſtein*'s Ambaſſadors are ſingular in their Obſervation, That the Elevation of the Pole in the City of *Aſtracan* is only 26 Degrees 22 Minutes; and Dr. *Connor* follows them in this Miſtake: But Father *Avril* ſays, the Lat. is 48 Degrees. Mr. *Moll* makes it 47. They had a King of their own; but in 1554, the City and whole Kingdom was taken by *John Baſilowitz*. Before this it belonged to the *Tartars* of *Nagaia*, and had its Name from a *Tartarian* Prince named *Aſtra-Can*, its Founder. It is ſituate in the Iſle of *Dolgoi*, in the *Volga*, which is all over ſandy and barren, except ſome Gardens and Grounds cultivated with great Care: So that *Herbeſtein* is miſtaken when he ſays, that it

Digitized by Google

it lies ſome Days Journey from that River. The Ambaſſadors obſerve, That the Heats were as exceſſive there in *September* and *October*, as in *Germany* in the middle of Summer. The Winter laſts only two Months; but is ſo exceeding cold, that the River is frozen up, and bears Sledges. On this Side the *Volga*, there's a Heath extending 70 *German* Leagues to the W. and another of 80 *German* Leagues to the S. Thoſe Heaths are remarkable for Salt-Pits. The Heat of the Sun bakes the Salt, ſo that it ſwims upon the Surface of the Water an Inch thick, and appears like Rock-Chryſtal. They have ſuch Quantities of it, that for an Half-penny one may buy 40 Pound Weight. The *Volga* ſome Miles lower abounds with Salmon, Sturgeon, white Fiſh, and Belluga, of the Roes of which Caviar is made. Twelve large Carps may be had for Two Pence, and 200 young Sturgeons for half a Crown. They have an incredible Number of Wild-Fowl, eſpecially Geeſe and Ducks, which the *Tartars* hunt with Hawks, whereof each Houſe has one, and they are very expert in breeding them.

The Fruits about *Aſtracan* are equal in Goodneſs and Beauty to thoſe of *Perſia*, eſpecially their Apples, Quinces, Nuts, Peaches, and Melons; but chiefly that Sort called *Carpus*, whoſe Rind is of a lively Green, and the Meat of a Carnation Colour. Grapes were firſt brought hither in 1613, by ſome *Perſian* Merchants, and planted by an old *German* Monk. Now they have a Vineyard, that produces 60 Pipes of excellent Wine in one Year; and every Houſe has its Walks or Arbours of Vines. The Herb *Eſula* grows here as high as a Man, and the Root of *Angelica* as big as one's Arm. About *Aſtracan*, and many Miles further N. there grows a prodigious Quantity of *Liquoriſh*: The Stalks are ſometimes above four Foot high, and very thick; yet 'tis inferior both in Bigneſs and Taſt to that in *Aſia*, near the River *Araxes*. They have 500 great Braſs Cannon, beſides many Mortars, in *Aſtracan*. The Gariſon conſiſts of 9 Regiments, of 500 Muſqueteers each, to keep the neighbouring *Tartars* in Awe. The Town is fortified with a double Wall, and ſome Towers, within half a Muſquet-ſhot of one another. The Fortifications are all very high, and of Stone, which make a noble Figure, eſpecially towards the River; but the Town is not anſwerable, becauſe the Houſes are low, and of Wood. *Michael Theodorowitz* built that Part of the City called *Stelitza-Gorod*, *i. e.* the Soldiers-Town. The Ruins of the great City *Czareſgorod*, with its Palace, and Walls of Brick, demoliſh'd by *Tamerlane*, have furniſhed the City of *Aſtracan* for many Years with Materials for their Publick Buildings.

The City is inhabited by *Muſcovites*. The *Armenians* and *Nagaian Tartars* have each of them a peculiar Suburb. The *Tartars* have 1000 Houſes, which are moſt Part of Bulruſhes; but they are not allow'd to come within the Walls.

As this City is in a manner the common Frontier on this Side betwixt *Aſia* and *Europe*, not only the *Crim*, *Precopenſe*, *Bulgar*, and *Nagaian Tartars*, but alſo the *Armenians*, *Perſians* and *Indians*, have a particular Place aſſign'd them, and drive a conſiderable Trade here; ſo that the Cuſtoms of this Place, when at the loweſt, amount to 250000 Crowns *per Annum*. Others of the moſt remarkable Towns belonging to this Kingdom are, *Soratoff*: It lies in Lat. 52. and Long. 67 ¾. in a large Plain upon a Branch of the *Volga*, about 4 Miles from the main Stream. 'Tis gariſon'd and inhabited only by *Muſcovites*, who ſerve as a Guard againſt the Invaſions of the *Kalmuck Tartars*, that inhabit a vaſt Country N. and E. from the *Caſpian* Sea. *Zariza* lies in Lat. 49. Lon. 42. and is ſituated on the W. Bank of the *Volga*. It is fortified with ſeveral Baſtions and Towers of Wood, and is a Frontier Gariſon againſt the neighbouring *Tartars* and *Coſſacks*. The Soldiers alſo convoy the Veſſels that paſs up and down the River. The Soil here is barren *Szarnagor* lies on the Right Side of the *Volga*, on a high Ground: It is ſquare, fortified with Wooden Towers and Ramparts; and is alſo a Frontier Gariſon againſt the *Coſſacks* and *Tartars*.

The *Nagaian-Coſſan Tartars* were unknown to ancient Geographers. They are ſaid to have been *Indians*, who revolted from

from their Kings, and about 1212 ſettled near the *Euxine* Sea, upon the *Palus Meotis*, where the ancient *Getæ* dwelt, and extended their Conqueſt firſt to the River *Don*, and afterwards to the *Volga*, where they now inhabit. Thoſe of *Nagaia* lie betwixt the *Volga* and *Jaika*, as far as the *Caſpian* Sea. Their principal City then was *Aſtracan*.

They live in round Huts of Bulruſhes, about 12 or 13 *Engliſh* Yards in Compaſs. The *Muſcovites* call them Vagabonds, becauſe they ramble in Summer from Place to Place, to ſeek Graſs for their Cattle, and carry their Huts in Carts. In Winter they dwell near *Aſtracan*. They pay no Tribute to the Czar, but are obliged to ſerve him in his Wars. They have petty Princes of their own, ſome of whom the Czar keeps as Hoſtages in the Caſtle of *Aſtracan*.

They are generally *Mahometans*, and very few of them of the *Muſcovite* Faith: They vow ſome of their Children to God, or to ſome Saint, which are diſtinguiſhed by a Ring in their Noſtrils, if Girls; and in their Right Ear if Boys.

They eat Fiſh dry'd in the Sun inſtead of Bread, and have ſometimes Cakes of Meal and Rice. Their Drink is generally Milk and Water; but there is Beer, Wine, Mead, and *Aqua-Vitæ*, at *Aſtracan*. Their Cattle are large, and the Tails of their Sheep ſo fat, that ſome of them are 30 Pound Weight: Their Ears hang down like Spaniel-Dogs. Their Horſes, thô ſmall and ill ſhap'd, are hardy and ſtrong. Thoſe *Tartars* have bad Lineaments, are low and fat, with large Faces, and little Eyes, of an Olive Complexion, and full of Wrinkles. They wear little Beards, and keep their Heads ſhaven; but the Women are tolerably handſome. The Men's Clothes are a looſe Coat of coarſe Cloth, with a ſhort Cloak of Sheep-Skins, the Wool outwards, and a Cap of the ſame, but commonly black. The Women wear white Linen, and have plaited Coifs on their Heads, with a great many *Muſcovian* Pence hanging down on both Sides.

CHAP. XII.

LITTLE TARTARY.

THIS Country had anciently ſeveral Names: 1. *Cherſoneſus-Taurica*, from the *Tauri*, or the *Tauro Scythæ*, who inhabited there, as *Pliny*, *Ptolomy*, and *Ovid*, inform us, and *Cherſoneſus*, becauſe it was a *Peninſula*. 2. *Crim-Tartary*, from a City of that Name. 3. *Precopian-Tartary*, from the City *Precopz*. 4. *Little Tartary*, to diſtinguiſh it from the *Great Tartary*. 5. *Strabo* calls it *Cherſoneſus-Scythica*. 6. Others call'd it *Gazavia*. It has the *Euxine* Sea on the S. which *Pliny* tells us was formerly called *Axtnos*, *i. e.* Inhoſpitable. On the E. it has the *Boſphorus Cimmerius*, ſo call'd from the *Cimmerii*, a People inhabiting there, now call'd the Streights of *Caffa*. It has the *Sinus-Carcinitus*, the Mouth of the *Boryſthenes*, on the W. and the Rivers *Pſol* and *Deſna* on the N. W. They both fall into the Left Side of the *Nieper*, and run from N. E. to N. W. The Boundary on the N. E. is the *Great Donn*, and the *Leſſer*, call'd ſometimes the *Donetz*. On the N. lies the Province of *Muſcovy*, call'd *Rezan*. The Mouth of the *Nieſter* is 150 *Engliſh* Miles S. W. from the *Taurica-Cherſoneſus*; and the Mouth of the *Donn* is 135 N. E. from it. The moſt Southern Promontory of that *Cherſoneſus* is 315 N. E. from *Conſtantinople*. The Town *Precopz* is 580 S from *Moſcow*. According to *Brietius*, from the Mouth of the *Nieper* to the Conflux of the *Greater* and *Leſſer Donn*, *i. e.* from 49 to 60 ½. Long. is 11 ½. Degr. which make 690 Miles. But he not obſerving the Diminution of the Degrees of Long. is out in his Reckoning: The Mouth of the *Nieper* is in 50, and the Conflux of the *Donn* and *Donetz* in. 61 ½. Long. ſo that the Diſtance is only 375 *Engliſh* Miles; and the Breadth is from the moſt Southern Part of the *Cherſoneſus* in Lat. 46. to the moſt Northerly Winding of the *Little Donn* in Lat. 52. about 360 Miles. The moſt Southerly Promontory of the *Cherſoneſus* is in Lat. 44 ½. and that Confluence in Lat. 49 ½. makes 320 Miles.

Of the Hiſtory of Little Tartary.

THis Country was famous for its fruitful Soil, and Plenty of Fiſh. It was ſubject to ſeveral Maſters, call'd the Princes of *Boſphorus*; but had no certain Form of Government. After that, the *Tauri*, a *Scythian* People, conquer'd it, and call'd it *Taurica*, as formerly mention'd. It is probable they were the *European Scythians*, whom *Darius*, the Son of *Hyſtaſpes*, made War upon with an Army of 700000 Men, and was routed by them, as *Herodotus* informs us. *Mithridates*, King of *Pontus*, defeated them, and annex'd *Taurica-Cherſoneſus* to his own Dominions. But being overcome by the *Romans*, he not only loſt his new Conqueſts, but alſo his Kingdom of *Pontus*. After that, the *Romans* ſet up Kings there, whom they called the Kings of *Boſphorus*. Upon the Diviſion of the Empire among the Sons of *Conſtantine the Great*, thoſe Provinces fell to the Share of the Eaſtern Emperors. (The *Tartars* now inhabiting *Crim-Tartary* are originally from *Aſia*, and began to be famous about 950, in the *Greek*, *Latin*, and *Arabian* Hiſtories.) The *Genoeſe* taking Advantage of the Confuſion and Diſorders among the *Greeks*, about the Time of the Holy War, and being then powerful at Sea, poſſeſs'd themſelves of the greater Part of *Crim-Tartary*, and eſpecially of *Caffa*, call'd by the *Greeks*, *Theodoſia*. In 1250, the *Tartars*, puffed up with the great Victories they had gain'd under their Prince *Batu*, who ravag'd for two Years together *Hungary*, *Sclavonia*, *Boſnia*, *Raſcia*, *Bulgaria*, and the Countries on both Sides the *Danube*, and alſo waſted great Part of *Ruſſia*, they invaded the

Places belonging to the *Genoese*; and tho' not able to expel 'em, yet they oblig'd them at length to pay Tribute. Some are of Opinion, that the *Tartars* suffer'd the *Genoese* to continue in that Country, because of the Gain they made by their Traffick, principally of Slaves, which the *Genoese* furnish'd to a great Part of the World, but especially to *Egypt*, who generally had all their *Mamalukes*, as long as that Government lasted, from *Caffa*; or rather, the *Tartars* having no Skill in besieging Towns, especially such as might constantly be relieved, could not totally drive them out. Those Plantations were very convenient for the *Genoese*; for they had a great Colony at *Pera* near *Constantinople*, by which they enjoyed the whole Trade of the *Black Sea*. At this Time the *Tartars* were Masters of the other Coasts of that Sea, of the *Palus Meotis*, and of many Places in the *Peninsula* and Continent, together with those where the *Nogaian Tartars* now live. But when the Emperor of the *Turks*, *Mahomet* II. had taken *Constantinople* in 1452 by Storm, he applied his utmost Force to drive the *Genoese* from his Neighbourhood, which by degrees he effected, and took *Caffa*, their principal Town, in 1475, after a Siege of 14 Years, when some say the Garison was brib'd to betray the City. 'Tis now the Residence of a *Beglerbeg*.

The *Tartars* of this Country acknowledg'd the Superiority of the Great Cham till 1400, that *Lochlon Cham*, one of the Descendants of *Batu*, refus'd Obedience, and took upon himself the absolute Dominion over all those Parts, except some few Places in *Taurica*, which still remain'd in the Power of the *Genoese*. But in 1584, their Independency was taken from them by *Amurath* III. who order'd their Prince's Throat to be cut, and set up *Islan*, the Brother of *Mahomet*, their last Prince, under such Conditions and Marks of Slavery as the Grand Seignior pleas'd. The *Tartars* then were possessed of all the Country of *Budziack*, which lies between the *Niester* and *Borysthenes*; but the Turk seiz'd upon that; so that their Dominions reach only from the *Borysthenes* or *Nieper* to the *Donn* or *Tanais*, of which the *Peninsula* is the chief Part. This Conduct of *Amurath* III. was contrary to a League betwixt *Selim* I. and the *Crim Tartar*, who married the Daughtre of the Grand Seignior, and assisted him with an Army of 150000 Men against his Father; by which League it was provided, That the *Tartars* should assist the *Turk*, when required, with 50000 Horse, headed by the Cham's Son, or some principal Officer; but when the Grand Seignior went to War in Person, the Cham was oblig'd to attend him with 100000 Horse. The Turk sometimes keeps the young Princes as Hostages for Performance of the Conditions: One of which is, not to make War, except against the *Muscovites*, without Consent of the Turk; and that they should pay him Yearly a Tribute of 300 Christians, some Furs, Butter, and such other Things, for which the Turk is to pay them 5500 Ducats: And the Cham is to succeed to the *Turkish* Empire, if the Males of the *Ottoman* Line fail. In 1663, the *Tartars*, being call'd to the Assistance of the *Turks*, made Incursions into *Hungary*, *Moravia*, and *Silesia*, sack'd and burn'd Cities and Towns, and carried off in one Year 160000 Captives, that they sold to the *Turks*, who trade with them for this Merchandize; as Sir *Paul Ricaut* informs us.

Of the MANNERS *of the* Tartars.

THis Country is very populous, by reason of their Polygamy; so that they talk of a *Tartar* who had 40 Children born in one Year by his Wives. They endure Thirst, Hunger, and Toil, with great Patience, and feed upon raw Flesh and Mare's Milk. A Horse's Head is a choice Dish with them: They prepare their Horse-Flesh thus; They cut it out in thin Pieces, lay it upon their Horses Back, ride on it all Day, and at Night eat it. They think the Heat of their Thighs, and the Sweat of the Horse, gives it a pleasant Taste. This is all their Cookery. They eat Garlick in abundance, which they say helps them to digest their raw Meat. They reckon it unworthy of a Man to till the Ground; and have no fix'd Habitations, but with their Flocks and Families wander from Place to Place over the large Countries betwixt the *Donn* and the *Nieper*. They think it the greatest Curse they can give their Enemies and Children, when angry with them, to wish,

Digitized by Google

wish, *That they may live as long in one Place as the Christians do.* They use no Finery in Apparel, but are great Slovens. Most of them are Atheists, and place their Happiness in the Pleasures of Sense; but some of them are *Mahometans*; yet *Jews*, *Armenians*, and other Christians, dwell in *Caffa*, &c. and are allow'd the Freedom of Worship. The Natives have no Table-Cloths: They fast long, and when they get Meat, eat so much, that they sleep for two Days. During this Surfeit, the *Poles* frequently surprize and kill them. Their Drink is Water, Milk, and Ale of Millet. They are mighty Lovers of sour Milk, think it a great Cordial, a Help to Digestion, and use it also as a Purge. They feed likewise upon Herbs that grow on the Banks of the *Donn*, but chiefly on one call'd *Paltraca*, which they say is nourishing, and makes them sprightly. If they have enough of this Herb, they are not afraid to go thro' the most wild and desolate Places of *Tartary*. They are, generally speaking, of an ordinary Stature, well set, have short Necks, broad Faces, large Foreheads, Eyes black and hollow, but very lively, with other Features peculiar to themselves, by which they may be distinguish'd from other Nations. They have long Beards, but shave all other Places of their Bodies. They have no Notion of Justice and Equity, but take any thing they want, without any Scruple, wherever they find it: Yet they keep their Promise to their Enemies; so that the *Poles* often let the *Tartarian* Prisoners go upon their Parole of Honour, to endeavour the Recovery of their Liberty by Exchange of Prisoners, which if they cannot obtain, they never fail to return by the Day prefix'd. When any of them are summoned before a Judge, and convicted of Theft or Robbery, they do not deny the Fact, but insist upon this as an Excuse, That they needed those Things; upon which the Judge gives Sentence, by telling the Plaintiff, That if he wants any thing, he may also furnish himself from his Neighbour's Goods. They sell *Polish* Virgins, whom they take Captives, at great Prices to the *Persians* and *Indians* for their Seraglio's, after the Cham has had his Share of them. If Murtherers be apprehended, their Punishment is to take from them their Clothes, Arms, and Horses, and then absolve them, and sometimes allow them a Horse and a Bow; and the Judge discharges them, with an Advice to go and mind their Affairs. They know no such thing as Boundaries and Limits of Lands, but live where they can. It is reported by most Authors, That for some Days after their Birth, they don't open their Eyes. Their Mothers and Nurses wash them every Day in salt Water, to harden and thicken their Skins against Cold, which is absolutely necessary; for from 7 Years old, that they leave their Huts of Osiers or Reeds, of about 12 or 14 Foot wide, and cover'd with a coarse Hairy Felt, or Cloth; they never sleep in an House, but in the open Air, tho' it be Frost and Snow; nor do they eat any thing but what they shoot with their Arrows. At 12 or 15 Years of Age, they go with their Fathers to the War. Their Cloathing is a short Shirt, with coarse Drawers, and a Sheep-Skin with the Wool on it over their Shoulders. The Women are distinguish'd from the Men by a Linen-Coif, or a Piece of Cloth round their Heads. The Wives of the Cham, and of Persons of Note, wear a Veil over their Faces when in publick, and are cloath'd in Silks, Callicoes, *&c.* The chief Men have their Horses of *Arabian* Breed, and use *Turkish* Saddles. They allow no Change in the Fashion of their Clothes, and punish Adultery with Death.

Of their SOIL.

THE Country is plain, and the Air unhealthful, because they don't cultivate the Ground. Tempestuous Winds rage frequently here. The *Chersonesus* is the most fruitful and best improv'd of all the Dominions of the *Crim-Tartars*. They say, the Country is naturally fertile, yields 100 Measures of Millet for one, and 50 for one of other Grain. Their Horses are little, ill shap'd, have ugly low Necks, but are strong, and endure Cold and Hunger without much Prejudice. They are very swift, and ride sometimes 20 or 30 Leagues without baiting. Their Food oftentimes is nothing but Leaves, Branches and Bark of Trees; and sometimes they dig up the Roots of Grass with their Hoofs, which altogether makes them preferable to any other Horses in the World. The *Tartars* are most terri-

Digitized by Google

ble, and do moſt Execution, when mounted on their own Horſes. Their Oxen are large, and grow very fat, upon the good Paſtures on the Banks of the *Boryſthenes*.

Their MILITARY AFFAIRS.

THeir Arms are Bows, Arrows, and Darts, in the Uſe of which their Women are expert. The *Tartars* Way of Fighting is to diſſemble a Flight, and then throw their Darts behind them with great Dexterity. When they are at the Point of Death, they will fight with their Teeth and Heels, and then are moſt revengeful. Their Saddles and Stirrups are of Wood, and they breed their Horſes to ſwim Rivers. When their Enemies chaſe, and are ready to catch 'em, they throw away their Saddles, Clothes, and every thing elſe but their Arms, that they may ride off with the greater ſpeed. They frequently retire on purpoſe to make their Enemies break their Ranks, and then they rally, and attack them with great Fury. When they fight in a plain Country, they don't draw up their Forces as other Nations; but when within Arrow-ſhot, they endeavour to ſurround the Enemy, that they may have the greater Opportunity of throwing their Darts and Arrows upon them from all Sides. Their Method of advancing and retiring is very ſurprizing: They carefully follow their Leaders; but if they be ſhot, or miſtake, their whole Army is diſorder'd, and can never rally again. They cannot fight in narrow Paſſes, becauſe they have no Arms of Defence. They uſe ſhort Stirrups, and are ſuch excellent Horſemen, that if any thing fall to the Ground, they can take it up again, tho' their Horſe run at full ſpeed. They can avoid the Enemy's Spears, by throwing themſelves to the other Side of the Horſe, where they hang by one Hand and one Foot; and when the Danger is over, ſpeedily mount again. When they make Inroads into the neighbouring Provinces, each Man provides himſelf with two or three Horſes, that when one is wearied, he may have another at hand. They don't uſe Spurs, but have fine Whips, ſo well twiſted, that ours are much ſhort of 'em. Their Saddles ſerve 'em at Night for Pillows, and they tie their Horſes to their Legs. If the Cham go in Perſon upon an Expedition, he ſeldom has fewer than 80, and ſometimes more than 100000, under his Command; but if a Mirza be General, he has never more than 50000. They chuſe to march in the Winter, when the Rivers are frozen, and, as much as they can, take unfrequented Ways, to ſhun the Scouts of the *Coſſacks*, and have a Compaſs to direct them through thoſe Deſarts. An Army of 80000 has commonly 200000 Horſes. They return always by another Way than they came. The Wings of their Army divide themſelves into ſmall Troops, ravage and burn the Country all round for 10 or 12 Leagues, and kill all that reſiſt. Such as yield, they bind, and carry away Priſoners, with all their Cattle, except Swine, which they burn as unclean Creatures. As ſoon as thoſe Wings have done with their Ravage, they return to the Body of the Army, and others are ſent out in their Turn. To prevent the Conſequences of ſuch Invaſions, their Neighbours have always their Houſes fortified, or Places of Strength and thick Woods, to which they retire. The *Coſſacks* fill their Grounds full of Trenches and Hedges, to hinder their March, and keep very diligent Watches every where. If they cannot overtake them, they repair to the Paſſages of the *Nieper*, where they lie in Ambuſh, and frequently recover much of the Prey. When the *Tartars* return to their own Country, they divide the Plunder, and firſt conſider thoſe who have loſt their Horſes in the Service: In the next place they give a Share to the Kindred of the Slain; then the Cham has his; after him the Officers; and the reſt is divided among the Soldiers. If any of the Captives be old, they give them to their Boys, that they may learn to ſhoot, throw Darts, and kill them, which is charming Sport to their Youth. They carry their Houſhold-Furniture over Rivers by tying Branches of Trees twiſted together to the Tails of Horſes, upon which they lay their Goods, and ferry them over; but if the River be broad, they kill their worſt Horſes, and make Boats of their Hides.

Of

Of the REVENUES *of the* Cham.

HE has no certain and fix'd Revenue; but his Funds are, 1. The Tenth of all Captives; for every Captive of Diſtinction, 3 Sequins; and a Dollar for every one elſe. 2. One half of the Tribute of the *Tauricæ-Cherſoneſus*, the Grand Seignior having the other. 3. The Grand Seignior pays him every Day 25 Dollars, to the Sultan *Galga* 12 ½, and to the Sultan *Huſtage* 12 ½, beſides Lands; and all the great *Tartars* have Salaries from him, but uncertain. 4. Donatives ſent him Yearly by neighbouring Princes. The *Muſcovites* and *Poles* having given Money to the Cham, to prevent his Invaſions, they afterwards claim'd it as a Tribute. The Prince of *Moldavia* preſents him Yearly with 20 Cart-load of Honey, each Cart drawn by 4 Oxen. 5. For every Well in the Country, he has a Horſe. 6. The richer and better Sort of *Tartars* furniſh him with Proviſions, and in caſe of Neceſſity, all the Nation contribute towards it. 7. He has vaſt Flocks and Herds kept by his Factors. 8. He coins Copper Money, which is only current in his own Dominions, and once in 4 or 5 Years he calls it all in, and coins a new Sort. The Forces of the Cham are reckon'd to amount in all to 300000 Horſe. He has no Foot, but a few Janizaries he borrows from the Turk for the Guard of his Perſon when he goes to War. He has alſo a green or purple Standard ſent him from the *Port*; and the Grand Seignior obliges ſuch *Tartars* as are his Tributaries to join the Cham with ſome Auxiliaries, when he deſigns any Invaſion upon Chriſtians. The *Beglerbeg* of *Caffa* manages the *Turkiſh* Affairs in theſe Parts.

Of the Diviſion of Leſſer Tartary.

IT is divided, 1. Into *Gazaria*, or *Precopia*, belonging to the *Turks*. The chief Towns are *Caffa*, *Segdat*, and *Sarigermen*. This Country is call'd the *Peninſula*, or *Cherſoneſus*.

The *Precopia*, or *Cumania*, belonging to the *Tartars*: The chief Towns are *Precope*, *Crim*, and *Baccaſar*. All theſe Places are in the *Peninſula*.

2. Into *Crim-Tartary*, properly ſo called. The chief Towns are *Okzakow* and *Aſoph*.

Of the CHERSONESUS.

THE *Cherſoneſus* is 140 *German* Leagues in Compaſs, 180 *Engliſh* Miles long, 120 where broadeſt, and one Mile over where narroweſt. This is the fruitfuleſt Country that belongs to the Cham. Towards the S. it is Mountainous, and well Water'd: The reſt is Champaign, and ill Water'd, ſo that they are oblig'd to dig deep Wells. The principal Cities are, 1. *Caffa*, anciently call'd *Theodoſia*. *Pliny*, *Strabo*, *Ptolemy*, and *Ammianus*, mention it. *Appian*, and *Stephanus Byzantinus*, call it *Theudoſia*: 'Tis in Lat. 44 ½. Long. 55 ½. a great City, a noble Mart, with a large and ſafe Port, and lies 380 Miles N. E. from *Conſtantinople*. Here are many *Armenians* and *Greek* Chriſtians; all of them, when above 15 Years of Age, pay a Tribute of a Piaſter and a half to the Grand Seignior, as Lord of the City, tho' the Cham's Juriſdiction reaches to the very Walls of it. Sir *John Chardin* gives this Account of *Caffa*: 'Tis a great City, built at the Bottom of a little Hill, upon the Sea Shore, and encompaſs'd with ſtrong Walls, that advance a little into the Sea. It has two Caſtles, one of them the Reſidence of the Baſha, and about 4000 Houſes, 3200 of which belong to *Turks* and *Tartars*, the reſt to Chriſtians. The Houſes, Bazars, Moſques, and Baths, are ſmall, and built of Earth. The Soil about it is dry and ſandy, the Water bad; but the Air pure and wholeſome. Proviſions are very cheap; good Mutton not above a Farthing a Pound, and other Things in proportion. The Harbour is ſafe, where Ships lie cloſe to the Shore, in 10 or 12 Fathom Water. They have a great Trade in Fiſh and Caviar taken in the Lake *Meotis*; 26 Miles diſtant from it, and tranſported into *Europe* and the *Indies*. They likewiſe export Corn, Butter, and Salt, to *Conſtantinople*, and other Places. Their Butter is the beſt in *Turkey*. 2. *Ingermen*, on the S. W. where there's now only a Caſtle, poſſeſſed by the *Turks*. It has been a great Town, as appears by its Ruins; among which are many Caves cut out of the Rocks, with Wells, and old *Greek* Buildings,

Digitized by Google

dings, as appears by the Inſcriptions. 3. *Sarigermen*, anciently call'd *Corſuna*, and then the nobleſt and moſt populous City of all the *Peninſula*, but now deſolate: 'Tis ſtill compaſs'd with a Stone Wall; and ſeveral Aquæducts, with other noble Buildings, remain entire. It lies W. from *Caffa* 120 Miles. 4. *Wolodimer*: The Czar took this Town from *Joannes Zimiſces*, and, with other rich Plunder, carried off two large Brazen Gates to *Kiow*; from whence *Boleſlaus* II. King of *Poland*, tranſported them to *Gneſna*, where they ſtill remain.

Of the Places belonging to Crim-Tartary *in* Taurica-Cherſoneſus.

1. *Precopz*, anciently call'd *Taphræ*, or *Taphre*. The *Tartars* call it Or, and the *Polanders*, *Precop*, which ſignifies a Ditch: It was taken by the Emperor *Trajan*'s Army. 'Tis the chief City of the Country, and gives it the Name of *Precopian Tartary*. It has the Gulph of *Nigropoli* on the W. and the Lake of *Bugey* on the E. This City lies 90 Miles N. W. from *Caffa*, 120 W. from the *Boſphorus Cimmerius*, 380 S. W. from the Mouth of the River *Donn*, and is ſituate in the *Iſthmus*, near the Ditch, built by the *Tartars* to defend the *Cherſoneſus*: It is not well fortified, but has a ſtrong Caſtle, the Reſidence of the Governor, who commands the Guards upon the *Donn* and *Nieper*; examines all Strangers, and ſuffers none to paſs without the Cham's Letters. 2. *Sachingerai*, where the Great Cham overthrew the *Nagay-Tartars*, and rais'd 17 Forts upon the Dyke, ſome of them of the Skulls and Bones of the Slain. 3. *Sach.ngeri*, on the *Black Sea*: It has 2000 Houſes, and a good Trade. 4. *Balcala*, call'd *Jombeli* by the *Genoeſe*, now poſſeſs'd by the *Turks*, who build their Gallies here. 5. *Mongut*, an Inland Town, once a great City, but now in Ruins: It is inhabited by *Turks* and *Greeks*. 6. *Pontico*, anciently called *Panticapeum*, and formerly the chief City of this Country, on the Mouth of the Streights of *Caffa*. 7. *Kerſa*, S. E. from *Precop*, on the Streights, and has above 1000 Houſes. 8. *Arbetok*, on the S. of the *Palus Meotis*, 60 Miles S. E. from *Precop*: It has two Caſtles, and the Cham keeps 70000 Studs here. Other Towns belonging to the *Cherſoneſus* are, *Koſtof*, S. W. from *Precop*, on the *Black Sea*: *Boluſnaf*, S. E. from *Koſtof*: *Belbeg*, S. from *Boluſnaf*, and S. W. from *Caffa*: *Karabes*, E. from *Boluſnaf*: But we forbear the Deſcription of them, becauſe they have nothing remarkable. 9. *Crim*, 25 Miles from *Caffa*, formerly a large City, but now almoſt reduc'd to a Village: It gives the Name of *Crim-Tartary* to the Country. The Cham has his Mint and Seraglio here. 10. *Bacca-Saray*, or *Paccaſar*, alias *Boſtan-Serail*, the Reſidence of the Cham: It has about 4000 Houſes, and a Moſch, with a magnificent Palace, and divers ſtately Sepulchres of the Chams. This City lies in a Country proper for Hunting and Fowling, in which the *Tartars* are very skilful. It is adorn'd with Baths, Gardens, Orchards, *&c.* ſtands 55 Miles N. W. of *Caffa*, and about 50 S. from *Precop*.

Of CRIM-TARTARY, *properly ſo call'd.*

IT lies N. from *Precop*, and has but few Towns. The Soil is fertile, and had formerly many Colonies of *Greeks*, moſt of 'em being now demoliſh'd. The Town of *Nigropoli* is near the Sea, and gives Name to the Gulph. *Ozzakow*, was once a Town of *Podolia*, and taken from the *Lithuanians* by the *Tartars*. It is ſometimes the Seat of the Cham, and lies near the Mouth of the *Nieper*, on the *Sinus Carcinatis*. The Inhabitants are *Tartars*; but it is garriſon'd with *Turks*, and lies in Lat. 46. Long. 51 ½. Betwixt the *Nieper* and *Nieſter* live the *Tartars* of *Ozzakow*, otherwiſe call'd the *Tartars* of *Budziack*. The *Nieſter* parts them from *Beſſaraba* on the S. They are ſubject to the Turk; and to ſecure their Dependance, the Grand Seignior has built Towns on the Sea-Coaſts, and along the Rivers. They are ſaid to be a Nation of Banditi and Libertines, who regard neither God nor Man. They go to their Rendezvous in ſmall Parties. All Authors take Notice of an Advantage they have over other Nations, *viz.* That they can ſee further and better, inſomuch

Digitized by Google

much that a *Tartar* will discern a single *Ruſs* further than a *Ruſſian* can discern a whole Troop of *Tartars*. Sometimes the *Coſſacks* purſue them in their own Country, and when they do ſo, march always in their Tabor; that is, in the middle of their Chariots, and ſend out Centinels on every Side at a good Diſtance. If they firſt ſpy the *Tartars*, they leave their Tabor, and fall upon them, and commonly have the Advantage; but if the *Tartars* firſt ſee the *Coſſacks*, they aſſault them in their Tabor with their Arrows, which, though they reach further than the *Coſſacks* Guns, yet their Tabor is ſo good a Defence, that 50 *Coſſacks* will not flee from 500 *Tartars*.

Of the RIVERS *of* Leſſer Tartary.

1. *Tanais*, ſo called by the Ancients, as *Strabo*, *Pliny*, and *Pomponius Mela*, was the old Boundary betwixt *Europe* and *Aſia*. 'Tis now called *Donn* by thoſe of the Neighbourhood. The *Italians* call it *La Tana*. Its Source is in the Province of *Rhoſan* in *Muſcovy*, in Lat. 54 ½. Long. 58. 110 Miles from *Muſcow*, and riſes from the Lake *Iwanowwa Lezora*, which is 500 *Ruſſian* Verſts broad. The Ancients believed this River had its Fountain in the *Ripheam* Mountains. It runs firſt Eaſtward. Some Maps place the moſt Eaſterly Winding of that River in Lat. 53. but Mr. *Moll* places it in 48. then it turns S. W. runs through the Country of the *Precopian Tartars*, and falls into the *Palus Meotis*, according to Mr. *Moll*, in Lat. 46. but according to others, in 50. Near the Mouth of this River is the City of *Aſoph*, as the *Germans* call it. *Ptolomy*, and *Stephen* of *Byzantium*, name it *Tanais*; the Natives *Azack*; and the *Italians*, *La Tana*. The River *Donn* divides it: It is ſituated at the Foot of a Hill, is of a ſquare Figure, and has a Caſtle of great Strength. It is 300 Miles N. E. from the Streights of *Caffa*. It was formerly taken by the *Muſcovites*, and retaken by the *Turks*. But the preſent Czar deſigning to make War upon the *Crim-Tartars*, and propoſing no leſs than the Conqueſt of their Capital City *Precop*, he reſolved firſt on the Siege of *Aſoph*; which being ſituated upon the Mouth of the River *Donn*, is an Inlet to *Leſſer Tartary*. 'Tis ſtrange that the *Turks*, who are ſo much bent on Conqueſts, were ſo careleſs of ſuch a conſiderable Place as *Aſoph*, and did not improve the Opportunity they had of joining the Rivers of *Donn* and *Wolga* together by means of a Canal, which was very practicable, becauſe there are two Rivers there of leſs Note; one call'd *Ilaffa*, which falls into the *Donn* from the N. E. the other, call'd *Camiſinca*, falls into the *Wolga* from the N. W. Thoſe two Rivers are not above 5 *Engliſh* Miles aſunder, which is not taken notice of by ordinary Maps; but they mention the Canal of *Camous*, which has no Being. The Ground betwixt theſe two Rivers is eaſy to be dug; and by this Canal, they might have open'd their Way into the Heart of *Muſcovy*; and by the *Wolga*, into *Perſia*. The *Turkiſh* Garriſon conſiſted of 10000 Men; the Czar's Army was 100000 Foot, and 20000 Horſe; but being deſtitute of Shipping, the *Turks* got in Supplies whenever they pleas'd, and the approaching Winter oblig'd the *Muſcovites* to raiſe the Siege: But the Czar being eager to repair that Diſgrace, made greater Preparations of Artillery and Bombs than formerly, and alſo of large Gallies, ſome of them 100 Foot, which in a Sea-Fight took or ſunk the *Turkiſh* Saiques, laden with Supplies and Proviſions. The Czar himſelf boarded the *Turkiſh* Admiral, and gave 50000 Ducats, found in the Enemy's Ships, to his Men. Upon this Naval Victory, the Garriſon capitulated: The Czar, after taking this City, order'd it to be repair'd, and fortify'd more regularly; then he commanded, 1. The Building of 80 Gallies, and 150 Brigantines. 2. The making a good Harbour on that Side. 3. The Conjunction of the two Rivers *Wolga* and *Donn*, and immediately 20000 Men were employ'd in that Work. A new Draught of that artificial Channel, and the Dams and Locks, *&c.* in order to a Paſſage of Ships through the Rivers of *Ilaffa* and *Camiſinca*, and to the *Wolga*, as alſo to the *Donn*, for a Communication betwixt the *Euxine* and *Caſpian* Seas, is drawn by Mr. *Moll*. 2. The *Boryſthenes* of *Ptolomy*, which the Natives call *Nieper*, the common Boundary of *Lithuania* and *Muſcovy*, riſes in *Muſcovy*, in the Dutchy of *Bielka*, near the Village of *Dnieperſco*, in Lat. 56 ½. Long. 55. 10 Leagues from the Lake of *Fromowo*; from whence, continuing its Courſe to the S. near *Wiefmo*, it runs Eaſtward,

Digitized by Google

ward, and passes by the Cities *Progobus*, *Smolensko*, *Orska*, *Du*, *Crowna*, and *Mohilouw*: From thence it runs S. and passes by *Kiow*, near the *Circassian Tartars*, and from thence towards *Oczakow*, a City of the *Precopian Tartars*, and disembogues into the *Euxine* Sea, 50 Miles from the Mouth of the *Niester*, and 100 N. from the Mouth of the *Ister* or *Danube*. Seventy five Miles above the Mouth of the *Nieper*, there are 13 Cataracts, which hinder the Navigation of this River; the Fountain of which was unknown to *Herodotus*. 3. The *Niester*, call'd the *Tyras*, by *Ptolomy*, *Strabo*, *Herodotus*, and *Pliny*. The Spring of this River is in *Red Russia* in *Poland*, from a small Lake 9 Miles E. from *Preslow*, and 4 from *Leopold*; then it runs E. and separates *Podolia* and the Palatinate of *Braclaw* from *Moldavia*, and falls into the *Euxine* Sea 6 Miles N. from the Mouth of the River *Danube*. *Ovid* makes mention of this River in *Lib.* 4 *de Ponto*.

Of the COSSACKS.

SOme say, the Word *Cossack* is *Russian*, and signifies Free-booter, or Banditi. Others derive it from *Cosa*, signifying a Goat, because of their Nimbleness. Some say, that *Cosa*, in the *Sclavonian* Language, signifies a Sythe, their ordinary Weapon. They are thought to have come first from the Islands of the *Borysthenes*, near the Mouth of that River, and were called *Zaporienses*, from the *Porowis*, or Cataracts and Rocks in the *Nieper*. The *Turks* call them *Russians*: They dwell in a Part of *Red-Russia* in *Poland*, and in *Bessarabia*, betwixt the Rivers *Borysthenes* and the *Niester*. They are terrible to the *Turks*, because of their Invasions by way of the *Black Sea*. In 1548, in the Time of *Sigismund* I. King of *Poland*, these *Cossacks* were only Volunteers of the Frontiers of *Russia*, *Volhinia*, *Podolia*, and the other Provinces of *Poland*, who assembled together, partly to defend themselves from the *Tartars*, by fighting them at the Passes of the *Nieper*, as they returned with their Prey, and partly to rob upon the *Black Sea*, where, getting rich Booty, they drew more into their Association. Sometimes they made Descents upon *Natolia*, and plundered the great Towns, as *Trebisond* and *Sinope*. At other Times they advanc'd within two Miles of *Constantinople*, and brought off Booty and Prisoners. At first they were about 6000, under *Eustachius Doskowicius*, their General; but their Numbers were quickly increas'd by their Neighbours, because of the Gain they made by their Pyracies, part of which they laid in their *Sborbinza Woskowa*, or Magazine, and the rest they brought home to their Houses. About the end of the Season, these Adventurers separate, and agree upon the Time and Place of Rendezvous next Spring in the Isles and Rocks of the *Nieper*, whence they return to their Pyracy. *Stephen Battori*, King of *Poland*, who began his Reign in 1576, considering the Service that might be made of those Thieves, for guarding the Country and Frontiers against the Inroads of the *Tartars*, formed them into a regular Body, and they serv'd him as Foot-Soldiers; for the *Polish* Army consists of Horse for most part. He gave them the Town and Territories of *Trebinorow*, about 80 Miles in length, in the Palatinate of *Kiow*, upon the *Borysthenes*; which Town they made their Magazine, and the Residence of their Governor-General, whom they nam'd, and gave him Power to chuse Subalterns. *Stephen Battori* also join'd 20000 Horse to this *Cossack* Infantry, to whose Maintenance he assigned the 4th Part of his Royal Revenues; whence they are called *Quartani*. These Forces did so secure the Frontiers, that the Country beyond *Breclaw*, *Bar*, and *Kiow*, betwixt the *Niester* and *Nieper*, was re-peopled, the Towns rebuilt, and Colonies planted there from the neighbouring Places. The *Cossacks* being thus brought into good Discipline, did frequently considerable Service to the Crown of *Poland*, but have since done the Republick much Mischief by their frequent Rebellions; for the *Cossacks* knowing their own Strength, and of what Importance they were to the *Poles*, began to set up for themselves, and would not obey the Orders of their Superiors, nor acknowledge the Power of the *Poles* over them. Their first Rebellion was in 1587, under their General *John Podkowa*, who was taken, and his Head struck off in 1596. *Sigismund* III. upon the Complaints and Threats of the Grand Seignior, forbad them to pillage any more upon the *Black Sea*. They obey'd his Orders for a while; but then turn'd their Force against

againſt *Ruſſia* and *Lithuania*, under the Command of their General *Nalevaiko*; and having had ſome Advantages over the *Poliſh* Army, commanded by General *Zolkiewki*, they look'd upon themſelves as invincible; yet that able Warriour found Means to block them up ſo cloſe, that he forced them to deliver him their General, who was beheaded.

In 1673, the Ground of a new War with the *Coſſacks* was laid thus: The Numbers of the *Coſſacks* being greatly increas'd, by the Multitude of Boors who frequently ran over to them to ſhare their Privileges, ſome great Men in *Poland*, who had got Eſtates in the Places appointed for the Quarters of the *Coſſacks*, were of Opinion that their Revenues would be conſiderably increaſed, if the Liberties of the *Coſſacks* were abridg'd. Whereupon they adviſ'd the King to reſtrain 'em, and began to uſe the ſame Severity to the *Coſſacks*, as to the *Poliſh* Boors, who are oblig'd to work 3 Days in a Week with Man and Horſe for their Lords, and to pay ſo much Corn, Poultry, *&c.* to carry home their Maſter's Wood, to pay him ſo much Money, and the Tenth of their Poſſeſſions. The *Poliſh* Lords being abſolute at home, and not puniſhed for killing their Slaves, they repreſented, That the *Coſſacks* deprived them of all the Advantages they could expect from their Lands in the *Ukrain*; for when the Boors were diſoblig'd, they went over to them. Therefore they reſolv'd to build a Fort at *Kudac*, a Place near their *Porooghi*, at a Point where the River *Zwamer* falls into the *Dnieper*, or *Boryſthenes*, and therefore very convenient to bridle the *Coſſacks*; who underſtanding the Deſign, cut in Pieces 200 Men that guarded the Builders; but being attacked by the *Poliſh* General *Potoski*, and divided among themſelves, they were routed at *Korſun*, and forc'd to deliver up their General, and four more of their Chief Officers, who were put to Death at *Warſaw*, tho' *Potoski* had promis'd them their Lives. After this, all their former Privileges were taken from them, with their Fortreſs *Tetchtimorawia*, and in their ſtead a new Body of Militia was ſettled there. This more and more enraged the *Coſſacks*, who again tried their Fortune with *Potoski*; but were worſted, tho they fought with great Bravery; then they fortified themſelves upon the River *Starexa*, beyond the *Boryſthenes*. After this, the *Poles* having loſt ſo many Men by endeavouring to ſuppreſs them, they were forced to promiſe, That their ancient Privileges ſhould be reſtor'd, and that their Militia of 6000 ſhould be re-eſtabliſh'd, under a General appointed by the King. The *Coſſacks* returning to their Homes, and laying down their Arms upon the Faith of this Treaty, were kill'd or plunder'd by the *Poliſh* Soldiers, and another Militia ſet up, excluding the ancient and true *Coſſacks*; and, among other oppreſſive Methods, the *Poles* took from them ſome of their *Greek* Churches. But the *Tartars* afterwards ruining a great Part of the *Ukrain*, convinc'd the *Poles* of the Neceſſity of reſtoring the *Coſſacks*. *Uladiſlaus* IV. making War upon the *Tartars*, was very careful to ſee it done, and gave them for General, *Pogdan*, (or *Theodore Chmielnuski*) and granted him a Privilege to build ſome Mills; but a *Poliſh* Gentleman nam'd *Jarinski* burnt them, raviſh'd his Wife, and afterwards kill'd both her and her Son. The *Coſſacks* were alſo highly provok'd by their Landlords, who had farm'd out their Lands to the *Jews*, that monopoliz'd all the Trade and Advantage of the Country, and got ſo much Power, that they would not ſuffer them to marry or baptize, but upon their own Terms. *Theodore* and his *Coſſacks* obtaining no Redreſs or Satisfaction for thoſe Injuries, rais'd an Army of 200000 Men, who burn'd, plunder'd, and ravag'd, the Country, and did what Miſchief they could to the *Poliſh* Nobility. Upon which the Senators deſired the King to march againſt them, who anſwer'd, That they ought not to have burnt down their Mills. King *John Caſimir* did alſo favour them under-hand, and deſign'd to make uſe of them for the Conqueſt of *Crim-Tartary*; at which the *Poles* being diſſatisfied, they levied an Army of 50000 Men, whom the *Coſſacks* defeated, kill'd 10000 upon the Spot, and took the City of *Kiow*. To revenge this Affront, the *Poles* ſummon'd the 7th Man throughout the Kingdom, and march'd againſt the *Coſſacks*, without the Conſent of the King, and were again defeated by them. But

while *Chmielinski* was celebrating the Nuptials of his Son with the Daughter of the Prince of *Wallachia* at *Kiow*, the *Poles* surpriz'd the *Coſſacks*, plunder'd the City, and took the *Grecian* Patriarch Priſoner. The *Coſſacks* ſent to the King, to know whether this had been done by his Authority? He anſwer'd, No; and that it was done by the Nobility out of Revenge. Upon this, *Chmielinski* called in the *Crim-Tartar* with 100000 Horſe, againſt whom the King went in Perſon, at the Head of the Nobility; and having routed them, though they were three to one ſtronger than the *Poles*, *Chmielinski* gathered up the Remainders of his ſcatter'd Army, and continually haraſs'd the Country, ſo that the King was oblig'd to make an Agreement with them; but the Nobility were diſcontented at it, and alledg'd, the King had granted too much to the *Coſſacks*. This Peace was made in 1649. *Chmielinski* fearing the *Poles* would not obſerve that Treaty, made an Alliance with the Grand Seignior and the Prince of *Moldavia*; and at a Diet he propos'd ſuch Terms as ſhew'd he intended to make himſelf an abſolute Prince, under the Protection of the *Turks*. Thus a new War broke out in 1651, when the *Coſſacks* and their Confederates beſieged *Smolensko*, took it next Year; and having ravaged *Lithuania*, they took *Wilna*, and ſome other Cities, where they committed great Barbarities. It was chiefly owing to them that the *Muſcovites* got Poſſeſſion of the Provinces of *Smolensko* and *Severia*, and the greateſt Part of the Palatinate of *Kiovia*, which were confirmed to them by the Treaty of Peace at *Oliva* in 1666. What became of *Chmielinski* and his *Coſſacks* ſince, we have little Account; only, that Part of them have ſubmitted themſelves to the *Muſcovites*, who gariſon many of their Cities in *Siberia* and other Places that border upon the *Aſiatick Tartars*. By an Agreement in 1677, betwixt the Grand Seignior and the King of *Poland*, *Ukrain* and the *Coſſacks* were to be under the *Turks*. They have alſo a Prince of their own, ſubject to the Grand Seignior: Some of them are alſo under the *Tartars*, and ſome continue ſubject to the *Poles*, who on that Account are called the *Loyal Coſſacks*.

Their RELIGION.

THE Common Sort are of the *Greek* Church; their Worſhip is the ſame with that of the *Ruſſians*: Their Metropolitan reſides at *Kiow*, is conſecrated by the Patriarch of *Conſtantinople*, and ſubject to him. The whole of their Religion conſiſts in Faſts and Holidays; but the greater Part of the Gentry are Papiſts, and a few of them Proteſtants.

Their MARRIAGES.

THey differ in this from the *Poles*: 'Tis very common in this Country for Maids to woo the Men. If a young Woman be in Love with a young Man, ſhe is not aſham'd to go to his Father's Houſe, and reveal her Paſſion in the moſt touching Expreſſions, and promiſes all Love and Obedience, if he pleaſes to accept of her in Marriage. If ſhe be rejected by the young Man, becauſe he is too young, or not diſpos'd to marry, or the like, ſhe tells him, That ſhe is reſolved never to go out of the Houſe till he conſent, and accordingly takes up her Lodgings there. To force her out, would be to provoke all her Kindred: Nor would the Church ſuffer them to uſe any Violence to her, without inflicting heavy Penances, and branding the Houſe with Infamy; ſo that after two or three Weeks, the Parents, or the young Man himſelf, being mov'd with the Conſtancy of the Woman, accommodate Matters as well as they can, and make up the Match.

Of their MANNERS.

THeir Manners are like thoſe of Soldiers, not ſollicitous for what's to come, but ſpend freely what they have among their Companions, and leave Futurity to ſhift for it ſelf. They are very inconſtant, mutinous, and purſue their preſent Advantage, rather than their Faith or Promiſe. They are great Drinkers; but by reaſon of their Labour and Hardſhips, they have ſo much Health, that Phyſicians are of little uſe among them. They are of a good Stature, ſtrong,

Digitized by Google

ſtrong, nimble, great Lovers of Liberty, uneaſie under any Yoke, and indefatigable. They are much given to Fiſhing and Hunting. None know better than they the Way of preparing Salt-Petre, and making Gunpowder. Their Country abounds with Salt-Petre, and ſeveral Parts of *Europe* are furniſh'd from thence. They have an odd kind of Diſtemper, particular to themſelves; the Country-People call it *Goſchetz*; and the Phyſicians, *Plica*. They that are troubled with it, loſe the Uſe of their Limbs, as if they had a Palſie, and feel great Pains in their Nerves, which commonly continues a whole Year: After that they fall into a great Sweat at Night, and next Morning their Hair is glu'd together, and has a nauſeous Smell, which remains for ever. From this, ſome think the *Poles* firſt made uſe of Powder for their Hair. The Humour falls on their Eyes, and deprives them of their Sight if they cut their Hair. This Diſtemper is infectious, and, like the Venereal Diſeaſe, communicated by Coition. Some Children bring it with them into the World, but it decreaſes by degrees. The great Numbers of Arſenical Mines in *Poland*, which communicate their poiſonous Qualities to the Waters, ſeem to be the Cauſe of this Diſtemper. Their Horſes alſo have it, and have ſuch a Knot in their Manes or Fore-top, of which, if the leaſt Part be cut off, the Horſe either dies, runs mad, or becomes blind or lame. Dr. *Connor* ſays, That Foreign Phyſicians have cur'd this Diſtemper by the ſame Medicines as are uſed in Venereal Caſes.

Of their Soil.

THis Country was almoſt a Deſart, till improv'd by the Induſtry of the *Coſſacks*, and other Colonies. The many Rivers add much to its Fruitfulneſs. They have ſome Animals peculiar to their Country. 1. A Beaſt call'd *Bobac*, not unlike a *Guiney* Pig: It makes Holes in the Earth, which it enters in *October*, and comes not abroad till *April*. Within theſe Holes, there are many little Apartments, for they diſpoſe of their Proviſions, Lodgings, and Dead, in ſeparate Places. Eight or Nine Herds of thoſe Beaſts live together in ſuch Caves: They are eaſily tam'd, and are very diverting. When they go out for Proviſions, they ſet a Centinel, who, as ſoon as he ſpies any Body, gives a Signal, by making a Noiſe, and they all run to their Caves. 2. *Sounaky*, a kind of Goat, remarkable for his beautiful Fur, reſembling Sattin, and white, ſhining, ſmooth, delicate Horns. He has no Horn in his Noſe, as ſome report; but as he feeds, goes backward. They have many Wild-Horſes, of no Value but for their Fleſh, which they ſell in their Markets, and think it better than Beef or Veal. When thoſe Horſes come to be old, their Hoofs never being par'd, do ſo contract their Feet, that they cannot go. In Summer, they are mightily incommoded with Flies and Graſshoppers, in ſuch vaſt Numbers, that they form a Cloud of 5 or 6 Leagues long, and 3 or 4 broad, darken the Air in the cleareſt Day, and deſtroy the Corn they light on in leſs than two Hours time.

Of their Sea Affairs.

WHen they rendezvous upon the Iſlands of *Sharbniza-Woſkowa*, the firſt thing they do is to chuſe their General for that Expedition, and to make their Boats, which they call *Colna*, of about 60 Foot long, 12 Foot deep, and as many wide. They are built very light, one Plank being pinn'd on the Edge of another, and widening upwards. They have a Stern at each End, and about 12 or 15 Oars of a Side. They have no Deck; but to prevent their ſinking, tho' full of Water, they encompaſs them round with a Border of Reeds, as big as a Barrel, ty'd together, and faſten'd to their Boats with Ropes. They have a ſorry Maſt and Sail, but ſeldom uſe them, except in fair Weather. Their Proviſion is a Tun of Biſket, which they take out of the Bung as they uſe it; a Barrel of boil'd Millet, and another of Paſte, made with Water, which they eat with their Millet. Every Boat carries about 60 Perſons, every Man having two Guns, and each Boat five or ſix Falconets. They ſet out about the beginning of *June*, and return about the firſt of *Auguſt*. They wait for a dark Night, that they may paſs undiſcovered by the *Turks* Gallies, which lie at *Oczakow* to intercept them.

them. With these Boats they cruise over the *Black Sea*. If they spy a Galley, they keep at a Distance till Night, observe the Course of the Vessel, and when it is dark, come up and board it: They take out all the Cannon, Money, and Merchandize, and sink the Ship, because they have neither Skill nor Opportunity to use it. No sooner have the *Turks* Intelligence that the *Cossacks* are abroad at Sea, but the Alarm is taken immediately, which reaches quickly to *Constantinople*: From thence Couriers are dispatched to the Coasts of *Natolia*, *Romelia*, and *Bulgaria*, to bid them be upon their Guard; but the *Cossacks* are generally too nimble for them, and are 40 Hours upon the Coast of *Natolia* before them. If a Galley spy them in the Day-time, which is not ordinary, for their Vessels are not above 2½ Foot above Water, they avoid fighting, by rowing away from her, or retiring to Shallows and among Reeds, where the Gallies cannot follow them. This was their Way of living, till the Grand Seignior oblig'd *Sigismund* King of *Poland* to prohibit those Pyracies, as was said before. 'Twas bad Policy in the *Poles* to suffer them to chuse their own General; for their General being their own Creature, is forc'd to comply with their Methods. They handle their Guns very dexterously, and have Sythes set long-ways upon Poles, with which they fight very fiercely and skilfully.

Their Manner of Fighting by Land.

THey are very indifferent Horsemen, but excellent Soldiers on Foot. They are inur'd to all manner of Fatigues and Hardships, obedient to their Commanders, active and dexterous in intrenching themselves, not only in the ordinary Way, but also by making a Fence of their Baggage-Waggons as they march. These moving Intrenchments are absolutely necessary for them when they march without Horse in open Plains, and the Desarts of the *Tartars*, against whom they are forced to stand wherever they meet them. There have been several Instances, that 1000 *Cossack* Foot, marching betwixt their Chariots and Waggons, have in a Plain repuls'd 5 or 6000 *Tartars* on Horseback. Their Horses, tho' swift, are but weak, and stopp'd by the least Barricado. This Way of marching in the midst of their Baggage and Ammunition-Waggons, would scarcely be practicable in any other Country but *Poland* and the Desarts of *Tartary*, which lie all upon a Level.

Of the Country of the Cossacks.

THE *Ukrain* signifies a Frontier Country, and lies betwix 48 and 52 Deg. of N Latitude; the *Niester* is the Western, and *Nieper* their Eastern Boundary, according to some; but *Baudrand* says, it divides the *Ukrain*; the East-Side belongs to the *Muscovites*; *Ranzkow*, *Kuinick*, *Broclaw*, *Kimirow*, *Bialocerkiew*, *Pawvolocz*, *Koresteſow*, *Mohilow*, and other Places, belong to *Poland*: *Kiow* is the chief Town, and belongs to the *Muscovites*, being taken from the *Poles* in 1653, by the Confederate Army of the *Muscovites* and *Cossacks*. This City gives Name to the Palatinate of *Kiow*, which had Princes of its own, till 'twas reduced to a Province by *Casimir* III. who began his Reign in the Year 1333. *Pitt*'s Atlas says, this City was the Metropolis of the *Russians*; but being ruin'd by War, *Vol. domir* translated the Seat of the Empire to *Volodomir*. The Ruins of the Walls shew it to have been 8 Miles in Compass. Here are to be seen still the Ruins of many Arcades, high Walls, Churches, and the Sepulchres of many Kings, with Greek Inscriptions. The Church of St. *Sophia*, whose Walls are lin'd with excellent Mosaick Work, and that of St. *Michael*, remarkable for its gilded Roof, are still in a tolerable Condition. Betwixt this Town and the *Nieper*, lies *New Kiow*, along the Banks of the *Nieper*, which has about 6000 Inhabitants. The Papists have 4 Churches, and the Greeks 10, with a sort of an University. The second Town of Note is *Pereſlaw*, on the E. Side of the *Nieper*, upon the River *Trubiez*, which falls into the *Nieper* two Miles below it: It lies 10 *German* Leagues S. E. from *Kiow*, is a strong Town, and contains 6000 Families. Here the *Cossacks* have a Regiment, and another at *Kaniow*, a little lower on the E. Bank of the *Niepar*. On the same Side is *Cirkaſe*, the Center of all their Retreats, which was burnt

Digitized by Google

burnt by the *Polanders* in 1637. On that ſame Side lies *Kirlow*, and below that *Cremiercow*, the loweſt Town upon the River, all the Country below it being deſart. Further down the River, there are many Iſles, moſt of them uninhabited, becauſe overflow'd in the Spring, but much frequented by Fiſhers. Several other Rivers increaſe the *Nieper* at *Romanow*, but chiefly *Samar*, which ſupplies the Country not only with Fiſh, but with other Commodities, as Honey, Wax, Veniſon, and eſpecially Timber. The *Coſſacks* call this River the *Holy River*. In the Spring, they catch Sturgeons and Herrings here, A little below this, the *Poles*, in 1635, built a Fort at *Kudac*, which is the firſt of the *Porohi*. *Conſtantinow*, on the River *Slicz*, which runs into the *Nieper* N. from *Kudac*, is a ſmall Town, in Lat. 54. *Braclovia* lies upon the River *Bog*. *Winnecza*, *Human*, *Czernikow*, *Lubnie*, *Powolocz*, and *Chwaſtow*, are other Towns, but inconſiderable, and not worth inſiſting upon.

Porohi, or *Porohi*, in the *Ruſſian* Language ſignifies a Rock: Of theſe there are 13 Chains that croſs the *Nieper*, and render the Navigation from the *Ukrain* to the *Black Sea* impoſſible; ſo that tho' the *Ukrain* be fruitful in Corn, yet the Inhabitants not being able to export it, ſuffer much of it to lie untill'd. Of theſe Rocks, ſome are under Water, ſome above it, as big as Houſes, very near to one another, and ſtop the Courſe of the River; ſo that when it is low, they make Cataracts ſometimes of 15 Foot high; but in the Spring, when the melted Snow ſwells the River, all the Rocks are cover'd with Water, except the 7th, which ſtill hinders the River to be navigable. Near the loweſt *Porohi*, the River is not above 150 Paces broad, and is the beſt Paſſage for the *Tartars*. Below that lies the Iſle *Tomahouka*, the Place where the *Coſſacks* rendezvous: But their chiefeſt Retreat is below the *Czertomelick*, (about 11 *German* Leagues from the Mouth of the *Nieper*) upon an Iſland, ſurrounded with a vaſt Number of ſmall ones, ſome of them dry, and others overflowed in the Spring: Some of them are Moraſſes, but all of them cover'd over with Reeds and Canes, as big as Pikes, which hide the Paſſages between the Iſlands, and make it a Labyrinth, known only to the *Coſſacks*, who call it *Scarbniza-Woyſkowa*, or the Treaſure of the Army. Here they lay up their Money and Ordnance. The *Turks* have loſt many Gallies among theſe Iſlands, which not being able to diſentangle themſelves, fell into the Hands of the *Coſſacks*.

From theſe *Porohi*, the *Coſſacks* are called *Zaporowski*, which is the great Body of the Nation, and none can be liſted among that Number, till he has paſſed in his little Boat all the *Porohi's*, and from thence by the Mouth of the *Nieper* to the *Black Sea*. The River there is 3 Miles broad, yet both the *Coſſacks* and others paſs it in this manner: They furniſh themſelves with Flat-bottom'd Boats, at the Stern of which they faſten croſs Poles of a good length, to which they tie the Heads of their Horſes, as many on the one Side as on the other, to ballance them; and putting their Baggage in the Boat, they row over, the Horſes ſwimming after them.

The *Ukrain* is a very fertile Country, tho the third Part of it is ſcarcely cultivated: It produces ſuch a vaſt Quantity of Grain of all Sorts, that the Inhabitants are at a loſs how to conſume it. They cannot export any of it, becauſe their Rivers are not navigable. They abound in Honey, Wax, Wood, Cattle, Fowl, and Fiſh. *Hungary*, *Tranſilvania*, *Wallachia*, and *Moldavia*, ſupplies them with Wine. They alſo make good Beer and *Aqua-Vitæ* out of their Corn. They have much Mead. The Salt-Pits near *Cracow* furniſh them with Salt. They have alſo ſome out of the Country of *Pokutia*, on the Borders of *Moldavia* and *Tranſilvania*, where there are Salt-Springs. Their Houſes are of Wood, and their Fortifications of Earth and Wood, which they account better againſt Cannon than Brick-Walls; but they are ſoon ſet on Fire.

The Rivers of Note here are, the *Boryſthenes*, or *Nieper*; the *Bog*, *Tyras*, or *Nieſter*, the common Border betwixt them and *Wallachia*; the *Dezna*, the *Ros*, the *Horin*, the *Stuez*, and the *Ster*, near which was fought the laſt Battle betwixt the *Poles* and *Coſſacks* in 1651, which oblig'd the *Coſſacks* to ſeek Protection among the *Muſcovites* and *Turks*.

The Language of the *Coſſacks* is a Dialect of the *Poliſh* Tongue, as the *Poliſh* is of the *Sclavonian*: But that of the *Coſſacks* is much more ſmooth, and full of Diminutives, which makes it very agreeable.

CHAP. XIII.

Of POLAND.

POLAND was anciently a Part of the *Sarmatia Europea*. The old Inhabitants were the *Corini*, who dwelt in the N. of *Poland*, on the E. of the *Oder*. The *Burgundiones* lay S. W. from them, according to ſome; but the Seats of thoſe People are not very certainly deſcrib'd, becauſe the *Romans* went no further that Way than the *Elbe*. *Zozim. Lib.* 1. *Cap.* 67. ſays, That the Emperor *Probus* fought with the *Burgundi* and the *Vandali*: But *Valeſius* thinks the *Germans* and *Sarmatians Burgundi* are different People. The *Lugii* were S. E. from the *Burgundiones*, upon the Banks of the *Viſtula*. *Cluverius* joins them with the *Vandali*, and ſays, that ſome Places betwixt the *Oder* and *Viſtula* have ſtill a Reſemblance of thoſe Names. The *Burii* lay S. W. from the *Lugii* on the *Oder*. *Tacitus*, *Cap.* 43. places them N. E. from the *Marcomanni* and *Quadi*. The *Logiones* were ſituated E. from the *Burii*, and the *Oſi* S. from them, on the *Oder*, near the Head of the *Viſtula*. The *Gothini* were near the *Quadi* to the E. and the *Oſi* to the N. They ſeem to be the ſame whom *Pliny* calls *Gutones*. *Cluver. Germ. Antiq. Cap.* 34. is at much Pains to prove that the *Goths*, who over-ran the *Roman* Empire, came from this Place; but moſt encline to follow *Jornandes*, who tells us they came from *Scandinavia*. The *Baſtarni* were on the E. Side of the *Viſtula*, and had the *Carpathian* Mountains, and the River *Nieſter*, anciently called *Tyras*, on the S. the *Venedi* on the N. and the *Peucini* on the W. *Cluverius* thinks they poſſeſſed the Countries of *Red-Ruſſia*, *Podolia*, and *Volhinia*, where lay *Ptolomy's Oppida Baſtarnica*, as *Carrpdunum*, now *Lemberg*; *Clepidavia*, now *Cominiec*; and *Vibantworium*, now *Bar*. The *Venedi*, *Jornandes* calls *Winidi*: This Name is preſerv'd in their Succeſſors ſtill, call'd *Dis Winden*. They had the *Alauni* on the N. the *Æſtiæi* on the W. the *Hamaxobii* on the E. and the *Baſtarni* and *Peucini* on the S. *Brietius* and *Cluverius* think they inhabited the Great Dutchy of *Lithuania* and *Livonia*, where lay Part of the *Hercinian* Forreſt; and from this People the *Sinus Venedicus*, now the Gulph of *Dantzick*, had its Name. The *Æſtii* were to the N. W. of the *Venedi*, near the *Inſulæ Electrides*, ſo call'd from the Plenty of Amber. They inhabited along thoſe Coaſts in Part of *Poland*, *Pruſſia*, and *Samogitia*. *Cluverius* thinks that *Eſthonia*, a Part of *Swediſh Livonia*, derives its Name from them. The *Peucini* had the *Baſtarni* to the E. the *Venedi* to the N. the *Lygii* to the W. and *Dacia* to the S. Their Country, according to *Sanſon*, and *Ortelius*, is that now call'd *Leſſer Poland*.

Poland is by the Natives call'd *Polska*, and as ſome think from *Pole*, which in the *Sclavonian* Language, commonly ſpoke here, ſignifies a Champaign Country, as *Poland* is known to be. Others derive that Name from *Polinoza*, a little Town on the *Viſtula*: And ſome will have it that *Polachi*, or *Polacki*, ſignifies the Poſterity of *Lechus* 'Tis urg'd in Favour of this Opinion, that they are by themſelves call'd *Polacki*; by the *Italians*, *Polacchi*; and by the *Muſcovites*, *Greeks*, *Tartars*, and *Turks*, *Lachi*. *Cromerus* ſays, the preſent Name is not old; for in the Time of *Alfred* King of *England*, about 880, this Country was call'd *Wenedland*, which ſeems to have been derived from the *Winidi*.

This Nation did formerly inhabit nearer to the Country of the *Tartars*; but after vaſt Numbers of People from *Germany*, as *Goths*, *Vandals*, &c. enter'd the *Roman* Provinces, the ancient Inhabitants mov'd further to the W. The *Poles* are undoub edly the Poſterity of the *Slavi*, or *Sclavonians*. For-

Digitized by Google

Jornandes tells us, That in *Justinian*'s Time, they were seated on the N. of the *Carpathian* Mountains, from the Fountain of the *Weissel* to the *Niester*, and thence extending themselves Westward to the *Danube*, and Eastward to the *Euxine* Sea; from whence they made Inundations upon the *Roman* Provinces, being join'd by others of the ancient Inhabitants. Some think this People, after their Conquests, took the Name of *Slavi*, which in their Language signifies *Fame*, or *Glory*; and their Posterity, as *Cromerus* observes, still retain it in their Compound Names, as *Stoni-Slaus*, *Wence-Slaus*.

The Extent of *Poland* was not formerly so large, as *Cluverius* informs us: The Length then from *Schwibussen* in *Silesia*, 30 Miles S. E. from *Frankfort* on the *Oder*, to *Leuczna* on the Borders of *Russia*, was not above 80 *German* Leagues; and the greatest Breadth, from the Springs of the *Vistula*, to *Wangrow* in *Masovia*, was 60 Leagues: But since that Time, *Lithuania*, *Black Russia*, *Podolia*, *Volhinia*, *Masovia*, *Samogitia*, and Part of *Livonia*, have been added at different Times to this Kingdom. *Brietius* says, the Length of it, from the most Westerly Place of *Silesia*, to *Smolensko* in *Muscovy*, is 690 *English* Miles; and the Breadth of it, from the Mouth of the *Niester*, to the most Northerly Parts of *Livonia*, is 640. The Longitude, according to *Strawolscius*, quoted by *Pitt*'s Atlas, is from the Marquisate of *Brandenburgh*, in Deg. 38. to the Mouth of the *Borysthenes* or *Nieper*, in Deg. 54. and the Lat. from the Palatinate of *Posenie* in *Red Russia*, in Deg. 48. to the most Northerly Place of *Livonia* subject to this Crown, in 58. According to Mr. *Moll*, the Long. is from 36 to 53 Deg. and the Lat. from 46½. to 56½. *Du Plessis* says, the Situation is betwixt *Posnan* in *Great Poland*, in Long. 38. to *Kudack*, a Fort upon the *Nieper*, in Long. 60. The Lat. is from the most Southerly Point of the Palatinate of *Red Russia*, in 47. to the most Northerly Place of *Curland*, in 58.

The Boundaries of *Poland* on the N. are the *Baltick*, the *Swedish* Sea, the Gulph of *Finland*, *Swedish Livonia*, and a Line drawn from *Pernow* in *Livonia*, to the Fountains of the River *Dwina*. *Muscovy* is upon the N. E. and E. *Little Tartary* on the S. E. The Limits on the S. are *Bessarabia*, *Moldavia*, from which it is separated by the River *Nestor*; *Transylvania*, and Part of *Hungary*, from which it is divided by the *Carpathian* Mountains. On the W. the Marches are *Silesia*, the Marquisate of *Brandenburgh*, and the further *Pomerania*.

Of the HISTORY *of* Poland.

Dugloss says, the Reason why we have no early Account of *Poland*, is, That they had few Governors who left any Fame behind them; but 'tis rather to be charg'd upon the Ignorance and Barbarity of those Times. Historians reckon four remarkable Changes in *Poland*: The first began in 550, under *Lechus*: His Posterity, call'd *Lechidæ*, continued till 830; then *Piastum*, a private Man, succeeded, and his Line was call'd *Piasti*. Others say, the second Race began in *Cracus*, in 700, who built *Cracow*. The *Jagellonian* Family began in 1386, in *Uladislaus Jagello*. Their Elective Kings began in the Person of *Henry Valois*, Duke of *Anjou*, in 1574.

Of the LECHIDÆ.

In 550, *Lechus* and his Followers possess'd themselves of this Country, and laid the Foundation of Government: Finding it abandon'd by the old Inhabitants the *Vandals*, or *Venedi*, he took up his Residence at *Gnesen*, where finding an Eagle's Nest, he call'd the Place *Gniasdo*. This he took for a good Omen, and made a Spread-Eagle the Arms of this new Commonwealth. He also built *Posnan*. Their Limits then reach'd no further than the *Greater* and *Lesser Poland*.

Historians are not agreed about the Country of *Lechus*, whether he was a *Croatian* or not, when he began his Reign; nor who were his Successors, and what Actions they perform'd. Their first Governors did not assume the Name of King, but only that of Dukes. After the Race of *Lechus* was extinguish'd, they chose 12 Governors, call'd Woiewodes, *i. e.* Captains of War, who polish'd this rude and barbarous People by good Laws; but at last, falling into Parties, the People were forced to chuse a King, who was *Cracus*, a Man of great Interest and Prudence, and well vers'd in the Arts of Government. He restor'd the Republick to

to its former Tranquillity, built the City of *Cracow*, ſo call'd from his own Name, and there kept his Court. *Lechus* II. his ſecond Son, ſucceeded him, having firſt murther'd his elder Brother to make Way for himſelf: Upon the Diſcovery of which, he was baniſh'd. His Siſter *Wenda*, a Virgin, ſucceeded, who choſe rather to rule alone, than to be the Wife of a King. She defeated one *Ridiger*, a *German* Prince, who would have oblig'd her to marry him; upon which he kill'd himſelf; and the Queen, leſt any adverſe Fate ſhould endanger her Honour and Virginity, leap'd from the Bridge of *Cracow* into the *Weiſſel*, and drown'd her ſelf. After this, the Government was for ſome Time in the Hands of 12 Waywodes or Palatines. Then, in 760, the People elected *Premiſlaus*, or *Leſcus* I. a Goldſmith, in Conſideration that he routed, by a Stratagem, the *Hungarians* and *Moravians*, who invaded their Country. He died without Iſſue. The People, to determine who ſhould ſucceed, appointed a Horſe-Race, and declar'd, he that won it ſhould be King: Upon this one of the Candidates ſtrow'd Iron Hooks in the Ground, which he knew, and therefore avoided; but the other Horſes were lam'd, and he came firſt to the Mark: But the Fraud being diſcover'd, he was kill'd on the Spot; and a poor Fellow call'd *Leſcus*, who had run the Race on Foot, being next to the Impoſtor, the People ſaluted him Prince in 776. He always kept his ſorry Clothes, to put him in Mind of the Meanneſs of his Original. This *Leſcus* II. was ſlain in the Wars with *Charles the Great*, and his Son *Leſcus* III. in 804, made Peace with him, and acknowledg'd himſelf his Vaſſal. He left *Poland* to his lawful Son *Popiel* I. and *Pomerania*, *Mark*, *Caſſubia*, and other Places, to his Baſtards. *Popiel* II. ſucceeded his Father *Popiel* I. and, by the Perſwaſion of his Lady, murther'd his Father's Brethren; after which he with his Wife and Children were eat up by Rats or Mice, which ſome ſay came out of the Corps of his Uncles.

In 820, the *Poles* exalted to the Royal Dignity *Piaſtum*, or *Piaſtus*, a Wheelwright, Son to *Caſſicon*, a Citizen of *Cruſwic*, of noted Hoſpitality and Charity; and he being the firſt King of that Name, all Natives that came to the Crown after him were call'd *Piaſti*; and thus began the ſecond Period. Others place this in 843. 'Tis ſaid, that he was 120 Years old before he died: His Poſterity reigned long in *Poland*, and from them deſcended the Race of the Dukes of *Lignitz* and *Brieg* in *Silеſia*, which is but lately extinguiſh'd. When *George William*, the laſt of that Houſe, dy'd in 1675 without Iſſue, the Dukedom fell to the Emperor. His Son *Ziemovitus* ſucceeded in 895, a Prince of a Martial Spirit. After him reign'd his Son *Leſcus* IV. of a peaceable Genius. His Son *Ziemomyſlus*, of the ſame Temper, ſucceeded him in 921. He had but one Son, who was born blind; but at 7 Years of Age he got his Sight; and being the Time when, according to their Cuſtom, he was to be ſhav'd and nam'd, 'twas look'd upon as an Omen that he ſhould be enlighten'd with the Chriſtian Faith: His Name was *Miceſlaus* I. He began to reign in 962. He had no Children for ſome time by his many Wives; upon which ſome *Germans* told him, That if he left Paganiſm, and turn'd Chriſtian, he would be bleſs'd with Children: But ſome ſay, his Converſion was owing to the Arguments of his Wife *Dambrawca*, the Daughter of *Boſiſlaus* Duke of *Bohemia*. He firſt introduced the Chriſtian Religion into *Poland*, as alſo the Cuſtom of drawing out half their Swords when the Goſpel is read at Maſs, to ſignify they were ready to fight for the Chriſtian Faith. He founded the Archbiſhopricks of *Gneſna* and *Cracovia*, and gave the Tythes of the whole Kingdom to the Clergy.

His Son *Boleſlaus Chrobry* was, in 999, by the Emperor *Otto* III. created firſt King of *Poland*, (his Predeceſſors being only Dukes) in Conſideration of his Devotion to the Shrine of St. *Adelbert*, Biſhop of *Gneſnen*, then famous for Miracles, and at that time viſited by the Emperor, to fulfil a Vow made in his Sickneſs. This firſt King of *Poland* enlarg'd his Dominions by his Wars againſt the *Red Ruſſians*, the *Bohemians*, *Saxons*, and *Pruſſians*. But his Son *Miceſlaus*, who began his Reign in 1025, loſt all his Father's Conqueſts: He died in 1034, leaving one Son, call'd *Caſimir*, and his Queen *Rixa*, behind him, who, during her Son's Minority, had the Adminiſtration of the Gover-

Digitized by Google

vernment. Her bad Conduct occasion'd Factions and Parties against her, which oblig'd her to leave the Kingdom, with her Son: He travell'd thro' *Hungary*, *Germany*, *Italy*, and *France*, where he assum'd the Order and Habit of a Monk in the *Benedictine* Convent at *Cluny*; but he was invited from thence by the *Poles*, who, to procure the Pope's Dispensation, promis'd a perpetual Tribute of a Farthing for each Head, except those of the Nobility and Clergy towards the maintaining of a perpetual Lamp in St. *Peter*'s Church, from thence called *Peter*'s *Pence*; and also to cause their Heads to be shaved above their Ears like Monks. After he came to the Throne, he defeated *Mastaus* and the *Prussians*, and restor'd the Kingdom to its former Tranquillity.

His Son *Boleslaus* II. called the *Bold*, began to reign about 1059. At first he made War successfully against the *Prussians*, *Bohemians*, and *Russians*; but having order'd *Stanislaus*, Archbishop of *Cracow*, who exhorted him to mend his vicious Life, to be cut in Pieces before the Altar, the See of *Rome* took it so ill, that Pope *Gregory* VII. excommunicated and deposed him; upon which he murther'd himself. This Bishop *Stanislaus* was canoniz'd by Pope *Gregory* VII. and has since that Time been receiv'd as the Patron of *Poland*. *Boleslaus*'s Successors were depriv'd of the Title of King, and the Bishops were forbid to anoint any of them. This continued 213 Years, till the Reign of *Premislaus*.

Uladislaus I. in 1082, succeeded him, but durst not take the Title of King, for fear of offending the Pope. He was successful both in his Foreign and Civil Wars. In 1103, *Boleslaus* III. his Son, succeeded, a brave Prince, and good Soldier, famous for 47 Battles, in most of which he was victorious: The greatest was that at *Huntsfield* near *Breslaw*, against the Emperor *Henry* V. In his last Battle against the *Red Russians*, he was defeated, by the Cowardice of the Weywode of *Cracow*; for which, as a Mark of Disgrace, the King sent him a Hare Skin, and a Spinning-Wheel, which did so vex him, that he hang'd himself; and the King was so much troubled at this Defeat, that he died of Grief.

He left four Sons behind him, one of whom, *Uladislaus* II. in 1139, obtain'd a great Part of the Kingdom, with the Name of Prince, and the other Brothers shar'd several Provinces among them, according to their Father's Last Will. This occasion'd Civil Wars between them and *Uladislaus*, who pretending to dispossess the rest, was himself oblig'd to quit the Country. After him, his Brother *Boleslaus Crispus*, or the *Curl'd*, was in 1146 made Prince of *Poland*: He was engag'd in a War against the Emperors *Conrade* III. and *Frederick* I. who design'd to restore *Uladislaus*: But at last a Peace was concluded, by which *Poland* remain'd to *Boleslaus*; but he was oblig'd to surrender *Silesia*, that then depended on *Poland*, to *Uladislaus*; which being afterwards divided into a great many Dukedoms, at last fell to the Crown of *Bohemia*, and has never since been in the Possession of the *Poles*. This *Boleslaus* receiv'd a great Overthrow from the *Prussians*, his Army, by the Treachery of a Guide, being misled into Morasses and Bogs. His Brother *Micislaus*, *Senior*, so called for his Prudence, thô but a young Man, succeeded in 1174; but was depos'd, because he follow'd the Advice of evil Counsellors, and twice, by his Cunning, regain'd the Kingdom. In 1178, his Brother *Casimir* succeeded. This Prince having received a Box on the Ear from one of his Pages, whose Money he had won at Play, pardon'd the Boy, saying, *That the Lad was enrag'd with the Loss of his Money, and that he himself had been justly punish'd for prostituting his Dignity.* He is famous for curbing the *Prussians* by War: He also made a City of *Dantzick* in *Prussia*, which before was only a poor Fisher-Town. He died in 1194. His Son *Lescus the White* succeeded in 1195; but was oblig'd to contend with the banish'd *Micislaus* for the Kingdom, with various Success, till *Micislaus* died. This *Micislaus* is noted for saying, *That a King was no longer oblig'd to keep his Oath, when while it was neither safe nor beneficial for him to break it.* *Uladislaus*, *Micislaus*'s Son, gave him some Disturbance for a while; but at last was forc'd to leave him in quiet Possession. In the Reign of this *Lescus*, the *Tartars* made their first Inroads into *Russia*, and have since prov'd very troublesome to *Poland*. *Lescus* was forc'd to make War against *Suentopoick*, whom he had made Governor of *Pomerania*, where

where he set up for himself, under the Title of Duke of *Pomerania*, and dismembred it from *Poland*. *Conrade*, the Brother of *Lescus*, possess'd himself of *Masovia* and *Cujavia*; but not being strong enough to make Head against the *Prussians*, who invaded his Country, he invited in the Knights of the *Cross*, and of the *Teutonick* Order, who were driven by the *Saracens* out of *Syria*. To them he surrender'd the Country of *Culm*, on Condition, That such Places as by their Assistance were conquer'd in *Prussia*, should be divided betwixt them; which afterwards prove an Occasion of great Wars betwixt those Knights and the *Poles*.

In 1226, *Boleslaus the Chast* succeeded his Father *Lescus*. In his Reign, the *Poles* receiv'd so great a Defeat from the *Tartars* in a Battle near *Lignitz*, that they fill'd 9 great Sacks with the Ears of the *Poles* they cut off. His Reign was also disturb'd by Civil Wars. In 1279, succeeded his Cousin *Lescus*, firnam'd the *Black*, who was very fortunate against the *Russians*, *Tartars*, and *Lithuanians*. The *Russians* were headed by *Leo* their Duke: The Place of their Defeat was call'd from him *Leopol*. They invaded *Poland* a second time, with a far greater Number of Men, and an innumerable Company of Mastiff-Dogs, train'd to War. He also rooted out the *Jazygians*, who inhabited *Podolia*. During his Reign, the *Tartars* made another Incursion, and carried away so many Captives, that there were reckon'd 21000 Virgins among them. They murther'd the Men, and poisoning their Hearts, cast them into the Waters, from whence several new Diseases were occasion'd in the Country, and among others (as some say) the *Plica Polonica*.

After the Death of *Lescus*, there were great Contests in *Poland* concerning the Succession, till at last *Premislaus*, Lord of *Great Poland*, carried it in 1295. He re-assum'd the Title of King, after it had been disus'd for 213 Years, and was crown'd by the Archbishop of *Gnesnen*. One Reason why his Predecessors were not ambitious of that Title, was, because the Country was divided among several Princes; but *Premislaus* thought himself powerful enough to re-assume it. He was barbarously murther'd by Assassins, Servants to the Marquis of *Brandenburg*. After him succeeded *Uladislaus Lochim*, so call'd from the Shortness of his Stature; *Lokiek* in their Language signifying an Ell. He did not assume the Title of King, but of Heir of *Poland*, and was deposed for Male-Administration. In 1300, *Wenceslaus*, King of *Bohemia*, was elected in his stead: He died in 1309, when *Lochim* was restor'd, and had long Wars with the Knights of the *Teutonick* Order, whom at last he vanquish'd in a great Battle. In his Reign, the Dukes of *Silesia*, who were formerly Vassals of *Poland*, submitted to the Crown of *Bohemia*. He died in 1333, and was succeeded by *Casimir* III. firnam'd the *Great*, the last of the *Piastian* Race: He introduced the Laws of the *Teutonick* Order, call'd *Magdeburg Laws*, and invited the *Germans* to till the Ground, by whose Industry and Example the Villages grew into great Towns; and several wall'd and fortified Cities, as well as Churches and Monasteries, were built. He very much improv'd and enrich'd his uncultivated Country. In his Reign, the Duke of *Masovia* did first submit himself as a Vassal to the Crown of *Poland*. He died in 1370, without Issue.

After his Death, the *Poles* were displeas'd with his Successor, *Lodowick*, King of *Hungary*, his Sister's Son, because he prefer'd his *Hungarian* before his *Polish* Subjects. This Prince being very curious to know what Opinion People had of him, he frequently disguis'd himself, and ask'd the People, *How they lik'd their King, and what they thought amiss in him*; and according to their Answer, reform'd Grievances. He died in 1382; and for want of Male-Heirs, they crown'd his Daughter *Hedwig* Queen. She married *Jagello*, Duke of *Lithuania*, on Condition that he should embrace the Christian Religion, oblige his Subjects to do the same, and annex his Dutchies of *Lithuania*, *Samogitia*, and Part of *Prussia*, to the Kingdom of *Poland*. The first Condition was immediately perform'd, for he was baptiz'd, and call'd *Uladislaus* IV. The Kings of *Poland*, his Successors, delay'd the Performance of the other Condition, on Pretence that the *Lithuanians* were not satisfied with it: But the true Reason was, That they were unwilling to surrender their Right of Succession to the Dukedom of *Lithuania*; so that this Union was not perfected till the Reign of King *Sigismundus Augustus*. *Uladi-*

slaus

ſtus was oblig'd likewiſe to pay 200000 Florins to *William* Duke of *Auſtria*, forfeited by *Hedwig*, who was before-hand contracted to that Duke. *Uladiſlaus* defeated the Knights of the *Teutonick* Order, kill'd 50000 of their Men in one Battle, took from them a great many Cities in *Pruſſia*, and had certainly deſtroy'd that Order, had not the Emperor *Sigiſmund* come to their Relief; ſo that they afterwards recover'd themſelves. He founded the Univerſity of *Cracow*, and died in 1434. In him commenc'd the 3d *Epocha* of the *Poliſh* Hiſtory. His Son *Uladiſlaus* V. ſucceeded, and was afterwards made King of *Hungary*, where he was engag'd in a War with the *Turks*. During this War, *John Hunniades* firſt defeated the *Turks* near the River *Meravia* in *Hungary*, where they loſt 30000 Men, and *Uladiſlaus* beat them upon the Frontiers of *Macedonia*; ſo that they were forced to make a Truce for 10 Years: But by the Perſwaſion of the Pope, who ſent Cardinal *Julian* to abſolve the King from his Oath, the Truce was broken; and not long after, that memorable Battle was fought near *Varna*, where the King himſelf was kill'd, and his Army defeated, to the great Shame and Prejudice of *Chriſtendom*. After this, the *Turks* were implacable againſt the Chriſtians, becauſe they thought they would never keep their Oaths or Word: And not long after, in 1453, *Mahomet the Great* took *Conſtantinople*.

Caſimir IV. was made King in 1445. A great Part of *Pruſſia*, weary of the Government of the Knights of the *Teutonick* Order, ſubmitted to him. This occaſion'd a War betwixt the *Poles* and thoſe Knights, which was carried on with various Succeſs, till a Peace was at laſt concluded, the Pope Mediator; by which the *Poles* got *Pomerellia*, *Culm*, *Marienburg*, and *Elbing*; and the reſt remain'd to the Knights, on Condition that the Maſter of the Order ſhould be a Vaſſal of *Poland*, and a Duke and Senator of that Kingdom, and maintain the King and his Court for 4 Days, whenever he ſhould be pleas'd to come among them. Much about the ſame Time, the Dukes of *Wallachia* and *Moldavia* ſubmitted themſelves, did Homage to the King of *Poland*, and paid him Tribute. In this Reign, the Deputies of the Provinces firſt appear'd at the Diets of the Kingdom. *Loccenius* reports of this King, That meeting with *Charles* King of *Sweden* at *Dantzick*, *Caſimir* was forc'd to get a Monk to talk *Latin* with him, becauſe he underſtood no *Poliſh*, but ſpoke *Latin* accurately; upon which *Caſimir* was ſo aſham'd of the Ignorance of himſelf and his Retinue, that when he return'd home, he iſſued a Proclamation, *That from thence forward, no Man ſhould be advanc'd to any Dignity, except he were able to ſpeak Latin.* Hence it came, ſays *Loccenius*, that the *Polanders* have ever ſince excell'd in the *Latin* Tongue. *Caſimir* died in 1492, and was ſucceeded by his Son *John Albert*, who was defeated by the *Turks* and rebellious *Wallachians*, when they carried away about 100000 Captives. The former invaded *Poland* again; but by a ſudden great Froſt, above 40000 of them were ſtarv'd to Death. The *Tartars* alſo in his Reign laid waſte *Red Ruſſia*, *Podolia*, and ſeveral other Parts of the Kingdom; but they were beaten back with Loſs, and about 20000 of them killed. His Brother *Alexander* ſucceeded in 1501, and was ſo great a Prodigal, that had he rul'd long, he would have beggar'd the Kingdom. His Queen *Helena* was nor Crown'd, becauſe being Daughter to *John*, Great Duke of *Muſcovy*, and a *Greek*, ſhe would not conform to the *Roman* Church. He died in 1506. *Sigiſmund* I. his Succeſſor, was the greateſt Prince in his Time. *Paulus Jovius* ſays, That the Emperor *Charles* V. *Francis* I. of *France*, and this King, being cotemporary, were the three Worthies of *Europe*; and that each of them deſerv'd to be Univerſal Monarch. *Sigiſmund*, beſides the great Abilities of his Mind, was alſo remarkable for his vaſt Strength; for in his Youth, he was able to break Horſe-ſhoes and ſtrong Ropes in pieces with his Hands. He had three ſeveral Wars with the *Muſcovites*, whom he always beat in the Field, but the *Muſcovites* got *Smolensko* by Treachery, and kept it. His War in *Pruſſia* with the Knights of the *Teutonick* Order was concluded, on Condition that *Albert* Marquis of *Brandenburgh*, who was then Maſter of that Order, ſhould hold the Eaſtern Parts of *Pruſſia* of the King of *Poland* as an Hereditary Fief, and acknowledge himſelf a Vaſſal of that Crown. In his Reign, the whole Country of *Maſovia* was reunited to *Poland*. He had great Succeſs againſt the *Wallachians*, and died in 1548.

Digitized by Google

His Son *Sigiſmund Auguſtus* ſucceeded. About this Time *Livonia* ſubmitted to the Crown of *Poland*, becauſe not able to defend it ſelf againſt the *Muſcovites*, who had taken *Dorpt*, *Felin*, and ſeveral other Places, from them. During this publick Conſternation, *Eſtland* and *Revel* ſurrender'd to *Erick* King of *Sweden*: But the Archbiſhop of *Riga* and the Maſter of the *Teutonick* Order fought the Protection of the King of *Poland*, which he would not grant on any other Terms, than that they ſhould ſwear Fealty to him: Whereupon the Maſter of that Order having abdicated the Dignity, ſurrender'd the Caſtle of *Riga* and other Places; in lieu of which, he was created Duke of *Semigal* and *Curland*. This gave Riſe to a War betwixt the *Muſcovites* and *Poles*, in which the latter loſt *Plotzo*. This King encourag'd the *Lutheran* and *Reform'd* Religion. He died without Iſſue, and put an End to the *Lithuanian* or *Jagellon* Line, which made Way for the 4th and laſt Revolution: Since which, their Kings have been elected out of ſeveral Nations.

After his Death, there were great Contentions about the Election of a new King. At laſt *Henry de Valois*, Duke of *Anjou*, Brother to *Charles* IX. of *France*, was elected; and after a Reign of 5 Months, the Throne of *France* being vacant by his Brother's Death, his private and haſty Retreat convinced the World, that he did not think the one worth keeping, when he could come at the other: He made his Eſcape in the Night, during a thick Fog, leſt the *Poles* ſhould detain him. He travell'd thro' *Auſtria* and *Italy* into *France*, and was thereupon depoſed by the *Poles* in 1574. The *Poles* falling into Diſſention, choſe two Kings; the Archbiſhop of *Gneſnen* and his Followers adher'd to *Maximilian* of *Auſtria*, and the Nobility to *Stephen Bathori*, Palatine of *Tranſilvania*, who was declar'd King in 1576, by Plurality of Votes. He married *Anna*, the Siſter of *Sigiſmund Auguſtus*, to confirm his Title, and became famous for many great Actions. He reduc'd the City of *Dantzick*, which ſided with *Maximilian*, and took *Polzko* and the neighbouring Countries from the *Muſcovites*. The Articles of the Peace he made with the *Muſcovites* were, That they ſhould reſign to him the whole Country of *Livonia*; in lieu of which, he was to reſtore all the Places he had taken from them. He made good Laws, and eſtabliſh'd the Soldiery of the Republick upon a good Foot. What he did towards bringing the *Coſſacks* under Diſcipline, has been mention'd before in the Hiſtory of the *Coſſacks*. This brave King, while he was making Preparations againſt the *Turks*, died in 1586. After his Death, there was another double Election, in which *Sigiſmund* III. the Son of *John* III. King of *Sweden*, who pretended to be deſcended of the *Jagellonick* Race by his Mother *Catherine*, whom he gave out to be Siſter of *Sigiſmundus Auguſtus*, was choſen. *Maximilian* of *Auſtria* was elected by the other Party, but defeated and taken by *Sigiſmund*, and obliged to ſign a Reſignation of the Crown. *Sigiſmund*, after his Father's Death, went to *Sweden*, where, in 1592, he was crown'd King; but was depos'd by his Subjects for attempting to introduce Popery, and his Uncle *Charles* IX. Duke of *Sudermania*, was elected in his Place. This occaſion'd a War betwixt *Poland* and *Sweden*: In the beginning of which, *Charles* IX. took a great many Places from the *Poles* in *Livonia*, which were all retaken by the *Poliſh* General *Zamoiski*. The King of *Sweden* was alſo routed in a Battle near *Riga*: But *Sigiſmund* being in Danger of his Life, by ſome Broils betwixt himſelf and the Nobility, it gave King *Charles* an Opportunity to recover himſelf, and recruit his Army.

At this Time began a new War betwixt the *Muſcovites* and *Poles*, becauſe the latter concern'd themſelves in the Affair of the falſe *Demetrius*, who pretended to be the Son of *John Baſilowitz*, Grand Duke of *Muſcovy*, ſaid to have been murther'd by the Order of *Boris Gudenow*, who hop'd thereby to ſucceed to the Empire after the Death of *Theodore*, the eldeſt Son of the ſaid *John Baſilowitz*. *George Minzeck*, Weyvode of *Sendomir*, gave *Demetrius* great Encouragement, on Promiſe to marry his Daughter. Upon the Hopes of ſo honourable a Match, the Weyvode, with other *Poliſh* Lords, gather'd an Army, and marched with *Demetrius* into *Muſcovy*. The Czar, *Boris Gudenow*, happening to die ſuddenly at that Time, *Demetrius* was well receiv'd by the *Ruſſians*; and having worſted thoſe that declar'd again him, he marched to *Moſcow*, where he w

pr

proclaim'd Czar: But he preſently became odious to the *Muſcovites*, who ſuſpected him to be an Impoſtor, becauſe of his Averſion to their Cuſtoms, as mention'd already in the Hiſtory of *Muſcovy*. They conceal'd their Reſentment till the Arrival of his *Poliſh* Bride, when the *Muſcovites*, headed by ſome of the Houſe of *Zuki*, related to the Czars by the Mother's-Side, aſſembled an Army of 20000 Men; and while the Nuptials were celebrating, they rais'd a Tumult, attack'd the Caſtle, kill'd *Demetrius*, and a great many *Poles* of his Bride's Retinue. Some of the Chief of them defended themſelves bravely, and got off. Then *Baſilius Zuki* was proclaim'd Czar, who caus'd the Body of *Demetrius* to be expos'd in publick; but his Face being much wounded, the Multitude could not diſcern his Features; upon which a Report was immediately ſpread, That *Demetrius* had eſcap'd: And ſoon after another appear'd who gave himſelf out to be the Man; but whether he was ſo, is not yet determin'd. The *Poles* acknowledg'd him, and gave him all the Titles and Regard due to the Czar. Some ſay, their Deſire to revenge the former Affront, and the Death of their Friends, inclin'd them to declare for him. This *Demetrius*, with an Army of *Poles* and *Coſſacks*, march'd into *Muſcovy*, beat *Zuki* in ſeveral Engagements, and oblig'd him to reſtore the Captive Bride, who acknowledg'd this *Demetrius* for her true Husband, which ſtrengthen'd his Party both in *Muſcovy* and *Poland*; ſo that had not the King of *Sweden* ſent *Pontus de la Gardie* to reinforce *Zuki's* Army, he muſt have been ruin'd. *Sigiſmund* III. of *Poland* deſign'd to make his own Advantages of thoſe Civil Wars, and had the Recovery of *Smolensko* and *Severia* in View. He inveſted *Smolensko* in 1609, and took it by Storm in 1611, when he recalled his Forces that had hitherto ſupported *Demetrius*, not thinking it fit that ſuch a conſiderable Army of his Subjects ſhould be under the Command of a Foreigner. The *Poliſh* Army being thus withdrawn, *Zuki* had Time to recruit his Troops; and being join'd by *Swediſh* Auxiliaries, he march'd to *Smolensko*, to oblige the *Poles* to raiſe the Siege; but was routed near *Cluſin*. After this Defeat, *Zuki's* Affairs were in great Diſorder, the *Poles* gain'd Ground, and they who formerly declar'd for him, now depos'd him, to avoid the Threats of the *Poles*, and offer'd the Crown of *Muſcovy* to *Uladiſlaus*, the Prince of *Poland*; by which they hop'd to be reconcil'd to the *Poles*, and to ruin *Demetrius*; and when their Affairs were in a better Poſture, they doubted not to get rid of the *Poles*. This had the deſir'd Effect, for immediately the *Poles* abandon'd *Demetrius*. *Zuki* was ſurrender'd to them, and the *Poles* promis'd to the *Muſcovites*, who had ſworn Allegiance to *Uladiſlaus*, that he ſhould appear in Perſon in 1610. But King *Sigiſmundus* refus'd this Offer of the *Muſcovites*, inclining rather to found his Right to that Kingdom upon Conqueſt, than on the Conſent of the People; and 'tis ſaid, had he march'd his Army ſtraight to *Moſcow*, he might have taken it at the firſt Aſſault: But as ſoon as the *Muſcovites* diſcover'd his Deſign, they revolted from *Uladiſlaus*; but before this Revolt, *Demetrius* was murther'd by his *Tartar* Guards. The *Muſcovites* attacked the *Poliſh* Gariſon in the City of *Moſcow*, conſiſting of 7000 Men, who defended themſelves bravely, and ſet Fire to the Town, which then had 180000 Houſes, where abundance of People were burnt: But notwithſtanding this, the *Muſcovites* recover'd themſelves, and beſieg'd the Caſtle of *Moſcow*; and *Sigiſmund*, by not ſending Supplies to them after the taking of *Smolensko*, made all his Affairs miſcarry; for he march'd his Army back to *Poland*, and ſent the Beſieged neither Men nor Money, who, after they had plunder'd the Treaſury of the Great Duke, left ſome to guard the Caſtle, fought their Way through the *Muſcovites*, and came to *Sigiſmund* to demand their Pay. He apply'd himſelf afterwards to retrieve his Affairs in *Muſcovy*; but his Deſigns were baffled by Jealouſies betwixt his Generals, ſo that his Guards in the Caſtle of *Moſcow* were forc'd to ſurrender by Famine. Thus all *Sigiſmund's* Expectations came to nothing, which griev'd him the more, becauſe he promis'd to himſelf that the Conqueſt of *Muſcovy* would open his Way to that of *Sweden*. That ſame Year, the *Poles* were worſted in *Moldavia*. In 1617, Prince *Uladiſlaus* undertook another Expedition into *Muſcovy*, but to no purpoſe; then he made a Truce with them for 14 Years: The Articles of which were, That the

Poles

Poles ſhould keep Poſſeſſion of *Severia*, *Zarnigo*, and *Novogorod*, which they had taken in the laſt War. In 1620, the *Poles* were engag'd in a War againſt the *Turks*, by the Practices of *Bethlem Gabor*, Prince of *Tranſilvania*, becauſe the King of *Poland* aſſiſted the Emperor in his War againſt him. Upon this the *Turks* enter'd *Moldavia*, with an Intention to baniſh the Duke of that Country, becauſe he ſided with the *Poles*. The *Poliſh* General *Zolkiewski* marched to the Duke's Aſſiſtance, but advanc'd too far into the Country; and as he retir'd, his Army was totally routed, and himſelf ſlain on the Spot. In 1621, the *Turks* marched againſt the *Poles* with 392000 Men; the *Poliſh* Army conſiſted of 65000. The *Turks*, commanded by their Emperor *Oſman*, aſſaulted the *Poliſh* Lines three times; but were as often repuls'd with great Loſs, tho' the *Poles* at that time ſuffer'd much by Want of Proviſions and Ammunition, Sickneſs, and a great Mortality among their Horſes. In theſe three Attacks, the *Turks* loſt 60000 Men, and were forc'd to make Peace upon Terms very honourable to the *Poles*. They alſo loſt a far greater Number in their Return to *Conſtantinople*. In 1621, *Guſtavus Adolphus* took *Riga* without any great Reſiſtance, and conquer'd all the reſt of *Livonia*, except *Dunneburgh*. That ſame Year he enter'd *Pruſſia*, and took *Marienburg* and *Elbing*. In 1629, *Hans Wrangel*, the *Swediſh* General, defeated the *Poles* near *Gorzno*. The Emperor ſent Auxiliaries to the *Poles*, who in a Battel near *Stum* had almoſt taken *Guſtavus* Priſoner; but they loſt the Day. By thoſe Defeats, and other Diſcouragements, the Affairs of the *Poles* were in a very bad Condition, which obliged them to make a Truce with the *Swedes* till 1634; the *Poles* being allow'd to keep *Elbing*, *Memel*, *Braunsberg*, *Pillau*, and what elſe they had taken in *Livonia*. *Sigiſmund* King of *Poland* died in 1632.

His Son *Uladiſlaus* IV. ſucceeded in 1633. He obtained a great Victory over the *Muſcowites*, who beſieg'd *Smolensko*, forc'd them to raiſe the Siege, and then to ſurrender their Army Priſoners of War. The *Turks*, who deſign'd to give him a Diverſion, were alſo repuls'd. This *Uladiſlaus* (who, as we ſaid before, was elected Czar) made Peace with the *Muſcowites* on Terms very honourable to himſelf, by which *Smolenſko*, *Czernickow* were granted to the *Poles*. Fame of this martial Prince ſo terrifie *Turks*, that the Grand Seignior allow'd the Charges of the War; and to pacify ſtrangled the Baſhaw that commande Forces againſt him. His Truce with *den* was renew'd for 26 Years; and *Swedes* were obliged to reſtore to the the Places they held in *Pruſſia*; for *Swedes* being defeated at *Norlingen* by *Germans*, were much mortified; and alſo embroil'd with the *Engliſh* and *D* who were diſpleas'd with the Tolls paid them in *Pruſſia*. In 1637, begar War betwixt the *Poles* and *Coſſacks*, r tion'd already in the Hiſtory of the lat

In 1637, *Uladiſlaus* died: *John Caſimir*, Brother, ſucceeded: He was deſign'd f Monk, and had liv'd two Years of his vitiate among the Jeſuits. *Hartknock Innocent* X. made him Cardinal. He af wards married his Brother *Uladiſlaus*'s dow. His Wars with the *Coſſacks* we related before in their Hiſtory. In 1 *Charles Guſtavus*, King of *Sweden*, ent *Poland* with an Army of choſen Men. conquer'd *Great Poland*, *Maſovia*, *Leſſer Pol* and the Capital City *Cracow*; and all Cities of *Pruſſia*, except *Dantzick*, ope their Gates to him. Many of the Citiz of this Town were alſo inclinable to fol the Example of the reſt; but by the I ſwaſion of ſome Miniſters, were kept Obedience. This put a Stand to the Vi ries of the *Swedes*, and alter'd the Fac Affairs to that degree, that they could maintain themſelves in *Pruſſia*, tho' the litia of *Poland* and *Lithuania* was under th Command, and that they had obliged *C Caſimir* to flee to *Silefia*. After the Conſ nation was over, the *Poles* join'd the *Tart* and kill'd ſuch of the *Swedes* as they fou ſtraggling; and the *Lithuanians* kill'd all *Swedes* in Winter-Quarters among th *Charles Guſtavus* had alſo weaken'd his my by his great March to *Jeroſlaw* and Ca *miski*; ſo that the *Poliſh* General, by Light Horſe, cut off the Rear of the *Swe* At this Time the *Poles* retook *Warſaw*; I King *Charles* being joined by the *Bran burghers* at *Warſaw*, fought that memora Battle, which laſted 3 Days, wherein *Poles* and *Tartars* were routed; upon wh

Digitized by Google

all the Princes and States of *Europe* began to look upon the Succeſs of *Sweden* with a jealous Eye, and thought the Greatneſs of that Prince inconſiſtent with the Ballance of *Chriſtendom*. The *Muſcovites*, to give them a Diverſion, fell into *Livonia*, and beſieg'd *Riga*; and the *Hollanders* did as much as they could to hinder the King of *Sweden* to be Maſter of *Pruſſia*. At the ſame Time the *Danes* made War againſt the *Swedes*, which obliged them to leave *Poland*. At this Time *Ragotzi*, Prince of *Tranſilvania*, enter'd *Poland*, fancying he might get the Crown to himſelf; but was routed, and forc'd to make Peace on diſadvantageous Terms. Upon this, *Cracow* and *Thorn* were recover'd by the *Poles*; the *Swedes* were forc'd to quit all their Conqueſts in *Curland*, and the *Poles* took the Duke of *Curland* Priſoner; but were obliged to riſe from before *Riga*. By the Peace of *Oliva*, the *Poles* recover'd all *Pruſſia*, but were oblig'd to quit their Pretenſions to *Livonia*: The *Muſcovites* got *Smolenſko*, *Severia* and *Kiow*: And how the *Coſſacks* diſpos'd of themſelves, has been told before. In ſhort, *John Caſimir*'s Reign was very unhappy, ſo that at laſt, being tir'd with the *Coſſackian*, *Muſcovian*, *Tartarian*, *Swediſh*, *Siebenburgian*, and Civil Wars, he voluntarily reſign'd the Crown in 1668, retir'd to the Abby of *St. Germain*, and there died a few Years after. He was ſucceeded by two *Piaſti*, or Natives; the firſt was *Michael Koributh*, Duke of *Wiſnowiski*, whoſe Reign was diſturb'd with Civil Wars; and by his Male-Adminiſtration, the *Turks*, in 1672, took *Caminiec*, which was formerly thought impregnable, and by this means open'd their Way into *Poland*. He concluded a Peace with them, by which the ſaid Town was left in their Hands, and the *Poles* were alſo obliged to pay them a Yearly Tribute. He died in 1673, and was ſucceeded by *John Sobieski*, who was formerly General againſt the *Turks*. In 1673, he forced the Camp of the *Turks* at *Kotchim*; ſo that of 32000, ſcarce 1500 eſcap'd. This War with the *Turks* continu'd till 1676, when a Peace was concluded, by which they kept *Caminiec*; but the *Poles* got off the Yearly Tribute. In 1683, when *Vienna* was beſieg'd, the Relief of it was chiefly owing to his timely Succour; for it could not have held out much longer againſt the *Turks*, if he had not marched in Perſon with his *Poles*, and routed their Army. Tho' he was married to a *French* Lady, ow'd his Exaltation to the Throne to the Intrigues of *France*, and had vaſt Promiſes made him by that Crown if he would invade *Sileſia*, when the *Turks* fell into *Hungary*, he diſdain'd thoſe Offers, would not in the leaſt aſſiſt the Common Enemy of *Chriſtendom* in their Deſigns againſt the Empire, but enter'd into a League Offenſive and Defenſive with the Emperor. He alſo had his Share with the Duke of *Lorrain* in the Victory obtain'd over the *Turks* at *Barkan*, where 10000 *Turks* were cut to Pieces. Theſe great Actions vex'd the Court of *France*, who deſign'd to ruin the Houſe of *Auſtria*. Therefore they form'd all the Factions and Parties they could againſt the King of *Poland*, which was the Occaſion that his following Campaigns had not the wiſh'd-for Succeſs; ſo that ſeeing himſelf thus embroil'd, he thought it moſt adviſable to apply himſelf to enrich his Family. In 1684, he made himſelf Maſter of the Fortreſs of *Jaſlowits*, marched to *Caminiec*, bombarded it, and routed a ſtrong Detachment of *Tartars*. In 1685, the *Tartars* ravag'd *Podolia*. In 1686, the King marched in Perſon at the Head of a great Army into *Moldavia*, and took the City of *Jaſſi*, the Reſidence of the *Hoſpodar*, who fled upon the Approach of his Army. He then marched to the Country of the *Budziack Tartars*, where the Court-Marſhal routed 8000 of them; but when the *Poliſh* Army marched further, they found the Country laid deſolate, and burnt by the *Tartars*; ſo that they were oblig'd to march back to *Jaſſi* in ſix Days; but all the Foragers were intercepted by the *Tartar*, Sultan *Muradin*. Some Time after, a *Moldavian* Spy brought him an Account, That a Detachment of 4000 *Tartars* were poſted at ſome Diſtance from their main Body. The King ſent the Court-Marſhal with ſome ſelect Troops, who ſurpris'd and routed them. The King himſelf marched up to their main Body, and oblig'd the Sultan to leave his Camp to the Mercy of the *Poles*; but this Action was more glorious than advantagious to them; for the advanc'd Seaſon oblig'd the King to quit *Moldavia*, and march back his Army to *Poland*. While his Army was buſy with the *Tartars*, the Gariſon of *Caminiec* har-

Digitized by Google

raſs'd the Country, and committed great Outrages. In 1687, the King's eldeſt Son, Prince *James*, bombarded *Caminiec*, but with no Succeſs. The Diet of *Grodno* broke up in Confuſion, which diſabled the *Poles* from appearing againſt the *Tartars* next Year. The *Tartars* and *Turks* perceiving the King of *Poland* embarraſs'd, ſent an Envoy to perſwade him to a ſeparate Peace; but finding themſelves diſappointed, they laid waſte the Province of *Volhinia*, before the *Poles* were ready to march out of their Winter Quarters; but when they took the Field, they obliged the *Tartars* to repaſs the *Nieper*; who perceiving the *Poliſh* Army in Diſorder, they were encourag'd to repaſs it, and fall upon the *Poles* before they were drawn up, when they cut 17 Companies of them to pieces, and made a new Invaſion. This obliged the King to march an Army of 19000 into *Moldavia*, where he gariſon'd *Seckow*, upon the S. Bank of the River *Sereth*; and ſo this Campaign ended. In 1691, the King enter'd *Moldavia*, took *Jaſſi*, *Nimick*, and ſeveral other Places, without Oppoſition: But the Seaſon being far ſpent, and the *Tartars* ſtill troubleſome on his Rear, it diſappointed his Deſign of invading the *Budziack Tartars*; only the Chaſtellan of *Chelm*, aſſiſted by the *Coſſacks*, defeated 4000 *Tartars*, and made himſelf Maſter of the Fortreſs of *Serock* upon the *Nieſter*. In 1692, the *Poles* block'd up *Caminiec* in *September*, but to no purpoſe; and doing nothing remarkable that Campaign, the Imperial Court were jealous that they inclin'd to a ſeparate Peace with the *Turks*. The Ground of this Suſpicion was, beſides ſome Differences betwixt the King and Emperor, That the King of *Poland* had ſent an Envoy to *Adrianople*, to whom the Cham of *Tartary* made ſeveral Propoſals for a ſeparate Peace; but they did not take. The *Tartars*, in 1694, with an Army of 20000 Men, relieved *Caminiec*, and furniſh'd it with Men and Proviſions; but going on to plunder and harraſs the Country, according to their uſual Cuſtom, they were routed by the *Poles*, and 2000 of them ſlain. In 1695, the Conteſts betwixt the General of *Lithuania* and the Biſhop of *Wilna* defeated all the King's Deſigns for that Campaign; and in 1696, the King's Death put a Stop to all his Projects of War. He was 71 Years of Age when he died, was a Prince of great Bravery, and ov Advancement chiefly to his own Mer Valour.

After his Death, ſeveral Competito pear'd for the Crown, among whon his Son, Prince *James*; but he had n tereſt enough. The *French* King ſet u Prince of *Conti*, who was elected by a that was not able to ſupport him; ſ thô he was ſent to *Poliſh Pruſſia* by a Squadron, he was obliged to return out being put in Poſſeſſion. *Frederic guſtus*, Elector of *Saxony*, having reno his Religion to make himſelf capable ing choſen, carried it by the Aſſiſtan the Allies, notwithſtanding the long ar gorous Oppoſition by Cardinal *Raaz* and the *French* Faction; and probably have continued in peaceable Poſſeſſion he not made War upon the *Swedes*, brought their young King *Charles* XII on him, who in 1704 ſet up *Staniſl Poliſh* Nobleman, Palatin of *Poſen*, a him; and by ſeveral Battles, and at la invading *Saxony*, has obliged King *Au* to ſurrender all but the Title, tho' *Staniſlaus* is not yet in quiet Poſſeſſio the Crown, the Chief General, and a Part of the *Poles*, having form'd a Con racy againſt him. Theſe Things being in Memory, we need inſiſt no longer them.

Of the AIR.

THE Air of this Country is accor to the Differences of the Climate, ſometimes ſo very cold, that Rain fr ere it falls to the Ground; and Lakes Rivers are ſo frozen, that Coaches loaded Carts paſs over them for five o Months together. The Air of *Pola* more healthful than that of *Lithuania* cauſe of the many Moraſſes there. Cold is not ſo much to be imputed Northerly Situation, as to its Nearn the vaſt and cold Countries of *Muſcovy*, whence the cold Wind blows.

Of the SOIL.

THE Soil for moſt part is Chan and open; but towards the Bord *Hungary*, Mountainous and Woody; ſ

Digitized by Google

'tis obſerved, the Places furtheſt diſtant from *Hungary*, are moſt fruitful. There is only one great Mountain in the middle of *Leſſer Poland*, call'd *Mons Calvus*: It has a Monaſtery on the Top, famous, as they pretend, for the real Croſs of Chriſt. What other Hills one meets with here, are rather to be eſteem'd riſing Grounds than Mountains. The Eaſtern Part of the Kingdom is full of Woods, Foreſts, Lakes, Marſhes, and Rivers, which afford a delightful Proſpect to the open Country.

The PRODUCT.

Poland is ſaid to have been formerly almoſt all Wood; but now, being cultivated by the Inhabitants, it is very fertile, and produces every where all kinds of Fruit, Corn and Herbs. A great Part of the Corn made uſe of in *Holland* comes from this Country, by Way of *Dantzick*. They have a good Breed of Horſe, ſo that their Cavalry is numerous, and well mounted. Their Paſtures are good, and feed a great many Cattle, which they export to Foreign Countries. The Foreſts abound with Wild-Beaſts, and alſo with Bees, that afford vaſt Quantities of Honey and Wax. They have alſo abundance of Flax and Hemp, and Vines in many Places, whoſe Grapes are grateful to the Taſt, eſpecially if the Summer and Harveſt be favourable; but the Wine is generally very ſharp when drawn off. In the Mountains, there are Mines of Lead, Silver, Copper, and Iron, with other kinds of Minerals, as Quickſilver at *Tuſtan* in *Red Ruſſia*, and Vitriol near *Bieez* in the Palatinate of *Cracovia*. But the moſt conſiderable of all, are the Salt-Mines at *Bochnia* and *Veliſca* in *Leſſer Poland*, which are the chief Riches of the Country, and bring moſt Money into the *Exchequer*. They work in thoſe Mines as we do in our Coal-Pits; the Salt is generally of a bluiſh Colour, but ſome of it white and tranſparent, like Chryſtal. When it is new dug, it has a brackiſh Taſt; but when expos'd to the Air, becomes brittle, and more ſweet. They have alſo ſome Veins of *Sal Gemme*.

Of their BEASTS.

THE Woods are well ſtor'd with Hares, Conies, Squirrels, Deer, Foxes, Bears, Wolves, and Boars. The *Maſovian* Foreſts have Plenty of *Elks*, *Wild Aſſes*, *Uri*, which Dr. *Charlton* interprets *Owres*; and the *Biſontes*, *Jubati*, by ſome rendred Buffs. *Aldrovand* ſays, theſe *Biſontes* in Shape and Horns reſemble an Ox, have Manes like Horſes, Beards on their lower Jaws, Tongues rough, like a File, and very hard; a Bunch upon their Backs, and their Hair ſmells like Muſk. They are incredibly ſtrong. The *Poliſh* Nobility hunt them, and eſteem their Fleſh when powder'd a great Dainty

The *Owr*, or *Urus*, call'd by the *Polanders*, *Thur*, is a kind of Wild-Ox, bigger, ſtronger, and ſwifter than the Tame. He has a ſhort black Beard, a Buſh of Hair upon his Forehead, and Horns very wide and large. *Pliny* ſays, the *Romans* made Lanthorns of them.

The *Elk*, call'd by the *Poles*, *Loſt*; by the *Germans*, *Ellend*, which ſignifies Miſerable, becauſe of the Falling-Sickneſs it is troubled with; is about the Size of a large Horſe, Bodied like a Stag, but broader; its Legs longer, and its Feet cloven, and large. Their Hoofs are reckon'd a Specifick againſt the Falling Sickneſs. In the Deſarts near the *Nieper*, *Herberſtein* ſays, there's a Sort of Wild-Sheep call'd *Solhac*, ſhap'd like a Goat, but with ſhorter Legs and Horns, growing ſtrait up. They are exceeding ſwift, and leap very high. They have a Sort of Wild-Horſes in the *Ukrain*, call'd by them *Dzikie-Komil*, which their Nobles eat for a great Rarity.

In *Lithuania* and *Muſcovy*, there's a voracious unſerviceable Beaſt, not found elſewhere, as *Mat. a Michovia* tells us, called *Roſſomaka*, with the Body and Tail of a Wolf, and the Face of a Cat: It feeds on dead Carcaſſes, and eats till its Belly is ſwelled to the utmoſt Stretch; then it ſqueezes it ſelf betwixt two Trees, forces the Load from its Stomach, and returns to its Prey, devouring and diſgorging ſucceſſively, till all is conſumed.

Digitized by Google

The *Wolf*, reſembling a Hart, or the *European* Lynx, call'd by the *Latins*, *Lupus Cervarius*, and by the Natives, *Ris*, with Spots on its Belly and Legs; affords the beſt Furs in *Poland*.

The *Quails* in *Podolia* have green Legs: Their Fleſh is unwholeſome, and if immoderately eaten, breeds the Cramp.

Their Trade of EXPORT.

THE Weſtern Parts of this Kingdom produce a great deal of Corn of all Sorts, which is exported from *Dantzick*; as alſo Honey, Wax, Amber, Hides, Tann'd Leather, *Muſcovite* and *Poliſh* Furs, Oak, Wainſcot, Maſts, Planks, Fir, Deal, Pitch, Tallow, Salt-Petre, Hops, Hemp, Flax, Salt, Beer, Pot-Aſhes, Opium, *Pruſſia* Wool for coarſe Manufactures, Vitriol, *Lapis Lazuli*, Vermilion, Braſs, Lead, Iron, Copper, Glaſs and Earthen Ware, Oxen, Sheep, Hogs, *&c.*

Their Trade of IMPORT.

STuffs of Silk and Worſted, *Engliſh* Cloths, Tapeſtry, Jewels, Sables, Salt-Fiſhes, Tin, Steel, Martens, *&c.* Iron Ware, *Rheniſh*, *French*, *Spaniſh*, and *Hungarian* Wines, *Spirits*, *Aqua Vitæ*, Brandy, Spices, of which they make a great Conſumption. They might be much richer, if they were induſtrious and frugal, and applied themſelves to Manufacturies: But the *Poles* are little inclin'd to either; for the Gentry are abſolutely forbid to follow Trade of any kind, on Pain of forfeiting their Honour; and the Commonalty want Funds; ſo that all the Trade there is chiefly carried on by Foreign Merchants: Beſides, ſuch of the *Poles* as have any Fortunes, ſpend too much of their Revenues in coſtly Habits and Luxury, to be able to undertake any conſiderable Traffick; nor have they any good Ports except *Dantzick*, which is not enough to improve the Trade of ſo large a Country.

The Complexion, Conſtitution, Genius, and Manners, of the Poles

THeir Complexion is generally inclini to Fair, and their Hair of a pale Y low. Their Stature is commonly ſomewh above the middle Size. Their Conſtitutio are generally good, and their Bodies gro ſo that the Women of Quality make it the chief Study to be lean and thin. They a hor Painting and Waſhes to improve th Complexion; nor have they any occaſi for it.

The Gentry are civil, value themſelv upon their Honour, are affable to Stra gers, brave, ſincere, not vers'd in the A of Diſſimulation, but exceſſively jealous their Liberty, and rather compel than i vite their Kings to obſerve their Laws. T Gentry claim ſuch Prerogatives, as th can ſcarce be found guilty of any Crim and when they happen to be, the Prince h ſcarce Power enough to puniſh them. Th have no manner of Regard to their Clerg but talk and act as they pleaſe againſt the and think themſelves ſufficient to be th own Guides.

The *Poles* exceed moſt Nations of *Eur* in Vivacity of Spirit, Strength of Bo and long Life, which cannot be occaſio by their Climate, becauſe the *Swedes*, *M covites*, and *Germans*, thō they live under t ſame Parallel, yet enjoy not the like Vigo and Health; ſo that 'tis reckon'd to p ceed, 1. From their Diet, which is gen rally freſh Meat, or Fowls roaſted. 2. Fro their Drink, which is ſpiritous and ſtro as *Hungarian* Wine, Anniſeed Water, The poorer Sort have a Liquor diſtil from Wheat, Barley, Oats, and Cyder, wh the Gentry rectify with Anniſeeds and S ces, 3. From their hard Way of Livi for they hate Effeminacy, and love a C tage as well as a Palace. The comm People frequently weave Tapeſtry and Ar as they travel. They ſleep frequently Snow and Froſt without any Bed, or ot Conveniency; and Children of two Mon old are carried about ſtark naked. 4. Fr th

Digitized by Google

their Hunting much. 5. From their Exercises, for they are much inclin'd to Dancing and Vaulting, and are expert Horsemen. 6. From their hard Beds, which contribute much towards strengthening their Bones. Their Slaves have no Beds, and their Gentry seldom any but Quilts. 7. From their Freedom and Liberty, for Slavery dulls the Mind, and enervates the Body.

Of their NOBILITY.

Klein, in his Titles of Honour, says, in *Poland* and the Great Dutchy of *Lithuania*, there are many Weyvodes, which is not a Feudal or Hereditary Title, but Officiary, and for Life only. They command the Territories committed to them, like the Lords Lieutenants in *England*, and have Castellans under them in all Places but *Cracow*, where the Weyvode is subject to the Castellan, in Memory of the dishonourable Flight of the Weyvode of *Cracow*, under King *Bolestaus Krziwousti*, from a *Russian* Ambush. This Office and Title is almost of 1000 Years standing. The modern *Greeks* make use of the Word Βοέβοδος, to denote a Weyvode.

In the Laws of *Poland*, the Secular States are call'd *Comites*, *Barones*, *Principes*, *Nobiles*, & *Milites*: But the Archbishop of *Gnesna* signs himself, *Legatus Natus*, & *Regni Poloniæ Primas*, & *primus Princeps*. *Cromerus* says, the different Titles us'd there import no Distinction of Honour, and that all their Noblemen have equal Power as such; so that what Inequality is among them, proceeds from their publick Employment.

Dr. Connor's *Account of their* NOBILITY.

HE says, they engross all Preferments and Posts of Honour; and no Foreigner, however Noble and deserving, can rise higher than a Colonel, or at most to be a Major-General, which is much the same as our Brigadier. Their common People can have no Possessions, unless a few Houses in a City, or a small Piece of Land about a League off in the Country: But the Citizens of *Dantzick*, and other Places of *Prussia*, with those of *Cracow*, *Leopol*, and *Vilna*, are excepted from this Badge of Slavery.

Every Gentleman, or Nobleman, which is the same thing there, has his Coat of Arms granted by the Republick; but then he or some of his Family must have an Estate there in Land. They are capable of the greatest Employments and Offices in the Kingdom, and may buy Lands where they please all over the Country, and have a Right to be elected King, if their Credit and Interest can procure it. Every Gentleman is a Sovereign Prince in his own Lands, and has Power of Life and Death over his Tenants, or rather Slaves, who have no Laws nor Privileges to protect 'em. They dare not leave his Lands to go to another's, on Pain of Death, unless he sells them; and if he do, his Tenants are made over with his Lands. But if their Lord ravish their Wives or Daughters, the Tenants may leave his Service; and they are many times glad when their Wives or Daughters give them such an Opportunity.

If one Lord kills another's Slave, he is not punish'd for it, but only obliged to give another in his room, or as much Money as will buy one, and to maintain the Family of him that is kill'd. If he kills one of his own Slaves, he only pays 15 Livres. Nay, if one Gentleman kills another, he cannot be apprehended or imprison'd, unless convicted by a Court of Justice, which gives him Time enough to escape; and when condemn'd, he cannot be executed without the King's Consent. No Soldiers can be quarter'd upon the Gentry: If any Officer do it, the Diet either sentences him to die, or declares him infamous. Since 1433, the King himself cannot lodge at a Nobleman's House without asking his Leave. If a Foreigner dies without Heirs, his Estate falls to the Lord of the Manor where he died, and not to the King. The Houses of the Nobility are Sanctuaries; so that no Delinquent can be taken thence by Force, tho' he may be arrested.

If a Nobleman will swear that his Goods were not bought, but are the Product of his Lands, he may send them any where out of the Kingdom without Custom, and after he has sworn, his Certificate suffices to exempt the Purchaser from the Duty. In *Prussia*, the Nobles are not only free from

Digitized by Google

Customs, but likewise all the other Inhabitants, by the *Magna Charta* of *Culm*. The *Polish* Noblemen have also the Privilege of Pre-emption.

All the Gentry of *Poland* are equal by Birth: They don't value Titles of Honour, and think that of a *Noble Pole*, or *Gentleman of Poland*, the greatest they can have. Neither the King nor Republick creates any with the Title of *Prince*, which belongs only to the Sons of the Royal Family; for tho' some are made Princes of the Empire, and enjoy the Title of Prince, as we shall afterwards hear, they have no Precedency upon that Account; nor have they any Dukes, Marquisses, Counts, Viscounts, or Barons, but what have Foreign Titles, which the rest generally despise; for they don't value any borrow'd Character, or external Denomination, but say, that 'tis only intrinsick Worth, and Services done to their Country, that deserves Preferment.

King *Sigismund* III. establish'd an Order of Knighthood of the *Immaculate Conception*, created several Knights, and allow'd them Privileges and Superiority above others; but they were so much undervalued and despised by the rest of the Gentlemen, that the Order soon came to nothing.

When they travel into *France*, *Italy*, or *Germany*, they assume the Titles of *Counts* and *Barons*, because they are admitted more easily to People of Quality, especially in *Germany*, where they scarce think any a Gentleman under a Baron, and consequently not fit for their Conversation.

Those great Privileges make the *Polish* Gentry powerful. Many of them have also large Territories, with a Despotick Power over their Tenants, whom they call their Subjects. Some of them have 5, some 15, some 20, and some 30, Leagues of Land, contiguous; but the poor Gentry have their Votes in the Diet as well as the richest. Some of them are Hereditary Sovereigns of Cities, with which the King has nothing to do. *Lubomirski* possesses above 4000 Cities, Towns and Villages. Some of them can raise 5, 6, 8, and 10000 Men, and maintain them at their own Charge. Dr. *Connor* says, Prince *Lubomirski* had actually in his own Pay, when he was in *Poland*, 7000 Horse, Foot and Dragoons.

The Gentry of Note have Horse a Foot Guards, which keep Centry Nig and Day at their Gates. They make an e traordinary Figure when they come to t Diet: Some of them have 5000 Guard and *Hautevill* says, some of them had fo merly 10000. They esteem themselv especially the Senators, above any Prince *Germany*, and want nothing of Sovereig Power, but the Liberty of coining Mone which is reserved to the Republick. F reign Ambassadors are oblig'd to make great Figure here, otherwise the Gent despise them. When great Men have Su at Law, and the Diet or other Tribun decide it, yet the Execution of the Se tence must be left to the longest Swor for the Justice of the Kingdom is comme ly too weak for the Grandees. Sometim they raise 5 or 6000 Men of a Side, plu der and burn one another's Cities, and l siege Castles and Forts; for the Grand think it below 'em to submit to the Se tence of a Company of Judges withou Field Battle.

Yet formerly their Noblemen were lit better than Slaves. *Cromerus* says, they w oblig'd to keep the King's Dogs. Th first Rise is ascrib'd to the Privileges gran by *Boleslaus the Chast* to the Clergy; and terwards, when *Poland* was harrass'd by vil Wars, the Gentry obtain'd many Pri leges from their Kings, which they h since taken Care to get augmented at ev new Election.

The most flourishing Families in *Pol* are, 1. That of *Radzivil*, which has Title of Prince. 2. The Dukes of *Wi owec* and *Zbaraw*, one of which Family elected King of *Poland* in 1664. 3. Princes of *Lubomirsky*, who are Princes the Empire. 4. The Princes of *Czartory* 5. The Princes of *Sapieha*, Great Go nors of *Lithuania*. 6. The Family of *zinski*. 7 The Family of *Jablonowsky*. 8. Family of *Przyemski*. 9. That of *Lipsk*

Those that are not Noble by Birth, be created Noblemen. This was forme at the King's Pleasure, but of late is at Disposal of the Senate or Diet. All litttle Diets of the Republick must give Consent, which must afterwards be proved by the great Diet, before they

Digitized by Google

their Patent. A Jew is made a Gentleman by turning Chriſtian, and by ſignalizing himſelf in the Wars; but the King muſt propoſe it, and the Diets approve it. The new-made Nobility are liable to ſeveral Impoſitions and Inconveniencies, from which the others are exempted. If any one be a Magiſtrate in *Cracow* or *Vilna*, he and his Poſterity are Noblemen.

Nobility is forfeited here three Ways: 1. By ſome heinous Crime; for Inſtance, when a Nobleman permits one that is Ignoble to uſurp his Coat of Arms. 2. By exerciſing any Trade or Merchandize. Sometimes Poſterity are reſtor'd, when Parents have quitted their Title thro' Poverty: And, 3. By bearing Office in any City that is not privileg'd.

Of the PEASANTS.

THey are born Slaves, have no Notion of Liberty, but lie very well ſatisfied without it. In *Courland*, they are as ſubject to their Landlords as in *Poland*, and in both Countries almoſt adore them. They love their Landlords, fight willingly for them, and all they have is abſolutely at their Devotion. When they debauch their Wives or Daughters, thoſe poor Wretches don't think their Women the worſe, or that they themſelves are injur'd or diſhonour'd by it. They have ſcarce any Religion, but, like Brutes, work on *Sundays* for their own Subſiſtence, being obliged to work 3 or 4 Days each Week for their Maſters, without Meat or Wages. Each of them earns his Maſter at leaſt 100 Livres *per Ann.* They have no Property, nor can they be made free, except they get into ſome Convent, be ordain'd Prieſts, or that their Maſters debauch their Wives or Daughters, as has been already mention'd.

When a Lord lets any Ground to a Peaſant, he orders his other Peaſants, at their own Charge, to build him a Houſe, to give him a Cow, Hens, Geeſe, and as much Rye as will keep him a Year. A Slave cannot ſend his Son to the Univerſity without buying a Liberty from his Lord. They reap their Maſter's Corn, and have rigid Tax-Maſters over them, who puniſh them ſeverely if they don't work as much as is requir'd of them. Their Maſters commonly boaſt of their Clemency, and ſay, That tho' they have an abſolute Power over them, they ſeldom make uſe of it, any more than other Chriſtians do over their Horſes and Dogs.

Dr. *Connor* ſays, he ask'd ſome *Poliſh* Noblemen, Why they ſo inhumanely treated and underva'ued their Boors? Who anſwer'd, That formerly all the Boors revolted from their Landlords, and conſpir'd to extirpate and deſtroy them, and murther'd ſo many, that the reſt were oblig'd to hide themſelves, or to leave the Kingdom; but at laſt, the Gentry getting together from all Parts, and being aſſiſted by their Neighbours, they quelled the poor Peaſants, who intended to have ſet up a Commonwealth of their own; and brought them to ſuch Extremities, that ever ſince they have been contented to live like Slaves.

Of the APPAREL *of the Gentry.*

ALL of them love to make a Show, and to be ſplendidly clad: They formerly delighted in Foreign Faſhions. When they had Wars with the *Muſcovites*, they follow'd theirs; and when with the *Turks*, they took their Habits. Their preſent Faſhion is, a Veſt that reaches to the middle of their Legs, with a long Robe lin'd with Fur, and ty'd about the Middle with a Saſh: Little Boots, with Iron Heels, and Furr'd Caps, and a Sabre by their Side. When they ride, they have a ſhort Cloak like an *Iriſh* Mantle, furr'd within and without. The better Sort have rich Furs from *Muſcovy*; but the poorer Gentry content themſelves with the Skins of Tygers, Leopards, Panthers, and a kind of grey Furs. The fineſt of their Furs coſt above 1000 Crowns, are worn only at Diets, and deſcend from Father to Son. Some of the *Poliſh* Gentry imitate the *French* Faſhion, and wear Linen, Lace, Point, Perukes, and Swords. The ordinary ſort of Gentry put Chaff into their Boots, which ſerves them inſtead of Socks. Some of the Nobles have 50 Suits of Clothes, all as rich as poſſible; and they love to have their Servants as well apparell'd almoſt as themſelves.

Of

Of the HABITS *of the Boors.*

IN Winter, they wear a Sheep-Skin, with the Wool inwards; and in Summer, a Close-body'd Coat of coarse Stuff, of a Colour much like our Chimney-Sweepers, with sorry Caps: Their Boots are ordinarily the Rinds of Trees wrapp'd about their Legs, with the thicker Part to guard the Soles of their Feet against the Stones. They cut their Hair close like Monks, and shave all from their Faces but a large Whisker. They walk gravely, with a Poll-Ax in their Hand, and a Sabre by their Side, which they never put off till they go to Bed: It hangs by a Strap of Leather, to which there is fasten'd a Handkerchief and Knife and Sheath, and a small Stone to whet their Knives.

In *Lithuania*, the Boors Shoes are of the Barks of Trees, and their Stockings of thin Bark, which they wrap about the Calves of their Legs. Before they enter any Town, they always take Care to put on fresh Shoes. They also wear a Sort of Ash-colour'd Habit, with Sleeves woven all of a Piece. The Boors here are more miserable than in *Poland*, for Gentlemen commonly go into Boors Houses, tho' not their own, take all they have, and beat and wound them shamefully, because they are not able to bribe such as have Power to do them Justice.

The *Prussian* Gentry are not so gaudy in their Habits as those of the more Southerly Parts of *Poland*. Their Peasants differ also in Habit from those of *Poland*, and wear sometimes long straight Coats of Leather.

Of their Meat, Drink, Houses, Marriages, and Burials, &c.

THE *Poles* never live above Stairs, and their Apartments are not united: The Kitchin is on one Side, the Stable on another; the Dwelling-House on the third, and the Gate in the Front. Their Houses are for most part of Wood; but they have some of Brick and Stone.

Their Houses are generally hung with Tapestry or Arras; but towards *Tartary*, they keep no extraordinary Furniture, because of the Incursions of that barbarous People. They content themselves with a few small Beds with Taffety Curtains; and if any one lodge at their Houses, they must carry their Bedding with them.

The Moveables of the Peasants are a few Earthen and Wooden Dishes, a hard Bed, and a wretched Coverlet. Their Children are not allow'd Beds till they marry, but lie upon Boards by the Fire. They have no Chimnies, but little Holes in the Tops of their Houses.

The Peasants Children go naked till they are 4 or 5 Years old, and frequently eat in the same Trough with the Pigs. They crawl on Hands and Feet till they are strong enough to walk; and when they are dirty, the Mother washes them in cold Water, which makes them exceeding hardy. *Hoüeville* says, he has seen Children there stark naked slide upon the Ice a great Way.

The Peasants of *Lithuania* and *Samogitia* build their Houses round, narrow, and open at Top, to let out the Smoak and Stink: They are generally cover'd with Boards, Straw, or Bark of Trees, and, with the Family and Cattle, are under the same Roof.

The *Polish* Gentry have seldom any Gardens or Orchards, tho' their Country be very proper for it, and might, by making Cyder and Perry, save a great deal of Corn, which they consume in Beer.

Their ordinary Meat is Beef and Veal, and they leave the Mutton to their Servants. They have Store of grey, but no red Partridges; many Hares, but no Rabbets, than which, they say, they would sooner eat Cats; but they breed white Rabbets for the Sake of their Furs. They have many Roebucks, but few Stags, Plenty of Wild-Oxen, Wild-Boars, Hogs, Poultry, Pigeons, *&c.* There are many Heath-Cocks and Pheasants in *Lithuania*, and Bustards in *Prussia*.

The *Baltick* Sea has scarce any Fish; but that Defect is supplied by great Plenty of Fresh Water Fish from Lakes and Rivers. The *Poles* have a peculiar Way of preserving Cabbage: They chop it small, put it into a Tub between Lays of Salt, press it very hard, and afterwards pour warm Water upon it, which makes it ferment, and serves them for Pickles. This they preserve all Winter, and sometimes the whole Year. Tho'

Digitized by Google

Thô it ſmells ſtrong at a diſtance, yet they think it a great Dainty.

Their uſual Drink is Beer, which in *Pruſſia* is made only of Malt; but in the reſt of *Poland*, of Wheat ground ſmall, and boil'd with Hops. Sometimes they mix it with Oats, and Spelt, a kind of Wheat which grows in *Italy* and *Flanders*.

In *Lithuania*, *Ruſſia*, and *Ukrain*, they make both a red and a white Liquor with Honey, which they call Mead. At *Warſaw*, they mix it with Spice and Juice of Cherries and Blackberries.

The *Lithuanians* and *Poles* have Wine from *Hungary*, *Italy*, *France*, and *Germany*. That of *Hungary* exceeds *Spaniſh* Wine in Strength, is brought to *Cracow* over the *Carpathian* Mountains in large Casks drawn by Oxen, and ſold at 20 Shillings the *Poliſh* Pot, which is about 3 Quarts. The *Italian* Wine is alſo brought over Land, and on that Account is dearer than the other.

In the Morning, both Men and Women generally drink Ginger, Yolks of Eggs and Sugar Boil'd together in Beer. They are immoderate Lovers of ruſty Bacon and Peaſe. They eat all manner of Muſhroms, and preſerve them for Pickle. They eat great Quantities of Poppy-Seed, drink the Milk of them, and make it into ſeveral Diſhes and Sauces. They make likewiſe abundance of Oil of the Seed of Hemp and Flax, which they eat on Faſt-Days. They uſe Spice to that Exceſs, that ſome great Men ſpend above 50000 Livres *per Ann* in that ſingle Commodity. They uſe Spice and Pickles in all their Sauces, which differ much from ours: Some of them are yellow, made with Saffron; others white, made with Cream: ſome grey, made of Onions; and others black, made of the Juice of Plumbs. They have all Sorts of choice Pot-Herbs, and ſome that are found no where elſe. They have alſo Confections of ſeveral kinds, and make much uſe of *Piſtacho-Nuts*.

They generally eat a great deal of Meat to a little Bread, tho' they have Plenty of Corn, eſpecially Rye, which is much better than in other Countries. They are great Admirers of Roots, have a Diſh call'd *Orachat*, made of coarſe Flower of Wheat, Barley, Millet, or Oats, and ſometimes of a ſmall Grain they call *Manna*. On Fleſh-Days, they eat it with Milk and Butter; and on Faſt-Days, with Oil. When the Boors want Bread, they make it of Acorns dry'd and ground.

Near the Mountains of *Hungary*, there are Wild-Goats, which they admire as very good Meat. They alſo make a Diſh of Beavers-Tails, but throw away the Body. Bears-Paws pickled they reckon a great Dainty. When they kill Elks, they don't gut 'em for 14 or 15 Days; and in Winter not in a Month. When the Grandees come to the Diet, they bring them in their Skins and Guts, and hang them at their Windows by 5 or 6 at a time, till they grow rank; then they roaſt ſome, and dreſs others like Beef *A-la-Mode*; and none but great Men have this Diſh at their Tables.

The *Poles* are generally open-hearted, courteous and hoſpitable to Strangers, invite them to their Houſes, converſe with them freely, and endeavour to imitate 'em. *Hauteville* ſays, he has known them entertain Strangers whom they knew nothing of, meerly becauſe they were out of Employment.

The Slavery of their Boors is ſo much the more tolerable to them, becauſe they ſeldom want Victuals and Drink: They have generally three or four Sorts at a Meal, one of Peaſe with ſlic'd Bacon, another of *Orachat*, and two more of ſeveral Sorts of ſtrengthening Roots, which they have in great Plenty.

In *Lithuania*, their Bread is coarſe and black, made of Rye, Smutty Wheat, and Barley, all ground together. They have abundance of Fleſh, Fiſh, and Fowl; and what Cattle or Poultry they think they cannot keep in Winter, they kill in Harveſt. They are good Marks-men, and maintain their Families in a great Meaſure by Fowling. Every Houſe has 4 or 5 Hand-Mills to grind their Corn.

The Peaſants of *Samogitia* are not ſo laborious as thoſe of *Lithuania*, and conſequently have not ſuch Plenty. Inſtead of Bread, they eat a Sort of Turnep as big as one's Head, which grow of themſelves, without Cultivation. They quench many red-hot Stones one after another in their Beer, Metheglin, and Mead, after they have boil'd

Digitized by Google

boil'd it a whole Night, in order to make their Bellies ſoluble. This Liquor they put up in Veſſels made of Barks of Trees.

They reward the ſtouteſt Drinkers at their Merry-meetings with a Shirt, Handkerchief, Frock, or the like. They live longer here than in *Lithuania*, and many of 'em reach to 120 Years of Age.

Formerly, the *Pruſſians* dwelt in Waggons, or Huts made of Boughs; and the Peaſants are not yet much improv'd in Architecture, for they generally live in Hovels built of Stakes, Roof and all twiſted over with Rods, without other Covering. Their Furniture is not much improv'd, for the old *Pruſſians* ſlept on the Ground, or on the Skins of Beaſts, and theſe lie upon the Straw.

They are content with a ſpare Diet, and more addicted to Sloth than Gluttony; yet, like the *Poles* and *Lithuanians*, they drink hard, eſpecially at Feaſts, where they frequently get drunk. Their former Drink was Water, or Mare's Milk, mix'd ſometimes with Blood; but now it is Mead and Beer. Their ordinary Food is Fiſh. They knew not the Uſe of Roots, till the Knights of the *Teutonick* Order came among them; but now the Peaſants make them their chief Dainties.

When the Gentry make a Feaſt, they never ſupply their Gueſts with Spoons, Knives, or Forks, ſo that they muſt bring them with them. They have a broad Piece of ſtarch'd Linen ſow'd round the Table-Cloth for Napkins: The Reaſon they give for it, is, to prevent their Servants from ſtealing 'em: Their Servants have their Meat reach'd them by their Maſters, which they eat behind their Backs. They bring twice as much Wine as their Maſters need, and drink the Remainder themſelves. They ſeize on what is left after Dinner. And their Ladies each of them carry a Napkin to prog for dry'd Sweet-meats or Fruits.

Theſe Feaſts are made by Friends and Neighbours to one another by turns. Full Brimmers are much in uſe among the *Poles*, for they will ſcarce excuſe a Man unleſs he pledges them *Super-Naculum*. This Vice reigns equally in Feaſts and Taverns; and Saints-Days are not excepted out of their Drunkards Calendar. Thoſe Diſorders are tolerated, becauſe of the great Exciſe they bring to the State. The Maſter of a Fea is eſteem'd an unreaſonable Niggard, tha does not allow his Gueſts as much as will ſufficiently fuddle them.

The Inns in this Country are long Stables, built up with Boards, and cover'd with Straw, without Furniture or Windows, There is a Chamber at one End, but none can lodge there becauſe of Flies, Fleas, Bugs, and noiſome Smells; ſo that Strangers chuſe rather to lodge among the Horſes, where there is alſo an intolerable Smell of rotten Cabbages, which thoſe People keep always by them. Travellers are obliged to carry Proviſions with them, and when Foreigners want, they apply themſelves to the *Lord of the Village*, who forthwith ſupplies them *gratis*.

Poland being for moſt part a Champagne Country; a Calaſh and two Horſes will rid a great deal of Ground there in a Day.

Travellers ought to take more than ordinary Care as they paſs Bridges in this Country, becauſe they are generally very bad, and ſeldom repair'd. In Winter, they uſe a furr'd Sack for their Feet; but there is no reſting at Nights in their Inns, eſpecially on Holidays, the Boors make ſuch a continual Noiſe with their exceſſive Singing, Drinking, and Dancing, in the ſame common Room where you are oblig'd to lodge; for they have no Fire elſewhere.

When they go a hunting for Bears, they take thoſe of the biggeſt Size with Nets; and when they have hamper'd him, all the Hunters ride about him, and having pinn'd down his Head and Feet with great Wooden Forks, they bind him ſo about with ſtrong Hempen Cords, that he is not able to ſtir; then they roul him into a great Wooden Cheſt: The Knots of the Cords are ſo contriv'd, that with one Pull they may be untied. The Bear is kept thus till they have a mind to hunt him, and then they let him out at a Trap-Door made on purpoſe.

They ſurround their Wild-Bulls with a great Number of Horſemen, when each of them rides up and darts an Arrow at him: Upon this the Ox purſues his Enemy; then another darts him behind; and as he turns about to purſue him, they dart him ſo by turns, till the Beaſt being tired with purſuing ſo many Aſſailants, falls down, and is eaſily taken or killed. They have another

Digitized by Google

Way of hunting, by making the Boors fell a great Number of Trees, and encloſe 'em: Each Hunter has his Poſt aſſign'd him, at which they throw Darts; and as the Bull runs towards his Enemy, the Hunter from behind gives him his Death's Wound: But if he breaks thro' the Incloſure, the next Hunter holds out a Piece of red Cloth, againſt which the Beaſt having an Antipathy, he forthwith leaves that Perſon, and runs at another, who being provided for him, commonly kills him. If the Beaſt catch a Man by the Cloaths, he pulls him to him with his Teeth or rough Tongue, and endangers his Life, if he be not ſpeedily reſcued.

Of their WOMEN.

THE *Poliſh* Ladies are generally very modeſt, and do not abuſe the great Liberty allow'd them. They ſeldom ſtir out of Doors without a Coach and Six, to Church, or to viſit a near Neighbour, and are always attended by a great Number of Servants. When they go abroad at Night, they have 24 or more Flambeaus carried before their Coach. Their Train is born up by He or She Dwarfs; and they have always an old Woman attending them, whom they call *Governante*, and an old Gentleman for their Uſher.

Notwithſtanding all thoſe Honours done the Women, they are intirely managed by their Husbands, and diſpoſe of no Money without his Leave. When they want any thing, they muſt ask him for it kneeling, embrace his Knees, and call him their Benefactor: But ſome few Trifles are allow'd them of courſe. The Faſhion of the Women's Cloaths comes nearer to that of the Men, than in moſt other Countries. They formerly wore Garlands on their Heads, compos'd of Gold, Jewels, Flowers, Silk, and the like; but now they wear Silk Caps lin'd with Fur, like the Men. In King *John* III.'s Time, they imitated the *French* Mode, becauſe the Queen was of that Nation.

The Peaſants Daughters are ſo extreamly reſerv'd, that they will draw a Knife at any Man that offers to kiſs them: Beſides, their Mothers have a watchful Eye over them, and make them wear little Bells before and behind, to give Notice where they are, and what they are doing; but thoſe Precautions don't always preſerve their Chaſtity.

The Country Women are habited as in other Countries, but that their Petticoats are very ſhort. Thoſe in *Red Ruſſia* go generally in Summer with an Apron before them, that reaches lower than ordinary.

Their MARRIAGES.

THE Wedding-Feaſts of the Gentry laſt ordinarily three Days. If a Lady marry any of her Waiting-Maids, ſhe coſts her almoſt as much as one of her Daughters. On the ſecond Day all the Gueſts preſent the Bride with ſomething new, which makes commonly a good Part of her Portion. The late Princeſs of *Poland*, when married to the Elector of *Bavaria*, had above 100000 Crowns preſented her.

Among the Boors, a Maid never marries till ſhe be 24 or 30 Years of Age, and has wrought with her own Hands ſeveral Basketsfull of Cloth of different Sorts, which, at the Time of her Eſpouſals, ſhe is to diſtribute among the Gueſts that her Husband brings with him. She muſt alſo have ſerv'd her Mother in all Domeſtick Affairs for a certain Time. The ſame Rule is obſerv'd with reſpect to their Sons. 'Tis alſo obſervable, that thoſe employ'd to make up the Match, always enquire more ſtrictly into the Manners and Behaviour of the Perſons, than after their Stock of Corn and Cattle, which is their uſual Allotment.

Their Godfathers and Godmothers are always accounted Relations, tho' they be nothing a-kin, and cannot marry this ſuppos'd Kindred, without a Diſpenſation from the Biſhop.

The Sieur *de Beauplan* gives this Account of the Weddings of the *Coſſacks*: After the Married-Couple go to Bed, the Company wait in the ſame Room till the Marriage is conſummated, and the Bride ſhifts her ſelf. If they find the Tokens of Virginity, they make joyful Acclamations, in which all the Kindred join, and next Day carry her Shift publickly about the Town like a Banner, that all the People may be Witneſſes of the Bride's Virginity: and the People follow with Muſick, Singing, and Dancing.

Digitized by Google

But if they don't find those Marks, every Man throws down his Glass, all the Jollity is at an end, and the Bride's Kindred out of Countenance: Then the Guests commit a thousand Extravagancies in the House, break the Pots and the Earthen Cups, put a Horse's Collar about the Bride's Mother's Neck, make her drink out of one of those broken Cups, and upbraid her for not having been more watchful of her Daughter's Chastity; and after they have treated her with all the vile Language imaginable, the Company breaks up: The Friends of the Bride keep within Doors for some Time, being asham'd to go abroad. The Bridegroom may put away his Bride if he pleases; and if he keeps her, he must resolve to put up abundance of Affronts.

Of their BURIALS.

THE Burials of those of Quality are celebrated with such Pomp and Magnificence, that they are more like Triumphs than Interments. The Corps is carried in a Herse or Chariot with six Horses, all cover'd with Black: The Coffin has a large black Velvet Pall over it, with a Cross of red Sattin in the Middle, and six long black Silk Tassels, supported by as many of the Deceased's Domestick Servants in close Mourning. Several Priests, Monks, and others, march before the Herse, each of 'em having a white Wax Torch in their Hand. Immediately before the Herse come three Men on Horseback, who carry the Arms of the Deceased, one his Sword, another his Lance, and the third his Dart. After the Burial-Service is over, those that carry the Armour enter the Church on Horseback, and riding furiously up to the Coffin, break the Arms of the Deceased upon it; after which the Body is interr'd. Then there is a Feast, where the Lay-Guests not only drink to Excess, but likewise force the Clergy to follow their Example. When the King dies, he is laid on a Bed of State, and a certain Number of Senators, Ecclesiastical and Temporal, are appointed to attend his Corps. The Republick defrays the Expences out of the Revenues of the Crown. The deceased Queen has the same Ceremonies and Honours allow'd her.

When Women of Quality mourn, they are apparel'd in a coarse black Stuff, and their Linen is not much finer than Canvas; and the greater their Quality, their Mourning Weeds are the coarser. All Senators, Deputies and others, that appear at the Diet for electing the next King, must be in Black.

The King's TITLES.

THE Titles given him by Ambassadors, and commonly made use of in the Acts of the Diet, are, *King of Poland, Great Duke of Lithuania, Duke of Russia, Prussia, Masovia, Samogitia, Kiovia, Volhinia, Podolia, Podlachia, Livonia, Smolensko, Severin,* and *Czernichovia.*

Of the ELECTION *of the King.*

WHen the Throne becomes vacant by Death, Deposition, or voluntary Abdication, the Archbishop of *Gnesna*, as *Inter Rex*, issues Circular Letters to acquaint the Provinces with it, and to summon a General Convocation of the Gentry to meet at *Warsaw*. Before this Meeting, the little Diets take Care to secure the Roads from Thieves, and to guard the Frontiers against Invasions; and Spies are sent into all neighbouring Countries to discover their Designs. They suffer none to go out or come into the Kingdom without Passports, till the Election is over: All Foreign Letters, tho' to Senators, are intercepted: the High-Ways are block'd up with Trees; and Ambuscades are plac'd about them. None must write to the Army during this Time; the Use of Fire-Arms is forbid to the People; and all Taverns are shut up.

The Diet consists of the Archbishop of *Gnesna*, who represents the King; and the other Senators, with the Deputies of the Provinces.

In the first Place, they send some of the Senators to the Army to direct the Affairs of War; Others have the Charge of the Treasure; and, till a King is elected, the Senate claims the Title of *Serene* from Foreign Governments. The Diet for ordering Affairs relating to the Election sits only a Fortnight, during which Time all Courts of Judicature cease, except that of the Marshals.

Digitized by Google

shals. Most Crown'd Heads, Princes and States, send Ambassadors at such Times to the Senate, and the Pope sends his Nuncio. A Gentleman is appointed to attend every such Foreign Minister, to prevent their corrupting the Electors with Money: But this Precaution is of little Use now, since Avarice bears so great Sway here.

When the Diet ends, the Deputies retire to their respective Provinces, acquaint their Constituents with their Proceedings, and of the Day appointed for the Election; and then the Gentry advise what is fit to be propos'd in the Diet.

This Diet of Election, before the Union of *Poland* with the Great Dutchy, was held at *Petrsow*; but since that Time, it is kept in an open Field half a League from *Warsaw*, near the Village *Vola*, and must not continue above six Weeks. There is a great Hall of Boards erected here for the Senate. They first go to Church, to pray God to direct them in their Choice: Then the Nobility chuse their Speaker, who takes an Oath that he will receive no Bribes, keep no Correspondence with any of the Competitors, and do nothing without Consent of the Republick. The Deputies sit in the open Field.

After they have appointed a Court of Justice during the *Interregnum*, all the Senators and Deputies take an Oath on their Knees, administred by the Primate, to maintain an Union among themselves, and to acknowledge none for King but him who is lawfully and unanimously elected; and swears to preserve inviolable the Rights and Privileges of the Republick. Then they oblige themselves not to give their Votes for any, till all the Disorders and Irregularities of the former Reigns be consider'd and redress'd. They annul all the Decrees of Tribunals, and all the Statutes of Kings that intrench on their Liberties; and the Generals are sworn to remove the Forces from the Place of the Diet.

Then the Diet gives Audience to Ambassadors from the Competitors or others, who must be very liberal to the Deputies, by giving Presents, and keeping an open Table, *&c.* After the Ambassadors have Audience, they proceed to the Election. If the Votes be equal, the Archbishop of *Gnesna* demands three times, If the Exorbicancies and Grievances be redressed. And if answer'd in the Affirmative, he declares the King Elect, which is also done by the Marshal of the Crown, and the Great Dutchy: and then *Te Deum* is sung.

'Tis a Rule with the *Poles*, never to elect any powerful neighbouring Prince, lest they be subdued, and brought under an absolute Power. Hence it is, that they never elected a King of the House of *Austria*, lest they should be treated by them as are the *Hungarians* and *Bohemians*. The Candidates must not only bribe the Senators and Deputies, who have a Vote in the Election, but also the other Gentlemen, who come in great Numbers to the Diet; for they often threaten the Senators and Deputies, if they don't elect whom they please.

The Qualifications now requir'd in a Candidate are, That he must not be a Native, nor present at the Election; but must be rich, and no absolute or neighbouring Prince. He must either actually be a Roman-Catholick, or promise to become one before he be Crown'd. He must also have the Reputation of a great Soldier. The Person elected commonly expends some Hundred Thousand Pounds Sterling, and the other Competitors generally as much a-piece; so that the Members of the Diet make great Advantage of the Election; and this seems to be one main Reason why they keep their Kingdom Elective.

Their chief Reasons are, 1. That they will rather obey a King that is their own Creature, than a Prince whom Hereditary Succession obliges them to obey. 2. They think this Form of Government not liable to the Inconveniencies and Hazards of a King's Minority, which is always attended with Confusions and intestine Broils. 3. They say, when a King owes his Crown to the free Election of the People, he will be more like, in common Gratitude, to make suitable Returns by Clemency and Justice. 4. That no Princes take so great Care to educate their Children as theirs, that they may set up for the Succession on the Bottom of their own Merit, and not on the Plea of Blood. 5. The Power they have of limiting their Kings by the Diet, and redressing the Grievances of former Reigns.

At the Time of this Election, the Diet forms an Act for the Security of their Rights and Privileges, which are call'd

Pacta Conventa. The King Elect's Ambaſſador ſigns thoſe Articles, and takes the Oath for him: Then the King himſelf ſwears to keep this Contract inviolable before the Altar in the Church of St. *John* at *Warſaw*. The Form of the Contract is, 1. *That the King ſhall not appoint any Succeſſor, but preſerve all the Laws made for the Freedom of Election.* 2. *That he ſhall pretend to no Right of Coining of Money, but leave that, and the Profits ariſing from it, in the Hands of the Republick.* 3. *That he will ratify and confirm all the former Articles of Peace made with Foreign Princes* 4. *That he will maintain the Peace and Tranquility of the Publick.* 5. *That he will not declare War againſt any Prince, bring Foreign Troops into the Kingdom, or ſuffer any to go out, nor levy any new Troops without Conſent of the Diet.* 6. *That all Field-Officers ſhall be either* Poles *or* Lithuanians, *or Natives of thoſe Provinces depending on the Crown of* Poland. 7. *That all the Officers of the Guards ſhall be* Poles *or* Lithuanians, *and their Colonel a* Poliſh *Nobleman, who muſt all ſwear to be ſubject to the Grand Marſhal* 8 *Not to uſe his Privy-Seal in Affairs that concern the Republick.* 9. *That he ſhall give no Man more Places than the Law allows.* 10. *After a Place has been vacant ſix Weeks at furtheſt, he ſhall beſtow it on ſome well qualify'd* Poliſh *Gentleman.* 11. *That he ſhall not marry without Conſent of the Senate, who ſhall aſſign him what Retinue they pleaſe.* 12. *That, by Conſent of his Council, he ſhall regulate the Number of his Troops, and preſerve good Diſcipline among them.* 13. *That he ſhall build no Fleet without the Advice of his Senate and Gentry.* 14. *That he ſhall not diminiſh his Treaſure in the Caſtle of* Cracow, *but rather increaſe it.* 15. *That he ſhall borrow no Money without Conſent of the Diet.* 16. *That he ſhall always adminiſter Juſtice, by the Advice of his Senators.* 17. *That he ſhall be content with thoſe Revenues his Predeceſſors had.* 18. *That no Strangers be introduc'd into his Council, and that he ſhall beſtow no Offices or Dignities upon them.* 19. *That he ſhall not diminiſh any of the Offices at his diſpoſal, in the Republick or Court.* 20. *That he ſhall maintain and defend all Rights, Liberties, Immunities, and Privileges, granted by former Kings to the* Poles *or* Lithuanians, *or to any of the Provinces that depend on thoſe two Nations.* To theſe Articles they commonly add others, according to the Circumſtances of Time, or the Quality of the Perſon elected. When the King has ſworn to obſerve the *Pacta Conventa*, the Chancellor preſents him with the Decree of his Election, ſign'd by all the Senators; and the King Elect may appoint a Day for his Coronation, which is now perform'd at *Cracow*. When the King is in the Church, the Archbiſhop of *Gneſna* asks him. If he will ſupport and maintain the Catholick Faith? If he will rule according to Equity and Juſtice? Then the King Elect kneels, kiſſes the Archbiſhop's Hand, and laying his own upon the Evangeliſt, ſwears *to perform all that he had before ſworn at* Warſaw: The Subſtance is, *That he will maintain all the Rights and Liberties of both theſe Nations granted at any Time to them, or agreed to by his Ambaſſadors, and to perform whatever has been enacted in the Diet of Election; to reſtore to the Kingdom whatever has been alienated or diſincumbred from their Lands and Revenues; not to leſſen the Boundaries of the Kingdom, but to defend and enlarge them; to eſtabliſh Courts of Juſtice throughout the Kingdom and Great Dutchy; and to ſee that Juſtice be render'd without Delay, without any Favour to Perſons or Things; And laſtly, he conſents, That if it ſhould happen, which GOD forbid, that he the ſaid King Elect ſhould violate this his Oath, or any Part of it, that the Inhabitants of the Kingdom, and all his Dominions, ſhall be totally diſcharg'd from paying him Obedience and Fidelity.*

After the King is thus ſworn, he riſes, hears the *Pacta Conventa* read again, and confirms the Oath which he had taken concerning them. Then kneeling, he receives the Benediction of the Archbiſhop and Biſhops; and his upper Garment being put off, the Archbiſhop anoints his Right Hand and Arm up to his Elbow, and his Shoulder, with conſecrated Oil, with theſe Words, *I anoint thee King with conſecrated Oil, in the Name of the Father, Son, and Holy Ghoſt. Amen.* Then he is led to a Chapel, where he is habited much like a Biſhop: After which, he has other Ornaments put on by the two Marſhals of the Kingdom and Great Dutchy; and then he is convey'd to the Throne erected in the Church, by the Senators, who are Officers of State, the Standard-Bearer of the Kingdom walking before. After hearing Maſs, he is brought back to the Altar, where the Archbiſhop delivers a drawn Sword into his Right Hand, ſaying, *Receive this*

Digitized by Google

this Sword, and cordially protect and defend the Holy Church againſt all Unbelievers. Then the King delivers the Sword to the Great Sword-Bearer of the Kingdom: He puts it up in the Scabbard, and returns it to the Archbiſhop, who girds it to the King's Side; upon which the King riſes, and drawing it again, flouriſhes it three times over his Head, to ſignify that he will defend the Trinity and Church againſt all Unbelievers. Then the King kneels, and the Archbiſhop puts the Crown on his Head, which the Biſhops of *Cracow* and *Cujavia* ſupport with their Hands. In the mean time the Archbiſhop ſays ſome Prayers; after which he puts the Scepter into the King's Right Hand, and the Globe into his Left. Then his Majeſty is brought back between the Archbiſhop and the two Biſhops to the Throne, where he is plac'd by the Archbiſhop, with theſe Words, *Sit, and maintain the Place given you by GOD*, &c. The King being thus ſeated, the Archbiſhop and Biſhops return to the Altar, where they ſing *Te Deum*; which being ended, the King comes and offers him Gold, kiſſes his Hand, and having made his Confeſſion, receives the Sacrament and Benediction from him. Then the Court-Marſhal cries, *Vivat Rex, Vivat Rex.*

Next Day the King goes in great Pomp to the Town-Houſe, the Senators carrying the *Regalia* before him; and the Great Treaſurer of the Kingdom ſcatters among the People a great Number of Gold and Silver Medals. He is then habited anew with his Royal Robes, and ſeated on a ſplendid Throne. Then the Magiſtrates of Cities pay him their Homage, aſſure him of their Fidelity, and preſent him with the Keys of their City-Gates: Then they take the Oath of Fealty on their Knees. After this the Primate lays down his Authority as *Interrex*, and all the Members of the Diet take the Oath of Allegiance to the King.

The ARMS *of* Poland.

ARE Quarterly: In 1ſt and 4th *Gules*, an Eagle-Argent Crown'd and Arm'd *Or*, for *Poland*. In the 2d and 3d *Gules*, a Cavalier arm'd Cap-a-pee Argent. In the *Dexter*, a naked Sword of the ſame. In the *Sinifter*, a Shield-Azure charg'd with a double-barr'd Croſs *Or*, mounted on a Courſer of the 2d, barb'd of the 3d, and neil'd of the 4th, for *Lithuania*. For the Creſt, a Crown heighten'd with 8 Flurets, and clos'd with 4 Demi-Circles, ending in a *Mond*, *Or*, which is the Creſt of *Poland*: The Motto is, *Hubent ſua ſidera Reges.*

Piaſecki, in his Chronicle, ſays, That after the Defeat over *Varus*, the *Germans* took a black Eagle, one of the *Roman* Standards, and the *Sarmatian* Auxiliaries a White one. Upon this Account the *Poles* have ſtill for their Arms, in a *Field-Gules*, an *Eagle-Argent*, and the *Germans* a *Black Eagle*.

Of the King's REVENUES.

WHen the King is Crown'd, the Diet allows him a Penſion of above 140000 *l. per Annum*, which, together with his Patrimonial Eſtate and Crown Lands, maintains him a very ſplendid Court in that cheap Country. He has beſides great Sums of Money for Nominations to Employments, Civil and Military. *John Sobieski* had in Revenues, Penſions, his own Eſtate, and other Caſualties, about 300000 *l.* Sterling *per Annum*. The Crown Revenues are Impoſts on Merchandizes and the *Jews*, Part of the Cuſtoms of *Dantzick*, and the Revenues of the Salt-Mines of *Cracow* and other Places. The Republick frequently allows the Queen an Annual Penſion, which is generally computed at 30000 *l.* Sterling. The King has his *Poliſh*, *German*, and *Hungarian* Guards, and the ſame Officers of his Houſhold as other Kings.

The Power of the King is much limited, for the Subjects have all along ſecur'd their Liberties by their Prudence and Valour. They don't reliſh the ſlaviſh Temper of the *Turks* and *Muſcovites*, who ſuffer themſelves to be govern'd according to the Humour or Pleaſure of their Prince. He cannot name any of his Children to Places of Profit or Honour, nor purchaſe Land for them in any Place of the Kingdom, without Conſent of the Diet. When a *Poliſh* Nobleman is in any Preferment, thô he commit Crimes againſt the Crown or State, the King has no Power to turn him out, without the unanimous Conſent of the Diet; for every Member has a negative Voice, which occaſions great Inconveniencies; for neither the King nor the State are well ſerv'd.

of

Of the SENATE *of* POLAND.

THE Government is intirely in the Hands of the Gentry, who are not the tenth Part of the Kingdom. Their Vassals or Slaves have no more Property, or Benefit of the Laws, than our Negroes in the *West-Indies*. The Senators are nam'd by the King, and continue for Life: They take an Oath to conserve inviolable the Rights and Liberties of the Republick; by which they think themselves oblig'd to contradict the King when he designs to invade their Rights: Even the Nuncio's in the Diet assume this Liberty. They have the same Power the *Tribuni Plebis* had among the *Romans*. These Nuncio's or Deputies sometimes affront and huff their Kings; as they did to *John Sobiesky*, whom they call'd a *Nero* and a Tyrant. Four of the Senators always attend the King, and he is oblig'd to consult 'em in all Affairs.

There are 17 Ecclesiastical Senators. The Archbishop of *Gnesna* is Primate of the Kingdom, and stiles himself, *The Pope's Legate born*. He can reverse whatever is done in any of the Bishops Courts; and it is Death to draw a Sword in his Presence. A Golden Cross is carried before him when he goes to the Diet, or to the King; and when he sits, his Chaplain holds it behind his Chair. His Marshal, who is a Senator, carries a Staff before his Coach, and salutes none with it but the King. He visits no Ambassadors, tho' they visit him. During the *Interregnum*, he may coin Money in his own Name, the Revenues of the Crown belong to him, and he has then the same Officers with the King; but at all times he has Drums beating and Trumpets sounding within and without, before he sits down to Table; and he may visit the King when he pleases.

The Lay-Senators are 128. The Diet or Parliament consists of King, Senators, and Deputies. The King is oblig'd every 3d Year to call a Diet; two must be held at *Warsaw*, and the 3d at *Grodno* in *Lithuania*; because, at making the Union, the *Lithuanians* alledg'd it was inconvenient for them to come always as far as *Poland*. The King must send his Circular Letters six Weeks before the Session, and a List of all the Affairs and Articles he proposes to be treated in the Diet. Upon this, a little Diet, of all the Gentry in each Palatinate, meets, and resolves what is to be done about the Articles sent by the King, and chuse Nuncio's or Deputies to represent their Decisions to the Diet. The Decision here, as well as in the great Diet, goes not by Plurality of Votes, but by Unanimous Consent; which often occasions great Confusions, and the Diets to break up without doing any thing. The Number of those Deputies is, 178 for *Poland*, and 70 for *Prussia*, according to the Number of their Provinces and Towns. Sometimes they disagree about chusing a Speaker, and break up as in the Grand Diet in 1693. *Hauteville* says, *the Poles employ more Time in drinking and feasting, than in debating Matters of State; for they never think on that Work, till they begin to want Money and* Hungarian *Wine*. In the Grand Diet, the Lower House is made up of the Deputies, and the Higher of the Senators: The latter are Judges of Criminal Affairs, and the Deputies bring up Bills to them to be debated. Five Days before the Conclusion of the Diet, the Senators and Deputies meet together in the Upper House. The Diet is not to sit above six Weeks, and when that Time is expir'd, the Deputies send their Speaker to the King, to take Leave of him in their Name, and will not sit any longer, be the Affairs of the Republick ever so pressing; as they did in 1649, when the *Tartars* and *Cossacks* had almost over-run the Kingdom. The Reason of this is, that by this Time their Provisions are spent by their great Train of Guards and Domesticks. The King, during the Diet, is obliged to increase his Guards, otherwise he might be expos'd to the Insults of the Gentry, who frequently take Liberty in the Diet to threaten and abuse him to his Face.

There is no Assembly in *Europe* more subject to Disorders, Factions, and Bribes; so that it seldom concludes in Peace. These Intrigues and Mismanagements are generally fomented by the *French* and *Austrian* Factions.

Their LAWS.

THey bear Date from the Time of *Casimir the Great*, before whose Time they have none in Writing; being then govern'd by the Customs of their Ancestors: But

Digitized by Google

But he brought in the *Magdeburgh* Laws, which are now call'd the *Conſtitutions of Poland*. *Lithuania* and *Volhinia* have ſtill their own Laws and Cuſtoms: And the Regal and Ducal *Pruſſians* have alſo their own Municipal Laws, call'd the *Laws of Culm*.

The *Poles* admire this Form of Government, becauſe it defends them againſt the Oppreſſions and Tyrannies of abſolute Governments; of which their Neighbours, the *Turks* and *Muſcovites*, are miſerable Examples. Their former Miſeries, under the Weywodes, made them abhor *ariſtocracy*, and their Gentry are averſe to *Democracy*, becauſe of its levelling Principles.

Of their MILITARY AFFAIRS.

IN the Infancy of the *Poliſh* Government, the *Poles* were obliged to fight their King's Quarrels whenever requir'd. *Boleſlaus Chrobry* firſt inſtituted a Militia of Horſe and Foot, to be levy'd out of every Palatinate and Diſtrict. *Boterus* ſays, the *Poles* can raiſe above 100000 Horſe, and the *Lithuanians* 70000. Their Foreign hir'd Foot have ſometimes exceeded 30000. The *Coſſacks*, when ſubject to the *Poles*, ſerv'd on Foot, and were of great Uſe in their Wars, eſpecially in thoſe againſt the *Tartars* and *Turks*. *Amurath the Great* uſed to ſay of 'em, *That in ſpite of the other Potentates of* Europe, *he could ſleep on both Ears, but that thoſe* Gad-flies, *meaning the* Coſſacks, *would ſcarce ſuffer him to ſleep on either*. They had at one time, when in Rebellion againſt *Poland*, an Army of 100000 Men.

The *Poliſh* Armies are badly pay'd, which occaſions frequent Mutinies: The Soldiers are alſo obliged to rob for Suſtenance. They ſeldom make uſe of Spies, ſo that they know little of the Deſigns of their Enemies. Proviſions are frequently ſcarce in their Army, becauſe they have no ſuch Thing as Sutlers or Magazines; and, which is extremely impolitick, if their Army conſiſt of 20000 Men, they have certainly 20000 more Servants and idle Fellows attending them.

It is not in the King's Power to chuſe Men of greateſt Experience and Merit for Generals; but he is often obliged to give the Charge of the Army to a rich Nobleman, who knows nothing of the Matter; and when he once gets his Commiſſion, the King cannot recal it. The Subalterns don't come to the Place of Rendezvous till ſix Weeks after the Time appointed, and leave the Army a Month before the Campagne is ended, which Grievance is not to be redreſs'd without great Danger.

Monſieur Dalerac's *Account of their* Military Affairs.

THE Republick has two ſeparate Armies, under two different Generals, who are not ſubordinate nor dependant upon one another: The firſt is that of the Kingdom of *Poland*, and the ſecond is that of the Grand Dutchy of *Lithuania*, which is an Auxiliary State, and Ally to the other, and not a ſubjected Province; ſo that their beſt concerted Expeditions frequently miſcarry, for want of Union and Expedition: For Inſtance; At the Siege of *Vienna*, in 1683, the King was returning back to *Poland*, when the *Lithuanians* join'd him in *Hungary*. The Army of the Kingdom is to conſiſt of 36000 Men, and that of *Lithuania* of 12000.

Each Army has a great and little General; and their Badge of Command is a great Lance, adorn'd at the End with Feathers or Knots of Ribbons, under a great Ball of ſome rich Stuff: It is carried before the two Generals. The King's has a Plume of Heron's or Eagle's Feathers; and when he commands in Perſon, his only is carried aloft. They have alſo a Battoon given them, as the Marſhals of *France*. A Great General is only accountable to a General Diet, and has an Allowance of 60000 Francs, at 10 Sous *per* Franc.

The *Huſſars* are the beſt *Gens d'Armes* of the Kingdom, and the fineſt Cavalry in *Europe*: They are compos'd of handſome Men, mounted on the fineſt Horſes of the Kingdom, with Led-Horſes richly capariſon'd; their Bridles adorn'd with Plates and Nails of Silver, or Vermilion gilt; embroider'd Saddles, with gilt Bows; Houzes according to the *Turkiſh* Faſhion, with Fringes of Gold and Silver; and a rich Sword fix'd to the left Side of the Saddle, under the Horſeman's Thigh. They have alſo Piſtols; do no Duty, are all of them Exempts, and referr'd

Digitized by Google

ſerv'd for Battle, and other diſtinguiſhing Actions. The King and Generals call them *Towariches*, which ſignifies Comrade. They have much Equipage, fine Tents, and a great Number of Servants. They are arm'd with Back and Breaſt, a ſcal'd Head-piece, adorn'd with Pendants of Iron Plates quilted, which come down to their Shoulders: They have a Gantlet of Malt: Over this they wear a great Leopard's or Tyger's Skin, in Form of a looſe Coat, made in a Warlike Faſhion.

Their Lances are larger than the *French* great Pikes, and pointed with Iron; the upper Part has a Streamer of Taffeta, in Form of a Standard, 3 or 4 Ells long: Becauſe of its Weight, it muſt be carried in a Boot fix'd to the Saddle. When they attack their Enemies, they never retire, but break through all that oppoſe them, except they be encompaſs'd; but if their Enemies open their Ranks, the Danger from them is over. If the Horſe be kill'd, the *Huſſar* cannot raiſe himſelf, becauſe of the Weight of his Armour; ſo that they are only of Service in Plains.

They have two Servants, each arm'd with Head-pieces and Lances, have Coats of the Skins of White Wolves, and behind their Backs a great Wing of Eagles Feathers, which is good for nothing but to frighten Children. The King, the Princes of the Blood, the Senators, Biſhops, and Miniſters of State, have all Companies of them to attend them.

The ſecond Sort of *Gens d'Armes* is the *Pancernes*, inferior to the *Huſſars*, but above the reſt of the Cavalry: They have a Coat of Mail, with an Iron Cap, cover'd with a Net-work of the ſame, which comes down to their Shoulders, and ſhewing only half their Viſage, with their great Whiskers, makes them look like Satyrs. They have Faulchions and Muskets: They are as well mounted as the *Huſſars*, but not ſo richly equipp'd. In lieu of a Trumpet, they have an Inſtrument of Copper, not much bigger than a Flageolet, crook'd and hollow like a Cornet, which makes a ſhrill and ſavage Noiſe. 'Tis ſuppos'd to be the *Lituus* of the Ancients.

The reſt of the *Poliſh* Army conſiſts of *Walachians*, *Coſſacks*, *Poles*, and ſometimes *Tartars*.

That which they call the Foreign Army, has another ſort of Diſcipline than the former: They are arm'd like thoſe of *Germany* and *France*; only the Dragoons are mounted on ſorry Jades, and are almoſt naked. The Infantry is more tatter'd than any *Spaniards* or *Italians*, and not uniform in their Cloaths. They have no Swords, but long Battle-Axes, which are of admirable Uſe: They ſerve as Reſts to their Muskets, and there's nothing comparable to them for covering a Battalion, and defending them againſt Horſe. All Foreigners may be employ'd in this Army. In a Word, they are the Safety of the Whole, and do all the Service, the reſt being little more than Ornament.

The old Weapons of the *Poles* were Scimiters, Lances, Gides, Javelins, Bows and Arrows. At preſent they uſe Fire-Arms; ſo that now they have nothing of the old *Sarmatian* Armour left but the Bow and Arrow. The *Poles* had formerly Bucklers of Oſier of a round Figure, cover'd with Skins a little rais'd and pointed in the Middle, where there was a piece of Iron, but is now almoſt quite out of Uſe. Some of theſe Bucklers coſt 300 Ducats of Gold. At the Siege of *Vienna*, *John Sobieski* had one of beaten Gold fix'd to his Saddle: It had upon it the Repreſentation of the Battle of *Kotchim* in *Baſſo-Relievo*.

The *Poles* have a Scimiter longer and heavier than thoſe of the *Turks*, but they don't cut ſo well.

The *Coſſacks* are the only Perſons employ'd to bring them Intelligence; of which our Author gives a pleaſant Inſtance: One of them having catch'd a *Turk*, threw him down like a Bundle into King *John Sobieski*'s Tent, went to the Treaſurer for his *Præmium*; which having receiv'd, he went back to the King's Tent, and ſaid, *John, they have paid me, God reſtore it thee, and good Night.* The *Poles* know little of the Stratagems of War, or of carrying on Sieges. 'Till of late, they had neither main nor ordinary Guards, nor Convoy for their Foragers. Their Intrenchments were like the Tabor of the *Coſſacks*. The Marches of their Army ruins the Country more than the Incurſions of the Enemy: For if an Officer be only to march from *Warſaw* to *Leopol*, which is but 50 Leagues, he is ſure to march to the Left and to the Right, and

make a long Tour, for they have no ſuch thing as a Route appointed; ſo that he will ſpend in that Journey two or three Months, eating up the Peaſants at Diſcretion: And if he does but come at the Time appointed, there is no Enquiry made; ſo that an Officer will make 5 or 6000 Francs by a ſmall Journey.

Their RELIGION.

THE *Poles* were firſt converted in 964, in the Reign of *Miceſlaus* I. as is ſaid already in the Hiſtory of his Reign. The Day of that Prince's Converſion is obſerv'd as an Anniverſary, when the Boys dip Statues in Rivers in Memory of his Baptiſm. Together with Chriſtianity, they receiv'd all the Errors and Corruptions of the then Church of *Rome*. Thoſe of *Red Ruſſia* entertain'd the Faith of the *Greek* Church, which they follow in many Places to this Day, and call the *Roman*-Catholicks *Latins*, by way of Contempt. Some of the *Greek* Church in this Kingdom are called *Uniats*, and differ only from the Papiſts by having their Worſhip in the *Greek* Language. Their Prieſts are call'd *Popi*.

Formerly *Poland* ſwarm'd with *Anabaptiſts*, *Arians*, *Tritheiſts*, *Photinians*, *Ebionites*, *Neſtorians*, and *Socinians*. The laſt were expelled by *John Caſimir*, who obliged them by an Edict to leave the Kingdom, and allow'd them 3 Years to remove their Effects. Notwithſtanding this, they were encourag'd by ſome of the Gentry, and among others by *George Blandrata*, a Phyſician, till *John Sobieski*, publiſh'd a more ſevere Edict, whereby the *Socinians* were immediately driven out. One Reaſon was, that they publiſh'd a Book, Entituled, *Tormentum Trinitatem Throno deturbans*.

The *Lutherans* are tolerated in *Poliſh Pruſſia*, the King being oblig'd to it by his Coronation-Oath. There are alſo ſome *Calviniſts* in this Kingdom. *Nicholas Radzivil* was the firſt *Poliſh* Gentleman that embrac'd *Calviniſm*, in the Reign of *Sigiſmundus Auguſtus*, and protected all of that Profeſſion.

They have alſo *Arminians*, chiefly in the Towns of *Ruſſia* and *Podolia*. They have their Worſhip in their own Language, but acknowledge the See of *Rome*. There are *Jews* every where in *Poland*; but they muſt not trade within 12 Leagues of *Warſaw*. They pay about 120000 Florins *per Annum* to the State. In the Great Dutchy of *Lithuania*, there are about 30000 *Tartars*, who are *Mahometans*, and are oblig'd to ſend 1200 Men yearly to the Wars againſt the *Turks* and *Tartars*. There are many Pagan Idolaters on the Frontiers of *Livonia*, *Pruſſia*, and *Samogitia*, who ſtill retain their ancient Superſtitions, whereof one is, That when any one dies, they dig up the Body of the laſt deceaſed of that Family, and cut off its Head, to prevent the Death of any more of their Friends.

The *Poles* are generally bigotted Papiſts, and formerly would make no Alliance with Proteſtants: So that *Uladiſlaus Jagello* rejected the Crown of *Bohemia*, becauſe the *Huſſites* had then over-run that Kingdom.

Biſhops preſide in the Aſſembly of their States, that the Church may receive no Prejudice. The leſſer Clergy have Seats in all Tribunals, and the Great Secretary of the Kingdom is always a Churchman.

The Regular Clergy are more eſteem'd than the Secular. Fryars-Mendicants may enter the privateſt Part of any Houſe without knocking at the Door. The Regulars there are all rich, but debauch'd, immodeſt, and avow'd Drunkards: Nor do their Superiors or the People rebuke them for it.

On Faſt-Days, the *Poles* abſtain from Milk, Eggs, Fleſh and boil'd Fiſh, at Night only; but may drink all Day if they pleaſe. On *Fridays* and *Sundays*, they forbear Butter, Cheeſe, Milk, and Eggs. On Faſt-Days, they won't eat Butter or Cheeſe, tho' the Pope give them a Diſpenſation, as he did in Cardinal *Radziouski's* Time; for which they call'd the Pope a Heretick.

The inferior Secular Clergy never attend at the Offices of their Church, but give poor Scholars Two-pence a Day to ſay their *Hours* for them in the Quire. All the Prieſts here neglect their Cures, and the Biſhops never correct the Inferior Clergy when they do amiſs.

The *Poles*, at the Elevation of the Hoſt, beat themſelves, and knock their Heads againſt the Pavement, or the Benches where they ſit, with ſo great Violence, that it may be heard at a conſiderable Diſtance. In Winter, the Ladies, and ſome of the ni-

Digitized by Google

ceſt Men, have Furr'd Bags in Church, to preſerve their Feet from the exceſſive Cold. Their Churches are fine, and well adorn'd. The Jeſuits of *Leopol* have a Cope they wear at Maſs, ſo thick ſet with Pearls, that a Man is ſcarce able to bear its Weight.

Their LEARNING.

IN the Univerſities of *Cracow* and *Vilna*, their chief Study is to ſpeak *Latin*; but they are Strangers to polite Learning. They diſregard the Oriental Languages; but are ſo fond of *Latin*, that their Servants and common People ſpeak it fluently, and ſo much the more eaſily, that the *Latin* Syntax agrees with that of their native Tongue: In every Village, they have School Maſters to teach it; and the Jeſuits in all Towns of Note have Colleges to inſtruct their Youth in that Language. The *Poles* value themſelves upon this as the greateſt Improvement of humane Nature.

Their Theology is a Mixture of *Ariſtotle's* Logicks and Metaphyſicks with School-Divinity. They talk conſtantly of *Quiddities*, *Modes*, *Entities*, *Subſtantial Forms*, and *Eſſences*. They quote *Albertus Magnus* upon all Occaſions, and admire *Thomas Aquinas* and *Scotus*. Their Divines know little of the Scriptures, Practical Divinity, Church Hiſtory, or Antiquities; but give an implicit Faith to Councils and Church Deciſions.

Dr. *Connor* ſays, they have few Phyſicians except Foreigners. The Gentry have little Opportunity to improve themſelves at home, and none but the richer Sort can go abroad, who are generally too lazy or proud to give the neceſſary Application to that Study: Though ſuch of the Natives as are Phyſicians uſe ſome of the ſame Medicines that we do, they know not how to apply them. They don't uſe Salivation in Venereal Diſtempers, but pretend to cure it by Sweating or Bathing in a hot Decoction of Herbs. The *Poles* are ſeldom troubled with the Scurvy or malignant Fevers. Pleuriſies are not ſo dangerous there as in other Countries; but they think Wounds and Ulcers in the Legs incurable.

The Sieur *de Beauplan* ſays, he has ſeen *Coſſacks* ſick of a Fever, who us'd no other Medicine but half a Bandaleer of Gunpowder, diſſolv'd in half a Pint of *Aqua-Vitæ*, mix'd well together, which they drank off, went to Bed, and roſe next Morning in perfect Health. He ſays, others mix Aſhes with *Aqua Vitæ*,, and it has the ſame Effect. Many of their Diſeaſes proceed from Drunkenneſs, to which they are generally ſo much addicted, that they have a Proverb, *That a Man had as good drink Water, if he does not feel the Effects of drinking.*

They have had ſome very great Scholars however, as *Stanislaus Hoſius*, Cardinal and Legate at the Council of *Trent*, and *Matthias à Michovia*; *Johannes Dglugoſſius*, *Martinus Cromerus*, and *Staravolſcius*, reckon'd good Hiſtorians; *Nicholaus Copernicus*, the great Aſtronomer; *Martinus Smiglecius*, a Logician; *Abr. Bzovius*, the Continuator of *Baronius's* Annals; *Sarbrevius*; and *Johannis a Lasco*, a Nobleman, a famous Reformer. *Caſimir* has in his Odes endeavour'd to imitate *Horace*, and his Language is not contemptible.

Their LANGUAGE.

AS the *Poles* have the ſame Origin with the *Muſcovites*, *Bohemians*, *Croatians*, *Moravians*, *Sileſians*, *Caſſubians*, *Bulgarians*, *Raſcians*, *Servians*, *Illyrians*, &c. *Cromerus* ſays, they have the ſame *Sclavonian* Language, but differ ſo much in Dialects, that they ſcarce underſtand one another. The Terms of Mechanick Arts are *German*, and in ſome Towns and Villages they ſpeak that Language. Many of the Gentry ſpeak *French* and *Italian*. The *Poliſh* Tongue is not copious, and very harſh, and difficult to pronounce, and abounds ſo with Conſonants, that ſome Words, for Inſtance, *Chrzeſzcz*, a Gad-fly, have 7 or 8 Conſonants without any Vowel; yet in ſpeaking, they ſound them with Vowels.

Of the Diviſion of POLAND.

IT is divided into the Kingdom of *Poland* and Dukedom of *Lithuania*, which was united to that Kingdom in 1560, by the Diet of *Lublin*, in the Reign of *Sigiſmundus Auguſtus*. The Kingdom of *Poland* contains *Great* and *Little Poland*, *Red Ruſſia*, and *Pruſſia*. The Dutchy of *Lithuania* is divid.d into *Lithuania*, *White Ruſſia*, *Samogitia*,

Digitized by Google

tia, *Poliſh Lithuania*, and *Curland*. Theſe are divided into Provinces, which are ſubdivided into Palatinates or Governments.

GREAT POLAND.

IT is bounded on the N. W. by *Pomerania*, on the W. by the Electorate of *Brandenburg* and *Sileſia*, on the S. by Part of *Sileſia*, on the S. E. by *Little Poland*, on the E. by *Maxovia*, and on the N by *Regal Pruſſia*: 'Tis generally a level and champaigne Country, has pleaſant Rivers, Lakes and Ponds, and is well furniſh'd with all manner of Fiſh and Fowl. Some Parts of *Cujavia* are more mountainous: The Hills there abound with Sheep and other Cattle, and the Vallies have Plenty of Corn. *Great Poland* is ſo call'd, becauſe *Lechus* choſe *Gneſna*, a City belonging to this Country, for his Reſidence: It comprehends 3 Provinces, *viz. Poland*, properly ſo call'd, *Cujavia*, and *Maxovia*: The Metropolis is *Poſna*, or *Poſnan*, in Lat. 52 ½. Long 37. and gives Name to a Palatinate. 'Tis ſeated upon the River *Warta*, 10 *German* Miles S. W. of *Gneſna*, and 50 N. from *Cracow*. This City is famous for Trade, and for an Univerſity, founded by Biſhop *John Lubraniski*. The Jeſuits College is a fine Place, where Learning is much encourag'd, and the Monaſtery is neatly built. The People here are richer in their Apparel than in any other Place of *Poland*, except *Cracow*, to which it is not inferior in Trade, Beauty or Riches. The Inhabitants are moſt Papiſts. Here are alſo many Jews, who have greater Privileges than the Citizens. The Biſhop is ſubject to the Archbiſhop of *Gneſna*. This City is ſtrong, and has a good Caſtle: It is ſurrounded with a double Wall, and a deep Ditch. The Suburbs are encompaſs'd by a Moraſs and deep Lake, and are frequently laid under Water by the overflowing of the *Warta*. Other Towns of Note are, 1. *Koſcien*, built among Marſhes, defended with a broad and deep Ditch, and a double Wall, and lies 28 Miles from *Poſnan*. 2. *Uskow*, a Wall'd Town, in a Plain, 44 *Engliſh* Miles from *Poſnan*, 3. *Sremsk*, *Krzwin*, *Premeck*, Timber-Towns belonging to this Diſtrict. 4. *Miedzyrzecze*, on the Confines of *Sileſia*, 60 *Engliſh* Miles from *Poſnan*: The Caſtle is thought impregnable, and ſeveral *German* Princes have found it ſo. 5. *Slupcza*, upon the *Warta*, with a very ſtrong Wall, and other Fortifications. 6. *Plydra*, a Wall'd Town upon the *Warta*, 36 Miles from *Kaliſh*. Moſt Towns of this Palatinate are built of Wood, except the publick Edifices.

The Senators are, the Biſhop, Palatine and Caſtellan of *Poſnania*, the Caſtellans of *Miedzirzec*, *Ragozna*, *Santre*, *Krawin*, *Premeez*, and *Srymik*.

The Standard and Arms of this Palatinate are, in a *Field Gules*, an Eagle expanded *Argent*.

Of the Palatinate of KALISH.

IT has the Palatinate of *Poſna* to the W. that of *Siradia* to the S. and *Lencicia* to the E. has its Name from the City of *Kaliſh*, mention'd by *Ptolomy*, on the River *Proſne*, which a little lower falls into the *Warta*: It is fortified with a ſtrong Brick Wall. *Staniſlaus Karncow* founded here the ſtately College of Jeſuits. It is 20 Miles E. from the Confines of *Sileſia*, and as many N. from *Siradia*. It has the Ruins of a ſtrong Caſtle, deſtroy'd by the *Teutonick* Knights. The other remarkable Towns are, 1. *Gneſen*, or *Gneſna*, in Lat. 52 ½. Long. 38. It was formerly the Metropolis of all *Poland*, but now only of *Great Poland*: It was built by *Lechus*. In the Cathedral, there's ineſtimable Treaſure of Gold, Silver, and curious enamell'd Veſſels, left by *Sigiſmund* III. other Princes of *Poland*, and the Archbiſhops of this See; but moſt of it is owing to the Tomb of St. *Adelbert*, which is cover'd with Silver. The Legacies of *Henry Firley*, late Archbiſhop, have greatly increas'd it; for beſides many coſtly Veſſels and Prieſts Veſtments, he gave them his own Mitre, worth 23000 *l.* Sterling. The Gates of the Cathedral are of *Corinthian* Braſs, curiouſly wrought: They were brought from the *Grecian* Monaſtery of *Corſuna*, in the *Taurica Cherſoneſus*, to *Kiow*, and from thence to this Place, by *Boleſlaus* II. In 1612, this City was burnt down, dail'y loſes Part of its ancient Glory,

Digitized by Google

and is now only considerable for being the Seat of the Cardinal Primate. 'Tis 28 *English* Miles N. W. from *Kaliſh*, 28 E. from *Poſna*, 132 N. W from *Warſaw*, 120 S. from *Dantzick*, and 52 from *Thorn*. 2. *Kelo*, a Timber-built Town, on the *Warta*, 20 *English* Miles from *Kaliſh*. 3. *Land*, on the *Warta*. 4 *Nakle*, a Timber-Town, near the Lake *Gopło*, with a Wall'd Caſtle, ſituated among Marſhes. 5. *Gheeia*. *Andrew Lipiki*, Biſhop of *Cracow*, founded a Collegiate Church here, with vaſt Expence.

The Senators are, the Palatine and Caſtellan of *Kaliſh*, and the Caſtellans of *Land*, *Nakle*, and *Kamin*.

The Standard and Arms of the Palatinate are, in a *Field-Argent* and *Gules*, a Buffalo's Head eras'd *Sables*, with a Crown betwixt his Horns, all in a *Cheeky*.

Of the Palatinate of SIRADIA.

IT has *Sileſia* on the W. and *Little Poland* on the S. and S. E. *Kaliſh* on the N. and *Lencicia* on the E. The chief Town is *Sirad*, 24 *Engliſh* Miles S. from *Kaliſh*, and 40 S. W. from *Lencicia*. It is ſituated upon the River *Warta*, fortified with a ſtrong Brick Wall and a Caſtle: The Houſes are of Wood, very mean, and low. This City, and the Territories about it, was made formerly a Dukedom, and was uſually given to the King's ſecond Son. Other Towns of Note are, 1. *Petrikow*, 28 *Engliſh* Miles E. from *Sirad*, and 16 *Engliſh* Miles N. from the Frontiers of *Leſſer Poland*. 'Tis ſituated in a fenny Place, but is a neat well-built City. The Diet of *Poland* ſits once *per Ann.* here, as does one of the great Tribunals in the Suburbs. In 1640, this City was burnt down. The King had a Palace here, which is now gone to Decay. 2 *Vielum*, which borders on *Sileſia*. 'Tis not equal in Beauty to the other Cities of theſe Parts, tho' its Houſes are of Brick. A great Part of it was burnt in 1656, during the *Swediſh* War; but 'twas afterwards repair'd. 3. *Roſprizа*, ſeated among Marſhes, 4. *Spicimir*, built of Wood. 5. *Wort*, built on a River of the ſame Name. 6. *Lusk*, where *Johannes Laſcus*, Archbiſhop of *Gneſna*, founded a Church, and richly endow'd it at his own Charge. 7. *Oſtrefow*, built of Timber, on the Borders of *Sileſia*, and encompaſs'd with Woods.

The Senators are, the Palatine and Caſtellan of *Siriad*, the Caſtellans of *Roſprizа*, *Spicimir*, and *Konarzew*.

The Arms of this Palatinate are, in a *Field Vert*, a *Lion-Gules*, and *Eagle Sables*, both Counter-coup'd in the Middle.

Of the Palatinate of RAVA.

IT is ſituated between *Leſſer Poland*, *Maſovia*, *Cuſavia*, and the Palatinate of *Lanſchet*. It is ſo called from its principal Town *Rava*, on the River of that Name, 60 Miles S. W. from *Warſaw*, and 44 S. from *Ploczo*: It is built for the moſt part of Wood, and tolerably populous. Priſoners of Quality, and Part of the Revenues of the Crown, are kept in the Caſtle. In this City, the Jeſuits have a College much viſited by learned Men.

Other Towns are, 1. *Lowitz*, more populous than the former, and lies 20 *Engliſh* Miles from it. The Caſtle is ſurrounded by the River *Bſura*. The Archbiſhop of *Gneſna* has his ordinary Reſidence in his Palace built here among the Marſhes. The Church is a beautiful Structure. In this City are many great Fairs, frequented by Merchants from all Places. 2. *Volhovia*, a populous Town, where the Biſhop of *Cujavia* has his Palace. 3. *Gombin*, a large Town, built with Timber. 4. *Sochaczew*, defended with Paliſadoes, and a Caſtle built on a Rock. 5. *Goſtinin*, built of Wood, among Marſhes. *Demetrius Zurki*, Czar of *Muſcovy*, was impriſon'd and dy'd here. 6. *Wieſdun*, remarkable for its Strength, and the Beauty of its Caſtle. It lies near *Rava* to the W.

The Senators are, the Palatine and Caſtellan of *Rava*, and the Caſtellans of *Goſtinin* and *Sochaczew*.

The Standard and Arms are, in a *Field-Gules*, an *Eagle-Sable*, with the Letter *R.* on his Breaſt.

The

The Palatinate of LENCICIA, or LANSCHET.

IT is ſituated betwixt *Rava* to the S. E. *Siradia* to the S. W. *Kaliſh* to the W. and *Little Poland* to the S. The chief Town is *Lencicia*, ſeated upon the River *Bſure*, among Lakes. It has a Caſtle built upon a Rock, is encompaſſed with a Ditch and Brick Wall, and has a great Fair once a Year. It was burnt in 1656. 'Tis about 10 *Engliſh* Miles from the River *Warta*, and 40 Miles S. E. from *Gneſna*. One of the little Diets meet here. *Orlow*, is built of Timber, ſeated among Lakes, and is 16 Miles from *Lanſchet*. *Pientkum*, built among Marſhes, on the Banks of the River *Bſure*. Beer is tranſported from this Place all the Kingdom over. Here is alſo a Monaſtery. *Uniejovia* has a famous Caſtle, founded on the *Warta*.

The Senators of this Palatinate are, the Palatine and Caſtellan of *Lanſchet*, and the Caſtellans of *Breſna*, *Inowlocz*, and *Biechovia*.

Their Arms are, in a *Field-Gules*, an *Eagle Argent*, and *Lion-Sables*, both Counter-coup'd in the middle, and the latter crown'd Or.

The Province of CUJAVIA.

IT has *Maſovia* on the E. *Kaliſh* on the S. and *Regal Pruſſia* on the N. It contains two Palatinates, *viz. Brzeſtye*, which lies to E. and S. and *Inowladiſlow*, or *Inowlocz*, to the S.

The Palatinate of BRZESTYE.

THis Palatinate is ſo call'd from *Brzeſtye*, a ſmall Town, 16 *Engliſh* Miles W. from the *Weiſſel*, 32 S. from *Thorn*, and 40 from *Lencicia*. It is ſituated in ſenny Ground, is built of Brick, and Wood interlaid, and defended with a very ſtrong Wall, and deep Ditch. Other Towns are, 1. *Uladiſlaw*, the chief Town of the Province of *Cujavia*, lies upon the *Weiſſel*, and is the Seat of the Biſhop of this Province, and of *Pomeren*, who have been under the Archbiſhop of *Gneſna* ſince 1173. The Cathedral is a ſorry old faſhion'd Building, but well furniſh'd with Plate, rich Ornaments, and Relicks. The Houſes are generally of Brick, and it has a Caſtle indifferently fortified. *Matthias Golanciew*, 42 Years Biſhop of this See, built a ſtately Palace here, and founded the Church of St. *Vital* the Martyr. This City lies betwixt *Thorn* and *Polotzko*, 20 *Engliſh* Miles S. W. from the firſt, and 20 S. E. from the latter, 60 Miles N. E. from *Gneſna*, and 88 S. E. from *Warſaw*. 2. *Cruſwic*, upon the North Bank of the Lake *Goplo*: It has a Brick Caſtle in the middle of the Lake, to which *Popiel* retir'd, and was deſtroy'd by Mice and Rats, as a Puniſhment from Heaven for poiſoning his Relations in a Banquet. It is next to *Gneſna* for Antiquity. Upon the ſame Shore with *Uladiſlaw*, and not far from it, lies, 3. *Niſſovia*, a Wall'd Town. 4. *Radzizw*, built of Timber, near a very great Lake. The Diets of this Palatinate, and of *Inowladiſlow*, are kept in this Town. 5. *Koſinow*, which has a ſtrong Caſtle. 6. *Kowalow*, built of Timber, among Marſhes.

This Palatinate is very fertile, and abounds with all Sorts of Grain, which not only ſuffices the Inhabitants, but is tranſported in vaſt Quantities to *Dantzick* by ſeveral navigable Rivers.

The Senators are, the Biſhop of *Uladiſlaw*, the Palatine and Caſtellan of *Brzeſtye*, and the Caſtellans of *Cruſwic* and *Cowal*.

The Arms are, in a *Field-Or*, an *Eagle-Gules*, and *Lion-Sables*, Counter-coup'd in the middle.

The Territory of *Dobrzin* is ſeparated from *Cujavia* by the *Weiſſel*, and is ſo call'd from the chief Town of that Name, on the River *Weiſſel*, betwixt *Poloczo* and *Uladiſlaw*. 'Tis fortified with Paliſadoes, and is ſeated on a Hill. It had formerly a Caſtle, and was given to the Knights of the *Teutonick* Order by the Duke of *Maſovia*.

The Palatinate of INOWLADISLOW.

IT has *Pruſſia* on the N. *Brzeſtye* on the S. E. the *Weiſſel* on the E. and *Kaliſh* on the S. It contains the Territories of *Bydgoſt*, *Belzo*,

Bobro, and *Inowlocz*. This Palatinate ſends to the Diet of *Poland*, beſides the Palatine, four Caſtellanis, *viz.* of *Inowlocz*, *Bydgoſt*, and *Conarow*; the chief Town is *Inowlocz*, on the River *Notez*: It is little, but has a ſtrong Caſtle, and is 28 *Engliſh* Miles W. from *Uladiſlaw*. *Bydgoſt* is a Wall'd Town on the River *Barde*, by which all Sorts of Merchandize are brought to it from the *Weiſſel*. It has a good Trade in Salmon.

The Province of MASOVIA.

THis Province had Dukes of its own till 1526, that, by the Death of its Duke, it fell to the Kings of *Poland*, who now reſide frequently there. It has *Lithuania* on the E. *Pruſſia* on the N. *Great Poland* on the W. and *Little Poland* on the S. It contains three Palatinates. It was ſubjected to *Poland* by *Caſimir the Great*. 'Tis ſaid, there are 40000 Nobles in this Province, and that 15000 of them met at the Election of *Sigiſmund* III.

The Palatinate of MASOVIA.

IT has *Polachia* on the E. and *Lucal Pruſſia* on the N. and is very fruitful in Corn. *Warſaw* is the chief City, ſeated upon the *Weiſſel*, in Lat. 32 Long 59 ½. in the very Center of the *Poliſh* Dominions: It is encompaſſed with a doub'e Wall, and deep Ditch. The Diet of *Poland* meets here, and the King keeps his Court in a large Palace built by *Sigiſmund* III and beautified by his Succeſſors. The Wooden Bridge over the River is of admirable Workmanſhip. St. *John Baptiſt*'s Church here is a fine Structure In the Suburb call'd *Cracow* there's built, as a Trophy of the Victory over the *Muſcovites*, a ſmall Chapel, for the Sepulchre of *Joannes Demetrius Zuski*, Czar of *Muſcovy*, who, with his two Brothers, died in the Caſtle of *Goſlowin*. It lies 12 *Engliſh* Miles N E from the Borders of *Little Poland*, 96 E. from *Lancicia*, 132 E. from *Gneſna*, 160 from *Poſna*, 116 S E. from *Thorn*, 96 N. from *Lublin*, and 160 N. from *Cracow*. In the Neighbourhood of this Place, the Kings of *Poland* are elected in the Fields; the Nobility have their Tents, and are encamp'd during that Time. Merchant Goods are brought by a River from the neighbouring Provinces, and from hence to *Dantzick*. This City was taken by the *Swedes* in 1655. Other Towns of Note are, 1. *Czarsko*, 40 *Engliſh* Miles S from *Warſaw*, upon the River *Weiſſel*. 2. *Wiſna*, in a Plain, near the River *Narew*, with a Caſtle on an adjoining Hill. 3. *Wiſſegrod*, built of Timber, on a Plain, has a ſtrong Caſtle, and lies 48 *Engliſh* Miles from *Warſaw*. 4. *Ciekanow*, at the like Diſtance from *Warſaw*, and has a ſtrong Caſtle in the middle of a Moraſs. 5. *Lombze*, on the River *Narew*, handſomely built, and about 96 *Engliſh* Miles from *Warſaw*. 6. *Rozan*, in a Plain near the River *Narew*. 7. *Liw*, built of Timber, with a Caſtle, on the Banks of the River *Liwiecz*. 8. *Pultovia*, the Biſhop of *Plosko*'s Reſidence: The Houſes are of Brick; the Caſtle is ſtrong, and the publick Edifices ſtately. 9. *Akreczim*, built with Timber, on the *Weiſſel*, with a good Caſtle, 32 *Engliſh* Miles from *Warſaw*. 10. *Varka*, a large Town, near the River *Pilcza*, about 37 *Engliſh* Miles from *Warſaw*. 11. *Blonye*, 16 Miles from *Warſaw*. 12. *Pultowsko*, a Wall'd Town, with a Caſtle, on the River *Narew*. 13. *Tarcin*, 20 *Engliſh* Miles from *Warſaw*. 14 *Grodzyecc*, 28 *Engliſh* Miles from *Warſaw*, and 8 from *Tarcin*. 15. *Praſnitz*, a large Town, with many fair Edifices of Stone.

The Palatine of *Maſovia*, the Caſtellans of *Cyrna*, *Warſaw*, *Wiſſegrod*, *Wiſna*, *Liw*, *Cieckanow*, and *Zakrotzin*, are the Senators of this Palatinate.

The Arms are, in a *Field-Gules*, an *Eagle* expanded *Argent*.

The Palatinate of PLOCZKO.

IT lies E. from *Maſovia*, between the *Weiſſel* and *Ducal Pruſſia*, and has its Name from *Ploczko*, the chief City, ſeated on a high Bank of the *Weiſſel*, from whence there's a Proſpect of a pleaſant and fruitful Country. It is a Biſhop's See, and very populous: It has Churches very well endow'd beſides the Cathedral, and alſo many Religious Houſes, eſpecially the Abbey of the *Benedictines* in the Suburbs, where they keep

4 the

Digitized by Google

the Head of St. *Sigiſmund* in a Gold Shrine, given by *Sigiſmund* III. The Church is dedicated to him. It has a Caſtle on the *Weiſſel*, and lies 56 *Engliſh* Miles S. W. from *Warſaw*, 36 S. E. from *Thorn*, and 40 N. E. from *Lencicza*. This City is enriched by the *Weiſſel*, which is navigable here. The other Towns are, 1. *Siepreez*, built with Timber, among Marches, 20 *Engliſh* Miles from *Plozkow*. 2. *Srensko*, alſo of Timber, with a Caſtle: It lies among Bogs, 40 Miles from *Plozkow*. 3. *Mlaw*, on the Confines of *Pruſſia*, ſeated on a River of the ſame Name, 40 *Engliſh* Miles from *Plozkow*. 4. *Radzanow*, a Timber Town, on the River *Ukra*, with a Caſtle, on a Rock.

The Senators are, the Biſhop, the Palatines and Caſtellan of *Plozkow*, the Caſtellans of *Siepreez* and *Radzanow*.

The Arms are, in a *Field Gules*, an *Eagle* expanded *Sables*, with a *P.* on the Breaſt.

The Palatinate of DOBRINA.

IT lies towards the W. between *Cujavia* and *Pruſſia*, and abounds with all Sorts of Fruit and Fiſh. *Dobrina* is the chief Town, built of Timber, on the *Weiſſel*: The Caſtle was demoliſh'd by the Knights of the *Teutonick* Order. The other Towns are, 1. *Ripin*, 20 *Engliſh* Miles from *Dobrina*, on the River *Odieck*. 2. *Slouk*, on the *Weiſſel*, 8 Miles from *Dobrina*. 3. *Gorzno*, a Town built of Wood, and ſtrong both by Nature and Art. This Palatinate was formerly the Cauſe of many Quarrels betwixt the *Teutonick* Knights and *Poland*.

The Senators are, the Caſtellans of *Dobrina*, *Ripin*, and *Slouck*.

The Arms are, in a *Field Gules*, a *Man's Head Proper*, doubly Crown'd Or and *Argent*.

The Palatinate of POLACHIA.

IT has *Lithuania* to the E. and *Maſovia Proper* to the W. and was united to the Crown of *Poland* in 1569. The chief Town is *Bielsko*, on the River *Biela*, with the Fortifications and Caſtle of Timber, formerly burnt by Lightning. It has *Grodno* on the N. and *Breſte* on the S. Other Towns are, *Mielnick*, *Dogoczin*, and *Tykoczin*, where they coin Money, and keep the King's Treaſure.

LITTLE POLAND,

HAS Part of *Hungary*, and the Mountains of *Crapack*, on the S. *Sileſia* on the W. and *Great Poland* on the N. from ſome Part of which it is ſeparated by the River *Worta*, and from others by the *Polcza*. It has *Red Ruſſia* on the E. and contains three Palatinates, *viz. Cracow*, *Sendomir*, and *Lublin*; is about 50 *German* Leagues in Length, and as many in Breadth. This Country was formerly overgrown with vaſt Foreſts, in which Robbers skulked, and laid many Places under Contribution. In 1450, *Caſimir* call'd an Aſſembly of the Nobles of *Little Poland*, to conſider of Ways and Means to ſuppreſs them; but not being then ſatisfied with *Caſimir*'s Title to the Crown, they did not fall in with his Propoſals, by which the Robbers increas'd in Number and Boldneſs, and under the Conduct of two Noblemen, *Cawca Swboranski*, and *John* his Brother, they fortified the Mountain *Zebrace*, near *Oſwenskim*; and other Places, where they intrench'd; and great Numbers of *Ruſſians* joining them, they were not ſuppreſs'd without great Bloodſhed and Hazard. The chief City of *Little Poland* is *Cracow*.

The Palatinate of CRACOW.

IT has *Sileſia* on the W. the Palatinate of *Sendomir* on the E. *Hungary* on the S. and *Siradia* on the N. It takes Name from *Cracow*, the Metropolis of the Kingdom, 36 *Engliſh* Miles E. from the Confines of *Sileſia*, 86 S. W. from *Sendomir*, 44 from the Borders of *Upper Hungary*, 160 S. W. from *Warſaw*, 140 S. E. from *Breſlaw*, 120 W. from *Olmutz*, 160 N. E. from *Vienna*, and 200 from *Buda*. It is in Lat. 50. and Long. 38½. Some think it to be the *Carodunum* of *Ptolomy*. It is ſeated on a rocky Bank of the *Weiſſel*, and is the largeſt and beſt built City in *Poland*; the Houſes are of Free ſtone,

Digitized by Google

4 or 5 Stories high, cover'd with Boards. There are many *Italian* and *German* Merchants here, who import ſuch Foreign Goods as the Country needs. 'Tis very populous, and divided into four Parts; 1. *Cracow*, or the ancient City. 2. *Caſimiria*, join'd to the other Parts by a Wooden Bridge over the *Wiſſel*. 3. *Stradonia*, which lies betwixt *Cracow* and the Bridge. 4. *Cleporia*. The King's Palace is on the Top of an high Hill, and overlooks both City and Country. It was rebuilt by *Sigiſmund* the Elder, who added the Gallery on the North Side, which has one of the beſt Proſpects in *Europe*. The Univerſity of *Cracow* was firſt begun by *Caſimir the Great*, finiſh'd by *Uladiſlaus Jagello*, in Performance of the laſt Will of his Queen *Hedwig*, and had its Privileges confirm'd by Pope *Urban*. All Sorts of Learning are taught here, and it contains 11 Colleges. In 1549, the Students leſt the Univerſity, becauſe the Magiſtrates would not puniſh the Servants of *Andrew Czarnecowſki*, who had murther'd many of the Scholars. They diſpers'd themſelves over *Germany*, where they learn'd the *Lutheran* Principles, and on their Return, ſpread them all over *Poland*. There are 14 Grammar-Schools in the City, and Univerſity Learning is taught in ſome of them. *Cracow* was made an Archbiſhoprick when Chriſtianity was firſt planted here. But 100 Years after, *Lampert Zula* refuſing to receive his Pall from the Pope, as his Predeceſſors had done, it was degraded into a Biſhoprick. In the Reign of *Boleſlaus the Chaſt*, which began in 1226, a Conteſt ariſing betwixt *Ivo* Biſhop of this See, and the Biſhop of *Breſlaw*, about Precedency, the Biſhop of *Cracow*, upon his Submiſſion, was reſtor'd to the Dignity of an Archbiſhop; which laſted only during his Life. At this Time, the Biſhops of *Cracow* wear an Archbiſhop's Pall, ſet richly with Jewels; which is the only Relick they have of their ancient Honour. The Streets are badly pav'd, tho' broad and ſtraight. The Market-Place is one of the greateſt in *Europe*, and has a ſtately Church dedicated to the Virgin. Thoſe of the Jeſuits and Dominicans are very fine, and well built. The Cathedral is within the Caſtle, but neither great, nor of good Architecture. 'Tis remarkable for being the Sepulchre of the Kings of *Poland*, and the Place of their Coronation. The Relicks of St. *Staniſlaus*, once Biſhop of this See, to whom it is dedicated, are kept there. This Saint is the Patron of the *Poles*; and being murther'd, in 1079, in this Church, by *Boleſlaus the Bold*, the Kings of *Poland* go to his Shrine upon Foot in Proceſſion, with all the Nobility, the Day before the Coronation; which they do to expiate that cruel Action. *Sigiſmund* III. and *Uladiſlaus* VII. offer'd on that Tomb many Gold and Silver Veſſels. *Sigiſmund* I. built a Silver Altar over it, with Golden Crucifixes, and many Veſtments embroider'd with Jewels of all Sorts; ſo that this Cathedral is remarkable for its Chapter and Treaſury. There are 50 other Churches in the Town and Caſtle. The Archbiſhop of *Cracow* is the Chancellor of the Univerſity.

The Caſtellan here has the Precedency of the Palatine, and takes Place of all the Lay-Senators of the Kingdom: The Reaſon is, becauſe a former Palatine deſerted King *Boleſlaus* in the *Muſcovite* War, as has been already mention'd. *Cracow* was taken by the *Swedes* in 1655, but was retaken in 1657.

Dr. *Connor* gives this Account of the Salt Mines near *Cracow*: The Depth is about 300 Geometrical Paces. One can ſcarce go over all the Alleys and Paſſages of them in a Week's Time. There are ſometimes ſuch fierce Winds in 'em, that nothing can withſtand them; and the Cold, in general, is hardly to be endur'd. The yearly Revenue of theſe Mines is about 400000 *French* Livres; of which 50000 go to the King, 10000 to the Queen, and ſome Thouſands more to the Officers of the Crown. Beſides which, the Proprietor is oblig'd to make a yearly Preſent to all the Cities of *Poland*, and to their Staroſta's. They were diſcover'd in 1548. There are four Kinds of Salt here; one is extream hard and rocky, like Chriſtal; another leſs hard, and clearer; a third white and pure, but brittle and ſofter. They are all brackiſh; but the fourth is ſomewhat freſher. In theſe Mines, there's on one Side a Stream of Salt Water, and on the other one of Freſh. There are ſome Places in theſe Mines where none can work, becauſe they dare

Digitized by Google

not carry a Candle for fear of ſetting the Vapours on Fire; which being nitrous, are eaſily inflam'd.

Other Towns in this Palatinate are; 1. *Zator*, upon the *Weiſſel*, 24 *Engliſh* Miles W. from *Cracow*, and 20 from the Confines of *Sileſia*. It has a ſtrong Caſtle, and gives Name to a Dutchy. 2. *Severil*, which gives Name alſo to a Dutchy, has a ſtrong Caſtle, and Mines of Silver and Lead. 3. *Biecz*, a Wall'd Town, water'd by the River *Rapa*, a Branch of the *Weiſſel*, of the Froth of which they make Sulphur: It is 60 *Engliſh* Miles from *Cracow*. 4. *Woyniez*, built of Timber, on the River *Dunieez*, 36 *Engliſh* Miles from *Cracow*. 5. *Sandecz*, a Wall'd Town, on the former River, 44 *Engliſh* Miles from *Cracow*. It has a Collegiate Church, with ſeveral Monaſteries, and its Inhabitants are induſtrious. 6. *Lelow*, ſurrounded with an old Wall, and has a ſtrong Caſtle on a Hill, with a Palace and Gardens after the *Italian* Manner. 'Tis ſeated on the River *Lelow*, 44 *Engliſh* Miles from *Cracow*. 7. *Oſwieczin*, upon the *Weiſſel*, the Capital of the Dutchy of the ſame Name, built of Timber, among Marſhes, with a Wooden Caſtle, plaiſter'd only with Clay: It is 28 *Engliſh* Miles from *Cracow*, and 12 from the Borders of *Sileſia*, to which it formerly belong'd; but ſince 1454, it has been poſſeſs'd by the *Poles*. 8. *Czentochova*, famous for good Beer, tranſported to moſt Places of *Poland*, and the neighbouring Countries of *Germany*. Without this Place ſtands a famous Monaſtery, where they have a Picture of the Virgin *Mary*, ſaid to be painted by St. *Luke*, to which Pilgrims come from all Places and make their Offerings. It has vaſt Quantities of Gold and Silver Plate, many rich Ornaments for Altars, and Habits ſet with all Sorts of Jewels, and particularly Pearl. Not only great Families give large Gifts to this Convent, but the Commons impoveriſh themſelves to enrich it. The Monks are Maſters of a great Territory near it, and maintain a Garriſon of 300 Men, which are in a better Condition than any other Soldiers of the Republick. In a Word, this is the *Loretto* of *Poland*. 9. *Slaucovia*, in the ſame Dutchy, famous for Silver Mines. 10. N. of *Cracow* lies *Proſzovice*, built of Timber. The King has a Palace here, on the Banks of the River *Sozeniova*. 11. *Ilkuſik*, 20 *Engliſh* Miles from *Cracow* to the W. is famous for Mines of Silver and Lead. This Town is encompaſſed with a Wall of Brick. Their Bread is extraordinary good, and their Beer the beſt in *Poland*. 12. *Wielickz*, and *Bochna*, remarkable for Quarries of excellent Rock-Salt. Theſe two Mines were diſcover'd in 1252. This is the only Province in *Poland* that has Metals and Minerals; and, beſides thoſe already mention'd, has Marble, Salt-Petre, Vitriol, Braſs, and Gold.

The Philoſophical Tranſactions of the *Engliſh* Royal Society, *N.* 61. *P.* 1099. gave this Account of the Salt-Gemme Mines of *Wilizka*: The Mines are below the Town, out of which they dig and cut three Sorts of Salt; one common, coarſe, and black; another ſomewhat finer and whiter; the third very white and clear, like Cryſtal. The coarſe and black is cut out in great Pieces, 3 *Poliſh* Ells long, and one thick, which coſt from 50 to 70 *Poliſh* Florins; but the Inhabitants of *Cracow* have them at 8 Florins apiece. They lay the greateſt Pieces before their Doors, that their Cattle may lick them. They uſe Mills and other Engines for grinding it. The Mine belongs to the King, and is one of the beſt Branches of his Revenue. A thouſand Men are conſtantly employ'd in theſe Mines. The Horſes that work below Ground grow blind by the Sharpneſs of the Salt. The Salt-work has beneath it ſeveral Salt Springs, whence the Salt Water is convey'd by Chanels to the Places where it is boil'd to Salt.

The Mineral Salt-work at *Bochna* is not ſo well order'd as the former.

The Senators of this Province are, the Biſhop, Caſtellan, and Palatine of *Cracow*; the Caſtellans of *Woumitz*, *Oſwieczin*, *Sandez*, and *Biecz*. The King names the Mayor of *Cracow*, who was a *Scots-man* when Dr. *Connor* was there.

The Arms are, in a *Field Gules*, an *Eagle* expanded *Argent*, Crown'd *Or*, with a *Baton* croſs its Wings of the Second.

In this Palatinate there is a particular Sort of *Manna*, which they gather in *May* and *June*, and ſweep it off the Graſs, with

Sieves, together with the Dew. They eat this *Manna*, and make ſeveral Diſhes of it for their Table.

The Palatinate of SENDOMIR.

IT has *Red Ruſſia*, and the Palatinate of *Lublin*, on the E. *Mazovia* and *Great Poland* on the N. the Palatinate of *Cracow* on the W. and *Hungary* on the S. It has its Name from *Sendomir*, the chief Town, upon the Bank of the *Weiſſel*, where that River receives the *San*, and has a ſtrong Caſtle. This City was ſack'd by the *Tartars* in 1240, taken by the *Swedes* in 1655, and retaken the following Year. 'Tis 112 *Engliſh* Miles N.E. from *Cracow*, and 128 S. from *Warſaw*. The Fortifications and Caſtle were built by *Caſimir the Great*, who died of a Surfeit, by eating too liberally of the Fruits of this Country, which are reckon'd the faireſt and beſt in *Poland*. The Aſſizes are kept here by the Magiſtrates of the Palatinate. Other Towns are, 1. *Kunow*, famous for its Marble. 2. *Schydlowietz*, which has Store of Iron and Steel in its Neighbourhood. It formerly belong'd to the Dukes of *Radzivil*, and is encompaſſed with an old Wall. The Caſtle is pretty well fortified. 3. *Optatow*, 16 *Engliſh* Miles from *Sendomir*, in a pleaſant Country, and waſh'd by the River *Pilcza*. 4. *Viaſden*, a new built Town, which has a good Trade, and is well fortified. 5. *Radom*, Capital of that Diſtrict, built in a Plain, ſurrounded with ſtrong Walls, and other Fortifications. 6. *Jedlink*, famous for a School, and a well built Church. 7. *Solecia*, on the *Weiſſel*, has a noted Caſtle, which was repair'd and beautify'd by its ancient Duke *Chriſtopher Zboravius*. 8. *Ilza*, a neat Town, built with Brick, belonging to the Biſhop of *Cracow*. It is remarkable for Earthen Ware, with which it furniſhes all *Poland*. The Caſtle is an old Building; but the Biſhop's Palace is new, and very ſtately. 9. *Rozentin*, which has great Plenty of Iron: It belongs alſo to the Biſhop of *Cracow*, who has a Houſe and pleaſant Garden here. 'Tis beautiful, and well fortified, and lies near the Bottom of *Mons Calvus*, which is by much the higheſt in *Poland*. 10. W. from this Town lies *Kielcz*, famous for Mines of Copper, and *Lapis Lazuli*. The Biſhop of *Cracow* has a fair Collegiate Church here. 11. *Chencin*, 12 *Engliſh* Miles from *Kielcz*: It abounds with Lead, Marble, and Silver, belongs to the King, and has a Caſtle on a Rock. Juſtice is adminiſtred here to the Diſtrict. 12. *Malagoſch*, noted for being a Caſtellany, and is built of Wood. 13 *Stenzicz*, Capital of the Diſtrict of that Name. It has a ſtately Monaſtery of *Benedictine* Monks. 14 *Slupicz*, ſituate alſo at the Foot of *Mons Calvus*; at the Top of which is the Abbey of the *Holy Croſs*. 15. *Racovia*, formerly a Neſt for *Socinians* and *Photinians*, and the Center of their Religion. It was pretty populous, and had a conſiderable Academy to inſtruct Youth, which was prohibited, on Account of their Errors, by a publick Edict. 16. *Corzin*, Capital of the Diſtrict of the ſame Name, a new Town, built with Timber. It has a Caſtle, lies near the River *Wiſlock*, and is ſurrounded with Marſhes. 17. *Wiſticz*, on the River *Nida*, built of Wood, and ſituated on a Rock: The Cathedral is built of ſquare Stone, with beautiful Cloyſters for the Canons. The adjacent Country abounds with all Sorts of Serpents and Inſects; but the ignorant Inhabitants ſay, that being interdicted by the See of *Rome*, they have no Power to do any Harm. When they are tranſported elſewhere, they immediately die. 18 *Pilzno*, a Timber Town, on the River *Wiſtock*. 19 *Bolowice*, alſo built of Timber, among the Hills, and is a Caſtellany. 30. *Zwichoſt*, alſo of Wood, lies on the *Weiſſel*, and has a Caſtle, with a double Wall, on the other Side of the River. 'Tis likewiſe a Caſtellany. 21. *Zaliſin*, famous for a conſiderable Market. 22. *Lezaisk*, has a noted Monaſtery, where they pretend ſeveral Relicks are miraculouſly kept, which draw thither great Crowds of People from all Parts.

The Senators are, the Caſtellan and Palatine of *Sendomir*, and the Caſtellans of *Wiſlicz*, *Radom*, *Zarnow*, *Sczcbow*, *Polowice*, *Malogoſch*, and *Zwichoſt*.

The Arms are, *Party per Pale Argent* and *Azure*; in the firſt 3 *Bars Gules*, and in the ſecond 3 *Stars Sables*, two and one.

The

The Palatinate of LUBLIN.

THis Palatinate was taken out of that of *Sendomir* by *Caſimir Jagellonides*, becauſe too big for one Palatinate. It has adjoining to it the Territory of *Lucovia*, which contains near 2000 Gentlemens Houſes. This Palatinate, and the other two, is the Dioceſe of *Cracow*, which comprehends 1018 Churches, 13 of which are Collegiate. It has *Red Ruſſia* and *Sendomir* on the S. E. and *Maſovia* on the N. It takes Name from the chief City, *Lublin*, 20 *Engliſh* Miles from the Frontiers of *Red Ruſſia*, 96 S. from *Warſaw*, 48 W. from *Chelm*, 154 N. E. from *Cracow*, 56 N. from *Sendomir*, in Long. 42. and Lat 51 ½. It is a well-built City, and pleaſant, but not large. The Moraſſes about it are a greater Fortification than its Walls. *Caſimir the Great* wall'd it, and the *Ruſſians* built the adjoining Caſtle. The great Church was built by *Leſcus the Black*, upon a Conqueſt obtain'd over the *Lithuanians* near this Place: He dedicated it to St. *Michael*, who they ſay appear'd before the Caſtle. St. *Bridget*'s Monaſtery was founded by *Uladiſlaus Jagello*. Two Courts of Judicature are kept in *Lublin*, from which there's no Appeal, except to the Diet of *Poland*. It lies on the River *Ryſtrice*, and is a Place of great Trade, and frequented by *Turkiſh*, *Armenian*, *Muſcovite* and *German* Merchants, eſpecially at the four Yearly Fairs, of a Month's continuance each. The *Jews* poſſeſs the Suburbs. Other Towns of Note are, 1. *Caſimir*, a very fair Wooden City, with a beautiful Palace, built by *Henry Erleſius*, Archbiſhop of *Gneſna*, and adorn'd with delightful Gardens. 2. *Urzendow*, a large Town, built of Timber, on a Lake, 28 *Engliſh* Miles from *Lublin*. 3. *Lulow*, Capital of the Territory of *Leucovia*, defended partly by Bogs, and partly by Paliſadoes, 56 *Engliſh* Miles from *Lublin*. It has a conſiderable Juriſdiction. 4. *Parkow*, alſo built of Wood, near a very large Lake, 36 Miles from *Lublin*.

The Senators are, the Palatine and Caſtellan of *Lublin*.

The Arms are, in a *Field-Gules*, a *Stag Paſſant Argent*, Collar'd *Or*.

RED RUSSIA.

OTherwiſe called *Roxalania*, from the ancient Inhabitants. The Southerly Boundaries are a Part of *Hungary*, *Tranſilvania*, *Moldavia*, and *Beſſarabia*; on the N. *Poleſia*; on the W. *Little Poland*; and on the E. the Deſarts of *Little Tartary*. It abounds in Corn, Beaſts of all kinds, Fiſh, and Honey. There are Trees found in the Banks of the River *San* very hard, and black as Ebony. The Country People ſay, they have lain there ſince the Deluge; but it is probable they have been waſh'd down by the Courſe of the River many Years ago. The Capital is *Leopol*, or *Lemberg* according to the *Germans*; but the *Poles* call it *Lnow*, or *Lunow*. 'Twas called *Leopolis*, becauſe founded by Prince *Leo* about 1289. It was made an Archbiſhoprick in 1414. It is built among Hills, on the River *Peltew*, and is a Place of Strength, with two Caſtles, one within, and the other without the Walls, on a high Mountain. It lies in Lat. 49 ½. Long. 42 ½. 60 Miles N. from the *Carpathian* Mountains, 60 N. E. from *Premiſlaw*, 160 E. from *Cracow*, 200 S. E. from *Warſaw*, and 120 N. W. from *Camimiec*. It was beſieged in vain in 1648 by *Chmielnicz*, the General of the *Coſſacks*, with an Army of 120000 Men. In 1672, the *Turks* took it, but quitted it again by Treaty. It has loſt much of its ancient Splendour, being impoveriſh'd, as the whole Province is, by the Civil Wars, and the Incurſions of the *Turks* and *Tartars*. Many *Turkiſh*, *Moldavian*, *Armenian*, and *Greek* Merchants, reſide here, and drive a conſiderable Trade. This City gives great Encouragement to learned Men, who are very civilly entertain'd by their Academy, which is ſupply'd with Profeſſors from that of *Cracow*. The River *Roxalania* is near it, where are taken Barbels of a great Size. It has likewiſe a vaſt Number of Fiſh-Ponds, full of ſeveral Sorts of fat Fiſh, which are ſalted, and tranſported all over *Poland*. The Churches are generally fair, and well built, and abound with coſtly Ornaments. 2. *Godick*, a Paliſado'd City, with a Caſtle, built in a Plain, and ſurrounded with Bogs: It lies

Digitized by Google

about 10 *Engliſh* Miles from *Leopol*. 3. *Javerifvia*, famous for a natural Bath in a neighbouring Village, which diſperſes ſeveral ſtubborn Diſtempers, as *Sixtus Leo*, a Phyſician of great Experience, teſtifies in his Treatiſe concerning it. 4. *Zolkiew*, a Town defended by a Caſtle, has many pleaſant Gardens, and a Church built with various Sorts of Marble. This City was the Seat of *John Sobieski*. The Arms of this Diſtrict are, in a *Field-Azure*, a *Lion-Paſſant*, crown'd Or, by a *Rock-Sables*.

Other Towns are, 1. *Premiſlaw*, upon the River *San*, a Biſhop's See, with a Caſtle, on a Hill. It is a pleaſant and populous City, and lies in Lat. 49 ½. and Long. 41. 48 *Engliſh* Miles N. from the Borders of *Hungary*, 40 Miles E. from the Frontiers of the *Leſſer Poland*, and 64 S. E. from *Sendomir*. They have one Biſhop of the *Ruſſian* Church. The Jeſuits have a College here. The Citizens are addicted to Trade. Near this City the King has a Park, full of all kinds of Wild Beaſts; and the Country has many Caſtles for fear of the *Tartars*. 2. *Chelm*, an Epiſcopal See, 40 *Engliſh* Miles E. from *Lublin*, 96 N. from *Premiſlaw*, and 48 N. from *Beltz*. It has been oft laid waſt of late by the *Tartars* and *Turks*. It is of no great Compaſs, has a Caſtle of Wood, and is the Capital City of a Territory of the ſame Name, which has *Volhinia* to the E. *Little Poland* to the W. *Lithuania* to the N. and *Bielza* to the S. 3. *Kraſneſtaw*, on the River *Wieprz*, 20 *Engliſh* Miles S. W. from *Chelm*, and 20 S. E. from *Lublin*. It is a ſtrong, tho' ſmall Town. 4. *Sambor*, a Paliſado'd City, with a Caſtle, upon the River *Tyra*, near the Borders of *Hungary*. 5. *Jaroſlaw*, famous for a Fair on *Lady day*, which is the moſt celebrated in *Poland*. Goods are brought hither from *Perſia*, *Conſtantinople*, *Venice*, *Muſcovy*, and *Amſterdam*. They ſay, there is uſually brought hither above 400000 Black Cattle, and 200000 Horſes. The Jeſuits have a College here, and without there is a ſtately Nunnery of modern Architecture. The Caſtle is ſeated on the River *San*. 6. *Lancut*, noted for ſeveral magnificent Churches, founded by *Ladiſlaus Lubomirski*, Palatine of *Cracow*. It has a Caſtle well fortified, as a Security againſt the *Tartars*. 7. *Reſovia*, which has a good Caſtle, many Monaſteries, and a Fair on the Feaſt of St. *Albert*. This Town is famous for a Linen Manufactory, manag'd by *Germans*, whoſe Anceſtors were taken Priſoners by *Caſimir the Great*, and ſettled in and about this Place.

The Arms of the Diſtrict of *Premiſlaw* are, in a *Field-Azure*, an *Eagle* expanded with two Heads, both crown'd Or.

HALICZ, is the Metropolis of a Diſtrict of that Name, which compaſs'd towards the W. with the Mountains of *Tranſilvania*; on the S. by the Beech Woods of *Tranſilvania*: Towards the E. it is divided in two Parts by the *Nieſter*, a rapid River, which has its Riſe among the *Carpathian* Mountains. The S. Diviſion of this Diſtrict is call'd *Pocuce*, or *Pocutio Halicz*, was formerly the Metropolis of the *Ruſſian* Kingdom, then divided into ſeveral Tetrarchies, each of which had its proper Duke. It is a large Town, built with Timber, and ſeparated from *Moldavia* by the River *Prut*, and on the other Side waſh'd by the *Nieſter*. The Inhabitants are Booriſh, and more inclin'd to Husbandry than Trade. Other Towns are, 1. *Coloni*, near the River *Prut*. It is much frequented on Account of its fine Salt, with which it furniſhes all the reſt of *Ruſſia* and *Lithuania*, there being none in thoſe two Provinces, except in the Diſtrict of *Premiſlaw*. All over this Country there are deep Wells, whoſe Waters are boil'd up into Salt. 2. *Martinow*, with a Caſtle, ſituated among Marſhes. 3. *Dolina*, ſeated among Hills. 4 *Podock*, on the other Side of the *Nieſter*, defended by a Caſtle, and has a fair Monaſtery, built by *Stephen Potucius*, Palatine of *Breclaw*, who is buried here. 5. *Brezana*, a populous Town, with a Caſtle, on a Hill. 6. *Buczavia*, or *Buske*, built among Marſhes, near the Spring of the River *Bog*, by which Goods are carried to *Lemberg*. 7. *Sannock*, is another Diſtrict of *Red Ruſſia*, near the Mountains of *Hungary* and *Tranſilvania*. The Town of *Sannock* lies near the River *San*, and has a Caſtle, pretty ſtrong, founded on a Rock. 8. *Croſna*, the Staple of *Hungary*, whither they bring all their Merchandize and Wines.

There-

Digitized by Google

Therefore the Marts and Fairs here are more celebrated than thoſe of their Neighbours. The Jeſuits have a College in this City. The other Cities of *Brozovia*, *Rimanovia*, *Dinovia*, and *Leske*, are Places of Strength, to prevent the Incurſions of the *Tartars*.

The Palatinate of BELCZ.

THis Palatinate lies near that of *Leopol* and *Cholm*, and contains 4 Territories: It has its Name from *Belcz*, the chief Town, 20 Miles from the River *Bog*. *Lemberg* is on the S. E. *Sendomir* on the N. W. and *Samoſcie* on the N. *Samoſcie* ſtands upon a Lake, and is erected into a Principality: It lies 56 *Engliſh* Miles E. from *Sendomir*, 60 N. from *Lemberg*, and 36 S. from *Lublin*. It was built by *John Samoſky*, Great Chancellor of *Poland*, in a pleaſant Plain, not far from the River *Vapr*. The *Coſſacks* beſieg'd it in 1651, but were oblig'd to raiſe the Siege. There is an Univerſity in this City. *Brody* belongs to this Palatinate, and lies E. from *Belcz*. 60 *Engliſh* Miles. *Olesko* lies 50 N. E. from *Lemberg*. There's another Town call'd *Grobs*. with a Caſtle, but otherwiſe of no great Note.

The Palatinate of UPPER VOLHINIA.

IT has *Red Ruſſia* on the W. *Podolia* on the S. *Ukrain* on the E. The chief Town is *Lucko*, on the River *Ster*, near a Lake, 24 *Engliſh* Miles E. from *Red Ruſſia*, and 100 N. from *Lemberg*. The City is large, and has a greater Number of *Greeks*, *Jews*, and *Proteſtants*, than *Papiſts*. The Trade is manag'd by the *Jews*. *Uladzimerz* lies on the River *Lug*, which falls into the *Bog* a little lower, and is 48 Miles W. from *Lucko*. *Crzeminiec*, is a little Town, upon a Hill, 32 Miles from *Lucko*. The *Tartars* have often viſited this Place, and done it much Miſchief. *Baranouka* is 80 *Engliſh* Miles N. E. from *Lucko*, and 44 W. from the Caſtle of *Korſec*. I lies on the River *Horin*. The *Turks* have done great Damage to this City. Other Towns are, *Oliko*, *Zaſſow*, *Oſtrog*, and *Lytozierem*.

LOWER VOLHINIA, *or the Palatinate of* KIOW.

THis Palatinate was Part of the *Ukrain*, the Country of the *Coſſacks*, which we have deſcrib'd in the former Account of the *Coſſacks*. The *Poles* have only now ſome ſmall Towns here, as *Bialozerkiew*, 64 *Engliſh* Miles S. W. from *Kiow*, and 140 N. from *Braclaw*; *Zarkaſſi*, and *Czernobel* upon the River *Uſz*, 72 *Engliſh* Miles W. from *Czernikow*, and 8 from the *Nieper* and *Kudac*.

The Province of *Podolia* is divided into *High* and *Low*.

HIGH PODOLIA,

HAS *Red Ruſſia* on the W. *Upper Volhinia* on the N. *Lower Podolia* on the S. E. and the *Nieſter* on the S. It is a fruitful Country, tho' mountainous, and has Plenty of Honey. The Vallies are well water'd. It has been the Seat of the *Tartarian*, *Coſſackian*, and *Turkiſh* Wars, for many Years, and expos'd to their Barbarities. The chief City is *Kaminiec*, upon the River *Smotrick*, which a little lower runs into the *Nieſter*. The City lies 120 *Engliſh* Miles N. E. from *Lemberg*, and is a Town of the greateſt Strength of any in *Poland*, defended by high Rocks, ſo that the Tops of the Houſes cannot be ſeen. It has held out many Attacks of *Tartars*, *Turks* and *Walachians*, and was much damaged by Fire in 1669. It has two Biſhops, one a *Papiſt*, the other an *Armenian*. It was taken by the *Turks* in 1672, and all the adjacent Country was ſubject to them, till the Peace of *Carlowitz* in 1699. by which this City, all *Podolia*, and the *Ukrain*, were reſtor'd to the *Poles*, who frequently endeavour'd to retake it, but in vain. It lies 60 *Engliſh* Miles S. W. from *Bar*. 280 S. W. from *Kiow*. 120 S. E. from *Lemberg*. 320 S. E. from *Warſaw*, and 680 N. from *Conſtantinople*. The other Cities here are, 1. *Trembowla*; which lies under a great Mountain, with a ſtrong Caſtle upon it. 2. *Latyczow*; which is well fortified, has

Digitized by Google

has a ſtrong Caſtle, and warlike Inhabitants. 3. *Bar*, a ſtrong Town, on the River *Kiow*, and is ſurrounded with Lakes. It lies 72 *Engliſh* Miles N. E. from *Kaminiec*, and 72 N. W. from *Broclaw*. The Caſtle is built upon a Rock. This City was founded by *Bonna Sforſa*, the Duke of *Milan*'s Daughter, Wife to King *Sigiſmund*. 4. *Huſiatnow*, well fortified. 5. *Czortikow*, with a ſtrong Caſtle, and well fortified. 6. *Chmielnick*, on the River *Bog*, defended only with Paliſadoes, and a Wooden Caſtle. 7. *Miedzibioſe*, with a large Wooden Caſtle. 'Tis ſituated among Marſhes, and has no Avenue but over Bridges. This Place was formerly much infeſted by *Tartars*. The Senators are, the Biſhop, Palatine, and Caſtellan of *Kaminiec* and *Podolia*. The Arms are, in a *Field Azure*, the *Sun* in its full Glory. Moſt of the Cities of *Podolia* are fortified, to protect them from the Inroads of the *Tartars*. This Country is ſo fertile, that it may vie with *Italy* or *Hungary*.

LOW PODOLIA, *or the Palatinate of* BROCLAW.

THis Palatinate has the ancient *Tyras* or *Nieſter* on the S W and *Lower Volhinia* on the E *Upper Podolia* on the N. and *Budziack Tartary* on the S. and S. E. The chief Town is *Broclaw*, on the River *Bog*, in Lat. 48 ½. and Long 47. In 1672, it was taken and plunder'd by the *Turks*. *Winniczа* is a fortified Town, upon the *Bog*, 48 *Engliſh* Miles E. from *Bor*, and 40 N. from *Broclaw*. In 1560, it was taken by the *Coſſacks*. This City is famous for a Meeting of the Gentry, and a Court of Juſtice. The Jeſuits have a College here. This City has been very much infeſted by the *Tartars*. The Senators are, the Palatine and Caſtellan of *Broclaw*. The greateſt Part of *Podolia* was reſtor'd by the *Turks* to the *Poles*, Sept. 22. 1699. by the Peace of *Carlowitz*.

Of the RIVERS *of* Poland.

THE chief Rivers in *Poland* are, 1. The *Weiſſel*. *Ptolomy* makes it a River of *Germany*, and calls it *Viadus* and *Suevus*. *Pliny* calls it *Viſtillus*; and *Mela*, *Viſula*. 'Twas the ancient Boundary of *Germany* and *Sarmatia*, according to *Agathamerus*. The *Poles* and *Sclavonians* name it *Wiſla*; the *Germans*, *Der Weiſſel*. It has its Source in the *Higher Sileſia*, from the *Carpathian* Mountains in the Borders of *Hungary*, now call'd *Krapac*, about Lat. 49 ¾. and Long. 41. *Mol* makes it Long. 38. It takes it's Courſe N. E. runs into *Poland*, and waters *Oſwiecin*, (near which the *Sola* falls into it) *Zator*, and *Cracow*, where it begins to be navigable; then the River *Nida*, whoſe Courſe is S. E the *Daniac*, near to *Polaniec*, and the *Wiſlick*, which runs N. E. fall into it. Below *Sendomir*, it is augmented by the *San*, which has alſo its Source in the Mountains of *Krapack*, and runs N. After this the *Weiſſil* runs N. The River *Viepriz*, which riſes in the Palatinate of *Belza*, and runs thro' that of *Lublin*, falls into it near the W. Borders of that Palatinate. Next, the *Pilcza*, which riſes in the Palatinate of *Cracow*, and runs by the N. Borders of *Sendomir*, falls into it 15 *Engliſh* Miles above *Czerſko*. After this, the *Weiſſil* runs thro' the Province of *Maſovia*, and waters *Czerſko* and *Worſaw*: Then it runs N.W thro' the Palatinate of *Plockſko*, and runs by *Plockſko*, *Dobrzin*, and *Wladiſlaw*. Next it goes thro' *Poliſh Pruſſia*: Then its Courſe is N. E. and waters *Thorn*, *Culm*, *Graudentz*, and *Newenburgh*. Twenty *Engliſh* Miles below that Town, it divides it ſelf into two Streams; the Eaſterly one, call'd *Nogatz*, runs by *Marienburgh* and *Elbing*, and falls into the Bay of *Friſch Haff*, or the *Cold Bay*, in Lat. 54 ½. and Long. 42 2. according to *Jaillot*'s Map; but Long. 38. by *Mol*'s Map. The Weſterly Stream waters *Dirſaw*; then, at the Caſtle of *Heuſt*, it divides again into two: That to the E. falls alſo into the *Friſch Haff*: The Weſterly Branch waters *Dantzick*, and falls into the *Baltick*, after a Courſe of more than 400 *Engliſh* Miles, in Lat. 54 ¾. and in Long. 37. near the Fortreſs of *Munda*, or *Weiſſelmund*, and ſurrounds the greateſt Part of the Iſland *Neringa*.

The *Romans* had no certain Knowledge of this, or of other Rivers beyond the *Elbe*.

The ſecond River is *Warta*, which riſes in the Palatinate of *Cracow*, in Lat. 52 ½. near the City of *Cromlow*. It runs N. thro' the

Digitized by Google

the Palatinate of *Soradia*, and waters *Sirad*, *Worta*, and *Kamia*; then it runs W. croſſes the Palatinate of *Kaliſch*, and waters *Landick*, *Pfydry*, and *Srim*: Next it runs thro' the Palatinate of *Poſna*, takes its Courſe N. and waters *Poſnan*. The *Noteez*, which riſes in the Palatinate of *Cujavia*, and runs through that of *Poſna*, falls into this River at *Zantoſk*. The *Obra* has its Spring in the Palatinate of *Poſna*, runs N W. and falls into the *Worta*, three *Engliſh* Miles S of the Mouth of the *Noteez*. Afterwards it runs through ſome Part of the Marquiſate of *Brandenburgh*, and waters *Landſperg* and *Kuſtrin*; not far from whence it falls into the *Oder*.

3. *Tyras*. *Pliny* calls it *Tyra*; *Mela*, *Tyras*; *Ptolemy* and *Scimmus Chius* call it *Turetz*. This laſt gives a Deſcription of it, and ſays, it was a deep navigable River, and had Plenty of Fiſh. *Ovid* ſpeaks of it, *Lib.* 4. *de Ponto*, *Epiſt.* 10. *Verſ* 50.

—— *Nullo tardior amne Tyras.*

It riſes in *Black Ruſſia*, in the Palatinate of *Lemberg*, from the Lake of *Leopol*, 16 Miles S. from *Lemberg*, about Lat. 49 3. and Long. 46 ½. according to ſome Maps; but *Moll* makes it Long. 48. It runs S. E. thro' the Province of *Poccuce*, and waters *Halicz*: Then it runs through *High Podolia*, or the Palatinate of *Caminiec*, and waters *Crudeck*, *Dzwingrod*, *Zwaniecz*, *Kylaigrod*, and *Ladawa*: Then it runs through *Lower Podolia*, and waters *Lampol*, *Kaminicze*, *Ruzkow*, and *Tekin*, or *Bender*. Then it takes its Courſe through the *Tartars* of *Ozzakow*, and falls into the *Black Sea* near *Buslogrod*, in Lat. 47 ¾. and Long 56 ⅔. according to *Jaillot*'s Map. Its Mouth lies 60 Miles N. from the Mouth of the *Danube*; whereas *Strabo* makes it but 300 Furlongs.

4. The *Bug*, which has its Spring in *Red Ruſſia*, near the Town of *Oleſko*, in Lat. 49 ⅔. and Long. 48. but according to *Moll*, in Long. 44. It runs N. through the Palatinate of *Belcz*, and waters *Krylow*: Then it runs through the Palatinate of *Chelm*, and waters *Dubna*, and other ſmall Towns; and taking its Courſe N. W. it divides the Palatinate of *Belzk*, where it waters *Mielneck* and *Grodeck*: Then it runs through the Palatinate of *Czerſko*, where the *Narew* falls into it; whoſe Courſe is S. W. and is noted for this, That no venomous Creature will live in its Streams; ſo that Snakes, ſticking to the Sides of the Boats that come out of the *Bug*, as ſoon as they enter this River, give a Hiſs, and ſwim back to the *Bug*; which falls into the *Weiſſel* near *Wiſchegorod*, in Lat. 52 ½. and Long. 43. but in *Moll*'s Map in Long. 39.

5. The *Bog*. *Herodotus* and *Pliny* make mention of it, and call it a River of *Sarmatia Europea*. Its Spring is in the Borders of *Podolia*, (in Lat. 49 ¾. Long. 50. *Moll* makes it lie in Long. 45.) which it ſeparates from *Volhinia*. It waters *Chmielnick*, *Winnitza*, and *Braclow*; runs through the Palatinate of that Name, and at laſt falls into the *Nieper* near *Ozzakow*; and a little lower, both of them fall into the *Euxine* Sea, in Long. 57 ½. after it has run a Courſe of more than 400 *Engliſh* Miles from W. to S. E.

6. The *Niemen*, anciently call'd *Chronus* by *Ptolomy*, who ſays it is a River of the *Venedi*, in *Sarmatia Europea*. *Ammianus Marcellinus* makes mention of it. The *Germans* call it *Memel*. It riſes in the Palatinate of *Minſki*, near the Borders of that of *Novogrodeck*, and is the Boundary of thoſe two Palatinates. Its Spring is in Lat. 53 ⅔. and Long 51 ⅔. It runs N. W. and waters *Bielcz*, where it enters the Palatinate of *Troki* in *Lithuania*, and there begins to run W. till it reach *Grodno*, which it waters: Then it takes the Northerly Courſe, till it comes to *Kouno*, where it enters *Samogitia*: Then it runs W. and waters *Goerſeburg*, on the Borders of *Ducal Pruſſia*, where it is call'd *Ruſs*. Next it waters *Tilſe*, and afterwards is divided into two Branches, which fall into the Lake call'd *Kuriſch-Haff*, and both they and the Lake fall into the *Baltick*, near *Memel*, in Lat. 55 ½. Long. 44 ¾ but in Long. 40. by *Moll*'s Map. Some think the *Mare Cronium* has its Name from the ancient Name of this River.

7. *Duina*. The *Poles* call it *Duna*. It has its Spring in *Novogrod*, a Province of *Muſcovy*, near the Lake *Wolga*, and the Fountains of the River *Wolga*. It runs S W. and croſſes the Palatinate of *Witepſk*, waters the City of *Witepſk*, turns N. W. and enters

ters the Palatinate of *Poloczk*, which it divides, and waters the City of *Poloczk*. Afterwards the River *Dryssa*, which runs S W. and the *Dzicona*, which runs E. fall into it. Then it goes through *Livonia*, which it ſeparates from *Semigallia*, waters *Duneburg*; and, ſtill keeping the ſame Courſe, runs by *Riga*; below which it falls into the Bay or Gulph of *Riga*, the ancient *Sinus Clilipenus*, in Lat. 57. and Long. 47 ½. but according to *Moll*, in Long 43. after a Courſe of 130 Leagues. It was anciently call'd *Rubo*, as ſome Moderns think.

The LAKES.

GReat *Poland*, *Cujavia*, and the Territory of *Lublin*, have ſeveral great and remarkable Lakes, abounding with freſh Fiſh of all Sorts. The chief of them is *Gopło*, in the Palatinate of *Brzeſty*, five Miles in Length, and half a Mile in Breadth. It lies 24 *Engliſh* Miles W. from *Brzeſty*, and 32 N. from *Lanſchet*.

2. *Bralet*, or the *White Lake*, ſo call'd by an *Antiphraſis*, becauſe, in *April* and *May*, it dies the Skins of thoſe that waſh in it of a ſwarthy Colour.

Puffendorf ſays, That *Poland* is very populous, and full of Towns and Villages. Some have computed, that the King and the Nobles have in their Poſſeſſion Ninety thouſand Cities and Villages: The Biſhops and Canons, One hundred thouſand five hundred and fifty: The reſt of the Clergy, Monks and Nuns, Sixty thouſand nine hundred and fifty: Which in all amount to Two hundred fifty one thouſand and five hundred Towns and Villages: But he ſays, he will not be anſwerable for the Exactneſs of this Account.

CHAP. XIV.

PRUSSIA in General.

PRUSSIA in general has on the N. the *Baltick* Sea for near 200 *English* Miles; on the N. E. the River *Memel*, which, at its Mouth, is called *Ruſs* and *Chronon* by the Ancients. On the S. lie *Podlachia* and *Lithuania*; and on the W *Great Poland*, *Maſovia*, *Coſſubia*, and *Pomerellia*. *Cluverius* ſays, the Extent of it, from *Thorn* upon the *Weſſel*, to the Mouth of the *Ruſs*, is 45 *German* Leagues, or 180 *Engliſh* Miles: The Breadth, from *Raigrodt* in *Polachia*, to the Mouth of the *Weiſſel*, as many. Its Long. according to Mr. *Moll*'s Map, is from *Thorn* in 38, to the *Ruſs* or *Memell* in 41 Deg. and its Lat. from *Raigrodt* in 53 ½. to the Mouth of the *Ruſs* in 55 ½.

Whence *Pruſſia*, *Boruſſia* or *Preuſſen*, has its Name, is not certain. *Cluverius*, in his *Germ. Antiq.* thinks *Helmoldus* (who flouriſh'd in the 12th Century) to be the firſt who makes mention of *Pruſſia*; but *Dithmarus*, who liv'd in the 11th Century, and the Anonymous Author of the Life of St. *Adelbert*, in the End of the 10th, ſpeak of it. *Marianus Scotus* ſays, the Name came from the City *Aprutis*, where *Adelbert* ſuffer'd Martyrdom in 995. But this Opinion is rejected, becauſe none elſe make mention of any ſuch City. The moſt probable Opinion is, That they derive their Name from the *Borruſſi*, who dwelt, as *Ptolomy* ſays, in *Ruſſia*, near the *Riphæan* Mountains, and remov'd from thoſe cold Places to *Pruſſia*. The Affinity of the Name and Language, (for the ancient *Pruſſian* is only a Dialect of the *Ruſſian*) makes ſome People to embrace this Conjecture. Others ſay, the *Venedi*, a Colony of the *Slavonians*, planted this Country, and quote *Polemul* for it, who ſays, That the *Venedi*, upon the *Viſtula* or *Weiſſel*, had the *Phynni* and *Gythones* on the S. which is favoured by *Cluverius*'s Obſervation, That ſeveral Places in *Liefland* ſtill retain the Name of *Wenden*, *Windaw*, *Uſchewinde*, &c. All Geographers, ancient and modern, place the *Eleſtrides Inſulæ* over againſt the Mouth of the *Weiſſel*, from whence Amber was carried all over *Greece* and *Italy*. This occaſion'd ſome Latin Poets, who read that Amber came from the *Venedi*, to confound them with the *Venetians*. *Hartknock* alledges, from the idolatrous Worſhip us'd anciently in *Pruſſia*, That the *Goths* were ſometimes Maſters of that Country.

The HISTORY *of* Pruſſia.

THE Origine and earlieſt Times of this People, as of moſt others, are very obſcure. Hiſtory tells us, they were at firſt a free and independent State, and had many Wars with their Neighbours; then they united with the *Slavi*. After 997, they were harraſs'd with Invaſions by the *Poles*, till at laſt *Boleſlaus Chrobry* conquer'd and impoſed a Tribute upon 'em, becauſe, as ſome ſay, they murther'd St. *Adelbert* at *Fiſchauſen*. This perfidious Pagan Nation, tho' frequently worſted by their Chriſtian Neighbours, did ſtill diſturb the Peace of all Kingdoms within their reach, which induc'd *Conrade*, the Duke of *Maſovia*, to invite the Knights of the *Croſs*, or of the *Teutonick* Order, to aſſiſt in reducing them: But the Preſent State of *Europe*, printed in *Germany*, gives this Account of it, *viz.* That the uneaſie *Pruſſians* endeavour'd often to free themſelves from the *Poliſh* Slavery; and in 1300, in order to moderate the *Poliſh* Rigour, *Conrade* Duke of *Maſovia* invited *Herman van Saltza*, Great Maſter of the *Teutonick* Order, and his Knights, to his Aſſiſtance, on Condition. That if, by their ſucceſsful Arms, they ſhould wreſt *Pruſſia* and

Digitized by Google

and *Culm* from the *Poles*, half the former ſhould remain to them, as a Reward of their Valour, and the other half, with the latter, ſhould continue to the *Pruſſians* themſelves. Theſe Terms were accepted, but not perform'd by the Knights; for in 53 Years Time, they extirpated the old *Pruſſians*, and became abſolute Maſters of the Country, as we ſhall hear more at large anon. This Order was inſtituted in 1191, by *Henry*, Patriarch of *Jeruſalem*, and other Chriſtian Princes, in Favour of the *German* Nation, upon this Occaſion. When the Emperor *Frederick* took the Croſs to recover *Jeruſalem*, and the *Holy Land*, whereof *Saladin*, Sultan of *Egypt*, had made himſelf Maſter in 1187, a great many *German* Noblemen and Gentlemen follow'd him as Voluntiers, who ſignaliz'd themſelves upon all Occaſions; and wanting a Leader after the Emperor's Death, when the Chriſtians beſieg'd *Acre*, they choſe *Frederick* Duke of *Suabia*, ſecond Son of the Emperor, and *Henry* Duke of *Brabant*, for Captain-Generals of their Nation, under whom they diſtinguiſh'd themſelves with ſo much Bravery at the taking of *Acre*, and other Places of that Country, that *Henry* King of *Jeruſalem* propos'd the inſtituting of an Order in their Favour, and, with the Patriarch and other Princes, form'd the Statutes according to the Model of the Knights of St. *John* of *Jeruſalem*, and excerpted what they thought moſt agreeable to an Order both Military and Hoſpitable; ſo that the Prieſts of this Order might celebrate Maſs arm'd Cap-a-pee. The Statutes, among other Things, bore, That the Knights ſhould be of a Noble Race; That they ſhould vow the Defence of the Chriſtian Religion, and the *Holy Land*; and finally, That they ſhou'd call themſelves, *Knights of our Lady of Mount Sion*. The Emperor *Henry* VI. and Pope *Celeſtin* III. approv'd the Inſtitution, order'd that they ſhould be clad in White, and wear a Black Croſs, like that of St. *John* of *Jeruſalem*, in their Habits, Standards and Arms, and live according to St. *Auſtin's* Rule. Hereupon the King of *Jeruſalem*, with *Frederick* Duke of *Suabia*, created the firſt Knights, to the Number of 40, making *Walpot* their Great Maſter. All Chriſtian Princes ſhew'd their Affection to this Order by their Gifts, which began to be conſiderable under their fourth Great Maſter, *Herman* of *Saltza*, in whoſe Time theſe Knights reſcu'd *John*, Son of *Henry* King of *Jeruſalem*, in a Battle which the Chriſtians loſt againſt *Conradin* King of *Syria*; in Acknowledgment of which good Service, the ſame *John* honour'd them with the proper Arms of the Kingdom of *Jeruſalem*. This Order conſiſted of 12 Provinces, *viz.* that of *Alſace* and *Burgundy*, *Auſtria*, *Coblentz* and *Eſch*, ſtill call'd Provinces of the Juriſdiction of *Pruſſia*; the Provinces of *Franconia*, *Heſſe*, *Weſtphalia*, *Lorrain*, *Thuringia*, *Saxony* and *Utrecht*, which are of the Juriſdiction of *Germany*; but now the *Hollanders* are Maſters of all that belong'd to them in the Province of *Utrecht*: Each Province had its Commanderies, and the ancienteſt of the Commanders was called the *Provincial*; but all are under the Great Maſter, as their Chief. The 12 Provincial Commanders aſſembled together to chuſe a Great Maſter or Coadjutor. The Great Maſter keeps his ordinary Reſidence at *Mariendal* in *Franconia*, ſince the Order was forc'd out of *Pruſſia*, and is worth about 20000 Crowns *per Annum*. The moſt Part of the Commanderies are poſſeſs'd by *German* Lords, or Princes younger Sons. To return to the Hiſtory of *Pruſſia*; The Duke of *Maſovia* in *Poland* gave theſe Knights a Grant of what Lands they cou'd conquer from the Pagans in *Pruſſia*, which the Pope and Emperor confirmed. They engag'd them in ſeveral Encounters, defeated them intirely, and in leſs than 60 Years drove the Pagans out of *Pruſſia*, and made themſelves Maſters of *Pomerelia*, *Samogitia*, *Livonia*, and *Curland*; and having built ſeveral Towns, Churches and Caſtles, and planted ſeveral *German* Colonies, they enter'd *Ruſſia*, where they eſtabliſh'd the Chriſtian Religion. Whilſt they were victorious here in *Europe*, in 1291 the Town of *Acre* was taken by the Sultan of *Egypt*, and the Knights were oblig'd to return to *Germany*. About 1400, their Affairs were very proſperous: They then made a conſiderable Figure in *Europe*; but at laſt, being ſlush'd with their frequent Victories, and a long Succeſſion of good Fortune, they attempted to conquer *Lithuania*, and were very troubleſome to all the neighbouring States, till in 1410, they were intirely routed by *Boleſlaus* King of

Digitized by Google

of *Poland*, at the River *Debrantz*, on the Borders of *Maſovia*. Upon this they loſt a great Part of *Pruſſia*, and would have loſt all their Conqueſts, if their Subjects had not been true to their Intereſt. After this they fell into Civil Wars, and, by their great Exactions and Severities, they alienated the Hearts of their Subjects. Moreover, ſome of their Commanders having Deſigns upon the Liberties of the People, built Citadels and Caſtles in Cities, to bridle the Citizens. They invited alſo ſome of the Senators and chief Citizens of *Dantzick* into the Caſtles there, on Pretence of Kindneſs and Friendſhip; but when they came into the Caſtle, they murther'd them. After this they ſtuck at no Villany, but debauch'd the Wives and Daughters of honourable Citizens, and us'd their Subjects as Slaves. The Nobility and Citizens, exaſperated with ſuch Tyrannical Government, aſſembled at *Culm*, and enter'd into a League, obliging themſelves to defend their common Liberty and Privileges, and agreed to give in a Memorial to the Provincial Meeting of the Eſtates, of their Sufferings from the Maſter of the Order and the Commanders. The Emperor *Frederick* III. declar'd what they had done was a rebellious Confederacy, and by his Edict commanded them to abjure that League, to obey the Maſter of the Order without Reſerve, fin'd them in great Sums, and depriv'd them of their Liberties and Privileges. Upon this they renounc'd their Allegiance to *Lewis Erliſtus*, the Grand Maſter of the Order, who defeated the *Poles* in a Battle, kill'd 30000 on the Spot, and took 136 of their Noblemen Priſoners; but was at laſt worſted by them. In 1454, the *Pruſſians* revolted to *Caſimir* King of *Poland*, and ſwore Allegiance to him. In 1466, when the Knights of the Order had loſt many of their Caſtles and Places of Strength, they were obliged to enter into Articles with the ſaid *Caſimir*, by which they quitted all Pretences for ever to the Territories of *Culm*, *Michelaw*, *Pomerellia*, *Elbing*, *Chriſtburg*, *Stum*, *Tolkomith*, and all the Caſtles and Dependencies of thoſe Places, with *Nerurg*, an Iſland in the *Baltick*, which has the *Weiſſel* on the S. W. with the Dioceſe of *Varmia*; reſerving to themſelves only that Part of *Pruſſia* of which *Koningsberg* is the Capital, and held it of the King of *Poland* by a Feudal Tenure. Moſt of the Knights ſwore Fealty to the Republick, except *Frederick* the Duke of *Saxony*, and Grand Maſter of the Order, who relying upon the Friendſhip and Aſſiſtance of the Emperor and Princes of the Empire, ſtill aſſerted the Independency of *Pruſſia*; but when he ſaw the Military Preparations of the *Poles*, who deſign'd to decide that Controverſy by the Sword, and knowing he was not able to encounter them, he fled to *Germany*. After his Death, he was ſucceeded by *Albert* Marquis of *Brandenburgh*, the 34th Great Maſter, who alſo refus'd to do Homage to the King of *Poland*, and gave this for Reaſon, That both the Emperor and Pope forbad him. This brought on a War betwixt the Marquis and *Poland*, which he carried on for ſome Time with great Vigour; but finding himſelf over-match'd, he made Peace with *Poland*, on theſe Terms, That he ſhould be made Hereditary Duke of *Pruſſia*, and hold it as Vaſſal to the King of *Poland*. Thus in 1525, he was created the firſt Hereditary Duke of that Part of it he then poſſeſs'd, which was afterwards call'd *Ducal Pruſſia*, to diſtinguiſh it from that Part of the *Poliſh* Dominions which was called *Regal Pruſſia*: And thus the Knights were wholly drove out of that Country. His Succeſſors thought this Treaty too favourable to the *Poles*, as they believ'd it too advantagious for him: But *George William*, Elector of *Brandenburgh*, and his Son *Frederick William the Great*, ſucceeded ſo well in their Deſign, that in 1657, at a Treaty then on foot, the Sovereignty of *Pruſſia* was afterwards at *Koningsberg*, *October* 18, 1663, confirm'd to him and his Heirs by the *Poliſh* Ambaſſador, on Condition, That in caſe of the Failure of his Heirs, it ſhould return to the *Poles*, and become a Fief of that Crown. This proſperous State of *Pruſſia* has been highly improv'd by the Son of that great Prince, who ſo far honour'd this Country, as to cauſe himſelf to be proclaim'd King of it, with an unuſual Magnificence, *January* 18, 1701.

Of the RELIGION *of the* Pruſſians.

WE have no certain Accounts of the Manner of their Worſhip while Pagans, nor at what Time, or by whoſe Means, they embrac'd Chriſtianity: But all agree in this, That towards the End of the 10th Century, St. *Aldbert*, or *Adalbert*, Biſhop of *Prague* in *Bohemia*, and afterwards Archbiſhop of *Gneſna*, as the *Poles* ſay, came thro' *Poland* into *Pruſſia*, where he either firſt planted or reſtor'd Chriſtianity. But the Pagan Prieſts ſeeing their Gain ſtruck at, ſo inflam'd the People againſt St. *Albert*, that they murther'd him barbarouſly at *Biſchauſen* in *Sambland*, in 997. Upon which, *Boleſlaus* King of *Poland*, as has been already ſaid, conquer'd them, and oblig'd them to embrace Chriſtianity; and to prevent their Relapſe into Idolatry and Superſtition, he burnt the great Oak at *Romanove*, the Temple of three of their Superior Gods: Yet no ſooner had the *Poles* withdrawn their Troops, but they return'd to Paganiſm. In the Beginning of the 13th Century, the Civil Broils among the *Poliſh* Nobility occaſion'd the Neglect of the Converſion of the *Pruſſians*. About 1215, *Chriſtianus*, a *Ciſtertian* Monk, endeavour'd to re-convert them, and for that End, by the Pope's Command, took upon him the Office of a Biſhop; but finding his own Power inſignificant, he was quickly forc'd to beg the Aſſiſtance of *Conrade* Duke of *Maſovia*. This Expedient alſo prov'd unſucceſsful; for the Knights of *Dobrin*, whom the Duke had oppos'd to the Fury of the *Pruſſians*, making Incurſions into *Maſovia*, were all vanquiſh'd and ſlain by the Idolaters. When all thoſe Expedients prov'd unſucceſsful, the Chriſtians began to conſider of ſome other Means of converting the *Pruſſians*, and pitch'd upon the Knights of the *Teutonick* Order, who were famous at that Time over all *Chriſtendom*, as moſt likely either to perſwade or force them to Chriſtianity. *Conrade* Duke of *Maſovia*, pleas'd with theſe Propoſals, immediately diſpatch'd Letters to the Maſter of the Order, profering him the Land of *Culm*, and Auxiliary Forces, in caſe he ſhould meet with any Oppoſition. Upon this, in 1226, *Herman de Saliza*, 4th Great Maſter of that Order, forthwith ſends *Herman de Balke*, one of his Knights, among the *Pruſſians*, with the Title of *Superintendant*, (afterwards chang'd into *Provincial* of *Pruſſia*:) But ſo vigorouſly did the Heathens oppoſe thoſe Undertakings, that it was 53 Years before they could be brought to renounce their Idolatry. After Chriſtianity began to take Root among them, ſeveral Biſhopricks and Monaſteries were founded; notwithſtanding which, many Heathens were wink'd at; for the barbarous Commonalty could not be brought from their ancient Folly but by degrees. Beſides, the Maſters of the Order minded the Enlargement of their own Power and Dominion, more than the Preaching of the Goſpel, and (tho' Papiſts) deſpis'd the Canons and Conſtitutions of the Church of *Rome*, and mock'd the Pope's Threats and Excommunication, which made Way for many Diviſions: And at this Time the *Waldenſes*, *Wickleſites*, and *Huſſites*, prevail'd mightily in *Pruſſia*. However, the *Teutonick* Order ſtill profeſs'd Popery, till the Time of *Albert* Marquis of *Brandenburgh*, laſt Maſter of that Order, and firſt Duke of *Pruſſia*, who having caſt off the *Poliſh* Yoke, not without a great deal of Blood, about 1520, he embrac'd the Proteſtant Religion, and, by his own Authority and Example, perſwaded the greateſt Part of the Knights to marry; and by degrees brought over the whole Country to Lutheraniſm. *Frederick William the Great*, who died in 1688, was a Calviniſt, and countenanc'd Calviniſm in *Koningsberg*, and other chief Cities of *Ducal Pruſſia*: But in *Dantzick*, and the other Towns upon the *Weiſſel* which are ſubject to the Crown of *Poland*, the People are Lutherans.

Of the MANNERS *of the* Pruſſians.

THE Inhabitants are generally ſtrong Body'd, and long-liv'd. *Adam Bremenſis*, in his Deſcription of *Denmark*, and the Northern Parts of *Europe*, tells us, the *Pruſſians* were grey Ey'd, and yellow Hair'd. The Ancients, as *Sidonius Apollinaris*, and *Auſonius*, had the ſame Opinion of all the Northern Nations: But ſince the *Pruſſians* have

Digitized by Google

have mix'd with other People, and admitted the modern Luxury of other *European* Countries, they are neither so healthy, nor of the same Complexion, as formerly. The Apparel of the *Prussian* Gentry is not much different from that of the more Southern Nations, thô not altogether so gaudy. The Boors wear long and strait Coats, of coarse Wool or Leather, after the Fashion of their Forefathers; but their rich Yeomen wear coarse *English* Cloth for a Holiday Suit. *Tacitus* tells us, the *Venedi* were the first of the *Scythian* Race that forsook their Waggons, and began to build Houses; yet their Successors are not arriv'd at any great Skill in Architecture. Near the *Weissil*, which is the ancient Seat of the *Venedi*, the Houses are magnificent, compar'd with the Wooden Huts which you meet with towards the wild Confines of *Lithuania*. *Tacitus* tells us, the *Phenni*, who dwelt in those Parts, had no other Shelter from the Injuries of the Weather and Wild-Beasts, but the Boughs of Trees twisted together: And to this Day the Invention is not much improv'd; for the Boors now have no other Houses than Hovels made of Stakes, interwoven with Rods, and cover'd with Earth, or, at best, a little Fern. The many Incursions which have been made into this Country upon the several Quarrels of the Electors of *Brandenburgh* with the *Poles* and *Swedes*, have forc'd them to raise some Castles and Fortifications of Stone; but otherwise, a Stone House here is a Rarity. The ancient *Prussians* slept on the Ground, or sometimes on the Skins of Beasts; and now they sleep on Straw, as was mention'd before.

Of the AMBER *in* Prussia.

THE old *Prussians* traded by exchanging one Commodity for another: Their chief Trade was the *Electrum*, or Amber, so famous among the Ancients; but was at last neglected by the Idleness of the People, who contented themselves with bare Necessaries. All those who have wrote of *Prussia*, have endeavour'd to find out the Nature of this *Electrum*. *Ovid* feign'd it to be the Tears of the *Heliades*, deploring the Fate of their Brother *Phaeton*. Some-Philosophers fancied it to be the Fat of the Sea: Others alledg'd it to be the Gum of a Tree; but could not say of what kind, whether Cedar, Poplar, or Elm. *Kircher* thinks 'tis a Bituminous Substance, which rising from the Bottom of the Sea, is toss'd by the Waves till it be brought to a Consistency; but none that liv'd on the *Baltick* could ever yet observe any such Bitumen in those Seas. Besides, the Veins of Amber, found under Ground in Places far distant from the Sea, do sufficiently prove the contrary: So that when 'tis found in the *Baltick*, and in the adjoining Lakes and Rivers, we must suppose 'tis broke off from some Vein under Ground by Floods or Tempests. Mr. *Hartman*, in his Treatise *De Succino Prussico*, gives this Account of it: Since (says he) it can neither be melted, nor is malleable, 'tis impossible it should be Metal: And because it is too solid a Body to come under the Species of Sulphur or Bitumen, it must needs be rank'd among Precious Stones. Amber, or *Succinum*, is a Coagulation of *Petrolum*; which being of divers Colours, White, Yellow, Red, and Black, accordingly grows into several Substances of those Colours. While 'tis very liquid, like Oil, it is call'd *Petrolum*: When somewhat thicker and clammy, 'tis call'd *Naptha*: When still more thick, we call it *Bitumen*: But when it comes to be a hard or stony Substance, it becomes White, Yellow, Red or Black Amber. If very Black, it is call'd *Gagates*, or Jet. When our Men broke the Rocks near *Tangier*, to form the Mole, they frequently found Amber in the Clefts of the Stones. The Marquis *de Bonac*, Envoy Extraordinary from the King of *France* to the King of *Sweden*, in a Letter to the Royal Academy of Sciences at *Paris*, says, he saw in some Places near *Dantzick* yellow Mineral Amber, of the same Sort with that found on the Sea-Coast. The Academy gave their Opinion about it: Messieurs *Cassini* and *Geraldi* observ'd, That Jet, and a sort of yellow Amber, was found at *Bugatch* in *Languedoc*, 27600 Fathom from the Sea; and that it is also found in the Rocks of *Provence*, and in *Sicily* along the Coasts of *Agrigento*, *Catanea*, *Leocata*, and on the Shores of *Corsica*, *Bononia*, *Ancona*, and *Umbria*. They further observ'd, That the Insects inclos'd in the Amber were of the Terrestrial kind, as Bees, Emmets, *&c.* and that none ever observ'd

Digitized by Google

obſerv'd Trees diſtilling Amber, as they do Pitch, Roſin, *&c.* From whence they infer, That Amber may probably be an Oil diſtill'd from Rocks, like *Petreolum*, and that thoſe Inſects are entangled in it when 'tis liquid. Amber is alſo found ſometimes in great Lumps on the Coaſts of the *Scottiſh* Iſlands. *Pliny* tells us, the ancient *Germans* call'd it *Gleſſum*, or Glaſs, becauſe of its Tranſparency; whence the *Romans* call the Iſland where it was gather'd *Gleſſaria*, and the *Barbarians* call'd it *Auſtronia*: But ſome think, the true reading of that Word in *Pliny* is *Auſtania*, becauſe the ordinary *German* Word for Amber is *Augſteyn*; and they are ſuppos'd to have given it that Name, on Account of its being good for the Eyes. *Tacitus de Moribus German. Cap.* 25. ſays, the *Æſtii* dwelt in that now call'd *Pruſſia* and *Curland*, and were ſo call'd, becauſe they lay Eaſtward from the *Suevi*. He adds, That they ſearch'd the neighbouring Sea, and were remarkable for their peculiar Skill in gathering Amber. *Caſſiadorus*, who liv'd in the 6th Century, quotes a Letter which *Theodorick*, a King of the *Goths*, wrote to thoſe *Æſtii*, thanking them for their Preſent of Amber, which he told them was very acceptable. Their Ambaſſadors, who brought it, could not inform him how it was generated; but told him that it was only found in their Country. *Heylin* thinks Amber proceeds from the Juice of a Stone, which grows like Coral, in a Mountain on the *Baltick*; but by the Violence of Storms is tore from the Rock, and is caſt out on the Coaſts of this Country, and ſometimes on thoſe of *Pomerania* and *Sweden*. The People who gather it leap into the Sea, tho' ever ſo raging, from whence they firſt take up ſome Weeds, after that this Liquor; which being expos'd to the Air, turns hard like Coral. It is good againſt bleeding at the Noſe, Agues, Falling-Sickneſs, Dropſies, Stone, Cholick, Weakneſs of the Stomach, Head-Ach, and the Yellow-Jaundice.

Of their MONEY.

THE *Pruſſians* had little or no Knowledge of Money before the Arrival of the *Teutonick* Order in 1230, who coming out of *Germany*, brought with them the Coin of their Country. Among the reſt of their Pieces, the broad *Bohemian Groſs* was long current both in *Pruſſia* and *Poland*: But knowing that this ſmall Stock would not go far, they ſet up Mints, and coin'd Pieces of their own, which they did ſo exactly, that moſt Nations have own'd that they firſt brought the Art of Coining to Perfection. Hence the learned Sir *Henry Spelman* thinks, that our *Engliſh* Word *Sterling* is deriv'd from the *Eaſterlings*, who coming out of *Pruſſia*, firſt taught the Art of Refining and Coining purer Silver in *England*, than before their coming had been made uſe of. The Species of Money now current in *Pruſſia* are;

1. A *Schilling*, which contains Six-pence, or Pfennings; no ſingle Pence being now in uſe there.

2. A *Groſs*, which conſiſts of 3 Schillings, and 20 of them make one Mark.

3. A *Mark*.

4. A *Gulder*, which contains 30 Groſſes,

5. A *Dollar*, (or *Thaler*) worth 3 Gulders.

6. A *Ducate*, equal to 2 Dollars, and is valued at 9 Shillings *Engliſh*.

Sweditſh and *Daniſh* Money is alſo current here. Some late *Pruſſian* Writers derive the Word *Schilling* from one *Bernhard Schilling*, who firſt ſtamp'd this ſort of Coin; but this is confuted by *Schuttelius*. The *Groſs* was ſo call'd, becauſe it was the greateſt Piece in the Infancy of their Coinage, and from thence perhaps we have our Groat. A *Mark* was no peculiar Piece of Coin, but a certain Weight, equal to 36 of the now *Pruſſian* Marks; ſo that it had not its Name, as *Loccenius* thinks, from the *German* Word *Mark*, becauſe 'twas mark'd or ſtamp'd with ſome particular Impreſſion, but was only us'd in that Country in reckoning of Money, as we do by Pounds and Marks, and the *French* by Livres; tho' neither of us have any Piece of that Value. *Gulder* ſignifies no more than a Piece of Gold Coin. The *Dollar*, (or *Thaler*) as the *Germans* call it, has its Name from the *German* Word *Thal*, a Valley, or Dale, becauſe that Piece was firſt coin'd at the Mines in *Joachim's* Dale in 1517; whence for ſome Time, inſtead of the Word *Thalerus*, they us'd *Joachimicus*

Digitized by Google

chimicus for a Dollar. The Value of these is alter'd frequently by Allays of Brass and Copper, according to the Humour of several States or Sovereigns.

Their LANGUAGE.

THat the *Venedi*, the first Inhabitants of some Parts of *Prussia*, spoke *Sclavonick*, is beyond all Controversy. After them, the *Goths* brought in a Dialect of the *Celtick*, differing a little from the *German*: But this did not take with the *Prussians*; for till the Arrival of the Knights of the *Teutonick* Order, they spoke, as they do still in many Places, a Language materially the same with what the *Muscovites*, *Poles* and *Lithuanians*, now use. *Grenovius*, a *Prussian* by Birth, is of another Opinion, because the *Poles* do not at all understand the *Prussian*, and scarce any thing of the *Lithuanian* Tongue: But this Argument is not conclusive, if we consider what Difficulty an *Austrian*, *Lunenburgher*, and *Fleming*, have to understand one another; and how much harder 'tis for a *Dane*, *German*, and *Englishman*, to discourse together, tho' their Language be of one Origine: So that a Mixture of the *German* and *Sclavonian* Tongues, and a Revolution of perhaps 2000 Years, must needs have much alter'd the *Prussian* Language from what it was at first.

This Country is large and fertile, being water'd with 2037 Rivers and Lakes, as their Monks have reckon'd, which afford them Store of Fish for their ordinary Food. This Province has no great Store of Mines, but abounds with Cattle, Wild-Beasts, Fish and Fruit of all Sorts, and enjoys a very temperate Climate. The Goods they have from *Poland*, *Russia*, and *Lithuania*, they export in great Quantities, and import whatever *Europe* or the *Indies* afford, but chiefly by Way of Exchange; whence the Inhabitants live richer and better than in any other Province of *Poland*. In this Country they make Glass of Ashes of a certain sort of Wood, or of the largest sort of Pebbles, which they boil 12 Hours before they vitrify. When they would have their Glass clearer than ordinary, they mix with the Ashes a certain sort of Earth of the Hardness of Tartar, which renders the Glass of different Colours, according to the Quantity mix'd with the Ashes. They observe, that if Salt be mix'd with Glass, it is much easier blown by the Artificer.

The principal Rivers of this Province are, the *Weissel*, the *Memel*, *Nogat*, *Elbing*, *Wisser*, *Passer*, *Alla*, *Pregel*, *Ossa*, *Drebnicz*, *Lico*, and *Lavea*.

The chief Lakes are, *Habus*, near 15 Miles long, and two broad, disjoin'd from the Sea by the Peninsula *Neringa*, which has a Communication with the Sea, where the Inhabitants gather Amber in Nets of a Conick Figure, with a large Mouth, and narrow at Bottom, which they tie to a long Pole, and put into the Sea when it begins to flow, and sometimes hale up Pieces of Amber as big as one's Fist. *Connor* was of Opinion, That the Amber was form'd by great Quantities of Resin or Turpentine, which drop'd from the Fir-Trees into the Lake, and being carried into the *Baltick*, was by the Waves congeal'd into Amber; but was afterwards inform'd, that Amber is a Mineral Juice that runs into the Sea, which at first taking up is soft, but is quickly harden'd by the Air.

Of POLISH PRUSSIA.

THis Country is divided into three Palatinates, *Pomerellia*, *Culm*, and *Marienburgh*.

The Palatinate of POLISH POMERANIA, *or* POMERELLIA.

THis is the most Easterly and least Part of *Pomerania*: It has *Brandenburgh Pomerania* on the W. the *Baltick* on the N. the *Weissel* on the E. and *Great Poland* on the S. When the *Goths* abandon'd this Province, the *Burussians* and *Scythians* settled here. The Palatine of *Pomerellia*, and the Castellan of *Dantzick*, are the Senators of this Palatinate. The chief City is *Dantzick*, which lies in Lat. 54 ½. Long. 38. call'd in Latin *Gedinum*; by the Natives, *Gdansk*; by the *Poles*, *Danske*; by the *Germans* and *French*, *Dantzig*. 'Tis one of the chief Hans-Towns, and has the greatest Part of the Trade of *Poland*. It is seated upon the *Weissel*, which 4 *English* Miles below falls into the Gulph of *Dantzick*,

Digitized by Google

zick, anciently call'd *Venedicus Sinus*. When and by whom this City was built, is not certain. *Becanus* and *Pontanus* think it was built by the *Danes*, about 1165, when *Woldimar* King of *Denmark*, having then War with *Sobeſlaus* I. Prince of *Pomerania*, built a Fortreſs here, and call'd it *Daneſwick*, which *Sobeſlaus* took from them in 116. Some think it is more probable, that to the Word *Dan*, *Cadan*, *Cdan*, or *Gdan*, the *Sclavonian* Termination *Ske* was added, which made it *Danske*, or *Gdanske*, and was afterwards chang'd into *Dantſick*. *Cluverius* is of this Opinion, and thinks the Name is deriv'd from the *Sinus Codanus*, ſo call'd from an ancient Idol of the *Germans*. It continued a Village till 1295, that *Premiſlaus* King of *Poland* made himſelf Maſter of it, and, by adding many Buildings to it, gave it the Form of a City. In 1343, it was wall'd, as *Cluverius*, in his *Germ. Antiq.* informs us. The chief Part of the City, call'd *Die Rechte Stadt*, was built by *Conrad Wallenrodt*, Maſter of the *Teutonick* Order, about 1390. In 1454, it ſubmitted to *Caſimir* King of *Poland*. They afterwards declar'd for the *Augſburg* Confeſſion, and ſided with *Maximilian* of *Auſtria* againſt *Stephen Battori* King of *Poland*, who proſcrib'd and beſieg'd them in 1577. but was oblig'd to raiſe the Siege In 1579, they were reſtor'd to their Privileges, with a Reſervation of many more; for they have a Suffrage in the Diet of that Kingdom, and are govern'd by their own Magiſtrates, who finally determine all Criminal Cauſes without Appeal, and all Civil Cauſes not exceeding 1000 Livres; and, with the Approbation of the Council of 100, impoſe neceſſary Taxes upon the Inhabitants. It lies 24 *Engliſh* Miles N. W. from *Marienburg*, 32 W. from *Elbing*, 88 N. from *Thorn*, 120 N. from *Gneſna*, and 200 N. W. from *Warſow*. In 1626, during the *Pruſſian* War, it was faithful to the Intereſt of the King of *Poland*: And lately, in 1655, when *Charles Guſtavus*, King of *Sweden*, had over-run *Poland*, all the Cities open'd their Gates to him except *Dantzick*, which put a Stand to the *Swediſh* Victories: So that the Faithfulneſs of this City retriev'd the Affairs of *John Caſimir*, when almoſt deſperate. It is water'd by the *Motlawe* and *Rodaun*, and is built partly of Stone, and partly of Brick. The Houſes are generally 6 or 7 Stories high. It conſiſts of 3 Cities; the firſt called *Voorſtat*, or the *Fore City*; the 2d *Aſtat*, or the *Old City*; the 3d *Rechte Stadt*, or the *Emperor's City*. All the three are encompaſſed with a high Wall, ſo broad, that Coaches eaſily go round it, and the Fortifications are of a vaſt Extent; but being commanded by two Hills on the S. W. it cannot well hold out a Siege. St. *Mary*'s Church in *Dantzick* is the ſtateſieſt Fabrick in *Pruſſia*, has 48 Altars, and 3722 Windows. The Font was made at *Antwerp*, and coſt 24000 Rix-Dollars. The principal Trade here is in Corn, which comes from *Poland*; and one Year with another, 'tis computed that they export 730000 Tuns of Wheat, two Tuns making up a Laſt. The Citizens have many Privileges, and particularly this, That they may buy up Corn as ſoon as it enters the Haven. This City is the Granary of *Holland*, and of other Northern Countries. Travellers and Merchants tell us, That the Granaries of *Dantzick* are generally 7, and ſome 9 Stories high, having each of them a Funnel to let the Corn run down from one Floor to another, to ſave the Labour and Charge of Carriage. Theſe Graharies are ſurrounded with Water, ſo that Ships lie cloſe to them to take in their Loading; and no Houſes are ſuffer'd to be built near them, for fear of Fire, as we are inform'd by *Phil. Tranſact.* of *R. S. N.* 25. *P.* 466. Merchants import Foreign Commodities to this Place, which furniſhes all *Poland*; and this contributes to the enriching of it. One Half of the Port-Cuſtoms belongs to the King of *Poland*, ſince the Reign of *Sigiſmundus Auguſtus*: And one Mill brings him in every Hour of the Day and Night 24 Gold Ducats. It is built on the *Rodaun*, which runs through the City. The yearly Revenue of this Mill is 4320 *l.* Sterling to the State, beſide the Profit it brings to the Proprietors. The Harbour is not deep, ſo that Ships of Burden can ſcarce reach the City. Tho' it is ſubject to the King of *Poland*, their Form of Government is Republican: The Eſtabliſh'd Religion here is Lutheraniſm ſince 1525; the Calviniſts are tolerated; and ſome Papiſts and Anabaptiſts are allow'd the Exerciſe of their Religion. *Cluverius*, the moſt eminent Geographer of his Time, was born here. There

Digitized by Google

are 20 Parishes in the City and Suburbs. One Half of the latter belongs to the Crown of *Poland*, and the other to *Dantzick*. The Streets are dirty in Winter, as in most Towns of *Poland*. The greateſt Part of the Inhabitants are *Germans*, and are reckon'd above 200000 in all. The Town-Houſe, where the Magiſtrates meet, is a very magnificent Structure, and has an exceeding high Spire. This City has 3 Magazines, well provided with Stores and Ammunition for Land-Forces. They have a College, with Profeſſors of all Faculties; but don't give the Degree of Doctor. The Juriſdiction of this City extends above 40 *Engliſh* Miles in Circumference. They ſend two Deputies to the Diet of *Poland*. The Senators, when once created, continue for Life: Four of the Senate are Calviniſts. Out of the four Proconſuls or Burgomaſters, the King nominates a Burgrave to repreſent him in the Senate, who ſigns all Sentences of Death. To repreſent the Grievances of the People, and to maintain their Privileges, there are 100 Burghers choſen to inſpect the Conduct of the Senate. The *Centum Viri* and Senate chuſe their Miniſters, which is the Manner in all *Lutheran* Countries. When the King comes hither, the City treats him for 3 Days; but he is allow'd only to bring a few Guards with him. They have a Secretary always at the Court of *Poland*. They can coin their Money without the King's Leave: His Effigies is on one Side, and their own Arms on the other. If any Appeal to the Tribunal of *Poland*, he is to lay down 100 Guilders in the Town-Houſe of *Dantzick*, to prevent the Frequency of ſuch Appeals. They have conſtantly above 200 Soldiers in Pay, can eaſily maintain 12000, and ſometimes they have had an Army of 60000. They have no Men of War, but abundance of Merchant-men of 3 or 400 Tuns, and 30 or 40 Guns apiece. They never trade into the *Eaſt* or *Weſt Indies*, but into the *Streights*, and all over *Europe*. In 1642. the Declination of the Magnet here was 3 Deg. 5 Min. W. In *July*, 1670, it was 7 Deg. 20 Min. The *Scots*, in Conſideration of the eminent Service they did to this City againſt the *Poles*, under the Conduct of one of the Family of *Douglas*, were allow'd to be Freemen of the Town, and other Privileges, beyond other Foreigners, and one of the Suburbs is ſtill called *Scotland*, in Remembrance of this Exploit, and was moſtly inhabited by *Scots*. The Arms of *Scotland* was alſo ſet up over the Gate, from whence they ſallied upon the *Poliſh* Army, and continued there till lately, that the Gate was rebuilt.

Not far from *Dantzick* to the E. is *Oliva*, an Abbey of the *Benedictines*, remarkable for a Peace concluded there in 1660, betwixt the Emperor, the King of *Poland*, and the Elector of *Brandenburgh*, on the one Side, and the King of *Sweden* on the other. *Munde*, or *Weiſſelmunde*, is a ſtrong Fortreſs, upon the Mouth of that Branch of the *Weiſſel* which runs by *Dantzick*, and can hinder the Entry of Ships. *Conitz* lies upon the Borders of *Brandenburgh Pomerania*, upon the River *Bro*, 32 *Engliſh* Miles W. from *Culm*. *Dirſchow* is ſeated upon the *Weiſſel*, 12 *Engliſh* Miles W. from *Marienburgh*, and 24 S. from *Dantzick*; was once a Place of Strength, but now diſmantled. 'Tis an ancient Monument of the Magnificence of the *Teutonick* Knights. *Pautzke* lies upon the Gulph of that Name, which is a Part of the *Baltick* near *Dantzick*: It has a ſtrong Caſtle, which was taken by the *Swedes* in 1626, and retaken in 1627. In 1655 the *Swedes* beſieg'd it, but were obliged to raiſe the Siege. *Hella* is a ſmall Town near *Pautzke* to the W. *Schlorn* belongs alſo to this Palatinate.

The Palatinate of CULM.

IT lies betwixt the *Weiſſel*, *Great Poland*, and *Ducal Pruſſia*, and was one of the 12 Parts of *Pruſſia*. It has its Name from *Culm*, the chief City, in Lat. 53 ½. Long. 39. 16 *Engliſh* Miles N. from *Thorn*, and 60 S. from *Dantzick*. This City was built by the *Teutonick* Knights in 1223, is ſituated upon a Hill, the Foot of which is waſhed by the *Weiſſel*, and was an Epiſcopal See, under the Archbiſhop of *Gneſna*. It has few Inhabitants, and no Trade ſince the *Swediſh* Wars; therefore the Biſhop's See is tranſlated to *Colmenſee*, 12 *Engliſh* Miles S. E. from it. *Herman de Saltza*, Maſter of the *Teutonick* Order, gave Laws and Conſtitutions for the Government of this Town; a Specimen

Digitized by Google

of which is given by *Lambecius*, from an old *Dutch* MSS. in the Emperor's Library at *Vienna*. The Municipal Laws of this Place are famous all over *Pruſſia*. It is ſtill reckon'd one of the Hans-Towns. *Thorn* is a Hans-Town, on the *Weiſſel*, which divides it: It lies in Lat. 53. and Long. 39. 16 *Engliſh* Miles S. from *Culm*, 72 S. from *Marienburgh*, 88 S. from *Dantzick*, 60 N. from *Lencicia*, and 116 N.W. from *Warſaw*. It was built at the ſame Time with *Culm*, by the Knights of the *Teutonick* Order, as a Garriſon to curb the Pagan *Pruſſians*, but not in the Place where it now ſtands. *Old Thorn* was ſeated a Mile W. from the *New*; but by whom and when *New Thorn* was built, is not certain. *Cluverius* ſays, it was a famous Mart, long before *Dantzick* was conſiderable for Trade. It has a Bridge over the *Weiſſel*. In 1454. both *Old* and *New Thorn* revolted from the *Teutonick* Knights to the *Poles*, who allow'd them great Privileges; whereas the Knights govern'd them in an arbitrary Manner. It had its Name from the *German* Word *Thor*, a Gate, becauſe built by the Knights to receive ſuch Forces into their Dominions as they needed. Hence the Arms of *Thorn* are a Caſtle and a Gate half open. This City is the neateſt and beſt built of any in *Pruſſia*: The Houſes are more ſtately, and the Streets broader, than at *Dantzick*. It owes much of its Beauty to *Henry Stroband*, Burgo-Maſter of the Town, who died in 1609. He built the Univerſity, and endow'd it with a conſiderable Revenue. The Profeſſors here are Men of great Learning. He founded alſo the Town-Hall, which, next to the *Stadthuis* in *Amſterdam*, is reckon'd the ſtatelieſt in *Europe*. He built a Hoſpital, and founded a Library, where two of *Cicero*'s Epiſtles are preſerv'd upon Tables of Wax. *Nicolaus Copernicus*, the great Aſtronomer and Mathematician, and remarkable alſo for his Piety, was born here in 1473, and died here in 1543.

In 1645, by Order of the King of *Poland*, a Conference was held here betwixt Lutherans, Calviniſts, and Papiſts, which had no Succeſs. The Acts of this Conference were printed at *Warſaw* in 1646, and *Georgius Calixtus* wrote Animadverſions upon it. This Place is famous for holding out a long Siege againſt the *Swedes*, who took it in 1655. The *Poles* retook it in 1658, after a Siege of 6 Months. The *Swedes* recover'd it afterwards; but in 1665, the *Poles* ſurpris'd it. The Fortifications were formerly very conſiderable; but *Charles* the XIIth, the preſent King of *Sweden*, having taken it *October* 14, 1703. diſmantled it.

Other Towns of Note here are, 1. *Graudentz*, a pleaſant and ſtrong Town, upon the *Weiſſel*, where the *Oſſa* falls into it, and is now well fortified; ſo that it is in no Danger from any Surprize. It lies 36 *Engliſh* Miles N. from *Thorn*, and 44 S. from *Marienburgh*. 2 *Strasburg*, is ſeated on the River *Debrentz*, E. from *Culm*, which in the laſt Age was frequently taken and retaken by the *Swedes* and *Poles*. 3. *Chouza*, one League from *Culm*, on the oppoſite Bank of the *Weiſſel*, has now nothing remarkable but a fine Church; tho' during the Government of the *Teutonick* Knights, 'twas the moſt flouriſhing Town of *Pruſſia*, as is evident from ſome of its ſtately Ruins. 4. *Novi*, two Leagues below *Graudentz*, is built on a Hill, the Foot of which is waſh'd by the *Weiſſel*. 5. *Ghmief*, a ſmall Town, with a ſtrong Caſtle, where *John Sobieski* kept his Treaſures.

The Territory of *Michalovia* in this Country is a ſtrait Neck of Land between the Rivers *Brodna* and *Drebentz*, and was the Occaſion of bloody Wars betwixt the *Poles* and *Teutonick* Knights.

The Senators of this Palatinate are, the Biſhops of *Culm* and *Warmia*, and the Palatine and Caſtellan of *Culm*.

The Palatinate of MARIENBURGH.

IT lies betwixt the *Weiſſel*, the *Baltick*, and *Ducal Pruſſia*, and has its Name from *Marienburgh*, the chief City, in Lat. 54. Long. 38½. It lies upon the *Negat*, a Branch of the *Weiſſel*, which loſes it ſelf in *Friſch-Haff*. The Natives call it *Margenburgh*. It derives its Name from an Image of the Virgin *Mary*, found there when the Fortifications were built. It lies 24 *Engliſh* Miles S.E. from *Dantzick*, 16 S.W. from *Elbing*, and 44 N. from *Thorn*. In 1281, the Caſtle was built by the *Teutonick* Knights, to ſtop the Inroads of the *Pruſſians*, and was the Capi-

Digitized by Google

Capital of their Dominions, and reckon'd impregnable. *Casimir* IV. King of *Poland*, took it in 1460. The *Swedes* took it in 1626, after 5 Months Siege. In 1640, it was burnt down by the *Germans*. In 1655, the *Swedes* took it; but it was restor'd again to the *Poles* in 1660, by the Peace of *Oliva*. The Town is but meanly built; most of its Houses are of Wood, and the Inhabitants poor; for thô the Island of *Marienburgh*, which is made by the *Weissel*, be rich, its Revenues are spent in casting up great Banks to preserve it from the Inundations of the River. The best Mead in *Prussia* is made here. The fruitful Island of *Zulna* lies near this City. *Elbing* lies in Lat. 54 $\frac{1}{2}$. Lon. 40. on a small River of the same Name, which falls into the *Frisch-Haff*. *Ptolomy* seems to place his *Ælvaonæ*, and *Tacitus* his *Helvecones*, near this Town. *Fredericus Zamalius* calls this City *Augusta Ælvaonum*, and *Ælvepolis*, not doubting but it had its Name from those ancient People. *Hennebergus* more properly derives the Name from *Oehlfisg*, *Olsany*, or *Oelsang*, *i. e.* a Place where Eels are caught. *Cromingius* says, it is from *Elst*, a Name given to Rivers by the *Goths*. It was built in 1239, by the Burghers of *Lubeck*, who obtain'd from the Knights, that it should enjoy the same Privileges and the same Laws that the Emperor *Frederick* II. had granted to *Lubeck*. The Master of the Order gave them for their Arms two Crosses and a Net, from the Arms of *Lubeck*. Their great Trade made it in a small Time one of the most considerable Cities on the *Baltick*. In 1454, they put themselves under the Protection of the King of *Poland*, and levelled their Castle, because the *Teutonick* Knights invaded their Privileges: It continued faithful to the *Poles* till 1525. *Albert* Marquis of *Brandenburgh*, and first Duke of *Prussia*, built an University here in 1542. In 1629, it was taken by the *Swedes*, who restor'd it in 1636. After this, they open'd their Gates to *Charles Gustavus*, King of *Sweden*; but it was restor'd again to the *Poles* by the Peace of *Oliva*: It now belongs to the King of *Prussia*; thô they never own'd that Prince till 1698, that General *Brant* laid Siege to it, and oblig'd them to surrender, having then but a small Garison. It is the chief Town of *Hockerland*, and lies near the *Baltick*. When *Stephen* King of *Poland* besieg'd *Dantzick* in 1577, he made *Elbing* the Staple of Trade. At that Time the *English* set up there, and brought their Cloths to it; and *Gustavus Adolphus* design'd also to make it the Staple during his *Prussian* Wars. This City is well built, and very clean. Many *English* trade here, thô their Number is abated since the Staple of our Cloth was fix'd at *Dantzick*. The Boors in the Neighbourhood of *Elbing* have as good Clothes and Houses almost as the Noblemen in *Courland*; and one cannot distinguish a Boor from a Burgher by their Apparel. The Country is Champagne and Level, like *Holland*, and as fruitful and well Peopled as any Part of that Province, *Amsterdam* excepted.

WARMIA, by some reckon'd the 4th Palatinate of *Polish Prussia*, is a Bishoprick, where the Gentry are exempt from the Regal Jurisdiction, and govern'd by the Laws of *Prussia*, under their Bishop, who is a Prince of the Empire. His Seat is *Heilsberg*, on the River *Aller*, 32 *English* Miles S. from *Koningsberg*. 'Twas built in 1240. *Frauenburgh*, or *Froubergh*, lies upon the Bay called *Frisch-Haff*, where the River *Schen* falls into it: It has a convenient Harbour, is 11 *English* Miles N. E. from *Elbing*, and as many from *Pillau*. The Cathedral Church of *Warmia* is here, of which the famous *Copernicus* was a Canon. *Braunsberg* lies betwixt *Marienburgh* and *Koningsberg*, upon the *Baltick* Sea, near the Bay of *Frisch-Haff*. 50 Miles E. of *Dantzick*, and 25 E. of *Elbing*. It has been morgaged to the King of *Prussia* for many Years, is populous, and has a famous University.

The Senators of the Palatinate of *Marienburgh* are, the Palatine and Castellan of that City.

CHAP. XV.

The Great Dutchy of LITHUANIA.

IT has *Muſcovy* on the E. ſome Parts of it on the N. E *Livonia* on the N. *Samogitia* on the N. W. *Ducal Pruſſia* and *Maſovia* on the W. *Little Poland* on the S. W. *Red Ruſſia* on the S. and the *Ukrain* on the S. E. This is the greateſt Province belonging to *Poland*. *Starovolſcius*, whoſe Opinion in this is moſt to be truſted, ſays, the Length of *Lithuania*, from the Borders of *Ducal Pruſſia*, which joins the Palatinate of *Troki*, in Long. 43. to the Frontiers of *Muſcovy*, or the Borders of the Dutchy of *Novogerod*, in Long. 54 is 660 *Engliſh* Miles; and the Breadth, from the Borders of *Red Ruſſia*, in Lat. 30. to the Borders of *Muſcovy* in 56. is 360 *Engliſh* Miles. In the Time of its Great Duke *Vitoldus*, it reach'd from the *Euxine* Sea to the *Baltick*. *Cluverius* ſays, the Length of it is, from the Fountains of the River *Polot*, in the Confines of *Livonia* and *Muſcovy*, to the Town of *Daſſow* near the *Black Sea*, 260 *German* Leagues; and the Breadth, between the *Memil* and the *Nieper*, 80. which makes *Lithuania* much larger than really it is; for it does not come near the *Black Sea* by many Miles. The Natives call it *Litwa*; the *Germans*, *Die Littawen*; the *French*, *La Lituanie*; the *Italians*, *Lituania*; and the *Poles*, *Litewsky*.

Whence the Name is deriv'd, is not certain; ſome will have it from *Lituus*, a Hunting-Horn, becauſe the Natives were given to Hunting; but this is too general. *Erafmus Stella*, a good Hiſtorian, ſays, That a Colony of *Pruſſians* ſettled here, under the Command of *Lituo*, their King's Son, in 573 whence the Country was called *Lithuania*; but this is alſo rejected, for the *Pruſſians* obtain'd this Place by Conqueſt ſince that Time. The *Poliſh* Hiſtorians generally agree, That *Palemon* flying from the Fury of *Attila* the *Hun*, left *Rome*, and came hither with a Colony of *Italians*, who call'd it *La Italia*, which was afterwards corrupted into *Lituania*. The *Lithuanians* are fond of this Origine, and think it confirm'd by the *Roman* Names of their Nobles, *Urſin*, *Column*, *Julian*, &c. But *Hartnock* ſays, it had its Name from *Littuo*, one of the *Alani*, who was one of their Dukes long before *Palemon*'s Time; and thinks this the more probable, becauſe the *Lithuanians* ſtill retain ſome Footſteps of the Name of thoſe People in their *Lithalani* and *Roxalani*; but the Account that *Ammianus Marcellinus* gives of the *Alani*, differing ſo much from that given of the *Lithuanians* by their beſt Authors, ſhows that they are not of one Nation; and their Language proves them to be of the ſame Origine with the *Pruſſians*.

We have no Account of this Country that can be depended on earlier than the 12th Century, when that People began to come out of their Woods, and to make a Figure in the World. In 1252, *Mendog*, a brave Man, headed his Countrymen, who, under his Conduct, recover'd their Liberty, and revolted from the *Ruſſians*. He afterwards became their Prince, civiliz'd them by good Laws, and in the Beginning of his Reign defeated the *Teutonick* Knights, and over-run all *Pruſſia*. He was ſucceeded by others that made Wars on the *Poles*, *Pruſſians*, &c. who invaded their Country. In 1301, their famous Prince *Godimin* refus'd to pay Tribute to the *Ruſſians*, and entring the Country of *Novogrod* with an Army, took *Volodomir*, and made all *Volhinia* ſwear Fealty to the Magiſtracy of *Lithuania*. He conquer'd all the *Ukrain*, *Pruſſia*, and a great Part of *Muſcovy*. In 1305, he built *Vilna*. In 1331, he invaded the *Tartars*, and recover'd *Podolia*. About this Time *Demetrius* Duke of *Muſcovy* ſent an Ambaſſador into *Lithu-*

Lithuania, to demand a Reſtitution of all thoſe Places and Provinces that belong'd to the Great Dukedom of *Ruſſia*. *Godimin* impriſon'd the Ambaſſador, march'd a great Army to *Muſcovy*, ſurpris'd the Czar in his Palace, and forc'd him to accept a Peace upon diſadvantageous Terms, *viz.* That the Bounds of *Lithuania* ſhould reach as far as *Moſcow*, and the River *Ugra*. In 1386, *Uladiſlaus Jagello*, Great Duke of *Lithuania*, was choſen King of *Poland*, on Promiſe that *Lithuania* ſhould be annex'd to *Poland*: But it was provided by the Articles of the Union, That *Lithuania* ſhould have their ancient Laws, Privileges, Senators, and Great Officers, continued. At this Time the *Lithuanian* and *Poliſh* Nobility ſwore Allegiance to the King and Queen of *Poland*, which was renewed in 1401, and 1414. but ſtill the *Poles* were oblig'd to ſend *Lithuanian* Princes to govern them. Afterwards, when the *Poles* deſign'd to join *Volhinia*, *Podolia*, and ſome other Provinces of *Ruſſia*, to the Crown of *Poland*, the *Lithuanians* oppos'd it with ſuch Vigour and Bravery, that it occaſion'd a long War betwixt the two Nations. At laſt, in 1566, the Differences were a little compos'd, and finally ended in 1569. The Articles were ſign'd by both People, in Preſence of Foreign Ambaſſadors, *viz.* *That the* Lithuanians *ſhould for ever diſclaim all Right or Pretence to the Provinces of* Polachia *and* Volhinia, *and Palatinate of* Kiow, *and never elect a ſeparate Duke or Governor; but upon a Vacancy, ſhould repair to the Place whither they ſhould be ſummon'd by the Archbiſhop of* Gneſna, *the* Inter Rex *of* Poland: *That in every Election, the* Lithuanians *and* Poliſh *Nobility ſhould have equal Freedom in Voting: That whoever, by a Majority of Votes of both Nations, ſhould be elected King of* Poland, *ſhould at the ſame Time be pronounc'd Great Duke of* Lithuania: *That the Election ſhould always be held in ſome Place near the Confines of both Countries: And that the Diet ſhould ſit in* Poland *and* Lithuania *by Turns*, &c. In 1654, and 1665, the Czar invaded *Lithuania*; upon which the King of *Poland* made Peace with *Sweden*, and drove the *Muſcovites* out of *Poland*. In 1667, 13 Years Truce was concluded betwixt the *Muſcovites* and *Poles*, on Condition, That *Blockz*, *Vitepſki*, and the *Higher Livonia*, ſhould be reſtor'd to *Poland*: That *Nowei*, *Vialiſi*, and *Sebiſch*, ſhould be excepted from the Palatinates of *Polockz* and *Vitepſki*; That the *Muſcovites* ſhould keep *Smolensko*, *Sevir*, and all the *Ukrain* beyond the *Nieper*; and that *Kiow*, after two Years, ſhould be reſtor'd to the Crown of *Poland*.

Of the CLIMATE *and* SOIL *of* Lithuania.

THE Air is extream thick and foggy, becauſe the Country is full of Woods and Lakes, there being one Forreſt of 100 Miles in Length. They have Store of Venniſon and Fiſh, and the Land is tolerably fruitful; but the extream Cold frequently ſpoils their Harveſt. *Lithuania* was overgrown with Woods, till the Reign of *Sigiſmundus* I. who burnt down many of them. His Example was follow'd by ſucceeding Kings, who us'd all Endeavours to cultivate this Country. Their Beaſts of all kinds are little, becauſe of the Cold. Beſides thoſe they have in common with *Germany*, they have Elks, Wild-Horſes, Wild-Oxes, or Buffalo's, Wild-Aſſes, and the Beaſts called *Uri*.

Of their COMMODITIES.

THE greateſt Trade of *Lithuania* is in Pitch, Tar, and Timber, which are tranſported to *Holland* and other Nations, for which they receive Salt and Wines. They are ſufficiently provided with all other Neceſſaries, have great Herds of Black Cattle, and conſiderable Flocks of Sheep, with Ermins, Sables, and all manner of Furs. They have great Plenty of Wax, Honey, and Pitch.

Of their TEMPER.

THeir Nobles are inſolent, proud, and domineering, and the Boors ſlaviſh, mean and cowardly, as has been mention'd already in the General Deſcription of *Poland*. In their Wars with *Poland*, they diſcover'd their barbarous and cruel Temper, deny'd Quarter to all Captives, rip'd up Women with Child, and murther'd Infants. They are treacherous to their Prince, re-

Digitized by Google

gardleſs of Oaths and Promiſes, and to this Day have an inveterate Hatred to the *Poles*. Dr. *Connor* ſays, he was aſſur'd at the Court of *Poland*, That Children, when expos'd or loſt, are frequently nurs'd by Bears, who are very numerous in thoſe Woods; and that one who had been nurs'd was kept in a Convent; his Countenance was frightful, and he had neither the Uſe of Reaſon nor Speech; he went upon all four, and often endeavour'd an Eſcape to the Woods: He was taught to ſtand, as we do Dogs, by placing his Body ſtraight againſt a Wall. Monſieur *Cleverskirk*, Ambaſſador from *Holland* to K. *W.* III. confirms this in a Letter to Dr. *Connor*, and ſays, That in *1661*, he ſaw a Boy in a Nunnery of 12 Years of Age who had been ſo nurs'd: He catch'd at one of his Silver Buttons, ſmell'd to it, and then leap'd to a Corner and howl'd. When he got any Bread, he leap'd upon a Bench, and walk'd on all four; then putting the Bread to his Noſe, he leap'd down to the Ground, and howl'd as before. He was not then brought to ſpeak, and had ſome Scars on his Face, occaſion'd by the Scratches of the Bear.

Of their APPAREL.

THE old *Lithuanians* wore raw Hides of Beaſts, Linen, and the inner Barks of Linden Trees, for Clothes. *Uladiſlaus Jagello* brought many of them to *Poland*, where he clad them with Woollen, and gave 'em Shoes. Their Nobles bought their Clothes ready made from other Nations. The Boors in many Places ſtill wear their ancient Habit. They eat Bread made of the Ears of Wheat unwinnow'd. Their Drink has already been accounted for in the Deſcription of *Poland*.

Of their LANGUAGE.

THE *Lithuanians* generally ſpeak the *Sclavonick*, and all their Pleadings in Courts of Judicature are in that Tongue. They have a great Mixture of *Poliſh*, and much Latin, which ſeems to confirm the Story of *Palemon*, formerly mention'd; ſome Inſtances of which are as follow: *Duonus*, *Duonum*, *a Gift*; *Ugnis*, *Ignis*, *Fire*; *Oras*, *Aer*, *Air*; *Saule*, *Sol*, *the Sun*; *Menuo*, *Menſis*, *a Month*; *Dienna*, *Dies*, *a Day*; *Roſa*, *Ros*, *Dew*; *Dieuas*, *Deus*, *God*; *Viras*, *Vir*, *a Man*, &c. The Latin Tongue is as common here as in *Poland*, and ſpoke by People of all Ranks.

Of their RELIGION.

NO Nation in *Europe* has been more bewitched with Idolatry: They worſhip'd Serpents, and many of them continued to do ſo till within theſe few Years; of which *Sigiſmund* Baron of *Herbeſtein* (in *Comment. Rer. Muſcov. P.* 84.) gives us this memorable Story, "Returning (ſays he) "lately from *Maſovia*, at *Troki*, a ſmall Town "8 *Engliſh* Miles from *Vilna*, my Hoſt ac"quainted me, That the ſame Year he had "chanc'd to buy a Hive of Bees of one "of thoſe Serpent-Worſhipers, whom with "much ado he perſwaded to worſhip the "true God, and kill his Serpent. Within "a while after, coming that Way, he found "the poor Fellow miſerably tortur'd and "deform'd, his Face wrinkled and turn'd "awry; and demanding the Cauſe, he re"ceiv'd this Anſwer, *That this Judgment "was inflicted on him for killing his God; and "that he was like to endure heavier Torments, "if he did not return to his former Worſhip.*" There are ſtill ſome Remains of this Idolatry in the Country; for in many Villages both in *Lithuania* and *Pruſſia*, the poor Boors keep Adders in their Houſes, to which they pay a ſuperſtitious Reſpect, thô they profeſs Chriſtianity, and fancy ſome great Diſaſter will certainly befal them, if thoſe Houſhold-Gods be hurt or injur'd. The ancient *Lithuanians* had alſo an Idol called *Percuns*, to whom they kept a Fire continually burning, with as much Caution and Diligence, as the Veſtal Fire was kept at *Rome*; and if the *Waidelot*, or Prieſt, ſuffer'd the Fire to go out, he was ſure to die for it. The like Ceremonies were perform'd in Remembrance of *Kiern*, one of their Princes, on the Top of a high Hill near *Dziewaltow*. Some think theſe Ceremonies were deriv'd from the *Roman* Colony that ſettled there under *Palemon*. They alſo buried their Dead, as *Caralewicz* informs us in his Hiſtory

Digitized by Google

ſtory of *Lith. Lib. 5. Cap.* 140. and expected a Reſurrection from the Aſhes, upon the coming of a ſtrange God to judge the whole Earth, from the Top of one of their Mountains. In 1386, *Uladiſlaus Jagelle*, their Great Duke, converted them from their Idolatry; for upon his marrying of *Hedwig*, Queen of *Poland*, he turn'd Chriſtian, and was baptiz'd at *Cracow* by *John* Biſhop of that See. When he firſt undertook the Converſion of the Pagans, he met with great Oppoſition; but when he cut down their tall Trees, the Temples of their Heatheniſh Gods, and the People ſaw that no Miſchief or Puniſhment befel him, they began to reaſon thus; Our Gods would never have put up this Affront, if they had been able to revenge it, and ſhew'd themſelves inclinable to liſten to *Jagello*'s Advice: Upon which the King built a Cathedral, and founded a Biſhoprick at *Vilna*, and the Queen gave Chalices, Veſtments, and other Ornaments, to 7 Churches in the Neighbourhood. At this Time many *Lithuanians* are of the *Greek* Church, thô more of the *Roman*. In *Vilna*, and ſeveral other great Towns, vaſt Numbers of the Inhabitants are *Lutherans*. They marry'd and unmarry'd as oft as they thought fit; and thô they thought it a Fault to lie with a Harlot, yet it was very ordinary and modiſh for their Wives to have Gallants, to whom their Husbands thought themſelves obliged, look'd upon them as their Aſſiſtants and Partners, and valued them more than their other Acquaintance. *Narimundus*, their Great Duke, is ſaid to have invented the Arms of *Lithuania*, which are, *Party per Pale, Gules* and *Azure*: In the former a *Warrior* arm'd Cap-a pee, brandiſhing a Sword over his Head, and riding a *Horſe Argent* in full Career; and in the ſecond the *Virgin Mary*, with our *Saviour* in her Arms, ſurrounded by a *Glory*.

The Dutchy of LITHUANIA.

LIthuania is divided by *Starovolſcius*, whom moſt Geographers follow, into *Lithuania Proper*, which contains the Palatinates of *Wilna* and *Troki*. The ſecond Diviſion is, according to *Hartknock*, *Little White Ruſſia*, which contains 8 Palatinates.

The Palatinate of VILNA.

IT is a little Palatinate, has that of *Breſlaw* on the E *Troki* on the W. *Samogitia* on the N. and the Palatinate of *Minſkow* on the S. It has its Name from the chief Town, which was built in 1305 by *Godimin*, the Great Duke of *Lithuania* In 1655, it was taken and plunder'd by the *Muſcovites*; but was after retaken by *Caſimir* King of *Poland*. It is ſeated upon the *Vilia*, a navigable River, where the *Wilna* falls into it, and lies 130 *Poliſh* Miles N. E. from *Cracow*, 48 N. from *Riga*, 70 N. E. from *Warſaw*, and 100 E. from *Smolenſko* This City is large, and indifferently populous; but the Streets are badly pav'd, and naſty: All their Houſes are of Wood, except the Palace of the Great Dukes of *Lithuania*, and ſome Merchants Houſes, which are of Stone. It has two Caſtles; that on a Hill is ancient, and almoſt ruin'd; but the other is a Pile of beautiful modern Architecture. The Churches are all of Stone, and are poſſeſs'd by thoſe of the *Roman* and *Ruſſian* Faith. The Cathedral ſtands in the lower Caſtle, where the Body of St. *Caſimir*, Canoniz'd by Pope *Leo* X. lies in a large Silver Tomb of great Value. Here is alſo a very large Bell, that requires 24 ſtrong Men to ring it. King *Stephen* founded the Academy in 1579, which was erected then into an Univerſity by *Gregory* XIII. There are 6 Profeſſors of Divinity, 5 of Philoſophy, 4 of Laws, and 7 of Philology. The *Muſcovite* Company here have a neat Warehouſe for their Ermins, Sables, and other Merchandize from *Moſcow*. Guns, and other Warlike Inſtruments, of excellent Workmanſhip, are made here. *Vilna* has the Honour of having the Tribunal for all *Lithuania*. *Alexander* King of *Poland* died here in 1506. The Citizens are exceeding poor and idle, Slaves to their Noblemen, and their Bellies. They are great Lovers of Garlick and Onions, which, with their ſmoaky Houſes, make half of them blind before they arrive to any conſiderable Age. They are great Drinkers, and quarrelſome; and if a Stranger be kill'd in any ſuch Riot, the Murderer is only to pay 16 Dollars as a Mulct. When a *Lithuanian* is ſlain, his Corps is preſerv'd till they can find the guilty

Digitized by Google

guilty Perſon, whom they cannot condemn without ſhewing him the Corps of the Deceaſed. They have no Hoſpital in that City, thô they need one more than any Place in *Europe*. The Streets are crowded with Swarms of Beggars. Other Towns are, 1. *Oſmian*, a Wooden Town, Capital of its Diſtrict, about 28 *Engliſh* Miles S. E. from *Vilna*, to which belongs a large Juriſdiction, with ſeveral eminent Towns. 2. *Braſlaw*, built of Timber, on a large Lake, with a Caſtle on a Rock. It has a conſiderable Juriſdiction, and lies 80 *Engliſh* Miles N. E. from *Vilna*. *Sanſon* and others make *Braſlaw* a particular Palatinate; but *Hartnock*, the moſt learned of all the *Poliſh* Writers, ſays otherwiſe. 3. *Wilkomitz*, upon the River *Swienta*: It's fortified, and has an ancient Caſtle, which the *Muſcovites* took in 1655. It lies N.W. from *Vilna*, on the Borders of *Samogitia*. The Cauſes of the Gentry are tried here. It has a very large Juriſdiction, in which are ſeveral conſiderable Towns, belonging to the King, Biſhops and Gentry. 4. *Ikazmia*, near a River of the ſame Name, about 12 *Engliſh* Miles S. E. from *Braſlaw*. 5. *Drizwiatz*, on a Lake near a River of that Name, 20 *Engliſh* Miles S. W. from *Braſlaw*.

The Arms of this Palatinate are *Argent* and *Gules*; in the former the Arms of *Lithuania*, and in the latter two Pillars of the firſt.

The Senators of this Palatinate are, the Palatine and Caſtellan of *Vilna*.

The Palatinate of TROKI.

IT has *Samogitia* on the N. *Ducal Pruſſia* on the W. the Palatinate of *Vilna* on the N. E. and that of *Novogrodec* on the S. The Senators are, the Palatine and Caſtellan. The chief Town is *Troki*. It was founded in 1321, by *Gedimin*, who made it his Seat. In 1655, it was taken by the *Muſcovites*, who plunder'd and burnt it, and maſſacred the Inhabitants with ſo great Cruelty, that the River on which the City ſtands was dy'd with Blood. It has a ſtrong Caſtle, and is ſeated on a Point of Land that ſhoots out into a Lake, and lies 16 *Engliſh* Miles W. from *Vilna*. It had formerly a ſtrong Wall, which was deſtroyed by the Knights of the *Teutonick* Order. It has a Caſtle in a Lake, fortified both by Nature and Art. Other Towns are, 1. *Grodno*, upon the *Memel*, S. from *Troki*. *Sigiſmund* III. built a Bridge over that River of Timber, ſo artfully contriv'd, that there is nothing in *Poland* comparable to it. The Caſtle was built by *Stephen Battori*, and is ſtrong. The Jeſuits have a College in this City. The General Diets of the Kingdom every third Year are kept here. The *Muſcovites* took it in 1655, and deſtroy'd it entirely; but now it is rebuilt, and has a good Trade. 2. *Lida*, the Capital of its Diſtrict, built with Wood, has a tolerable Caſtle, and a Court of Juſtice for the Gentry. 3. *Couna*, a ſmall Town, on the Confines of *Samogitia*, upon the Conflux of the *Memel* and *Wilia*, with a ſtrong Caſtle, founded on a Rock. Its Situation would make it impregnable if it were fortified. 4 *Upita*, is Capital of a large Diſtrict, where there are ſeveral Towns. 5. *Merecza*, built at the Confluence of the *Merecz* and the *Memel*, N. from *Grodno*.

The Senators are, the Palatine and Caſtellan of *Troki*.

The Arms are, in a *Field Azure* thoſe of *Lithuania*.

The 3d Polatinate is LITTLE WHITE RUSSIA:

IN Length about 200 Miles, and in Breadth 120. It is divided into ſix Parts, the firſt of which is,

NOVOGRODEC.

WHich is divided into the two Diſtricts of *Novogrodec* and *Slonim*. *Novogrodec* is the chief City, is built of Timber, and was the Appenage of the ſecond Sons of the Dukes of *Lithuania*. The Diet for the Great Dutchy of *Lithuania* is held by turns in this Place and *Minſki*. It is built on a Plain, has no Fortifications, and lies 12 *Engliſh* Miles S. from the *Memel*. Other Towns are, 1. *Slonim*, which has a Caſtle, and ſome other regular Fortifications lately built. The Diſtrict of this City was formerly a Dutchy. It lies 32 *Engliſh* Miles S. from *Novogrod*. 2. *Wolkowiſko*, is a large Town, on

Digitized by Google

on the Borders of *Podlachia*, S. from *Grodno*, and has a Court of Juſtice for the Gentry. 3. *Lacowicz*, famous for a very fair Palace, built by a Grand General of *Lithuania*, is well fortified after the modern Way. 4. *Myſza*, a Town with a Caſtle, ſeated on a Lake. 5. *Zlucz*, one of the largeſt Cities in this Country, on a River of that Name, 80 *Engliſh* Miles S. E. from *Novogrodec*. The Cathedral and Ducal Palace are of Stone. This City had not long ago a Prince of its own, with large Territories; but he was always Tributary to *Poland*, and is at preſent in Poſſeſſion of the Family of *Radzivil*. The three pitch'd Battles which *Conſtantine* Duke of *Oſtrog* gain'd over the *Tartars* near this Place, make it famous. 6. *Rozan*, a well built Town, with very fair Streets. 7. *Newwitz*, 60 *Engliſh* Miles E. from *Novogrodec*. *Nicholas Radzivil*, ſirnam'd the *Pilgrim*, founded ſome noble publick Edifices here. The River *Oſza* falls into the *Memel* near this Place.

The Senators are, the Palatine and Caſtellan of *Novogrodec*.

The Arms are, in a *Field-Azure* thoſe of the Great Dutchy.

The Palatinate of BRIESCIA, *or* POLESIA.

IT lies betwixt *Red Ruſſia* on the S. E. *Volhinia* on the S. *Mazovia* on the W. and the Palatinate of *Novogrodec* on the N. It is overgrown with Woods, and has many Lakes and Pools. It has its Name from the chief Town *Brieſcia*, which is a large Wooden City, near the Confines of the Palatinate of *Lublin*, on the *Bug*, where the *Muhawiecz* falls into it, which makes it ſtrong. The Caſtle is of Timber, but founded on a Rock. It lies 80 *Engliſh* Miles N. E from *Lublin*, and 120 E. from *Warſaw*. The Jews have their chief Academy here, to which they reſort from *Italy*, *Germany*, *Moravia*, *Sileſia*, &c. not only to ſtudy, but alſo to take Degrees in that Religion. There's a Palace of modern Architecture here, with Variety of pleaſant Gardens. 2. *Prinsko*, indifferent large, on the River *Pina*, which falls into the *Przpic*, that joins the *Nieper* on the Borders of the Dutchy of *Czernichow*. It lies 90 *Engliſh* Miles E. from *Breſcia*. The *Coſſacks* took, plunder'd and burnt it; ſo that little but the Ruins are now to be ſeen. The Inhabitants are induſtrious, and make frequent Journies into *Muſcovy* and *Germany* on Account of Trade. They are generally of the *Greek* Church, and have a Biſhop, who reſides here. 3. *Bialo*, S. W. from *Breſſci*, famous for a Palace built by the Dukes of the Family of *Radzivil*, which is now a College for inſtructing of Youth. 4. *Prepetow*, a Town with an old Caſtle, built on the River of the ſame Name.

The Senators of this Palatinate are, the Palatine and Caſtellan of *Brieſcia*.

The Arms are the ſame with the former, differing only by a *B* in the middle.

The Palatinate of MINSKO.

IS in the middle of *Lithuania*, has the Palatinate of *Mſciſlaw* on the E. that of *Witepſk* on the N. *Vilna* on the N. W. *Novogrodec* on the S. W. and *Rohaczow* on the S. E. The Capital is *Minsko*, a large Town, on the River *Swiſtocz*, in the middle of a Moraſs, with a double Wall, a ſtrong Caſtle, a very deep Ditch, and other Fortifications. Formerly the Diet was kept here alternatively with *Vilna* and *Novogrodec*. 2. *Boriſſow*, on the River *Berezina*, whoſe Courſe is S. E. After it has run through this Palatinate, and the Territory of *Rohaczow*, in Lat. 52 ½. it fell into the *Nieper*. The Caſtle is well fortified, and the Gariſon is very ſtrong, to prevent the Incurſions of the *Muſcovites*. It lies about 150 *Engliſh* Miles S. E. from *Vilna*. It was ruin'd in 1655 by the *Muſcovites*, and nothing rebuilt ſince but the Caſtle. 3 *Kordanow*, with a Caſtle, about 100 Miles from *Vilna*. 4. *Radoſkowiz*, which has alſo a Caſtle, *Sigiſmundus Auguſtus* muſter'd above 100000 Men here at once in 1568. 5. *Rohaczow*, the chief City of a Territory of that Name, lies near the *Nieper*, where the River *Odnicz* falls into it, 80 *Engliſh* Miles S. from *Mohilow*, and 160 from *Kiow*. 6. *Lohoiſko*, about 30 Miles from *Boriſſow*. 7 *Bobroiſko*, on the River *Berezina*. 8 *Odruczko*, with a Caſtle: It formerly gave Name to a Dutchy, whereof ſeveral

Digitized by Google

Noble *Ruſſians* had the Title. 9. *Mozyr*, on the River *Przipiecz*, where the *Tur* falls into it.

The Palatinate of MSCISLAW.

HAS that of *Minſki* on the W. *Witepſk* on the N. and the Dutchy of *Smolenſko* on the E. It is divided by the *Nieper*, is a very Woody Country, and the Frontiers towards *Muſcovy* are overflowed with Water: The Champagne Ground is generally fruitful; it abounds with Cattle of all Sorts, and has great Numbers of excellent Fowl: 'Tis divided into the two large Diſtricts of *Mſciſlaw* and *Modziria*. *Jagello* erected it into a Dutchy for his Brother *Simon*. The Capital is *Mſciſlaw*, which is a ſmall Town, on the River *Soſz*, near the Frontiers of *Muſcovy*, and therefore ſtrongly garriſon'd. It lies 64 *Engliſh* Miles S. from *Smolenſko*, and 72 E. from *Mohilow*. This Diſtrict was formerly a Sovereignty, but now reduc'd. It is famous for a great Victory obtain'd in 1514 over the *Muſcovites*, by *Conſtantine* Duke of *Oſtrog*; but in 1660, the *Muſcovites*, to revenge this Loſs, took the City, and maſſacred all the Inhabitants. 2. *Modzir*, is Capital of its Diſtrict, and built among Marſhes. 3. *Dambrow*, 14 Miles W. from *Smolenſko*, on the Confines of *Muſcovy*: It has a ſtrong Caſtle. 4. *Bychow*, 48 *Engliſh* Miles from *Mohilow*, upon the *Nieper*, has alſo a Caſtle. 5. *Koppſe*, with a Caſtle. 6. *Sklow*, both on the ſame River. 7. *Reczycza*, with a Caſtle. 8. *Viſzkorod*, about 12 *Engliſh* Miles from *Kiow*. 9. *Striſſin*, with a Caſtle, all on the *Nieper*. 10. *Mohilow*, is built on a Hill, the Foot of which is water'd by the *Nieper*: 'Tis large and well built, and one of the ſtrongeſt Towns of *Lithuania*. The *Muſcovites* took it in 1654, and kept it till 1656, when it was retaken by the *Poles*. It is noted for its Trade, and a fine College, built by the Jeſuits. The *Muſcovites* tranſport their Furs this Way into *Germany* and *Poland*.

The Senators of this Palatinate are, the Caſtellan and Palatine of *Mſciſlaw*.

The Arms are the ſame with thoſe of *Lithuania*, with an *M* in the middle.

The Palatinate of WITEPSK, *or* VITEBSKO.

IT has *Muſcovy* on the E. the Palatinate of *Poloczko* on the N. W. and W. and thoſe of *Minsko* and *Mſciſlaw* to the S. It had Dukes of its own till the Heireſs married *Olgerd*, the Father of *Jagello*, in 1359. It has its Name from *Witebsko*, its Capital, which is very ſtrong, becauſe it lies on the Confluence on the *Dwina* and *Wiezka*; by which Goods are tranſported to *Riga* in *Livonia*. It is about 48 *Engliſh* Miles from the Borders of *Muſcovy*, 64 E. from *Poloczko*, 100 N. W. from *Smolenſko*, and 300 N. E. from *Vilna*. It was often taken and retaken in the late *Muſcovite* Wars. It has two large Caſtles, well defended by Nature and Art, againſt the Incurſions of the *Muſcovites*, who have often been repuls'd here with great Loſs. It has always a Garriſon of 2000 Men. 2. *Orsha*, a large City, defended on the one Side with Paliſadoes, and on the other by the *Nieper*: It has a ſtrong Stone Caſtle, waſh'd by the River *Orſzca*, lies 72 *Engliſh* Miles W. from *Smolenſko*, and 48 N. from *Mohilow*. 3. *Czaſniki*, on the River *Ula*. 4. *Siewo*, with a Caſtle, about 24 Miles from *Czaſniki*. 5. *Lepio*, with a Caſtle, on a Lake, 28 *Engliſh* Miles from *Czaſniki*. 6. *Woronice*, with a Caſtle, on the River *Uſzcza*, about 12 Miles from *Poloczko*. 7. *Wielicz*, which was taken in 1573 by the *Muſcovites*, and retaken in 1579.

The Senators of this Palatinate are, the Palatine and Caſtellan of *Witebsko*.

The Arms are in a *Field-Vert*, thoſe of *Lithuania*.

The Palatinate of POLOCZKO.

IT lies in the N. E. Part of *Lithuania*, has *Muſcovy* on the N. and E. and the Palatinate of *Vitebsko* on the S. E. It is ſo call'd from the chief Town, on the Confluence of the *Dwina* and *Poleſa*, in Lat. 55 ½. Long. 48, according to Mr. *Moll*; but *Jaillot* places it in 53 ½. It was formerly very conſiderable;

Digitized by Google

ble; but in 1562, *John Basilowitz*, Great Duke of *Muscovy*, took it, and carry'd away most of the Inhabitants. *Stephen Battori* recover'd it in 1579, together with the whole Territory. It was formerly a Dutchy, and subject only to its own Princes. A *Russian* Prelate resides here. The Jesuits have a fair College here, built and endow'd by *Stephen Battori*. It has two Castles upon the *Dwina*, where the *Polesia* falls into it. It is the Bulwark of *Lithuania* against the *Muscovites*, who besieg'd it in vain in the last Wars. 2. *Usace*, 12 *English* Miles from *Polocz*, on a River of its own Name. 3. *Disna*, on the *Dwina*, tolerably fortified: It lies 24 *English* Miles from *Polocz*. 4. *Drissa*, upon the *Dwina*, 45 *English* Miles N. W. from *Polocz*.

The Senators of this Palatinate are, the Palatine and Castellan of *Polocz*.

The Arms are the same with those of *Lithuania*, with a *P* side-ways in the middle of the Coat.

CHAP. XVI.

SAMOGITIA.

IT is divided into three Governments or Captainships: It has *Lithuania*, the Palatinates of *Vilna* and *Troki*, on the S. E. *Courland* and *Semigallia* on the N. the *Baltick* on the W. and *Ducal Prussia* on the S. W. The *Estiens* were the ancient Inhabitants. This Province takes its Name from its Situation, which is low and marshy; for the Word *Samogitæ* signifies so much. It abounds with Lakes and inaccessible Mountains, and is much over-run with Woods, which afford great Quantities of Honey, purer than that of *Lithuania* or *Livonia*. Their Ploughs are wholly of Wood; and tho their Soil be fat and stiff, they are fond of those Wooden Ploughs to a Superstition. One of their Staroſta's design'd to introduce Iron Plough-shares; but the Season not proving so warm as formerly, they imputed it to the Change of their Ploughs; so that he was forc'd to allow them their former Ploughs, to prevent an Insurrection. Their Horses are very swift, but generally so small, that one would wonder they endure so much Fatigue. *Vitoldus*, Duke of *Lithuania*, in 1404, gave this Country to the *Teutonick* Knights; but in 1408, it was taken from them. After *Jagello*'s Death, in 1446, by a Treaty with *Poland*, they were possess'd again of this Dutchy; but in 1525, when *Albert* of *Brandenburgh* was made Hereditary Duke of *Prussia*, it fell to the Crown of *Poland*. In 1655, when the *Muscovites* had over-run the Palatinate of *Troki* with Fire and Sword, they durst not enter the vast Forrests of *Samogitia*. In the late Wars with *Sweden*, it was almost entirely ruin'd.

Of their MANNERS, RELIGION, *&c.*

MOst of the Inhabitants differ little in Manners, Habit or Language, from the *Lithuanians*; yet some of them still retain Part of their old Pagan Idolatry, which was the most ridiculous of any in *Europe*, especially in the Deserts, where they pay Devotion to a Four-footed Serpent, under the Name of *Givoste*. Few Families here are without Serpents for their Houshold-Gods, to whom they pay more than ordinary Veneration, tho' they profess Christianity. The Manner of the Pagan Sacrifices here about the End of *October* was as follows; Men, Women, Children, and Servants, met at the Place appointed, where a Cloth was spread upon Straw, with Loaves set in due Order, and between each Loaf a large Pot of Beer; then Beasts of divers kinds, and of both Sexes, were sacri-

Digitized by Google

fic'd after the ancient Cuſtom thus; Firſt the *Augur*, or Prieſt, after having mumbled over ſome Words, ſtrikes them on the Back, Belly, &c. with a Rod; then all that are preſent follow his Example, crying out, O *Zimiennick!* (for ſo they call their God) *Theſe Offerings we make to thee for protecting us ſo mercifully hitherto, and we moſt humbly implore thee to have the like Compaſſion on us for the future, and to preſerve us from Fire, Sword, Peſtilence, and our Enemies.* Which being ſaid, they immediately fall to eat, but firſt cut off a Bit from every Plate, and throw the Pieces about the Room, crying, O *Zimiennick! Graciouſly partake of our Sacrifices, and favour thy Adorers.* After which they eat and drink heartily, and ſo the Ceremony concludes. Theſe Sacrifices are ſtill obſerv'd by the Country People in ſeveral Places of *Lithuania* and *Ruſſia*. Chriſtianity was firſt preach'd here by *Meinardus* in 1200.

The Houſes of the Boors are low, and built long-ways, and for the moſt part of Wood, near Lakes or Rivers: They have an Hearth in the middle, and but one Room, which ſerves themſelves and their Cattle. The better Sort drink out of Horn Cups, and eat out of Wooden Platters. They have Plenty of extraordinary White Honey in their Woods, but little Wax; and they have alſo abundance of Elks.

The Length of *Samogitia* from E. to W. is 140 *Engliſh* Miles; but it is not ſo broad: It has no Palatinate, but 3 Captainſhips. The Senators are, the Biſhop, the Great Captain, or *Staroſt*, and the Caſtellan of *Samogitia*.

The firſt Government or Captainſhip is *ROZIENE*:

Whoſe chief Town is *Roſenia*, in Lat. 55 ½. Long. 41 ½. 'Tis ſmall, and ill built, and lies on the River *Dubiſt*, 48 *Engliſh* Miles N. from *Kowna*, 120 S. from *Riga*, and 108 W. from *Vilna*. The Aſſemblies of the Province are kept here.

2. *The Captainſhip of MIDNICK.*

The chief Town is of the ſame Name, and is the Seat of the Biſhop of *Samogitia*, who is Suffragan to the Archbiſhop of *Gneſna*. It is better built than the former, and ſeated near the Fountains of the River *Wirwitz*, 25 Miles N. W. from *Roziene*. 2. *Kowna*, on the River *Memel*, famous for a College of Jeſuits, and ſeveral conſiderable Monaſteries. This Town was formerly much frequented by *German* Merchants, who built many ſplendid Houſes of Stone and Brick, which the Inhabitants have imitated, and in ſome Things excelled.

3. *The Government of PONIEWISS.*

The chief Towns are, *Poniewiſs* and *Birza*.

The Senators of the Province of *Samogitia* are, the Biſhop, Staroſta, and Caſtellan.

Of LIVONIA.

SEeing a very inconſiderable Part of this Country belongs to *Poland*, we refer the Deſcription of it till we come to *Sweden*. *Dunsburg*, a ſtrong Town on the *Dwina*, is the only conſiderable Place in *Poliſh Livonia*; yet it has 3 Senators, *viz.* the Biſhop, Palatine, and Caſtellan of *Livonia*.

CHAP.

CHAP. XVII.

COURLAND.

THE Dutchy of *Courland*, which comprehends the Provinces of *Courland* and *Semigallia*, is bounded on the N. and W. by the *Baltick*, on the S. E. by the Great Dutchy of *Lithuania*, on the N. E. by *Livonia*, and on the S. by the Dutchy and Province of *Samogitia*. Its Length is, from *Memel* in *Prussia* to *Riga* in *Livonia*, about 200 *English* Miles. The Breadth is different; from the *Baltick* to *Lithuania* and *Samogitia* being in some Places 30, and in others but 24 Leagues.

Of the SOIL.

THis Dutchy is a plain champagne fruitful Country, and has always been well inhabited: It has many Woods. The Corn of *Courland* and *Livonia* is more valued by the *Dutch* than that of *Poland*, because it is better prepar'd here than in other Countries; for they dry their Corn in the Straw, as we do Malt, and afterwards thrash both together: But this consumes a great deal of Wood; therefore the King of *Sweden* has forbid it to be practis'd in his Dominions. According to some, *Courland*, *Semigallia*, and the District of *Pilten*, lie from Long. 45 to 50. and from Lat. 56 Deg. 5 Min. to 57 Deg. 5 Min. But Mr. *Moll* makes it from Long. 40 to 46

The Commodities of *Courland* are much the same with those of *Poland*, as Flax, Hemp, Honey, and Linseed, of which many Ship-loads are sent abroad; Tar, Masts, Timber of all Sorts, Pot-Ashes, Goat-Skins, *&c.* They have Plenty of Black Cattle and Horses. They carry their Goods down the *Dwina* to *Riga*, and export them by the *Baltick*. Many Authors say, That Herring-fishing was on these Coasts till 1313. after which they went to the *Danish* Coasts, then to those of *Norway*, and at last to the Coasts of *Great Britain*.

The RELIGION *of* Courland.

THE first Efforts to convert *Livonia* and *Courland* to the Christian Faith were made by *Ansgarius*, the *Danish* and *Swedish* Apostle, as *Adam* of *Bremen* informs us: Afterwards, about the End of the 12th Century, by the *Danish* King's Order, a certain Merchant built a Church there, but with little Effect, till *Waldemar* II. a succeeding King of that Nation, founded a Bishoprick in that Country: But Christianity gain'd little Ground here till about 1180, when *Meinhard de Segeberg* of *Lubeck* made further Advances in it, and ordain'd Bishop of *Livonia*, (which then comprehended *Courland*) by the Archbishop of *Bremen*.

To him succeeded *Berthold*, a *French Cistertian* Abbot, who in 1194 began to build *Riga*, and was Archbishop of it; but was kill'd the same Year in a Battle against the Infidels. Next one *Albert* was chosen in 1194, in whose Time the Order of *Livonian* Knights was instituted by the Pope, to further the Progress of Christianity here. The Provincial Master of the Order was chosen by the Great Chapter of *Prussia*. The Knights were called the *Order of Sword-Bearers*, and their Habits and Arms were a White Mantle, with a Sword on the Breast in *Pale*, and a Star *Gules* in Chief: But after their joining with the *Teutonick* Order, they took also their Habit and Cross.

Religion continued on the same Foot here till 1561, that *Gotthard Ketler*, then Master of the *Livonian* Order, turn'd Protestant.

The

Digitized by Google

The People are generally Lutherans; but there are a few Papists and Calvinists.

The late Duke, at the King of *Poland*'s Request, gave Leave to build two Churches for the Papists, one at *Mittaw*, the other at *Goldingen*. The Jesuits pretended to have bought the Curacy of *Mittaw*, and settled there; but the College was lately demolish'd; yet they still continue in the Country.

The Dutchesses of *Courland* have since 1645 been always Calvinists, and had a Church at *Mittaw*, where the Calvinists of *Livonia*, and the *English* Merchants of *Riga*, come to worship, there being no Liberty allow'd the Calvinists in the King of *Sweden*'s Dominions except at *Stockholm*, where the *French* Protestants have a Church.

Since the Reformation, there has been no Schism among them: The *Greeks* are tolerated, and also the *Unti*, who own the Pope; but the *Sociniani* are not tolerated. Some *Jews* from *Poland* and *Lithuania* have crept in here. The Clergy have no Tythes, but Land, and they have Money from the People when they confess. In some Places the Duke, and in others the Nobility, are Patrons of Churches.

The Families of the Gentry are very ancient, have great Privileges, and are exceeding jealous of suffering any upstart Nobleman to come among them; for they esteem nothing so much as ancient Families and Creations. There is scarce a Gentleman of Note who has not been a considerable Officer abroad or at home. The best Officers in *Poland* are generally *Courlanders*. Some of them are Princes and Counts of the Empire, and there's scarce a Family but may be Knights of *Malta*, because of their Antiquity. They enjoy the Privileges of Nobles in *Poland*, of which many Foreigners of great Quality have been ambitious, as the Duke of *Saxony*, who was in 1652 created a *Polish* Nobleman. In 1568, the Marquis of *Huntly*, in *Scotland*, was made a Marquis of *Poland*, and is the only one there.

Of the ancient State of this Country.

ABout the 9th Century, *Courland* was subject to *Sweden*, and paid them a small Tribute; but was not possess'd by 'em.

Baron *Blomberg*, the late Duke of *Courland*'s Minister, says, That *Courland* was not totally subdued till 1488, when it was conquer'd by the *Teutonick* Knights, who some Time before were sent thither by *Volquinus*, the 2d Great Master, tho' it had been attempted frequently; for in 1248, their 5th Master, *Detericus a Groningben*, took several Towns from them; upon which the *Courlanders*, fearing they might be forc'd to embrace Christianity, submitted.

In 1250, the 6th Master of the Order, *Andrew a Stuckland*, attack'd them so vigorously, that the *Semigallian* Pagans submitted to pay Tribute, and afterwards, by his Perswasion, *Mindog*, Duke of *Lithuania* and *Courland*, turn'd Christian, and was crown'd King of *Lithuania* by *Henry* Bishop of *Culm*, and *Albert* Archbishop of *Riga*, by Order from Pope *Innocent* IV. and among other Provinces, he restor'd *Courland* to the *Livonian* Order in 1252.

But notwithstanding this Concession, the *Courlanders* were not easily subjected or converted; for the following Masters of the Order had constant Wars with them about their Religion: But in 1488, the 17th Provincial Master, *Conrade Herzogenstein*, subdued the sturdy *Semigallians*; yet they gave frequent Disturbance to the Order afterwards.

After him they had 4 Absolute, instead of Provincial Masters. In 1513, *Walter Plettenburg*, Absolute Master, upon *Albert* Marquis of *Brandenburgh*'s resigning his Order to *Sigismundus Augustus*, King of *Poland*, obtain'd Leave from *Albert* to be free from his Subjection.

In the Time of *William Plettenburg*, Absolute Master, *Luther*'s Doctrine prevail'd in *Courland* and *Livonia*, particularly at *Riga*, *Revel*, *Dorpt*, &c.

The last Absolute Master was *Gothofred Ketler*, in whose Time, those Provinces not being able to resist the *Muscovites* under *John Basilowitz*, they divided into two Parts, of which *Revel* and *Esthonia* put themselves under the Protection of *Sweden*, and the rest united to *Poland*, under *Ketler*, who was thereupon made Hereditary Duke of *Courland* and *Semigallia* in 1558, by *Sigismundus Augustus*, King of *Poland*, on Condition that they should be held in Fee of the Republick. He was accordingly invested with them

Digitized by Google

them in 1561. and upon renouncing his Pretenſions to *Livonia*, had the ſame Privileges that were granted to *Albert* Marquis of *Brandenburgh*.

He was ſucceeded by his eldeſt Son *Frederick* in 1587, who dying without Iſſue, the Dukedom came to his Brother *William* in 1602, who returning from Baniſhment, was receiv'd by the *Courlanders* with great Joy. This Duke had but one Son, who was Godſon to our King *James* I. After his Death, his Son Duke *James* inherited the two Dutchies of *Courland* and *Semigallia* in 1639. This Prince was much given to building of Ships, and had 30 or 40 well rigg'd, half of them being Men of War, from 80, 50, 40, to 30 Guns. So that *Charles Guſtavus* of *Sweden* us'd to ſay, *My Couſin the Duke of* Courland *has too much for a Duke, and too little for a King. Guſtavus* afterwards broke the Neutrality agreed on, without any Ground, ſurpris'd and ſeiz'd the Duke and his Family, rifled his Treaſury, ruin'd his Country, and diſpers'd his Ships; by which the Duke ſaid he loſt Six Millions and a half of Rix-Dollars. His Ships diſcover'd the River *Semigal* in *Guinea*, and the Iſland of *Tobago*, one of the *Caribbes*, then uninhabited, where he built a Fort, and call'd it *Fort James*, after his own Name. He was at a vaſt Charge to cultivate and fortify this Iſland, which he enjoy'd without any Interruption for many Years.

But at length one *Lambſon*, a *Zeelander*, a very rich Man, one of the States of *Holland*, getting Poſſeſſion of a Corner of it, was, after much Diſpute, ſuffer'd to plant there, on paying a yearly Tribute to the Duke; but taking Advantage of the Wars betwixt the *Swedes* and *Poles*, and of the Duke's Impriſonment, he at laſt diſpoſſeſs'd him of the whole.

The *Dutch* being thus in Poſſeſſion, kept it, and the Duke, after many fruitleſs Endeavours with the *Lamoſones* and the States, finding neither of them inclinable to a Reſtitution, applied himſelf to King *Charles* II. of *Great Britain*, for Aſſiſtance, ſubmitted the Iſland to his Protection, and held it by Way of Grant from the Crown of *England*. Whereupon a Treaty was formally concluded; upon which *The King granted the Duke, and his Succeſſors, full Liberty of Trade and Commerce for ſuch Ships as properly belong'd to him and his Heirs, (but not to thoſe of his Subjects) in any Rivers or Havens within the Dominions of his Majeſty on the Coaſt of* Guinea; *as alſo to trade for Goods not exceeding the Value of* 12000 *l. Sterling per* Annum, *according to the Price they were firſt bought for on thoſe Coaſts from whence they were exported, with full Libe ty to build one or more Store-houſes to lay up Goods, under the Caſtles and Forts belonging to his ſaid Majeſty or Subjects on thoſe Coaſts; to hold and enjoy the ſaid Liberties as long as Friendſhip, Amity, and a good Underſtanding, continued between the ſaid King and the Duke, and their Succeſſors. And in Conſideration of this Conceſſion and Grant, the Duke made over to his Majeſty, his Heirs and Succeſſors, the Fort of* St. Andrew *in* Guinea, *and all other Forts, Fortifications and Sconces there, belonging to the ſaid Duke, together with all Guns, Bullets and Powder, and other Inſtruments of War belonging to the ſame.*

And the Duke agreed, That he and his Heirs ſhould pay 3 per Cent. *for all Goods imported or exported from any of his Majeſty's Ports in* Guinea.

Moreover, his Majeſty granted to the ſaid Duke, and his Heirs, &c. *that Iſland of* Tobago, *together with all Lands, Havens, Creeks, Rivers, and Profits to the ſame belonging, to be held and enjoy'd under the King's Protection.*

Provided always, That the ſaid Duke, &c. *ſhould not ſuffer any other beſide his Subjects, and the Subjects of the King, to abide in the Iſland, to ſettle Plantations, or build Houſes; but the King's Subjects ſhould have all the Privileges of the Duke's Subjects. Moreover, the Duke agreed and promis'd, That neither he nor his Heirs,* &c. *nor his Subjects, nor any for their Uſe, ſhould export any Merchandize or Product of the ſaid Iſland of* Tobago, *or import, otherwiſe than out of, or into ſome Ports belonging to* England *and* Courland, *or the Ports of the City of* Dantzick.

Moreover, for acknowledging that the Duke of Courland *did hold and enjoy the ſaid Iſland from his Majeſty, it was further provided and agreed, That when, and as often as the King of* Great Britain, *his Heirs,* &c. *ſhould ſo require it, or when he or they were engaged in a War againſt any other King, Prince or State, except the King of* Poland, *the Dukes of* Courland, *at their own proper Charge, from Time to Time, ſhould bring or cauſe to be brought, one good Mon-*

of

Digitized by Google

of War, furniſh'd with 40 great Iron Guns, to ſuch Ports, Station or Place, which his ſaid Majeſty, &c. ſhould name; into which Ship his Majeſty ſhould put Commanders and Seamen, and ſupply them with Food and Wages, under the Conduct and at the Expence of the ſaid King, ſo long as the ſaid Ship ſhould abide in his or their Service, which at one Time ſhould never exceed the Limits of a Year. For the Teſtimony and undoubted Confirmation of this Treaty, Charles II. *King of* Great Britain, *and the Duke of* Courland, *ſign'd and ſeal'd the above nam'd Treaty, Nov.* 17. 1664.

Upon this, the King wrote a Letter to the States, but without Succeſs, for they favour'd *Lambſon*'s Pretenſions. Afterwards the Count *d'Estree*, the *French* Admiral, took the Iſland, where he made a miſerable Slaughter of the *Dutch*, and oblig'd them to quit the Poſſeſſion of the Iſland.

Several Merchants and others ſollicited the King of *France* to grant them the conquer'd Iſland; but he refus'd it, declaring that it belong'd to a Neutral Prince, who did no body any Harm.

In 1680, King *Charles* II. of *Great Britain*, ſent a Letter to the Governor of *Barbadoes*, commanding him to aſſiſt the Subjects of the ſaid Duke to regain and repoſſeſs the Iſland; but the Duke's Ship which carried the Letter was betray'd to the Privateers of *Algiers* by the Commander. The Duke however ſent a Governor afterwards to *Tobago*, till, by the Aſſiſtance of the *Engliſh*, he might be able to eſtabliſh a Colony there.

In 1681, the Duke enter'd into a Contract with Captain *Pointz*, and granted him and his Company very advantagious Terms, *viz.* That the *Engliſh* under his Command ſhould poſſeſs 120000 Acres of Ground in that Iſland.

Duke *James* was ſucceeded by his eldeſt Son *Frederic Caſimir*, who died in *February*, 1698. and was ſucceeded by his eldeſt Son *Frederic Caſimir* II the preſent Duke, who was then not above 6 Years of Age.

The Dukes of *Courland* are Vaſſals to the Crown of *Poland*, and when any new King is elected, the Duke is oblig'd to ſend his Envoy to receive Inveſtiture, by having a Standard deliver'd him, with the Arms of *Poland* on one Side, and thoſe of *Courland* on the other. After which the Envoy is permitted to ſit down on the Throne, on the King's Left Hand, to cover his Head, and has great Civilities paid him.

This Duke has all the *Regalia* that the *German* Sovereign Princes have, and has Place in the Diet of *Germany*, above the Dukes of *Mecklenburg*. He coins Money in his own Name, and has ſupreme Juriſdiction over the Noblemen of his Country; only in ſome extraordinary Caſes, they may appeal to the Court of *Poland*.

He has a great Demeſne, of which his Revenue chiefly conſiſts, and keeps a very pretty Court, having all his Officers of State as other Princes; and he and his Nobility are able to raiſe 18000 Men.

This Dutchy, in caſe the Duke want Heirs-Male, is to revert to the Crown of *Poland*.

The Nobility and People are much inclin'd to Hoſpitality, which was the old Character *Tacitus* gave the *Germans* in his Book *De Moribus Germanorum*.

The Diet of the States is conven'd by the Duke as often as Affairs of State require it. He ſends his Letters of Summons to all his Staroſta's, with a Schedule of the Points to be debated, and requires them to cauſe Deputies or Repreſentatives of the Gentry to be forthwith elected in their reſpective Juriſdictions; upon which they are choſen, and furniſh'd with Inſtructions from their Electors how they ſhall behave themſelves, in like Manner as the Deputies of *Poland*.

Courland is divided into two Governments.

1. *The Government of* GOLDINGEN.

Goldingen is the chief Town of this Diſtrict, and of all *Courland*: It was formerly one of the Hans-Towns. It is ſeated on the River *Metaw*, 98 *Engliſh* Miles W. from *Windaw*, 60 S. W. from *Mittaw*, and 75 from *Riga*, in Lat. 56½. Long. 41. This City has a large Juriſdiction. 2. *Windaw*, call'd by the *Poles Kieſcz*, is a City and Palatinate: It has a Caſtle on the Sea, which was formerly the Reſidence of the *Livonian* Knights, and the Place where they conven'd their Aſſemblies: It has uſually a Garriſon of *Poles*, under the Command of the Duke of

Digitized by Google

Courland. It is one of the Sea Ports of *Courland*, and trades in Pitch, Tar, Wax, &c. 3. *Libau*, where the Duke's Ships are built, and has the greateſt Trade of any of his Towns. 4. *Angernund*, in a Bay of the *Baltick*, between *Riga* and *Windaw*. 5. *Pilten*, 22 *Engliſh* Miles N.W. from *Goldingen*, is a Palatinate, whoſe Gentry being Proteſtants, and offering to ſubmit to the King of *Poland*'s Protection, he endeavour'd to re-eſtabliſh a Popiſh Biſhop over them; upon which they alter'd their Reſolution, and forthwith ſubmitted to the Duke of *Courland*. They are the richeſt Gentry in all *Courland*. The principal Families are thoſe of *Meydel*, *Beher*, *Sacken*, *Mandewill*, &c. 6. *Durben*, S. from *Goldingen* Their other Towns are, *Erdwalen Grubin*, *Tuczkow*, *Frawenburgh*, *Uſchwend*, *Talſen*, *Candaw*, *Hoſenpot*, *Oendange*, and *Tuccum*, which belongs to the Government of *Tuccum*.

2. *SEMIGALLIA, which has* 2 *Captainſhips.*

1. The Captainſhip of *Mittaw*, the chief Town, which is ſituated on the *Mutza*, 22 *Engliſh* Miles S. from *Riga*, 16 N. from the Borders of *Samogitia*, and 60 Miles E. from *Goldingen*. It lies in Lat. 56½. Long. 43. It is the uſual Reſidence of the Dukes of *Courland*, and their Burial-place. They have a very fine Caſtle on the River *Aa*, which might be made navigable, if thoſe of *Riga* did not choak up its Mouth. It is well fortified with two Baſtions, ſurrounded by Marſhes, and defended by a ſtrong Gariſon. The City is large, and contains about 12000 Inhabitants. The Streets are no pav'd, becauſe they wanted Stone, till of late that they have found Quarries; ſo that it is now fortified with many Bulwarks. It was twice taken by the *Swedes*; but has been ſince regain'd, and is at preſent ſubject to its Duke. 2. *Bauske*, another ſtrong City, with a Caſtle, which was taken by Storm by *Guſtavus Adolphus*. They have a numerous Gariſon here. 3. *Selburg*, the chief Town of a Government Other Towns are, *Egypten*, on the Borders of *Lithuania*, *Dubro*, *Dalen*. *Schudding*, *Pilkal*, *Beher*, *Nerſten*, *Salas*, *Pozwole*, *Radziwilluki* and *Lunka*.

CHAP. XVIII.

Of SWEDEN.

OLaus Rudbeck is very poſitive, that this is the moſt ancient Kingdom of *Europe*, and that other *European* Nations are Colonies from thence; but few will believe either his Account, or that of *Joannes Magnus*, who fancies the *Swedes* have their Name and Deſcent from *Suenno*, the Son of *Magog*, the Grandchild of *Noah*, by his Son *Japhet*; but this Folly of tracing the Original of Kingdoms higher than is conſiſtent with Hiſtory, is not peculiar to the *Swediſh* Hiſtorians: Thoſe of moſt other Nations have their Share of it. *Puffendorf*, in his Hiſtory of *Sweden*, mentions the ſame Opinion of the Antiquity of his native Country; and that after the Deluge, it was inhabited before any other on this Side the *Mediterranean*. He thinks, their Curioſity to know the Reaſons of the Obliquity of the Sun's Courſe, and of the Length of the Days in Summer, might induce them to travel ſo far North: But at laſt tells us, he would not oblige any Man to take up with his Conjectures, and indeed they ſeem to be but ill founded; for it is certain, that all ancient Colonies were from the E. and S. to the W. and N. and that when the more Southerly and fruitful Places were ſtock'd

Digitized by Google

with People, ſome were oblig'd to ſeek their Fortune in the Northern Countries.

The moſt probable Account is, That the *Swedes* had their Name from the *Suiones*, mention'd by *Tacitus* in *Lib. de Moribus Germ. Cap.* 44 & 45. whom he places beyond the *Suevi*, who dwelt in the N. of *Germany*, betwixt the *Elb* and the *Weiſſel*. He ſays, the Seat of the *Suiones* was in the Ocean, and beyond them, and that there was a ſtill Sea, which he thought ſurrounded the Earth. This Account agrees beſt to the *Peninſula* of *Scandinavia*.

Loccenius Antiq. Lib 1. *Cap* 1. ſays, the *Swedes* were ſo called from their Military Bravery; for *Suen* in their Language ſignifies a ſprightly Youth. *Scheffer us*, and others of their Antiquaries, are of this Opinion.

Sweden is bounded on the N. by *Norwegian Lapland*, on the N E. by *Muſcovite Lapland*, on the E. and S. E. by *Muſcovy*, on the S. by *Poland* and the *Baltick*, on the S. W. by the *Sound* and the Gulph of *Schaggar Rauk*, and on the W. by *Norway*, from which it is ſeparated by unpaſſable Mountains

The Latitude is from the moſt Southerly Part of *Schonen* in 56 Deg. to the Borders of *Norwegian Lapland* in 69. The Longitude from the moſt Weſterly Place of the Government of *Bahus* in 32. to the Eaſt Side of the Lake *Onega* in 35. according to Mr. *Moll*; but in 62 according to *Jaillot's* Maps, with whom *Ozanam* agrees; for he makes *Archangel* in the ſame Longitude that *Jaillot's* Maps do.

The Extent of this Kingdom in Length, according to *Jaillot*, is 900 *Engliſh* Miles. Mr. *Moll* makes it 660. *Du Pleſſis* reckons its Breadth, from the S Parts of *Schonen* to the N. Sea, 340 Leagues, or 1020 *Engliſh* Miles; and its Length, from the Weſterly Parts of the Government of *Bahus*, to the Eaſterly Places of *Ingria*, 780. *Brietius* makes the Breadth, from *Chriſtianopel* in Lat. 56. to the Mouth of the River *Paes*, that runs into the Northern Ocean in Lat. 70. 840 *Engliſh* Miles: But *Brietius* is miſtaken, when he makes *Chriſtianopel* the moſt Southerly Place of *Sweden*, and likewiſe in making its Latitude 56 Deg. when it is more than 57. and by extending its Breadth to the Mouth of the River *Paes*, he makes a great Part of *Norwegian Lapland* belong to *Sweden*. He makes the Length of it 750 Miles. The true Breadth is, from Deg. 56 to 69, 780. But many Abatements are to be allow'd for ſeveral Seas, many great Lakes, ſome of 'em above 80 *Engliſh* Miles long, and 20 broad, which, together with the Rocks, Woods, Heaths and Moraſſes, make the habitable Part of this large Kingdom not very great.

Of the ancient INHABITANTS.

THE Ancients made *Scandinavia* an Iſland of unknown Extent; and all other Places N. of the *Baltick*, which *Tacitus* calls *Mare Suevicum*, they make Iſlands: But *Mela* and *Pliny* call the *Baltick*, *Sinus Codanus*; and *Ptolemy* calls that Part of it into which the *Weiſſel* falls, *Sinus Venedicus*. *Pliny* quotes *Xenophon Lampſacenus*, who ſays, That *Scandinavia*, which he call'd *Baltia*, was an Iſland of vaſt Extent. *Jornandes de Reb. Get. Lib* 37 *Cap.* 2. names it *Scanzia*, and ſays, it was a Nurſery of People, and Seminary of Nations; and that the *Goths*, who overran the *Roman* Empire, came from thence.

The *Hilleviones* inhabited the E. and S. Parts of the *Dofrine* Mountains, which ſeparate *Norway* from *Sweden*. *Pliny* calls thoſe Mountains *Sevo*, or *Sulvo*, and ſays, they are as large as the *Riphean* Mountains. Their Seat probably was in *Schonen*, *Bleking*, *Halland*, and the neighbouring Places; for he ſays, they poſſeſs'd 500 Villages.

We have ſpoken already of the *Suiones*. The *Scritofinni* of *Paulus Diaconus*, the ſame with the *Scretofenna* of *Jornandes*, and the *Scrithifinni* of *Procopius*, probably dwelt in *Finmark* and *Norwegian Lapland*. *Pliny*, *Lib.* 14. *Cap.* 13. ſpeaks of a large Iſland, which he calls *Enningia*, but ſhould be read *Finningia*. He calls the Inhabitants *Fenni*, which is the modern *Finland*. *Brietius* and *Cluverius* make the Gulph of *Riga* *Pliny's* *Sinus Clilipanus*, and others make it that of *Livonia*. The *Carbones* were planted in *Carellia*, and the Country betwixt the Lakes *Ladoga* and *Onega*. The *Scyrri* reſided on the E. Side of the Gulph of *Bothnia*; and the *Pharonæ* lay N. from them, on the W. of the *White Sea*, anciently called *Sinus Grandivicus*.

Pliny ſpeaks of many Iſlands in the *Baltick* that were viſited by the *Roman* Arms, and

Digitized by Google

and ſays, the moſt remarkable was *Faboria*, or *Burchania*, which probably is that now called *Borcum*.

The *Goths* are by all the *Swediſh* Hiſtorians plac'd in *Scandia*, and reckon'd the Poſterity of *Magog*, the Father of all the *European Scythians*, who in *Ezek.* 28. 2. is call'd the Chief Prince of *Moſech* and *Tubal*, or the Prince of *Rhos*, *Meſech*, and *Thubal*. *Bochart* ſays, the Hebrew will allow this Reading, and that the 70 Interpreters, *Symmachus*, *Theodotion*, and *Proclus*, read it ſo; and approves of St. *Ambroſe*'s Conjecture, who from this Place infers, that the *Goths* had the ſame Original with other *Scythians*.

Cluverius makes the *Gothini*, who dwelt near the Fountains of the *Weiſſel*, to be thoſe that over-run the *Roman* Empire, and to be the ſame with the *Goths*, and calls *Jornandes*'s Account fabulous, who places the *Goths* in *Scandia*: But *Cluverius* is thought to have done this out of Emulation and Reſpect to his own Country; for his Opinion ſeems not probable, for Reaſons which ſhall be mention'd anon. The Account of the *Goths*, that bids faireſt for Truth, is, That they were call'd by Strangers *Got*, or *Guten*, for their Humanity or Hoſpitality, which is obſerv'd in the Northern People by *Tacitus*: And *Howell* obſerves. That others were nam'd *Zuadi*, and *Thaifal*, for the contrary. Whether the *Goths* were planted here before the Arrival of *Woden*, is not certain, though ſome will have it ſo, and that they ſent Colonies to *Aſiatick Scythia*, and built a City call'd *Aſgard*, near the Lake *Meotis*, where *Woden* was King; but came from thence, and ſettled in *Scandia*. Whatever may be in this, it is certain that both *Scandia*, *Pontus*, and *Thrace*, &c. had People of the ſame Name; and that on the Sea-Coaſts of the *Baltick*, they ſpeak at this Day the Language which was ſpoken by the ancient *Getæ*, who liv'd about *Pontus*, and the Northerly Parts of *Aſia*, as the Account which *Ovid* gives of the Language of that People proves, and the Humours and Manners of the *Scandian Goths* did agree with thoſe of the *Aſiatick*; but the Queſtion is, Whether the *Scandian Goths* were Colonies of thoſe about *Pontus*, and the *Palus Meotis*, &c.? Or if the *Aſiatick Goths* derive their Origine from *Scandia*? The laſt is moſt probable, becauſe the vaſt Countries in *Scandia*, in the Northerly Parts of *Germany*, and the Iſlands ſpeaking that Language, ſeem to prove, that thoſe of *Aſia* being few in Number, compar'd to the *Goths* in *Scandia*, and the neighbouring Places, were Colonies from thence. Beſides, the People that liv'd near the *Aſiatick Goths* ſpoke a quite different Language, and were more numerous by much than they. *Andreas Buræus*, a *Swede*, ſays to this Purpoſe, That the Laws of the *Weſtrogoths*, which were made about the Time when Colonies of thoſe People went to *Aſia*, *Thrace*, &c. ordain, That no *Goth*, who ſhall leave his native Country *Scandia*, and plant in *Greece*, *Thrace*, *Pontus*, and other Places abroad, ſhall have any Right or Pretenſion to the Lands or Goods they left in *Scandia*, unleſs they return and ſettle in their own Country. He ſays, thoſe Laws are much the ſame with *Iſidore*'s Laws of the *Viſigoths* in *Spain*; and concludes, that they were borrow'd from thoſe Laws of the *Goths*, their Countrymen, in *Scandia*; and that the *Swediſh* Hiſtory, and thoſe of other Nations, ſhew, that many went from *Scandia* to viſit their Friends and Relations in *Thrace*, &c. *Jornandes*, in his Hiſtory of the *Goths*, writes, That *Rudolphus*, the 85th King of *Sweden*, left his own Kingdom, and viſited *Theoderick*, King of the *Goths* in *Italy*; and *Valeſius* out of *Laxius* tells us, That it was ordinary for many from *Sweden* to travel to *Illyricum*, *Italy*, and other Places, to viſit the *Goths*, their Countrymen. To prove this Point farther, *Buræus* ſays, 'tis evident from Hiſtory, That after the *Goths* ſettled in *Spain*, they entertain'd a Correſpondence with the *Goths* in *Scandzia*, as *Sweden* was called in thoſe barbarous Times; and that ſeveral Noblemen from thence ſubſcrib'd the 8th Council of *Toledo*. Another great Proof of this is, That the Name of *Goths* continues in no Place except *Sweden*, where we have *Gothland* in the *Peninſula*, and an Iſland of that Name.

Grotius, in *Prolegomenis ad Hiſtor. Gothorum*, *Vandalorum*, &c. conjectures, That about 300 Years before our Saviour, the *Goths* went out of *Scandia*, or *Gothland*, into the Continent of *Germany*, where they left a Colony, which *Tacitus* calls *Gothones*. Before that Time, they had Peopled the Iſlands of the *Baltick*, and the Sea Coaſts,

Digitized by Google

from whence they made Inroads into *Dania*, and the *Palus Meotis*, before the Time of the *Antonini*. *Spartianus* ſays, the *Gothi* and *Getæ* were the ſame People. *Jornandes* thinks, that in the Reign of *Philip*, they came into *Moeſia* and *Thrace*; and thoſe who reſided in *Moeſia*, were called *Gothi Minores*. *Grotius* is poſitive, they had the Name of *Oſtrogothi* and *Weſtr gothi* in their own Country, which is probable from *Jornandes*'s Deſcription of *Scandi*. The *Jutes*, *Getes*, or *Goths*, who with the *Saxons* and *Angli* conquer'd *England*, were of *Scandian* Original; and *Ptolemy* ſays, in *Scythia*, or *Cymmeria*, there were People called *Jotæ*, the ſame with the *Getæ* or *Goti*.

Procopius affirms, That the *Gepidæ* were of *Gothick* Extract. *Jornandes* does the like, and gives this Account of their Original, That *Beric*, a King of the *Goths*, with three Veſſels, ſail'd from *Scanzia*; and one of 'em ſailing ſlower than the reſt, the Crew was on that Account call'd *Gepidæ*; for that Word ſignifies ſo much. They landed in an Iſland of the *Viſtula*, and afterwards proceeded further.

Procopius is alſo of Opinion, That the *Vandali* were *Gothick* Nations, and ſpoke that Language; the Truth of which he had good Occaſion to know, for he was acquainted with *Gelomir* their King, and many of his Nobles, that were brought Priſoners to *Conſtantinople*.

The HISTORY *of* Sweden.

Rotius gives an Account of *Swediſh* Kings 3000 Years before Chriſt; which Form of Government is pretended to have continued till the 100th Year after the Foundation of *Rome*; then it became a Republick, which laſted 250 Years. Monarchy was re-eſtabliſh'd by *Erick* II ſirnam'd the *Wiſe*, who is ſaid to have had 21 Succeſſors, till *Anno Chriſti* 455. *John Magnus* continues this Liſt till the Time of *Biorn*, who was contemporary with *Charlemagne*; but it is certain, their firſt Kings were rather Judges or Captains, and each Canton of *Sweden* had one of them. It is moſt reaſonable, ſays the Author of the *Revolutions of Sweden*, to think that their Hiſtorians, in order to make a long Catalogue of Kings, made thoſe Princes that at the ſame time liv'd in different Provinces to ſucceed one another. In thoſe fabulous Times, their Hiſtorians make their Kings all Giants, Magicians or Robbers, who had no Idea of Honeſty or Virtue: Cruelty and Valour were the ſame thing among them. They thought it unworthy of their Character to marry any Princeſs, except they had firſt raviſh'd her; and none of them could pretend to Courage till they kill'd a ſavage Beaſt in View of the People, or ſurpris'd and aſſaſſinated their Enemy in his own Houſe. Such Actions entituled them to the Name of Heroes during Life, and to Deification after Death.

Puffendorf owns thoſe Antiquities of *Sweden* to be fabulous; and that the ancient *Swedes* had no *Epocha* from whence they date their Hiſtory; ſo that the Catalogue of their Kings is not Authentick. Their ancient Hiſtorians were Poets, and that Part of their Hiſtory is form'd from old Ballads and fabulous Legends. Theſe Poets embelliſh'd their Stories with Allegorical and Figurative Expreſſions, which Poſterity miſtook for Fact; and *Joannes Magnus* ſtrives to outdo *Saxo Grammaticus* in Fiction and Romance. *Meſſenius* ſays, That all their Hiſtory, before the Nativity of Chriſt, is fabulous.

They alledge, That 60 Years before Chriſt, the famous *Woden*, or *Othin*, was driven out of *Aſia* by *Pompey the Great*. After which *Woden* and his Followers conquer'd *Ruſſia*, the *Saxons* and *Danes*, and laſt of all *Norway* and *Sweden*, 24 Years before our Saviour. He kept *Sweden* for himſelf, and all the other *Scandinavian* Princes were to do him Homage. Thus for many Years after, the King of *Denmark* us'd to hold the King of *Sweden*'s Bridle, and the King of *Norway* his Stirrop. Many Northern Nations are ambitious to derive their Extraction from this *Othin*. He introduc'd the Heathen Worſhip, Witchcraft and Magick, and the Cuſtom of raiſing great Heaps of Earth on the Graves of Perſons of Note, and of engraving Funeral Inſcriptions on Rocks and Stones, which yet remain in many Places of the Country. *Frotho Jorge* ſucceeded, who is ſaid to have cover'd the Temple at *Upſal* with Gold, and ſurrounded its Pinacle with a Golden Chain. After him ſucceeded *Nirod*, *Sigtrug*, *Aſmund*, *Uffo*, *Hinding*,

Digitized by Google

Hinding, *Regner*, *Halvard*, *Helgo*, *Attilus*, *Hether*, *Roderick*, surnam'd *Singabund*, *Hegmor*, *Hogrin*, *Frick*, *Haldan*, *Sivand*, *Erick*, *Haldan*, *Ungrin*, *Reginald*. About 588, *Rodolph* was King of the *Goths* in *Scandinavia*, and defeated by the *Angles*, who poſſeſſing themſelves of that Kingdom, he fled to *Italy*, to *Theodoric* King of the *Goths*. *Frotho* ſucceeded him, and was follow'd by *Holmius*, *Suercher*, *Valander*, and *Viſtar*, who was burnt by his own Son. *Damaldar*, another King, was ſacrific'd by his Subjects to their Idol at *Upſal*. Thoſe who ſucceeded, were *Domar*, *Dagner*, *Duger*, and *Aginus*, whom his Wife hang'd. After him came *Alrick*, *Erick*, *Ingo*, *Hugler*, *Haco*, *Hrunder*, *Haequin*, *Ring*. In his Time the Battle of *Brovalla* was fought, where 30000 *Danes* and 12000 *Swedes* were kill'd. He ſacrific'd 9 of his Sons to the Idol at *Upſal* Next to him came *Egillus*, *Other*, *Odel*, *Oſtan*, *Ingword*, *Amund*, *Sivard*, and *Herot*, who was cruel to his Nobility: And for his Male-Adminiſtration, *Regner* King of *Denmark* made War upon him. When he was reduc'd to Extremity, by the Advice of his cruel Daughter, who had murther'd her Husband and his Brother, he burnt himſelf, with her and his whole Family, except his Son *Olaus*, in his own Palace; and *Regner* King of *Denmark* made his own Son *Bero*, or *Biorn*, by *Herot*'s Daughter, King of *Sweden*.

The firſt Piece of probable Hiſtory we meet with is, the Preaching of the Goſpel in *Sweden* in this *Bero*'s Reign, by *Anſgarius*, a Monk of *Corbey*, in 829, who was ſent by the Emperor *Ludovicus Probus*. The *Swedes* baniſh'd *Bero*, becauſe he would not turn Chriſtian. *Armund*, another of their Kings, perſecuted the Chriſtians, and was alſo baniſh'd: Then they invited *Olaus* from *Werweland*, who, to ſecure his Title to the Crown, marry'd his Son *Ingo* to *Regner*'s Daughter. He was converted by *Anſgarius*, and quietly poſſeſs'd the Kingdoms of the *Goths* and *Swedes*, till ſome of his Heathen Subjects ſacrific'd him to their Idol at *Upſal*. *Ingo* was kill'd in his War againſt the *Ruſſians*. After him ſucceeded *Erick Weatherbal*, who was skill'd in Witchcraft; then *Erick Segerſal*, who conquer'd *Finland*, *Courland*, *Livonia*, *Eſthen*, *Holland*, and *Schoen*, and drove King *Suens* out of *Denmark*: *Erick*'s Son *Stenchil* turn'd Chriſtian, burnt down the Idol at *Upſal*, and forbad Idolatry on Pain of Death, which ſo enrag'd his Subjects, that they burnt him and two Prieſts near *Upſal*. His Brother *Olaus*, and many of his Subjects, were converted by ſome Miniſters from *England*, who perſwaded him to grant a yearly Tribute, call'd *Romeſcot*, to the Pope, to maintain the War againſt the *Saracens*. He dethron'd the King of *Norway*, and made an Union betwixt the *Goths* and *Swedes*, who formerly had been great Enemies.

After him came his Son *Amund*, in whoſe Reign Chriſtianity flouriſh'd. His Brother *Amund Slemme*, a careleſs Prince, ſucceeded, and, with the greateſt Part of his Army, was ſlain by *Cnut*, King of *Denmark*. After his Death, the *Goths* and *Swedes* diſagreed about a Succeſſor. At length it was concluded that *Haquin*, who was then old, ſhould be King during his Life, and that *Stenchil* ſhould ſucceed. *Haquin* defeated the *Danes* in three Battles. After *Stenchil*, came *Ingo the Pious*, who deſtroy'd all Monuments of Idolatry at *Upſal*, for which his Pagan Subjects baniſh'd him, and then murther'd him in *Sbonen*. After him were *Halſtan*, *Philip*, and *Ingo*, who had no Sons, but two Daughters, *viz. Chriſtina*, who was married to St. *Erick* and *Margaret* to *Magnus* King of *Norway*. This *Ingo* was poiſon'd by the *Eaſt-Goths*.

After this the *Eaſt-Goths* choſe a King for themſelves, call'd *Ragwald Knaphaſde*: He was very ſtrong, but fooliſh, and was ſlain by the *Weſt-Goths*. The *Eaſt-Goths* elected *Suercher* II. a good King, who was murther'd by one of his Servants; then they choſe his Son *Charles*; and *Erick* was King of the *Swedes*: But they and the *Goths* being ſenſible of the Neceſſity of an Union among them, they agreed, that *Erick* ſhould rule both Kingdoms; that *Charles* ſhould ſucceed him; and that their Heirs ſhould reign by Turns. This *Erick* reduc'd the *Finns*, and oblig'd them to be Chriſtians. He collected a Body of Laws from the ancient Conſtitutions of the Kingdom, which was called *St. Erick's Law*. *Magnus*, the King of *Denmark*'s Son, ſlew him, and defeated his Forces; but the *Swedes* and *Goths*, headed by *Charles*, the Son of *Suercher*, rallied and kill'd all the *Danes*, with their King, and his Son; and thus *Charles* became alſo King of

Den-

Denmark, and reign'd with general Applauſe, till *Canut*, the Son of *Erick*, ſurpriz'd and kill'd him. He alſo routed the Forces commanded by *Koll*, the Brother of *Charles*, and kill'd himſelf upon the Spot. *Canut* reign'd ſucceſsfully 23 Years. After his Death, *Suercher*, the Son of *Charles*, was made King; but *Erick*, the Son of the laſt deceaſed King, being his Rival, the Difference was compos'd thus; *Suercher* was to be King during Life, and *Erick* to ſucceed; but *Suercher*, contrary to the Agreement, murther'd all the Sons of *Canut* except *Erick*, who fled to *Norway*, from whence returning with ſome Forces, and being join'd by the *Swedes*, he oblig'd *Suercher* to flee to *Weſt-Gothland*. *Waldemar* King of *Denmark* ſent him 12000 Men, with which he endeavour'd to recover his Kingdom, but was routed. He afterwards invaded *Weſt Gothland*, where he was defeated and ſlain. *John*, the Son of *Suercher*, ſucceeded *Erick*, who reign'd but three Years.

After his Death, *Erick the Liſper*, Son to the former *Erick*, was King. To bring the potent Family of the *Tolekungers* over to his Intereſt, he married his three Siſters to three of the Chief of them, and married one of their Daughters himſelf; but the *Tolekungers* being now more potent by this Alliance, they rebell'd, and defeated the King, who fled to *Denmark*; and being reinforc'd there, he return'd, and routed *Canut Tolekunger*, and caus'd him and his Son *Halinger* to be ſlain, which reſtor'd Peace to the Kingdom. In his Reign *Gulielmus Sabinenſis*, the Pope's Legate, firſt introduc'd the Celibacy of the Clergy here. *Erick* forc'd the *Finns* to return to their Obedience, and to profeſs Chriſtianity, in 1250. *Waldemar*, this King's Siſter's Son, was made King during his Minority, and the Adminiſtration was in the Hands of *Birger Terle*, his Father. He augmented the Laws, and govern'd with much Wiſdom and Goodneſs. This *Birger* was made a Duke, being only an *Yerl*, or Earl, before. He ruin'd the factious Family of the *Tolekungers*: He married his Son *Waldemar* to *Sophia Erick*, the King of *Denmark*'s Daughter, and founded *Stockholm*. He died in 1266, after he had been Regent 13 Years, and left 4 Sons, *viz. Waldemar* King of *Sweden*, *Magnus* Duke of *Sundermanland*, *Erick* of *Smaland*, and *Benedict* of *Finland*. *Waldemar* went in Pilgrimage to *Rome* and *Jeruſalem*, and left the Government to his Brother *Magnus*. Upon his Return, he accus'd him of a Deſign to ſet up for himſelf; and the Aſſembly of the States not being able to compoſe thoſe Differences, *Magnus* and *Erick* retir'd to *Denmark*, return'd with a great Army, routed *Waldemar*, and made him Priſoner. Upon this the States declar'd *Magnus* King of *Eaſt* and *Weſt Gothland*, and *Dalbi* fell to *Waldemar*'s Share. The *Danes* ſided with *Waldemar*, becauſe *Magnus* did not pay the Subſidies promis'd, and ſo the War was renew'd, till the *Danes* having receiv'd Satisfaction, they left *Waldemar* in the lurch, who was thereby oblig'd to reſign the Kingdom to *Magnus*.

Magnus was crown'd at *Upſal* in 1279, and aſſum'd the Title of King of the *Sweates* and *Goths*, which had not been us'd ſince the Time of *Olaus Skotkonung*. The *Tolekungers* began anew to make Diſturbances, killed *Ingemer Danſchkop*, the King's Favourite, took *Gerhard* Earl of *Holſtein*, the King's Father-in-Law, Priſoner, and beſieg'd the Caſtle of *Jenkoping*. The King diſſembled his Diſpleaſure, and made them fair Promiſes; but he afterwards accus'd them to the States of High-Treaſon, for which they were all hang'd at *Stockholm*. He died in 1288, and left the Care of the Kingdom to *Torchel Gnutſon*, who was Regent 13 Years, during his Son *Birger*'s Minority. He ſubdued *Carelia*, forc'd them to profeſs Chriſtianity, and built the Fortreſs of *Wiborg* to curb them, and took *Kekolm* from the *Ruſſians*. *Birger*, when he was of Age, married *Marota*, Daughter to *Erick* King of *Denmark*. He built the Fortreſs of *Norburgh* on the Frontiers of *Ruſſia*, which the *Ruſſians* afterwards took and demoliſh'd. He declar'd his Son *Magnus*, then but 3 Years old, his Succeſſor. His Brothers fell into Animoſities amongſt themſelves, and the King having ſeiz'd their Inheritance, they made Inroads into *Weſt-Gothland*, and diſpers'd the King's Troops; but at laſt a Peace was made, which coſt old *Torchel*, one of his Counſellors, his Head, on Pretence that he had inſtam'd the Differences betwixt them. After this the two younger Brothers aſpir'd to the Crown, ſurpriz'd the King, oblig'd him to ſurrender, and made him

Digitized by Google

him Priſoner in the Caſtle of *Nicoping*. The King's Son eſcaped to *Denmark*: The King of which, by three Expeditions, attempted to relieve the King his Brother-in-Law; but to no purpoſe; ſo that at laſt it was agreed the States ſhould determine thoſe Differences. They concluded, That King *Birger* ſhould pardon all paſt Injuries, be content with what Part of the Kingdom ſhould be aſſign'd, and have his Liberty; upon which the Senate and his Brothers ſwore Fealty to him. After this, *Erick* of *Denmark*, and *Haquin* of *Norway*, came with 60000 Men into *Sweden* to aſſiſt *Birger* againſt his Brothers: They took *Jencoping*, and oblig'd their Forces to fly; but the *Danes* wanting Proviſions, return'd home, and by a new Agreement Duke *Erick* had *Weſt Gothland*, *Dahr*, *Halland*, *Wermeland*, and *Smaland*; and Duke *Waldemar* had *Upland*, *Oeland*, and Part of *Finland*, which they were to hold of the King in Fief: And thus Peace was reſtor'd to the whole Kingdom. *Waldemar* and his Brother *Erick* were afterwards perſwaded by the King to come and viſit him; and when they were in Bed, and their Servants diſperſ'd, they were made Priſoners, beaten, and laid in Irons; and their Servants all kill'd or taken. The King deſign'd to beſiege *Stockholm*; but the Citizens being appriſ'd of his Barbarity, repuls'd him, and purſued him to *Nicoping*. He retir'd to *Steckeburgh*; and before his Departure, threw the Keys of the Priſon into the River, and caus'd the Doors to be barricado'd; ſo that before *Nicoping* could be taken by Storm, both the Princes died of Famine. The whole Kingdom was enrag'd at this barbarous Action, ſo that *Birger* was forc'd to fly to *Denmark*, where gathering ſome Forces, he ſhifted from Place to Place, till moſt of them were ſurpris'd at *Sudercoping*; then he fled to *Gothland*. The *Swedes* beſieg'd *Steckeburgh*, where his Son *Magnus* commanded, forc'd him to ſurrender, ſent him Priſoner to *Stockholm*, and made *Matthew Ketelmundſon* Regent of *Sweden*, who drove the King's Party out of the Country about 1319.

Upon this the States elected *Magnus Smeck*, Duke *Erick*'s Son, then but 3 Years of Age. Next Year *Magnus*, King *Birger*'s Son, was wickedly ſentenc'd to Death and beheaded, notwithſtanding the States of the Kingdom had ſworn Fealty to him as their future King; upon which *Birger* and his Queen died of Grief. *Ketelmundſon* manag'd Affairs with great Equity and Wiſdom, till *Magnus Smeck* came of Age, who diſappointed their great Expectations of him; for he ſlighted the Advice of the Great Council, hated the Senate, and deſign'd entirely to aboliſh it, becauſe it was a Check to his arbitrary Deſigns. He married *Blanche*, Daughter to the Earl of *Namure*, and was manag'd entirely by his Favourite *Benedict* of *Gothland*. At this Time thoſe of *Schonen* being oppreſs'd by the *Holſteiners*, put themſelves under his Protection, which was afterwards confirmed by *Waldemar* King of *Denmark*, and the *Sound* was made the Boundary of the two Kingdoms. After he had ruled 12 Years, he made War upon the *Ruſſians*, but with bad Succeſs; for he was oblig'd to quit Part of *Carelia* to purchaſe a Peace. His Treaſury being exhauſted, he laid heavy Taxes upon the People without Conſent of the States, and mortgaged many of the Crown-Lands. The Pope excommunicated him, becauſe he applied the *Peter-Pence* to defray the Charge of the *Ruſſian* War. The People of *Norway* offer'd their Crown to his Son *Haquin*, who married *Margaret*, Daughter to *Waldemar* King of *Denmark*. *Erick*, Son to *Magnus*, being declar'd King of *Sweden*, the States of the Kingdom revolted from *Magnus Smeck*, and ſlew his Favourite *Benedict*: Then *Magnus* ſought Aſſiſtance from *Denmark*, which engag'd his Subjects ſo, that they oblig'd *Erick* to take Arms againſt his Father. The End of this Controverſy was the Diviſion of the Kingdom, of which *Upland*, *Gothland*, *Wermeland*, *Dahr*, *North-Halland*, *Weſt-Gothland*, and *Oeland*, fell to *Magnus*; and *Schonen*, *Bleckingen*, *South Halland*, *Eaſt-Gothland*, *Smaland*, and *Finland*, to his Son *Erick*, in 1363.

After this *Magnus* ſent for his Son K. *Erick*, and perſwaded his Mother to poiſon him; by which he re-obtain'd Poſſeſſion of the whole Kingdom, and reveng'd himſelf upon the Nobility, who were the Barriers of the People's Liberty: And to accompliſh his tyrannical Deſigns, he made *Waldemar* King of *Denmark* his Friend, by reſtoring *Schonen*. Upon this *Waldemar*, with *Magnus*'s Connivance, fell into *Gothland* and *Oeland*, kill'd many Boors, plunder'd the Coun-

Digitized by Google

Country, and demoliſh'd *Bergholm*. This oblig'd the *Swedes* to ſubmit to *Haquin* of *Norway*, who impriſon'd his Father *Magnus*; and by the Advice of the States, married the Earl of *Holſtein*'s Daughter, who in her Voyage to *Sweden* was drove on the Coaſts of *Denmark*, and detain'd by King *Waldemar*, who deſign'd his Daughter *Margaret* for *Haquin*; but *Albert* Duke of *Mecklenburgh*, and the Earl of *Holſtein*, declaring War againſt *Denmark*, the Earl of *Holſtein*'s Daughter was ſet at Liberty, and coming to *Sweden*, was ſlighted by *Magnus Smeck*, which made her retire to a Nunnery; and *Haquin*, notwithſtanding his Contract with her, married *Margaret* of *Denmark*.

The baniſh'd Lords, Senators, and others of the *Swedes*, took up Arms againſt *Magnus*, as one who had forfeited his Title to the Crown; and conſulting about chuſing another, they agreed upon *Henry* Earl of *Holſtein*, who declin'd it, becauſe of his Age, and recommended *Albert* Duke of *Mecklenburgh*, *Magnus*'s Siſter's Son; but they choſe his own ſecond Son, alſo called *Albert*, and proclaim'd him King at *Stockholm*. Upon this, *Magnus* and his Son *Haquin* march'd againſt *Albert*, and fought him near *Enceping*; but were defeated, *Magnus* taken, and *Haquin* wounded. After this, *Sweden* continued to be a Theatre of War for many Years; for *Waldemar* King of *Denmark*, and *Haquin*, conſtantly ſent Forces into *Sweden* to reinforce *Magnus*'s Party; and *Haquin* once defeated *Albert* in Battle, and beſieg'd *Stockholm*. At laſt it was agreed, That *Magnus* ſhould have his Liberty, on paying 12000 Marks of fine Silver, and reſigning the Crown and *Schonen* to *Albert*: After this *Magnus* retir'd to *Norway*, where he was drown'd by Accident, and *Haquin* and his young Son *Olaus* died ſoon after, by which the ancient Royal Line of *Sweden*, which had ruled 200 Years, ſince St. *Erick*'s Time, was extinguiſhed. Not long after, *Waldemar* of *Denmark* died without Heirs Male; and the *Danes*, in order to unite *Norway* to *Denmark*, declar'd *Margaret* Queen of *Norway*, his Daughter, their Queen, to which the *Norwegians* were induc'd to agree by Intrigues and Bribes.

Albert's Enemies being thus all taken out of the Way, he began to hate the Nobility, to be jealous of the Senate, and to follow the arbitrary Methods of his Predeceſſors; but gradually and ſlily, becauſe of the Fate of *Magnus*, which was ſtill freſh in his Memory. However, to effect his Deſigns, he invited in Foreign Noblemen, eſpecially thoſe of his own Family, and *German* Officers, and put the Adminiſtration into their Hands, under various Pretexts. He alſo brought in Foreign Troops, ſo that his Subjects began to ſuſpect him, ſince all this was contrary to the Fundamental Laws of the Kingdom. He likewiſe oblig'd them to pay exceſſive Taxes. The Treaſury being exhauſted by the Wars againſt *Denmark*, he propos'd the annexing the Revenues of the Clergy, and ſome of the Lands of the Nobility, to the Crown, which they refuſed: And he continuing to extend his Prerogative, it occaſion'd a Civil War: Upon this the States applied to *Margaret* of *Denmark* for Aſſiſtance, which ſhe granted, on Condition that ſhe ſhould be their Queen when they had humbled *Albert*. On his Part, he morrgaged the Iſle of *Gothland* to the *Teutonick* Knights for 20000 Nobles, and challenged Queen *Margaret* to a Battle, which was fought at *Talkoping* in *Weſt-Gothland*, where ſhe obtained the Victory, and took King *Albert* and his Son. After this the Dukes of *Mecklenburgh*, the Earls of *Holſtein*, and the Hans-Towns, ſided with *Albert*, and ſent him Supplies; ſo that by this War, which laſted 7 Years, *Sweden* was laid under Contribution by Foreigners, and their Trade ruin'd.

At length a Peace was concluded at *Mekolm*, by which King *Albert*, his Son, and the reſt of the Priſoners of Note, were ſet at Liberty, on Condition that within three Years he ſhould reſign all his Pretenſions to the Crown in Favour of Queen *Margaret*. The Hans-Towns were Guarantees of the Treaty, and in caſe of failure, were to pay her 60000 Marks of fine Silver. *Albert*'s Son died within two Years, which made him lay aſide all Thoughts of recovering the Crown, and he ſoon after died in *Mecklenburgh*; ſo that *Margaret* was left Queen over the three Northern Nations, and call'd the *Semiramis* of the North.

The *Swedes* before this ſeeing ſhe had no Heirs, and fearing that after her Death *Albert*'s Son, who was then alive, might pretend to the Succeſſion, they deſir'd her to marry, which

which she would not listen to, being jealous that a Husband would claim a Share of the Sovereignty: But to give some Satisfaction to the *Swedes*, she told them, She would name for Successor *Henry* of *Mecklenburgh*, her Nephew, then very young; for she thought if he had been of Age, he might have disturb'd her ambitious Projects, out of his Impatience to mount the Throne. By her Intrigues, she perswaded the Estates of the three Crowns to go into this Succession. At the same Time she told them, how profitable an Union of the three Northern Nations would be; how likely to terminate all Quarrels for the future; that thereby they would soon become Masters of all the Trade of the *Baltick*; and that their Disunion was the only thing that could effectually gratify the Hans-Towns. The Estates being gain'd thus, partly by her Presence and Eloquence, but more by the secret Practices and Bribes of her Courtiers, they consented to this Union, and made it a Fundamental Law, which was call'd the *Union of Calmar*, and laid the Foundation of bloody Wars for more than one Age betwixt *Denmark* and *Sweden*. The Articles of this Union were, 1. *That these three Kingdoms, for all Time coming, should have one and the same King or Queen; and that he or she that was to succeed to the Throne of those 3 Realms, must be elected by all the 3 Kingdoms; and that the Election should be in each Kingdom by Turns.* 2. *That the Sovereign should be obliged by these Articles to reside by Turns in each of the three United Nations, and to spend in each of them the Revenues arising from that Kingdom; That the Revenues, Money, &c. of each Kingdom might not be exported, nor employed any other Way, than for the Advantage of that Kingdom from whence they were collected.* 3. *That each of the three United Kingdoms should for ever have their own Senate, Laws, Customs, Money, and Privileges; and that the Governors, Magistrates, Generals, Bishops, Troops, Garisons, should be Natives of the Kingdom where they were employ'd; and that none born in one of the three Kingdoms should bear Office in any of the Kingdoms but in that where he was born.*

The *Swedes* thought that those wise Limitations would secure their Peace; but tho' their Senate and Laws protected them for a while, they soon found, that *Denmark* being the Center of the Union, and then the more powerful Nation, *Margaret* and all her Successors favour'd the *Danes* more than them, whom they endeavour'd by all Ways and Means to keep under, and make miserable.

During *Henry*'s Minority, (whose Name she chang'd to *Erick*, to please the *Swedes*, who had 12 Kings of that Name) in 1410, she endeavour'd to regain the Isle of *Gothland* from the *Prussian* Knights; but failing in it, was oblig'd to pay the Mortgage, which was 10000 Nobles. In 1412, *Erick* married *Philipa*, the Daughter of *Henry* IV. King of *England*; and his Aunt Queen *Margaret* died much about this Time. He was soon engaged in a War with the Earl of *Holstein*, the Hans-Towns, and the Dukes of *Mecklenburgh* and *Saxony*, about *Slesvick*. Tho' this was only the Quarrel of *Denmark*, the other Kingdoms were more oppressed than they, and their Trade with the Hans-Towns was broke off. Besides, the King's Officers us'd the *Swedes* very tyrannically, and he himself broke many Articles of the Union, especially when he sent away the most ancient *Swedish* Records into *Denmark*. This at last oblig'd the *Swedes* to take desperate Counsels. *Engelbrecht Engelbrechtson*, a *Dalekarlian*, headed his Countrymen, who besieg'd *Jesse Ericksin*, one of the King's Officers, and a great Oppressor, who, to prevent an Insurrection, was turned out; yet the Boors, with *Engelbrecht* at their Head, over-ran the neighbouring Country with Fire and Sword, and destroyed those who would not join them. At last one *Erick Puke* came over to them with the *North Hallanders*, took many Places of Strength, killed all the *Danes* they met, and forced the Senate of the Kingdom to renounce their Allegiance to *Erick*. This oblig'd him to make Peace with the *Holsteiners*, and to turn his whole Force against *Sweden*; but a great Part of his Fleet was destroy'd by Storm: He came with the rest to *Stockholm*, and was forced to make a Truce for 12 Months with the *Swedes*. *Olus*, the Archbishop of *Upsal*, perswaded them to own him as King, provided he would stand to the Union, which the King at that Time consented to, and reserv'd only to himself the Castles of *Stockholm*, *Calmar*, and *Nycoping*, leaving the *Swedes* to command the rest. No sooner had the King done this, but he

left *Sweden*, contrary to the Union; and the Eſtates being afraid he might return with a greater Force, they aſſembled at *Arboe*. In the mean time *Engelbrecht* took *Stockholm*, and beſieg'd the Caſtle. At this Time the Marſhal *Charles Cnutſone* was declared Governor and General of the Kingdom, and *Engelbrecht* was kill'd by one *Benediſt Suenſone*, his old Enemy. Some were jealous of the Marſhal's too great Power, which occaſion'd a new Treaty, wherein the King promis'd to put the Natives of *Sweden* only in Places of Truſt in that Kingdom; and *Benediſt Suenſone*, as a Reward for murdering *Engelbrecht*, was made Governor of *Calmar*. The King ſoon after, in his Voyage from *Gothland* to *Sudercoping*, was overtaken by a Storm, wherein moſt of his Ships were loſt, and he narrowly eſcap'd. When the *Swedes* heard of the Tempeſt, and not knowing whether the King was alive or dead, they reſolv'd that both the firſt and ſecond Treaties at *Calmar* ſhould ſtand. By this Means the Marſhal got moſt of the Caſtles of the Kingdom into his Hands; at which *Erick Puke* being diſguſted, he raiſed a great Number of Boors, and defeated the Marſhal and his Troops. Upon this, the Marſhal deſir'd an Interview with *Puke*, and, contrary to Promiſe, ſent him Priſoner to *Stockholm*, where he was beheaded. When the Senators heard the King was alive, they ſent to him to know if he would confirm their former Treaty at *Calmar*, which he refuſed. Upon this they made a ſecret League with ſome Leading-Men in *Denmark* againſt him. The Marſhal prevailed with the Senators to appoint a Day for the King to appear in *Sweden*, to renew their Privileges; and in caſe of failure, they were to renounce his Authority: But the Archbiſhop perſwaded them to forbear bringing Matters to Extremity, till a General Meeting of the Eſtates of the 3 Kingdoms might redreſs their Grievances; and when they met, the King's Commiſſioners would not confirm the Treaty of *Calmar*; upon which they broke up. The King retir'd with all his Treaſure out of *Denmark* to *Gothland*; and thoſe of the *Daniſh* and *Swediſh* Senators, who were diſſatisfied with the King's Government, agreed to detbrone him, and choſe another, who would obſerve the Articles of the Union. The *Danes* ſent to *Chriſtopher* Duke of *Bavaria*, deſiring him to accept of their Crown, and acquainted the Marſhal with it; upon which he was own'd as King by the Senators and the Marſhal, and Crown'd at *Upſal* about 1439. He afterwards married *Dorothy*, Daughter of *John* Marquis of *Brandenburgh*. *Erick*, who was ſtill in Poſſeſſion of *Gothland*, took many of the *Swediſh* Ships, for which the Senate deſir'd *Chriſtopher* to make War upon him, which he did; but ſuddenly clapp'd up a Peace, by which *Erick* was left in Poſſeſſion of *Gothland*. *Chriſtopher* died at *Helſingburgh* in 1448, and left great Legacies to the Churches of *Sweden*; but the *Danes* being poſſeſs'd of his Ships, Ammunition, rich Furniture, and ready Money, would not pay them.

The Marſhal *Charles Cnutſone*, upon *Chriſtopher*'s Death, got himſelf elected King: But the *Danes* offer'd their Crown to *Chriſtian* Earl of *Oldenburg*. *Charles* in the beginning of his Reign beſieg'd *Erick* in the Caſtle of *Wisby*; but *Chriſtian*, the new King of *Denmark*, raiſed the Siege. *Erick* retired to *Pomerania*, without making any further Pretenſions to the Crown, and died at *Rugen*.

The greateſt Part of the *Norvegians* elected *Cnutſone* alſo for their King, which occaſion'd conſtant Wars betwixt him and *Chriſtian* of *Denmark*. *Cnutſone* was ſucceſsful at firſt; but after the Death of his brave General *Thord Bonde*, *Chriſtian* was too hard for him. The Archbiſhop of *Sweden* declared alſo for *Chriſtian*, ſurpris'd *Cnutſone*'s Forces at *Strengneſs*, and beſieg'd himſelf in *Stockholm*; upon which he embarked with all his Treaſure for *Dantzick*. The Archbiſhop having got all the Strong-holds into his Hands, ſent for *Chriſtian* to *Sweden*, where he was declared King. His Government was tolerable at firſt; but afterwards his Cruelty and heavy Taxes made him odious to the *Swedes*: He tortur'd to Death many of their Great Men, on Pretence of correſponding with *Cnutſone*. He was alſo cruel to the Boors, who took Arms againſt him, and impriſon'd the Archbiſhop of *Sweden* in *Copenhagen*. *Kaſil*, Biſhop of *Lyncoping*, being provok'd at this, made an Inſurrection, and obliged the King to fly to *Denmark*, whence he return'd next Year with a conſiderable Force; but the Biſhop's Army

Digitized by Google

Army defeated him, and forc'd him to leave *Sweden* a second time. The Biſhop alſo beſieg'd *Chriſtian*'s Gariſon in *Stockholm*, and ſent to *Cnutſone* for Help, who came to *Sweden* with Forces that he had levied in *Pruſſia* and *Poland*; and *Stockholm* ſurrendring to him, he was again made King: But ſome Differences happening betwixt him and Biſhop *Katil* about exchanging the Archbiſhop, the Biſhop made Peace with *Chriſtian*, who came with a powerful Army to *Sweden*. He defeated *Cnutſone*'s Forces upon the Ice near *Stockholm*, and ſet the Archbiſhop at Liberty; and getting all the Places of Strength into his Hands, *Cnutſone* was obliged to give up all his Pretenſions, and leave the Kingdom: But *Nils Sture*, and *Erick Axelſone*, *Cnutſone*'s Friends, did for ſome Time oppoſe the Archbiſhop's Deſigns; and *Axelſone* being declared Regent of the Kingdom, the Archbiſhop was obliged to ſurrender *Stockholm* and other Strong holds to him: But *Nils Sture* and *Erick Nilſone* going over to the Archbiſhop's Faction, they involved the Kingdom in Blood and Confuſion: Yet the Archbiſhop's Party was worſted at laſt; upon which he died of Grief, and the Commons of *Sweden* once more reſtored *Cnutſone*: But *Erick Nilſone*, *Erick Carlſone*, *Trolle*, and ſome others, ſurpris'd *Cnutſone*'s Army during a Truce, and forc'd his Men to fly; but purſuing them too far, they were entirely routed by *Cnutſone*, and their Leaders fled to *Denmark*; upon which *Cnutſone* return'd to *Stockholm*, and recommending the Kingdom to his Nephew *Steen Sture*, he died there about 1470.

After his Death, there was nothing but Confuſion and Anarchy in *Sweden* for one Year: But at laſt *Steen Sture* was declar'd Regent, vanquiſh'd *Chriſtian* of *Denmark* in a Battle near *Stockholm*, and drove him out of the Kingdom, to which he never return'd, but died in *Denmark* in 1481.

After his Death, the *Danes* made *John*, *Chriſtian*'s Son, their King. The *Swedes* agreed to this Choice, provided that he would obſerve the *Pacta Conventa* which King *John* ſwore to and ſeal'd; but the Articles not being duly perform'd, *Steen Sture* continued Regent 14 Years after. The Kingdom was at this Time miſerably afflicted with inteſtine Diviſions, and had alſo a War with *Ruſſia* and *Denmark*. The Senators adviſed *Sture* to lay down his Regency; but he refuſing it, they invited King *John*, who defeated *Sture*'s Party; upon which the Senate, and *Sture* himſelf, acknowledg'd *John* as King, and the Succeſſion was ſettled upon his Son *Chriſtian*. *John* reign'd for ſome Time peaceably; but at laſt, falling into the arbitrary Meaſures of his Predeceſſors, he oblig'd *Sture*, and others of the Nobles, to ſurrender the Fiefs of the Crown which they poſſeſs'd, and gave them to *Danes* and *Germans*. His Officers follow'd his Example, and committed all manner of Inſolencies in their Provinces: But when *John* was defeated at *Ditmarſen*, the *Swedes*, headed by *Sten Sture*, aſſembled at *Wadſtana*, and renounc'd their Allegiance to *John*, becauſe he had broke the Articles of *Calmar*.

Upon this *John* fail'd to *Denmark*, and his Queen was left in *Stockholm*, which *Sture* beſieg'd, forc'd it to ſurrender, and was conſtituted Regent of the Kingdom. In the mean Time the *Danes* burnt *Elfsburg* and *Oreſteen*, and committed great Cruelties in *Weſt-Gothland*, under the Command of *Chriſtian*, *John*'s Son, who had alſo deſtroy'd moſt of the Noble Families of *Norway*; but their Fury was a little allay'd, becauſe the Queen was in the Hands of their Enemies. At laſt the *Lubeckers* and Cardinal *Raimond* procur'd her Liberty to return to *Denmark*. The Regent conducted her to the Borders, but in his Return died ſuddenly. Upon this the States, at their Meeting in 1503, made *Suante Nilſon Sture* Regent. Then the War began afreſh with King *John*, with various Succeſs. At firſt, the Emperor, the *Ruſſians*, and Pope, join'd with the *Danes*: But the Regent made Peace with the *Muſcovites*, and ſet the *Lubeckers* againſt the *Danes*, from whom they retook *Calmar* and *Bornholm*. In the midſt of this Succeſs *Suante* died, in 1511, in the 8th Year of his Regency. After his Death, *Steen Sture*, the Regent's Son, was choſen Regent with great Difficulty; the ancient Senators inclining more to *Guſtavus Trolle*, a Man of great Experience. King *John* died at *Alburg* in *Jutland* in 1513, and the *Danes* and *Norwegians* declar'd his Son *Chriſtian* King. The *Swedes* hated him for his Father's Cruelty, and deſired Time to conſider of the Matter; and *Chriſtian*, after four

Years, perceiving the *Swedes* were not resolv'd to elect him, and that the Regent would not part with his Power, he instigated Pope *Leo* X against him, strengthened his Party, by bringing over *Guſtavus Trolle*, the new Archbiſhop, and perſwaded the *Ruſſians* to invade *Finland*. When the Regent found out the Archbiſhop's Treachery, he tender'd the Oath to him, and upon his refuſing it, he beſieg'd him in the Caſtle of *Stecka*. *Chriſtian* of *Denmark* took ſome Ships with Ammunition belonging to the Regent, but could not raiſe the Siege; ſo that the Archbiſhop was forc'd both to ſurrender the Caſtle and his Office, for which the Pope excommunicated the Regent, fined the *Swedes* in 100000 Ducats, and order'd it to be levied by *Chriſtian*, who fell into *Sweden* with a great Army. The Regent met and gave him Battle; but being killed, his Army was ſoon diſperſed. Upon this the Archbiſhop aſſum'd his former Dignity, and being aſſiſted by two other Biſhops, declar'd *Chriſtian* King of *Sweden*, who at firſt treated the *Swedes* with a great deal of Humanity; but afterwards, on Pretence of the Pope's Fine and Excommunication, he committed all manner of Cruelties and Barbarities; and the Archbiſhop, in the Pope's Name, demanded a Million of Pounds for Reparation of Damage done to the Church at *Upſal*, and his Caſtle of *Stecka*, and on Pretence that Gunpowder was convey'd under the King's Palace to blow him up. The Regent's Widow, his Mother-in-Law, and 15 others, beſides the Senate and Common-Council of *Stockholm*, were accuſed for it, and all condemned as Hereticks; upon which 94 of them were beheaded at *Stockholm*, and their Servants hang'd. The Regent's Body was alſo hung up among the reſt, and their Quarters affix'd in many Places of the Country. His Widow and his Mother in-Law gave all they had for their Lives, but were committed to cloſe Priſon. In *Finland*, *Hemmoning Gudde*, notwithſtanding his former Services to *Chriſtian*, was executed, with 10 more: The Abbot of *Nydala*, and 10 Monks, were drown'd: Two Gentlemen's Sons, one of 9, the other of 7 Years, were beheaded at *Jencoping*; and after *Chriſtian* had murther'd 600 of his *Swediſh* Subjects, he returned well ſatisfied to *Denmark*.

At this Time *Guſtavus Ericſon*, whoſe Father had been beheaded, and his Mother thrown into Priſon by the Tyrant, having eſcaped from Priſon, he ſhelter'd himſelf among the *Dalekarlians*, who choſe him for their Captain; and the States of the Kingdom following their Example, declar'd him Regent: But the Clergy, ever ſince the Union, continued firm to the Enemies and Murtherers of their Countrymen; and *Chriſtian*, to be reveng'd on *Guſtavus* the Regent, kill'd his Mother and Siſter in Priſon at *Copenhagen*, order'd no Quarter to be given to any *Swediſh* Noblemen, and confirmed great Barbarities wherever he came. The Regent made Repriſals upon the *Danes*, and being aſſiſted by the *Lubeckers*, he beſieg'd *Stockholm*, and during the Siege receiv'd the glad News, That the *Jutlanders* had renounc'd their Allegiance to *Chriſtian*. This ſo encourag'd the Regent's Party, that they drove the *Danes* out of the whole Kingdom, retook *Oeland* and *Borkholm*, and the Caſtle of *Calmar*, and the Regent was made King; upon which *Stockholm* ſurrender'd to the *Lubeckers*; and *Chriſtian* and his Queen retiring to the *Netherlands*, the *Jutlanders* made *Frederick* I. King *Chriſtian*'s Uncle, King, and were very deſirous to bring the *Swedes* to own him; but they having already ſmarted ſufficiently by the Union, and the *Daniſh* Kings, who did them more Miſchief under the Title of Kings of *Sweden*, than they could have done if the Kingdoms had been ſeparated, and at War as formerly, they would not agree to it. The Reformation began at this Time; of which more in its Place.

Soren Norby ſtill adher'd to *Chriſtian*'s Party, and had *Gothland* in Poſſeſſion, which enabled him to annoy the *Swedes* in their Trade. Upon this *Guſtavus* ſent *Bernard Van Melen* to reduce the Iſland, and *Norby* put himſelf under the Protection of *Denmark*, which occaſion'd ſome Differences betwixt thoſe two Northern Kings.

Guſtavus having ſurmounted thoſe Difficulties, was crown'd at *Upſal* in 1528, and the rebellious *Dalekarlians*, who were diſcontented at the Change of Religion, were alſo obliged to come hither. They were headed by *Thuro Johanſon*, the Rix-Marſhal, who made them revolt, endeavour'd to do the ſame by the *Weſt* and *Eaſt Goths*; and per-

Digitized by Google

perſwaded them to elect *Magnus Brynteſon*, a popular Man among them, for King: But King *Guſtavus* appeas'd thoſe Commotions, by granting an Indemnity to moſt of them, and beheading only ſome of their Leaders. The King having diſpos'd of ſome ſupernumerary Bells, the *Dalekarlians* began a new Rebellion, and deſign'd to depoſe him; but he terrified them ſo by his Forces, that they crav'd Pardon, and promis'd Obedience for the future. The King married *Katherine*, Daughter to *Magnus* Duke of *Saxe-Lauenburg*. *Chriſtian* after this landed in *Norway* with a conſiderable Force, and the King ſent ſome Troops to the Frontiers, under the Command of *Lars Sigeſon*, Rix-Marſhal, who being join'd by the *Danes*, forc'd *Chriſtian* to raiſe the Siege of *Bahus*, and obliged him to ſurrender himſelf to the *Danes*. He was thereupon committed to Priſon by *Frederick* King of *Denmark*, where he died 27 Years after, being juſtly called the *Nero* of the North. The *Lubeckers* began another War againſt *Sweden*, becauſe *Guſtavus* would not grant them the Monopoly of Trade on his Coaſts, demanded the Money due to them for aſſiſting him with their Ships, and join'd the remainder of *Chriſtian*'s Party. They made *John* Earl of *Hoya*, *Guſtavus*'s Brother-in-Law, their Head, deſign'd the Conqueſt of the Northern Kingdoms, and brought over ſome of the Citizens of *Stockholm* to their Party, by promiſing it ſhould be a Hans-Town. After *Frederick* the King of *Denmark*'s Death, they perſwaded the Senate of *Copenhagen* to enter into their League, and their Party was numerous, till the *Danes* choſe *Chriſtian* III. for King; and being aſſiſted with Money and Forces by *Guſtavus*, they defeated the *Lubeckers* near *Elſingburg*; and in a Sea-fight, deſtroyed their Fleet, and carried many of their Ships to *Denmark*. *Guſtavus* married for ſecond Wife *Margaret*, the Daughter of *Abraham Ericſon*, Governor of *Weſt Gothland*; and apprehending the Deſigns of *Charles* V. the Emperor, he ſent into *France*, and made an Alliance with that Crown.

In 1544, a Diet of the States met at *Weſteras*, where, in Gratitude to him for being the Inſtrument of delivering them from the *Daniſh* Slavery, and freeing them from an Union with that Nation, declared the Succeſſion Hereditary in his Family, and ſettled it upon his Son *Erick Guſtaveſon*, then 11 Years of Age. By his Will, he gave to *John*, his ſecond Son, the Dukedom of *Finland*; to his third Son, *Magnus*, the Dukedom of *Eaſt-Gothland*; and to *Charles*, the youngeſt, the Dukedom of *Sudermania*, *Nerick* and *Wermeland*, to be held in Fief of the Crown of *Sweden*. *Erick*, the eldeſt, was perſwaded by his Tutor *Dionyſius Burrow*, a *Frenchman*, to make his Addreſſes to Queen *Elizabeth* of *England*. This *Dionyſius*, and after him *Erick*'s Brother *John*, and *Steen Sture*, went to *England* to propoſe the Match, who miſtaking Compliments for Realities, wrote that it was adviſable for *Erick* himſelf to come over and compleat the Marriage; but when he was ready to go, his Father died at *Stockholm*, in 1559. ſo that he durſt not leave his Dominions with his Brethren.

Erick was 27 Years of Age when he ſucceeded: He obliged his Brothers to ſubſcribe new Articles at *Arboga*, and firſt introduc'd Hereditary Titles of Honour, as Earls, Barons, *&c.* alledging, That in an Hereditary Kingdom, it was reaſonable there ſhould be Hereditary Dignities among the Nobility. Some of the *Lieflanders* had formerly put themſelves under the Protection of *Denmark*, and others of them under *Poland*. Thoſe of *Revel* and *Eſthonia*, being neareſt to *Sweden*, ſought Protection from *Erick*, which he granted, together with all their former Privileges. When the *Poles* heard that the *Swedes* had gariſon'd *Revel*, they ſent an Ambaſſador to demand it; but the *Swedes* anſwer'd, That they had as good Right to it as the *Poles*: Upon which the latter beſieg'd the Town; but the Gariſon ſallying upon them, oblig'd 'em to raiſe the Siege. When *Erick* deſign'd to come to *England* about his Match with Qu. *Elizabeth*, he was blown back by a great Storm. He was inconſtant in his Temper, and ſuperſtitiouſly fond of Judiciary Aſtrology. He laid aſide his Deſign of courting Qu. *Elizabeth*, and made his Addreſſes to *Mary* Qu. of *Scotland*, and the Princeſs of *Lorrain*, at one and the ſame Time, and not long after to *Catherine*, Daughter to the Landgrave of *Heſſe*; but ſucceeded in neither. His Brother *John* married *Catherine*, Daughter of *Sigiſmund*, King of *Poland*, without *Erick*'s Conſent, for which he beſieg'd him in the Caſtle of *Abus*, took him, and ſentenc'd him to Death, which was chang'd to perpetual Impriſonment.

ment. To revenge this Affront, the *Poles* inſtigated the *Lubeckers* and *Danes* to make War upon *Sweden*, and the *Danes* affronted the *Swediſh* Ambaſſador. The *Swedes* routed the *Danes* and *Lubeckers* at Sea, but loſt their Admiral, which carried 200 Braſs Guns. They had not the like Succeſs by Land, except in *Livonia*, where their Affairs went well. King *Erick* had the Misfortune to fall into Broils with his Subjects, on the Account of his bad Adminiſtration and Amours: He fell deeply in Love with one *Katherine*, a Peaſant's Daughter, who manag'd him as ſhe pleas'd. In her younger Days, ſhe ſold Nuts in the Streets of *Stockholm*: But notwithſtanding this, and the Remonſtrances of his beſt Subjects, he debas'd himſelf ſo far as to marry her. In Matters of Government, he was rul'd by two Favourites; one was *Dionyſius Burreau*, his Tutor, who enrag'd him to that degree againſt the Family of the *Sture*, that *Erick* ſuborn'd Knights of the Poſt againſt the Chief of them; upon which they were put in Priſon, and there murther'd by the King's Command, who with his own Hand ſtab'd *Nils Sture*. He afterwards laid the Blame of this Cruelty on *Burreau*, and, to pacify the People, caus'd him to be ſlain by his Guards; and fearing that his Subjects would reſent thoſe impious Practices, he releas'd his Brother *John*, and declar'd, that *Joran Peerſon*, his other Favourite, advis'd him to theſe illegal Methods, and *Joran* was committed to Priſon; but upon his Succeſs againſt the *Danes*, he relapſed to his former arbitrary Ways, juſtified all his Acts of Injuſtice, and would have taken away the Lands left his Brothers by his Father's Will; but they refuſed to accept the Equivalent he offer'd them in *Livonia*. Upon this, he deſign'd to have had his Brother *John* murder'd, at the Nuptials betwixt himſelf and his Miſtreſs *Katherine*: But his Brother being appriz'd of his Plot, did not come to the Marriage, but aſſociated with ſome Noblemen, who were diſpleas'd with *Erick*'s Government, and reſolv'd to dethrone him. By the Mediation of the King of *Poland*, they procured a Truce with *Denmark*; and having ſtrengthened their Party by ſome *German* Forces in *Erick*'s Service, who revolted to them, they ſeiz'd his Caſtles. In that of *Wadſtena*, they found a great Treaſure; then they beſieg'd *Stockholm*, with *Erick* in it, and the Senate open'd the Gates to them whilſt he was at Church; but he eſcap'd into the Caſtle, which the Duke's Forces beſieg'd, and preſs'd it ſo hard, that he was oblig'd to ſurrender, and reſign the Crown. Then the Eſtates aſſembled at *Stockholm*, renounc'd their Allegiance, made him cloſe Priſoner, and committed him to the Cuſtody of the Friends of the murther'd Lords, who us'd him barbarouſly.

In 1566, *John*, his Brother, was proclaimed King of *Sweden*, who in the firſt Place did Juſtice on ſome of the bad Counſellors of the former Reign, and ſent an Ambaſſador to *Denmark* to get the Truce prolong'd, or to make a Peace, which they accepted on diſadvantageous Terms, for which the whole Tranſaction was declared void at the next Diet. *John*, to pleaſe his Brother *Charles*, to whom he had promis'd a Share in the Government, put him in Poſſeſſion of *Sudermania*, *Nericke* and *Wermeland*, which his Father had left him. Then he was crown'd at *Upſal*. He ſent Ambaſſadors to *Muſcovy* to prolong the Truce; but the *Muſcovites* put them in Priſon, and made *Magnus*, Duke of *Holſtein*, King of *Livonia*, on Condition that he ſhould hold it of the Czar. The *Lieflanders*, loving to be under the Government of a *German* Prince, conſented to the Propoſal; and to bring this Project to bear, the *Muſcovites* advanced with a great Army; ſo that the King was obliged to make Peace with the *Danes* on their own Terms. While the *Muſcovites* were in *Livonia*, the *Tartars* invaded *Muſcovy*, took and burnt the City of *Moſcow*, and cut above 30000 of the Inhabitants in pieces. After the *Muſcovites* had made a Truce with the *Poles* and *Tartars*, they fell again into *Livonia* with 80000 Men, and committed inhumane Barbarities: But a *Swediſh* Party of 600 Horſe and 1000 Foot routed 16000 *Muſcovites*, and killed 7000 of them on the Spot: Upon which the Czar offer'd a Treaty to be ſet on foot at *Newgarten*; but King *John* diſliking the Place, the War began again, in which the *Swedes* had but indifferent Succeſs, and were repulſed before *Weſenburg* and *Telsburg*. The *Ruſſians* alſo ſurpris'd the *Swedes* and *Germans* when drunk in their Camp, and killed a great

many

many of them. The *Swedes* however made several Inroads into the Territories of the *Muſcovites*, which brought on a Truce for two Years. It was thought this War might have been more ſucceſsful, had not *John* been engaged in a Deſign of changing the Eſtabliſhed Religion in *Sweden* for Popery. For, thô educated a Proteſtant, he was miſled by his Wife, and reſolved to reſtore Popery by degrees. To effect this, he deſign'd to follow the Scheme of *Caſſander*, who was ſet on work by the Emperors *Ferdinand* I. and *Maximilian* II. to compoſe the Differences about Religion in *Germany*. *John* invited ſome Jeſuits, who in Lay-Habits were to aſſiſt his Secretary Mr. *Peter Fretenius*, the chief Manager of this Affair; and at the Convocation of the Clergy, propoſed a new Liturgy, with a great many Popiſh Ceremonies, to be uſed in the Adminiſtration of the Sacraments, and Conſecration of Biſhops and Prieſts. He likewiſe introduced the Maſs. Some of his new conſecrated Biſhops complied with all this; ſo that Popery was openly profeſſed all over the Kingdom, except in the Provinces belonging to his Brother *Charles*, whom he endeavoured to perſwade to approve of this Change, but in vain. At laſt the King got the Liturgy approved by a General Synod of the Clergy, and alſo by the Eſtates of the Kingdom, who made it Treaſon to oppoſe it. After this the King baniſh'd and impriſon'd all who would not conform: But notwithſtanding thoſe ſevere Methods, many of the Clergy preach'd againſt the Wickedneſs and Impiety of thoſe Principles and Practices, and ſent their Remonſtrances to the *German* Univerſities of *Wittemberg*, *Leipſick*, *Helmſtadt*, *Franckfort*, and others, who all approved of their Zeal for the *Augſburg* Confeſſion, and condemn'd the Liturgy as dangerous to the Proteſtant Religion. King *John* at this Time ſent and poiſon'd his Brother King *Erick* in Priſon; and having gain'd this Point, he more openly own'd his Affection to Popery. The Invocation of Saints was publickly preach'd, and whoever oppos'd it were impriſon'd. He ſent afterwards an Ambaſſador to *Rome*; and the Pope ſent a Nuncio to *Stockholm*; and King *John* ſent a great many young Gentlemen abroad, to be educated by the Jeſuits.

The *Ruſſian* War in the mean time was carried on with various Succeſs. The *Poles* and *Swedes* agreed, That whatever Towns either of them took from the *Muſcovites*, ſhould remain to thoſe who took them. The *Swedes*, under the Command of *Pontus de la Gardie*, took from the *Muſcovites* the ſtrong Forteresſ of *Kexholm*, the Caſtle of *Padis*, *Weſenburg*, *Telsburg*, and *Narva*, where they killed 7000 of them. They alſo took *Juanogrod*, and other Places of Note; but the *Poles* growing jealous of thoſe Advantages, the *Swedes* were obliged to make a Truce with the *Muſcovites*, which continued 4 Years. The Miſunderſtanding betwixt King *John* and his Brother *Charles* increas'd, ſo that he ſummon'd him to appear before the Diet at *Wadſtena*; but by the Mediation of ſome of the Senators, they were made Friends. The King did all he could to perſwade the Clergy of his Brother's Territories to approve the Liturgy, but without Effect. King *John* died at *Stockholm* in 1592.

His Son Prince *Sigiſmund*, who before this was elected King of *Poland*, ſucceeded. In the *Interregnum*, Duke *Charles* took upon him the Adminiſtration, by Conſent of the Senate, which was approved afterwards by *Sigiſmund*. *Charles* call'd together the *Swediſh* and *Gothick* Clergy at *Upſal*, where the *Augſburg* Confeſſion was confirmed, and the new Liturgy and other Popiſh Ceremonies abolished. The States approved of this, and of another Decree, forbidding any Appeal out of *Sweden*, and order'd that *Sigiſmund* ſhould ſign thoſe Decrees before his Coronation; but *Sigiſmund* declar'd, That being an Hereditary Prince, he ought not to oblige himſelf to any thing before his Coronation. He came to *Sweden*, accompanied with the Pope's Nuncio, and demanded a Popiſh Church in every City; that the new Archbiſhop ſhould be depoſed; and that he might be crown'd by the Nuncio. *Charles* and the States endeavour'd to perſwade him from thoſe unpopular Courſes, but in vain: Upon which they enter'd into an Aſſociation for the Defence of the Proteſtant Religion, and muſter'd their Troops near *Upſal*. *Sigiſmund* fearing the Conſequences, pretended to repent of his former Conduct, ſign'd the Propoſals of the States, and was crown'd by

Digitized by Google

by the Biſhop of *Strengneſs* in 1594. When the Coronation was over, he attempted by Force what he could not gain by Perſwaſion, and ſent for Troops from *Poland*; but Duke *Charles* was provided to receive them. The King finding himſelf baulk'd, reſolved to leave the Kingdom. When the States knew it, and that he was ſailed for *Dantzick*, with the Conſent of *Charles* they took upon them the Adminiſtration, depoſed the King's Governor at *Stockholm*, becauſe a Papiſt, and forbad Popery in *Sweden*. After this, a Peace was concluded with the *Muſcovites*, and in a Diet at *Sudercoping*, the States juſtified their Proceedings in a Letter to *Sigiſmund*, confirmed the *Augsburg* Confeſſion, aboliſhed Popery, and made Duke *Charles* Regent, but accountable to the Senate. *Sigiſmund* wrote to diſſuade *Charles* from it, and alſo to the States, to whom he committed the Government in his Abſence, and deprived *Charles* of his Regency: But another Diet was call'd at *Arboga*, where *Charles* was again declared Regent. About this Time *Nicolas Flemming*, the King's General, killed a great many *Swediſh* Boors, for which *Charles* made War upon him, poſſeſſed himſelf firſt of *Gothland*, and then of the whole Kingdom, which obliged the Governors for the King to fly into *Poland*. King *Sigiſmund* perceiving his Affairs in *Sweden* requir'd his Preſence, he reſolved to go thither with 6000 Men, and the States reſolved to meet him with an Army. The *Weſt-Goths* and *Finlanders* declared for *Sigiſmund*: The *Finlanders* equipped ſome Ships for his Service; and while *Charles* ſailed with his Fleet to reduce them, the King landed at *Calmar*. All Overtures of Accommodation being rejected, the War began, wherein *Charles* was worſted at firſt, and his Men laying down their Arms, obtained Pardon; but afterwards at *Stangbro* he ſurpriſed the King's Army, and killed 2000 of them on the Spot, with the Loſs only of 40 of his own Men. The King after this Defeat promiſed to content his Subjects, but he ſailed to *Dantzick*; and the States convening again, once more conſtituted *Charles* Regent, renounc'd their Allegiance to the King, and offer'd the Crown to his Son *Uladiſlaus*, provided he would come to *Sweden*, and be bred a Proteſtant; but in caſe of failure, he and his Heirs were to be excluded for ever from the Succeſſion. *Charles* marched againſt the *Finlanders*, whom he defeated, and made an Alliance with the *Muſcovites*. In 1600, the States met at *Sincoping*, where ſome of the Lords who aſſiſted *Sigiſmund* to invade their Country were declared guilty of High-Treaſon, and executed; and *Sigiſmund* was declared to have forfeited his Right to the Crown, and his Son *Uladiſlaus* the like, becauſe he did not appear within the limited Time. The Duke knowing that thoſe of *Eſthonia* and *Revel* were his Friends, he marched thither with a great Army, where he was joyfully receiv'd; upon which the *Poliſh* Governors retir'd to *Poland*. At firſt he had good Succeſs in *Livonia*, and took ſeveral Places; but the *Poles* raiſed the Siege of *Riga*, and retook *Kokenhauſen*, and other Places near it. In 1604, *Charles* was declared King, and the Succeſſion entail'd on his Heirs Male or Female: After which he was routed by the *Poles* in *Livonia*; but the confuſed State of *Sigiſmund*'s Affairs hinder'd him from making his Advantage of it. *Charles* aſſiſted the *Muſcovites* againſt the *Poles* with good Succeſs; but the *Swediſh* Affairs were not ſo proſperous in *Livonia*; and the *Danes* perceiving the *Swedes* ſo deeply engag'd in War, they thought it the beſt Time to attack them. By this means the *Swedes* were brought to an Extremity; but Prince *Guſtavus Adolphus*, thô under Age, retrieved them by his extraordinary Conduct and Valour; for with 1500 Horſe, he ſurpris'd the chief Magazine of the *Danes* at *Chriſtianſtadt*, and took from them the Iſle of *Oeland*, and the Caſtle of *Borkholm*. Soon after his Father *Charles* IX. died in 1611, in the 61ſt Year of his Age.

The States conſidering they were embroil'd in War with the *Poles*, *Ruſſians*, and *Danes*, thought it moſt adviſable, that *Guſtavus*, though not 18 Years of Age, ſhould take upon him the Adminiſtration. The *Danes* had the Advantage by Sea, becauſe *Guſtavus*'s Fleet was in a bad Condition, and took *Calmar*, *Ryſbyfort*, and *Elfsburg*. At this Time *Guſtavus* rais'd 2300 Men in *Scotland*, and hired five *Scotch* Ships, which did him great Service, for they took and plunder'd the City of *Drontheim*, and its Territory, and afterwards ſailed to *Sweden* by Way of *Finland*. The *Muſcovites* were willing

ling to have given their Crown to *Charles Philip*, *Guſtavus*'s Brother, but it came to nothing, becauſe *Guſtavus*, deſigning that Crown for himſelf, delay'd ſending his Brother; and the *Muſcovites*, when they perceived this, elected *Michael Theodorowitz*; yet *Charles* arriv'd in *Muſcovy* at laſt: But *Michael*'s Party was by this Time ſo ſtrong, that *Charles*'s Friends thought it not ſafe to declare for him. The *Swedes* however took many Places in *Muſcovy*; til at laſt a Peace was concluded in 1617, by which the Town of *Kexholm*, and the Province of *Ingermania*, fell to *Sweden*. Thus the *Swedes* on that Side had a Barrier betwixt them and *Muſcovy*, and the *Muſcovites* were entirely ſeparated from the *Baltick*.

This ſame Year *Guſtavus* was crown'd at *Upſal*, and married *Eleonora*, Daughter to the Elector of *Brandenburg*. The Truce with *Poland* being expir'd, *Riga* ſurrender'd to the *Swedes*, after ſix Weeks Siege; and *Sigiſmund* of *Poland* rejecting the Propoſals of Peace, *Guſtavus* enter'd *Livonia*, and defeated 3000 *Lithuanians*; ſo that the *Poles* loſt all *Livonia*, except *Dunesburg*. He alſo routed the *Lithuanians* again in *Semigallia*: Yet *Sigiſmund* would not make Peace, being encourag'd by the Emperor's fair Promiſes. Upon this, *Guſtavus* ſail'd with 80 Ships and 26000 Land-Forces to *Pillaw*, where he was receiv'd by the Elector of *Brandenburg*'s Orders; and landing his Men, took *Raunsberg* and *Frauenburg*, and moſt other Places of *Poliſh Pruſſia*. The *Poles* were forced to raiſe the Siege of *Marienburg*, with the Loſs of 4000 Men; and alſo to raiſe that of *Dirſhaw*. But *Guſtavus* deſigning to attack *Dantzick*, he was wounded in the Belly, which oblig'd him to delay the Siege. Soon after this he defeated *Koniersſoliski* near *Dorſtaw*; and ſome Days after he received another Wound in his Left Shoulder. A Treaty of Peace betwixt *Poland* and *Sweden* was almoſt concluded: But the Emperor promiſing to aſſiſt *Sigiſmund* with 24 Men of War and 12000 Men to continue the War, the Treaty was broke off, and the *Swedes* and *Danes* join'd in ruining the *Poliſh* Fleet; for none of them were willing they ſhould increaſe their Naval Strength in the *Baltick*. *Guſtavus* took three *Dantzick* Ships, and ſunk one, near that Town; but was repulſed before the Fort of *Dantzick*: To revenge which, he threw himſelf into the Harbour, cut in Pieces 200 of the Enemy, and took 14 Pieces of Cannon. *Alexander Leſley*, a *Scots* General, being detach'd by *Guſtavus* with two Companies of Foot and a Troop of Dragoons, to take a View of the Enemy's Army; this ſmall Detachment was ſurrounded by 17 Troops of *Poliſh* Cavalry, but broke through them twice, killed above 100 Horſe, and carried off 4 Standards. This brought on a general Engagement of both Armies, in which the *Poles* loſt 3000 Men, 4 Field-Pieces, and 14 Standards; but the Victory did alſo coſt the *Swedes* much Blood. *Guſtavus* block'd up the Harbour of *Dantzick* with 8 Ships; and the *Poles* encounter'd them with 10 Men of War, who kill'd the *Swediſh* Admiral, took his Ship, and obliged the Vice-Admiral to blow up his; but the *Poles* alſo loſt their Admiral and 400 Men. *Guſtavus* after this detached 1000 Foot, who paſs'd the *Weiſſel*, and ſurpris'd *Newenburg*, a *Poliſh* Magazine, where they took moſt of their Baggage, and 600000 Crowns in Money. The *Swediſh* General *Wrangel* did alſo raiſe the Blockade of *Brodzintz*, where he killed 3000 *Poles*, took 1000 Men, 5 Pieces of Cannon, and 2000 Waggons with Proviſions. This Defeat obliged the *Poles* to accept the *German* Auxiliary Troops, conſiſting of 5000 Foot and 2000 Horſe, under the Command of General *Arnheim*, who having joined the *Poles*, offer'd *Guſtavus* Battle, which he accepted, tho' he had only 5000 Horſe and 8000 Foot. At firſt the *Swediſh* Horſe were repuls'd; but the King charging in Perſon, ſoon made the *Poles* retire; and as they deſign'd to paſs the *Nogatz*, *Guſtavus* poſted Forces to diſpute their Paſſage: Upon which the Battle was renewed; and *Guſtavus* venturing too far, a *Pole* took hold of him by the Shoulder-Belt; but the King, by ſlipping it over his Head, got free of him. After this, another catch'd him by the Arm, and deſign'd to have carried him off; but *Erick Soop* ſhot the *Polander*, and reſcu'd his Majeſty. In the Action, which was near *Stum*, the *Swedes* took 7 Colours and 5 Standards. The *Poles* imputed thoſe Loſſes to *Arnheim*, whom they ſuſpected of a Correſpondence with the Elector of *Brandenburg*; and being weary of their Foreign Auxiliaries, and afflicted with Famine and Plague, they concluded

Digitized by Google

cluded a Truce with the *Swedes* for 6 Years; by which *Guſtavus* was to reſtore *Poland*, *Brodnitz*, *Wormdit*, *Melſack*, *Stum*, and *Dirſchaw*, all in *Pruſſia*. *Marienburg* was left to the Elector of *Brandenburg*; and *Guſtavus* was to keep the Caſtle and Harbour of *Pillaw*, *Memel*, *Elbing*, and *Brounsburg*, beſides all his Conqueſts in *Livonia*: So that this War concluded to his Honour and Advantage.

The Proteſtants in *Germany* being jealous of the Deſigns of the Papiſts, and ſenſible of the Oppreſſions of the Emperor, who aim'd at being abſolute, during the War betwixt the *Poles* and *Swedes*, deſir'd the Aſſiſtance of *Guſtavus*; but he being then ſo entangled that he could not diſengage himſelf, *Chriſtian* IV. of *Denmark* declared for the Proteſtants; but was defeated by the Imperialiſts, who afterwards made themſelves Maſters of *Lower Saxony*, and of many Places upon the *Baltick*. *Guſtavus* fearing the Conſequences, preſs'd the harder upon the *Poles*, to oblige them to a Peace. He repreſented alſo to the States of *Sweden* the Danger of the Neighbourhood of the Emperor's Forces, who had made themſelves Maſters of Part of *Denmark*: Upon which they unanimouſly agreed, That War with the Emperor was neceſſary, ſince he was the declar'd Enemy of *Sweden*, as appear'd by his intereſting himſelf ſo much in the *Poliſh* Quarrel, and by his refuſing the Title of King to *Guſtavus*. In the Beginning of this War, Count *Wallenſtein* laid Siege to *Stralſund*; and *Guſtavus* offer'd 'em Aſſiſtance, and ſent Ammunition to the Town. Upon this, the Citizens made an Alliance with him, and he ſent an Army, which oblig'd *Wallenſtein* to raiſe the Siege. The next Year he made War upon the Emperor; and, in the firſt place, ſent General *Leſly* with ſome Troops to drive the Imperialiſts out of the Iſle of *Rugen*, which he effected. Then *Guſtavus* embarked with 92 Companies of Foot and 16 of Horſe. Some Regiments were rais'd for him in *Pruſſia* before-hand, which were join'd by ſeveral Regiments of *Finlanders*, and commanded by *Guſtavus Horn*. The King landed at *Stetin*, and oblig'd the Duke of *Pomerania* to make an Alliance with him. The Adminiſtrator of *Magdeburg*, who had been depos'd by the Emperor, declar'd for him, having before his Arrival recover'd the Town and Territories of that Name. *Guſtavus* with theſe Forces beat the Imperialiſts out of the furthermoſt Parts of *Pomerania* and *New-Mark*; and the Succeſs encourag'd the Duke of *Lunenburg* and the Landgrave of *Heſſe* to enter alſo into an Alliance with him.

In 1631, *Guſtavus* concluded an Alliance with *France*, by which he was to have yearly from that Crown 400000 Crowns; and, notwithſtanding the Winter Seaſon, he took the Cities of *Lokenitz*, *Prentzlow*, *New Brandenburg*, *Clempenow*, *Trempton*; and *Loi z-Demmin* ſurrender'd to him, after a Siege of 3 Days; and *Colberg* did the like, after a Blockade of 5 Months; by which the Imperialiſts were drove quite out of *Lower Pomerania*. The Emperor finding his Generals not able to make head againſt *Guſtavus*, gave the Command of the Army to Count *Tilly*, the experienc'd and ſucceſsful *Bavarian* General. He fell upon *New Brandenburg*, a Place of no Strength; in which *Kniphauſen* commanded with two Regiments of *Swedes*, ſtorm'd it, after a brave Defence, and killed moſt of the common Soldiers. *Guſtavus* in the mean time marched to *Francfort* upon the *Oder*, commanded by the Earl of *Shaumberg*, took it by Storm, after a Siege of 3 Days, ſlew 1700 of the Enemy, and took 800. He afterwards ſent ſome Troops to *Landsberg*, who oblig'd the Town to ſurrender.

About this Time the Proteſtant Princes met at *Leipſick*, to concert Meaſures about oppoſing the Emperor's Edict for the Reſtitution of the Church-Lands. *Guſtavus* ſent to them, exhorting them to Union among themſelves, and to demand Aſſiſtance of Men and Money from them. But the Elector of *Saxony* hinder'd the Princes from entring into the propos'd Alliance, becauſe he deſign'd to head them himſelf, though he had not Courage to make an open Breach with the Emperor; and he was alſo jealous of the *Swediſh* Power, and thought it his Intereſt not to engage ſo far againſt the Emperor, as to leave no room for a Retreat when he found it needful; and, for the ſame Reaſon he refuſed Protection to the City of *Magdeburg*. *Guſtavus* perceiving the Proteſtant Princes to be miſtruſtful of him, thought it not fit to attempt the Relief of that City; eſpecially ſince the Elector of

Saxony.

Saxony refuſed either to join him, or to ſupply him with Proviſions and Ammunition. By this Means *Tilly* took the City by Storm, ſack'd it in a barbarous Manner, burnt it to the Ground, and cut off all the Inhabitants but 400. This Cruelty drove the Proteſtants to Deſpair; and *Guſtavus* iſſued a Manifeſto, declaring, That the Irreſolution of the other Proteſtant Princes was the only Cauſe of thoſe Calamities. He ſent Part of his Forces to aſſiſt the Duke of *Mecklenburg*; and with the reſt he marched into *Mark*. With the Aſſiſtance of thoſe *Swediſh* Troops, the Dukes of *Mecklenburg* drove the Imperialiſts out of all their Territories, except *Domitz*, *Wiſmar*, and *Roſtock*, which they block'd up. About this Time 6000 *Engliſh* and *Scots*, under the Command of the Marquis of *Hamilton*, arrived in *Pomerania*, to ſerve under *Guſtavus*, for Relief of the *German* Proteſtants. The very Fame of his Arrival, and of the *Scots* Valour, ſays Dr. *Burnet* in his Memoirs of the Houſe of *Hamilton*, ſtruck a Terror into the Imperialiſts, made the Elector of *Saxony* agree with the *Swedes*, encourag'd the Proteſtant Party, and oblig'd Count *Tilly* ſo to weaken his Army by reinforcing the Gariſons which lay in the Marquis's Way, that the Marquis's Arrival was conſeſs'd through *Germany* to have been a great Occaſion of *Guſtavus*'s Victory at *Leipſick*; of which anon. The Marquis had an extraordinary Reception from the King of *Sweden*, who order'd him to guard the Paſſes upon the *Oder*, to ſecure a Retreat in caſe he ſhould be beat. The Marquis after this reliev'd *Croſſen*, and made the Imperialiſts retire, leaving Part of their Baggage and Cannon behind them. He alſo took *Guben*, and was order'd to reduce *Sileſia*, but afterwards countermanded to the Siege of *Magdeburg*, where he offer'd to fight the Imperialiſts that came to relieve it; but the *Swediſh* General declin'd it. The Marquis loſt many of his Men by Plague and Famine; and in ſhort was very ill uſed by the King of *Sweden*, who did not agree with his Maſter King *Charles* I though he had a very high Eſteem of the Marquis: So that his Army dwindled at laſt to two Regiments; and the Marquis return'd home a little before *Guſtavus* was killed at the Battle of *Lutzen*, in order to have renewed a Treaty betwixt King *Charles* and *Guſtavus*; and to have remov'd the Miſunderſtanding betwixt them. But to return to *Guſtavus*, he ſurpris'd *Tilly*'s Guards near *Wolmerſtadt*, and cut off 3 Regiments; but *Tilly* march'd on with 40000 Men to *Leipſick*, and took it. This prompted the Elector of *Saxony* to declare for *Guſtavus*, who would not join his Army except he deliver'd into his Hands the City of *Wirtenberg*, to ſecure his Retreat, ſend his eldeſt Son into the *Swediſh* Army, advance 3 Months Pay to his Troops, and deliver up thoſe who counſell'd him to ſide with his Enemies: All which the Elector agreed to. Upon this, *Guſtavus* paſs'd the *Elb* near *Wirtenberg*, with 13000 Foot and 9000 Horſe, and joined the Elector near *Dieben*: And a Council of War being called, the Elector declared his Inclination for fighting. *Guſtavus* thought it alſo adviſeable to fight *Tilly* before he was joined by *Altinger* and *Treffenbach*; the King being to command the Right, and the Elector the Left. *Tilly* hearing of this, fortified himſelf in his Camp; but *Pappenheim*, and others of the Imperial Generals, would fight; and talk'd contemptibly of the new-levied *Saxons*, and of the fatigued *Swedes*. The Armies being drawn up, *Tilly* had the riſing Ground, and the Wind; but *Guſtavus* putting ſome Squadrons of Foot among his Horſe, and wheeling about, regain'd the Wind, and charging the Imperialiſts, forced them to open their Left Wing, when *Bannier* fell in, and put them into Confuſion. *Guſtavus* ordered his Men, when they attack'd the *German* Cuiraſſiers, to run their Swords into their Horſes, which they did; but the *Saxon* Infantry, and ſome of their Militia-Horſe, fled; which *Guſtavus* perceiving, he fell upon the *German* Horſe that purſued them, obliged them to give over the Chace, and gave the *Saxons* Time to rally. The Imperial Foot continued firm, till *Guſtavus* charg'd their Flank with his Right, and took their Cannon: So that they were entirely routed, 7600 killed on the Spot, and 5000 taken, who liſted themſelves in *Guſtavus*'s Service. *Tilly* was in Danger of being killed; but was reſcued by the Duke of *Saxe-Lauenburg*. The *Swedes* took above 100 Standards and Colours; but loſt 2000 Men, moſt of them Horſe; and the *Saxons* had 3000 killed. After this, they retook *Leipſick*; and *Guſtavus* at *Merſeburg* cut off above 1000 Im-

Digitized by Google

perialiſts, and took 500. He did not think fit to purſue *Tilly*'s Army further; but agreed, That the Elector ſhould march into the Emperor's Hereditary Countries; and that he himſelf ſhould march towards *Franconia*, where he took *Koningſhofen*, *Swinfurt*, and the Caſtle of *Wartzburg*. He was afterwards joined by 12000 Men, under the Duke of *Holſace*; and *Tilly* was alſo reinforced by the Imperialiſts: But the *Swedes* fell on his Rear, and cut off 4 Regiments. The Marquis of *Anſpach* made alſo an Alliance with the King: So he marched towards the *Rhine*, ſurpriſed *Hanaw*, and *Francfort* on the *Mayne*; and being poſſeſſed of all the *Ringau*, he marched into the *Palatinate*, of which the *Spaniards* were then Maſters; and driving them out, he enter'd the *Bergſtrate*, took *Gerſheim*, paſſed the *Rhine* near *Stockſtadt*, defeated the *Spaniards* that diſputed his Paſſage at *Oppenheim*, where he killed 5000 of them, and made himſelf Maſter of many Places. At this Time the Coaſt of the *Baltick* was cleared of all the Imperialiſts, by the Surrender of *Roſtock* and *Wiſmar*. The States of the Circle of *Lower Saxony* agreed to levy 6000 Foot and 500 Horſe for their own Defence againſt the Imperialiſts; and the Elector's Forces under General *Arnheim* took *Prague*: But this General being a ſecret Enemy to *Guſtavus*, and correſponding with the Imperial Generals, he would march no further into the Hereditary Countries, otherwiſe he might have ſubdued all *Moravia* and *Auſtria*. The Emperor finding that *Tilly* was not able to cope with *Guſtavus*, he gave the Command of his Army to Count *Wallenſtein*, an old and experienc'd Soldier, and ſo rich, that he was able at his own Charge to raiſe an Army, and ſoon levied 40000 Men. In the Winter *Guſtavus*'s Forces took many Places on the *Moſelle*, and defeated the *Spaniards*. In the Spring he marched into *Franconia*, and poſſeſſed himſelf of all the Places on the *Danube* as far as *Ulm*. Then he marched to the River *Leck*, where *Tilly* being intrenched on the other Side, was wounded by a Cannon Bullet, of which he died ſoon after. This did ſo much affright his Army, that the *Swedes* attacked and killed 1000 of them, and marched into the Circle of *Bavaria*, where they took *Rain*, *Newburg* on the *Danube*, and *Augſburg*; but their Deſigns on *Ingolſtadt* and *Ratiſbon* miſcarried. Before the firſt, the Marquis of *Baden* was kill'd by the King's Side, who had alſo his Horſe ſhot under him. But *Guſtavus* laid *Bavaria* under Contribution, and their Capital, *Munich*, ſurrender'd to him, where he found 140 Cannon, and in one of them 30000 Ducats. He would not ſuffer the Elector's noble Palace to be plundered. The *Swedes* roured 10000 *Bavarians*, who deſigned to ſurpriſe them: But the *Bavarians* afterwards took *Norigaw*, and broke the Articles with the Citizens. After this the *Swedes* made themſelves Maſters of moſt of the Places in *Upper Suabia*. *Wallenſtein* would not then aſſiſt the Elector of *Bavaria*, but marched into *Bohemia*; from whence, by *Arnheim*'s Treachery, he ſoon drove the *Saxons*. Then he directed his Courſe to *Bavaria*, where the Elector joined him. *Guſtavus* encamped near *Nuremberg*; and the Imperialiſts cut off many of his Convoys: But he was reinforced from ſeveral Places by 15000 Foot and 10000 Horſe. He attacked *Wallenſtein* in his Camp; but was repulſed with the Loſs of 2000 Men. In the mean time *Pappenheim* defeated the *Heſſians*, forced the Duke of *Lunenburg* to raiſe the Siege of *Gallenberg*, and obliged General *Banditt* to riſe from before *Paderborn* and *Hoxter*, relieved *Wolfenbuttel*, took *Hildersheim*, and was marching to join *Wallenſtein*. On the other hand, the *Saxons* enter'd *Sileſia* with 16000 Men, and might have poſſeſſed all the Country, had it not been for the Treachery of *Arnheim*, who was allowed by the Elector of *Saxony* to correſpond with *Wallenſtein*. *Guſtavus* deſign'd to have ſent Part of his Forces to *Franconia*, and with the main Body to have marched into *Bavaria*; but preſſing Letters from the Elector of *Saxony* oblig'd him to march to his Aſſiſtance; for *Wallenſtein* had enter'd *Miſnia* with all his Forces: Upon which, *Guſtavus* fearing leſt the Elector might make a ſeparate Peace with the Emperor, he marched to join him, and concluded it was beſt to fight *Wallenſtein* before he was joined by *Pappenheim*; and led his Army to *Lutzen*, where a Battle followed, in which the *Swediſh* Infantry fell with ſuch Bravery upon the Imperial Foot, that they routed them, and took their Cannon; but a broad Ditch hinder'd the *Swediſh* Cavalry to advance. The King put himſelf at the Head of the *Smaland* Regiment of Horſe; and

and advancing bravely before the reſt, accompanied only by the Duke of *Saxe-Lauenburg* and two Grooms, he loſt his Life there. 'Tis moſt probable, ſays *Puffendorf*, he was ſhot or ſtab'd behind his Back by the ſaid Duke, who was brib'd by the Imperialiſts. The *Swedes*, enraged by *Guſtavus*'s Death, fell upon the Enemy with greater Fury than before; and routed them on all Sides; but the Death of their heroick King made this Victory too dear a Purchaſe. This great Prince was juſtly called the *Ceſar* of the North, and would probably have dethroned the Emperor, and aboliſhed Popery in the Empire, had he lived. He diſcovered his Military Bravery very early in his Father's Time, and was alſo remarkable for his Piety. He had abundance of *Scots* in his Army. In 1623, two Regiments of that Nation were appointed to guard his Perſon and the King of *Bohemia* at *Mamich*, tho' he had both *Swedes* and *Dutch* at that Time in his Service. He aſcribed the Victory at *Leipſick* to a *Scots* Brigade. They performed great Service for him at other Times, as the noble Defence of *Straſſund*, the taking of *Francfort* on the *Oder*, *Mentz*, *Donawert*, *Augsburg*, *Ingolſtadt*, &c. for he had no leſs than three *Scots* Generals, one Velt-Marſhal, one Lieutenant-General, two Major-Generals, 23 Colonels, 20 of which came afterwards to be Major-Generals, 55 Lieutenant-Colonels, 14 Majors, with an unknown Number of Captains and Subalterns, beſides 7 Regiments of *Scots* that lay in *Sweden*, *Livonia*, &c. and the *Dutch* in *Guſtavus*'s Service were glad many times to beat the *Scots* March when they deſigned to frighten and alarm the Enemy. 'Tis obſerved, That Colonel *Sir John Hamilton* abandoned the Army, tho' earneſtly preſſed by *Guſtavus* to ſtay, only becauſe the *Swedes* and the *Dutch* were ordered to ſtorm the Enemy's Works before him at *Wurtzburg*, after he himſelf and his Men had boldly hewn out the Way for them.

The News of *Guſtavus*'s Death was joyfully receiv'd by the Emperor, who thought the *Swedes* would be obliged to abandon all their former Conqueſts in *Germany*. The Proteſtants there were alſo divided into Factions, being only united by the great Authority of *Guſtavus*. The *Swedes* proclaimed *Chriſtina*, his Daughter, Queen, being then but 6 Years of Age, and committed the Care of the War in *Germany* to Chancellor *Oxenſtiern*, who firſt ſent ſome Regiments back to *Sweden* to ſecure the Peace there. He went to *Dreſden*, to perſwade the Elector of *Saxony* to enter ſincerely into the Alliance, and to concert Meaſures with him about the enſuing Campagne. The Elector of *Brandenburg*, the Landgrave of *Heſſe*, and an Ambaſſador from *France*, went thither alſo to the ſame purpoſe, but with no Succeſs, for he anſwer'd them coldly, and in general Terms; ſo that the Confederates could not expect much Conſtancy or Aſſiſtance from him. *Oxenſtiern* ſent 14000 Men, under the Command of the Duke of *Lunenburg*, into *Lower Saxony* and *Weſtphalia*: Other Troops were order'd to *Franconia*; and the reſt were detached to *Sileſia*. The Duke of *Lunenburg* took ſeveral Places in *Weſtphalia*, and defeated Count *Mansfield*. *Guſtavus Horn* was alſo ſucceſsful in *Alſatia*; but the Treachery of *Arnheim*, who ſtill diſcover'd all the Confederates Secrets to *Wallenſtein*, and acted in concert with him, ſtop'd his Victories there. The Duke of *Lunenburg* took *Hamelen*, and defeated 15000 Imperialiſts who came to raiſe the Siege, killed 2000, and took as many Priſoners.

At this Time 4 Circles of *Upper Germany* aſſembled at *Hailbron*, and committed the Management of the War to *Oxenſtiern*, who reinſtated the Children of *Frederick* Count *Palatine* in his Territories and Electoral Dignity, in order to engage *England*, *Holland*, and the whole *Palatine* Family, in his Intereſt. *Arnheim* marched out of the Way, to give an Opportunity to *Wallenſtein* to fall upon the *Swedes* in *Sileſia*, and drive them from thence; but in other Places the *Swediſh* Affairs were in a tolerable Poſture. *Guſtavus Horn* did ſo harraſs the Duke *de Feria* in his March from *Italy*, that of 30000 Men, he had only 12000 Men left, which broke his Heart. *Horn* alſo took *Ratisbon*, and ravaged *Bavaria*.

The Emperor was at this Time ſuſpicious of the Deſigns of *Wallenſtein*, who was grown too great for a Subject; for he had bargain'd with the *French* to join 'em, and made ſome Propoſals to *Oxenſtiern*, who would never truſt him. The Emperor reſolved

Digitized by Google

ſolved to take him off; but in this dangerous Juncture, had none he could truſt with the Conduct of this Affair but three *Scots* Colonels, *Gordon*, *Leſly*, and *Butler*, who boldly ſeiz'd this perfidious General, and ſtruck off his Head in the View of his Army. The King of *Hungary* was made General in his ſtead, who retook *Ratisbon*. After this happened the fatal Battle of *Nordlingen*, where 6000 *Swediſh* Foot were killed, and a great many taken, with their General Count *Horn*, and 130 Colours. Upon this the Elector of *Saxony* made a ſeparate Peace with the Emperor. The Elector of *Brandenburg* ſided with the *Saxons*, and all *Upper Germany* was over-run by the *Imperialiſts*; and the Truce with *Poland* being expired, the *Swedes*, to procure a new one, were obliged to quit *Pruſſia* to the *Poles*. *France* alſo refuſed to engage further with the *Swedes*, unleſs *Philipsburg* was ſurrender'd to them, which was complied with. Then a War began betwixt the *Swedes* and the Elector of *Saxony*, who demanded the Reſtitution of the Archbiſhoprick of *Magdeburg*, and offer'd 2500000 *Miſnia* Livres as an Equivalent; but *Oxenſtiern* refuſed it. Upon which, the *Saxons* marched to the *Elb* to give the *Swedes* Battle: *Banier* defeated their advanced Guards at *Altenburg*; but 7000 of them having paſſed the *Elb* near *Domitz*, General *Ruthven*, a *Scots-man*, was detached with moſt of the *Swediſh* Horſe, and 1000 Foot, to ſecure that City. The *Swediſh* Horſe fell upon the *Saxons*, cut moſt of them off, and took 2500, whom they forced to ſerve in the *Swediſh* Army. Moſt of the Allies, who preferr'd their private Intereſt to the Common Cauſe, had now deſerted the *Swedes*, who, thô they were leſs numerous than formerly, acted more unanimouſly, and reſolved that *Wrangel* ſhould command a Detachment on the *Oder*; that *Leſly* ſhould act in *Weſtphalia* upon the *Weſer*; and that *Banier* ſhould command the Body of the Army upon the *Elb*, where he routed 12 *Saxon* Regiments. *Knipbauſen* alſo routed a Body of *Imperialiſts*, and killed 1000 on the Spot, but loſt his Life in this Engagement; upon which his Forces were obliged to retire; but General *Leſly* recruited them, and gathering up the diſpers'd Regiments, made himſelf Maſter of *Minden*; the Gariſon of which was ſubject to the Duke of *Lunenburg*, who had declared againſt the *Swedes*: And *Leſly* having joined the *Swediſh* Troops who had been in the Service of that Prince to his own, he brought Affairs in *Weſtphalia* to a good Poſture, and the Landgrave of *Heſſe* join'd him to relieve the City of *Hanaw*, blocked up by *Lamboy*, which they did, and obliged *Lamboy* to retire with much Loſs. After this, *Leſly* retired towards the *Weſer*: For the *Swediſh* Affairs in *Saxony* being in an ill Poſture, *Banier* order'd *Leſly* to join him; and *Wrangel* having alſo brought him Recruits from *Pomerania*, *Banier* gave the *Saxons* Battle near *Perleburg*, where he attacked them in their fortified Camp, and killed 5000 in the Field of Battle, beſides thoſe ſlain in the Purſuit. He alſo defeated 8 *Saxon* Regiments near *Edenburg*, and 2000 of their Men near *Pegau*. The next Year, being 1639, he drove the Imperial General *Gallas* into the Hereditary Countries. *Bernard* Duke of *Saxe-Weimar* had the ſame Succeſs on the *Rhine*, where he twice routed the *Imperialiſts*, and afterwards killed 9000 of them; when they came to raiſe the Siege of *Briſack*. He likewiſe defeated the Duke of *Lorrain*, and killed 3500 of his Men; ſo that the Place was obliged to ſurrender. After this, the *Swedes* reſolved to make the Emperor's Hereditary Countries the Seat of the War; but the Death of Duke *Bernard*, who was poiſon'd by the *French*, becauſe he refuſed to ſurrender *Briſack* into their Hands, hinder'd it, and his Army was brib'd to ſubmit to a *French* General. In 1641, *Banier* had well near ſurpriſed *Ratisbon*, where the Emperor and the Eſtates of the Empire were aſſembled; but a ſudden Thaw hinder'd it. He deſign'd to carry the War into *Moravia*, *Sileſia*, and *Bohemia*; but Duke *Bernard*'s Forces, then under the Command of a *French* General, left him, and the *Imperialiſts* ſo cloſely beſet him, that he had no Way to retreat but thrô the Foreſt of *Bohemia*, which he did with great Expedition, and ſaved the *Swediſh* Army, but died ſoon after, on *May* 10, 1642. After his Death, the *Swedes* under the Command of *Wrangel* and *Comingſmark*, beat the *Imperialiſts* twice near *Wolfenbuttle*. *Leonard Torſtenſon* ſucceeded *Banier* in the Command of the Army, and marched to *Sileſia*, where he took *Glogaw* and other Places.

Digitized by Google

ces. He alſo defeated the Imperialiſts that came to relieve *Sweinitz*, killed 3000 of their Horſe, and their General the Duke of *Saxe-Lawenburg*: But not thinking fit to march into *Bohemia*, becauſe the Imperialiſts were ſuperior there in Number, he beſieged *Leipſick*. The Imperialiſts, under *Piccolomini*, came to its Relief, which occaſioned a Battle, wherein the *Swedes* killed 5000, and took 4500, with the Loſs of 2000 of their own Men. After this, *Leipſick* ſurrender'd to *Torſtenſon*; but *Piccolomini* obliged him to raiſe the Siege of *Friburg*; and the *Weimarian* Army, under the Command of the *French* General *Guebrian*, was routed by the *Bavarians*. 'Twas obſerv'd the *French* carried on a ſeparate Intereſt from the *Swedes*, and were unwilling that they ſhould be ſo powerful in *Germany* as to be able to carry on the War without their Help, and therefore endeavour'd to balance the War in the Empire. In 1644, *Torſtenſon* had private Orders to march into *Holſtein*, where the *Danes* had done the *Swedes* a great many Injuries. Accordingly he ſurpriſed them, took a great many Places from them, beat their Troops in *Jutland* and *Schonen*, ruin'd their Fleet, and made himſelf Maſter of the Biſhoprick of *Bremen*, and the Iſle of *Burnholm*. This obliged the *Danes* to agree to a diſadvantageous Peace at *Bromesbroo*, by the Mediation of *France* and *Holland*; by which the King of *Denmark* gave up to *Sweden* for ever *Jemptland*, and *Harndal*, which borders on *Jemptland*, and was Part of the Government of *Drontheim*, with the Iſle of *Gothland* and *Oeſel*, and gave the Province of *Bleking* for 26 Years as a Security. *Sweden* might have expected better Terms, had there not been a *Dutch* Fleet in the *Sound* of 48 Men of War, of whoſe Friendſhip they were not certain. *Torſtenſon* made a Truce with the Elector of *Saxony*, march'd into *Bohemia*, and at *Jenowitz* killed and took 8000 Imperialiſts, with the Loſs of 2000 of his own Men. After this he marched into *Moravia* and *Auſtria*, took many Places on the *Danube*, and join'd *Ragotzki*'s Army, conſiſting of 25000 Men, but undiſciplin'd, who ravag'd the Country. But *Ragotzki* afterwards made Peace with the Emperor, and marched home. The *French* under the Command of *Turenne* were defeated by the *Bavarians*, and *Torſtenſon* march'd back to *Bohemia*, his Men being ſick by eating too many green Grapes; and he himſelf being diſabled by the Gout, he quitted the Command of the Army, which then conſiſted of 15000 Horſe, and 8000 Foot, all Veterans. *Wrangel*, who ſucceeded him, made a Truce with the Elector of *Bavaria*; but the Emperor ſome Months after perſwaded the Elector to break it. Upon which *Wrangel* beſieg'd *Eger*, and after routing three Regiments of the Enemy that came to relieve it, it ſurrender'd in 1648. *Turenne* join'd *Wrangel*, and ravaged *Bavaria* and *Suabia*. They paſſ'd the *Danube* near *Lawingen*, overtook the Enemy's Rear-Guard, and killed 2000 of them, among whom was General *Haltzappel*. *Konigſmark* ſurpriſed the Suburbs of *Prague*, where the *Swedes* found an ineſtimable Booty in the Emperor's Palace, and Noblemen's Houſes, and took many Priſoners of Note. He alſo took *Tabor* by Storm. *Wittenburg*, another *Swediſh* General, took Count *Butcheim*, and ſeveral Officers of Note, who fled from *Prague* with their Convoy, and a great many Lords, 350 ordinary Perſons, and a conſiderable Booty. *Charles Guſtavus*, Count *Palatine*, was by Queen *Chriſtina* made Generaliſſimo of all her Forces. He learn'd the Art of War under *Torſtenſon*, and brought with him 7000 Men from *Sweden*.

About this Time the Peace at *Munſter* and *Oſnabrug* was concluded, to the Honour of the *Swedes*, who had made *Germany* the Seat of War for 18 Years. Seven Years were ſpent in adjuſting the Preliminaries: But the Emperor ſeeing that the *Swedes* were ſtill victorious, and at that Time had an Army of 70000 Veterans, commanded by the braveſt Generals of the Age, he granted the *Swedes* the Dutchies of *Bremen* and *Verden*, *Upper Pomeren*, and Part of the *Lower*, the Iſle of *Rugen*, and the City of *Wiſmar*, which has a Vote in the Circles and Diets of the Empire, and 5000000 Crowns towards the Payment of their Army. It muſt be own'd, to the Honour of the *Swedes*, that they had frequently more advantageous Terms offer'd them, if they would have yielded to a ſeparate Peace; which they refuſed, and would not lay down their Arms till they compos'd moſt of the Differences, which had till then divided.

Digitized by Google

vided the Empire, reinſtated many *German* Princes in their Territories, and ſettled both Peace and the Proteſtant Religion in *Germany*. If their Allies had not forſaken them at this Time, and that other States of *Europe* grew jealous of their Greatneſs, they might have laid under Contribution all the Countries from the *Baltick* to the Lake of *Conſtanz*; for they had in *Germany* above 100 ſtrong Places well garriſon'd. In 1654, Queen *Chriſtina* ſurrender'd the Crown at *Upſal* to *Charles Guſtavus*, her Nephew, on Condition that he ſhould allow her an Yearly Penſion, ſufficient to ſupport her Rank and Dignity. Then the Troops were disbanded at *Upſal*, to the great Grief of the People, becauſe till then the like had not been ſeen or read of in their Hiſtories. When the Queen had ſurrender'd the Sovereignty to *Charles Guſtavus*, ſhe departed the Kingdom, publickly embrac'd Popery at *Inſpruck*, and paſſed moſt of her Time afterwards at *Rome*. *Charles* was crown'd at *Upſal*, and obtain'd from the Diet, That the 4th Part of ſuch Crown-Lands as had been given away ſince *Guſtavus Adolphus*'s Reign, ſhould be reunited to the Crown. They likewiſe added ſomething new, and made it unalienable. He ſettled his Military Affairs that were in Diſorder ſince the Peace, and deſign'd to make War upon *Poland*, becauſe *Caſimir*, their King, would not acknowledge his Title, and ſent an Ambaſſador to Queen *Chriſtina*, to perſwade her to proteſt againſt the Reſignation ſhe had made, but in vain. The ſame Ambaſſador was alſo ſent to the States of *Sweden* upon that Deſign, but with equal Succeſs. Upon this *Charles* march'd into *Poland*, defeated thoſe that oppos'd his Paſſage; and all the Forces of the Republick being diſpers'd, the Waywodes and Caſtellans of *Poland* ſubmitted, and ſwore Fealty to the Crown of *Sweden*. *Caſimir*, after this, met him near *Cracow* with 10000 Men, who were defeated, 1000 of them ſlain, and all their Baggage taken: Upon which *Cracow* ſurrender'd; and *Caſimir* being forced to fly into *Sileſia*, did ſome Years after abdicate the Government; ſo that not only *Great* and *Little Poland*, but alſo the Provinces of *Maſovia*, *Podolia*, *Red Ruſſia*, and *Volhinia*, ſent their Deputies to *Charles* at *Warſaw*, and, in the Name of their Principals, ſubmitted to him. Thus he conquer'd this Kingdom in 3 Months time, and *Dantzick* only held out againſt him. This amazing Progreſs alarmed moſt of the States of *Europe*, and afterwards the *Poles* revolted from him, becauſe they fear'd a Change in Religion; and the Noblemen being jealous their Privileges ſhould be abridged, in many Places they cut off the *Swediſh* Garriſons, eſpecially in *Lithuania*. *Charles* having ended his Differences with the Elector of *Brandenburg* about *Pruſſia*, marched back to *Warſaw*. In his Way he met *Czarneczi*, who commanded 12000 Men, whom he defeated, and took many Priſoners. And near *Warſaw* the *Swedes* alſo routed the *Poles* and *Tartars*, in a bloody Battle that laſted three Days, when many Thouſands of 'em were kill'd and drown'd in a Moraſs. The Elector of *Brandenburg*, after this Victory, withdrew his Troops to *Pruſſia*, and was wavering. The *Muſcovites* invaded *Carelia*, *Ingria*, and *Livonia*. In the latter, they took *Duneburg* and *Kokenhauſen*. They alſo laid Siege to *Riga*, but were forced to raiſe it. *Ragotzki*, Prince of *Tranſilvania*, with 30000 Men, joined King *Charles* near *Optatow*, where they took the City of *Braſlaw* in *Lithuania*. At this Time the *Danes* declared War againſt *Sweden*, being inſtigated by the Emperor, *Holland* and *Muſcovy*. They demanded back all the Countries the *Swedes* had taken from them, and invaded the Dutchy of *Bremen*, which obliged King *Charles* to march directly to *Stetin*, and he adviſed *Ragotzki* to return to *Tranſilvania* in the mean time; but he refuſed it, and directing his Courſe to *Volhinia*, where he had neither Friends nor Places of Strength, the *Poles* and *Tartars* ſurpris'd him, and cut off moſt of his Army. After this the *Turks* declared War againſt him, and in a Battle with thoſe Infidels he loſt his Life. *Charles* recover'd in 14 Days time all the Places the *Danes* had taken in *Bremen*. He alſo invaded *Holſtein*, where he carried all before him; and *Wrangel* took *Fredericks-Udde*; but the *Swedes* were worſted in *Holland*. At this Time the *Auſtrians* enter'd *Poland*, to drive the *Swedes* from thence, and took *Cracow*. The *Poliſh* General *Czarnuski* invaded *Pomerania*, and ravaged it cruelly. In 1658, *Charles* marched over the Ice to the Iſland of *Fuhnen*, or *Huen*, where he killed

Digitized by Google

killed 4400 Soldiers, and 1500 Boors, and from thence he went to other Iſlands, and at laſt into *Zeeland*, where he carried all before him. This diſtreſſed the King of *Denmark* to that degree, that he was obliged to clap up a Peace at *Roſchild*, by which he reſign'd to King *Charles* the Provinces of *Schonen*, *Halland*, and *Bleking*, with the Iſles of *Huen*, *Falſter*, *Bornholm*, and the Governments of *Bahus* and *Drontheim* in *Norway*. *Charles* ſeeing this Peace with the *Danes* was not to be depended upon, and knowing his War with *Poland* was far enough from being ended, thought it moſt adviſable to humble *Denmark* in the firſt place, as his weakeſt Enemy: Upon which he landed Forces in *Zeeland*, and beſieged *Copenhagen*, while *Wrangel* reduc'd *Cronenburg*. The *Danes* in *Copenhagen* defended themſelves bravely, till they were deliver'd by the *Dutch* Fleet, who after defeated the *Swediſh* Navy, in which they loſt their Admiral, and his Ship They ſailed through the Fire of the *Swediſh* Ships that lay before the Town, and reliev'd it; upon which the Siege was changed into a Blockade; and in the Iſland of *Huen*, the *Swediſh* Infantry were cut off. At this Time *Charles* gave Orders to *Douglaſs*, one of his Generals, to make himſelf Maſter of *Mittaw*, and ſecure the Duke of *Courland*'s Perſon, becauſe he had broken the Neutrality; which *Douglaſs* performed, and brought the Duke Priſoner to *Riga*, from whence he was ſent to *Ivanogorod*, where he continued till the End of the War. The King of *Sweden* was ſtill Maſter of the Iſles of *Langland*, *Huen*, *Falſter*, and *Laland*; but the *Engliſh* and *Dutch* both declar'd againſt him, and threaten'd him if he would not make Peace with *Denmark*. After the Departure of the *Engliſh* Fleet, the Confederate *Dutch*, *Danes*, *Brandenburgers*, and *Poles*, tranſported their Troops into the Iſland of *Fubnen*, or *Huen*, defeated the *Swedes* at *Nyborg*, and killed 4000 of their beſt Men. This Loſs touched *Charles* in a ſenſible manner; and having aſſembled the States at *Gothenburg*, to conſult about Affairs, he was taken with a Fever, and died in 1666, at a Time when he had ſix powerful Enemies combined againſt him.

Charles XI. was but 5 Years of Age when his Father died. The States were deſirous of an honourable Peace, which was concluded at *Oliva* near *Dantzick*, with the Emperor, the Elector of *Brandenburg*, and the King of *Poland*, who reſign'd his Pretenſions to the Crown of *Sweden*, as the *Poles* did their Claim to *Livonia*. That ſame Month a Peace was concluded near *Copenhagen* with *Denmark*, upon the ſame Terms with that at *Roſchild*; but that the *Danes* kept the Iſle of *Bornholm*, and *Drontheim* in *Norway*. The *Swedes* however got *Bornholm*, in Conſideration of an Equivalent in *Schonen*. The *Swedes* alſo concluded a Peace with the *Muſcovites* about that Time; and in 1674 enter'd into the Triple Alliance with *England* and *Holland*, to preſerve the *United Netherlands*. At length they broke this Alliance, and ſided with *France* againſt the Elector of *Brandenburg*, to draw him from the Intereſts of the Empire; but the Elector routed the *Swediſh* Army, and took all that the *Swedes* were poſſeſſed of in *Pomerania*. The *Lunenburgers* got the Dutchy of *Bremen* and *Verden* into their Poſſeſſion, the King of *Denmark* took the City of *Wiſmar*, and alſo ſeveral conſiderable Places in *Schonen*; but the *Swedes* on the other Side routed 5000 *Brandenburgers* in the Iſle of *Uſidom*; and *Koningſmark* defeated the Confederates in the Iſle of *Rugen*, where he killed and took all their Men. The *Swediſh* Fleet was about this Time ſhipwreck'd on the Iſle of *Bornholm*, moſt of the Men were drown'd, and the reſt ſtrip'd and impriſon'd by the *Danes*, tho' they had Paſſports from the K. of *Denmark*. The *Danes* made an Inroad into *Schonen*, and took *Helſingburg* and *Chriſtianſtadt* by Storm; but the K. of *Sweden* marched againſt them, and entirely routed them. He alſo defeated them in another Battle at *Lunden*. Next Year the *Danes* were routed again at *Landskroon*, and *Chriſtianſtadt* ſurrender'd to *Charles*. By the Peace of *Nimeguen*, the *Swedes* were repoſſeſs'd of all the Countries they had in *Germany*, and all Places taken by the *Danes* were reſtor'd to them. The King of *Sweden* married *Ulrica Eleonora*, the King of *Denmark*'s Siſter, in 1678.

After the Peace, he applied himſelf to repair the Damage his Dominions had ſuſtain'd during the late War, to fortify his Gariſons, which were in a bad Condition, and to re-eſtabliſh his Authority in the Territories that were reſtor'd him at the Treaty

Digitized by Google

of *Nimiguen*. His Officers and chief Miniſters about him, as Baron *Guldenſtiern* and Baron *Flemming*, poſſeſſed him with an ill Opinion of the Faithfulneſs of the Senators. In 1680, the King called together the States, and propoſed, That they ſhould enquire into the great Loſſes during the laſt War, for they had loſt above 40 Sail of good Ships, and above 100000 Men, and paſs Sentence upon ſuch as ſhould be found guilty of Maladminiſtration; ſo that the Odium of all this fell upon ſuch as were in the Miniſtry during the King's Minority, and their Eſtates were confiſcated to make Satisfaction. The States alſo voted, That the too great Power of the Senators contributed much to the former Miſcarriages; and that they needed no ſuch Mediators betwixt the King and them; therefore they abſolv'd his Majeſty from that Article of his Coronation-Oath, which oblig'd him *to rule the Kingdom with the Advice of the Senators*. They further declared, That the King might deny them their former Salaries, and only employ ſuch of them as he pleaſed; and they were afterwards to be called the King's Senators, inſtead of the Senators of the Kingdom. To oblige the King yet more, they voted, That his Majeſty, who had received his Crown only from God, was accountable to him alone for his Actions. They granted at the ſame time a very great Sum to the King, towards which every Servant was to pay the Tenth Part of their Wages, and each Farm Five Crowns, which was as much as the uſual Rent of thoſe Farms before that Time. Cities were to pay proportionably; and this was to laſt 4 Years. They eſtabliſhed a new Court of Reſumptions, to reunite all Crown-Lands formerly alienated, or ſold at Under-Rates, and that the Proprietors ſhould pay for the Loſs the Crown had ſuffer'd from the Date of the Alienation. Thus thoſe Lands were reunited, though greatly improved by the Owners. The ſame was done as to Noblemen's Poſſeſſions in *Livonia*. The Nobility were obliged to comply with all this, becauſe many of them needed Court-Employments to ſupport their Grandeur.

By thoſe Methods the King got a vaſt Revenue; but it impoveriſhed moſt Families in *Sweden*: For when the Crown ow'd Money to great Families, whoſe Lands were to be reunited, they were left to ſtate their Accounts in the Court of Liquidation; but what they ow'd the King was to be paid immediately.

At the Aſſembly of the Eſtates in 1683, a Sum was granted equal to the former; and they explained that Article of the Coronation-Oath, whereby the King was obliged *to rule according to Law*; and declared he was not thereby tied to the Laws then in being, but might alter the ſame, and add what other Conſtitutions he thought fit. Theſe and the like Conceſſions have made the King of *Sweden* as abſolute as any in *Europe*. The Clergy, Burghers and Peaſants, complied the more willingly with this Change, becauſe they thought it would be the only Way to humble the Nobility, who were always Imperious and Tyrannical.

He reſented the Affront put upon him by the *French*, in ſeizing the Dutchy of *Deux-Ponts*, and their entring into an Alliance with the Elector of *Brandenburg*, and therefore reſolved to remain Neuter in the ſucceeding War. In 1696, he offer'd his Mediation to compoſe the Differences betwixt the contending Princes and States of *Europe*, which was accepted by the Confederates and *France* at the Treaty of *Ryſwick*. He died *April* 17. 1697.

Upon the 16th of *November* following the States declared *Charles* XII. of Age, though but fifteen Years old. In 1699, he ſided with the Duke of *Holſtein* againſt *Denmark*, with a Deſign to put a Stop to the late Alliance concluded betwixt *Muſcovy*, *Poland*, and *Denmark*, againſt him. Upon this he ordered his Forces in *Pomerania* and *Bremen* to join thoſe of *Lunenburg*; and obliged the King of *Denmark* to riſe from before *Tonningen*. In 1700, the *Engliſh* and *Dutch* Fleet came into the *Sound*, declared againſt *Denmark*, joined the *Swediſh* Fleet, and made a Deſcent on the Coaſts of *Zeeland*. The King of *Sweden* landed 800 Foot; and a Storm having obliged the reſt of the Tranſports to ſtand off to Sea for two Days, the *Danes* might eaſily have cut them all off; but at laſt the *Swedes* landed about 8000 more, who obliged the King of *Denmark* to put an End to thoſe Differences, by the Treaty of *Travendahl*; at which the Duke of *Holſtein* obtained advantageous Conditions.

In

In the mean time, *Auguſtus* King of *Poland*, contrary to the Peace at *Oliva*, invaded *Livonia*, and beſieged *Riga*; but afterwards quitted it. The Czar of *Muſcovy* alſo invaded *Livonia*, without proclaiming War, and inveſted *Narva*. The Czar ſent two Detachments, one of 5000, and another of 15000, to ſecure a Paſs; but the King of *Sweden* routed thoſe Detachments, and advanced directly to the Czar's Camp. The Diſpute laſted 3 or 4 Hours, before the *Swedes* could enter the Enemy's Lines; many of the *Muſcovites* were drowned by the breaking of a Bridge, and the reſt laid down their Arms upon Quarter: So that about 30000 of them were killed and taken. The *Swedes* got all their Artillery and Baggage, with a conſiderable Sum of Money. This Victory encouraged the *Swedes* to attack the *Muſcovites* in their fortified Camp, which the King enter'd Sword in Hand, and totally routed them; and about 30000 of them were ſaid to be ſlain, with the Loſs only of 3000 *Swedes*, who got all their Baggage, 70 Braſs Cannon, 30 Mortars, and 164000 Rix-Dollars. The brave young Prince gain'd this remarkable Victory over his perfidious Enemies in the 17th Year of his Age; and thus *Narva* was relieved. After this he marched againſt the *Saxons*, made them abandon all their Conqueſts in *Livonia*, enter'd *Poland*, joined *Sapieha*, routed *Oginski*, drove King *Auguſtus* out of the Country, purſued him to *Saxony*, dethron'd him, and got *Staniſlaus*, Palatin of *Poſen*, elected in his room. The Particulars of this young Prince's War in *Poland* and *Muſcovy* are of ſo late a Date, that 'tis needleſs further to inſiſt upon them.

Of the AIR, SOIL, *&c.*

THE Air of *Sweden* is generally clear, dry, and cold, which contributes much to the Health and great Age of the Inhabitants, ſome of whom live 120, and others 130 Years; but ordinarily 'tis extreme cold in Winter, which laſts 9 Months, and is immediately ſucceeded by the Summer; ſo that they have no Seaſons like our Spring and Autumn.

Mr. *John Scheffer*, Profeſſor of Hiſtory and Antiquity in the Univerſity at *Upſal*, writes, That the Froſt pierces into the Earth two *Swediſh* Ells; and what Moiſture is found there, is white like Ice: That ſtanding Water freezes 3 Ells deep, which kills the Fiſhes if the Ice be not broke; but where the Ice is thin, or the Bottom ſlimy, they die not ſo ſoon. When the Ice in great Lakes and Bays is broke either by the Force of the Water, or of the impriſoned Vapours, the Cleſts reach the whole Length of ſuch Lakes; and the Noiſe is as terrible as that of Peals of great Guns. The Air which comes in at thoſe Cleſts does for moſt part preſerve the Fiſh in great Lakes. He obſerves, That a ſtrong Brine made of Bay-Salt is never throughly frozen in thoſe Parts: That they have Foxes and Hares, which about the beginning of Winter are half white, and in the middle of it all white; and the Colour of the Squirrels is then of a mix'd white and grey, as we find it in *Philoſoph. Tranſact. N.* 19. *P.* 350. The Froſts there come from the N. E. Winds, which blow from the Northerly Places of *Muſcovy*, *Tartary*, and the Frozen Ocean near the Pole.

The Mathematicians of *Charles* XI. in their Travels through the Northerly Places of that Kingdom to *Torneo* in *Bothnia*, ſay, That though they delayed their ſetting out from *Upſal* till the 2d of *May*, O. S. they were detained in many Places by Snow and Mountains of Ice 20 Cubits high on both Sides of the Rivers; ſo that they had a Winter Journey in the End of *May*, and the Beginning of *June*.

The Heat of their Summer is almoſt as intolerable as the Cold of their Winter. It comes all of a ſudden, and is ſo intenſe, that it ſets Woods on fire, which ſpreads ſometimes for many Leagues, and is ſcarce to be ſtop'd till it come at ſome Lake or very large Plain.

The Soil in the middle of the Country is indifferent fertile, and they have ſome fruitful Vallies; but the Mold is ſeldom above half a Foot deep; and where 'tis ſhalloweſt, they have moſt Corn: And for this Reaſon the Ground is eaſily plough'd by one Ox. Their barren Land they enrich by Aſhes of Trees, which they burn on the Place, and rake the Seed among the Aſhes, which next Year, without further Pains, yields a plentiful Crop. This is an old

Digitized by Google

Practice in this Country; but the Danger of deſtroying all the Woods, has of late Years occaſion'd ſome Laws to limit this Cuſtom.

Were the Inhabitants induſtrious, they might have Corn enough of their own; but they are obliged to have much of it from *Livonia*, which is called the Granary of *Sweden*; beſides what they have from Parts of *Germany* near the *Baltick*. The poorer Sort in the Northern Places grind the Bark of Birch-Trees, which they mix with a little Corn, and make into Bread.

The Corn and other Fruits of the Earth ripen very ſoon here, as in other Northern Countries; ſo that ordinarily they have but 6 Weeks between Seed-time and Harveſt. The Reaſon ſeems to be, That the Oil and Sulphur which abound in their Soil, as appears by the Trees and Minerals produc'd there, being pent up all Winter by Froſt and Snow, are all of a ſudden actuated by the great Heat of the Sun, who ſcarce ever goes below their Horizon during thoſe Weeks, which makes 'em amends for its ſhort ſtay. Yet the Corn is liable to Danger from the Cold even in this Seaſon; for if there happen a Dew or a Froſt while it ripens, it very much hurts the Grain, and ſometimes deſtroys it, which is to be prevented no other Way but by cutting it down immediately in that caſe.

In Summer, the Fields are cover'd with Flowers, and they have Plenty of Currans, Strawberries, and Raſpberries; but Apricocks and other Wall-Fruit are very rare: Their Cherries are tolerably good; but their Apples, Pears, and Plumbs, are ſcarce, and of no good Reliſh. They have abundance of Roots, which is a great Part of the Food of their Poor. In the Northerly Places, where the Ground is always cover'd with Snow and Ice, the People live by Hunting and Fiſhing.

Woods, Mountains, Heaths, Lakes, Moraſſes, and vaſt Foreſts, cover a great Part of this Country. Oaks, Pines, Beech, Elder, Birch, and Fir, grow here in great Plenty; and the Trees grow ſo cloſe, that where they fall and rot, the Woods are ſcarce paſſable.

This Country abounds with Mines of Copper and Iron, and ſupplies moſt other Places with thoſe Metals, becauſe they are better here than in other Countries. There are Silver Mines in *Salberg* in *Weſtmania*. *Finland* affords Pitch and Tar, and *Dahl* and *Wermeland* Maſts, *&c.*

Of their BEASTS.

THE Cattle are of a ſmall Size; nor can the Breed be better'd by bringing in larger from other Places, for they ſoon degenerate, becauſe in Summer the Graſs is not very nouriſhing, and in Winter they are almoſt ſtarv'd. Their Sheep bear a very coarſe Wool. Their Horſe, eſpecially the *Finniſh*, are ſmall, but vigorous, ſtrong, ſure-footed, and ſwift.

Wild-Beaſts are very plentiful, eſpecially in the Northern Provinces, as Bears, Elks, Deer, and Hares, which are hunted for their Fleſh; but their Wolves, Foxes, Wild-Cats, and Ermins, for their Furs. They have no Rabbets, but what are brought in for Curioſity.

Of their FOWL.

THey have both Wild and Tame in great Plenty, and good of their kind, as *Orrus*, as big as a Hen; *Kedlers*, as large as a Turky. They have Partridges, and another Bird ſomewhat like them, called *Terpers*, Fieldfares, and Woodcocks. They have Plenty of ſmall Birds, as Thruſhes, Black-Birds, and *Syden-Sewans*, of the Size of a Fieldfare, but better Meat, and are ſuppoſed to come from *Lapland*. They have few Pigeons, becauſe they are deſtroy'd by Hawks. They have many Eagles, Faulcons, and other Birds of Prey.

The TRADE *of* Sweden,

IS in Copper, Iron, Steel, Pitch, Tar, Roſin, Maſts, Planks, Oak, Deal Boards, Wooden-Ware, and Furs, beſide the Commodities exported from *Lieſland*, which are valued at 700000 *l. per Annum*.

Thô *Sweden* always had Materials of Trade, yet by the Idleneſs or Ignorance of the Inhabitants, Strangers had formerly all the Management of it. The Hans-Towns

on

Digitized by Google

on the *Baltick* engroſſed all their Trade, till the *Dutch*, after their Revolt from *Spain*, got a Share of it. Before that Time, no Iron was made in *Sweden*, but the Oar was carried to *Dantzick*, and other Parts of *Pruſſia*, and there forged into Bars. Moſt of their Manufactures are owing to ſome Mechanicks that were driven from the *Netherlands* by the Cruelty of the Duke of *Alva*. They erected Forges and other Conveniencies for making of Iron Guns, Wire, and other Manufactures of Copper, Braſs, *&c.* They know now how to take the Latten from the Copper, and make all Sorts of Utenſils of it.

In 1644, they obtained a Freedom from paying Cuſtoms to *Denmark*, when their Ships paſſed the *Sound*. In Time of War, the *Engliſh* uſed formerly to tranſport moſt of their Commodities; but in Peace, they tranſported them in their own Bottoms. The *Swedes* are not able to keep their Iron-Works a going without Credit from abroad. Hence it is, the *Engliſh* and other Foreigners pay them *per* Advance in Winter for the Iron they are to receive in Summer. If it were not for this, Foreigners could ſcarce live among them, for they envy the Thriving of Strangers, and treat them uncivilly. In 1687, an Act was made, That no Foreign Merchant ſhould have Liberty of Trading in *Sweden* above two Months in a Year, except they would be Burghers; and now and then they put this in Execution, The third Part of the Goods and Eſtate of every Foreign Merchant that dies in *Sweden*, muſt be pay'd to the King, which hinders moſt of them from marrying and ſettling there; and ſometimes the Government has demanded a 6th Part of the Eſtate Foreigners had got there, when they were going to leave that Country, and have arreſted their Effects on that Account.

Their Trade of IMPORT.

FRom *Portugal* they import Salt, without great Quantities of which they cannot ſubſiſt. From *Scotland* they have Store of Herrings, and had formerly Wool. From *France* they have ſtrong Liquors, and Fineries, which ſupply their Vanity and Luxury, but occaſion little or no Vent for their own Commodities. From *England* they have Cloth, Stuffs, and other Woollen Manufactures, that amounted ſometimes to 50000 *l. per Annum*; Tobacco, *Newcaſtle* Coals, Pewter, Lead, Fruits, and Sugar, with other Commodities. Their Trade with *England* is very beneficial to them; for the *Engliſh* pay them but one Third, or at moſt one Half, in Goods, and the reſt in Money. Of late they have ſet up Manufacturies of Cloth to ſupply their Army, and have clogg'd the Importation of coarſe *Engliſh* Cloth with ſuch exceſſive Duties, that it is almoſt equal to a Prohibition.

Of the MINES.

THE Silver Mine at *Salberg* is 145 Fathom deep. They have no Records ſo ancient as to give an Account of the firſt Diſcovery of this or the Copper-Mine there. The Oar ſeldom yields above 4 *per Cent.* The Yearly Revenue of it is about 20000 Crowns of fine Silver, of which the King has the Pre-emption, paying one Fourth leſs than the intrinſick Value.

The Copper-Mine is 80 Fathom deep, and the Roof ſometimes falls in. The Copper made here amounts Annually to 200000 *l.* the Fourth of which belongs to the King; and upon the Remainder, he has a Duty of 25 *per Cent.* when it is exported unwrought; ſo that the Proprietors have but ſmall Profit.

Towards the Mountainous Parts, there are many Iron Mines and Forges, from whence they export Iron to the Value of 300000 *l. per Annum*. The great Woods and Foreſts ſupply thoſe Forges with Charcoal, which is ſix times cheaper than in *England*, but not ſo good. Magnets are found in thoſe Iron Mines; but the Mathematicians ſent by *Charles* XI. to *Torneo* ſay, the Loadſtones they have from the Mines in *Lapland* excel all they ever ſaw in attractive Force.

In *Nericke*, or *Nericia*, there is Plenty of Minerals of Vitriol, Allom, and Sulphur. *Weſtmania* abounds alſo with Mines.

Sir *Gilbert Talbot* ſays, there is a heavy Stone in *Sweden*, of a yellow Colour, intermix'd with Streaks of White, which makes it look as if 'twere compos'd of Gold and Silver.

Digitized by Google

Silver. It is found in firm Rocks, and runs in Veins, upon which they lay Wood, and ſet it on Fire. When the Stone is thus heated, they caſt Water upon it to make it rend, and then dig it up, break it into ſmaller Pieces, and put it into an Iron Pot, the Mouth of which they put into another, and put both into an Oven, where the Stone being melted, runs into the lower Pot. The firſt running of this Stone is Sulphur. What remains of the Stone, is carried out, and expoſed upon a high Hill to the Sun and Air for two Years, when it takes Fire of it ſelf, and ſends forth a thin blue Flame, ſcarce diſcernable in the Day-time. This being conſum'd, there remains a blue Duſt behind, which the Workmen put into great Tubs of Water, where it infuſes 24 Hours, or longer; then they boil the Water in Kettles, as we do Salt-petre, and put it into cooling Tubs, where they place Croſs-Sticks; upon which the Vitriol faſtens like Sugar-Candy.

The Water that remains after the Extraction of the Vitriol, they mix with an 8th Part of Urine and the Lees of Wood-Aſhes, which is again boil'd very ſtrong, and being ſet to cool in Tubs, with Croſs-Sticks in them, the Allom hangs upon 'em.

In the remaining Water, after the Allom is extracted, there's a Sediment, which being ſeparated from the Water, is put into an Oven, where Wood is burnt upon it till it become Red, from whence comes *Minium*, or Red Lead. *Philoſoph. Tranſact. N.* 21. *P.* 375.

Of the Inhabitants, their Diſpoſitions, Manners, Cuſtoms, &c.

THat *Sweden* was formerly very populous, is evident from the ancient Expeditions of the *Goths*, *Vandals*, *Normans*, and other People, who from *Scandinavia* overran moſt Countries of *Europe*, and erected Kingdoms in *France*, *Italy*, *Spain*, and other Places. The Polygamy then in uſe among thoſe Pagans is commonly thought to have been one Cauſe why *Sweden*, *Norway*, and *Denmark*, were thus over-ſtock'd with People.

The Nature of the Climate, which occaſions a very healthful, dry and ſharp Air, makes the Natives of a ſtrong and vigorous Conſtitution; which being confirmed by a hardy Education, coarſe Fare, and indifferent Lodgings, qualifies them for all the Fatigues and Hardſhips of War. *Puffendorff* gives this Character of his Countrymen in general; That they are very grave and reſerved, which if not qualified by Converſation with other Nations, often degenerates into Miſtruſtfulneſs. They over-value themſelves, and deſpiſe others. They have Capacity ſufficient to learn the Principles of Arts and Sciences, but commonly want Patience to attain to the Perfection of any; for many of them imagine themſelves to be Maſters before they have got half Way. They have but very little Inclination, and a leſs Eſteem, for Mechanick Trades. They are but meanly qualified for ſuch Manufactures as require Induſtry and Ingenuity; are obſerv'd to be invidious, and never love to ſee Strangers, nor one another, thrive. They are well vers'd in Diſſimulation, have a great Inclination to make a Figure, and live beyond their Income, which ruins their Families.

Other Authors give this further Account of them; That the Peaſants are very obedient and reſpectful to their Superiors; That moſt of them are very poor, and are taught by Neceſſity to make, after a rude Faſhion, Shoes, Clothes, Inſtruments for Husbandry, and other Neceſſaries that they are not able to purchaſe: And to keep them to this Frugality, nor above one Taylor or other Mechanick is allow'd to dwell in a Pariſh, tho' ſome of them are above 20 Miles in Extent. They are generally well made, handſome and ſtrong, and Lovers of good Cheer, eſpecially at other People's Charge. Their Hiſtory, already quoted, ſhews that they are not inferior to any Nation in *Europe* for Valour. The Peaſants wear Clothes of Sheep-Skins in Winter, and their other Raiment is generally of coarſe Cloth.

Their Houſes are for moſt part of Wood, but low, becauſe they are leſs obnoxious to Storms and Winds, very frequent in thoſe Parts. The Houſes of the Gentry are of Stone or Brick, and all of them make uſe of Stoves in the Winter.

Their Women are fair and handſome, and value themſelves for being more witty and polite than other Women of the North.

Digitized by Google

Of their NOBILITY.

BEfore *Erick* XIV. there was no Hereditary or Feudal Titles of Honour, as Dukes, Counts, Barons, *&c.* the Titles then were only Officiary; ſo that *Charles* VII. and *Erick* X. though the Sons of Kings, had no other Title but that of *Juncker*, which ſignifies a young Nobleman; but when any Perſon ſignalized himſelf by his Bravery, the Government gave him ſome publick Poſt. *Selden*, in his Titles of Honour, Pag. 458. ſays, in the old Laws of *Sweden* there's no mention of any Secular Dignity that was not meerly Officiary, beſides *Miles* and *Militaris*, the firſt ſignifying a Knight, and the ſecond a Gentleman.

In this Kingdom there are ſeveral Noble Families, moſt of which ſignaliz'd themſelves in the long *German* Wars. The Original of their Hereditary Titles was in 1561. when *Erick* XIV. gave *Peter Brahe*, *Suante Sture*, and *Guſtavus Roſe*, the Title of Earls, and at the ſame Time gave the Title of Barons to two of the Family of *Steinbocks*, two of the *Guldenſtierns*, and to the Families of *Lewenhaupt*, *Gripp*, *Flemming*, and *Horn*. It is cuſtomary in *Sweden* to call the Sons of their Nobles by three Names, the firſt his own Chriſtian Name, the ſecond that of his Father in the Genitive Caſe, and the third the Surname of his Family; for Inſtance, *Guſtavus Suantonis Banier*, *i. e. Guſtavus* the Son of *Suante*, *Banier* being the Name of the Family.

The chief Families are thoſe of *Aſchenberg*, *Bonnier*, *Bielke*, *Brahe*, *Axel*, *Horn*, *Coningſmark*, *Lewenhaupt*, *Oxenſtiern*, and *Steinbock*.

The making of Knights in *Sweden* was formerly performed with greater Ceremony and Solemnity than meerly by the Stroke of a Sword. The Belt, Sword and Shield, were given them, together with Fiefs, and the Oath they ſwore obliged them to defend Chriſtianity, their King and Country; and to protect Orphans, Virgins, Widows, and the Poor, *&c.* Their Order of Knighthood is that of the *Sword*. The Nobility and Gentry are brave, and of a warlike Temper, civil, and, of a ſtately Deportment, but over-value themſelves, love Parade, are magnificent in their Equipage, are loyal to their Prince, much enclined to travel, and more expenſive in their Buildings, Apparel, and Number of Servants, than in Houſekeeping. Though they endure the Fatigue of War patiently, yet they are not reputed to know much of Stratagem. When employed in State Affairs, they give great Application; but their Abilities come more from Experience, than from Study or Greatneſs of Genius.

They never allow their Children to ſtudy Law, Phyſick, or to learn any Trade, becauſe they think it would ſully their great Birth, and this occaſions their Trade to make ſo little Progreſs. Though to gain Experience in War, they ſubmit to the loweſt Offices abroad, yet at home there is but one Inſtance known of a Gentleman who accepted the Command of a Merchant-Ship. They imitate the *French* in the Faſhion of their Clothes.

Of their RELIGION.

THE Hiſtorians of this Country ſay, the Rites and Ceremonies of Paganiſm were introduced by their famous *Woden*, who mix'd Witchcraft and Magick with it, as was hinted before. They had a Temple at *Upſal* lin'd with Gold, and 3 Idols in it; that in the middle was call'd *Thor*, from whence our *Thurſday*: He preſided over the Air and Storms. *Vodi*, or *Woden*, was their *Mars*, from whence our *Wedneſday*. *Frieco*, or *Friga*, was their *Venus*, from whence our *Friday*. Every ninth Year they had a publick Sacrifice at *Upſal*, where all were obliged to be preſent. They offer'd nine Heads of each Sort of Male Beaſt they could catch, and hang'd their Bodies on Trees. We meet alſo with ſome Footſteps of humane Sacrifice in their Hiſtory. *Pomponius Mela* ſays, the *Getæ* were remarkable for their Belief of a future State: That they weep'd at the Birth of a Child, and rejoyc'd at the Death of their Friends: That the Wives frequently kill'd themſelves, to accompany their Husbands to the other World. And Polygamy being in Uſe among them, the Wives contended who ſhould have that Honour, which was given to her that was found to be of the greateſt Virtue.

Digitized by Google

Virtue. There are many Inſcriptions on Rocks in Runick Characters ſtill to be ſeen in *Sweden*, which prove that the Immortality of the Soul was an Article of Faith among the Pagan *Goths*.

Chriſtianity was firſt preach'd in *Sweden*, by Order of *Charles the Great*, about the Year 800, after he had prevailed with the Pagan *Saxons* to turn Chriſtians. He ſent one *Herbertus* into *Sweden*, but with ſmall Succeſs. After his Death, his Son *Ludovicus Pius*, in 814, ſent *Anſgarius*, a Monk of *Corbey*, and afterwards Archbiſhop of *Bremen*; but Chriſtianity made no conſiderable Advancement till the Reign of *Olaus Skotkonung*, about 980, who ſent Ambaſſadors to *Eldred*, a *Saxon* King in *England*, to deſire Preachers from him: Upon which *Eldred* is ſaid to have ſent *Sigfrid*, Archbiſhop of *York*, who willingly left his Archbiſhoprick, and became the Apoſtle of the *Goths*. The *Swediſh* Hiſtorians blame him for perſwading this bigotted eaſie Prince to ſubject his Kingdom to the See of *Rome*, and pay it an yearly Tribute. *Olaus*'s Succeſſors proteſted againſt this, which embroil'd them with the Court of *Rome*.

About 1150, *S. Erick* King of *Sweden* marched into *Finland* with an Army, carried with him St. *Henry*, an *Engliſh* Biſhop, and obliged a great Number of the *Finns* to profeſs Chriſtianity; but at laſt this Biſhop was murthered by the Infidels, and was buried at *Abo*, the chief City of that Country.

After Chriſtianity was ſettled in *Sweden*, the Biſhops minded their own Riches and Grandeur more than the Care of Souls; ſo that the Archbiſhops of *Upſal* frequently made a greater Figure than their King, and depoſed them by their Intereſt and Power. The Clergy then poſſeſſed above half the Kingdom, were Temporal Lords in their Dioceſes, and by Legacies, Mortifications, and other pious Frauds, annexed great Poſſeſſions to their Domains. At every new Election they had their Privileges increaſed, for then Princes were obliged to comply with their Demands, becauſe of the great Power they had in the Kingdom. Thus by degrees they became almoſt independent on the Crown; ſo that they fortified their Caſtles, gariſon'd their Towns, kept Troops in Pay, and frequently made War upon thoſe that diſobliged them or their Vaſſals.

In 1395, when *Margaret* had united the three Crowns, ſhe foreſaw that the only Way to entail Slavery upon the *Swedes* was to gain the Clergy, and to bring them to a Dependance on *Denmark*; and for that End enlarged their Privileges, gave more Lands to the Church, and made them ſenſible, that they could not make ſuch a Figure if the Kingdoms were diſunited, ſince the Archbiſhop of *Upſal* was always to be Adminiſtrator of *Sweden*. This engaged them in an Intereſt contrary to that of their Country, and to join with the *Danes*, who oppreſſed it.

Thus in 1515, the Archbiſhop *Trolle* ow'd his Advancement to the Adminiſtrator *Steno*, yet he would not acknowledge him, but correſponded with the *Danes*, and perſwaded them to invade his native Country; for which the States of *Sweden* cited *Trolle* to appear before them; but he refuſed, and retired to his ſtrong Caſtle of *Stecka*, which his Predeceſſors had made impregnable. Upon this he was declared a Traitor, depoſed from his Dignity, beſieged in his Caſtle, and obliged to ſurrender: After which the Caſtle was demoliſhed, becauſe it had been a Receptacle to the *Danes*, and a skulking Place for Rebels, who were protected there by the Archbiſhops.

When the Pope was informed of the Proceedings of the States againſt the Archbiſhop, he excommunicated the Adminiſtrator, and the Senate fin'd him in 500000 Ducats, to be paid to the Archbiſhop, put the Kingdom under an Interdict, and left the Execution of this Sentence to *Chriſtian* King of *Denmark*, the ſworn Enemy of the *Swedes*. The King of *Denmark*, glad to have any colourable Pretence againſt the *Swedes*, marched into *Sweden*, and beſieged *Stockholm*; but was obliged to riſe from before it, as has been hinted before; and his Fleet being becalm'd, it occaſion'd a great Famine among his Men, which obliged him to propoſe a Peace, and to deſire an Interview with the Adminiſtrator; and that *Guſtavus Eriskſone* might be deliver'd for an Hoſtage: To which *Steno* conſented. But as ſoon as *Guſtavus* went on board, he was made Priſoner, contrary to the publick Faith, and Law of Nations, and carried to the Caſtle of *Calo* in *Jutland*.

The

The Administrator was unluckily killed afterwards in an Engagement with the *Danes*; upon which his Army was routed and dispersed, and all the Kingdom submitted to them except *Calmar* and *Stockholm*. The Archbishop forbad Christian Burial to those who took Arms against the *Danes*, and *Christian* return'd to *Sweden*, was Crown'd there, and committed the Massacres and Barbarities formerly mention'd.

Gustavus Erickson making his Escape from Prison, came to *Lubeck*, in order to engage that City in the *Swedish* Quarrel; but failing, he failed to *Sweden*, and in Disguise travelled through the most Desart Mountains and Forrests, till at length he came to *Dalecarlia*, where he was forc'd to work in the Copper-Mines for Subsistence; but being discovered, went to another Place, and meeting with a Curate, who befriended him, by his Advice, he went to a Fair, which was the Yearly Rendezvous of the *Dalecarlians*, and perswaded them to take Arms. They were successful in their first Enterprize, which encouraged more of the *Swedes* to join him; so that at length he drove the *Danes* out of the Country, and established the Government.

About this Time Lutheranism began to enter *Sweden*, by means of two Brothers, *Laurentius* and *Olaus Petri*, of the Province of *Nericke*. They study'd at *Wittemberg* under *Martin Luther*, return'd to *Sweden*, and publickly preach'd against Popery. They represented, how inconsistent the Pride, Riches, Ambition, Cruelty, and other Vices of the *Swedish* Clergy, were with the Designs of Christianity. They shew'd, That the Clergy had been the Cause of all the Civil Wars; That without their Assistance, the *Danes* had never been able to compass their Designs. They expos'd the Covetousness of the Court of *Rome*; and how that the Legate *Arcimbold*, by his Indulgences, laid the whole Kingdom under Contribution. *Olaus* went to *Upsal*, affix'd *Theses* there, and had publick Conferences with the Popish Clergy; the Issue of which gain'd him a great many Proselites among the Professors and Students of the University, and the great Families of the Kingdom; for he demonstrated plainly how Popery had vitiated Christianity.

Gustavus lov'd those Principles, but thought not fit to declare for them till his Affairs were better establish'd. The Chancellor *Laur. Anderson* had demonstrated to him the Reasonableness of the Protestant Religion, and the Corruptions and Innovations of the Romish Church. Under the Chancellor's Protection, *Olaus* and other *Lutheran* Ministers had Liberty to preach the Gospel in *Sweden*; and the *Popish* Clergy being much inferior to them in Learning, they were baffled in all Disputes.

Gustavus delay'd his Coronation, because the Oath at that Time oblig'd the King to maintain the Establish'd Religion and Clergy in all their Privileges and Pretensions. His Scheme was gradually to humble the Clergy; in order to which, he first abolished the Impositions the Clergy levied for Dispensations to eat Flesh on prohibited Days; their meddling in Divorces, and other Processes about Marriage; then he disarm'd them of their Spiritual Artillery of Excommunication. He forbad them to annex to the Church the Estates of Ecclesiasticks, to the Prejudice of their Heirs; and discharg'd them to confiscate the Goods of any Subject. After this he made an Enquiry into the Rights of Monasteries, and reunited many of the Lands possess'd by Churchmen to the Crown. About this Time *Olaus* publish'd a *Swedish* Translation of the New Testament, against which all the Clergy remonstrated. *Olaus* confuted the Errors of Popery in a publick Conference before the King and Senate, in which the Bishops were worsted; and *Olaus* insisting upon the Authority of the Scripture in this Debate, the only Subterfuge the Papists had, was to alledge that his Translation of the Scripture was false. Upon this *Gustavus* desired the Bishops to make another, because few of the Clergy understood Latin; and *Olaus* printed the Conference, which brought over many to his Party.

Gustavus after this called together the Estates, and represented the bad Condition of the Kingdom by the long Wars, the Lowness of the Revenues of the Crown, and the Greatness of the Publick Debts, especially that they ow'd to *Lubeck*, who, for Security of their Money, had the Mo-

nopoly of their Trade, which would end in the Ruine of their Country; adding, That the other Subjects were not able to pay any suitable Taxes towards the clearing these Debts, while the Clergy were possess'd of all the Riches of the Kingdom. He shew'd further, what Share they had in bringing on these Troubles that had ruin'd the Country; and that it was reasonable they should contribute towards the paying of the Debts, since they made a bad Use of their Riches, to support their Pride and Ambition, and to enable them to embroil the Nation. He told them further, That he was willing to quit the Government, if they would reimburse the Expences he had been at in this War for the Honour and Independency of the Country. The Clergy, headed by *Thureihanſon*, oppos'd his Propoſals, and accus'd *Guſtavus* of Hereſy, who being enrag'd at it, accus'd them of Ingratitude, conſidering his great Undertakings to recover the Country from *Daniſh* Tyranny, and went out of the Aſſembly. The Chancellor repreſented to the States the bad Conſequences of their Conduct, in which he was ſeconded by the Biſhop of *Strengnez*, which prevailed on the States to make an Act, That the Biſhops ſhould ſurrender their Caſtles and Places of Strength into the Hands of the King's Officers; and that all Lands which had been alienated and granted to the Clergy, ſhould be re-united to the Crown; That the Nobility might recover their Lands that were mortgaged to the Clergy, upon Payment of the Money; That the Clergy ſhould pay Two Thirds of their Tythes to maintain the War againſt *Chriſtian* of *Denmark*, and found Publick Schools and Hoſpitals; That the Clergy ſhould be puniſh'd if they excommunicated any Man upon a civil Account; And that Men of good Lives and Learning ſhould be preferr'd to Charges in the Church. This Act was ſign'd by all the Senators, and *Guſtavus*, who went with ſome Troops of Horſe to put it in Execution, and carried along with him *Olaus Petri*, and many other Lutheran Doctors of Divinity. This Expedition of *Guſtavus* compleated the Ruine of Popery; ſo that moſt of the Inferior Clergy profeſs'd the Proteſtant Religion, ſome of the Biſhops left the Kingdom, and others complied with this new Regulation.

The Biſhop of *Scara* join'd the Malecontents, and engag'd *Thureihanſon* in their Party. They marched to *Dalecarlia*, where the Inhabitants, who were little better than Savages, declared againſt any Change in Religion; but *Guſtavus* ſurpris'd them, and oblig'd them to lay down their Arms; and when *Guſtavus* found moſt Part of the *Swedes* had chang'd their Religion, he declared himſelf a Proteſtant, and conven'd an Aſſembly of the Clergy at *Orebro*, the chief City of *Nericke*, in 1529, who renounc'd their Dependance on the Pope, aboliſh'd Popery, and ſign'd the *Augsburg* Confeſſion.

The Archbiſhops and Biſhops of this Kingdom retain now little more than the Name, and a bare Shew of Superiority over other Superintendants; for the Reformation depriv'd them of their former Eccleſiaſtical Juriſdiction. They have moderate Stipends; the Archbiſhop of *Upſal* has only 400 *l. per Annum*, and the reſt of the Biſhops proportionably. They have 10 Biſhops, who are confined to their own Employments, are never call'd to Council, but come to the Aſſembly of the States: Neither are they troubled with the Adminiſtration of any Secular Affairs. Under the Biſhops, there are 7 or 8 Superintendants, who differ only from the Biſhops in Name. Each 10 Churches has a Rural Dean over them. The Number of Churches in *Sweden* and *Finland* amount to 2000. The Clergy have One Third of the Tythes: The other Two Thirds are annex'd to the Crown. The King is Patron of moſt Churches, and has the Nomination of the Archbiſhop. Their Churches are generally neat, and adorn'd with Sculpture, Painting and Gilding. Their Altar-Cloths, Copes, and other Veſtments, are rich.

Of their MARRIAGES and BURIALS.

MAtches are made here by the Will of Parents, and entirely for Intereſt. This Country is not much troubled with the Extravagancies of Lovers: None can

marry

marry without Publication of the Banns. Perſons of Quality don't marry till they are 30 Years of Age, or above, becauſe they are not able to live ſuitably to their Birth till the Death of their Relations, or that Advancement to Offices afford them the Means of Subſiſtence.

The Women are generally fair, and well ſhap'd, and are ſaid to be more chaſt before Marriage than after. They are prolifick, but great Drudges, the meaner Sort being put to Plough, Thraſh, row in Boats, and bear Burthens: Yet Conjugal Broils are not frequent here, becauſe the Wives never diſpute their Husbands Authority. Divorces ſeldom happen in this Country. Couſin-Germans may not marry without the King's Conſent, which is more frequently granted than refuſed.

They affect Pomp and Superfluity beyond their Abilities at their Weddings; ſo that many times, by the Exceſs of one Day, they involve themſelves in Debt for many Years after.

Their Funerals have more of Jollity and Feaſting, than ſuits the Occaſion; and that they may have more Time for their Preparations, they tranſport their Dead to Vaults near the Church, where they remain unburied ſome Months, and frequently ſeveral Years: But of late, this and other unneceſſary Expences begin by degrees to be laid aſide, partly to conform with the Frugality of the Court, and partly becauſe they are not ſo rich as formerly.

Of their LEARNING.

POlite Learning can plead no great Antiquity in this Country; for the Univerſity of *Upſal* was not founded till 1476, when *Sixtus Quartus* gave it all the Privileges of that of *Bononia*. Among the ancient Weſtern *Gothi*, the *Runick* Poetry ſeems to have been as old as their Letters; and their Laws, their Precepts of Wiſdom, their Records, Religious Rites, Charms and Incantations, were all in Verſe or Rhimes, ſo called from the *Gothick* Word *Runes*, ſignifying the Verſes which were invented or introduced by *Oden*; and becauſe all their Writings for many Ages were in Verſe, it came to be the common Name of all ſorts of Poetry among the *Goths*; and the Compoſers of them were called *Runers*, or *Rhimers*, and alſo *Vniſes*, or *Wiſes*, becauſe their beſt Performances in what Learning was among them were in Verſe. The *Goths* had above 100 ſeveral ſorts of thoſe Runes, ſome in longer, ſome in ſhorter Lines, ſome equal, others unequal, with different Cadences and Quantities; ſome were fram'd with a Conſonancy of Syllables, which made a ſort of Gingle that pleas'd the People; and becauſe their Language was compos'd for moſt part of Monoſyllables, 'twas eaſy to make many of them end in the ſame Sound. Another ſort of Runes were made ſo as two Lines, or the ſecond of each four, ſhould end with Words of the ſame Sound; which being eaſie, and needing leſs Spirit, becauſe the Chime in the Sound ſupplied the Want of that, this in Time became general among all the *Gothick* Colonies in *Europe*, and made Rhimes or Runes paſs for good Poetry: But becauſe they did really want the true Spirit of it, to ſupply this Defect, their Bards poſſeſſed the People with a Belief, That Charms and other great Wonders were perform'd by the Force of their Runick Verſes. Hence it came to paſs, That this ſort of Poems came to be decry'd, and the ancient Characters in which they were written to be aboliſhed, firſt by the Zeal of the Biſhops, and then by Orders of the State, which proved an unrecoverable Loſs to the Hiſtory of thoſe Northern Kingdoms. Moſt are of Opinion, That this happened in the Time of *Olaus Skotkonung*, upon the Deſire of Pope *Silveſter* II. and *Wormius* ſays, They were alſo forbid by the Council of *Toledo*, becauſe the Chriſtians of thoſe Times thought Paganiſm could not be aboliſhed without ſuch a Prohibition; as Sir *William Temple* informs us in his *Eſſay upon Poetry*.

The moſt curious Piece of Learning in this Country is a *Gothick* Tranſlation of the Evangeliſts, of 12 or 1300 Years ſtanding, by *Uphila*, a Biſhop of the *Goths* in *Thrace*.

Guſtavus Adolphus was a great Patron of Learning, and endow'd the Univerſities with tolerable Salaries for Profeſſors in moſt Sciences. His Daughter *Chriſtina* augmented them, and invited many Learned Men to *Sweden*, as *Grotius*, *Carteſius*, &c.

Digitized by Google

The *Swedes* are more given to transcribe, collect, and translate, than to write Original Pieces. The Clergy are but indifferent for Learning, and little acquainted with Ecclesiastick Antiquities, or the Controversies of Religion, because they have no Adversaries to oppose. The Country People have Kalendars on their Clubs, in *Runick* Characters, which show them the Seasons of the Year, the Full Moon and Change, Leap-Year, the Golden Number, and Dominical Letter.

The Chancellor of the University of Antiquities at *Upsal* is always a Minister of State, and the Archbishop is Vice-Chancellor. Here they profess the Northern Antiquities, and pretend to clear the Obscurities of *Gothick* Antiquity. The best Performances of the *Swedes* are in this sort of Learning; a Specimen of which may be seen in what *Olaus*, *Varelius*, *Loccenius*, *Schefferus*, and *Rudbeck*, have published. There is another University for the Study of Antiquity at *Stockholm*; and there's one also at *Abo* in *Finland*, which has fewer Professors and Students.

There was a 4th at *Lunden* in *Schonen*, which during the Wars with *Denmark* was prohibited, because its Neighbourhood to that Kingdom was supposed to create in the Students an Affection for that Crown, to which that Province formerly belong'd; but now it is restor'd. The *Swedes* use the Old or *Julian* Stile in all their Letters and Business.

Of their LANGUAGE.

IT is a Dialect of the *Teutonick*, but rougher, and less capable of Improvement than either the *Danish* or *High-Dutch*. Hence it is, That the *Swedes* seldom write any thing in their own Language. The Gentry and Citizens speak *High-Dutch* and *French* to Perfection. The College of Antiquaries at *Upsal* have publish'd a new Edition of the *Codex Argenteus* with the modern *Swedish*, to demonstrate that their Language is a Dialect of the ancient *Gothick*.

The *Finlanders* have a sort of Gibberish of their own, altogether different from the *Swedish*. They send their Children when young to learn Foreign Languages, before they learn their own; for a *Finlander*, if he pass 14 Years of age, is utterly uncapable of speaking or learning any other Tongue but his own. They don't use the Letter F, and have no Word that begins with B, D, G, or a double Consonant.

Of their GOVERNMENT.

THE Power of their ancient Kings was much limited; they could do nothing that concerned the Government of the Kingdom without the Consent of the States; for the *Swedes* were jealous of their Liberties. In former Times, they had a Magistrate call'd *Drotzet*, design'd as a Curb to their Sovereign, who had a Power by their Constitution to reprove their King, when he acted contrary to the Laws of the Land, and to put him in mind of his Duty; but now the King of *Sweden* is Absolute, as we have heard before.

His TITLES *are*,

KIng of *Sweden*, of the *Goths* and *Vandals*; Great Prince of *Finland*, Duke of *Schonen*, *Esthen*, *Liefland*, *Carelia*, *Ingria*, *Bremen*, *Verden*, *Stetin*, *Pomeren*, *Cassuben*, and *Sclavonia*, Prince of *Rugen*, Lord of *Ingermanland* and *Wismar*, Prince Palatine of the *Rhine*, Duke of *Bavaria*, *Cleves* and *Bergen*, *&c.*

The present King is of the Family of *Deux-Ponts* in *Germany*, a Branch of the *Palatine* Family, which came to the Crown in the Person of *Charles Gustavus*, who was Son to a Sister of *Gustavus Adolphus*.

His REVENUES.

THE Revenues of the Crown consisted formerly in some Lands of a small Extent near *Upsal*, and in a Tribute, which the Peasants paid by Poll. In the Reign of *Magnus Ladasasz*, the Senate annex'd to the Crown the Mines of Copper, made him Proprietor of the Lakes *Meler*, *Vener*, and *Veter*, with a Right to fish on the Coasts of the *Baltick*; and they order'd, That those who had Fiefs from the Crown, or Licence to hunt or feed their Cattle in the King's Forests, should pay a certain Rent to the Crown.

Digitized by Google

Crown. In those Days, few were punish'd by Death for Murther, or other Crimes, but the Criminals were fin'd in certain Sums, payable to the King, which was then a considerable Branch of the Revenue.

Gustavus Ericlson reunited 30000 Estates that had been alienated from the Crown, and possessed by the Clergy. *Charles* XI. resumed all the Lands that the Nobles had purchased from the Crown; and some say, That the Revenues in 1578 amounted to 700000 Dollars.

The present Revenues are from the Crown-Lands, the Customs, Poll-Money, Tythes, Copper and Silver Mines, Law-Suits, *&c.* Each Peasant above 16, and under 60 Years of Age, pays Twelve-pence *per Annum*; and such of them as plough a certain quantity of Ground, must pay Annually one Shirt, one Lamb-Skin Coat, one Pair of Mittens, one Pair of Woollen Stockings, and one Pair of Shoes, towards the Maintenance of the Soldiers. In short, the whole Revenue is reckon'd to be near 1000000 of Pounds Sterling *per Annum*.

Of the STATES *of the Kingdom.*

THey have nothing left them now of their ancient Power; the End of their Meeting is only to ratify the King's Propolals. The Nobility and Gentry are represented by one of each Family, of which there are about 1000. The Colonels, Lieutenant-Colonels, the Majors, and a Captain of each Regiment, sit and vote in this Meeting.

The Bishops and Superintendants are Members of this Diet: The Body of the Clergy send about 200 to represent them; 150 are sent from the Boroughs, and 250 from the Peasants.

Of their MILITARY AFFAIRS.

THE *Scots* first introduced Military Discipline into this Country: Their Armies consisted formerly of Peasants, who were remarkable only for their Courage and Numbers. The Feudal Laws first made in this Country obliged the Gentry, who held their Estates by Knights Service, to bring a certain Number of Horse to the Army. The last King made great Regulations in his Military Affairs, and settled the Number of Horsemen that the Nobles and Gentry are to provide, and order'd each Farm of 60 *l. per Annum* to maintain one Foot-Soldier, who, if he marry, has a House built at the Charge of the Peasants, who also must furnish him with Hay, to keep a Cow in Winter, and Pasturage in Summer, and plough, sow, and reap for him; and when this Soldier dies, they must provide one in his room.

The Officers of Horse and Foot are maintain'd by the King, who appoints Lands for that End; so that every Officer has a House and Lands, and the Rent of as many Farms as make up his Pay.

Of the ARMS *of the Kingdom.*

THE King of *Sweden* bears for that Country Quarterly; in the 1st and 2d and 4th *Azure*, 3 Crowns *Or*, two in *Chief*, and one in *Base*. For *Finland*; in the 2d and 3d *Barry-Argent* and *Azure*, a Lion *Or*, Crown'd *Gules*. For the Palatinate of the *Rhine*; over all Quarterly, in the 1st and 4th *Sables*, a Lion *Or*, Crown'd, Arm'd, and Langued, *Gules*. For *Bavaria*; in the 2d and 3d *Lozenges* bend-wise, of 21 Pieces, *Argent* and *Azure*. For the Crest, they have a Crown Royal, adorn'd with 8 Flowers, and clos'd by as many Demi-Circles, terminating in a *Monde Or*. The Supporters are two Lions *Or*, Crown'd of the same; and the Motto is, *Dominus Protector meus*; *i. e.* The Lord is my Protector.

Of the LAKES, RIVERS, BAYS, *&c.*

THE chief Lakes are, 1. The *Peter*, in *Gothland*. The Natives say, it is remarkable for a Noise like Thunder, in that Quarter from whence a Storm is to happen the Day after, and for the sudden thawing of its Ice, so that it sometimes surprises Travellers, and in half an Hour becomes navigable. In some Places it is above 300 Fathom deep. 2. *Meler*, in *Uplend*; which falls into the Sea at *Stockholm*, and furnishes one

Digitized by Google

one Half of that City with freſh Water. 3. The *Venir*, in *Weſt-Gothland*, ſaid to be 130 *Engliſh* Miles in Length, and 40 in Breadth. Twenty four Rivers from the Mountains of *Norway* fall into it. The River *Elve*, or, as ſome call it, *Trolhetta*, has its Source from hence, and falls over a Rock 60 Foot high, near *Gothenburg*, with ſuch a Noiſe, that 'tis heard at the diſtance of 200 Furlongs. 4. *Huelmer*, in *Nericke*. 5. *Siliam*, in *Dalecarlia*. 6. *Aawa*. 7. *Lulatresk*. 8. *Enaratresk*, in *Lapland*. 9. *Ulatresk*, in *Cajania*. 10. *Pejenda*, in *Tavaſtia*. There are many other Lakes; but theſe are the moſt remarkable, and are all ſtor'd with variety of Fiſh; as Salmon, Pikes, Perch, Tench, Trouts, Eels, and many other Sorts, unknown elſewhere, particularly a Fiſh call'd a Streamling, leſs than a Pilchard, which are taken in great quantities, ſalted in Barrels, and ſent over all the Country. In the Lakes of *Finland*, they have vaſt quantities of Pikes, which, when ſalted and dried, are ſold at cheap Rates.

From thoſe Lakes moſt of the Rivers in this Country riſe, but none of them are Navigable; the chief are, 1. The *Dalecarl*, which riſes in the *Dofrine* Mountains, runs thro' *Dalecarlia*, and divides the Provinces of *Geſtricia* from *Upland*, and falls into the Gulph of *Bothnia*. 2. *Saga*, which divides *Upland* from *Weſtmania*. 3. *Angerman*, which waters *Angermania*, and falls into the Gulph of *Bothnia*, moſt of them are noted for Plenty of Salmon. Other Rivers of leſſer Note are, *Ula*, *Tidalda*, *Not*, *Eda*, *Uſk*, *Niſſa*, *Laga*, *Helga*, *Marboa*, *Aam*, *Cumoelf*, *Hoelf*, *Ulaeff*, *Peventz*, *Nieva*.

In the Lakes and on the Sea-Coaſts they have vaſt numbers of ſmall Iſlands, of which above 6000 are inhabited, and the reſt are either bare Rocks, or cover'd with Wood.

Their chief Bays or Gulphs are, the Gulph of *Bothnia*, which ſeparates *Sweden* from *Finland*, and reaches from Lat. 60 to 66. It abounds with Seals, which yield a conſiderable quantity of Train-Oil. The Gulph of *Finland* ſeparates *Finland* from *Livonia* and *Ingria*: It runs from Weſt to *Eaſt*, from Longitude 45 to 55, and the Gulph of *Riga* lies on the Weſt of *Livonia*.

Of the Diviſion of SWEDEN.

SWEDEN is divided into 8 Parts, *viz. Sweden-Proper*, *Gothland*, *Schonen*, the Government of *Bahus*, the *Nordelles* or *Northlands*, *Finland*, *Ingria*, and *Swediſh-Livonia*.

I. *SWEDEN PROPER*,

IS Fruitful in Corn, and lies betwixt the *Nordelles* to the North, *Oſtrogothland* to the South, the *Baltick* to the Eaſt, and the Governments of *Bahus*, *Aggerhus* and *Drontheim*, to the Weſt; and is ſubdivided into 5 Provinces, *viz. Upland*, *Sudermania*, *Nericia* or *Nericke*, *Weſtmania*, and *Dalecarlia*.

UPLAND,

HAS *Geſtricia* on the North, *Sudermania* on the South, the *Baltick* on the Eaſt, *Weſtmania* and *Nericia* on the Weſt. The chief City is *Stockholm*, in Latitude 59 Deg. and 40 Min. according to the Obſervations of the King of *Sweden*'s Mathematicians. Moſt Maps make *Dantzick* one half of a Degree more Eaſtward than *Stockholm*; and by the Obſervations of *Hevelius* and Mr. *Flamſtead*, the difference of Meridians betwixt *London* and *Dantzick* is 1 Hour, 15 Min. 30 Sec. which is 18¾ Deg. ſo that *Stockholm* is about Longitude 37. It lies 28 *Engliſh* Miles Weſt from the *Baltick*, 36 South from *Upſal*, 300 North from *Dantzick*, 180 North-Eaſt from *Gothenburg*, 150 North from *Calmar*, and 240 North-Eaſt from *Copenhagen*. The time when it was firſt built is not certain; ſome ſay, King *Birger* built it in 1261. About 300 Years ago it was only an Iſland, with two or three Cottages for Fiſhers; but upon building a Caſtle there, to ſtop the Inroads of the *Moſcovites*, and by the Removal of the Court from *Upſal* to this Place, it became more Populous than the antient Cities, and is now the Metropolis of the Kingdom. It is naturally fortified with Rocks; which, towards the Sea, over-top the Houſes, and make the Proſpect not ſo pleaſant. In 1552, a great part of it was burnt down, the Houſes being then of Wood, which occaſion'd an Act to rebuild it with Brick and Stone. Some ſay, the Houſes at firſt were founded on Piles of Timber drove into the Ground,

Digitized by Google

Ground, becauſe it was Marſhy. It is built upon 6 Iſlands, join'd together by Bridges, and has two large Suburbs, one on the N. and the other on the S. The Port is one of the ſafeſt in *Europe*; for 1000 Ships of great Burden may lie without Anchor or Cable, and the Mountains round it defend them from Storms, as the Citadel and two Forts guard the Canal from the Inſults of Enemies; but it has this Inconvenience, that it is far diſtant from the Sea; and the Lake *Meler*, that falls from it into the *Baltick*, is full of Windings, and has no Tides, which makes it the more difficult for Ships to get out. This City has almoſt all the Trade of *Sweden*. The King for moſt part reſides here: 'Tis one of the fineſt Cities of the North, and ſuppoſed to be as populous as *Briſtol*. The Caſtle is a large Building, cover'd with Copper, and ſerves for an Arſenal. The Officers of the Court lodge in it, and moſt of the Offices for Publick Affairs are kept there; but it has neither Strength nor Beauty. There are 9 large Churches, built with Brick, and cover'd with Copper, in the City. St. *Nicholas* Church is the moſt remarkable: It was founded by King *John*, on Marble Pillars. In the King's Chapel, at the Altar, there's a Silver Statue of our Saviour on the Croſs at full Length. There's a Citadel, commanded by a neighbouring Hill, and the King's Palace, which is ſtrong and high, lies within it. The Streets are very large, and there are many Gardens and Walks in and about the City, which make it pleaſant.

Jacobdal, a Village within half a League of it, has a Caſtle, where the Kings of *Sweden* reſide in Summer.

Enkoping, W. from *Stockholm*, on the Lake *Lever*, is a pleaſant Town, and of good Trade.

Upſal, lies in Lat. 59 Deg. 54 Min. according to the Obſervations of *Charles* XIth's Mathematicians, and the Meridian is near that of *Stockholm*, only a little more Weſtward. They obſerv'd alſo, That the Variation of the Compaſs there was 8 Degrees. *Joannes Magnus* is ſo vain as to ſay, it was founded 240 Years after the Flood, by *Ubbo*, one of their Kings. It lies on the River *Sala*, which falls into the Lake *Enkopen*, and is about 30 Miles N. W. from *Stockholm*. It is the moſt ancient City in the Kingdom, formerly the Reſidence of their Kings, and from thence called *Upſala Konung*. Before the Reformation, all their Kings were Crown'd and bury'd in this City; and in 1654, Queen *Chriſtina* reſign'd the Crown here. It has a Caſtle built after the *Gothick* Manner, on a Hill, and commands the whole City. This Town was alſo the chief Seat of Paganiſm, where they had the rich Temple, of which *Joannes Magnus* tells ſo many Stories, and makes that at *Cuzco* to be mean, when compar'd with it. About 1148, *Eugenius* III. made it an Archbiſhop's See, who always keeps his Court here. The Cathedral has a Clock of admirable Workmanſhip. We have mention'd its Univerſity already. Moſt Part of the Books in the Library were given by *Guſtavus Adolphus*, who took them from many Libraries in *Germany*, and eſpecially from that of *Wurtzburg*.

Oregrund, is an ancient Town on the *Baltick*, N. E. from *Upſal*: It has a good Port, which occaſions a Trade there.

Other Towns here are, 1. *Oſt-Hammar*. 2. *Forſmark*. 3. *Elikarby*. 4. *Skephamar*. 5. *Wedoo*.

SUDERMANIA,

HAS *Upland* on the N. E. *Weſtmania* on the N. *Nericia* on the W. the *Baltick* on the E. and S. and *Oſtrogothland* on the S W. It is fruitful in Corn, and has abundance of Mines. The chief Town is *Nycoping*: It lies on the *Baltick*, in Lat. 58½, and Long. 36. has a good Port, and is tolerably rich. The Caſtle is ſtrong, and formerly was the Reſidence of the Dukes of *Sudermania*. It has a good Dock for building Ships; lies 52 *Engliſh* Miles S. W. from *Stockholm*, and 28 N. E. from *Norcop* 1*g*

Troſa, is a ſmall Trading Town betwixt *Nycoping* and *Telga*, on the *Baltick*.

Telga, a ſmall Town, N. E. from *Troſa*, on the S. Side of the Canal, by which the Lake *Meler* communicates with the *Baltick*: It lies 16 Miles S. from *Stockholm*.

Stregnes, lies in Lat. 59, on the S. Side of the Lake *Meler*, 32 *Engliſh* Miles S. W. from *Stockholm*, N. from *Norcoping*, and W. from *Telga*. It is an ancient Town, and a Biſhop's See. *Charles* IX. is buried here.

Kongſor,

Kongſer, is ſituated on a pleaſant River, where it falls into the Lake *Meler*. King *Charles* XIth's Mathematicians ſay, it lies in Lat. 59 Deg. 34 Min.

Other Towns are, 1. *Dunker*. 2. *Sirwada*. 3. *Ofma*. 4. *Wette*. 5. *Oſtre*. 6. *Coredingen*. 7. *Garla*. 8. *Biorlanda*.

NERICIA,

IS fruitful in Corn and Mines, has *Weſtmania* on the N. *Oſtrogothland* on the S. *Sudermania* on the S. E. and *Wermeland* on the W.

Orebro is the chief Town: It lies on the River *Troſa*, which *De la Foreſt* calls *Orebro*, near the Lake *Meler*, 16 *Engliſh* Miles S. W. from *Arboga*.

Other Towns are, 1. *Aikeland*, S. from *Orebro*. 2. *Kunda*. 3. *Maſio*. 4. *Segerslwo*.

WESTMANIA,

HAS *Nericia* on the N. *Upland* on the E. *Geſtricia* on the N. *Sudermania* on the S. E. and *Wermeland* on the W.

Aroſia, or *Weſteras*, is the chief Town: It lies near the N. Side of the Lake *Meler*, in Lat. 59½, and Long. 35. 16 *Engliſh* Miles N. E. from *Arboga*, and 40 W. from *Stockholm*. In 1521, *Guſtavus Erickſon* defeated the Army of *Chriſtian* II. of *Denmark* here, where, in 1544, the States made the Crown Hereditary to the Family of *Guſtavus* I. It is a Biſhop's See, and has a ſmall Caſtle.

Arboga, is a ſmall Town on a River of the ſame Name, near the Lake *Meler*, 20 *Engliſh* Miles S. W. from *Weſteras*, and 18 N. E. from *Orebro*. It was ruin'd by the *Danes* in the 16th Century.

Sala, or *Saalberg*, is N. from *Weſteras*, and remarkable for a Silver Mine diſcovered about the End of the laſt Age.

Other Towns are, 1. *Koping*, W. from *Weſteras*. 2. *Nohra*. 3. *Lindeſnas*. 4. *Rittern*, 5. *Olomkolm*. 6. *Wela*.

DALECARLIA.

IT has *Geſtricia*, *Helſingia*, and *Medelpadia*, on the E. the Government of *Aggerhus* on the W. *Wermeland* and *Weſtmania* on the S. It is divided into 3 Parts, *viz. Oſterdalia*, *Veſterdalia*, and *Sudalia*. This Country is Mountainous, and all over Woody. The ancienteſt Peaſants are their Judges. The Kings of *Sweden* always took Care not to diſoblige this People, and were not allow'd to ſend Troops or have Gariſons there, and never enter'd this Country without giving Hoſtages for Security of their Privileges; nor did they exact any Tribute of them, but a ſmall Number of Furs. Their Cuſtoms are quite different from thoſe of the other Provinces. The Inhabitants of this Country were famous under the Conduct of *Guſtavus* I. when they retrieved their Country from the *Daniſh* Yoke, as has been already mentioned. There are no Towns in this Province, but only Villages.

II. *GOTHLAND*,

HAS *Dalecarlia* on the N. *Norway* on the N. W. *Weſtmania*, *Nericia*, and *Sudermania*, on the E. the *Baltick* on the S. E. *Schonen* on the S. and the *Baltick* on the S. W. It is divided into *Weſtrogothland* and *Oſtrogothland*.

Weſtrogothland is ſub-divided into *Weſtrogothland Proper*, *Dahl* or *Dalia*, and *Wermeland*.

Weſtrogothland Proper has the Lake *Wener* on the N. *Dalia* on the N. W. the *Baltick* on the S. W. *Schonen* on the S. *Smaland* on the S. E. *Oſtrogothland* on the E. and *Nericia* on the N. E.

Gothesburg, lies on the *Categat*, in Lat. 58½, Long. 30 Deg. 40 Min. has the beſt and moſt frequented Port on the *Baltick*: It is ſeated on the Mouth of the River *Trolhetta*, where it falls into the *Sinus Codanus*, 12 *Engliſh* Miles S. from *Bahus*, 264 W. from *Stockholm*, 200 N. W. from *Calmar*, and 120 N. from *Copenhagen*. It is a new built Town. In 1644, the *Daniſh* Fleet beſieg'd it in vain. The Caſtle of *Elburg* lies near it.

Falkoping, S. from the Lake *Wener*, is a ſmall Town, that has been frequently harraſs'd in the *Daniſh* Wars. *Hio* is another Town on the W. of the Lake *Weter*

Scara, is 10 *Engliſh* Miles S. from the Lake *Wener*: It was anciently the Seat of the *Gothick* Kings; but there remains little now except Ruins. It is a Biſhop's See.

Lidskoping,

Digitized by Google

Lidoköping, a small Town on the S. of the Lake *Wener*. *Mariestad*, another, lies betwixt the Lakes *Weter* and *Wener*.

Other Towns are, 1. *Bogestund*. 2. *Hielingsaas*. 3. *Brete*. 4. *Nyloese*. 5. *Nananga*. 6. *Skefde*.

DALIA, or DAHL,

HAS the Government of *Bahus* on the W. *Wermeland* on the N. and *Westrogothland Proper* on the E. 'Tis leſs fruitful than any other Part of *Gothland*.

The Towns are, 1. *Dalleburg*, on the W. of the Lake *Wener*, 44 Miles N. E. from *Bahus*. 2. *Bretten*, which ſome call *Wenerbourg*, on the W. of that Lake. 'Twas ſack'd in 1644 by the *Danes*, but is now rebuilt.

WERMELAND,

HAS *Dalecarlia* on the N. *Nericia* and *Weſtmania* on the E. the Lake *Wener* on the S. and *Dalia* and *Norway* on the W. It is ſaid to have been the laſt planted of all the *Gothick* Provinces. 'Tis Mountainous and Woody, and has ſome Mines of Iron, and one of Copper.

The Towns are, 1. *Philipſtadt*, the Approaches to which are difficult, becauſe it lies in the middle of Moraſſes. 2. *Carlſtadt*, built by *Charles* IX. on the N. E. of the Lake *Wener*: It was the Capital of *Wermeland*, before the *Danes* ruin'd it in 1644. Other Towns here are, 1. *Grilberga*. 2. *Ruſkog*. 3. *Kolen*. 4. *Friſende*. 5. *Arwycka*.

OSTROGOTHLAND,

IS divided into *Oſtrogothland Proper* and *Smaland*. *Oſtrogothland Proper* has on the E. the *Baltick*, on the W. the Lake *Witer*, on the N. *Sudermania*, and on the S. *Smaland*. It is the beſt Place in *Sweden* for Paſture.

Norkoping, the Capital of all *Oſtrogothland*, lies in a Moraſs, on the River *Motala*, betwixt the *Baltick* and the Lake *Weter*, 20 *Engliſh* Miles from the *Baltick*.

Stegeborg, is a ſmall Town, S. from *Norkoping*, and is remarkable for its good Port on the *Baltick*.

Linkaping, is S. W. from *Norkoping*, and has a Biſhop, Suffragan to the Archbiſhop of *Upſal*. It has a ſtately Church, which was built by *Herbertus*, the firſt Apoſtle of *Sweden*.

Suderkoping, lies on the *Baltick*, in the Bottom of a Bay, 20 *Engliſh* Miles E. from *Linkaping*.

Wadſtena, famous in the *Swediſh* Hiſtory, had anciently a Fort and Monaſtery dedicated to *St. Bridget*, which is now an Hoſpital for Invalids.

Scheening, anciently a famous City, but now inconſiderable. In 1248, Pope *Innocent* IV. order'd a Council to meet here, which prohibited Matrimony to the Clergy.

Other Towns are, 1. *Kelmo*. 2. *Nylechen*. 3. *Skenſta*. 4. *Lindeny*. 5. *Riſinge*.

SMALAND.

THis Province abounds with Black Cattel, which are tranſported to *Denmark*, and from thence to *Germany*, *Holland*, &c. It has the *Baltick* on the E. *Schonen* on the S. and is divided from *Oſtrogothland* by the Wood *Holawedh*. This Province is 380 *Engliſh* Miles in Compaſs. It has Mines of Copper and Lead; and there's Iron found, as ſome ſay, at the bottom of their Lakes and Rivers.

Calmar, is the Capital, was burnt down in 1647, but now handſomely rebuilt. It lies 180 *Engliſh* Miles S. W. from *Stockholm*, and as many N. E. from *Copenhagen*. It is one of the moſt conſiderable Places in *Sweden*. Its Fortifications are regular; the Citadel is of a great Extent. It has an excellent Port on a Creek of the *Baltick*, and is famous for the Union of the 3 Northern Crowns, that was concluded here.

Jencoping, a ſmall Town, but ancient, on the S. Point of the Lake *Veter*. It was plunder'd by the *Danes* in 1644.

Wexſio, a Biſhoprick, lies in the middle of the Province. St. *Sigifrid* was buried here.

Other Towns are, 1. *Weſterwick*. 2. *Ekſio*. 3. *Erlanda*. 4. *Torſas*. 5. *Alaſta*. 6. *Hallars*. 7. *Kerna*. 8. *Monſter*.

III. SCHONEN,

WAS purchas'd by the *Swedes* from *John*, Duke of *Holſtein*, about 1330, was conquer'd by the *Danes* in 1341, and recover'd by the *Swedes* in 1658, by the

Digitized by Google

Treaty of *Roſchild*. In 1676, and 1677, the *Danes* took many Places in it; but were obliged to reſtore them by the Treaty of *Fountainbleau* in 1679. It has *Smaland* on the N. the *Baltick* on the E. and S. and the Frith or Streight called the *Sound*, or *Oreſundt*, which ſeparates it from *Zeeland*, on the W. It is divided into *Schonen*, *Bleking*, and *Halland*.

Schonen has a high Coaſt; but the low Lands of it has charming fine Meadows, and fruitful Fields. The Beer of this Country is very good, and much better than that of *Zeeland*.

Lunden, the Capital, lies in Lat. 55 ½, Long. 31 ½, was formerly a conſiderable City, and had 22 Churches, but has little of its ancient Splendour now. The Cathedral of St. *Laurence* is a ſtately Building. The famous Clock there is ſaid to be the Contrivance of *Gaſpar Bartholinus*: It ſhews the Year, the Month, the Day of the Month, all the Feſtivals, fix'd and moveable, the Hour and Minute. At each Hour, two Horſemen come out and ſtrike the Hours in a Fighting Poſture; then a Door opens, which diſcovers the Virgin *Mary* on a Throne, with our Saviour in her Arms, and the *Magi* worſhiping him. Two Trumpets ſound all the while. There is alſo a magnificent Altar in this Church. The Town has no Walls, and but few Inhabitants.

Malmoe, is a ſmall Town, but neat, and tolerably rich, becauſe of its Port on the *Sound*, S. from *Lunden*, which is much frequented. In the War before the Treaty of *Fountainbleau*, the *Danes* beſieg'd it twice in vain.

Trellebourg, lies alſo on the *Baltick*, S. from *Malmoe*.

Landſcroon, over againſt the little Iſle of *Huen*, was formerly only a little Caſtle, which *Erick*, who ſucceeded Queen *Margaret*, enlarg'd; but ſince that Time, the Kings of *Sweden* have fortified the Citadel with regular Fortifications. The *Danes* took it in 1670. 'Tis now a conſiderable Town, and has a well frequented Harbour.

Helſingburg, lies over againſt the Caſtle of *Cronenburg* in *Zeeland*. When it belong'd to the *Danes*, it was very rich, becauſe of its Trade with *Elſingor*; but now the *Danes* impoſe ſo great Cuſtoms, that their Trade is ſunk. It was formerly well fortified; but by the Treaty of *Fountainbleau*, all the Fortifications were demoliſh'd, which has reduc'd this Place to a Village of 80 or 100 Houſes, and one Church.

Other Towns are, 1. *Udſted*. 2. *Engelholm*. 3. *Ria*. 4. *Smidhamer*. 5. *Semmerſhaven*. 6. *Julebo*.

BLEKING,

BElong'd formerly to *Denmark*; but by the Treaty of *Roſchild* in 1658, was annex'd to *Sweden*. It lies N. E. from *Schonen*, S. from *Smaland*, and has the *Baltick* on the E. and S. Their Paſture is good for Black Cattle, which they export in great Numbers.

Chriſtianople, ſo call'd from *Chriſtian* IV. King of *Denmark*, who built and fortified it, is the Capital of the Province. It lies on the Borders of *Oſtrogothland*, 20 *Engliſh* Miles S. from *Calmar*, and 15 from the Iſland *Oelund*. It has a good Port, and a pretty Trade.

Carelſcroon, ſo called from *Charles* II. who built it on a little Iſle of the ſame Name, which is join'd to the Continent by a very long Bridge. The Town covers almoſt the whole Iſland, and has an excellent Harbour well fortified, where ordinarily 50 of the King's Ships lie ſecure from Storms, and the Inſults of Enemies.

Rattenby, lies S. W. from *Chriſtianople*, on the *Baltick*, and has a good Port.

Chriſtianſtadt, on the Borders of *Schonen*, was built in 1600, by *Chriſtian* IV. of *Denmark*, near the Mouth of the *Helles*. It lies half Way betwixt *Copenhagen* on the W. and *Chriſtianople* on the E. in the middle of a Moraſs, which makes it ſtrong. The *Danes* took it in 1676; but two Years after were obliged to reſtore it.

Alhus, two Miles S. from *Chriſtianſtadt*, is ſmall, but an ancient Town.

Other Towns here are, 1. *Ellcholm*, N. E. from *Chriſtianſtadt*. 2. *Seltiburg*. 3. *Lurkeburg*. 4. *Knutsbro*.

HALLAND,

HAS *Schonen* on the S. E. *Weſtrogothland* on the N. E. and N. and the *Sound* on the W. It belong'd formerly to the *Danes*; but

Digitized by Google

but by the Treaty of *Roſchild*, it was annex'd to *Sweden*. This Country abounds in Woods and Lakes, and is not ſo fruitful as *Schonen* or *Bleking*. It is 60 *Engliſh* Miles in Extent from N. to S. and 15 from E. to W.

Helmſtadt is the chief Town, on the Mouth of a River that falls into the *Sound*, or Gulph of *Categat*.

Laholm, lies S. E. from *Helmſtadt*, on the Mouth of a River that falls into the ſame Gulph, and is not conſiderable now, ſince its Fortifications were demoliſhed.

Falkenbourg, lies alſo on the *Categat*.

Warborg, N. N. W. from *Falkenbourg*, is a ſmall Town, in the Bottom of a little Gulph, with a Port defended by a ſtrong Caſtle.

IV. *The Government of* BAHUS,

BElong'd to *Denmark* before the Peace of *Roſchild*. It has the *Sound* on the S. W. *Dahl* or *Dalia* on the N. E. and the Government of *Aggerhus* on the N. W. is but thinly inhabited: It is 100 Miles long from N. to S. and in ſome Places about 15 broad. It is divided into 2 Parts.

1. *Inland*, of which *Bahus*, the Capital, lies 10 *Engliſh* Miles N. from *Gottenburg*: It was built in 1309 by *Haquin*, the 4th King of *Norway*, on an Iſland made by the River *Trolhetta*. It is well fortified, and has a ſtrong Caſtle. The *Danes* beſieg'd it in 1678, but in vain.

2. *Vyckſiden*, of which *Maelſtrand* is the Capital: It is a ſtrong Town, and has a Caſtle on a ſteep Rock, almoſt ſurrounded by the Sea. In 1678, *Chriſtian* V. King of *Denmark*, made himſelf Maſter of it; but it was reſtored by the Treaty of *Fountainbleau*.

V. *The* NORDELLES, *or* NORTHLANDS.

THeſe Northerly Provinces are 8, *viz. Geſtricia*, *Helſingia*, *Medelpadia*, *Angermania*, *Weſt-Gothland*, *Jempterland*, *Harndal*, and *Swediſh Lapland*.

GESTRICIA,

HAS *Helſingia* on the N. *Upland* on the S. the Gulph of *Bothnia* on the E. and *Dalecarlia* on the W. It has Mines of Copper and Iron.

Geval is the chief Town. The King of *Sweden*'s Mathematicians found the Lat. here 60 Deg. 31 Min. whereas moſt Maps make it 61. It is 50 *Engliſh* Miles N. from *Upſal*, and remarkable for being the Reſidence of the Governor of the Country, and having a Royal School. It lies on the Gulph of *Bothnia*, at the Mouth of a River of the ſame Name.

Fahlun, by the Obſervations of the *Swediſh* Mathematicians, is in Lat. 60 Deg. 32 Min. and a pretty large Town.

Copperberg, a large Town, lies near a Mountain of the ſame Name, famous for the beſt Copper-Mines of the World. It is 50 *Engliſh* Miles W. from *Geval*.

HELSINGIA,

HAS the Gulph of *Bothnia* on the E. *Norway* on the N. W. *Dalecarlia* on the W. *Geſtricia* on the S. and *Medelpadia* on the N. It is overgrown with Woods, has many Lakes and Mountains, and few Inhabitants, who don't cultivate much of the Country, but live by Fiſhing and Hunting.

Hudwickſwald, near the Gulph of *Bothnia*, is a neat City, and conveniently ſituated for Trade.

Soderhamn, in Lat. 61 Deg. 12 Min. is another Town of this Diſtrict.

MEDELPADIA,

IS N. from *Helſingia*, has many Lakes and thick Forreſts, where grow excellent Maſts. There are few Towns here, but many Caſtles in this Province.

Indal, near the Gulph of *Bothnia*, is the chief Town.

Tuna, another Town, lies S. from *Indal*, near the Gulph of *Bothnia*, and has a Caſtle.

Digitized by Google

ANGERMANIA,

IS N. E. from *Medelpadia*, and has its Name from the River *Angerman*, which riſes from the Mountains of *Norway*.

Hernoſand, on the *Baltick*, is the only Town of that Diſtrict, which has a convenient Port. The Superintendant reſides here.

WEST BOTHNIA,

HAS the Gulph of that ſame Name on the E. *Swediſh Lapland* on the W. and *Angermania* on the S. W. It is water'd by many ſmall Rivers, which make their Paſtures good.

Torna, or *Torneo*, is the chief Town of this Country, on a River of the ſame Name, which riſes in *Lapland*, runs S. E. and falls at *Torneo* into the Gulph of *Bothnia*. They have a good Trade in Furs with the *Laplanders* and *Finlanders*, whoſe Language they underſtand. They have alſo a good Trade in Furs with the *Muſcovites*. King *Charles* XIth's Mathematicians, after their moſt accurate Obſervations, found the Lat. there to be 65 Deg. 43 Min. The Difference of Meridians betwixt *Stockholm* and *Torneo* 19 Min. 20 Sec. which make 40 Deg. 50 Min. and that *Torneo* is more E. than *Stockholm*, and the Variation of the Compaſs from N. to W. 7 Deg.

Lubla, in Lat. 65 Deg. 25 Min. was built in 1622, and the new Town in 1642; but has been twice burnt down ſince.

Pitha, or *Bithea*, was built in 1621, has a convenient Port, and good Privileges to encourage Trade.

Uma, a conſiderable Town in thoſe Parts, on the ſaid Gulph, is the Seat of the Governor of that Province. The Lat. is 63 Deg. 48 Min. and the Variation of the Compaſs 7 Deg. There are many ſmall Iſlands along that Coaſt.

JEMPTERLAND,

HAS *Angermania* or *Angermanland* on the E. *Medelpadia* and *Helſingia* on the S. E. and the Government of *Drontheim* in *Norway* on the W.

Reſſunt, a ſmall Town with a Caſtle, is the only conſiderable Place in this Province.

Of the ISLES *on the Coaſts of* Sweden.

ALAND, lies over againſt *Upland*, to which Province it belongs. The moſt Southerly Places of it have the ſame Lat. with *Upſal*.

GOTHLAND,

Is 70 *Engliſh* Miles from the Coaſts of *Oſtrogothland*. Its Length from N. to S. is 50 *Engliſh* Miles, and the Breadth from E. to W. 18. The *Pruſſian* Knights quitted this Iſland to the *Danes* in 1408 for 9000 Crowns. The *Swedes* got it in 1645, by the Peace of *Bromſtro*; and it was confirm'd to them by the Peace at *Fountainbleau*. It has good Paſture for Cattle, which they tranſport.

Wiby is the chief Place of the Iſland, and lies on the W. Side of it: 'Twas famous in Antiquity for its excellent Sea-Laws, which were obſerv'd by moſt Sea-Towns on the *Baltick*. It had formerly a great Trade, but 'tis now decay'd. Sea-Charts were firſt made here.

OELAND,

Lies near the Province of *Smaland*, from which it is divided by a Frith called *Calmar-Sound*. Its Length from N. to S. is 69 Miles, and the Breadth 18: It has 18 Pariſhes, and is one of the moſt pleaſant Places of *Sweden*: The Air there is more calm, and the Soil is more fruitful, than in any other Place of that Kingdom. It has good Hunting, and the Kings of *Sweden* come hither in Summer for that purpoſe. The Coaſts are well defended by ſteep Rocks and ſtrong Caſtles.

Berkholm, the Capital, lies on the E. Side of it, and has good Fortifications.

Oſtenby, on the S. Side, is alſo well fortified.

HUEN or WEEN,

Was poſſeſs'd by the *Danes* till 1658. It lies in the middle of the *Sound*, betwixt *Landſcroon*

Digitized by Google

Landscroon and *Copenhagen*. All Strangers and Seafaring People call it the *Scarlet* Island. It is not above 7 *English* Miles in Circumference, but one of the best Spots of Ground that can be seen, there being no barren Place in it: It produces great Plenty of Wheat, Rye, and other Grain, and good Fruit. They have all sorts of Cattle, and pay the King Yearly 800 Crowns. In 1576, *Frederick* II. King of *Denmark*, gave this Island to *Tycho Brahe* for his Life, that he might build an Observatory there for his Astronomical Observations. He allow'd him also a Sum of Money, and a Pension of 2000 Crowns *per Annum*. In 4 Years time, he finished the Castle of *Uraniburg* in the middle of the Island, which was a magnificent Building, with commodious Apartments: His Machines and Instruments were numerous and fine; and he had a Printing-House, a Mill for making Paper, and Laboratories for Chymical Operations, with Gardens, Fish-Ponds, and other Ornaments, which made it a charming Place. He also built *Stellenburg*, on the W. of *Uraniburg*, with all Conveniencies for Astronomical Observations. King *James* I. in his Voyage to *Denmark* to marry his Queen, honour'd him with a Visit; but the Court of *Denmark* turning, his Enemies, he was oblig'd to leave his ungrateful Country. Whence he came to *Rostock*, but was invited to settle in *Prague* by the Emperor *Rodolph* II. who gave him a Pension of 3000 Gold Ducats, where he died in 1601. *Christian* IV. of *Denmark*, gave those fine Buildings to a Mistress of his, who destroy'd them; so that the Place of them now is scarcely to be known.

The Isles *Hawe* and *Malqueren* on the Coasts of *Bleking* are not very considerable.

VI. *FINLAND*,

IS call'd by Authors *Fimonia*, *Finnia*, and *Finningia*, is extended from the Gulph of *Bothnia* on the W. to *Muscovy* on the E. from which it is separated by the Lakes *Onega* and *Ladoga*. On the N. it has *Lapland*, and on the S. the *Baltick* and the Gulph of *Finland*. They had Kings of their own, till they were conquer'd by St. *Erick*, King of *Sweden*, as has been said already. About the Time of the Death of *John* King of *Sweden*, 100000 *Muscovites* invaded this Country in Winter; but were so warmly ply'd by 600 *Finlanders* only, who came with their Pattens upon the Snow, in which the *Muscovites* could not move, that very few of this great Number return'd. This vast Country is barren every where, except on the Sea-Coast. It is divided into 6 Provinces, *viz. Finland Proper*, *Eastern Bothnia*, *Nyland*, *Tavasthus*, *Carelia*, and *Savolax*.

FINLAND PROPER,

HAS the Gulph of *Bothnia* on the W. *Eastern Bothnia* on the N. *Tavasthus* on the E. *Nyland* on the S. E. and the Gulph of *Finland* on the S. This Province is fruitful in Grain, and has some Mines of Copper and Iron.

Abo, the Capital, lies on the Mouth of the River *Aurajoki*: It has been a Bishop's See since 1158. Its University was founded in 1640, by Queen *Christina*: It has a good Port, which occasions some Trade there, and lies 100 *English* Miles N. from *Revel*, and 144 E. from *Stockholm*.

Biornoburg, 80 *English* Miles N. from *Abo*, on the Mouth of the River *Cumo*, where it falls into the Gulph of *Bothnia*, is a small Town of some Trade.

Other Towns are, 1 *Rawno*. 2. *Muiko*. 3. *Nykyrsky*. 4. *Wirmo*. 5. *Haliko*. 6. *Bicrno*.

EASTERN BOTHNIA, or *CAJANIA*,

LIes over against *West Bothnia*, from which it is separated by the Gulph of that Name; has on the N. *Kimi-Lapmark*, on the E. *Savolax* and *Carelia*, *Finland* and *Tavasthus* on the S. It is 300 *English* Miles in Length, and has many Rivers, that fall into the Gulph of *Bothnia*.

Cajenburg is the chief Town, and lies on the E. Side of a great Lake called *Ulatresk*, in Lat. 65, and Long. 45.

Other Towns are, 1. *Uld* or *Uldaburg*. 2. *Curleby*. 3. *Nycarleby*. 4. *Wasa*.

NYLAND,

Digitized by Google

NYLAND, or NEWLAND.

IT was ſo call'd, becauſe its ancient Inhabitants being driven out, new Colonies were ſent to plant here. It has good Paſture, and breeds large Oxen, Horſes, and other Cattle. It has *Tavaſthus* to the N. the Gulph of *Finland* on the S. and *Carelia* on the E.

The Towns here are, 1. *Borg* or *Borgo*, 60 *Engliſh* Miles N. from *Revel*, and 100 W. from *Wiburg* in *Carelia*, on the Gulph of *Finland*. 2. *Helſingfort*, W. from *Borgo*, with a large Port. 3. *Raſchburg*, W. from *Helſingfort*, on the ſame Gulph.

TAVASTHUS,

IS an Inland Province, has *Eaſt Bothnia* on the N. *Nyland* on the S. *Finland* on the W. and *Savolax* on the E. It has nothing remarkable but Mines of Iron.

Tavaſthus, anciently call'd *Gronenburg*, 90 Miles N. E. from *Abo*, is the chief Town: It is ſituated in the middle of unpaſſable Moraſſes. In 1250, *Birger Jerl* built a Fort here, to bridle the *Tavaſtians*. This Town lies near the great Lake *Pejende*, that has much Iron at the bottom, which the Inhabitants take out for their Uſe.

CARELIA,

HAS the Gulph of *Finland* on the S. the Lake *Onega* on the E. *Savolax* on the N. and *Nyland* on the W. The Poſſeſſion of this Province has been the Cauſe of great Wars betwixt *Muſcovy* and *Sweden*. In 1292, *Birger* King of *Sweden* made himſelf Maſter of it. In 1338, another King gave back *Kexholm*, in the E Part of this Country, to the Czar; but in 1617, *Guſtavus Adolphus* retook it all again.

Wiburg is the chief Town of the Province, and has a Biſhop, Suffragan to the Archbiſhop of *Upſal*. It is 45 Miles S. from *Kexholm*, as many W. from the Lake *Ladoga*, and 106 N. from *Narva*. It has a very ſtrong Citadel, which the *Muſcovites* have frequently beſieg'd in vain with an Army of 100000 Men. It has a good Port, and a tolerable Trade.

Kexholm, which the *Muſcovites* call *Corelgorod*, or the Fort of *Carelia*, lies on the W. of the Lake *Ladoga*, where the River *Voxen* falls into it. This Lake overflows the Country for 20 Miles Northward; ſo that the Corn grows only on the Tops of Mountains or Hills; but the Inhabitants of this City and the adjoining Country live more by Fiſhing and Hunting than by Husbandry. The Lat. of this Town is 62. Long. 50. It has a ſtrong Citadel. In 1558, the Conſtable *La Gardie* took it from the *Muſcovites*. Near this Place ſome Rubies are found.

SAVOLAX,

IS a Deſart Country, full of Lakes and Woods, has *Carelia* on the S. *Kexholm* on the E. *Tavaſtia* on the W.

Nyſlot, N. from *Kexholm*, on a Lake, is the principal Place of this Province.

VII. INGRIA,

LIes on the bottom of the Gulph of *Finland*: It belong'd formerly to *Muſcovy*. In 1609, *Ivan Baſilowitz* being in Danger of loſing his whole Empire in a War with *Sigiſmund* of *Poland*, was obliged to ſeek the Aſſiſtance of *Charles* IX. King of *Sweden*, and promis'd him the Province of *Carelia*; but after he was delivered from his Danger, he broke his Promiſe. To revenge this Affront, *Guſtavus Adolphus* made War upon the *Muſcovites*, and obliged *Michael Feodorowitz* to yield to *Sweden* for ever, by the Treaty at *Stockholm* in 1618, *Carelia*, *Kexholm*, and the greateſt Part of *Ingria*; which was confirm'd in 1661, by a Treaty betwixt *Charles* XI. and *Alexis Michaelowitz*. This Province is barren, but conſiderable for being a good Frontier againſt the *Muſcovites*, and for the hunting of *Elks* twice a Year, who paſs the River *Nieva* for *Carelia* in the Spring, and in Autumn they return from *Carelia* to *Muſcovy* thrô this Province. It has *Novogorod Weliki*, a *Ruſſian* Province, on the E. the Lake *Ladoga* on the N. E. *Carelia* on the N. the Gulph of *Finland* on the W. and *Livonia* on the S. W.

Notteburg,

Digitized by Google

Nottenburg, which the *Muſcovites* call *Oreſca*, lies on the rapid and broad River *Nieva*, in Lat. 60, Long. 50, which contributes much to make this City impregnable. The Fortifications are ſtrong, and of a large Extent. In 1614, *Guſtavus Adolphus* ſat down before it, and could not take it by Force; but the Gariſon was obliged to capitulate, becauſe they were plagued with a Diſeaſe of Boils or Warts in their Mouths, which hinder'd their eating. Since the *Swedes* became Maſters of it, they have improv'd the Fortifications.

Caporia, lies on the Gulph of *Finland*, and is a very ſtrong, thô a ſmall Town.

Iwanogorod, lies near the Confines of *Swediſh Livonia*, not far from *Narva*, from which it is parted by a rapid River that runs out of the Lake *Peipus*, and falls into the *Finniſh* Gulph: It is ſurrounded ſo with Rocks, that the Tops of the Houſes are only to be ſeen. In 1700, the *Muſcovites* beſieg'd it, but could not take it.

Jamogorod, lies on the River *Laga* S. S. E. from *Iwanogorod*, and is naturally ſtrong.

Other Towns here are, 1. *Orlin.* 2. *Sanitz.* 3. *Derp.*

VIII. *SWEDISH LIVONIA*;

HAS *Courland* on the S. W. the Gulph of *Riga* on the W. that of *Finland* on the N. *Lithuania* on the S. *Muſcovy* on the E. and *Ingria* on the N. E. and formerly comprehended *Courland*. It is 240 *Engliſh* Miles from N. to S. and 180 from W. to E. *Cluverius* makes it too large, by joining *Courland* to it, which belongs to its own Duke. Some make the *Levones* of *Ptolomy* the firſt Inhabitants of this Country; but it is more probable, that the *Æſtii* poſſeſſed it. *Hartzknock* ſays, That the Provinces of *Letten*, *Courland*, and *Semigallia*, were inhabited by the *Venedi*. He thinks the *Sinus Venedicus*, and the Towns of *Wenden* in *Letten*, and *Windau* in *Courland*, prove this.

The Soil is very fruitful, and in ſome Places produces 30 for one. The Country is plain. They have a particular Way of Husbandry, which is, That wherever there is a Valley, they ditch it up, make the Water overflow it to a conſiderable Depth, and let it ſtand for 3 or more Years: During this Time, they ſtock it with Fiſh, and then drein it. By this means the Ground becomes ſoft and fat, and requires but one eaſie Ploughing. The firſt and ſecond Year they ſow Barley, and the third Year Oats. Thus they never fail of having great Crops. They alſo improve their Ground by burning great Forreſts, the Aſhes of which are much better than Dung. They have great Plenty of Cattle and Fowl.

The Product is Plenty of Wheat, Barley, Rye, Oats, and Linſeed, of which they export many Ship-loads, and 'tis reckon'd the beſt of any in *Europe*. They have alſo Flax, Hemp, Honey, Wax, Tallow, Cattle, Horſes, Butter, Tar, Maſts, Planks, Deals, all ſorts of Timber, Pot-Aſhes, Yarn, Hops, Goat-Skins, *&c.*

The Air is clear and healthy, thô the Winter be long. The Natives dry their Corn in the Straw by hot Stoves, which makes it very hard, and not ſo liable to Corruption as other Corn; ſo that it will keep more than 20 Years: For this Reaſon the *Hollanders* prefer it to all other, and export it to the *Eaſt-Indies*. The Natives ſow the Fields with this hard Grain, which yields a great Product. The Sea, Rivers, and Lakes, abound with Fiſh, of which they reckon above 50 Sorts.

Of the Religion, Ancient State, &c. of this Country.

THE Inhabitants are Pagans, and almoſt Savages; and till the Knights of the Sword ſettled here, and taught them better, they threw away the Wax after they had got the Honey.

About 1158, when *Frederick Barbaroſſa* was Emperor, ſeveral Ships belonging to *Bremen*, bound for *Wiby* in the Iſle of *Gothland*, then a Town of great Trade, were driven by Streſs of Weather into the Gulph of *Riga*; and finding this Country very fit for Trade, they ſent Colonies hither, with Monks, and reſolv'd to ſettle Religion here, either by Perſwaſion or Force; for the Natives then worſhip'd divers ſorts of Beaſts; but thoſe dragooning Methods had not the Succeſs propos'd; for after they had been conſtrain'd to be baptiz'd, they immediately ran to Rivers to waſh away their Baptiſm.

Meinhard

Digitized by Google

Meinhard was their first Bishop, and was succeeded by *Bertold*, who endeavouring to make Profelytes by Force of Arms, was killed, and many Christians with him, in 1186, and was succeeded by *Albert*, a Canon of *Bremen*, who built *Riga*. He held *Livonia* as a Fief of the Empire; upon which he got Liberty to coin Money, and Authority to institute, in 1204, an Order of *German* Knights, who were call'd the *Livonian* Order, or *Knights of the Shore Sword*, according to the Rules of the *Knights Templars*. *Innocent* III. confirmed this Order: Their Habit was a white Cloak, with two *Swords Gules* in *Sautoir*, and a Star of the same Colour. They had a 3d Part allow'd them of what they should conquer from the Infidels. Tho' those Knights behav'd themselves bravely enough, yet the Pagans were too hard for them, and killed *Volquin Schenk*, their second and last Great Master, in a Battle in 1238. So that after this Order had continued 35 Years, they were forc'd to unite with the Order of *St. Mary of Jerusalem*, or the *Prussian* Knights. This Union was solemniz'd at *Rome* the same Year in the Pope's Presence. After this they fought against the *Courlanders*, because they would not be baptiz'd, and defeated them; and thus *Courland* and *Semigallia* were oblig'd to yield to the Order. Their *Heer* Master *Hano* Duke of *Brunswick* fought many Battles against the *Courlanders*, *Lithuanians*, and *Samogitians*, who had revolted from Christianity, in which many on both sides were slain. Those Engagements weaken'd the Order to that degree, that they were forc'd to be recruited by many new Croisades, till at last, in 1287, they brought those People to submit.

After the Order had Peace abroad, they began to make War upon the Bishop of *Livonia*, and abandon'd themselves to all manner of Vice. This War lasted from 1291 to 1341; in which both of them us'd the Assistance of Pagans. In one Year they had 9 pitch'd Battels. One Reason of this War was, because the Archbishop and Chapter would not wear Habits like those of the Order; who at last got the better, and dispossess'd the Archbishop of all his Towns except *Riga*. In 1330, they slew 10000 *Muscovites* in a Battle. In 1351, they kill'd 8000 *Lithuanians*, and had a War of 84 Years with them; during which there were lost on the Side of the Order, 28 Knights of the highest Nobility, 49 of the lesser Nobility, 11000 Gentlemen, 4000 Citizens, 15000 Strangers, and 16000 Peasants. In 1394, the Archbishop join'd the Pagans of *Lithuania*, *Russia*, and *Samogitia*, and in a bloody Battle, both Armies were almost destroy'd.

The Order, when in the Height of their Prosperity, were encourag'd to break the Peace with the *Muscovites*: Upon which *Uladislaus Jagello* march'd against them with an Army of 150000 Men, and the Order had only 83000: They fought at *Tannenberg*, where the *Poles* slew 40000 belonging to the Knights, with all their Generals, and the Master of the Order himself, with the loss of 60000 of their own Men; but *Jagello* was so weaken'd with this dear-bought Victory, that he was oblig'd to seek Peace: After which, the Order became scandalously vitious. In 1498, the *Muscovites* invaded *Livonia*. To revenge this, *Walter Plettenberg*, their Great Master, march'd against their Army of 100000, and with 12000 Men only, kill'd 40000, with the loss of 400 of his Men. *Launclavius* mentions this Victory. *Plettenberg*, in 1521, for a Sum of Money, was made Independent of the Tutonick Order: The Emperor *Charles* V. made him a Prince of the Empire; he favour'd the Reformation, and died in 1535. About this Time, the People of *Livonia* declar'd for the Protestant Religion, and despis'd the Threats of *Charles* V.

In 1558 and 1559, *Ivan Bazilowitz* invaded *Livonia*, and harass'd the Country after a very barbarous Manner; and the *Livonians* not being able to make head against him, some of them, as *Courland*, *&c.* fought the Protection of *Poland*; and the Town of *Revel*, with Part of *Esthonia*, put themselves under the Protection of *Erick* the 14th of *Sweden* in 1560, as has been formerly mention'd. This was the Ground of long Wars betwixt *Poland* and *Sweden*, 'till *Gustavus Adolphus* conquer'd almost all *Livonia*; in which the *Swedes* were left in Possession by the Peace of *Oliva*.

The

The Manners, Customs, &c. of the Inhabitants.

THE Inhabitants are Lutherans, but tolerate the *Ruſſians* and Papiſts. The Bible is lately tranſlated into the *Lettiſh* Tongue among them. The Earl of *Curliſe* and the Duke of *Holſtein*'s Ambaſſadors ſay, They have little more than the Name of Chriſtianity, and are intirely ignorant of the Principles of it. They have little or no Notion of a future Life, have ſtill a Hankering after their old Paganiſm and Idolatry, and offer Sacrifice on the Top of ſome Hill, or in ſome Forreſt. Sorcery is hereditary there. When they kill a Beaſt, they caſt a Piece of it away; and when they brew, they caſt ſome of it on the Ground, which is a remainder of the old Pagan Sacrifices. If their Children be ſick within 6 Weeks of their Baptiſm, they re-baptize them, and attribute it to the Child's having got an improper Name: But they conceal this Cuſtom, for fear of the Magiſtrate.

The Peaſants are Slaves, and are not allow'd to purchaſe any Lands. When they venture to cut down Trees, or ſow Wheat, and ſell it underhand, if they be caught, they are ſure to be laſh'd with a Whip or Holly-Rod till the Blood follows. They are allow'd no Money, and if it be known they have any, Officers are appointed to take it from them. The late Kings of *Sweden* have order'd them to be treated with more Humanity, and the laſt King of *Sweden* humbled their Nobility. The Natives are of a ſtrong Conſtitution, and fit for Hardſhips, but as brutiſh as the *Muſcovites*.

Their Ceremonies of Marriage are peculiar to themſelves. When a Peaſant marries a Maid of another Town, he makes her ride behind him, and before him rides a Bag-piper, and two of his Friends with naked Swords, who give two Strokes croſs the Door of the Bridegroom's Houſe, and put one of the Swords in a Beam over the Bridegroom's Head, to prevent Charms. For the ſame Reaſon the Bride ſcatters many Pieces of red Stuff on the High-Ways, and on the Graves of unbaptiz'd Children. The Bride ſits at Table with a Veil over her Face, and when the Gueſts are ſeated, the Bridegroom and ſhe riſe and go to Bed and return in two Hours; and the Feaſt is concluded with Dancing and Drinking till they all drop down upon the Floor.

Livonia is divided into *Eſthonia* and *Letten*.

LETTEN, or *LETTONIA*,

Is on the S. of *Livonia*; the chief Town is *Riga*, on the River *Dwina*, which, for about 500 *Engliſh* Miles, brings the beſt Products of *Muſcovy*, *Poland*, *Lithuania*, and *Semigallia*, to this Place. The River here is three times broader than the *Thames* at *London*, but not very deep. On the Side towards *Poland*, the River is Defence enough to the Town, becauſe the *Poles* have ſeldom Foot Soldiers and Artillery ſufficient for a Siege. On the Side towards *Moſcow*, 'tis fortified according to the modern Way, has a fine new built Citadel, and is one of the greateſt, beſt built, and moſt populous Towns on the *Baltick*, and has a great Traffick with the Hans-Towns, *Engliſh* and *Dutch*. In 1611, *Guſtavus Adolphus* took this City from the *Poles*. It is 36 *Engliſh* Miles N. from *Mittaw*, 120 S. from *Revel*, 100 N.W. from *Dunaburg*, 160 N. E. from *Remingsberg*, and 200 N. from *Vilna*, in Lat. 57. Long 42.

Dunemond, is a ſtrong Fortreſs at the Mouth of the *Dwina*, where it falls into the Gulph of *Riga* or *Livonia*, and commands the Entrance of it. In 1700, the *Saxons* took and ruin'd it; but the *Swedes* retook and rebuilt it. It is ſurrounded with unpaſſable Moraſſes.

Kockenhauſen, is another Fortreſs on the *Dwina*, S. from *Riga*. In 1700, the *Saxons* took and deſtroy'd it; but it was alſo rebuilt by the *Swedes* a little Time after.

Wenden, is a little Town N. E. from *Riga*, and ſuffered much in the late *Swediſh* and *Muſcovite* Wars.

The Iſle *Oeſel*, which ſome think is the *Oſericta* of *Pliny*, lies in the Gulph of *Riga*. The *Danes* yielded it to *Sweden* in 1645, by the Peace of *Bromsbro*. *Arnsbourg* is the chief Town, has a ſtrong Fortreſs, and lies on the N. Side of the Iſland.

Sonneberg, another Fortreſs, lies on the W. Side of the Iſland.

Digitized by Google

The Iſle of *Dagho*, lies N. from *Oſel*, and is ſeparated from it by a Canal, which joins the *Baltick* and the Gulph of *Riga*. It was given to the *Swedes* by the Peace of *Bromsbro*. *Dagerort* and *Paden* are good Caſtles on the S. Side of that Iſle.

ESTHONIA,

Is on the N. of *Livonia*, and divided into 7 Circles or Parts, *viz. Harnland*, *Wikesland*, *Eſthonia Proper*, *Havenland*, *Wirland*, *Alentaken*, and *Oldempo*.

Harnland is the moſt Northern Part of *Livonia*, and *Revel* is the Capital, in Lat. 59. Long. 42. It was built in 1228, by *Waldemar* II. King of *Denmark*, on the Gulph of *Finland*. It has an excellent Port, and a large and commodious Station for Ships. It was one of the Hans-Towns above 300 Years, and has a good Trade, which makes it very rich. The Fortifications are ſtrong. The Citadel is built on a Rock, ſteep on all Sides except on that next the Town. A Superintendant under the Suffragan of *Riga* reſides here. In 1557, the *Muſcovites*, with an Army of 100000 Men, beſieg'd it for 6 Months, but in vain.

Wikeſland is extended along the Coaſt of the Gulph of *Riga*. *Hopſel* is the Capital, and lies S. W. from *Revel*. *Lahal*, S. from *Hopſel*, on the ſame Gulph, is a little Town, but fortified with a good Caſtle.

Pernaw has ſorry Fortifications; but the Citadel is ſtrong. This City has a great Trade in Corn with the *Dutch*, and has a good Port. Other Towns are, *Fellin*, on the River *Pernau*, E. from *Pernaw*; *Wittenſtein*, N. from *Fellin*; *Weſenburg*, E. from *Revel*. In 1700, the King of *Sweden* laid up Magazines here for his Expedition into *Livonia*.

Nerva, or *Narva*, a Place of great Importance, on a River of the ſame Name, is famous for the Victory that *Charles* XII. of *Sweden* obtained over the *Muſcovites* near it on the 19th of *November*, 1700. and has a conſiderable Trade.

Derpt, or *Juriegowd*, is on the River *Emleck*, on the S. Side of the Lake *Peipus*. This Town is ſmall, but very ancient. It has a ſtrong Caſtle, famous for the Sieges it has ſuffer'd by the *Teutonick* Knights, the *Muſcovites*, *Poles* and *Swedes*. The laſt took it in 1625. In 1632, *Guſtavus Adolphus* founded an Univerſity here.

Of LAPLAND.

Weſtiſh Lapland has *Eaſt Bothnia* and *Cajania* on the S. *Muſcovite Lapland* on the E. *Norwegian Lapland* on the N. and *Norway* on the W.

Both the Name and Country is unknown to the ancient Geographers, who involv'd all thoſe Northern Places in Darkneſs and Barrenneſs, and planted 'em with Monſters, as *Cyclopes*, *Cynocephales*, &c. *Saxo Grammaticus*, who liv'd about 1190, is the firſt that ſpeaks of *Lappia*. The Inhabitants are from *Finland*, and it is probable had been baniſh'd thence, for the Word *Lapp* ſignifies ſo much; upon which the modern *Laplanders* take it as an Affront to be called *Lapps*. The ancient Northern Hiſtorians call'd this Place *Biarmia*. No Man can be poſitive as to the Extent of *Lapland*, becauſe moſt of the Maps contradict each other; and that in *Scheffer's Hiſtory of Lapland* is erroneous, becauſe it makes *Torneo* in *Bothnia* in Lat. 67. whereas it is but in 65 43 Min.

Of the AIR, SOIL, *&c.*

THE moſt Southerly Parts of *Lapland* are without the Polar Circle; ſo that the Sun, when in the Tropick of *Capricorn*, is above 90 Degrees from their Zenith, and about that Time never appears above the Horizon. The moſt Northerly Places have a Day of one Month long in Summer, and a Night of the ſame Length in Winter; and becauſe the Sun is then long above their Horizon in Summer, its Heat is great, which ſpeedily ripens the Product of the Country. The Air is pure and healthful; but they have frequently great Winds, which blow up the Trees that grow on the Tops of Mountains by the Roots; and Travellers are oblig'd, if ſurpris'd by thoſe Tempeſts, to lie flat on the Ground till it be over, or to ſhelter themſelves in the Cavities of Rocks. It is needleſs to ſpeak of the cold Snow and Froſt in this Country in Winter, for it muſt neceſſarily be conceiv'd to be exceſſive.

The

Digitized by Google

The Soil produces abundance of Pot-Herbs, Flowers, and Shrubs. They have Plenty of Berries of an excellent Taſt, as a kind of Bramble with Leaves like thoſe of Strawberries; another with yellow Berries, the thorny red and white Raſpberries, a kind of wild red Currans, as alſo white and black Currans, Strawberries of many ſorts, a kind of Oxberry, a ſort of Water Calthorp, a white Gooſeberry, a kind of Sweet-briar; another ſort with Fruits, large like Pears; a kind of thorny wild Medlar Tree, the common Juniper, another of the ſame kind, with thick and broad Leaves; a ſort of wild Pear Tree, two kinds of Sarvice Trees, a wild Cherry Tree, a ſort of wild Apple Tree, Angelica, Sorrel, and ſeveral ſorts of Moſs, as *Rudbeck* informs us.

Their BEASTS,

ARE Stags, Bears, Wolves, Lynxes, Foxes of ſeveral Colours, Squirrels, Ermins, Martens, Haws, Glittens, Beavers, Otters, Elks that come from *Lithuania*, and therefore are challeng'd to belong to the K. of *Sweden*; Rain-Deer: This Creature is leſs than a Stag; his Colour inclines to an Aſh; but his Haunches, and under his Belly and Shoulders, are white: They have long and rough Hair under their Necks: Their Feet are thick, ſhort, and cleft, reſembling thoſe of Bulls. When they walk, their Joints make a Noiſe like that of the claſhing of Flints: They have two Horns, with two Branches each; the larger Branch bends backward, and the leſſer forward: They feed on Moſs. There is both a wild and tame kind of them. Thoſe begot betwixt a tame Doe and a wild Buck, are the ſtrongeſt and beſt fiz'd: Their Milk is nourihing and fat, and makes good Cheeſe. This Creature is peculiar to the *Laplanders*, and not known elſewhere, as *Scheffer* ſays, which muſt be meant as to that ſort only. They have good Hunting-Dogs, about a Foot high, of a bright ruddy Colour: Their Tails turn up like our Pigs, and their Ears ſtand upright like thoſe of Wolves.

Their BIRDS.

THey have Swans, Geeſe, Ducks, Lapwings, Snipes, all ſorts of Water-Fowl, Heath-Cocks, Stock-Doves, Wood-Cocks, and Partridges. They have alſo Fowls not to be ſeen elſewhere; as, 1. The Kniper, a kind of Snipe, black on the Head, Back, and Wings, but the Breaſt and Belly are white: It has a red long Bill ſet with Teeth, red ſhort Feet, reſembling thoſe of Water-Fowl. 2. The Loom: It is never ſeen on the Ground, but either in the Water or flying. Their Partridges are as white as Snow in Winter. Their Feet are rough like a Hare's; and inſtead of Feathers, they have a ſort of Wool.

Of their MOUNTAINS.

ON the W. they have the *Sevo* of *Pliny*, now the *Dofrine* Mountains, which for Extent are not inferior to the *Riphæan* Mountains, and in ſome Places very high: The Tops of them are cover'd either with Snow, Sand, or Stone. All the Mountains in *Lapland* are only Branches of them. The *Swedes* call all Mountains *Fiel*, as the Northern *Engliſh* and the *Scots* call them *Felt*. Theſe Mountains begin about *Jemptland*, and from thence reach 400 *Engliſh* Miles N. till they come to a Bay of the Frozen Sea, call'd *Tirul*.

Of their MINES.

IN 1635, during Queen *Chriſtina's* Reign, a Silver Mine was diſcovered in *Naſafiel*, in the Lapmark of *Pitha*, not far from the Mountains of *Daarfiel*, that ſeparate *Lapland* from *Norway*. This Mine was ſpoil'd in 1658, during the *Daniſh* Wars, by one *Van Anen*, Governor of *Norway*. The ſecond Silver Mine was diſcovered in 1660, in the Lapmark of *Lulah*, above 120 *Engliſh* Miles from *Lulah*, and 30 from *Roedſtadt*, a Village of *Norway*. The chief Inconvenience attending it is the want of Wood; ſo

ſo that they carry the Oar 5 Leagues. This Mine is ſtill in being. There are many other Mines here; but ſome of them in unacceſſible Places. The *Laplanders* know where there are many rich ones; but are unwilling to diſcover them, leſt they ſhould be forced to work in them, which does not ſuit with their lazy Temper. In 1655, a rich Copper Mine was diſcover'd in the Lapmark of *Torna*, where 100 lb. of Oar yields 40. In 1668, another was found 3 Leagues N. from the former. One of Iron was diſcover'd in 1640, near *Kengis*, where there is vaſt Quantities of it, and extream fine. *Charles* XIth's Mathematicians ſaw both thoſe Mines in their Travels to *Lapland*, and ſay, That the Metal is carried with great Charge and Danger by rapid Rivers, and dangerous Cataracts, to the Gulph of *Bothnia*. Another Mine was lately diſcover'd in the ſame Lapmark, 100 lb. of the Oar of which yields 150 lb. of Copper.

Of their STONES, JEWELS, *and* PEARLS.

THey have no Free-ſtone, but have others that bear the Impreſſion of Animals, Trees, *&c.* and ſome that are ſhap'd like Counters. The *Laplanders* make Gods of 'em. They have abundance of Chriſtal, which, if well poliſh'd and ſet, reſembles Diamonds. *Beuraus* ſpeaks of Amethyſts there; but they are flat and full of Clouds; and they have Topazes of a pale yellow. All their Precious Stones are much worſe than thoſe found elſewhere; and their Pearls are of a bad Water, and not comparable to the Oriental.

Of their RIVERS, LAKES, *&c.*

MOſt of them riſe from the Mountains of *Norway*, and fall into the Gulph of *Bothnia*. The River *Uma* is increas'd by the Rivers *Vindilar*, *Pitha*, and *Skialfve*. *Lahla* and *Kima* are conſiderable for their Bigneſs, and are augmented in their Courſe by vaſt Numbers of leſſer ones. *Torna* receives 29 Rivers, one of which is a *Swediſh* Mile broad, as *Charles* XIth's Mathematicians inform us. When the Snow melts, thoſe Rivers overflow their Banks, and all of 'em have frightful Cataracts. *Lapland* has alſo many Lakes, which, as alſo the Rivers, abound with Fiſh.

Of the Inhabitants, their Manners and Cuſtoms.

THey are generally of a low Stature, of about 4 Foot and a half high: They ſtoop for moſt part, which ſome think is occaſion'd by the Lowneſs of their Cottages: Their Complexion is ſwarthy, which is thought to be partly from the Coldneſs of the Air, and the conſtant Smoak of their low Huts. They are flat Fac'd, have broad and low Noſes, hollow and blear'd Eyes, wide Mouths, black, ſtreight and thin Hair, broad Breaſts, ſlender Waſts, and ſmall Legs, but are ſwift, nimble, and ſo ſtrong, that a *Norwegian* is not able to bend their Bows above one half. They are good Divers. 'Tis obſerv'd of them, That when they are tranſported to more moderate Climates, they ſeldom live long; thó in their own Country they live to a good Age. They are great Cowards; therefore the *Swedes* never employ them in their Wars. Since their Converſe with Foreigners, they have learn'd to cheat; but they are charitable to the Poor, and hoſpitable to Strangers.

The *Laplanders* on the Mountains live on the Fleſh and Milk of their Rain-Deer: They alſo buy Cows and Sheep from *Norway*, and kill them againſt Winter. They hang their Rain-Deer's Fleſh to dry in the Cold, as others do by Fire and Heat; and they have Plenty of Cheeſe.

Thoſe who dwell in Woods and low Grounds feed on Veniſon and Fiſh. They have no Bread nor Salt; but inſtead of the latter, uſe the inner Rind of Pine-Tree dry'd. They ſometimes pound their Fiſh to a Powder, which is their Flower. Their Confections are of Bramble-Berries, that they think good againſt the Scurvy, and Angelica, which they broil after the outer Rind is peel'd off. Their Drink is Water, of which in Winter they have always a Kettle-

Digitized by Google

Kettle over the Fire; and they alſo drink the Broth of Fiſh and Fleſh boil'd together. In Summer, they wear a cloſe Garment, reaching to the middle of their Leg, and gird them with Belts. They have no Linen, and their Clothes are made of coarſe Wool, of a light grey Colour, without dying. The richer Sort have their Clothes of different Colours, and delight moſt in red. They hang at their Girdle a *Norway* Knife, and a Pouch, which keeps their Flint and Matches, Tobacco, and other odd Things. They wear Braſs Rings and Chains on their Girdle. Their Night-Caps are of the Skins of the Bird Loom, with the Feathers on. Their Shoes are of the Skin of Rain-Deer, with the Hair outwards, ſow'd at bottom, ſo as the Hair of one Part of the Sole lies forward, and the other backward; for if it ſhould run all one way, it would be too ſlippery. In Winter, their Clothes are of the Skins of Rain-Deer, with the Hair inward. Their Caps, Boots and Gloves, are of the ſame. The Women's Apparel is not much different from that of the Men. They hang to their Girdles many Chains, Toys, Rings, Knives, with a Needle-Caſe, and other Things, ſometimes weighing 20 Pound Weight. Their Thread is made of the Nerves of Rain-Deer, and they lie in Winter on their Skins. In Summer, they cover themſelves at Nights, Face and all, with Blankets of coarſe Wool, to defend them from the Gnats.

Formerly they wander'd about, and had no fix'd Habitation; but in 1602, *Charles* IX. of *Sweden* aſſign'd them their reſpective Abodes; but they ſtill remove from Place to Place, as they find moſt fit for Paſture and Fiſhing within their own Bounds.

Their Huts are made of Pieces of Timber or Rafters join'd together, and cover'd with Turf, or the Branches and Bark of Pine-Trees, and coarſe Cloth. Some of their Houſes are built upon Trees, to prevent their being overwhelm'd by Snow, or devour'd by Wild-Beaſts. Their Huts have two Doors, at the leſſer of which no Women muſt enter, becauſe from thence the Men go to hunt, and look upon it as an ill Omen to meet a Woman. Their Storehouſes are built on Trees, to ſecure their Proviſions from Bears and other Wild-Beaſts.

They have Days which they call Lucky and Unlucky in their Kalendar, and in the latter never go a hunting. In Summer, they purſue the Wild-Beaſts with Dogs, and on Winter they follow their Tracks in the Snow with their Pattens or Scates. They kill the ſmall Beaſts with their Bows and Arrows, and the larger with Spears and Fire-Arms. They catch Ermins in Traps, as we do Mice, and ſometimes they catch them with Dogs. They kill Squirrels, Martens and Sables, with blunt Darts, for fear of ſpoiling their Skins. They alſo kill Foxes, Beavers, &c. with Darts; but are careful to hit them, ſo as not to ſpoil their Skins. The Baron *Herberſtein* ſays, they are the beſt Marks-men in the World. They ſometimes uſe poiſonous Baits; and they catch the wild Rain-Deer by letting out a tame Female, behind which the Huntſman hides himſelf, and ſhoots the wild ones. They dig Pits for larger ſorts of Wild-Beaſts, and have their own Foreſt Laws; for if any catch a Wild-Beaſt in a Trap laid by another, he muſt give it to the Owner of the Snare or Trap; and he that firſt traces a Bear's-Den, has the Management of hunting him. They account the Fleſh of this Beaſt the greateſt Rarity imaginable. When they have caught a Bear, and return home, they are welcom'd by the Women, who ſpit chew'd Elder-Bark on their Faces, and there they are feaſted for three Days. He that kills the Bear, is diſtinguiſh'd from the reſt by Laces round his Cap, wrought with Tin Wire. When they kill any Fowl with a Gun, they pull two Feathers out of the left Wing, to appeaſe the Anger of the God of the Foreſt. One of their Skates is ordinarily as long as themſelves, and the other is about a Foot ſhorter. They are faſten'd to their Feet by Withs, for which they have Holes on the upper Part. They put their Feet into the middle of the Skates, and uſe a long Pole, at the end of which there's a round Piece of Wood to hinder it from piercing too deep in the Snow, and run with great Swiftneſs over it, as others do over Ice, without Wearineſs, and travel 60 Miles a Day with great Eaſe. Their Skates are cover'd with the rough Skins of Rain-Deer. The Hair is laid ſo as turn againſt the Snow, which

which prevents their falling backward; ſo that in this manner they can climb ſteep Mountains, and ſlide down again with all the Eaſe imaginable.

They make all their own Moveables and Boats, and faſten the Boards with Twigs, the Nerves of Rain-Deer, or the Roots of Trees twiſted together like Ropes, and caulk 'em with Moſs to keep out the Water. They are 6 Yards long, and 1½ bread, and have ſometimes 4 Oars. All of them make their own Sledges, which are ſhap'd like Boats, only they are flat behind, and not pointed as before: The Bottom is convex, that it may ſlide with the more Eaſe over the Snow. When they travel, they cover their Feet with Sea Calf-Skin, and lay Moſs beneath them. They make Boxes of thin Birch Planks, and inlay them with Rain-Deer's Horns. They are dexterous at making Baskets of the Roots of Trees, ſlit in long thin Pieces, and twiſted together, ſo as to hold Water on Occaſion. The *Swedes* are very fond of thoſe Baskets. The *Laplanders* make handſome Spoons of the Horns of Rain-Deer, and Moulds, in which they engrave Flowers and Birds, and caſt Tin in them, with which they adorn their Girdles. The Men dreſs all the Meat. The Women are employ'd in making Clothes and Shoes, Harneſs for the Rain-Deer, ſpinning Thread, and in knitting the Fur of Hairs into Caps and Gloves, which are very ſoft and warm. They alſo draw Tin into Wire through a Horn with their Teeth, ſometimes round, and ſometimes half flat; and they cover their Thread with it for embroidering the Shapes of Beaſts, Flowers, Stars, *&c.*

The Traces which tie the Rain-Deer to the Sledge are faſten'd about their Necks, go down by their Breaſts through their fore and hind Legs, and are join'd to the Prow of the Sledge. The Reins are ty'd to their Horns, and held by the Traveller, who is tied in the Sledge as a Child in a Cradle, and has a Stick in his Hand to remove any Stone or Wood in his Way. He muſt ballance the Sledge with his Body; for the Bottom being Semicircular, 'tis in Danger of being overſet. They hang Bells to the Trappings of the Rain-Deer, which pleaſe thoſe Beaſts very much. Before they ſet off, their Maſter, or thoſe acquainted with them, never fail to whiſper ſomething in their Ears. They travel frequently 48 *Engliſh* Miles in 10 Hours. The *Laplanders* are generally idle, never work but when forc'd by Neceſſity, and diſdain all Foreigners.

Of their RELIGION.

BEcauſe this Nation has no ancient Hiſtory, 'tis difficult to give an Account of their ancient Paganiſm, or to know if it was the ſame with what is now. *Zeigler*, who liv'd about the Time of the Reformation, thinks that Chriſtianity was known among 'em before that Time. Others think, St. *Erick*, who liv'd above 500 Years ago, might introduce Chriſtianity among them. *Zeigler* ſays, That in his Time, tho they had then heard of it, they hated it; but to pleaſe the Kings of *Sweden*, they did not openly declare againſt it.

Guſtavus Erickſon was the firſt who was any way ſucceſsful in his Endeavours to eſtabliſh Chriſtianity among them; for bringing 'em immediately to depend on the Crown, he order'd them to meet at a certain Time of the Year to pay their Tribute to his Collectors, with whom he ſent Miniſters to teach them, and to baptize their Children; for till then they had no Churches nor Preachers. *Guſtavus Adolphus* and Queen *Chriſtina* founded Schools and Churches among them, and appointed Salaries for that End. *Guſtavus Adolphus* order'd likewiſe ſome of the moſt uſeful Books to be tranſlated out of the *Swediſh* into the *Lapland* Tongue, which were the firſt that ever appear'd in that Language. In Queen *Chriſtina*'s Time, the *Pſalms of David*, the *Proverbs of Solomon*, *Eccleſiaſtes*, *Luther's Catechiſm*, *Sacred Hymns*, and other Books of Devotion, were tranſlated. More Books were alſo tranſlated afterwards. And that they might be encouraged to ſend their Children to School, an Annual Revenue was allotted to maintain the Scholars both in Victuals and Clothes. By this means ſome of the *Laplanders* became Preachers, which contributed much to the Improvement of Chriſtian Knowledge there; for before that Time, all their Sermons were in the *Swediſh* Tongue, of which the *Laplanders* knew little.

Of

Digitized by Google

Of the Remainders of Paganiſm among them.

THere are ſtill ſuch conſiderable Remains of Paganiſm, as encline many Authors to believe that they never heartily embrac'd Chriſtianity. The *Laplanders* plead the Authority of their Anceſtors as a ſufficient Reaſon to juſtify their Practices. The great Diſtance of Churches is us'd by them as an Excuſe for their not coming to Worſhip; and they make heavy Complaints againſt the Covetouſneſs of their Clergy. They think many Days of the Year unlucky, and will undertake no manner of Buſineſs upon them. If they meet in a Morning with ſuch a Beaſt or Bird as they reckon a bad Omen, they return to their Huts, and don't ſtir abroad that Day. They don't believe the Reſurrection, and worſhip their Idols and Chriſt promiſcuouſly, and with the ſame manner of Worſhip, in which they are uniform, thô they give their Idols various Names in different Places. They believe there are Fairies that wander about among Rocks, Mountains, Rivers and Lakes, and give them alſo a ſhare of their Devotion. They own one Supreme God, whom they arm with Thunder-bolts: They make the Rainbow his Bow, and have the ſame Notion of him that the old Pagans had of their *Jupiter*. They have another Subordinate God, to whom they acknowledge they owe all the Bleſſings of Life, and never fail to worſhip him. The Sun, whom they call *Baiwe*, is another of their Divinities, becauſe of his Influence on the Bodies of Men and Beaſts. They have Temples and Images conſecrated to each of their Gods. Their Idols are either the Trunks of Trees rudely carv'd, or of Stone. One of thoſe is preſerv'd in the Royal Cabinet of Antiquities at *Upſal*. All their Women are excluded from Worſhip; and they conſult their Drum, whether the Sacrifice they intend to offer be acceptable; and they anoint the Idol with the Heart-blood of the Sacrifice: And when they cannot reach the Top of a Mountain conſecrated to *Storjunkar*, one of their Deities, they dip a Stone in the Blood of the Sacrifice, throw it up to the Mountain, and ſo conclude their Devotion; and ſometimes they ſtrow Branches of Birch and Pine about their Images.

Of their MAGICK.

THis Country has always been remarkable for that Diabolical Art: They excuſe themſelves, alledging it neceſſary for them to uſe Enchantments, to prevent their being hurt by others. Parents and Maſters here teach young Children thoſe Deviliſh Arts, and bequeath to them, as Part of their Inheritance, ſuch Spirits as they ſuppoſe they have found ſerviceable to themſelves. Each Family has their own Demons, and ſome of them foreſee Things to come againſt their Will. Sometimes Demons appear to them in the Woods, and teach 'em a certain Song, that they muſt never forget, and they always appear to them for their Service when that Song is ſung.

Their Drum is the moſt uſual Inſtrument for Magick, and is made of the hollow Trunk of a large Pine, Fir, or Birch Tree, that grow in particular Places, or the Skin that covers it. They paint with the Juice of an Alder-Tree ſeveral red Figures with the Names of their Gods, the Beaſts they hunt in the Woods, Birds, Fiſhes, Rivers, Lakes, *&c.* and with their Pagan Gods they paint alſo the Perſons of the Trinity, and ſuch other Figures as they think ſuit their Occaſions.

When they uſe this Drum, they have an Index and a Hammer: The firſt is a Bunch of Rings made of Metal, and they beat the Drum with the Hammer, which puts the Rings in motion, and when they touch ſuch and ſuch Figures, they take it as a Determination of the Event of the Things they enquire about, and of the Expediency and good Succeſs of their Undertakings. He that beats the Drum, and all that are preſent, muſt then kneel, and no Woman muſt touch the Drum. When the Drummer beats, he mutters ſome Charms, falls into a Trance, and continues in it anſwerable to the Diſtance of the Place he is to bring an Account from. During this Trance, all that are preſent muſt ſing, and when he recovers, he gives them an Account of all their Queſtions as to the Health of their abſent

Digitized by Google

absent Friends, *&c.* and to convince them of the Truth of what he says, he sometimes brings a Ring, Knife or Shoe, *&c.* from the Place. When the Rings go about according to the Course of the Sun, they promise themselves Success in their Hunting, Fishing, *&c.* and if otherwise, they look for bad Luck.

They also tie Knots, by which they pretend to make the Winds favourable or cross to Seafaring Men. From the Voyage undertaken by the Company erected at *Copenhagen* in 1647, by *Frederick* III. of *Denmark*, we have this Account of these Wind-Merchants: They sent a Boat ashore to fetch the most noted Necromancer of the Place, who told them that he could not afford them Wind to the North-Cape, because his Command reached no further than the Cape of *Roucella*; and for 10 Crowns he sold them a Wind to that Cape, in a Piece of Linen-Cloth tied with three Knots. When the Master of the Ship untied the first Knot, they had a fine Gale from E. S. E. which carried them 30 Leagues beyond the *Maelstrom*, and dangerous Rocks and Whirlpools on the Coasts of *Norway*: Then they were becalm'd, which oblig'd them to untie the second Knot; upon which they had a favourable Wind to the Cape *Roucella*; and the Wind then failing them, the Master untied the third Knot; after which they had a terrible Tempest: But we must leave the Reader to his own Judgment, whether this Account be fabulous, or that such Things are really performed by Evil Spirits.

They send abroad Flies of a bluish Colour, which they pretend to be their Familiars, to hurt their Enemies, their Cattle, or their Children; and sometimes they pretend that they cleave Rocks asunder, and try which of their Familiars are most powerful, and those are reckon'd so that kill the other Person's Rain-Deer, Wives or Children. They likewise use Balls made of Moss, or of the Hair of Beasts, for that purpose, and pretend by this means to convey Serpents into their Enemies Bodies, and so destroy them.

Their Language has greater Affinity with the *Finnish* than with any other, tho' it has a Mixture of other Tongues, as the *Swedish*, *Norwegian*, and *Tartar*.

Of their MARRIAGES.

THE young Men court young Women whose Parents or Friends can give 'em most Rain-Deer, and must bribe all her Relations for their Consent. When he comes first, he stands at the Door, and must not come in till her Father allow him; and if the Father break his Promise of giving him his Daughter, the Suitor recovers all his Expence and Gifts. When the Bride goes to Church, she is dragg'd along by her Relations, and pretends the greatest Reluctancy to Matrimony. The Bridegroom must serve his Father-in-Law a Year before he can take away his Wife, and her Patrimony of Rain-Deer: When all the Friends give Presents to the new married Couple. The *Laplanders* are observ'd to be very jealous.

The Women of this Country are frequently barren, and few of them have above 7 or 8 Children. After they are deliver'd, they take a good Draught of Whale's Fat, which they have from *Norway*: They wash the Child with Snow or cold Water, but don't suffer the Water to touch its Head till it be baptiz'd; then they wrap it in a Hare's-Skin. The Women lie in only 4 or 5 Days, and then go about their Business as before. They all of 'em suckle their own Children, and their Cradles are made of a Piece of hollow Timber, like a small Boat. The Child has no Bed-Clothes, but a kind of soft and fine Moss, and they cover it over with the tender Skin of a young Rain Deer. When the *Lapland* Women travel, they tie this Cradle, with the Child in it, to their Back. When they rock the Child, they fasten the Cradle with a Rope to the Roof of the Hut, and tossing it from one side to the other, lull the Child asleep. The Boys are taught from their Infancy to handle their Bows, and shoot at a Mark, and are not allow'd to eat in a Morning till they have hit it. The Mothers train the Girls to Women's Business.

Of their GOVERNMENT.

THey had Kings of their own till 1277, about which Time *Paulus Jovius* says, *Magnus Ladislaus* undertook the Conquest of this

this Country, and employ'd their Neighbours of the Diſtrict of *Bikarti* on this Deſign, who ſurpris'd the chief *Laplanders*, kill'd many of them, and obliged the reſt to ſubmit, which encouraged the *Muſcovites* and *Norwegians* to conquer the *Laplanders* in their Neighbourhood. In 1518, *Guſtavus Ericſon* depriv'd thoſe of *Bikarti* of the Tribute they had receiv'd from the *Laplanders* ſince the Time of *Magnus Ladulaſſe*. They have now 3 Governors, who keep each a Court for the Adminiſtration of Juſtice.

In 1602, it was ordain'd, That inſtead of Skins, they ſhould pay to the Crown of *Sweden* every Tenth Rain-Deer, and the Tenth of all their dry'd Fiſh. In 1606, inſtead of the former Tribute, each Native of *Lapland*, above the Age of 17, was to pay 2 Buck Rain-Deer, or 3 Does, 8 Pound of dry'd Fiſh, every Tenth Fawn of their tame Rain-Deer, and the Tenth of all the Fiſh they catch'd. Now they pay their Tribute in Rain-Deer, Money, or Skins. Each of them that poſſeſs ſuch an Allotment of Land, pays two Rix-Dollars *per Annum*. Every Head of a Family muſt pay one white Fox-Skin, or two Pair of *Lapland* Shoes; or inſtead of them, half a *Lapland* Pound of dry'd Pikes. They pay alſo a certain Tribute to the Czar and the King of *Denmark*, for Liberty to hunt and fiſh in their Territories.

The Time of paying their Tribute to the *Swediſh* Governors is at the Fairs, where moſt of their Trade is by Barter. Their Commodities are, Ermins, the Skins of Black, Red, Blue and White, Foxes, the Skins of Otters, Gluttons or Badgers, of Martens, Beavers, Squirrels, Wolves, Bears, Rain-Deer, and their Skins, *Lapland* Garments, Boots, Shoes, Gloves, dry'd Pike, Cheeſes of Rain-Deer's Milk, *&c.* Thoſe Commodities they exchange for Woollen and Linen Cloth, Copper, Braſs, Salt, Meal, Ox's Hides, Brimſtone, Needles, Knives, *Aqua-Vitæ*, and Tobacco, of which laſt they are extream fond. They buy Black Cattle and Sheep from *Norway*. Their Fairs are kept on the Ice.

Of *their* DISEASES *and* BURIALS.

NO Peſtilential Diſeaſe is known here; but they are frequently troubled with ſore Eyes, which is owing to their ſmoaky Huts. They are alſo ſubject to the Pleuriſy, Inflamation of the Lungs, and Giddineſs of the Head. They have no Phyſicians, and their univerſal Medicine is Angelica, boil'd in Whey of Rain-Deer's Milk. When they have a Pain in their Back, they anoint it with the Greaſe of Serpents. When they have Pains in their Limbs, they apply burning Chips, which occaſion a Bliſter, and they think that draws off the Viſcous Humour. To Wounds, they apply the Roſin of Trees. When their Limbs are benumb'd with Cold, they thruſt a red-hot Iron into a Rain-Deer's Cheeſe, and with the Oil that diſtils from thence, they anoint the affected Part with incredible Succeſs. They boil this Cheeſe in Milk againſt a Cough, and all other Diſtempers of the Breaſt and Lungs. Moſt of them die rather of Age than by Diſtempers. When any of them die, a Braſs Ring is ty'd to their right Arm, which they think preſerves them from having any Harm done them by the Ghoſts of the Deceas'd. They put into the Coffin a Flint and Steel, that they may not want Light in the other World; and they lay a Hatchet by them, that they may cut out their Way to Heaven through Woods, *&c.* and never fail to lay Bows, Arrows, and Victuals, in the Coffin. If the Perſon was rich, they ſacrifice to his Memory ſome Rain-Deer every Year; but ſome of them are buried after a Chriſtian Manner.

Swediſh Lapland is divided into 6 Marks or Countries, as *Uma-Lapmark*, *Angermanlapmark*, *Pitha-Lapmark*, *Lula-Lapmark*, *Torna-Lapmark*, and *Kiemi Lapmark*. There's no conſiderable Town in all this Country, but only a few Villages, needleſs to be inſiſted on.

CHAP. XIX.

Of DENMARK.

SOME ſay, this Kingdom has its Name from *Danus*, a Prince of the *Goths* or *Jutes*. *Saxo-Grammaticus* and King *Erick* of *Denmark* think that it was ſo called from *Dan*, the Son of *Humble*, who was cotemporary with *David* King of *Iſrael*; but we cannot truſt their ancient Hiſtorians, they are ſo fabulous. *Cluverius* derives it from the *Sinus Codanus*; but *Gerardus Voſſius*, *Lib.* 1. *De Idolatria*, *Cap.* 7. thinks that both the *Sinus* and the Country were ſo called from *Woden*, afterwards called *Gudan*, and *Codan*. *Wormius* approves of this Conjecture.

Denmark is bounded on all Sides by the Sea, except where it is join'd to *Holſtein*. This Peninſula was the *Cherſoneſus Cimbrica* of the Ancients. On the W. and N. W. it is waſh'd by the *German* Ocean: On the N. and N. E. it has the Entrance into the *Baltick*, called *Categat*: On the E. the *Baltick*; and on the S. the River *Eider*, which ſeparates it from the Dutchy of *Holſtein*.

It lies betwixt 54½ and 58 Deg. of Lat. and 26 and 34 Deg. of Long. *De la Forreſt* ſays, From the Borders of *Holſtein*, to the moſt Northerly Parts of that Peninſula, 'tis 270 *Engliſh* Miles; and its greateſt Breadth from W. to E. comprehending the Iſlands, 180. *Buno* ſays, *Jutland* is 222 Miles from N. to S.

The HISTORY *of* Denmark.

THough *Puffendorff* owns, That *Denmark* is one of the moſt ancient Kingdoms of *Europe*; yet *Buræus* a *Swede* ſays, That *Dan*, the Son of *Humble*, was only cotemporary with their 16th King. Moſt of the *Daniſh* Hiſtorians make one *Danus* or *Dan* the firſt of their Kings, who headed the *Cimbri* and *Goths*, or *Jutes*, that marched into *Germany*, which they ravaged. Then they pretended that they worſted the *Roman* Army in ſeveral Engagements; but at laſt were defeated by *Marius* at *Vercil* 100 Years before the Birth of Chriſt, and returning homeward, ſettled in *Jutland*, which was ſo call'd from the *Jutes*. *Olaus Wormius* owns, That the ancient Hiſtory of *Denmark* is obſcure and fabulous; and that moſt of the ancient Inſcriptions that might have given Light to it are much defac'd, and many of them at this great diſtance of Time not legible. *Saxo Grammaticus*'s Reputation is not much to be relied on; for every one is ſatisfied that he carries the Antiquity of his Country too high, and advances Fables for true Hiſtory: So we cannot pretend to give an exact Liſt of their ancient Kings; but ſhall only take Notice of ſuch of them as were moſt remarkable.

Frotho III. is one of the moſt famous among them. *Wormius* thinks he Reign'd about the Birth of Chriſt, and ſays he was very rich, and ſo clear'd *Denmark* of Thieves and Robbers, that if Gold or Silver had been left in the Streets, it would have been ſafe.

Gotrick aſſiſted *Wittekind*, King of the *Saxons*, againſt *Charles the Great*, by whom he was defeated: After which, to ſecure his Territories from the Inroads of *Charles*'s Army, he built the Wall called *Daniwerck*, which croſs'd the Iſthmus, and reach'd from the Mouth of the River *Eider* to *Sleſwick* or *Gottorp*.

Erick began to Reign about *A. Ch.* 846, and is reckon'd the firſt Chriſtian King; yet others ſay, his Brother *Harald*, who reign'd before him, did profeſs Chriſtianity, being

Digitized by Google

being converted by Means of *Ludovicus Pius*. About this Time the *Danes*, under the Command of *Rollo*, are ſaid to have ſettled in *Normandy*.

Erick, call'd the *Bairn*, or the *Child*, ſucceeded: His Government at firſt was very juſt; but at laſt he became cruel, perſecuted the Chriſtians, kill'd more Biſhops, and demoliſh'd more Churches, both in *England*, *Germany*, and *Denmark*, than all his Predeceſſors. He died about 902.

Canutus the Hairy came after: In his Time every third Man in *Denmark* was obliged by Lot to go and ſeek his Fortune, and thereupon they over-ran *Pruſſia*, *Courland*, and *Semigallia*, and ſettled there. He died a Heathen in 912.

Frotho came next, who, according to their Hiſtorians, was 29 Years King of *Denmark* and *England*, and died a Chriſtian.

His Son *Gormo* ſucceeded, who was born in *England*, and baptiz'd at *Aalre* in *Somerſetſhire*. King *Alfred* was his Godfather, and gave him the Name of *Athelſtane*. From him, a Village near *Huntingdon* is called *Gorman-Cheſter*, as *Cambden* informs us.

Harald Blaatand, his Son, ſucceeded: He was worſted in many Encounters by *Otto* I. Emperor of *Germany*; from whom the Sea betwixt *Jutland* and *Fulmen* was called *Ottenſundt*, becauſe that Emperor threw his Lance into it, as the utmoſt Limits of his Expedition.

His Son *Sueno Otto* ſucceeded in 980. At firſt he perſecuted the Chriſtians; but at laſt was converted, and founded three Biſhopricks, at *Sleſwick*, *Ripe*, and *Arhuſe*. The *Jutes* took him Priſoner, and he was ranſomed by the Women, who on this Account had afterwards an equal Share of their Father's Inheritance with the Males. He conquer'd a Part of *England*, and died in 1012.

His Son *Canute*, or *Knute* II. ſirnam'd the *Great*, came after him, and was at the ſame Time King of *England*, *Denmark*, *Sweden*, *Norway*, *Slavonia*, and *Sambland*. He was buried at *Wincheſter* in 1036.

Hardikaut, his Son, ſucceeded in the Kingdom of *England*, where he died in 1041.

Magnus King of *Norway* ſeiz'd the Kingdom of *Denmark* upon the Death of *Hardikaut*, died in 1048. and was ſucceeded by *Sueno Eſthret*, who was a Religious Prince. He died in 1076, and left behind him five Sons, who came all ſucceſſively to the Throne.

Harald the Eldeſt Reign'd two Years: He was a ſoft, effeminate, and bigotted Prince, which encouraged the *Engliſh* to throw off the *Daniſh* Yoak without any conſiderable Difficulty, after they had been ſubject to them 120 Years.

St. *Canute*, his ſecond Brother, ſucceeded, and commanded his Subjects to pay Tythes to the Clergy. His Brother *Olaf* miſrepreſented this pious Deſign of *Canute*, and inſtigated the People to a Rebellion; upon which they took Arms, drove him out of *Jutland*, purſued him to *Fulmen*, and barbarouſly murder'd him in the Cathedral of *Odenſee*, the Capital of that Iſland, in 1088.

Olaf Suenos, 3d Son, was declared King by his Party; in whoſe Reign a great Famine happen'd, which they reckon'd a Judgment for the Murther of their former King. Many of the People died for want of Bread, and *Olaf* himſelf had a Share in that Want. He died a Penitent in 1095.

Erick the Good Suenos, 4th Son, ſucceeded, died in his Pilgrimage to *Jeruſalem*, and was buried in the Iſle of *Cyprus* in 1106. In his Time, *Lunden* in *Schonen* was made an Archbiſhop's See. Before this Time, all the *Daniſh* Biſhops were ſubject to the Archbiſhop of *Bremen*.

After his Death, the Kingdom was in great Confuſion, becauſe *Sueno* III. *Canute* VI. and *Waldemar* I. were all Competitors for the Crown; and after much Bloodſhed, they agreed to divide the Kingdom into 3 Parts.

Nicolas, *Sueno*'s youngeſt Son, was ſlain in 1135, by the *Jutes*, in Revenge of *Canute* Duke of *Flanders*, whom *Nicolas* had caus'd to be killed.

Erick Edmund, a good King, ſucceeded: He abdicated the Government, and put himſelf into a Monaſtery at *Odenſee* in *Fubnen*, where he died in 1147.

Sueno Gratenhede, *Erick Edmund*'s Son, got the Crown upon the Death of his Kinſman *Erick Lamb*. At this Time there were three Kings in *Denmark*. After 10 Years Civil Wars, in which both *Sueno* and *Canute* were ſlain, the whole Kingdom was govern'd by *Waldemar*, ſirnam'd the *Great*: He repair'd the Ruins of *Gotrick*'s Wall, built a ſtronger one of Brick, and enlarged the Ditch. He

Digitized by Google

ſubdued the Inhabitants of the Iſle of *Rugen*, who had been troubleſome to *Denmark*, was Lord of all the Countries on the North of the *Elbe*, and died in 1182.

Canute, his Son, ſucceeded, and fought with great Succeſs againſt the Emperor of *Germany*, who pretended a Superiority over *Denmark*. After he had Reign'd 22 Years, he died at *Ringſtede* in 1202.

Waldemar II. his Brother, came next. At firſt he was very fortunate, and Reign'd over *Denmark*, *Livonia*, *Courland*, *Pruſſia*, *Pomerania*, *Rugen*, *Mecklenburg*, *Holſtein*, *Stormar*, *Ditmarſen*, and *Wageren*, and the Cities of *Lubeck* and *Lunenburg*. The Emperor of *Germany* deſign'd to have invaded *Denmark*; but when he heard of the Preparations *Waldemar* made againſt him, he retir'd. *Wormius* ſays, he was a great Lover of Antiquities, and gave conſiderable Sums to thoſe that were skilful in reading old Inſcriptions. He aboliſh'd the Uſe of the Fiery Ordeal, and died in 1242.

His Son *Erick* ſucceeded. *Waldemar* had given other Parts of the Kingdom to his other Sons, *viz.* to *Abel*, *Sleſwick*; to *Canute*, *Blecking*; and to *Chriſtopher*, *Laland* and *Falſter*, which occaſion'd great Broils among the Brothers. At laſt *Erick* was murther'd by *Abel*, and he himſelf was ſlain by his Subjects in 1252.

He was ſucceeded by his Brother *Chriſtopher* I. to whom the Archbiſhop of *Lunden* occaſion'd many Troubles, for which *Chriſtopher* impriſon'd him. Upon this the Clergy excommunicated the King, and at laſt he was poiſon'd by *Arneſaſt* Biſhop of *Arkuſe* with the Euchariſt.

Erick, his Son, abandon'd himſelf to all manner of Vice: He debauch'd the Wife of *Andrew Stigot*, Marſhal of *Denmark*, who in Revenge murder'd him at *Findelorp*, a ſmall Village in the Biſhoprick of *Wiberg*, in 1286.

His Son *Menved* ſucceeded, was a pious Prince, and died in 1319.

Chriſtopher II. *Menved's* Brother, ſucceeded, and being vicious like his Father, his Subjects baniſh'd him, and made *Waldemar* Duke of *Sleſwick* their King; but growing weary alſo of him, they recalled *Chriſtopher*, in whoſe Reign *Schonen* ſurrender'd it ſelf to *Sweden*, and *John* Duke of *Holſtein* ſold all his Pretenſions to it for 70000 Marks of fine Silver; moſt Parts of *Denmark* having afterwards revolted from him. He died at *Nieping* in the Iſle of *Falſter* in 1333.

After his Death, the *Danes* had an *Interregnum* of 7 Years; during which Time the *Holſteiners* brought a great Part of *Denmark* under their Subjection; and the *Danes*, in order to drive them out of *Denmark*, invited *Waldemar* III. the Son of *Chriſtopher* II. into the Kingdom.

He had the Character of a bold, ſubtle, and covetous Prince. When Pope *Gregory* XI. threaten'd to excommunicate him for ſlighting the Orders of the Apoſtolical See, he wrote a Letter to the Pope, telling him, That he held his Life from God, his Kingdom from his Subjects, his Riches from his Parents, and his Faith from the Pope's Predeceſſors, which if the Pope envied him, he was willing to quit it to him. He ſold *Eſthonia* and *Revel* to the Knights of the *Croſs* for 28000 Marks of fine Silver, which was employed to defray the Charge of his Journey to the *Holy Land*. He got *Schonen* back again from *Magnus Smeck* by fair Promiſes, and *Gothland* was alſo ſurrender'd to him. He had frequent Wars with the Hans-Towns, and died in 1375.

After him Reign'd his Grandſon *Olaus* VI. by his Daughter *Margaret*, and *Haquin* King of *Norway*. During his Minority, his Mother *Margaret* had the Adminiſtration of Affairs. After his Father's Death, he was King of *Norway*, and alſo claim'd the Crown of *Sweden*, becauſe his Father was Son of *Magnus Smeck*, King of that Country; but he died young.

In his ſtead the *Danes* and *Norwegians* made *Margaret* their Queen: She declared *Erick* of *Pomerania*, Son to her Siſter's Daughter by the Duke of *Pomerania*, King. She made War againſt *Albert* King of *Sweden*, and in one Campagne ſhe took him, *Rodulph* Duke of *Mecklenburg*, and the Earls of *Holſtein* and *Reppin*, Priſoners. The *Swedes* being diſſatisfied with their King, deſerted him, and acknowledg'd her for Queen. In 1396, ſhe made the Union of *Calmar*, which has been diſcourſed of at large in the Hiſtory of *Sweden*. She died in 1412.

Erick ſucceeded: He ſurrender'd to his Couſins the Dukes of *Pomerania* the Iſland of *Rugen*, that had been long ſubject to the *Danes*. The *Swedes* were diſpleas'd with

Erick,

Erick, becauſe he did not govern according to his Coronation-Oath, and oppreſſed them by Foreigners. The *Danes* thought him careleſs of their Affairs, and alledging he endeavour'd to ſecure the Succeſſion on *Bogiſlaus* Duke of *Pomerania*, they choſe *Chriſtopher* of *Bavaria*; upon which *Erick* retir'd into *Pomerania*, where he died in 1438.

Chriſtopher Duke of *Bavaria*'s Reign was but ſhort: He was ſucceſsful againſt the Rebels of *Jutland*, and the Hans-Towns. He died Childleſs in 1448. The *Danes* call him a good Prince; but the *Swedes* had no Reaſon to be pleaſed with his Government.

Chriſtian Earl of *Oldenburg*, his Siſter's Son, ſucceeded, was declared King both by the *Danes* and *Norwegians*; and in this Family thoſe two Crowns have remained ever ſince by a conſtant Succeſſion. He made War upon the *Swedes*, becauſe they had made *Charles Cnutſon* King; of which, ſee more in the *Swediſh* Hiſtory. In 1471, the Emperor *Frederick* III. gave him *Ditmarſen* in Fief. He married his Daughter *Margaret* to *James* III. of *Scotland*, quitted to him the *Orkney* Iſlands and *Shetland* for a Dowry, and died in 1481.

His Son *John* ſucceeded. In 1501, he was miſerably routed by the *Ditmarſians*, and died of the Plague at *Alburg* in 1513.

Chriſtian II. his Son, ſucceeded. The *Danes* hated him, becauſe he was entirely managed by *Sigiberta*, a *Dutch* Woman of mean Birth; as alſo becauſe he had cauſed *Torlerven One*, the Governor of the Caſtle of *Copenhagen*, to be unjuſtly executed. We have ſpoke already of his Cruelties in the Hiſtory of *Sweden*. The *Danes* revolted from him, and choſe his Uncle *Frederick* Duke of *Holſtein* for their King.

Frederick I. was Crown'd in 1524. The Reformation began here in his Time. *Chriſtian* gather'd ſome Forces, with a Deſign to regain the Crown; but they were ſoon diſperſed. The Emperor *Charles* V. thô he promis'd it, could give no Help to *Chriſtian*, becauſe he was entangled in War with *France*. And when *Chriſtian* came with a Fleet to *Norway*, he was routed and taken by Count *Guldenſtern*, and impriſon'd in the Caſtle of *Collemberg* in *Zeeland*, where he died in 1559. *Frederick* died at *Sleſwick* in 1533.

Chriſtian III. his Son, ſucceeded, who met with great Troubles from the Earl of *Oldenburg* and the *Lubeckers*, that deſign'd to reſtore *Chriſtian* II. but he happily diſengag'd himſelf, eſtabliſh'd the Proteſtant Religion in *Denmark* and *Norway*, and died in 1558.

His Son and Succeſſor *Frederick* II. ſubdued the *Ditmarſians*. He made War upon *Erick* King of *Sweden* with various Succeſs; but at laſt concluded a Peace at *Stetin* in 1570, and died in 1588.

Chriſtian IV. his Son, ſucceeded, and Reign'd peaceably till 1611, when he made War upon *Charles* IX. of *Sweden*, and took *Calmar* and *Elfſburg*; but reſtor'd thoſe Places to *Guſtavus Adolphus*. In his Reign, *Ferdinand* II. Emperor of *Germany*, over-ran moſt Part of *Jutland*, and defeated him near *King Luttern*. He loſt many Places, which were reſtor'd by the Peace at *Lubeck* in 1629. In the War betwixt *Sweden* and *Germany*, he was troubleſome to the *Swedes*, did all he could to ſtop their Victories, and ſpoil their Trade, by detaining and confiſcating their Ships in the *Sound*. To revenge this, the *Swedes* fell with an Army into *Holſtein*, *Jutland*, and *Schonen*, and did the *Danes* much Damage both by Sea and Land, till the War was ended by the Peace of *Bromsbroo*. The *Dutch* made uſe of this Opportunity to regulate the Toll of the *Sound*, which the *Danes* had hitherto exacted at Pleaſure, and made it very burdenſome to them. *Chriſtian* died in 1648.

Frederick III. his Son, ſucceeded, who by the Perſwaſion of the *Dutch* broke the Peace with the *Swedes*: Upon which *Charles Guſtavus* came ſuddenly with an Army into *Holſtein* and *Jutland*, and took *Frederick-Odde* by Storm: And in 1658, there being a great Froſt, he marched over the Ice to *Fuhnen*, where he ſurpris'd the *Daniſh* Troops: From thence he came to the Iſlands *Langland*, *Falſter*, and *Laland*, and at laſt to *Zeeland*, and laid cloſe Siege to *Copenhagen*; which City, and conſequently the whole Kingdom, would have fallen into his Hands, had not the Emperor of *Germany*, the Kings of *Poland* and *England*, and the *Dutch*, concern'd themſelves in the *Daniſh* Quarrel: Upon which a Peace was made near *Copenhagen*, as has been already ſaid in the Hiſtory of *Sweden*.

After

After this Peace, the King, at a Diet held at *Copenhagen*, was declared an abſolute Monarch, and the Crown made Hereditary, whereby the Privileges of the Nobility were aboliſhed, of which they had made a bad Uſe, in oppreſſing the Peaſants. Thus a new Form of Government was introduced there, by Vertue of which the whole Management of Affairs depends abſolutely on the King's Pleaſure. This great Change was made on the 23d of *October*, 1660; of which more hereafter, when we come to their Government. He died of a Fever, *Febr.* 16. 1670.

His Son *Chriſtian* V. ſucceeded, and made an Alliance with the Emperor, *Holland*, and their Confederates. He made War upon the Duke of *Holſtein*, took him by Surprize at *Rensburg*, forced him to quit all the Advantages he had got by the Peace at *Roſchild*, and obliged him to ſurrender *Tonningen*, which he demoliſhed, and afterwards took *Wiſmar* from the *Swedes*. Next Year he enter'd *Schonen*, and took *Helſingburg*, *Lanſcrone*, and *Chriſtianſtadt*, and the Iſle of *Gothland*: But his Troops that went to inveſt *Helmſtadt*, were routed by the King of *Sweden*. In 1677, the *Danes* were beat in a Battle near *Lunden* by the *Swedes*. *Chriſtian* beſieg'd *Malmoe*, but was obliged to riſe from before it. He was afterwards routed again by the *Swedes* in a Battle near *Landſcrone*. In the following Year, the *Danes* were obliged to raiſe the Siege of *Bahus*, and to ſurrender *Chriſtianſtadt*, which was reduced to Extremity by Famine; but at Sea they had better Succeſs; yet by the following Peace with *Sweden* were obliged to reſtore all the Places they had taken.

After the Peace at *Fontainbleau* betwixt thoſe Crowns in 1679, new Troubles began betwixt the *Danes* and the Duke of *Holſtein*, who alledg'd, That by the Peace, he was not only to have the Reſtitution of all his Dominions, but was alſo freed from the ancient Union betwixt the two Houſes of *Denmark* and *Holſtein*. The Duke began to fortify himſelf by new Alliances, of which the King of *Denmark* having Notice, he ſequeſtred the Duke's Share of the Dutchy of *Sleſwick* a ſecond time. The King of *Denmark* being encourag'd by the inteſtine Diviſions of the City of *Hamburg*, made uſe of that Opportunity to renew his ancient Pretenſions on that City, which he beſieged; but the *Hamburgers* being reinforced by the Elector of *Brandenburg* and Duke of *Lunenburg*, ſallied upon the *Danes*, chas'd them from their Works, and cut off 1500 of them. This Diſaſter obliged the King of *Denmark* to make Peace, by which the *Hamburgers* were left in their former Condition. In 1689, the King of *Sweden* declared for the Duke of *Holſtein*, becauſe of the above-mention'd Sequeſtration of the Duke's Part of *Sleſwick*; ſo that a Rupture was likely to have followed betwixt the two Northern Crowns; but by the Mediation of *England* and *Holland*, and the Electors of *Brandenburg* and *Saxony*, a Peace was made at *Altena*, by which the Duke of *Holſtein* was reſtored to all his Poſſeſſions and Rights. The *Jus Armorum* was the only Thing not decided by this Treaty, the chief Pretenſion of the Duke; yet the King of *Denmark* conſented that the Mediators of the former Treaty ſhould examine and determine it: But the Duke not truſting to this, rais'd ſome new Fortifications, and took Foreign Troops into his Service, which the *Danes* demoliſhed; but the Duke rebuilt them, and added other additional Works. Upon this the young King of *Denmark*, *Frederick* IV. marched his Troops into the Duke's Territories, beat the *Swediſh* and *Holſtein* Troops from their Poſts and Forts, and once more demoliſhed all the Fortifications built on the Frontiers. After this he beſieged *Tonningen*, a conſiderable Place belonging to the Duke; but the *Swedes*, with the Dukes of *Hanover* and *Zell*, marched to its Relief, and were joined by 3000 *Dutch* Auxiliaries. This obliged the *Danes* to raiſe the Siege, and retire to their own Territories, whither they were purſued by the *Swedes*. In the mean time the *Engliſh* and *Dutch* Fleet join'd the *Swediſh* Navy, and diſpers'd the *Daniſh* Fleet, who retir'd to the Harbour of *Copenhagen*, where they were cannonaded for 3 Hours; but the *Danes* were ſecure in that Harbour, ſo that only one Seaman was kill'd. The Confederate Fleet not thinking fit to purſue that Deſign any further, 'twas reſolved that the King of *Sweden* ſhould land in the Iſle of *Zeeland*, which he did with 8000 Men; and

Digitized by Google

and this brought on the Peace at *Travendahl*, by which the Duke had his *Jus Armorum* granted him, and 260000 Crowns for his Damages by the late Irruption of the *Danes*. This Treaty was in 1700: And nothing remarkable having happen'd in that Kingdom ſince, 'tis needleſs to bring their Hiſtory any lower.

The AIR, SOIL, *&c.*

THE Air in *Jutland* is not generally ſo cold as in ſome more Southerly Places of *Germany*, which proceeds from the nearneſs of the Sea. In *Zeeland*, the Air is groſs and foggy, eſpecially near *Copenhagen*; yet Colds of the Lungs are very rare there, which is attributed to the Pureneſs of their Firing, which is Beech Wood. Through all *Denmark*, they have but two Seaſons, Summer and Winter; ſo that Extremity of Heat ſucceeds Extremity of Cold. During the Months of *June*, *July*, and *Auguſt*, the Heat is much more intenſe than in *England*: The Nights then are very ſultry; and during all the Summer, they are plagu'd with vaſt Swarms of Flies, which they are obliged to kill with poiſon'd Water.

Denmark in general has Plenty of Corn, much of which is exported to *Holland*, *Norway*, *Iſeland*, and other Places. They have Plenty of Black Cattle, great Numbers of which the *Dutch* tranſport to their more fertile Soil, where they grow prodigiouſly fat in a little time. They abound with Hogs, and have good Breed of Coach-Horſes. The Gentry are much enclin'd to Gardening, and have Melons, Peaches, Grapes, and all ſorts of Sallads, very early.

Their Cattle are for moſt part lean and ſmall, and muſt be kept within Doors 7 or 8 Months in the Year. The Forreſts abound with Game, as Harts, Wild-Boars, Elks, Stags, Roebucks. They have alſo Plenty of Hares, Conies, *&c.* and abundance of Fowl, Wild and Tame, and particularly of Partridges.

The *Baltick* affords them Plenty of Fiſh. Formerly they had Shoals of Herrings on their Coaſts; but that Trade is now greatly decayed. They ſtill abound with Cod, Whitings, Place, *&c.* Their River-Fiſh are reckon'd as good as any in the World.

Their Trade of EXPORT

IS in Barley, Wheat, Rye, and Black Cattle, of which they have formerly exported 100000 *per Annum*. They have alſo Horſes, Butter, and Tallow. The *Norwegians* export Timber of all kinds, eſpecially Fir; but the Exportation of Oak is forbidden. They likewiſe export Maſts, Tar, Pitch, Stock-Fiſh, Oil, and Iron. They have Copper and Silver Mines, but of ſmall Value. Moſt Authors obſerve, That Trade is decaying in *Denmark*, for which they blame their Arbitrary Government, the great Taxes upon the Inhabitants, and the great Expence they are at in keeping up ſo many ſtanding Forces: All which diverts the Money that ought to be employed in Trade, which is alſo diſcouraged, becauſe the Inhabitants know that the Government may ſeize at Pleaſure what they have earn'd by their Induſtry.

Some Manufactories were lately ſet up by Courtiers and great Men, particularly thoſe of Silks and Drinking-Glaſſes; but in a little time they came to nothing, becauſe Trade is not to be forced where real Advantages and Encouragements are not to be found, and where Property is not ſecured.

Their Trade of IMPORT

IS Salt from *Portugal* and *France*. From the latter they have Wine, Brandy, Silks, and other Vanities, to which the rich People there are much addicted. *England* and *Holland* import many Commodities, both of their own Manufacture, and from their Plantations. Some reckon that 300 Veſſels from *England* paſs the *Sound* Yearly, and 1000 from *Holland*. Both thoſe Nations pay for the moſt part ready Money for the Goods they export from *Norway*. The *Danes* have begun lately to bring Spices in their own Bottoms from the *Eaſt-Indies*, where they have a ſmall Fort on the Coaſt of *Coromandel*. They have alſo an *Eaſt-India* Company, of which moſt of their Men of Quality are Members.

The Ancient INHABITANTS

WEre the *Cimbri*, of whom *Tacitus* gives this Account, *Cap.* 37. *De Mor. Germanorum*, That there were not many of them then remaining; but there were ſtill ſome Monuments to be ſeen of their ancient Bravery, Power, and Numbers. They gave Name to *Jutland*, anciently called the *Cherſoneſus Cimbrica*, and had many People ſubject to them, whom *Ptolomy* names. *Wormius* is poſitive that the *Cimmerii* and *Cimbri* are one People, and quotes for it the Authority of *Procopius*, who was a General in *Beliſarius*'s Army againſt the *Goths* and *Vandals*. *Procopius* ſays alſo, That the *Goths* or *Getæ* were the ſame with the *Cimmerii*. *Wormius* ſays further to this purpoſe, That *Wibourg* in *Jutland* was 600 Years ago called *Cimmersberg*. *Jonas Koldingenſis* ſays, there is a Town on the Coaſt of *Schonen* called *Cimberſhaven*. Theſe People made many Expeditions into the Eaſt, and ſome of them ſettled in that Peninſula now called *Little Tartary*, where was the ancient *Boſphorus Cimmerius*. It is moſt probable that the Northern Places, from whence the *Cimbri* came, gave the firſt Riſe to the Poets to ſpeak ſo much of the *Cimmerian* Darkneſs, becauſe, as has been mention'd already, they alledg'd all thoſe Countries had perpetual Night.

Sabellicus and *Saxo Grammaticus* ſay, That the *Longobardi* were Inhabitants of *Jutland*, and alledge, That they left their Country about *A. C.* 414, there being then ſuch a Famine in *Denmark*, that they were obliged to make a Law, That all the old People and Infants ſhould be killed, becauſe they were uſeleſs to their Country, that thoſe who remained, and could manure the Ground, might have Food. Others propos'd, That it were more fit that ſome of the Inhabitants, for whom there was no Food at home, ſhould go abroad and ſeek their Fortunes, which prevailed; ſo that they left their Country, and ſettled in the North of *Italy*, which from them was called *Lombardy*; but *Paulus Diaconus* ſays, they were called *Longobardi*, from their long Beards.

The *Dani* or *Daci* were the Poſterity of the *Cimbri*. The *Romans* called the Eaſtern Places of the Empire, where the *Goths* ſettled, *Dacia*. *Procopius* ſays, That the *Goths* and *Daci* were the ſame People, whom the *Greeks* call *Cimmerii* and *Getæ*.

It is probable that the *Jutæ* were the *Jutæ* of *Ptolomy*. *Wormius* ſays, *Jutland* was anciently called *Jottunland*. *Adamus Bremenſis*, *Beda*, and *Saxo Grammaticus*, ſpeak of the *Jutæ*. *Lambard*, in his *Archeonomia*, ſhews, That the Latin Tranſlation of *Bede* is falſe, when it has *Vitæ* inſtead of *Jutæ*; for the *Saxon* Copy has it *Geatum*, i. e. *Jutes* or *Goths*; and in many other Places he calls them *Jut*. Archbiſhop *Uſher* alſo ſays, That in all the Manuſcript Copies of *Bede* he ever ſaw, he calls that People *Jutæ*, and not *Vitæ*. *Florence* of *Worceſter*, *William* of *Malmſbury*, *Henry* of *Huntingdon*, and other *Engliſh* Hiſtorians, are of the ſame Opinion. *Robins Ethelward*, a *Saxon* Writer, calls them *Giotæ*; and the *Saxon* Annals of *Peterburg* call them *Jeatum*. *Spelman* ſays, That they were ſo called from the *Gothick* Word *Jet*, ſignifying a Giant.

The *Angli* and *Saxons* came alſo from this Country, of whom we ſhall diſcourſe when we come to *England*. *Gellarius* places the *Teutones* in the Iſlands of *Fubnen*, *Zeeland*, and the Southerly Places of *Schonen*. *Ptolomy* ſpeaks of the *Holſati*, who were the Inhabitants of the modern *Holſtein*; the *Vagrii* of *Wagria*; of the *Storemarſi*, that dwelt in the modern *Stormar*; of the *Teutonmarſi* in the modern *Ditmarſh*; and of the *Crempemarſi* and *Villemarſi*, who dwelt in the Southerly Parts of *Jutland*. *Nordalbingia* was the Name of *Jutland*, and other Places of that Peninſula, in the barbarous Times.

The *Daniſh* Hiſtorians boaſt that *Ireland* was 8 times conquer'd by the *Danes*, *viz.* in the Reigns of the *Daniſh* Kings *Fridleve* I. *Frotho* I. *Hiarn*, *Fridleve* II. *Frotho* IV. *Regner Ladbrog*, *Siward* III. and *Frotho* III. who died *A. C.* 912.

They alſo ſay, That *Saxony* was made Tributary to *Denmark* 15 times, *viz.* in the Reigns of *Helgo*, *Rolvo*, *Hother*, *Roderick*, *Uffon*, *Dan* II. and III. *Fridleve* I. *Frotho* III. *Hiarn*, *Fridleve* II. *Frotho* IV. *Regner Ladbrog*, *Siward* III. and *Frotho* VI.

The *Livonians* were ſubject to the *Daniſh* Kings; *Canute* IV. *Waldemar* II. *Erick* VI. *Chriſtopher* Son of *Waldemar* II. *Erick* VII. and *Chriſtopher* II. *Courland*, *Eſthonia*, and *Pruſſia*,

Digitized by Google

Prussia, were also frequently conquer'd by them. They say, the *Swedes* were defeated by them in 22 Battles, and swore Allegiance to 24 of their Kings, and the *Norvegians* in 32 Battles, and paid Homage to 12 of their Kings, before Queen *Margaret* united it to *Denmark*; and that the *Russians* have been Tributaries to 8 of their Kings. *England* was also conquer'd 10 times by 'em.

Of the present Inhabitants, their Dispositions, Manners, Customs, &c.

THE *Danes* are tall, handsome, and straight. Most of them have white or yellow Hair. *Lucan* observ'd, That they who dwelt on the N. of the *Elb* had yellow Hair in his Time. Formerly this Country was over-stock'd with Inhabitants, and upon that Account obliged to send abroad its supernumerary People; but now the Case is alter'd; for Mr. *Molesworth* observes, that it is but indifferently Peopled, which he imputes to their hard Usage, Poverty, and bad Diet, which he says is general over all *Denmark*. The Burghers and Citizens eat Rye Bread, lean salt Flesh, Stock-Fish, Bacon, and very bad Cheese. The Peasants live on Roots, White Meats, and Rye Bread, seldom tast fresh Fish, and scarce ever any Flesh, except on some extraordinary Festivals. He further observes, That the common People are now mean Spirited, have lost their former Bravery, are inclin'd to gross cheating, and mistrust other People. Apoplexies and the Falling-Sickness are Epidemical Distempers there, which probably comes from their bad Diet. Their Peasants are as absolute Slaves as any in *Barbadoes*, but their Food not so good. Neither they nor their Posterity can leave the Land to which they belong; and when it is purchas'd, they are sold with the Freehold, as Timber-Trees are with us. They don't reckon Riches there by Numbers of Acres, but by Numbers of Boors, who, with all that belong to 'em, appertain to the Proprietor of the Land. When any of them get a little Money, they lay it out in Brandy, lest their Landlord should hear of it, and take it from them. They are also liable to the quartering and paying of Soldiers, and must furnish the King's Family, and all their Attendants, with Horses and Travelling-Waggons for their Baggage and Furniture, whenever the King makes a Progress, tho' but to his own Country-Houses; and all this at their own Charges for themselves and Horses for 2 or 3 Days together; and what makes it worse, is, that the Harvest is the usual Travelling-time of the Court. The King does also frequently give a Warrant to any Person of Quality or Officer that has a Journey to make; upon which the Peasants are obliged to serve and attend them.

Mr. *Molesworth* says, it is difficult for a Stranger to find Conveniencies of Lodging and Eating in *Denmark*, even in *Copenhagen*, where there are few or no Lodgings to be lett in private Houses; and in the Taverns, one must be content to eat and drink in a publick Room, into which all Company may enter and do the like.

Their Divertisements in Winter are riding in Sleds, well wrapp'd up in Wool or Fur. None presume to use this Pastime till the King and Court has begun; as all the Clocks of *Copenhagen* must strike after the Court-Clock.

Of their NOBILITY.

FOrmerly ancient Estates and Valour were the only Title to Nobility in this Country: None took either Patent or Degree of Honour from the King; but of late, to supply the Want of Riches and Merit, some have got the Titles of *Baron* or *Earl*. No higher Title has yet been given to Favourites. They have some ancient Families, as that of *Wran*, and others, who were said to have been at the signing of a Treaty of Peace betwixt *Charles the Great* and their King at *Hemming* on the *Eider*.

The Chief Families in *Denmark* and *Norway* are, 1. The Earls of *Rantzau*, who are also Counts of the Empire, and have their Seats in the *Westphalian* Class, from which Country they came Originally. 2. The Earls *Ahlefeld*. 3. The Earls of *Brockdorff*. 4. The Earls of *Reventclau*. 5. The Earls of *Schack*. 6. The Earls of *Wedeln*. 7. The Earls of *Oldenburg*.

Digitized by Google

Their Nobility and Gentry have a ſingle Coat of Arms, which they never alter nor quarter with any other. The Nobility don't enjoy the ſame Privileges by thoſe Titles as our Peers do in *England*, but content themſelves with a few airy inſignificant ones, that diſtinguiſh them from the common People.

Before the Crown was Hereditary, the Nobility and Gentry liv'd in great Affluence and Proſperity; their Tenants reſpected them as ſo many Petty Princes. In the Time of the Convention of Eſtates, which was once *per Annum*, they met the King with great Retinues; and in publick Affairs, their Suffrages were of greateſt Weight, and uſually carried the Point, the Commons being in a great meaſure directed by them, becauſe they depended much on them; but now the Caſe is alter'd, and they diminiſh daily both in Number and Credit; their Eſtates ſcarce being able to pay the Taxes impos'd on them, which makes them oppreſs their Tenants for their own Subſiſtence. Moſt of their Palaces are ruinous, and they are obliged to cringe to the Court for a Military or Civil Employment.

The Nobility love to go fine, after the *French* Mode; but the Ladies Winter-Dreſs is *Daniſh*, and very becoming and convenient. The People of Quality are much addicted to drinking ſtrong Liquors, which occaſions frequent Apoplexies among them.

Their Marriages are uſually preceded by Contracts, which continue ſometimes 3, 4, or more Years, before they proceed to a publick Wedding by the Miniſter; though the young Couple grow frequently better acquainted before theſe Formalities are over.

Sumptuous Burials and Monuments are much in Requeſt with the Nobility, and it is uſual to keep the Corps of a Perſon of Quality in a Vault or in the Chancel of the Church for ſeveral Years, till they have a fit Opportunity to celebrate the Funeral.

Their Orders of KNIGHTHOOD.

SOme ſay, the Order of the *Elephant* was inſtituted in 1190, by *Canute* VI. but this is not certain. It is more probable that it was inſtituted by *Chriſtian* I. which is ſupported by a Bull of Pope *Pius* II. dated at *Viterbo*, *June* 8, 1463. After his Death, this Order was much neglected, till *Frederick* II. reviv'd it in 1580. The Collar of the Order was then a Gold Chain, at the End of which hung an Elephant of the ſame Metal, enrich'd with ſome Diamonds, bearing a Tower on his Back full of arm'd Men, having the King's Cypher on the Side, and round it this Motto in *High-Dutch*, *My Help is in God alone*. Under the Elephant's Feet are thoſe Symbolical Letters, *T. I. W. B.* the moſt likely Interpretation of which is, That the King having found the Unfaithfulneſs of moſt of his Friends, and having a Dog call'd *Wildbrat*, that lov'd him, and conſtantly attended him, he would hint the ſame by the Initial Letters of thoſe Words, *Trew Is Wild Bratt*. *Chriſtian* V. gave it a new Luſtre, and caus'd the ancient Statutes of the Order to be review'd, and added new ones.

The Order of *Dannebrog* was founded by *Waldemar* II. King of *Denmark*, on St. *Laurence's* Day, on Occaſion of a long and doubtful, but at laſt a victorious Battle, with the Pagan *Lieflanders*; during which there appear'd in the Air a red Standard, with a white Croſs in the middle, which he took as a Preſage of Victory, and appointed this Standard to be the *Palladium* of the *Danes*, who call'd it *Dannebrog*; but it was taken and cut in pieces by the *Ditmarſians* 200 Years after. Few believe this Account, but rather think the Standard called *Dannebrog* was ſent to *Waldemar* from the Pope, to encourage him in the Holy War againſt the Pagans in *Livonia*. In 1671, *Chriſtian* V. reſtor'd it. The Collar of the Order is Wove-work, intermix'd with a Croſs of Gold enamell'd. At the End of the Collar hangs a Croſs ſet with Diamonds, and in the middle of the Reverſe appears a white Croſs edg'd with red, ſurrounded with Rays, with theſe Letters at the 4 Out-Parts, *Ref. Ti. Tu. Tor.* The Knights have this embroider'd on their Coats. Above the Hand, which holds the Collar of the Order, there are Rays coming down from on high, and round the Reverſe theſe Words, *Teſſera Fidelium*. Thô this Order is not ſo honourable as that of the Elephant, yet it is conferr'd on none but Perſons of Quality and Diſtinction.

Of their GOVERNMENT.

THE King's Titles are, King of *Denmark*, *Norway*, of the *Goths* and *Vandals*; Duke of *Sleſwick*, *Holſtein*, *Stormar*, and *Ditmarſh*; Earl of *Oldenburg* and *Delmenhorſt*.

Before 1660, this Kingdom was Elective, as *Waldemar* IIId's Letter to the Pope ſhows: The King was choſen by his Subjects of all Ranks, for even the Boors had their Voices. They ordinarily had moſt Reſpect to the Merit and Valour of the Candidate, yet with a due Regard to the Family of the preceding Kings, if any of that Line were found qualified; but if their Kings deceiv'd their Expectation, they frequently depos'd and baniſh'd them. The King could do nothing without his Parliament; which Form of Government the *Goths* had introduc'd into moſt Parts of *Europe*.

The Manner how the Kingdom became Hereditary and Abſolute.

THE King had gained great Reputation by his brave Defence of *Copenhagen* in 1659, which obliged the *Swedes* to raiſe the Siege: Upon this a Peace was concluded; but the Army was not disbanded, nor could they be for want of Money to pay their Arrears. The Peaſants and Burghers were extreamly impoveriſh'd by the laſt War, which had put a Stop to all Buſineſs and Trade; ſo that a Meeting of the 3 Eſtates was appointed at *Copenhagen*, in which the Nobility declared, That the Money neceſſary on that Occaſion ought to be levied on the Commons, without deſigning to bear any proportionable Share themſelves, but only a voluntary Contribution, thô moſt of the remaining Riches of the Kingdom were in their Hands. The Burghers thought ſome Conſideration ſhould be had of their valiant Defence of *Copenhagen*, and of their Poverty; and that it was reaſonable that the Nobility, who were Proprietors of the Kingdom, ſhould at leaſt pay their Share of the Taxes. This diſoblig'd the Nobility: Upon which one *Otto Craeg* ſtood up and told the Commons, That they were only Slaves, and had no Liberty to diſobey the Orders of the Nobility their Maſters: To which *Nanſon*, Speaker of the Commons reply'd, *That the Commons were not Slaves, nor would from thenceforth be called ſo by the Nobility, which they ſhould ſoon prove to their Coſt.* Upon this the Commons and Clergy broke up, and met in *Brewers-Hall*, where, after many Debates, the Commons concluded, That it was moſt fit, without Delay, to wait upon the King, and offer him their Votes and Aſſiſtance to be an abſolute Monarch, and that the Crown ſhould be Hereditary to his Family. They expected by this to oblige the King to them, who in Gratitude could not but confirm and enlarge their Privileges; and they thought they ſhould only change many Maſters for one; and above all, they were prompted to this by a Deſire of Revenge on the Nobility. The Clergy propos'd by this to be alſo freed from the Tyranny of the Nobles, and to have no other Superior but the King, whoſe Intereſt they thought it would be to favour them, becauſe of the Influence they had on the Conſciences of the People. The King was not to very fond of this Change at firſt, and ſaid, That thô he knew it was not his own Inclination to abuſe this Exceſs of Power which was offer'd him, yet ſome of his Succeſſors might do ſo, to the Ruine of themſelves and Subjects; but the Queen, who was a Woman of Intrigue and high Spirit, over-perſwaded him. The Nobles knew little of this Deſign againſt them; yet ſome of their own Number were alſo gain'd by the Court. Some of the Commons however declar'd, That it was reaſonable they ſhould have their Privileges drawn up and ſign'd by the King for their Security; but the Clergy ſaid, It was a Thing unbeſeeming and diſhonourable to require any other Security than the King's bare Word.

Next Morning the Commons and Clergy came to the Council-Houſe, where the Nobility were met, and *Nanſon* told them, That the only Remedy for the Diſorders of the Kingdom, was to make the Crown Hereditary, and the King Abſolute; if the Nobility would concur, they were content; if not, they were going to the King themſelves, and the Matter ſhould be done without them. The Nobility were Thunder-ſtruck with this; but ſeeing they were no longer Maſters; that the Commons

Digitized by Google

were arm'd; and that the Clergy and Army were againſt them; that they were in a fortified City, remote from their ſeveral Countries and Intereſts, where formerly they had govern'd like Princes; they durſt not oppoſe the Reſolution of the Commons, but only told them, That a Buſineſs of this Importance requir'd Time and Conſideration. *Nanſon* deny'd them the leaſt Delay: So the Commons and Clergy march'd in a Body to the Palace, and in their Name the Biſhop of *Zeeland* offer'd the King an Abſolute and Hereditary Dominion, which his Majeſty accepted, and thank'd them; but told them, That the Concurrence of the Nobility was neceſſary: To procure which, Orders were given, That the City-Gates ſhould be ſhut; and that none of the Nobility ſhould depart till this great Change was finiſhed with all poſſible Formality. This frighted the Nobility ſo, that they diſpatch'd Letters to the Court, to ſignify their Willingneſs to comply with what the Commons had propos'd. Three Days were ſpent in making Preparations for this Solemnity: Scaffolds were rais'd before the Caſtle, and adorn'd with Tapeſtry; the Soldiers and Burghers were order'd to be in Arms; and on the 27th of *October* the King, on a Theatre erected for that purpoſe, receiv'd the Homage of all the Senators, Nobility, Clergy, and Commons, which was perform'd kneeling; and the Oath they took obliged 'em to obey him without Reſerve as their Hereditary Monarch, which they alſo ſign'd. Some ſay, That if the Nobility had made any Struggle for their Liberty, the King would not have puſh'd the Point ſo far as to deſire an Arbitrary Dominion: But thus he was made above the Law, which the Commons have repented frequently ſince; and all that the Citizens of *Copenhagen* have by it, is, the Privilege to wear Swords. The Clergy are the only Gainers by it, whom the Court favours as ſubſervient to their Deſigns of keeping the People in Slavery, by the Authority they have over them.

Of the King's REVENUES.

THey ariſe, 1. From the Cuſtoms of Import and Export, which amount to 165000 Rix-Dollars *per Annum*. 2. From the Land-Tax, Houſe-Tax, and Fortification-Money, by which the Crown raiſes conſiderable Sums; for every Houſe muſt pay 4 *per Cent.* of the Value that the Ground on which it is built is rated at. For every 100 Rix-Dollars Stock, the Inhabitants muſt quarter one Soldier, beſides others in Proportion to their Trade; and when the Government is in great Want of Money, this Tax is doubled. The Yearly Sum rais'd from this Fund is reckon'd to be One Million of Rix-Dollars.

When the King has a Daughter to be married, her Portion is levied on the Subjects; 3. From the Tenths of Timber, Oil, Tar, Pitch, and Fiſh, and from the Copper, Silver, and Iron Mines, in *Norway*, which is reckon'd at 700000 Rix-Dollars *per Annum*. 4. From the Crown-Lands and confiſcated Eſtates, valued Yearly at 200000 Rix-Dollars: But Mr. *Molesworth* obſerves, That this Branch of the Revenue does not enrich the Crown; for when any Man's Lands fall into the King's Hands, no Care is taken to improve 'em; ſo that they are turn'd to Forreſt, and the Houſes fall to Decay. 5. From the Exciſe of *Copenhagen* upon Proviſions brought to the Market, and upon Tobacco, Wine, Salt, Corn, *&c.* which is farm'd at 140000 Rix-Dollars *per Annum*. 6. From the Exciſe of the reſt of the Kingdom, which amounts to the like Sum. 7. From ſmaller Taxes, as upon Marriages, and Stamp'd Paper, ſome of which amount to ſeveral Rix-Dollars a Sheet; and upon Brewing, Grinding, *&c.* all which together make about 100000 Rix-Dollars *per Annum*. 8. From the Revenue of *Iſeland*, which is 27000 Rix-Dollars *per Annum*. 9. From *Oldenburg* and *Delmenhorſt*, 80000 Rix-Dollars *per Annum*. 10. From the Toll upon the *Weſer*, which is 50000 Rix-Dollars *per Annum*; all which amount to about 639250 *l.* Sterling *per Annum*.

Of the SOUND.

THis Paſſage or Streight call'd the *Sound*, or *Ore-Sound*, lies between the Iſland of *Zeeland* and the firm Land of *Schonen*, is guarded on the *Daniſh* Side by the Caſtle of *Cronenburg*, over againſt which lies the Town and Caſtle of *Helſingburg* in *Schonen*, now demo-

Digitized by Google

demoliſh'd. Betwixt theſe, all Veſſels that trade into the *Baltick* paſs and repaſs; ſo that next to that of *Gibraltar*, we may juſtly reckon this Streight the moſt important and beſt frequented of any in *Europe*. Since the *Danes* loſt *Schonen*, their Title to the Toll on Ships that paſs the *Sound* is not ſo ſecure, becauſe they are not Maſters of the Land on both Sides; and upon this Account the Windows of *Cronenburg* Caſtle, whoſe Proſpect lies towards *Schonen*, were walled up, that ſo hateful an Object might not cauſe continual Heart-burnings and Grief in the *Danes*.

The Origine of the Toll that the King of *Denmark* obliges Ships which paſs the *Sound* to pay, was on Account of the Buoys which he kept there, that Ships might avoid the Shelves and Banks. *Cambden* informs us, in the Life of Queen *Elizabeth*, That in 1582, the *Engliſh* Ambaſſador repreſented to the King of *Denmark*, That *England* paid that Toll only on Account of thoſe Buoys, and for defraying the Charge of Lights, which the *Daniſh* King put up in the Night for a Guide to Ships; and on the ſame Account all Trading Nations agreed, That their Ships which paſſed that Way ſhould pay their Share. Before 1582, the *Engliſh* paid only one Roſe-Noble for each Ship that paſſed the *Sound*; but there being no fix'd Treaty, the *Danes* began in Time to be Arbitrary, and to impoſe what they pleas'd, according to the Strength or Weakneſs of thoſe they had to deal with, or according to their Friendſhips or Enmity with thoſe Princes and States to whom the Ships belong'd. Therefore to aſcertain this Toll, the Emperor *Charles* V. concluded a Treaty with the King of *Denmark* at *Spires*, in Behalf of his Subjects of the 17 Provinces, who then had a great Traffick in the *Baltick*; by which Treaty every Ship of 200 Tuns, and under, that enter'd the *Sound*, was to pay two Roſe-Nobles at her Entrance or Return; and every Ship above 200 Tuns, was to pay three.

This Agreement remained in Force till the Revolt of the 7 United Provinces, when the *Danes*, taking the Advantage of thoſe Wars, rais'd the Toll to an extravagant Height, becauſe the State of Affairs would not allow the *Dutch* to redreſs themſelves; and King *James* I. conniv'd at thoſe Oppreſſions of the *Danes*, on Account of his Marriage to a Daughter of that Crown. However, about 1600, the *Dutch* join'd with the City of *Lubeck* againſt this exorbitant Toll; and from that Time the *Danes* exacted more or leſs, according as Fortune was favourable or adverſe, but generally little: But in 1647, the *Danes* made a Treaty with *Holland* as a Sovereign State, that was to laſt 40 Years. After the Expiration of which, if no new Treaty was made, that of *Spires* was to be in Force. The *Danes* exacted once 519 Rix-Dollars on each Ship of 200 Tuns; and many are of Opinion, That the unreaſonable heightening of this Toll occaſion'd the K. of *Denmark*'s loſing ſo many Territories to the *Swedes*, who in 1645 got themſelves free from paying any to the *Danes*.

This Streight is not above an *Engliſh* Mile and a half over. When the *Dutch* had War with *Denmark*, their Ships paſſed through the *Greater Belt*, which is 16 *Engliſh* Miles broad; and the *Danes* cannot hinder it, except they have a Squadron of Men of War conſtantly there; whereas they have only a ſmall Frigat of 24 Guns, whoſe Station is at the Entrance of the Gulph of *Nisburg* on the Coaſt of *Fubnen*.

In 1644, *Lewis de Geer*, Admiral of the *Dutch* Fleet, paſſed the *Sound*, and enter'd the *Baltick*, keeping to the Coaſt of *Schonen*, without receiving any Harm from the Caſtle of *Cronenburg*, that continually fir'd on him. In 1645, the *Dutch* Fleet of 50 Men of War, and 32 Merchant-men, commanded by *Witte Wittens*, paſſed the *Sound*: And M. *Terlon*, in his Memoirs, informs us, That he was with *Charles Guſtavus* King of *Sweden* in the Caſtle of *Cronenburg*, when Admiral *Obdam*, who commanded the *Dutch* Fleet that was ſent for the Relief of *Copenhagen*, paſſed the *Sound* in a Line of Battle, thô the *Swedes* were Maſters of both Sides, *viz.* of *Elſinor* and *Helſingburg*, and fir'd all the Cannon of both Fortreſſes upon the *Dutch* Fleet; yet *Terlon* obſerv'd, That the Cannon from the Caſtle could not reach the Fleet that ſailed through the middle of the Streight; yet a Cannon Ball from the Fleet reach'd one of the Caſtle-Windows with Violence enough.

About

Digitized by Google

About 1640, the Customs of the *Sound* yielded 240000 Rix-Dollars *per Annum*; but since 1645, they have not yielded above 150000; some Years not above 80000; and in 1691, they did not extend to full 70000.

Their WEIGHTS

ARE the great and small Hundred, the first of 120, and the other of 112 lb. The former is divided into 12 Parts or Stones, at 10 lb. *per* Stone.

They have also a Skip-Pound, which makes 32 Stone, at 10 lb. *per* Stone, which is 320 lb. Or 20 Lis-Pounds of 16 Pound Mark is a Skip-Pound. And the 100 lb. *English* is found to be 92 at *Copenhagen*.

Their Measures are not so certain; the best Account is, That 100 Yards *English* make about 163 *Danish* Ells.

Their LAWS.

MR. *Moldsworth* says, their Laws exceed all that he knows in the World for Justice, Brevity, and Perspicuity: They are contain'd in One Quarto Volume in the *Danish* Language, with so much Plainness, that no Man, who can write and read, is so ignorant but he may presently understand his own Case, and plead it too if he pleases, without the Assistance of Councel or Attorney. They have none of that *Chicane*, which destroys and raises so many Estates in other Places: A very few Advocates do the Business of all that have Law-Suits there; nor are their Fees exorbitant. No Suit, tho' of the greatest Importance, hangs in Suspence longer than one Year and a Month; for a Man may go through all the Courts, and have Execution done within that Time, unless he be wanting to himself. They have 3 Courts in *Denmark*, *viz.* the City or Town Court, from which there lies an Appeal to the County, and from that to the highest Court in *Copenhagen*, where the King himself sometimes sits in Person, and it is always compos'd of the prime Nobility. This resembles our Court of *Chancery*; and if any Thing happen to fall in Debate, for the Decision of which there is not a positive Law, it is determin'd there by the King, or by the other Judges that are present, who are Keepers of the King's Conscience.

When the Estates made the King Absolute and Hereditary, they presented him with the Book of Laws called *Handfestnung*, which contain'd all that had ever been made against an Absolute Sovereignty. The *Lex Regia*, which contains the People's Surrender of their Rights, is contain'd in the *Codex Christianus*, made by *Christian* V. by which their Kings are declared to be the only Legislators, accountable to none; That no former Laws are binding upon them; That they may put in and out what Officers they please; do in Ecclesiastical Matters what they think fit; and make Peace and War, and Treaties with Foreign States, without Advice of their Council.

Before *Waldemar* II. who liv'd in the 12th Century, the *Danes* had no written Laws. *Christian* V. made the Collection now in use: They are very severe against Duels, so that few are heard of there. Their Laws are very just in respect of Shipwrecks, because of the Relief they give to those in Distress, and the Exactness with which they preserve the Goods they can save for the Use of the Owners, if they be claim'd before a Year and a Day; but if not, they belong to the King; and if the Goods be such as cannot be well kept, the Law orders them to be sold to the best Advantage, and the Money to be secur'd for the Owner. They observe the same Method in Goods found on the Roads.

Their

Their MILITARY AFFAIRS.

'TIS needleſs to ſpeak of their ancient Military Bravery, which is ſo well known in Hiſtory; but as to the preſent State of their Soldiery, it is certain the King of *Denmark* levies more Men than his Country can maintain. Soldiers are thought here to be the Riches of the Kingdom; for when the King has no occaſion for his Men at home, they are hir'd out to others; ſo that Mr. *Molesworth* ſays, Soldiers are as Saleable here as Sheep or Oxen. Their King has found a Way to maintain 18000 Men at home for leſs than 100000 Crowns *per Annum* thus: The Country is divided into ſo many Ploughs, three of which are to find a Man; and when he is order'd to march, his Owners are obliged to give him ſo much a Day. The King finds them nothing but Arms. They are all handſomely cloath'd, and when any of them die or are ſent abroad, the Maſters are obliged to find others in their room, which diſpeoples the Country. The Foot, both Officers and Soldiers, are for moſt part Strangers; the Natives being now ſo much diſpirited, that they are not thought proper for Military Service.

There is kept in *Copenhagen* 3000 able Seamen in conſtant Pay. He has alſo ſome Thouſands of Seamen at *Hamburg*, *Lubeck*, and other Cities; and thô he does not make uſe of them, he now and then gives them a Month's Pay or two, for which he is ſure of them on Occaſion; ſo that in 12 Days, he can fit out a Squadron of 15 Men of War. He has alſo a great Number of Ship-Carpenters in Pay at *Copenhagen*, all well clad and diſciplin'd.

The King has in the Baſon of *Copenhagen* 36 Ships of the Line of Battle, 15 or 16 Frigats, 8 or 10 Fire-Ships, and ſome Bomb-Veſſels, beſides Yachts, from 16 to 36 Guns, that may ſerve for Frigats.

The beſt Seamen he has are the *Norwegians*; but moſt of them are in the Service of the *Dutch*, and have their Families in *Holland*, from whence it is not likely they will ever return, except the *Dutch* uſe them worſe, or the *Danes* better than hitherto they have done; for the *Daniſh* Proviſion by Sea is generally bad.

Some of the biggeſt of their Ships draw more Water by 5 or 6 Foot at the Stern than at the Head, which ſhows them to be broken Back'd. They are generally lower Maſted than ours, and ſeem more unweildy, which makes them more proper for the *Baltick* than the Ocean, except a few of their Cruizers, and other Ships that convoy their Merchant-men to *France*, *Spain*, and *Portugal*.

The ARMS *of* Denmark.

THE King of *Denmark* bears Party of 3, and Coupe of 2, which make 12 Quarters. In the firſt for *Denmark*, Or, *Semé of Hearts Gules*, 3 Lions Paſſant-Gardant *Azure*, Crown'd, Langued, and Arm'd of the firſt. 2. For *Norway*, *Gules*, a Lion Rampant Or, Crown'd and Arm'd of the firſt: In his Paws a Battle-Ax *Argent*, hilted of the ſecond. 3. For *Gothland*, *Gules*, a Lion Paſſant-Guardant Or, on 9 Hearts of the ſame in *Feſſe*. 4. For *Schonen*, *Gules*, a Dragon Crown'd Or. 5. For *Jutland*, *Gules*, a Paſchal-Lamb *Argent*, ſupporting a Flag of the ſame, marked with a Croſs *Gules*. 6. For *Sweden*, *Azure*, 3 Crowns Or. 7. For *Sleſwick*, Or, two Lions Paſſant-Gardant *Azure*. 8. For *Iſland*, *Gules*, a Fiſh Crown'd *Argent*: Over thoſe 8 Quarters, a great Croſs *Argent*, which is the ancient Deviſe of the Kingdom; on the Center of which are placed the Arms of *Ditmarſh*, viz. *Gules*, a Cavalier Arm'd *Argent*. 9. For *Holſtein*, *Gules*, a Nettle-Leaf open, and charg'd in the Middle with a little Eſcutcheon; the whole *Argent*. 10. For *Stormar*, *Gules*, a Cygnet *Argent*, gorg'd with a Crown Or. 11. For *Delmenhorſt*, *Gules*, two Feſſes Or. 12. For *Oldenburg*, a Croſs Pattee *Argent*: The Shield is ſurrounded with the Collar of the Order of the *Elephant*: The Helmet Or, embroider'd and damask'd; the Sights cover'd, and wanting Bars; above which a Crown Or, encircled with 4 Circles, and adorn'd with Precious Stones: On the Top, a Globe Or; and above all, a Croſs Pattee *Argent*.

The Creſt is a Leopard Paſſant over the Crown Or, 8 Streamers *Azure*; a plain Croſs *Argent*, 4 Spears bending to the Dexter Side, and as many to the Siniſter Side Or.

The

The Supporters are two Savages Crown'd and Girt with Ivy Proper, Arm'd with two pointed Clubs.

The Mantle *Or*, ſown with Hearts *Gules*, and Lions *Azure*, doubled *Ermin*. The Motto is, *Pietas & Juſtitia cormant*.

The ancient RELIGION *of the Inhabitants, from* Olaus Wormius.

Othin or *Woden* firſt introduc'd Paganiſm here, as well as in other Northerly Countries. They had their Worſhip in *Denmark* in thoſe ancient Times, either in Temples built with great Coſt, or in the open Air. At firſt they plac'd their Idols in ſmall Huts, open on all Sides, becauſe they thought it unbecoming the Majeſty of their Gods to be ſhut up in Houſes. Afterwards they built ſplendid Temples. The moſt magnificent in the North was that at *Upſal*, which was the Center of Paganiſm. There are none of the Ruins of thoſe Temples to be ſeen now in *Denmark*, partly becauſe when Chriſtianity obtain'd, they either demoliſh'd them, that the Remains of them might not appear, or built Chriſtian Churches in their Place.

The Pagan Altars were a Heap of Earth, on the Top of which 3 great Stones ſupported a greater; below which the Blood of their Sacrifices was pour'd. They always made uſe of Flint-Stones to ſtrike Fire, becauſe they thought it unlawful to uſe any other Way of kindling Fire for their Sacrifices.

Of their GODS.

THeir moſt ancient Idols were *Oden* and *Thor*. The *Norvegian* Hiſtory informs us, That *Olaus Trugge*, their King, took away the Statue of the latter, which was of ſolid Gold. *Frico* or *Friggo* was another, and ſaid to be the Wife of *Othin*. Solemn Oaths were ordinarily ſworn by the Name of *Thor*, who had a Hammer in his Hand for a Scepter. Theſe three were their chief Gods. They had other Inferior ones, *viz. Diſa* or *Thiſa*, the Wife of *Thor*, from whom *Tueſday* was named. The Sun was another of their Gods, from whom came *Sunday*. He was repreſented by a naked young Man, his Face reſplendent with Rays, and holding a Wheel in his Hand, which denoted his Courſe. They alſo worſhip'd the Moon in the Shape of a Man with Aſſes-Ears, holding a Moon in his Hand. *Vodan* was their *Mars*, and was carv'd with a Crown on his Head, a Sword in his Right Hand, and a Buckler in the Left. From him the 4th Day of the Week was called *Bodenſdag*. *Thor*, their chief God, was repreſented lying on a Bed, with a Crown of Gold on his Head, adorn'd with 12 Stars, and a Scepter in his Right Hand. They repreſented *Friga* by the Statue of a Hermaphrodite, with a Sword in the Right, and a Bow in the Left Hand; and from her *Friday* was called *Frigedag*. *Saeter* was plac'd upon a Column, which had a Fiſh at the Top, and this Idol ſtood on its Back, bare Headed, with a long Beard, and long Hair; in his Right Hand a Veſſel full of Water and Flowers, and his Feet bare. They had many other Gods; and their Kings, who had made themſelves famous while alive, were deified after their Death.

Their SACRIFICES

WEre of two Sorts; the firſt was Solemn and Pompous, and celebrated each 9th Year, when they ſacrificed 89 Men, and the like Number of Horſes, Dogs, and Cocks. This Sacrifice was perform'd in *Zeeland*. The ſecond was offer'd each 9th Month, and continued 9 Days, in each of which, 9 different Sorts of Beaſts were offer'd; and they alſo ſacrific'd Men at this Time, whom they threw into a Fountain, and if they died ſoon, they expected all Happineſs and Succeſs. After they were drown'd, the Prieſts drew them out, and hung them on a Tree in a conſecrated Wood, and afterwards reckon'd 'em among the Gods.

They ſacrificed to *Woden*, their *Mars*, in Token of Gratitude, ſeveral of the Captives they had taken in Battle. Once, in Time of a great Famine, the *Norvegians* ſacrific'd their King *Olaus Tretelge*. *Fro*, who ſucceeded *Othin* or *Woden*, inſtituted thoſe Human

Digitized by Google

man Sacrifices, and told 'em, That after his Death, he would accept of no other. This barbarous Worſhip gain'd Ground to that degree, that *Huquin* King of *Norway*, before he engag'd *Harald* King of *Denmark*, ſacrific'd his own Sons. They anointed the Temples and Seats with the Blood of the Sacrifices, drank to the Memory of all their Gods, and had ſometimes Turnaments for their Honour.

Of the Fire-Ordeal *of the ancient* Danes.

When any Perſon was accuſed of a Crime, and could not clear himſelf, he was commanded to offer himſelf to this Trial thus; A Piece of red-hot Iron was laid upon the Palm of his Hand, till he walked to a Place 9 Foot diſtant; then he threw down the Iron, and his Hand was ſeal'd up; and if after 9 Days there was no Appearance of the Burning, he was declared innocent. *Wormius* thinks this Cuſtom had its Riſe in *Denmark* on this Occaſion: *Poppo*, who was the Apoſtle of the *Danes*, and preach'd the Goſpel for ſome Time with no Succeſs among them, at a Meeting of the Nobles took up a red-hot Iron in his Hand, carried it about a long Time without Hurt, and told them, This Miracle was a Proof of his Miſſion, which gained many to Chriſtianity. Upon this, the old Way of trying the Guilty by Combats was laid aſide, and the Ordeal was appointed to be the only Way to purge the Accuſed. This was about *A. C.* 986. They had alſo a Water-Ordeal thus: The accus'd Perſon was thrown into cold Water, and if he ſunk to the Ground, they reckon'd him innocent; but if guilty, they ſaid the Water would not ſuffer him to be cover'd with it, but threw him out. They had alſo an Ordeal by hot Water, which was thus; The accuſed Perſon thruſt his Arm up to the Elbow into boiling Water, and if his Arm was burnt, they reckon'd him guilty; but if not, they accounted him innocent. The Prieſts us'd many Prayers and Ceremonies on this Occaſion, that God might make this Trial anſwer the End of it. They had afterwards another kind of Fire-Ordeal, by which the Accus'd was oblig'd to walk over 9 red-hot Plough-Shears blind-fold, and bare-footed, and if they eſcap'd burning, they were held to be innocent. *Waldemar* aboliſh'd this Cuſtom *A. C.* 1242; and *Innocent* III. at the Council of *Lateran*, prohibited the Clergy to be preſent at ſuch Trials, to bleſs the Iron, or to uſe the other accuſtomed Rites. In 1248, *Haquin*, the 19th King *Norway*, did likewiſe abrogate this Fire-Ordeal.

Of their Duels.

Moſt Controverſies were decided this Way, and us'd by all Sorts of Perſons, Churchmen not excepted. This Cuſtom was obſerv'd in *Denmark* till the Time of *Chriſtian* III. They had incloſ'd Places for this Purpoſe with great Stones or Timber; and ſuch of the Combatants as got the firſt Wound, was caſt, and obliged to pay to the Conqueror 3 Marks of fine Silver, as the Ranſom of his Life; but if the vanquiſh'd Perſon happen'd to be kill'd, the Conqueror fell Heir to all his Eſtate; and if any Perſon refus'd to meet his Adverſary when challeng'd, he was declar'd to have loſt the Buſineſs in Debate. Their Arms were a Sword, Spear, Helmet and Buckler. This Cuſtom continued in *Norway* till *A. C.* 1006.

Of the Burials *of the ancient* Danes.

Their Kings were buried near their Palaces, and many of their Sepulchres are ſtill to be ſeen, as that of *Sigar* in *Zeeland*, near a Village, from thence called *Segerſtede*, which was formerly a great City. Moſt of the reſt were buried near the High-Way, which was alſo the Cuſtom of the ancient *Romans*; and if any *Dane* of Note died by the Hand of his Enemies, they made a Funeral ſuitable to his Birth. They us'd to build up Heaps of Earth and Stone to a conſiderable Height, as Monuments. *Cambden* tells us, That the *Engliſh* call thoſe *Daniſh* Graves *Barrowes*. Such of them as had a Lay of Stones at the Foundation, were for Generals, or conſiderable Perſons; but thoſe for the Vulgar were only of Earth.

Digitized by Google

These Tombs were afterwards more artfully contriv'd; for they not only fix'd great Stones upon them, with the Names and Titles of the Deceased, but surrounded those Heaps with great Stones at the Bottom, plac'd other Stones on the Top, and made an Inclosure of Stone round them. *Wormius* says, there are two of them still to be seen near *Roschild*. They buried also in Woods and Groves.

Some of those Monuments were extraordinary expensive. 'Tis observ'd, That *Harald Blaatand* employ'd his whole Army, and a vast Number of Horse and Oxen, to remove a very great Rock, which he design'd as a Monument for his Parents, and boasted, that none after him would ever attempt the like.

The ancient *Danes* burnt the Bodies of the Deceas'd, and many of the Sepulchral *Urns*, in which they put their Ashes, have been found. Those who were kill'd in Battle, were buried all together in one Heap, and every one of the surviving Soldiers were obliged to bring a certain Quantity of Earth and Stones towards making it. Sometimes they built it like a Mountain, Vault-wise, in which they inclos'd the Bodies of the Deceas'd.

After Christianity was establish'd, their Bodies were burnt with Juniper, and they put many precious Things in the Graves of their Kings. *Olaus Trygge*, King of *Norway*, rifled the Graves of his Predecessors, and found great Riches in them. Many old Coins have been found in their Graves, and some of them very weighty, with old Weapons, and Spurs of a great Size. They us'd to put a Piece of Money in the Mouth of the Deceas'd. This Custom of burning their Bodies was instituted by *Othin*, who told them, the more valuable Things were put with them into the Grave, the more acceptable they would be to the Gods.

Of the CONVERSION *of the* Danes.

CHristianity was first preach'd here in the Reign of *Harald Blaatand*, about *A. C.* 948, by *Poppo*, as we heard before; and about the middle of the 12th Century, it was establish'd by Pope *Adrian* IV. an *Englishman*, whose true Name was *Nicholaus Breakspear*. *Wormius* observes, That worshiping of Saints was not us'd in *Denmark* till a long Time after.

When the Corruptions of the *Roman* Church grew so intollerable to many Nations in *Europe*, that they found a Reformation necessary, *Denmark*, which had been more abus'd by the Priests than many Places more Southerly, embrac'd the Doctrine of *Luther*. This happened in the Reign of *Frederick* I. about the middle of the 16th Century, who establish'd that Doctrine so firmly and universally in his Dominions, that to this Day they allow no other Religion; only the Calvinists have a Church in *Copenhagen*, set up by the Queen; and there is a Popish Chapel allow'd at *Gluckstadt* to a few Popish Families in those Parts. There are no Factions or Disputes here about Religion. The Clergy depend entirely on the Crown; and thô they flatter the Court, and preach up the Power of the Prince, they are not allow'd any Power in Civil Affairs, or Share in the Government; nor are they encouraged to come to Court, or to appear on any Publick Occasions; so that the Pulpit is their only Province. Their chief Subsistence is the voluntary Benevolence of the People, which makes them take Care to get their good Opinion; yet they keep 'em in Awe by the Practice of Confession before they administer the Sacrament, which every one that receives is obliged to. This, with Crucifixes and some other Ceremonies, is all that they retain of the *Romish* Church.

There are 10 Superintendants, who take it kindly to be called *Bishops*, and *My Lord*, *viz.* one in *Zeeland*, one in *Fuhnen*, four in *Jusland*, and four in *Norway*. They all depend on the Superior Consistory or Meeting of the Clergy. They have no Temporalities, keep no Ecclesiastical Courts, and have no Cathedrals, with Prebends, Canons, Deans, Sub-Deans, *&c.* but have only the Rank above the Inferior Clergy of their Diocese, and a Power to inspect into their Doctrine and Manners. The Revenue of the Bishop of *Zeeland* is about 2000 Rix-Dollars *per Annum*. The other Bishops of *Denmark* have about 1500 Rix-Dollars; and the Bishops of *Norway* have 1000 *per Annum*. The King has a great Share of the Tythes, and the Bishops are allow'd to have two or three

Digitized by Google

three Pariſhes each. Their Habit is common with that of the other Miniſters, *viz.* a plaited black Gown with ſhort Sleeves, and a large ſtiff Ruff about the Neck; and on their Heads they wear a Cap with Edges, like our Maſters of Arts, only theirs is round. Moſt of them underſtand *Engliſh*, and have the beſt of their Divinity out of the Writings of our Divines. Some of them, that have ſtudied at *Oxford*, are more valued than the reſt. The Commonalty are great Frequenters of the Church, which are kept much more decent, clean, and better adorn'd, than with us; ſo that they look almoſt as gaudy as the Popiſh Churches.

Of the ancient LEARNING *of* Denmark, *from* Olaus Wormius.

HE informs us, That anciently there were few Scholars in *Denmark*, and the *Gothick* Kings were very ignorant; ſo that any who could but read and write, was in great Eſteem in that Country. The *Daniſh* Hiſtory tells us, That one *Hiarn* was choſen King meerly for making an Epitaph on King *Frotho*. *Saxo Grammaticus* ſaw it, and tranſlated it into Latin. Hiſtory tells us, That their Kings gave peculiar Marks of their Favour to Poets, as Gold Chains, Gold Rings, coſtly Garments, *&c.* entertain'd them in their Courts, and made them their Favourites. Their Rhimes or Runes were ſaid to have had ſuch Force, as they were able to appeaſe the Kings when in Wrath. They inſtance in *Egilbu Skalligrimus*, who thô he had killed a Son and other Friends of *Erick Blodock* King of *Norway*, yet obtain'd his Pardon, for an excellent Copy of Verſes he made. Thoſe Poets were called *Scalder*: And *Wormius*, in his *Literatura Runica*, has a Liſt of the moſt eminent. Their Subject was the Hiſtory of former Times, and the Lives and great Actions of their Kings, and other brave Men.

Some will have *Uphilas*, the Biſhop of the *Goths*, to be the Inventor of the Runick Letters; but this is not probable, only he was the firſt that acquainted the *Romans* with thoſe Characters. *Wormius* thinks they were more ancient than the Greek Letters; but gives no Reaſon for it. He ſays, they were taken from the Hebrew Alphabet, and have a great Affinity to the *Greeks*. *Selden*, in his *Janus Anglicus*, *p.* 19. and *Salmaſius*, are alſo of this Opinion. The Uſe of thoſe Letters ſeems to be very ancient in *Denmark* and *Sweden*; and *Wormius* tells us, they have Inſcriptions 600 Years older than *Charles the Great*, and inſtances in a Rock in *Bleking*, call'd *Harald's Rock*, becauſe the Deeds of *Harald Hyldetand*, who liv'd about *A. C.* 270, and was coremporary with the Emperor *Galienus*, are engraven upon it. He ſays further, That *Hiarn*, who was choſen King for his Poetry, liv'd a few Years after the Birth of Chriſt. He concludes, That the true Inventor of their Letters and Poetry cannot be known at this Diſtance, becauſe of the Want of Books, and becauſe moſt of the Rocks, which were the Books of the ancient *Goths*, are demoliſhed. He thinks it moſt probable, that Learning came thither with *Woden* from *Aſia*; but that the Runick Letters are of a later Date. Their Pointed Letter were introduced by *Waldemar* II. King of *Denmark*, and are therefore called the *Waldemarian Runes*.

Spelman thinks the Word *Runes*, or *Rune*, comes from the *Saxon* Word *Ryne*, that ſignifies a Miſtery, becauſe the Poets of thoſe Times conceal'd the Knowledge of them from the People, as the *Egyptian* Prieſts did their Hieroglyphicks, and becauſe their Myſteries of Magick and Witchcraft were wrote in thoſe Letters. *Hadrianus Junius*, and *Stephanius* the *Daniſh* King's Hiſtoriographer, are of the ſame Opinion; but *Wormius* thinks they are called *Runes* from *Run*, which ſignifies a Furrow, becauſe the one Line began where the former ended.

He likewiſe ſays, They had 28 kinds of Runick Alphabets, and that the *Swedes* had the ſame Letters with the *Danes*, as appears from the Obſervations of *John* and *Olaus Magnus*, and *John Bureus*. He informs us, That the *Scythian*, *Maſſagetick* and *Getick* Characters, have a great Affinity with the *Runick* ones, which he proves from a Table, containing 72 kinds of different Characters, wrote by *James Bonaventura Hepburn*, a *Scots-man*. It was printed at *Rome* in 1617.

Saxo Grammaticus gives us many of thoſe Inſcriptions on Rocks, as does *Wormius* in his Learned Book, called *Monumenta Danica*. *Saxo* tells us alſo of an Epiſtle engraven on Wood, from *Fengo* King of *Denmark*, to the

Digitized by Google

King of *Great Britain*; and *Wormius* ſays, he had ſeveral Epiſtles of that ſort of Love and Buſineſs in his *Muſæum*, with many Runick Kalendars, as he tells us in his *Faſti Danici*.

They engrav'd likewiſe on Bones, and on Horns, eſpecially on thoſe of the Elks and Rain-Deers, and ſometimes they engrav'd their Kalendars on the Bones of Fiſhes. *Wormius* ſays, That *Chriſtianus Friſius*, Chancellor of *Denmark*, has a Book conſiſting of 13 Leaves, made of thin Plates of Rain-Deer's Horn, about four Inches long, and one broad: The Feſtivals, Changes of the Moon, *&c.* are artfully engraven on it. Some of their old Bells have likewiſe Inſcriptions on them. In the middle Times, they made uſe of Parchment; but all their ancient Books are loſt, except that curious Book of Antiquity, call'd, *The Laws of Schonen*, which contains the Succeſſion of the *Daniſh* Kings, their Marriages and Actions, and the Boundaries betwixt *Denmark* and *Sweden*. It is writ in *Runick* Characters: Every Word is ſeparated from another by a Colon, and every new Law begins with a Red Letter.

Wormius tells us, That after they had engraven their Letters on Rocks, Wood, Horn, *&c.* they colour'd the Draughts with Ink made of Pitch, the Blood of Seals, and other Ingredients, which are not now known; and that this Ink was ſo durable, that neither Storms nor Time could efface the Characters.

They had 136 kinds of Rhimes; and *Wormius* ſays, the old *Daniſh* Poems were fram'd with great Art and Care, and that they exceeded thoſe of all other Nations in the wonderful Effects they had upon the Hearers. He ſpeaks of a certain Inſpiration that thoſe Poets were ſometimes poſſeſſed with, and ſays, their Poetry never ſucceeded with any but ſuch as were naturally endued with that Poetical Fire.

Thoſe employed in converting the *Danes* aboliſh'd the Runick Inſcriptions, becauſe they did not underſtand them themſelves, and would not take Pains to learn them. Upon this Account all their Prayers and Worſhip were performed in Latin, and they had Inſtructions to propagate the *Roman* Characters as more holy than the *Runick*, which they ſaid were polluted with Paganiſm and Magical Spells, and contrary to Chriſtianity. The *Runick* Characters fell partly into Contempt on that Account, and alſo becauſe the *Roman* Characters were more eaſily writ, and had more Books of Learning in 'em. The *Runick* Characters were not quite aboliſh'd however in 1319; for the Laws of *Schonen* were writ about that Time, thô very few had then any Skill in them. *Alphonſus* King of *Caſtile* and *Navarre* aboliſh'd them in *Spain*, *A. C.* 1086. *Roderick* of *Toledo* tells us, That the Council of *Toledo* condemn'd them *A. C.* 1116. *Aventinus* in his Annals, *Lib.* 1. ſays, That after the Death of *Frederick* II. Emperor of *Germany*, the *Germans* diſus'd the *Runick* Letters, and inſtead of them brought in the Latin Characters.

Jornandes tells us, That *Zamolxes Zoutæ*, and *Dicineus*, who were great Philoſophers, inſtructed the *Goths*, their Countrymen, in Knowledge. *Wormius* ſpeaks of two Books, called *Edda* and *Scalda*, which contain great Variety of Ænigma's, Allegories, and Hieroglyphicks, that were Part of the ancient Learning of the *Goths*. Many Horns are ſtill to be ſeen with Inſcriptions and Figures of Animals, which give us ſome Taſt of the Religion and Natural Philoſophy of the ancient *Danes*. That found in the Dioceſe of *Ripen* is of this Sort.

Of the preſent State of Learning there.

THE late King *Chriſtian* V. erected a Royal Academy for the Polite Education of young Gentlemen in 1690 at *Copenhagen*, committed the Government of it to Mr. *Van Schindel*, a Perſon of a Noble Family in *Sleſwick*, ſettled Profeſſors of moſt ſorts of Learning under him, with Maſters for all genteel Exerciſes, and gave them the Houſe of the Counts of *Brahe*.

Mr. *Moldſworth* ſays, That Learning runs low there at preſent; only Latin is more ſpoken by their Clergy than by ours in *England*. There are few Books printed there, and thoſe only ſome dull Treatiſes againſt the Papiſts and Calviniſts. The *Belles Lettres* are very much Strangers here, and can hardly be introduc'd, till a greater Affluence among the Gentry makes Way for them; for Neceſſity dulls and deſtroys Men's

Digitized by Google

Men's Spirits The Revenues and Buildings of the Univerſity at *Copenhagen* are mean. The Students wear black Cloaks, and live ſcattered about the Town. On the King's Birth-day, the Rector *Magnificus* harangues his Majeſty in the Univerſity with a Latin Speech, full of groſs Flattery.

In this King's Grandfather's Time, there was an Univerſity at *Sora*, where the Lodgings and Conveniencies for Study exceeded thoſe of *Copenhagen*; but the King had Occaſion for the Revenues, ſo that now it is deſolate, and there's only a ſmall Grammar-School in its ſtead. Mr. *Molesworth* obſerves, That there's a certain Equality of Judgment among them, and that every one keeps the ordinary beaten Road of Senſe, which in this Country is neither the faireſt nor the ſouleſt. They are not good at imitating the Inventions of other Countries; and for inventing themſelves, he ſays none have ever pretended to it ſince the famous *Tycho Brahe*.

This Country has produc'd many Learned Men; as,

1. *Saxo Grammaticus*, who liv'd in the 12th Century, and wrote the Hiſtory of *Denmark* in elegant Latin. *Eraſmus* was amaz'd to find ſo much Eloquence and good Language in ſuch a barbarous Age. He was the King of *Denmark*'s Hiſtoriographer, died in 1190, and is buried at *Roſchild*, where his Latin Epitaph is ſtill to be read.

2 *Eraſmus Latus*, who was Profeſſor of Divinity in the Univerſity of *Copenhagen*. He publiſhed many Learned Works, of which *Geſner* has given us the Catalogue.

3. *Nicolaus Hemingius*, remarkable for his judicious Commentaries on the Scripture. He died at *Roſchild* in 1600.

4. *Tycho Brahe*, born in *Schonen*: He was a rich Nobleman, and Baron of *Toſtrup*. All *Europe* is obliged to him for the Improvements he made in Aſtronomy.

5. *Chriſtianus Severinus Montanus*, who was *Tycho Brahe*'s Scholar, and Profeſſor of Aſtronomy at *Copenhagen*, where he wrote his *Aſtronomia Danica*. He loſt much of his former Reputation by his Book *De Vera Circuli Menſura*. Printed at *Amſterdam* in 1644. This Work coſt him 30 Years Study; but was confuted in one Page by Dr. *Pell*, then Profeſſor of Mathematicks at *Amſterdam*.

6. *Arild Witfield*, Lord of *Odersherch*, and Chancellor of *Denmark*. He reduced *Saxo*'s Hiſtory to a Chronological Method, and wrote in *Daniſh* a Hiſtory of the Kings of *Denmark* and *Norway*. *Pontanus* gives a great Character of that Work.

7. *Stephanus Stephanius*, *Regius* Profeſſor of Hiſtory in the Univerſity of *Sora*. He wrote Accurate and Learned Notes on *Saxo Grammaticus*. He alſo wrote the Hiſtory of *Denmark*, from 1550, to 1559, which was Printed at *Sora* in 1650.

8. *Olaus Wormius*, *Regius* Profeſſor of Phyſick at *Copenhagen*, a great Antiquary, who with incredible Diligence, and great Succeſs, made wonderful Diſcoveries relating to the *Runick* Inſcriptions, Learning, Poetry, *&c.* and has given an Exact and Learned Account of the Antiquities of his Country, which lay unregarded before his Time. He wrote upon thoſe Parts of abſtruſe Learning, his *Literatura Runica*, *Monumenta Danica*, *Faſti Danici*, and *Muſæum Wormianum*. The laſt is the Catalogue of his Natural Curioſities and Rarities, of which he had a great Collection.

9. *Petrus Joannes Reſenius*, Profeſſor of Moral Philoſophy, and Counſellor to the late King, has improv'd the Antiquities obſerv'd by *Wormius*, and made a greater Collection of *Runick* Monuments. He has alſo publiſh'd the *Edda Iſlandorum*, which ſhews his great Abilities in that Part of Learning.

We might alſo add *Petrus Severinus*, the two *Bartholines*, famous for Phyſick and Anatomy, and *Borrichius*, who left a great Legacy to the Univerſity of *Copenhagen*.

Their LANGUAGE.

RODERICK of *Toledo* tells us, That the *Teutonick*, *Daniſh*, *Norwegian*, *Swediſh*, *Low-Dutch*, and *Engliſh*, have the ſame Origin, thô they differ in Dialects. *Juſtus Lipſius* ſays, That the Old *Celtick* was alſo an Idiom of the *Teutonick*. The *Edda Iſlandorum*, an ancient Piece, gives an Account of the Language of that Country, and calls it *Daniſh*: It informs us, That *Woden* brought that Language from *Aſia*, and that the Colonies he planted in *Denmark*, *Sweden*, *Norway* and *Saxony*, left their Language there.

Wor-

Digitized by Google

Wormius obſerves, That the *Daniſh* is mightily chang'd within theſe laſt 400 Years, which is evident from their ancient Monuments. Of late they borrow many Words from the *High Dutch*, which the Court, Gentry, and Burghers, uſe in common Diſcourſe, and the *French* when they talk to Strangers, to whom the *Daniſh* is diſagreeable, becauſe of its bad and languiſhing Tone.

The DIVISION *of* Denmark.

Denmark is divided into the Peninſula of *Jutland*, and the *Iſles*. We ſhall begin at the latter.

ZEELAND,

WAS anciently call'd *Codonania* by *Pomponius Mela*, and had its Name from its Situation in the Sea; and ſome ſay, this Iſland is the largeſt in the *Baltick*, is almoſt of a Circular Figure, and about 180 *Engliſh* Miles in Circumference. It has the *Sound* and *Schonen* on the E. the *Baltick* on the S. the *Great Belt* and the Iſle of *Fulmen* on the W. and the Entrance into the *Sound* on the N. It is tolerably fruitful in Corn, and has a great Trade by exporting Black Cattle. The Woods are full of Game. The Face of the Land is pleaſant, and abounds with little Hills, Woods and Lakes. Mr. *Molesworth* ſays, there are few Meadows here, yet they have Plenty of good Hay, from the Graſs that grows by the Sides of Corn-Fields, and in ſome ſcatter'd Spots of Marſhy Grounds. It has no Rivers, nor above half a Score Brooks, that are able to turn a Mill; but has a great Number of fine Lakes, well ſtor'd with Fiſh. In this Iſland there are 340 Pariſhes, and the principal City of *Denmark*.

Copenhagen, which lies 20 *Engliſh* Miles E. from *Roſchild*, 16 S. from *Cronenburg*, 150 S. from *Gothenburg*, 225 S. W. from *Calmar*, and 350 from *Stockholm*. Its ancient Name was *Segelburg*. In the 12th Century, *Abſolon* Archbiſhop of *Denmark*, as *Saxo Grammaticus* informs us, built a Citadel here to ſtop the Incurſions of the Pirates, and called it *Axel-huis*. This encouraged ſeveral Fiſhermen and other Traders to ſettle here, from whence it was called *Kiopmans-Haven*, *i.e.* Merchants-Haven. *Chriſtian* IV. King of *Denmark*, enlarged and beautified this City, and join'd it to the Iſle *Amack* by a Bridge, in which he built a new Town of 4 or 500 Houſes, and an Exchange, which is a large Building, with a great Vault below, where Merchants have their Warehouſes. He alſo built an Arſenal, which is now well provided with Artillery, and particularly with Cannon for Ships, many of which are 48 Pounders. Braſs Guns are as plentiful here as Iron Guns elſewhere. Each Ship of the King's Navy has a diſtinct Chamber, with all manner of Rigging for it. In other Rooms they keep ſmall Arms for Ships: And for the more convenient Embarkment of all of them, the Arſenal is built on the Brink of the Water. They have Plenty of Braſs Mortars 100 and 200 Pounders, and a green Braſs Culverine 21 Foot long. For Land Artillery, they have 30 Battering-Pieces from 12 to 48 Pounders, 20 Mortars from 100 to 200 Pounders, and 70 Field-Pieces, all of Braſs. They have alſo 20000 Muskets, and 600 compleat Sets of Armour. The celebrated Globe of *Tycho Brahe*, 6 Foot Diameter, and the only Remains of all the Inſtruments that belong'd to him, is kept here. By the Obſervations of Mr. *Picard* and Mr. *Flamſted*, the Difference of Meridians betwixt *London* and *Copenhagen* is 51 Min. 40 Sec. ſo that the Long. is 32 Deg. and the Lat. 56½ Deg.

This City ſtands very low; but there is a Riſing Ground within half a League of it, and two or three little Hills that cover it on the W. Side, from whence the City may eaſily be bombarded. This Town is large, and has a very regular Citadel on the N. and N. W. built on the Shore, with ſeveral fine Baſtions, and Ravelins of Earth, well ſtor'd with Cannon, and palliſado'd. They have a Battalion of Foot in Gariſon. The other Sides are of more difficult Acceſs, by reaſon of Marſhes. There are ſeveral Royal Baſtions with Ravelins before the Curtains, which reach from the Citadel to the S. Part, and continue beyond the Arm of the Sea, which ſeparates *Zeeland* from

Digitized by Google

from *Amack*. A Circuit of Fortifications, conſiſting of 8 Royal Baſtions, and a Ravelin, incloſes the New City and Port, with the Fleet, and faces the *Tilboorth* or Cuſtom-Houſe Battery, which ſecures the Entry into the Haven. Thoſe Fortifications make the City of a round Form. The Houſes, which are above 7000 in Number, don't take up above half the Ground incloſ'd.

The Harbour is excellent, and would be the Staple of all the Trade in the *Baltick*, if it were a Free City. The Entrance into it is ſo narrow, that one Ship only can paſs at a time; and this Entrance is ſhut up every Night with a ſtrong Boom. The Citadel on one Side, and the Cuſtom-Houſe or Block-Houſe, well ſtor'd with Cannon, on the other, command the Mouth of the Port; within which lies the Navy Royal. It is capacious enough to hold 500 Sail, where neither Wind nor Enemies can annoy them. The Road without is very good and ſafe, being fenced from the Sea by a large Sand-Bank, on the Point of which there's a couple of Buoys to direct all Ships that come in or go out. There are no Tides here, but always a ſufficient Depth of Water; ſo that this Port may in all Reſpects be reckon'd one of the beſt in the World.

They have 10 Churches: St. *Mary*'s is the Cathedral, wherein the greateſt Solemnities, ſuch as the Coronation of their Kings, *&c.* are celebrated. The Dome is fine, and the Steeple magnificent. The Church of the *Holy Ghoſt* is fine, and very ancient. That of St. *Nicholas* is not inferior to the other two in beautiful Structure: It has a ſtately Steeple, and was built after the Reformation. St. *Peter*'s is alſo an ancient Church, where Worſhip is perform'd in *High Dutch* ſince 1574, by the Command of *Frederick* II. who then caus'd it to be new built. *Trinity* Church is alſo a fine Building, and was finiſhed in 1656. The Publick Library is kept over this Church; a great Part of the Books were given by *Chriſtian* IV. This Church joins to the Round Tower, built by Order of the ſame King, who laid the firſt Stone himſelf in 1637. It was finiſhed in 1642, and called *Uraniburg*, being built inſtead of that of the ſame Name belonging to *Tycho Brahe* in the Iſle of *Huen*, which was demoliſhed in his Reign. The Stairs are 15 Foot broad, and ſo eaſy, that a Coach may go up them. The *Danes* call it *Stelleburg*, becauſe 'twas deſigned for Aſtronomical Obſervations: It is flat at Top, and has a Balcony with Iron Baliſters round it. The Chamber of Curioſities here contains a great Number of Rarities of Nature and Art. *Jacobæus*, a Phyſician at *Copenhagen*, has publiſhed a Catalogue of them in Folio.

The Academy here was founded by *Chriſtian* I. about 1475; and *Sixtus Quartus* granted it all the Privileges of that of *Bononia*. King *John* enlarged and beautified it, and ſettled Salaries for the Profeſſors. *Chriſtian* III. built a Ward for the Maintenance of 20 poor Students. *Frederick* II. added 80 more to them, and encreas'd the Penſions of the Profeſſors. *Gaſpar*, *Thomas*, and *Eraſmus Bartholoini*, were Profeſſors here.

The Streets are light enough in the Night by Lanthorns. They make uſe of no Flambeaus here, for fear of Fire, to which this City is liable, by reaſon of the many Timber Buildings. To prevent this, every Maſter of a Houſe muſt have a large Tub full of Water at his Door. Coaches are much us'd here, becauſe of the Dirtineſs of the Streets in Winter. Mr. *Mold'ſworth* thinks this City is near as large as *Briſtol*. In 1659, the *Swedes* beſieged this Place, and were obliged to raiſe the Siege, after they had ſpent a whole Year in it.

Amagar or *Amack*, lies E. from the City, on the other Side of the Haven, and is call'ed the Garden of *Copenhagen*. It is almoſt of an Oval Form, and about 6 Miles in Length. This Iſland was planted by *Hollanders*, ſent thither by the Arch-Dutcheſs of *Savoy*, and Governeſs of the *Low Countries*, at the Deſire of *Chriſtian* II. that his Queen, who was Siſter to *Charles* V. Emperor of *Germany*, might have Pulſe, and other Things planted there, that pleas'd her Taſt. They ſtill retain the *Dutch* Faſhions, and ſupply *Copenhagen* with Milk, Butter and Cheeſe, of which they ſell above the Value of 1000 Rix-Dollars every Week. Beſides the Pulſe and other Fruits which the Iſland produces, here is Plenty of Wheat, Barley, and Oats, and abundance of Hares. The Inhabitants are induſtrious, and their Houſes neat and cleanly. That

Part

Part of *Copenhagen* called *Chriſtians-Haven*, becauſe built by *Chriſtian* IV. lies in this Iſland. It was in this Iſle that *Frederick* III. began to defeat the *Swedes*, who made a Deſcent here *October* 9, 1658. but the next Day they were ſo warmly attacked by the *Danes*, that *Charles Guſtavus* King of *Sweden*, and *Wrangel* his General, were obliged to leave their Army engaged, and to make their Eſcape in a Fiſher-Boat.

Roſchild lies in Lat. 56 ½, and Long. 31 ⅔, at the Bottom of the Bay of *Iſone*. It was anciently the moſt conſiderable Place of the Iſle of *Zeeland*; but ſince *Copenhagen* became the Reſidence of the Kings of *Denmark*, it has gone to Decay. It is moſt noted for being the Burying-Place of the Royal Family. *Harald*, the Father of *Sueno Otho*, is buried here, and his Epitaph ſtill to be ſeen, as alſo that of *Sueno the Great*, and of *Margaret*, who united the 3 Northern Crowns; thoſe of *Chriſtian* III. *Frederick* II. *Chriſtian* IV. *Chriſtian* V. and *Frederick* III. *Sueno Otho* made this Place a Biſhop's See in 1012. *Sueno Gratenhede* fortified it; and *Lyſcander* tells us, there was once 27 Churches in this Town. In the Old Cathedral, there's a fair Marble Pillar, that Queen *Margaret* erected to hang the Whetſtone upon, which *Albert* King of *Sweden* ſent her to ſharpen her Needles, in Deriſion of her Sex. This Jeſt coſt him dear, for ſhe took and detain'd him Priſoner 7 Years, and obliged him to renounce his Right to the Crown of *Sweden*. There is a Convent of Lutheran Nuns here, who are all of good Families. They have no diſtinct Habit, are under no Vows, but may if they pleaſe leave the Cloyſter and marry. The Situation of this Town brings it ſome ſmall Trade. A Treaty was concluded here in 1658 betwixt the two Northern Crowns.

Elſineur lies in the Streight called the *Sound* or *Oreſunds*, over againſt *Helſingburg* in *Schonen*, N. from *Copenhagen*. When the Court reſided in the Caſtle of *Cronenburg*, the Town was larger than now, and had Walls. The Caſtle of *Cronenburg* is 4 or 500 Paces diſtant from it on the Shore. It makes a large ſquare Court, and was adorn'd with fine Statues. The Pipes of the Ciſtern that ſupplied the Gariſon with Water, and the Locks of the Doors, were all of fine Silver, before it was plunder'd by the *Swedes*. It was built in 1582, is all of Free-ſtone, and has 4 little Towers at each Corner, cover'd with Copper; but this Caſtle, with the Chapel, Steeple, and Ornaments of it, are all going to Decay. It has a Ditch round it, and 4 Baſtions, two of which are to the Seaward, ſurrounded with another Ditch, and the Land-ſide is ſecured by 5 more Baſtions, and an half Baſtion. They have fine Cannon upon them; but the Baſtion that commands the Paſſage of the *Sound* has but two Cannon 36 Pounders each, and 11 more of a ſmaller Size. The Rampart is vaulted with Free-ſtone. The *Danes* believe this Caſtle is able to defend the Paſſage of the *Sound*; upon which the King ſtruck a Medal in 1691, on one Side of which there's a two-handed Key, with this Motto, *Claudit & Recludit*. In 1658, the *Swedes* made themſelves Maſters of this Caſtle, but were obliged to ſurrender it by the Treaty of *Copenhagen* in 1660.

Fredericksburg is a Royal Caſtle. 10 *Engliſh* Miles S. W. from *Cronenburg*: It belong'd to a private Gentleman; but *Frederick* II. purchas'd it, and began to enlarge it. His Son *Chriſtian* IV. finiſhed it. This is the *Verſailles* of *Denmark*. The Houſe is built on Piles in a Lake. The Body of the Caſtle conſiſts of a very fair Front, with two great Wings. The Chapel is well adorn'd, and cover'd with gilt Copper. It had 12 Silver Statues of the Apoſtles, and all the Locks, Bolts, *&c.* were Silver, till it was plunder'd by the *Swedes*. The Hall is adorn'd with Painting, and has the Pictures of ſeveral of the Kings of *Denmark*, and of the Royal Family, as large as the Life, and a Frame of Paintings which repreſents the Sea and Land Battles of the Kings of *Denmark*. It is hung with rich Tapeſtry of Silk-Mohair, repreſenting the Actions and Battles of *Chriſtian* IV. There's a Gallery that leads from the Caſtle to the Hall of Audience, adorn'd with Pictures, moſt of which were bought in *Italy*. There's a Park here 19 Miles long, of a proportionable Breadth, and interſpers'd with Pools and Fiſh-Ponds, with a Mixture of Green Plats, Hillocks, and ſmall Vallies. It was ſtock'd with Fallow Deer from *England*. There's a pretty Flower-Garden behind the Caſtle on the other Side the Lake, in which, the

Digitized by Google

thô deep, they have built a kind of Terrass on Piles, which cost 100000 Crowns.

Sora stands near a Lake, which on one Side forms a kind of Morass, is pleasantly situated near a charming Wood of vast Extent, which is reserv'd for the King's Diversion and Game. *Absalom Vildus*, Archbishop of *Lunden*, founded a Church and Monastery, and settled a Seminary of Monks here, who were to write the History of *Denmark*. We owe *Saxo Grammaticus*'s History to this Foundation. Many of this Bishop's Ornaments, with his Sword, were found in his Tomb here; for he went frequently to War, where he acquired great Reputation. He died in 1201. Many Historians call him *Absalom Hunde*. *Frederick* II. erected an University here, which was called *Academia Equestris*, because design'd for the Education of young Gentlemen in Chivalry; and the Revenues of the Nunnery of *Marieho* in *Laland* were given to it in 1621. It became famous by the able Professors *Christian* IV. invited to come hither, among whom was the Learned *Meursius*, Professor of History and Politicks here, from 1625 to 1639, when he died, and is buried in this Place. *Charles Gustavus* King of *Sweden* being educated here, when he invaded *Zeeland* he would not suffer his Soldiers to enter it: But the Revenues of this University were annexed to the Crown since, as we said before. The Ruins shew this to have been formerly a Place of great Note; but now the Town is very inconsiderable, having but one short Street, which consists of not above 50 Houses. It lies near the middle of the Isle, 30 Miles S. W. from *Copenhagen*, and 18 S. from *Roschild*.

Ringstede, N. E. from *Sora*, is a Town of great Antiquity, where many of the *Danish* Kings are buried in an old Church dedicated to St. *Canute*, particularly King *Waldemar*, and *Erick the Pious*. It decays daily, because of the Want of Trade. The Houses are low, because the Town is built on a high Ground; and the high Winds in Winter are very troublesome and dangerous here.

Korsor, was formerly a considerable Town, and had a great Trade, but is now poor: It stands on a Neck of Land, where the Sea forms a Gulph, the Entrance into which is about a Musket-shot over; but the Basin is very deep, and Ships of great Burden may lie in it. At the Entrance of the Port, there's a square Fort with 9 Demi-Bastions, and some Iron Guns. The Foot of the Rampart is pallisado'd, and has a Ditch full of Water round it. There is also a Castle; but the Gates of it are ruinous. This Town lies over against *Nibourg* in *Fuhnen*, from which 'tis separated by the *Greater Belt*, which is here about 30 *English* Miles over. When *Charles Gustavus* invaded *Zeeland* in 1658, he landed his Men here.

Holbeck is a considerable Town, 15 *English* Miles N. W. from *Roschild*, at the Bottom of a narrow Bay.

Kallenburg. *Saxo Grammaticus* calls it *Kalundon*, lies N. W. from *Holbeck*, at the Bottom of the most Westerly Bay of the Island. It was only a Fisher-Town till 1158, when *Absalom Hvides*'s Brother made it a City, and beautified it with a Castle, Church, and other Publick Buildings. It has now a good Trade, by reason of its safe and convenient Harbour.

Other Towns are, 1. *Kege*, which is a little, but populous Town, on a small Bay of the *Sound* on the E. Side of the Island, 18 Miles S. from *Copenhagen*. It has a good Trade in Corn and Fish. 2. *Prestoe*, S. W. from *Kege*, on the Bottom of a Bay of the *Baltick*, which has some Trade. 3. *Waxingborg*, S. from *Prestoe*, the most Southerly Town in the Island. It has also a Port, and a moderate Trade.

FUHNEN,

HAS the *Great Belt* on the E. the *Baltick* on the S. the *Lesser Belt*, which separates it from *Jutland*, on the W. and the Isle *Samsoe* on the N. It is about 48 Miles long from S. to N. and 40 Miles broad from W. to E. *Saxo Grammaticus*, *Lyscander*, and all Travellers, make this the fruitfulest Place of the King of *Denmark*'s Dominions; for the Soil is good and well manur'd. The Country consists of small, but very fruitful Hills, some of them covered with Woods; It is better Peopled than *Zeeland*. They export much Corn, and great Herds of Black Cattle, and have a good Breed

Digitized by Google

of Horſe, and Plenty of Hogs. It contains 4 Gariſon Towns, 264 Villages, and 348 Pariſhes, 88 Fiſh-Ponds, 39 Rivulets, and is the Appanage of the King's eldeſt Son.

Odenſee, the chief Town of the Iſland, is called *Ottonia* by moſt Geographers. Some will have it called ſo from *Woden*; but it is more probable that its Name came from *Otho* I. for whoſe Honour it was built in 948, by *Harald* King of *Denmark*. It ſtands almoſt in the middle of the Iſland, 85 Miles W. S. W. from *Copenhagen*, 16 Miles W. from *Nyborg*, and as many E. from *Middlefor*. Before the Crown was made Hereditary in 1660, the General Aſſemblies of the States met here, and their Kings had their Reſidence in this Place. The Buildings are good, and the Streets regular. They have two fine Churches, one dedicated to St. *Canute*, in which his Body was found in 1582, in a Copper Coffin, gilt and adorn'd with Precious Stones; the other to St. *Francis*. The Town-Houſe is a ſtately Building. It has been a Biſhop's See ſince 950. *Harald Blaatand* was killed here; and many of the *Daniſh* Kings, and particularly *Chriſtian* II. are buried in this Town. Their Beer is extraordinary good, and their Linen not inferior to any in *Holland*.

Nibourg lies on the narroweſt Paſſage of the *Great Belt*, betwixt *Fubnen* and *Zeeland*. *Chriſtian* III. firſt fortified it in 1546, and incloſ'd the Caſtle within its Works. It was a ſtrong Place; but the Breaches made in the Curtain and in the Caſtle during the laſt War with *Sweden*, are not yet repair'd. The Fortifications are better towards the Sea. It ſtands in a very fine Country, and has an excellent Port, which occaſions ſome Trade. It was formerly the Reſidence of the *Daniſh* Kings, and is famous for a Victory the *Danes* gained near it over the *Swedes* in 1659.

Schwinburg lies on the S. Side of the Iſland, over againſt the Iſle of *Langeland*. It is a pleaſant Town, and famous for the Paſſage of the *Swediſh* Forces over the Ice to *Zeeland* in 1658.

Aſſens lies S. W. from *Odenſee*, on the Streight of the *Little Belt*, near this Town. In 1535, King *Chriſtian* IIId's Army, commanded by *John Rantzau*, routed that commanded by *Chriſtopher* Earl of *Oldenburg*, and killed *Guſtavus Trolle* Archbiſhop of *Upſal*. *Rantzau* afterwards levelled this Town to the Ground.

Middlefor or *Midleſor*, is a ſmall but neat Town, in a Country abounding with all Neceſſaries: It lies on the *Leſſer Belt*, which is frequently called the *Streights of Midleſor*, 24 *Engliſh* Miles W. from *Odenſee*. This is the narroweſt Paſſage of the *Belt*, being no broader than the *Thames* at *Gravеſend*. In 1658, *Charles Guſtavus* led his Army over the Ice to this Place, routed the *Daniſh* Forces that oppoſ'd him, and made himſelf Maſter of the Iſland of *Fubnen*.

Geographers have plac'd an imaginary Town, called *Sophiendde*, 7 Miles N. E. from *Midleſor*; on the *Belt*, over againſt *Friderichſodde*; but the Travels into *Denmark* in 1692, aſſure us, there never was any ſuch Town.

Foborg or *Woborg*, on the S. Part of the Iſland, N. W. from *Schwinburg*, at the Bottom of a Bay, was formerly burnt by the Army of *Chriſtian* III.

Other ISLES *are*,

ARROE, which lies S. from *Fubnen*, is fertile in Corn, and abounds with Anniſe-Seed, with which they ſeaſon their Meat and Bread. It produces Plenty of Black Cattle and Horſes. It has 7 Pariſhes, and depended formerly on the Dutchy of *Sleſwick*; but was united to the Crown in the laſt Age. The only Town is *Roping*, on the S. of the Iſland, at the bottom of a Bay, and is a Place of ſome Trade, becauſe of its Port.

LANGLAND, ſo called from its Length, which is about 30 *Engliſh* Miles. Its greateſt Breadth is not above 12. It contains 16 Pariſhes, and abounds with Wheat, Rye, and Barley, of which it exports great Quantities Yearly. The moſt conſiderable Towns are, 1. *Rudkoping*, a large Town on the W. Side of the Iſle, over againſt *Schwinburg* in *Fubnen*. 2. *Tranekier*, N. from *Rudkoping*, is a good Fortreſs, where the King of *Denmark* keeps a ſtrong Garriſon.

LALLAND lies S. Eaſt from *Langland*, S. from *Zeeland*, and S. W. from *Falſter*. It is all low Ground, and from thence has its Name. 'Tis about 20 *Engliſh* Miles long, and 12 broad. It produces all ſorts of Corn in abundance, and particularly Wheat, with which

Digitized by Google

which it supplies *Copenhagen*, and other Places of the Kingdom. The *Dutch* ship off great Quantities of Corn from hence every Year. It is a Principal Government, called a *Stifts-ampt*, and has several of the leſſer Iſles under its Juriſdiction. It conſiſts of 4 Heriots or Lordſhips, and has the following Towns, *viz.* 1. *Naſchow*, on the Bottom of a Bay on the W. Side of the Iſland, a large and well fortified Place. It was ſtorm'd, burnt and taken by the *Lubeckers*, in 1510. 2. *Maribo*, in the middle of the Iſle, on a Lake, and had formerly a famous Nunnery. 3. *Nyſted*, on the S. of the Iſland, a large Town, once famous for a Noble Monaſtery built here in 1286. This Iſland is noted for being the Birth-place of *Nicholas Hemmingius*.

FALSTER, lies E. from *Laland*, from which it is ſeparated by a narrow Streight called *Gulber-Sound*, and S. from *Zeeland*, from which 'tis ſeparated by the *Grone-Sound*. It abounds with Barley, Wheat, *&c.* which Strangers export; is 16 *Engliſh* Miles in Length, and 8 in Breadth: The chief Towns are, 1. *Nykoping*, which has a ſtrong Caſtle, and a well frequented Harbour, a pleaſant Situation, and uniform Buildings. 2. *Stolecoping*, on the N. of the Iſle, a Place of ſome Trade, being a Thorowfare betwixt *Zeeland* and *Germany*.

MONA, lies N E. from *Falſter*, from which it is ſeparated by the *Grone-Sound*, and S. S. E. from *Zeeland*. It produces little Corn, but has good Paſture. The Soil is chalky and high, and a good Land-Mark to the *German* Veſſels that trade in thoſe Seas. It was formerly Part of the *Daniſh* Admiral's Allowance, as being a Place the fitteſt of any in the King's Dominions for him to reſide in. *Steg* or *Steka* is the only Town of Note here: It lies on the N. of the Iſland, on a little Rivulet, that falls a Mile below it into the Streight called *Grone-Sound*, which ſeparates it from *Zeeland*. It made a brave Defence againſt the *Lubeckers* in 1510, and forc'd them to retreat. In 1659, they made a better Defence againſt the *Swedes* than greater Places had done.

SALTHOLM, lies E. from *Amack*, near the Coaſts of *Schonen*, over againſt *Malmo*. The Author of the Travels into *Denmark* in 1702, obſerves, That *De Witt's* Maps and others make this Iſle larger than *Huen*; thô the Inhabitants told him, it was but a ſixth Part ſo big.

ALSEN, is a ſmall Iſle over againſt the Bay of *Flensburg*, in the Dutchy of *Sleſwick*, of which it is a Part, and lies S. W. from *Fuhnen*. It has 13 Pariſhes, is exceeding fruitful, and ſo populous, that many Thouſands of Fighting Men have been levied in a ſhort Time here. *Rantzaw*, a *Daniſh* Antiquary, is poſitive that the *Eliſii*, *Arii*, and *Manimi* of *Tacitus*, were the Inhabitants of thoſe 3 Iſlands, *viz.* *Alſen*, *Aaroe*, and *Moen* or *Meun*. The chief Town is *Sunderborg*, a large City, with a ſtrong Caſtle, on the Canal that ſeparates *Alſen* from the Continent of *Jutland*. The Bailiwick of this Name is an Appanage of the Duke of *Holſtein-Sunderborg*. *Nordborg* lies on the N. of the Iſland, and belongs to the Duke of *Holſtein-Nordburg*.

FEMEREN, is a ſmall Iſland on the Coaſt of *Wagria*, N. from *Oldenburg*, and S. from *Laland*. It has always been looked upon as one of the Keys of *Denmark* with reſpect to the Empire: Therefore *Chriſtian* IV. was more afraid of the *Germans* becoming Maſters of this Iſland, than of their overrunning *Jutland*, which made him fortify all the old Caſtles, and put ſtrong Gariſons into every Place of Importance here. There are ſeveral Iſles of leſs Note betwixt the moſt Northerly Promontory of *Jutland*, called Cape *Scagen*, and *Fuhnen*, *viz.* *Anholt* in the *Categate*, *Leſſow*, E. of the Dioceſe of *Aalbourg*; *Neding*, *Hertzholm*, *Katholm*, *Jordholm*, *Tune*, and *Samſoe*. The laſt lies N. of *Fuhnen*, has *Zeeland* on the S. and the Coaſts of *Jutland* on the W. *Chriſtian* V. made *Mote*, his Concubine, a Citizen's Daughter of *Copenhagen*, who bore him two natural Sons, Counteſs of this Iſland. It abounds with Cattle and Corn, and is ſo pleaſant, that it is called the *Samos* of the North. *Wero* lies N. E. from *Samſoe*, and *Spro* lies in the Streight of the *Great Belt*, N. from *Laland*.

BORNHOLM, the moſt Eaſterly of all the Iſlands belonging to the King of *Denmark*, lies 20 *Engliſh* Miles E. S. E. of the Province of *Schonen*. It belong'd formerly to the Archbiſhops of *Lunden*; but in the beginning of the 16th Century, *Chriſtian* II. took it from them, on Pretence that it was neceſſary for his Naval Preparations againſt

Digitized by Google

Sweden. The *Swedes* have frequently laid it waſte; and in the War with *Frederick* II. they made themſelves Maſters of it, and deſign'd to keep it; but were obliged to reſtore it by the Treaty of *Copenhagen*, *May* 27, 1660. *Nex* is a large Town, on the S. W. of the Iſland, well fortified, and has a ſtrong Caſtle. *Rattenby* lies N. N. E. from *Nex*, and has a good Fortreſs or Citadel, fortified after the modern Way, which commands the beſt Road in the Iſland. It was finiſhed in 1689, and has good Baſtions and Outworks. This Iſland is 28 *Engliſh* Miles long, and 8 broad.

CHRISTIAN's-OYE, are a Number of little Iſlands, which lie about 7 *Engliſh* Miles N. W. from *Bornholm*. They encloſe a ſafe Harbour for 30 Sail. The largeſt Iſle is in Form of a Creſcent, and is well fortified. There are 90 Iſlands belonging to the Dioceſe of *Fubnen*, moſt of which are habitable and fertile; but thoſe we have deſcrib'd are the moſt remarkable.

JUTLAND,

IS Part of the ancient *Cimbrica Cherſoneſus*, ſo called from the *Cimbri*, who ſettled here after their Defeat by *Marius*, formerly mentioned; is the biggeſt and moſt conſiderable Part of the King of *Denmark*'s Dominions, and amounts to about Two-Thirds of the Whole. It is bounded on the W. and N. by the *German* Ocean, on the N. E. by the *Categat* or *Schager-Raak*, on the E. by the *Leſſer Belt*, or *Midleſor-Sound* and the *Baltick*, and on the S. by the River *Eyder*, which ſeparates it from *Holſtein*. *Buno* ſays, the Length of it from N. to S. is 212 *Engliſh* Miles, and the broadeſt Place is not above 90. Moſt Authors agree, That *Jutland* has about 950 Pariſhes, and the Dutchy of *Sleſwick* 280. This is a plentiful Country, and abounds with Cattle, but wants good Ports. The *Dutch* tranſport Yearly great Quantities of their lean Black Cattle to their own more fertile Soil, where they fatten in a ſhort Time. The Horſes and Hogs of this Country are good, and numerous. It affords enough of Corn for the Natives. The Land is moſt fertile near the Coaſts; for the Inland is full of Heaths, Lakes and Woods.

This great Province is divided into *North* and *South Jutland*. The laſt is otherwiſe called the Dutchy of *Sleſwick*, and is ſeparated from *North Jutland* by the River *Ripe*.

NORTH JUTLAND is divided into 4 Dioceſes, which are thoſe of *Aalbourg* or *Alborg*, *Wiborg*, *Arhuſen*, and *Ryben*. This Country is larger and better Peopled than the Dutchy of *Sleſwick*.

AALBOURG, is ſo called from the Multitude of Eels taken in the Gulph of *Lymford*, which bounds this Dioceſe on the S. and S. W. It is otherwiſe called the Dioceſe of *Burglaw*. It ends in a ſmall Point on the N. N. E. Its Length from N. W. to N. E. is about 100 *Engliſh* Miles. The N. Part of it is called *Wenſyſſel*, and by Latin Authors *Vandalia*, which makes ſome think that 'twas the Seat of the *Vandals*. The Inhabitants are the hardieſt of the King of *Denmark*'s Subjects. This Dioceſe has 13 High Courts of Judicature, 180 Pariſhes, 6 Cities, and 18 Noblemen's Houſes. The chief Town is *Seagen*, which lies on the Promontory betwixt the *Norwegian* and *Baltick* Sea. It is more frequented by Merchants from all Parts of *Europe* than any other Town in *Jutland*, becauſe they touch here in their Way thrô the *Sound*. Its Trade would be far greater, were it not for the dangerous Coaſt it lies on.

Wenſyſſel is 12 *Engliſh* Miles N. W. from *Alborg*, on a River, which ſome Miles below falls into the Bay or Gulph of *Limford*.

Alborg, called alſo *Ælburgum*. The Biſhoprick was founded here in 1065 by *Sueno Eſtheritb*, and the Biſhops have reſided in this Place ſince 1540. It ſtands 15 *Engliſh* Miles from the *Baltick*, on the Gulph of *Limford*, which runs more than 100 Miles W. from the *Baltick* towards the *German* Ocean, from which it is ſeparated by a narrow Iſthmus made by Sand-Hills on the W. Shore of *Jutland*, over againſt the great Shoal call'd *Jutſche Riff*.

Nikioping is ſituated in the Iſle of *Mors*, which is made by the Gulph of *Limford*, and is a conſiderable Town.

Tyſted lies on the S. W. Part of this Dioceſe, 45 *Engliſh* Miles W. from *Alborg*, in the middle of the Peninſula, made by the *German* Ocean, and the Gulph of *Limford*, which is the moſt fruitful Place of this District.

Digitized by Google

ſtrict. It has a ſort of an Univerſity, which was formerly a Free-School, founded by *Chriſtian* III.

The Dioceſe of WIBOURG,

Has that of *Alborg* on the N. from which it is ſeparated by the Gulph of *Limford*, the Dioceſe of *Ripen* on the W. S. W. and S. and that of *Arhuſen* on the E. and S. E. Woods, Mountains and Lakes, abound here, ſo that it is not ſo fertile as the other two Dioceſes. Its Length from W. to E. is 48 *Engliſh* Miles. It has 218 Pariſhes, 3 Caſtles, and as many Cities. It has 10 Rivulets, of which the moſt noted is *Gudden*. It has many Lakes, which communicate with the Gulph of *Limford*. This occaſions ſome Trade in this Country. The chief City is

Wibourg, anciently the Capital of the *Cimbri*, and then called *Cimmersberg*, as was ſaid before. It is not ſo certain why it changed its Name: Some think it was the Seat of Pyrates, who were then called *Wigis* in the old *Daniſh* Tongue. It ſtands in the middle of *Jutland*, near a Branch of the Gulph of *Limford*, 130 *Engliſh* Miles N. from *Slefwick*, 35 N. W. from *Aarhur*, and 35 S. from *Aalbourg*. It is a Place of great Reſort, being the Seat of a High Court of Judicature, to which Appeals are made from Inferior Courts; but none from it, except to the King. It has been the Seat of a Biſhop for above 600 Years, and their Biſhop debates Precedency with him of *Aalbourg*.

Scheve or *Schiffnuis*, on the ſame Gulph, W. from *Wibourg*, has the Reputation of breeding the beſt Horſes in the North. The Peninſula of *Soling* is ſurrounded on all Sides by the ſame Gulph, except towards the S. and is the moſt noted Place in *Denmark* for fine Horſes, which are exported by Foreigners. The Old *Solingi* of *Ptolomy* had their Seat here.

Nybe lies on the ſame Gulph, 8 *Engliſh* Miles W. from *Aalbourg*, and is alſo noted for a good Breed of Horſes.

The Dioceſe of RYPEN,

Contains 30 Bailiwicks, 282 Pariſhes, 10 Caſtles belonging to the King, 100 Noblemen's Seats, and 7 Cities. It has, according to *Jonas Coldingenſis*, a Part of the Dioceſe of *Alborg* on the N. that of *Wibourg* on the N. E. that of *Arhuſen* on the E. the Dutchy of *Slefwick* on the S. and the *German* Ocean on the W. Its Length from the N. W. to S. E. is about 95 *Engliſh* Miles; the greateſt Breadth not above 60, and in ſome Places towards the N. W. not 20. In this Dioceſe was found the famous Golden Veſſel in Shape of a Horn, formerly mentioned. *Wormius* ſays, it was found on the 20th of *July*, 1639. by a poor Girl paſſing by *Oſterby*, a Village near *Tunderup*, for which the King rewarded her. He ſays, it is 2 *Roman* Feet and 5 Inches long: The Diameter of the larger End is 4 Inches, and that of the leſſer 1½. It contains 2 Quarts and a half, and weighs 99 Ounces and 2 Drams. The Gold of it is incomparably fine. There are many Hieroglyphical Figures engraven upon it, which *Wormius* undertook to explain at the Deſire of the King, and thinks they are all ſignificant, and contain Leſſons of Morality. The Age of this precious Horn cannot be well determin'd; but he concludes, that it was made before Chriſtianity was received in *Denmark*; and conjectures that it may be as old as the Reign of *Frotho the Great*, who Reign'd about the Time of our Saviour's Birth, becauſe this King was vaſtly rich, and a great Enemy to Robbers, of whom he freed the Country, and us'd to lay valuable Things in the High-way, which if ſtole, the Governor of that Diſtrict was obliged to make good. He thinks this Horn might be laid down on that Deſign, and in Time cover'd with Mud and Earth. *Fortunius Licetus* is of the ſame Opinion: But the Probability of this we leave to the Reader. *Wormius* ſays, this Province is not inferior to any other of *Jutland* for Corn and Paſture.

Rypen, the chief City, lies on the River *Nidſau*, which divides it into 3 Parts, and gives Occaſion to the City's Arms, which are 3 Lions. The River falls into the *German* Ocean 3 *Engliſh* Miles below it, where it makes a good Port, more frequented than any in *Jutland*. This City is in the S. W. Part of the Dioceſe, 20 *Engliſh* Miles W. from *Hatterſleben* in *Slefwick*, 40 N. W. from *Flensburg*, and 30 S. W. from *Colding*. The Biſhoprick was founded in 980 by *Harold* King of *Denmark*; but the Church, which is

Digitized by Google

is of hewn Stone, and an admirable Structure, was built in 848, by *Erick* II. whom St. *Anſgar* converted. The Steeple is of a great Height, and ſerves for a Land-mark to Ships that ſail along this dangerous Coaſt. It has a ſort of Univerſity, and a good Caſtle. The *Swedes* took it in 1645; but it was retaken by the *Danes*.

Colding is an old City, mentioned by *Ptolemy*: It lies on a River that falls into the Gulph of *Colding*, which *De Ville*, Author of the Travels into *Denmark* in 1702, obſerves to be wrong laid down in Maps, for they make it too round at Bottom. *Erick Glipping* is ſaid to have been the Founder of this City in 1268; and fortified it with ſtrong Walls and good Ditches, becauſe it was a Frontier Town; for the *Daniſh* Dominions reach'd no further S. at that Time. *Chriſtian* III. was ſo taken with its pleaſant Situation and healthful Air, that he uſually reſided here. He rebuilt the Caſtle of *Arnſburg*, which commands the Town, and died here *Jan.* 1. 1559. The Caſtle is a large Brick Building, conſiſting of 4 main Parts, plaiſter'd over without, and forms a Court, which is not very ſquare. This Town has only 100 or 120 Houſes, and is more conſiderable on the Account of its Bridge, called *Brobarrit*, than any thing elſe, becauſe a great Part of the King of *Denmark*'s Revenue comes from the Toll paid for the Black Cattle and Horſes that come from *Jutland*, and muſt paſs this Bridge; each of which pays a Crown. The King has Stables for fine Horſes on the other Side of the Bridge, and an Academy for riding the great Horſe. Thô this Town lies commodiouſly for Trade on the *Little Belt*, over againſt *Middlefar* in *Fuhnen*, yet they have none but in Cattle. They have good Fiſh, and excellent Eels, in that River, which runs by the Town, and ſeparates *North-Jutland* from *Slefwick*. It is 15 *Engliſh* Miles S. W. from *Fredericks-Odde* or *Fredericia*, 30 N. E. from *Ripen*, and 60 N. from *Slefwick*.

Fredericks-Odde has been a well fortified Town, being a Paſs over the *Little Belt* or *Middlefar-Sound*. It was built by *Frederick* III. of *Denmark*, and is well ſeated, on a Point of Land with an eaſie Deſcent to the Seaward. The Works are very high on the Land-ſide. On the other Side of the Point there are 8 Baſtions. It has two Gates, and before each a Ravelin, but ruinous. Towards the Sea the Fortifications are lower, and of a greater Extent, where there are Baſtions, Platforms, and ſome Batteries on the Shore. Thoſe Fortifications incloſe a great deal of Ground; but the 5th Part of it is not inhabited, for there are many Corn-Fields and Orchards within the Walls. All the Fortifications are now going to Decay. This Place was formerly a Refuge to Bankrupts, Jews, and ſuch People; but the preſent King has recall'd thoſe Privileges. Here are two Churches; one *Daniſh*, and the other *German*; but they have no Steeples. In 1658, it was taken by *Charles Guſtavus*'s Troops, commanded by *Wrangel*; and the Garriſon of 2000 Men were all kill'd or taken. This open'd a Way for the King of *Sweden* to undertake his Expedition over the Ice from this Place to *Fuhnen*, where the Paſſage over the *Belt* is about 3 *Engliſh* Miles. In 1659, the *Swedes* burnt and demoliſh'd this Town.

Weil is 25 *Engliſh* Miles N. W. from *Fredericksi-Odde*, as many N. from *Colding*, and is ſeated on a River which falls into a great Bay, that communicates with the *Leſſer Belt*. It has a good Harbour, and the City is neat and well built, thô not large.

Warde lies on a River that falls into the *German* Ocean 10 *Engliſh* Miles below the Town. It is commodiouſly ſeated for Trade, is 32 *Engliſh* Miles W. from *Weil*, and 18 N. from *Ripen*.

Ringkoping, 32 *Engliſh* Miles N. from *Warde*, lies on a Bay of the *German* Ocean, made by a Tongue of Land 30 Miles in Length from N. to S. ſo that Ships ride ſafe in the Port from all Winds.

Lemwick lies on the Gulph of *Limford*, from whence it is named, on the N. W. Borders of this Dioceſe, 10 *Engliſh* Miles E. from the *German* Ocean. *Hodſelbro*, 15 *Engliſh* Miles S. E. from *Lemwick*, lies on a River which communicates with the *German* Ocean by a Lake, into which the River falls.

The Dioceſe of ARHUSEN.

The *Germans* call it *Das Stift Arhuſen*: It has *Otto's-Sound*, or the *Little Belt*, on the S. E. and E. the *Categat* on the N. E. the Dioceſe of *Alborg* on the N. that of *Wiborg* on the W. and that of *Ripen* on the S. and

and S. W. *Jonas Coldingenſis* ſays, it has 3 Bailiwicks, 304 Pariſhes, and 5 Caſtles. Its Length from S. to N. is 60 Miles; but is not above 32 where broadeſt. It is fruitful in Corn, and has abundance of Game.

Arhuſen, the chief Town, lies on the Mouth of the River *Gude*, which a little below falls into the Sea. *Jonas Coldingenſis* ſays, it has been a Biſhop's See ſince 1014. The Cathedral is a neat Building; but the Biſhop's Palace is ruinous. In 1644, it was burnt by the *Swedes*. It has a good Trade, and lies over againſt the Iſle *Samſoe*, 45 *Engliſh* Miles N. E. from *Colding*, 34 S. E. from *Wiborg*, 50 S. from *Alborg*, and 25 N. from *Fulnen*.

Scanderburg is a good Fortreſs, near the Spring of the *Gudden*.

Horſens lies 20 Miles S. from *Arhuſen*, on a River that falls into the *Leſſer Belt*.

Randers, on the *Gudden* or *Gude*, 15 Miles N. from *Arhuſen*, near a Bay that communicates with the *Categate*, is a Place of good Trade, and famous for the beſt Salmon in *Jutland*. Other Towns are, 1. *Hobro*, alſo on a Bay that communicates with the *Categate*, and N. from *Randers*. 2. *Mariager*, on the S. Side of the ſame Bay. 3. *Ernia*, a Caſtle on the *Categate*. 4. *Ebelſtad*, S. from it, on the Bottom of another Bay that alſo communicates with the *Categate*.

SOUTH JUTLAND, or the Dutchy of SLESWICK.

HAS on the N. E. the *Little Belt*, on the E. and S. E. the *Baltick*, on the S. the Dutchy of *Holſtein*, from which it is ſeparated by the *Eider*; on the W. the *German* Ocean, and on the N. the Dioceſe of *Ripen*. Its Length, from *Chriſtianpris* on the S. E. Part, to *Ripen* on the N. W. Borders, is about 70 *Engliſh* Miles, and its greateſt Breadth not above 40.

This Dutchy is an ancient Dependance of the Crown of *Denmark*; for in 1028, *Nicolaus* I. gave it to his Nephew *Canute*, the Son of *Erick*, ſirnamed *Ejegod*. In 1338, *Margaret* Queen of *Denmark* gave it to the Counts of *Holſtein*, and their Succeſſors, together with the Iſlands of *Femeren*, *Alſen*, and *Arroe*; but their Poſterity failing in 1459, *Chriſtian* I. united it to the Crown of *Denmark*, and now it is divided betwixt the King of *Denmark* and the Dukes of *Holſtein-Gottorp*, *Holſtein-Glucksbourg*, *Holſtein-Sunderbourg*, and *Holſtein-Nordbourg*. The Intereſts and Juriſdictions of the King of *Denmark* and the Duke of *Holſtein-Gottorp* are ſo intermix'd, that in Time of War, the People know not which to obey. In ſome Towns and Bailiwicks, they divide the Revenues, and jointly elect the Magiſtrates. In others, the King and Duke elect by Turns every Year. This Province is divided into 22 Parts, viz. the Bailiwicks or Præfectures of *Gottorp*, *Chriſtianspreſt*, *Eiderſtedt*, *Huſum*, *Flensbourg*, *Gluckſtadt*, *Sanderburg*, *Nordbourg*, *Apenrade*, *Tondern*, *Lohm*, and *Hoderſtebe*.

The Bailiwick of GOTTORP.

Sleſwick, the chief Town, lies on the River *Sley*, which falls into the *Baltick* 6 Miles lower. *Adamus Bremenſis*, who liv'd about 1100, tells us, it was anciently called *Heithobu*, and in his Time was a populous and rich City. The modern Name comes from the River upon which it lies. In the Infancy of Navigation, Goods were brought up the *Eider* by Boats to *Holinſtede*, and from thence by Land to *Sleſwick*, where they were ſhip'd and exported to *Zeeland*, *Fulnen*, and other Places on the *Baltick*. This City was converted by means of *Erick* the *Boiru* about 800. In 1064, the *Sclavonians* invaded this Country, re-eſtabliſh'd Paganiſm, and built a Temple to their Idols, the Ruins of which are to be ſeen near this Place; but the *Danes* ſoon drove them out. The *Angles*, a powerful and trading People in thoſe Bounds, built the Church of the *Holy Ghoſt*, with a Hoſpital near the Market-Place. *Otho* I. made this Place a Biſhop's See. It belongs to the Duke of *Holſtein-Gottorp*, lies 60 *Engliſh* Miles N. from *Lubeck*, and as many from *Hamburg*.

Geltingen is the principal Town of a ſmall Country, anciently the Seat of the *Angles*, who came from the Dutchy of *Mekklenburg*. It lies 20 *Engliſh* Miles N. E. from *Sleſwick*, near the *Baltick*.

Gottorp lies alſo on the River *Sley*, and is the Reſidence of the Duke of that Name.

The

Digitized by Google

The Caſtle ſtands to the W. of the Gulph of *Sleſwick*, in the middle of a little Lake; is built in a long ſquare Form, fortified with 4 Baſtions of Earth; and the Bottom is pav'd with Free-ſtone; the Curtains are long, and the Sides ſtand N. and S. We approach the Caſtle by a Bridge which joins it to the S. Shore. The Firſt is commanded by a Mountain that ſtands N. E. of it; from whence the *Danes* annoyed the Caſtle in 1675, when the Duke was treacherouſly ſurpris'd by the K. of *Denmark* at *Rensburg*. As we enter the Court, there's a Tennis-Court on the Left, and Stables on the Right. The Duke before his Death had deſign'd to rebuild the Caſtle; the Front is finiſh'd, and if the whole had been compleated, it had been one of the fineſt Palaces in the *Europe*. A Rampart encompaſſes the Firſt Court, and the Caſtle-Gate is of very fine blue Stone as hard as Marble, with a Lanthorn over it that has 27 Lights. On the N. Side of the Caſtle there is a Bridge of 200 Paces over the Lake, and at the End of the Bridge there is a Walk between Rows of Trees that lead to the Garden, in which there are many fine Water-works and Caſcades. On the Left there is a Baſon or Fiſh-Pond 200 Paces ſquare, with Rows of Trees on all Sides, except on the N. They have alſo fine Arbours on the Sides of the Pond, and in the middle a *Hercules* of a Monſtrous Size, repreſented with his Club going to kill the *Lernean Hydra*, out of every Part of which the Water plays. In every Corner of the Pond there are Statues, which form Caſcades. On the N. there's a Parterre in Form of a Creſcent, divided into ſeveral Compartiments, with Niches round, containing the Buſts of many Kings and modern Princes. There are alſo the Repreſentations of many fabulous Animals that throw Water. At the End of the Walk there's a ſmall Room, where there's a Globe made by the famous *Tycho Brahe*, ſo contriv'd, that by Mechaniſm it repreſents his Syſtem of the World. There is another admirable Globe of Copper, 10 Foot in Diameter, ſo contriv'd, that by Wheels mov'd by Water, it repreſents the Motions of the Heavenly Bodies. Before this Houſe, there is a Level Ground 50 Paces long, and three times as broad, divided into 3 Parts: Thoſe on the two Sides have fine Parterres; and that in the middle has a great Baſon in the Center with Water-Works. The next Terras is higher; the whole is enclos'd with green Pales as high as each Terras, with Buſts all round. On the higheſt Terras there is the fineſt Proſpect in the World, *viz.* the Caſtle in the Front, in the middle of a Lake ſurrounded with a charming Country, and a fine Plain before it. On the Left there is a great Orangery, where they have alſo *Indian* Trees, Mirtles, Pomegranates, and others in Boxes. The Park is very fine, about 4 *Engliſh* Miles in Circumference, and full of Fallow Deer and Stags. *Gottorp* is well fortified, and a Toll is paid here for great Numbers of Black Cattle that paſs from *Jutland* to *Germany*. It lies very near *Sleſwick*, and 25 *Engliſh* Miles N. W. from *Kiel*.

Eiklenford, 14 Miles S. E. from *Sleſwick*, is ſo nam'd from the abundance of Squirrels there, has a good Port in the bottom of a Bay on the *Baltick*, and a conſiderable Trade.

Chriſtianspreiſs is the Capital of a Bailliwick of that Name, which borders on the Dutchy of *Holſtein*, and is divided betwixt the King of *Denmark* and the Duke of *Holſtein*. This City is ſituated on a Gulph of the *Baltick*, at the Entrance of the Haven of *Kiel*, which belongs to the Duke of *Holſtein*, and is commanded by a Caſtle, that was built in 1637 by *Chriſtian* IV. of *Denmark*. It has about 500 Houſes, and two Gates, defended with ſtrong Works. The *Eider* ſerves for a Ditch, and makes it unacceſſible; and where the River grows narrower, they have built a fine Half-Moon in the Water, with Port-holes for 16 Pieces of Cannon; but *Jaillot*'s Map makes the *Eider* two Miles diſtant from it. *Chriſtianhagen* is a Village belonging to the King, as alſo *Gottorp*.

The Bailliwick of *Eiderſtete* lies on the *German* Ocean, and is ſo nam'd from the *Eider*. *Tunningen*, the chief Town, is ſmall, lies on the *Eider*, and is 16 *Engliſh* Miles from the Ocean. The *Dutch* frequent it to buy Black Cattle. It is the ſtrongeſt Town belonging to the Duke. The Fortifications conſiſt of 5 Baſtions, with Ravelins before the Curtains, a very large and deep

Digitized by Google

deep Ditch, and a fine Glacis The *Eider* ſtrengthens it much on one Side, and fills a large Canal, which makes a Port capable of receiving great Ships. The Ramparts of the Town are good. The Gariſon conſiſts of 2000 Foot. The Houſes are built with Brick, and very neat. The Inhabitants have one Church, and the Gariſon another. The Country about is fertile and populous.

The Bailiwick of *Huſum* lies N. from that of *Eiderſtette*, and belongs to the Duke. The chief Town, of the ſame Name, lies on a Gulph, at the Mouth of a ſmall River that falls into the Ocean, where pretty large Veſſels come up to the Bridge that joins the Town to the Bailiwick of *Eiderſtette*. The Duke has a Palace here of Freeſtone. This Town is well Peopled, and has a good Trade, is 20 *Engliſh* Miles S. W. from *Flensburg*, and 10 N. E. from *Tonningen*.

Frederickſtadt was built by Duke *Frederick*. It lies on a ſmall River call'd the *Trenn*, that falls near it into the *Eider*. The *Trenn*, at high Water, carries Barks of 50 Tuns. That Duke Peopled it with *Hollanders*, and granted them great Privileges. The Houſes are built after the *Dutch* Way. All Sorts of Religions are tolerated here. The Town is ſquare, ſurrounded with a large Canal, and planted with Rows of Trees. It is divided into two Parts by another Canal, with Trees on the Sides. The *Lutheran* Church is built of Brick, and neat. The Duke keeps 3 Companies of Foot in Gariſon. It lies 6 *Engliſh* Miles N. E. from *Tonningen*.

The Bailiwick of *Flensburg* belongs to the King. and lies on the *Baltick*, N. from that of *Gottorp*. The chief Town, of the ſame Name, is on the Bottom of a Bay of the *Baltick*, that makes a very fine Haven, where the greateſt Ships may ride ſafe, and come up to their Houſes. On the Land-ſide it is encompaſſed with Mountains, that ſhelter it from Winds, and ſupply it with Water.

There is a Mountain adjoining to one Part of the Suburbs, on which there is a Caſtle, which commands the Gulph on that Side. The *Danes* think this Town, next to *Copenhagen*, the biggeſt in the Kingdom; but *De Ville* ſays, that *Elſingor* is larger. It is 36 *Engliſh* Miles S. from *Colding*, and 15 N. from *Sleſwick*. The Country about *Flensburg* is called the Diſtrict of *Angelen* or *Engeland*, which was the Country of the *Engliſh Saxons*, that conquer'd the S. Parts of *Britain*.

The Bailiwick of *Glucksburg* joins to the former, lies alſo on the *Baltick*, and belongs to the Duke of *Holſtein Glucksburg*. The chief Town is on the ſame Gulph with *Flensburg*, but not conſiderable.

The Bailiwick of *Apenrade* lies W. from the Iſle of *Alſen*, and belongs to the Duke of *Holſtein-Gottorp*. The chief Town is of the ſame Name, has a Port on the Bottom of a Bay in the *Baltick*, and a great Trade with the *Daniſh* Iſles.

The Bailiwick of *Tunder* is W. from *Apenrade*, on the Ocean, and is compos'd of firm Land and Iſles. *Tunder*, the chief Town, lies on the River *Bre*, belongs to the Duke of *Holſtein*, is large, ſtands well for Trade, and has a fine Church, full of Pictures and Ornaments.

The Iſle of *Amrom*, on the Coaſt of that Bailiwick, belongs to the King. *Sylt*, another Iſle N. from it, belongs to the Duke. *Fer*, a 3d Iſland; the E. Part of it belongs to the Duke, and the W. Pare to the King.

The Bailiwick or Abbacy of *Lohm*, which is N. from *Tunderen*, belongs to the Duke, and has a ſmall Town of the ſame Name N. N. E. from *Tunder*.

The Bailiwick of *Hardeſtebe*, the moſt Northerly of any in the Dutchy of *Sleſwick*, belongs to the King. *Hatterſtebe* is a ſmall Town, but has a good Port on the *Little Belt*. The Iſles of *Marse* and *Rom* are N. W. from *Ripen*, and belong to the King. We refer the Deſcription of the King of *Denmark*'s Dominions in *Holſtein*, *Stormar*, *Ditmarſh*, and *Oldenburg*, to *Germany*.

CHAP. XX.

Of NORWAY.

MOST of the *Daniſh* Antiquaries think this Country had its Name from *Norus*, the Founder of the Kingdom; but they are not agreed who he was, or when he liv'd. *Adamus Cremenſis* calls it *Nordmannia*, thinks it to be the utmoſt Part of the World on that Side, and tells us, that it is bounded on the E. by the *Riphæan* Mountains. *Tandem in Riphæis Montibus Limitem fecit ubi & Ioſſus deficit Orbis.* Moſt think it is called *Norway*, *Northwege*, or *Norwege*, from its Northerly Situation.

It is bounded on the S. by the Entrance into the *Baltick*, call'd *Schagger Raak*, and on the W. and N. by the Northern Ocean. It is ſeparated from *Sweden* by a Ridge of unpaſſable Mountains, call'd by *Pliny*, *Sevo*, now the Mountains of *Daarfiel*.

It lies betwixt Lat. 57 and 72. and Long. 22 and 50. Their longeſt Day is two whole Months. The Length of this Country is computed at about 1600 Miles. and its greateſt Breadth about 300.

Of the AIR, SOIL, *&c.*

THE Cold is very intenſe here. Thoſe Mountains that divide it from *Sweden* are always cover'd with Snow, and violent cold Winds blow from 'em towards the Vallies, which makes 'em barren; but Southerly, and along the Weſtern Coaſt, the Air is more temperate, yet corrupted by the Putrifaction of a kind of Rats they call *Lemmer*, by which the People are infeſted with the Jaundice, and a Giddineſs in the Head that is dangerous to Strangers. Moſt of the Country is nothing but Rocks, Woods, and Mountains. In the Vallies they have a good Breed of Black Cattle, and of little Horſes, very ſwift, and capable of Fatigue.

Their Trade lies in Maſts, Deal-Boards, Pitch, Tar, Copper, Furs, Dry'd Fiſh, Train-Oil, Filberds, Butter, Tallow, Hides, and Cheeſe.

Their only remarkable Rivers are, the *Tino* towards the N. and the *Glama* in the S. of the Country, which carries Boats. The chief Mountains are thoſe of *Dan-fiel*, or the *Doſrine*, which the Natives divide into four Parts, *viz.* the *Fille Fiel*, *Doſre-Fiel*, *Rust-Fiel*, and *Skarſ-Fiel* ✿

Their HISTORY.

Jonas Ramus, their lateſt Hiſtorian, ſays, That the *Sitones* liv'd here without any Laws or Government, and were a kind of Giants, but civiliz'd by *Norus*, who liv'd, according to ſome, in the Year of the World 2910; but according to others, was cotemporary with *David* King of *Iſrael*. They ſay, That about *A. M.* 2960, *Woden* came from *Aſia*, and ſettled here. They alledge he was of *Trojan* Race, and ſucceeded by *Suibdager*, *Haquin*, and *Olo*, who was cotemporary with *Helgo* King of *Denmark*, *Godagneſtus*, *Hegnerus*, and *Hegnerus*, reign'd at the ſame Time in other Parts of *Norway*; and *Gewer*, *Helgo*, *Balder*, *Horlet*, and *Gerritus*, were afterwards King of *Norway* at one and the ſame Time. In the Time of *Rorick Slongebaand* King of *Denmark*, *Collerus* was King of *Norway*. In *A. M.* 3775, *Frogerus* reign'd, and was ſucceeded by *Frotho*. *A. M.* 3911, *Gotherus* reign'd. In 3960, *Frotho* was King, and ſucceeded by the following Kings one after another, *viz.* *Amundus*, *Alfus*, *Harldus*, *Agdenſis*, *Vikerus*, *Haquinus*, *Helgo*, *Hagboitus*, *Hetherus*, *Olaus*, *Vegetus*, *Omun-*

Digitized by Google

Omundus, *Sigwardus Ring*, *Sigwardus Ring* Junior, *Regnerus*, and *Lodbrog*, who was contemporary with *Charlemagne*. *Sigifordus* reign'd about *A. C.* 798. and, together with *Godefrid*, invaded *Holland*, the Sea-Coasts of *France*, and over-ran *Flanders*.

In 868, *Harold Harfager* was their sole King. *Romus* owns, that the *Norwegian* History before the Epocha is fabulous, and not much to be relied upon. He thinks, that till then they were rul'd by many petty Princes, and that the Government was interrupted by frequent Anarchies, which makes the Chronology of those Times so dark. *Harfager*'s Race continued Kings of *Norway* 500 Years, during which there was only one *Interregnum* of 4 Years betwixt the Reigns of *Gibbus* and *Magnus* IV. *Harfager* died in 931, and was succeeded by his Son *Erick Blodock*, who was banished because of his Cruelty in 933, and kill'd in a Battle in *England*.

Haquin Adelstone succeeded in 933, after the Expulsion of his Brother: He was educated by *Athelstan* the *Dane*, King of *England*, where he was converted, and essayed the Conversion of his Subjects, but in vain. He was killed by the Sons of *Erick Blodock*.

Harald Graefeld, the Son of *Erick Blodock*, succeeded in 960. He kill'd *Sigward*, call'd *Lade Jarl*, whose Son *Haquin* kill'd him in 975, and succeeded to the Throne. In his Time the Emperor *Otho* sent 30 Ships, commanded by Counts, to *Norway*, by whose Means a considerable Part of the Southerly Provinces were converted. He was a bad King, and was kill'd in 995 by his own Servant, when he fled from *Olaus Tryggonis*.

This *Tryggonis* was *Harfager*'s Nephew, and began his Reign in 996. He undertook the Conversion of *Iseland* and *Norway*, and was killed in a Sea-Fight in the *Baltick* in 1000.

St. *Olaus* succeeded him, and freed *Norway* from all Dependance on other Kingdoms. He propagated Christianity more generally than 'twas before; but by being too severe, he disoblig'd his Subjects, who being perswaded to rebel by *Canute* King of *Denmark*, he was forced to retire to *Sweden* in 1029. Next Year he levied Forces to regain his Kingdom; but was killed at *Stikbestad*.

Canute made his Son *Sueno* King, who upon the Return of *Magnus*, St. *Olaus*'s Son, fled to *Denmark*, and died there in 1035.

St. *Olaus*'s Son, called *Magnus the Good*, was declared King in 1034, and in 1042 was also made King of *Denmark*, according to an Agreement betwixt him and *Canute*, and gave the Administration to *Sueno Ulfonis*, who set up for himself; but was defeated in 3 Battles by *Magnus*, who died in 1047.

Harald Haardroade succeeded in 1049. He built the City of *Anslo*, had War with *Sueno* King of *Denmark*, and was killed in Battle in *England* in 1066.

His Son *Magnus* succeeded in 1067. His Brother *Harald Kyrre* govern'd one half of the Kingdom during *Magnus*'s Reign, and succeeded him in the whole when he died in 1069. *Harald* built the City of *Bergen*, finish'd the Church of *Drontheim*, which *Magnus the Good* and his Father had begun, and died in 1093.

Haquin, the Son of *Magnus*, succeeded to one Half of *Norway*, died the following Year, and was succeeded by

Magnus Barford, the Son of *Olaus*, who upon the Death of his Father, and his Predecessor *Haquin*, was King of all *Norway*. He invaded the Western Isles of *Scotland*, and appointed a Governor over them. He had War with the King of *Sweden* about the Boundaries of his Kingdom, and conquer'd a Part of *Iceland*, where he died in 1103.

After his Death, his 3 Sons, *Olaus*, *Sigwardus*, and *Osteinus*, reign'd together. *Olaus* died in 1116, and *Osteinus* in 1123. *Sigwardus* had many Wars abroad, and particularly in the *Holy Land*, from whence he returned, died in 1130, and was buried in St. *Helword*'s Church in *Anslo*.

Magnus Blinde and *Harald Gille* succeeded him. After they had reign'd peaceably a long Time, a Civil War happen'd betwixt them, wherein *Harald* was put to flight; but recruiting his Army, he defeated and took *Magnus* near *Bergen*, gelded him, put out one of his Eyes, and cut off one of his Legs; after which *Harald* died in 1136.

His 3 Sons, *Sigward*, *Ingo*, and *Osteinus*, succeeded; at first they liv'd peaceably together, and made War upon their Enemies, whom having subdued, they began a Civil War among themselves, in which *Sigward* was

Digitized by Google

killed at *Bergen* in 1155, and *Oſtenus* in 1157. *Ingo* was killed at *Aquſh* in 1161 by *Haquin*, *Ingward's* Son, who was alſo kill'd by *Ingo's* Party in a Sea-Fight in 1162.

Magnus, the Son of *Erling*, was made King, tho' he was not of the Royal Family. During his Minority, his Father had the Adminiſtration. In his Time there aroſe a ſtrong Faction, called the *Birkauers*, whom *Magnus* defeated, with their Leader; but at length was routed twice, expelled the Kingdom by them, and at laſt killed in 1183.

Sverus, the Son of *Sigward*, was firſt made King of the *Birkauers*, and after many Battles with *Erling* and *Magnus*, was at laſt made King of the whole, and died at *Bergen* in 1202.

His Son *Haquin* ſucceeded, and reign'd only two Years, when *Guthormus*, the Nephew of *Sverus*, was made King, tho' but 4 Years of Age, and died in 1205.

Ingo Baarſon ſucceeded him, had great Troubles from a Faction called the *Bagli*, was obliged to allow a Part of the Kingdom to *Philip* their Leader, to prevent a Civil War, and died in 1217.

Haquin ſucceeded when but 13 Years of Age, and quitted the 4th Part of the Kingdom to *Skulon*, his Father-in-Law, who rebelled, but was routed, which procured Quiet to the Kingdom. *Haquin* made War upon the Weſtern Iſles of *Scotland*, but died in the Expedition, and was buried at *Dronthein* in 1263.

His Son *Magnus* was declared King before his Father's Death: He was a peaceable and juſt Prince, and made good Laws, from whence he was called *Lagbetter*, or the Lawmender, and died in 1289.

Erick, his Son, ſucceeded: He had long Wars with the *Danes*, and died in 1299. His Brother *Haquin* continued the *Daniſh* War, and died in 1319. *Magnus*, *Erick's* Son, was declared King of *Norway* and *Sweden*, thô but 3 Years of Age. He added *Schonen* to his Dominions, and left the Adminiſtration of *Norway* to his Son *Haquin*. The *Swedes* rebelled, and impriſon'd him. His Son *Haquin* ranſom'd him in 1371, and he was drown'd in 1374.

Haquin, his Son, had a long War with the *Swedes*, married *Margaret*, Daughter to *Waldemar* K. of *Denmark*, and died in 1380.

His Son *Olaus* was declared King of *Denmark* in 1376, and after his Father's Death proclaimed alſo King of *Norway*. He died without Children in 1387. His Mother *Margaret*, by his Death, was left in Poſſeſſion of *Denmark* and *Norway*, and upon her Victory over *Albert* King of *Sweden*, was made Queen of that Kingdom; and from that Time *Norway* has been united to *Denmark*.

Of the Inhabitants, their Manners, Cuſtoms, &c.

WE refer the Account of the *Normans* to *France*, and of the *Lombards* to *Italy*. The old Inhabitants were the *Sitones*. *Pliny* calls their Country *Nerigmon*, which *Æthicus* miſtakes for *Noricum*. The *Bergi*, who according to *Pliny* dwelt over againſt *Thule*, ſeem to have given Name to the Town *Bergen*. The *Marksfinni* dwelt near the North Cape. *Paulus Diaconus* ſays, they liv'd on raw Fleſh, and were cloath'd with Skins undreſs'd.

The preſent Inhabitants are a hardy, laborious, and honeſt ſort of People, think themſelves better than the *Danes*, whom they deſpiſe, and in Deriſion call *Jutes*. They are ſtrong and couragious, and endure Hardſhips better than the *Danes*, being more accuſtomed to them, by reaſon of their barren Soil and cold Climate. The *Danes* think it politick to keep them under, and give them no Opportunity to exert their Strength, or to learn the Art of War: For that Reaſon they have gradually removed all their ancient Nobility. They are ſaid to be of a plain Temper, juſt in their Dealings, and civil to Strangers. They were anciently accounted great Pyrates, but not ſo now. They are good Seamen.

The Women are handſome, not ſo fat as their Men, and are reckon'd more witty.

The E. and N. E. Parts of this Country are but thinly Peopled, becauſe of the inacceſſible Rocks and craggy Mountains. They have no Towns, but generally live in Tents, and remove in Companies from one Place to another for hunting and fiſhing.

Their

Digitized by Google

Their Diet is Stock Fish, with coarse Butter and Cheese. Most of their Corn is imported. They have some Barley of their own.

Their GOVERNMENT.

THey had Kings of their own till 1387, as was said before; but now one of the King of *Denmark*'s natural Sons is usually their Viceroy, to whom Appeals are made from their Courts of Justice.

Their RELIGION.

ST. *Olaus*, in the 11th Century, introduc'd Christianity here, and drove out all the obstinate Pagans. In 1486, Pope *Innocent* VIII. gave Leave to the Priests of *Norway*, and others under the same Parallel, to celebrate the Communion in other Liquor than Wine, because they could not well have it. In 1523, this Country was reform'd from Popery, and Lutheranism introduc'd.

Their LANGUAGE.

IS in most Places the same with that of *Iseland*, which proves them to be of the same Original; but the Language in the civiliz'd Parts of the Country differs little from that of *Denmark*.

The DIVISION of Norway.

IT is divided into the Governments of *Aggerhus*, *Bergen*, *Drontheim*, and *Wardhuis*.

The Government of AGGERHUS.

HAS that of *Bergen* on the W. from which it is separated by vast Mountains, *Dalecarlia* on the E. the *Categate* on the S. and that of *Drontheim* on the N. Its Length from N. to S. is 360 Miles, and its Breadth 388. *Aggerhus* is more fertile than any of the other Governments. The chief Town is

Onslo, *Opslo*, or *Christiana*, so called from *Christian* IV. who rebuilt it in 1614. It lies on the Mouth of a River, that falls into a Bay which communicates with the *Baltick*, and is called the Bay of *Onslo*. It has a Castle, is a Bishop's See, and the Cathedral was dedicated to St. *Alward*. Here is kept the Sword of *Haquin*, one of their Kings: The Hilt is of Crystal, finely polish'd, and the Sword is very large, and of great Antiquity. The Vice-Roy resides here. In 1589, King *James* VI. of *Scotland*, and I. of *England*, was married at this Place with *Anne*, Daughter to *Frederick* II. of *Denmark*. It has a good Trade for Fir, Pitch, *&c.* Many Mackrels are caught here, and also much Pearl, of which *Henricus Arnaldi*, a *Dane*, gives the following Account: Their Shells are like those of Muscles, but larger, and the Fish like an Oyster, which produces a great Cluster of Eggs, like those of Craw-Fish, some white, and some black. These Eggs, when ripe, are cast our, and grow like the Shell from whence they came; but sometimes it happens that one or two of those Eggs stick fast to the Side of the Matrix, and is not voided with the rest; which being fed by the Fish, in Time they grow into Pearls of different Sizes, and imprint a Mark, both in the Fish and the Shell, of the same Figure with themselves. *Philosoph. Transact. N.* 101. *P.* 11. *Onslo* lies 120 *English* Miles E. from *Bergen*, and 150 N. from Cape *Skagen* in *Jutland*, in Lat. 60.

Aggerhus lies near *Onslo* to the W. on the Bottom of the same Bay, and gives Name to the whole Province. It has a strong Castle, and is memorable for the brave Defence it made against the *Swedes* in 1567, who were forced to retire from before it, after a Siege of 18 Months. It lies 60 *English* Miles N. W. from *Frederickstadt*.

Torsberg is a small Town, with a large Harbour, on the Bay of *Christiana*, 30 *English* Miles S. from *Onslo*. It has a good Trade, because of its Situation, and the neighbouring Mines of Copper and Iron. A Silver Mine was discover'd here in the Reign of *Christian* IV. but turns to no great Account. Mr. *Moldsworth* observes, That the

the Ports of this Country are ſo deep, that there is no Anchorage for Ships, and therefore its Coaſts are reckon'd the moſt dangerous of any in *Europe* to fall in with by Night, or in a Storm; ſo that if a Ship be driven on them, there is no eſcaping, the Shore being all along high Rocks, at the very Foot of which there is 200 Fathom Water.

Frederickſtadt, has its Name from *Frederick* II. who built it in the laſt Century. It lies on the *Categate*, where the River *Glammen* falls into it. This River has its Riſe in the *Doorfel* Mountains, and takes its Courſe Southward towards this Government.

Vlecktern is a ſmall Town, but has a good Port.

Skeen lies in the *Categate*, on the Mouth of the Bay of *Chriſtiana*, is famous for its Mines of Copper and Iron, and for one of Silver, diſcover'd in the Reign of *Chriſtian* IV. but it laſted not long.

Saltzberg lies on the River *Drammen*, which falls into the Bay of *Chriſtiana*, 18 Miles N. W. from the Town of that Name. 'Tis alſo noted for Mines of Iron, Copper, and ſome of Silver, whence the Mountains in the Neighbourhood are called *Silverbergen*.

Hammar lies in the N. of this Government, 130 *Engliſh* Miles N. from *Frederickſtadt*, on the River *Glammen*. It gives Name to a Diſtrict of this Government, was formerly a Biſhop's See, but is now under the Juriſdiction of the Biſhop of *Chriſtiana*.

Hollin, ſeated on the Lake *Nordſie*, which communicates with the River *Categate*, is 20 Miles N. W. from *Tonsberg*, and has a Church cut out of a Rock, with a Burying-place on the Top of it. *Wormius* thinks it was a Pagan Temple.

The Government of BERGEN.

HAS the Great Ocean on the W. and S. W. the Government of *Aggerhus* on the E. and that of *Drontheim* on the N. E. 'Tis 240 *Engliſh* Miles long from N. to S. and where broadeſt not above 90. It is divided into the Diſtricts of *Bergen* in the North Part, and that of *Stavanger* in the South Part. The chief Town is

Bergen, which the Natives call *Baern*. It lies on a crooked Bay called *Jelta Fiored*, 12 Miles from the Ocean, 330 *Engliſh* Miles S. W. from *Drontheim*, 200 from Cape *Scaw* in *Jutland*, and 300 E. from the neareſt Place of *Scotland*. It is probably the *Berges* of *Pliny*. *Jornandes* calls it *Bergium*. The Name comes from its Situation among Hills. The Houſes are moſtly of Timber, and but ſorrily built. It has been five times burnt down, *viz.* twice in the 15th, and three times in the 16th Century. Its Port is large, and the moſt frequented of any in that Ocean. In the *Dutch* War, their Fleet was protected here from the *Engliſh* Navy. This City is the principal Mart of all *Norway*, to which the Product of the Country is brought and exported. The particular Trade of this Town is in a Sort of Stock-fiſh called *Bergen Viſch*, which are caught ordinarily in *January*, and dried by the cold Air. The Inhabitants, fearing too great a Concourſe of Strangers who ſettled here might be prejudicial to them, order'd, That no Foreigner ſhould have the Freedom of this Town, unleſs he conſented either to be whipt, roul'd in Mud, or hung in a Basket over ſome intolerable Smoak; but now this Cuſtom is laid aſide. The Foreign Merchants who reſort here, as the *Dutch*, *Hamburgers*, *Lubeckers*, *Engliſh*, &c. have built a ſtately Exchange. The Town has a ſtrong Caſtle, which ſerves for a Citadel, and is the Biſhop's Reſidence.

Stavanger lies in Lat. 60. in a Peninſula, in a great Bay of the Ocean, full of ſmall Iſlands. This Bay is guarded by the ſtrong Caſtle of *Doofwick*, two *Engliſh* Miles from the Town, which is a Biſhop's See, under the Biſhop of *Drontheim*; and the Governor is ſubject to him of *Bergen*. It has a good Port, and would have a greater Trade were it not for the Neighbourhood of *Bergen*, which is 70 *Engliſh* Miles N. from it on the ſame Coaſt, and about 60 N. from the *Categate*.

To the Biſhoprick of *Stavanger* belongs *Tyle Marchia*, whoſe Name gave Riſe to the Opinion of *Procopius*, that *Scandinavia* was the ancient *Thule*.

The Bailiwicks of *Sudhernleen*, *Nordhorn*, *Lonſogne*, *Ladſiord*, *Norſiord*, and *Sundmorlen*, are ſubject to the Government of *Bergen*.

Digitized by Google

The Government of DRONTHEIM,

IS of a vaſt Extent, and reaches beyond the Polar Circle. Some reckon, that along the Coaſts from the S. W. Parts, to its Borders on the N. E. where it joins to that of *Wardhuis*, 'tis about 540 *Engliſh* Miles long; but its Breadth is not conſiderable. It is barren and ill Peopled, and ſub-divided into 21 Diſtricts. It has the Government of *Aggerhus* and *Dalecarlia* on the S. *Muſcovite Lapland* on the E. and the Government of *Wardhuis* on the N. E. It was given to the *Swedes* in 1658 by the Treaty of *Roſchild*; but was reſtored to the *Danes* in 1660 by that of *Copenhagen*. *Harndal* and *Jemptерland* belong'd to this Province; but were yielded to the *Swedes* by the Peace at *Bromsbroe* in 1645. This Country is Mountainous and Woody. The chief Town is

Drontheim, in Lat. 65½. It was built in 999 by *Olaus Trygen*, was the Seat of the old *Norwegian* Kings, and Capital of the Realm. It was made an Archbiſhoprick by *Eugen.* III. Its Latin Name is *Nidroſia*, from the River *Nider*, on which it lies, where it falls into the Northern Ocean. This Town has no Walls nor Fortifications. The Houſes are mean; for it has not recover'd its Splendour ſince 1522, when it was burnt down, with its Cathedral, dedicated to St. *Olaus*, which was the moſt beautiful and ſtately of any in the N. The Ruins ſtill ſhew its admirable Architecture. The Port would be more frequented, if the Entrance were not dangerous by Rocks. Near this Town there's a Lake, whoſe Waters never freeze in the coldeſt Winter. They have no Wood in the Neighbourhood, ſo that they are obliged to build their Houſes of Fiſh-Bones which they likewiſe uſe for Fuel. The Illands of *Iſeland*, *Groenland*, and the *Orcades* were ſubject formerly to the Archbiſhop of *Drontheim*.

Romſdal, or *Romſdalen*, a large Town, 160 *Engliſh* Miles S S.W. from *Drontheim*, lies on the Bottom of a Bay on the Ocean, and has a tolerable Trade. Other Towns are, 1. *Leerſtand*, 110 *Engliſh* Miles S. from *Drontheim*. 2. *Stronden*, 40 S. E. from *Drontheim*, on the River *Nider*. 3. *Steerdale*, on the other Side of the ſame Bay, 28 Miles N.W. from *Drontheim*. 4. *Opdael*, at the Bottom of a Bay, 40 Miles from the Ocean, and 100 S. from *Drontheim*.

Lofoten, an Iſland, lies N. N. W. from *Drontheim*. *Samien*, a little Iſle, lies N. E. of *Lofoten*. *Sollere*, another, is near *Samien*; and the Iſland *Trommes* lies N. N. E. from *Sollere*.

Moelſtrom is a famous Gulph or Whirlpool, about Lat. 68. of 40000 Geometrical Paces in Circumference. Seamen call it the Navel of the Sea: It is fatal to Ships that approach too nigh in the Time of Flood, when the Sea for two Leagues round forms ſuch a terrible Vortex, that it ſwallows up every thing that comes near it; and during the 6 Hours of Ebb, it throws out the Water with ſuch Violence, that the heavieſt Bodies cannot then ſink if thrown into it, but are caſt back again by the impetuous Stream. During the Ebb, the Fiſhermen catch abundance of Fiſh on it, which being forced up to the Surface of the Water, cannot dive again.

Halgaland belongs to this Government, and lies N. of the Polar Circle. It is the Country of *Othher*, King *Alfred*'s Geographer, who told that King, That no inhabited Country lay further N. than this; but his Ignorance is ſufficiently diſcover'd ſince. *Melanger* is a Town in Lat. 69½. upon a Bay of the Northern Ocean.

The Government of WARDHUIS.

THis Country has *Muſcovite Lapland* on the S. E. *Swediſh Lapland* on the S. the Government of *Drontheim* on the S. W. and the *Frozen Ocean* on the W. and N. It is otherwiſe called *Finmark*, or *Norwegian Lapland*. The Cold here in Winter is extream, ſo that it has very few Inhabitants, and no Trees except Pines and Firs. They have Plenty of Rain-Deer, Bears, White Hares, Squirrels, Black Foxes, Beavers, Otters, and other Furs, which is the greateſt Part of their Trade. The Rivers abound with Fiſh. *Petit*'s Atlas makes the *Finni* of *Tacitus* the old Inhabitants; but 'tis more probable that thoſe *Finni* inhabited the modern *Finland*, from whence *Lapland* was Peopled.

Their

Their Manners, Religion, &c. are much the same with those of the *Swedish Laplanders*, of which we gave an Account in the Description of that Kingdom; but they are of worse Dispositions, and said to be ugly, savage, revengeful, jealous, inclin'd to cheating, idle, and industrious in nothing save Fishing and Hunting. They are more addicted to Sorcery than the other *Laplanders*, make a Trade of selling favourable Winds to Sailors, and are said to raise Tempests, if they be not rewarded to their Content. Their Women have the same bad Qualities, and are of a low Size.

This Country extends about 240 Miles from W. to E. and 150 from S. to N. There is no Property or distinct Possessions here; but whoever settles in any Part first, it belongs to them while they stay.

The chief Place is *Wardhus*, which is the Seat of a Governor. *Moll* says, 'tis in Lat. 70½. and Long. 49. It lies in an Isle called *Warda*, 8 *English* Miles from the main Land of *Finmark*, and about 15 in Compass. The Governor resides in the Castle, which is a Fort of 6 Bastions. The King of *Denmark* has always a good Garison here, to oblige the Ships bound to *Muscovy* to pay their Toll. The Town consists only of a few Cottages, inhabited by Seamen. The People of this and the neighbouring Islands live upon dry'd Stock-Fish, and have no Bread or Beer, but what is brought from other Places. They have some small Black Cattle, which are also fed with dry'd Fish.

The other Places of this Province are Hamlets, of 10 or 12 Huts. All the Coast of *Norway*, but especially this Government, is cover'd with small Islands, which we don't name, because they are of little Consequence. In the Island *Maggero* lies the North Cape, well known to those who sail for *Russia*. It is the most Northerly Place in *Norway*. *Moll* places it in Lat. 71½. and Long. 44½.

Our *English* Writers give an Account of a very ancient Commerce betwixt our Ancestors and *Norway*, some of which are fabulous, especially what relates to King *Arthur*'s Time; but since that called the *Norman* Conquest, our Histories are positive that we seldom wanted a considerable Fleet of *Norway* Merchantmen in this Kingdom, particularly in the Reign of King *Henr* IV. as appears by his Agreement with the Merchants from the *Hans-Towns*, set down at large by *Hacluit*. In the 25th of K. *Charles* II. an Act was made for incouraging the *Greenland* and *Eastland* Trades, which took off a great Part of the Imposts on *Eastland* Commodities, and order'd, That any Subject should be admitted into the Company trading thither, for 40 *s.*

CHAP. XXI.

The ISLANDS *of* FERO.

THey are 17 in Number, and lie in Latitude 62 Deg. 10 Min. and in Longitude about 16 Deg. 20 Min. They ſtretch in Length about 60 Miles, and in Breadth about 40. have *Norway* on the Eaſt, *Schetland* and *Orkney* on the South-Eaſt, *Ireland* on the South, *Greenland* on the Weſt, and *Iſeland* on the North-Weſt. Mr. *Jacobſon Debes*, Provoſt of the Churches there, in his Book tranſlated and printed in *London* in 1676, gives us the following Account of them: They are high Rocks in the Sea, cover'd with thin Earth, and divided from one another by deep and rapid Streams. In the Vallies, the Mould is about two Foot thick, and produces Plenty of Graſs and Corn; but the People live moſt on the Shore, for the Conveniency of Fiſhing. They have many Creeks, Inlets and Havens, for their Veſſels, and near their Habitations they incloſe ſome Ground for Graſs and Corn. Their Sheep feed in the Vallies and Hills all the Year; but their Black Cattle only in Summer. Part of thoſe Iſlands is inhabited, and Part left for Paſturage. The moſt remarkable of them are as follow:

1. *Fugloe*, that is, Foul Iſland, lies furtheſt to the N. E. is pretty high, flattiſh on the Top, almoſt ſurrounded with Clifts, is three *Engliſh* Miles long, and the greateſt Breadth not above two. It has a Creek on the E. Side, but not fit for Anchorage.

2. *Swinoe*, two Miles S. of *Fugloe*, conſiſts of two long high Hills, with a deep Valley betwixt them, which at a Diſtance makes it look like two Iſlands. The Mountain on the S. is about a League in Length, and that on the N. about half a League. The Valley, by reaſon of the Inlets, is but a Mile long, and the Inhabitants have Boats on both Sides of it, that they make uſe of according as the Wind ſerves.

3. *Videroe*, or *Vidoe*, is three Miles W. of *Fugloe*, and a Mile from *Swinoe*, is 6 Miles long, and 3 broad, and has a Valley, where the People dwell; but is in general full of high Hills.

4. *Bordoe*, ſhap'd like a Crab, with many Points, reſembling Claws, lies S. W. and W. of *Videroe* and *Swinoe*, about half a Mile in ſome Places, and in others not above a Muſquet-ſhot. It in a manner encompaſſes *Videroe*; ſo that betwixt them there is a ſafe Harbour againſt all Weather and Tides, and three Entrances into it. There are Inlets in other Places, which are ſafe Harbours for Boats. This Iſland is about two *German* Leagues from S. to N. and about one and a half where 'tis broadeſt, from E. to W.

5. *Kunoe*, about ſix Miles long, and one broad, conſiſts of a long ſharp Hill, ſeparated from *Bordoe* by a narrow Streight, in ſome Places half a Mile broad, and in others leſs. It lies S. and N. from *Mule* on *Bordoe* to the Harbour of *Klack*, on that ſame Iſland which it covers and makes ſafe.

6. *Kalſoe*, lies W. of *Kunoe*, from which 'tis divided by a Stream of two Miles broad, which opens from S. to N. and is a ſafe Paſſage for Ships, eſpecially when the Stream is with them. This Iſland is ſomewhat longer and broader than *Kunoe*, runs S. and N. and has no Harbour or Creek.

Digitized by Google

7. *Oſterve*, lies W. of *Kalſoe* and *Bordoe*, is 20 Miles long, in ſome Places two, and in others 6 Miles broad. It has many Inlets with good Harbours, one of them call'd the *King's Haven*, becauſe his Ships uſe to cruiſe there when in Search of Pyrates. The Stream betwixt this Iſland and *Kalſoe* is in ſome Places but a Mile and a half broad, and affords a ſafe Paſſage for Ships.

8. *Nelſoe*, lies two Miles S. from hence, is 4 Miles long, and a Mile and an half broad. It has a high Hill in the Middle, a Plain on the N. of it, and a Harbour on the S.

9. *Stromoe*, the largeſt of theſe Iſlands, is 24 Miles long, and where broadeſt 8 Miles. It lies W. of *Oſterve* and *Nelſoe*, is full of high Hills; and there is one called *Skellingſa's*, much higher than the reſt, which is a good Direction for Sailors that are bound to the N. Entrance of *Thorſhaven*, on the S. End of the Iſland, where their chief Commerce lies. This is a ſmall, but a good Harbour, and has another Entrance from the S. There are ſeveral other Harbours and Creeks in this Iſland.

10. *Waagoe*, lies a Mile and an half W. from *Stromoe*, and the Paſſage is ſafe betwixt them. This Iſland is about 8 Miles in Diameter, and cut by two long Creeks, one of which, on the S. E. makes a good Summer Harbour. The Land abounds with Hills; and on the W. Side there are two little Iſlands, called *Tineholm* and *Gaſholm*, with high Cliffs.

11. *Myggenæs*, lies two Miles W. from hence. 'Tis three Miles long, and one and a half broad. The Ground is high, ſurrounded with Promontories, and has but one Landing-place; and on the W. End there is a ſmall Iſland, with a high Clift round about, and ſloping at Top like the Roof of a Houſe.

12. *Kolter*, 3 Miles S. E. of *Waagoe*, and two W. of *Stromoe*, is a Mile and a half long, and half a Mile broad. It has a high Mountain on the N. End, which riſes 200 Fathom above the Water. Yet 18 Years ago, in the middle of Summer, a great Quantity of Herrings was found ſpread on the Top of it, which our Author thinks were caſt up there by a Whirlwind.

13. *Sandoe*, two Miles S. of *Stromoe*, is 8 Miles long, and 4 broad, with a Creek on the S. Side, and a little Iſle on the N. W. in which there are wild Black Cattle and Sheep.

14. *Skuoe*, two Miles further S. is three Miles long, one broad, a high Ground, and full of Cliffs.

15. *Store-Dimen*, or *Great Dam*, lies a Mile to the S. E. is round in Figure, a large Mile in Diameter, high and encompaſs'd with great Cliffs. It has no Paſſage to it but one, where 'tis difficult for a ſingle Man to enter at a time; ſo that it might be fortified with little Expence, and made impregnable, ſince Ships cannot lie near it, becauſe of the Strength of the Current; nor could they be famiſh'd, becauſe there are Cows, Sheep and Fowl, on it for 30 Men. Some Years ago, a Farmer's Wife of that Iſland having an Intrigue with her Servant-Man, they murder'd her Husband, and kept out the Iſland a long while, to avoid Puniſhment; but growing ſecure, at laſt they were ſurpris'd, and brought to Juſtice. Two Miles S. E. from this Place, is an Iſland called *Little Dimen*: It has ſome Inhabitants and wild Sheep upon it, and riſes out of the Sea like a ſharp and round Clift.

Two Miles S. from hence lies *Suderoe*, almoſt 20 Miles long, and 8 broad where broadeſt: It is full of Hills, has many Clifts on the W. Side, and but 4 Landing-places, which are difficult of Acceſs. On the E. it has 4 Creeks, and one of them a good little Harbour; and on the S. Side there is one of the beſt Harbours in *Feroe*, called *Lebree*.

Theſe are the moſt remarkable Iſlands. There are others call'd *Holmes*, which are left for Paſturage; and there are ſeveral Rocks which riſe out of the Sea near theſe Iſlands, two of which are neceſſary for Mariners to know; one N. of *Fuglioe*, called the *Biſhop*, is round and pretty high; the other, S. E. of *Sumbioe*, on the S. of that Iſland is a round high Rock, called the *Monk*, near which there's a dangerous Whirlpool, which in calm Weather draws Slips towards it, and frequently ſinks them; but ſometimes they eſcape, by driving with the Stream. The Inhabitants talk of a floating Iſland, which has been frequently ſeen near this Place; but our Author takes it either to be a Fable, or an Illuſion of the Devil.

When

Digitized by Google

When the Sun is in *Cancer*, there's no Night for a whole Month, and in the middle of Winter they have but little Day; but the Dawning and Twilight are longer than usual, especially when the Sun is in the S. or N. Signs. In the longest Day, the Sun rises at two a Clock 7 Min. and goes down at 9, 53. which makes the Day 19 Hours 46 Min. and from the Setting to the Rising of the Sun, 'tis but 4 Hours 14 Min. during which there's no Difference to be perceiv'd betwixt Day and Night, the Sun being then but 4 Deg. 29 Min. under the Horizon, and cannot make any difference for a whole Month, there being then but little difference in the Sun's Declination; so that till the 17th of *August*, when the Sun first comes 18 Deg. under the Horizon, they have no considerable Night. In the middle of Winter, the Sun rises at 9 Hours 53 Minutes in the Morning, and sets at two Hours 7 Min. in the Afternoon; so that there is but 4 Hours 14 Min. Day; but the Dawning and Twilight add much to it; so that something of Day is to be perceiv'd at 8 in the Morning, and lasts till 4 at Night.

In these Islands Loadstones are found, on which, if a Compass is set, it will vary much in some Places to the E. and on others to the W. If a Compass be set on the Rocks near *Sumbo-Monk*, formerly mention'd, it runs round, and is spoil'd for after-use, as happen'd to a Ship that was suck'd in by the Whirlpool there some Years ago. The ordinary Declination of the Loadstone on *Feroe* is otherwise 13 Deg. 19 Min.

The Currents betwixt the Islands run very strong, and in several Manners, according to the Situation of the Land, or the Necks and Points of it. In the Winter, when the Wind blows against the Tide, it occasions a terrible and turbulent Sea, especially when there's any Ground near the Surface of the Water; for then the Sea beats so terribly against it, that scarce any Ship, tho' the Depth be sufficient, can get over those Breaks; and for ordinary Boats, they presently sink them. The Natives call those Grounds upon which the Waves break thus, *Boffves*, and observe, that in bad Weather they break 3 or 7 times successively, and then rest; during which Time the Inhabitants that must pass them row their Boats over as swift as they can. When they break, 'tis reckon'd to be a Sign of Frost and Snow, or else of warm Weather, and a N. Wind, according to the Season of the Year. The ignorant Inhabitants think they proceed from the Aversion of the Sea to the Iron in the Boats; and our Author is one of those Philosophers who ascribes them to occult Causes, which in plain *English* is, that he knows nothing of the Matter. He observes however, That when a warm Air raises Fogs from the Sea, the Currents run swifter and stronger, and the Boffves break out; and the like happens in Winter before Frost and Snow. He observes also, That before Storms of Wind, every Nail in their Houses crack, tho' they be low built, and have thick Walls of Turf and Stone; yet they don't move when the Storm beats on them. All these Things he ascribes to Magnetical Sympathies and Antipathies.

He observes further of the Currents, That at New and Full Moon, they run very strong and swift; so that the poor Fishermen when at Sea, thô surpris'd with a Storm, must stay till the Current runs towards the Land; so that they are many times lost. When the Current runs against the Wind, the Sea breaks almost every Winter with a Westerly Wind, over a Promontory in the Isle of *Kolter*, which is 30 Fathoms high, in such a Quantity as endangers the poor Inhabitants, tho' the Sea has 50 Fathoms to run without the Clifts before it reach the Land; and some Years ago the Water broke over with such Force, as to tumble a great Stone of 6 Foot long, 4 Foot thick, and 4 Foot broad, that lay on the Top of the Promontory a considerable Way from the Place where it lay before. Tho' the Course of the ordinary Tides here be according to that of the Moon as elsewhere, yet their Course is different according as they beat against the Rocks and Points of Land, and according to the Situation of the Ground under Water, which occasions particular Streams to alter their Course, and run against the general Tides.

Digitized by Google

As to the General Currents, our Author gives us this Account: When the Streams run even betwixt the Land, there is a principal Current, but does not run with equal Rapidity during the 6 Hours; for the firſt 2 Hours, it runs pretty faſt; the 2d 2 Hours 'tis very rapid; and the 3d 2, it decreaſes by degrees. It is ſtrongeſt in the New and Full of the Moon; but in Spring and Summer, when the Sun has moſt Force, 'tis ſtronger at every Change of the Moon, than in Autumn and Winter; from whence our Author infers, That the Sun and Moon, and inward Warmth of the Earth, occaſion the Motion of the Tides. When Sailors cannot advance with their Ships in the middle of the Inlets, they take the Advantage of the Tides or contrary Streams, which ſometimes reach a Mile from the Shore. He cannot exactly deſcribe how high or low the Tides riſe and fall, becauſe there's a great Inequality in it, by the Changes of the Seaſons of the Year and Moon; but they riſe uſually 7 Fathom at W. and but 3 at E. He ſays, an E and W. Moon make the higheſt Water; but in particular Streams, 'tis high Water at different Hours; and ſometimes in one Inlet, there are 5 different Currents that run againſt one another. There's a little Stream betwixt *Stromoe* and *Oſterøe*, which, tho' it lie wholly ſtill, and dead on both Sides, yet it runs forward and backward, according to the ordinary Changes of the Moon, ſo ſwiftly, that there's no rowing againſt it. The Cauſe he ſays is thus: There is no Ebb or Tide at the S. of the Stream; but at N. the Water riſes and falls, tho' there be no Stream: Therefore when the Tide comes, the Water runs over to the S. Bay, and when it falls, it returns to the N. yet no Stream can be perceived, becauſe the Inlet grows wider on both Sides, and is very deep. Before one comes to *Feroe*, there's no Stream diſcern'd; but when it comes to the Iſlands, it thruſts it ſelf between Lands, as a River would do thro' a Sluice.

Beſides thoſe Streams, there are three others that turn round, and are called *Mole-Stromme*, or Whirlpools, which are very dangerous, ſink every thing that comes near them, and throw it up again at a certain Diſtance. Our Author thinks they proceed from round Grounds at Bottom, with Channels or Conduits in them. The moſt dangerous is that S. of *Suderoe*, about *Sumboe Monk*, which has ſwallowed up ſeveral Ships tho' others have eſcaped. The Sea round this Whirlpool is 80 or 90 Fathom deep, where the Stream runs quiet and ſtill. A little further in, the Ground lies from 25 to 35 Fathom deep, where the Sea begins to riſe and turn round. Further in, the Ground lies but from 8 to 10 and 12 Fathom deep, Snail-wiſe, in a Circle four times round. This high Ground has Points or Cliffs on the Top about 8 Fathom deep, and about 10 or 12 diſtant from one another; ſo that when a Veſſel comes upon this uneven Bank, 'tis turn'd round thoſe Cliffs by the Stream with ſo much Swiftneſs, that People who are not uſed to it lie down in the Boat, to avoid being giddy, and the Boat is turn'd round all the 4 Circles; between which there are three Channels or Conduits, where the Sea runs about ſlowly in ſmall Turnings. On the E. Side there's a Gulph, where the Stream runs in as through a Sluice, and works but ſoftly within. Theſe Channels are from 25 to 35 Fathom deep. In the middle of the Pool, there's a deep Hole from 50 to 55 Fathom; and in the middle of all, 'tis 61 deep. The innermoſt Water runs about ſlowly; and on the S. Side of that Hole the Rock call'd *Sumboe-Monk* riſes 10 Fathom above the Water, and the Depth about this Rock is 15. and N. of this there are 6 leſſer Rocks, betwixt which and the *Monk*, the Water is from 3 to 4 Fathom deep. Our Author obſerves, That on the Top of thoſe Rocks, the Compaſs runs round, as the Whirlpool does, and is thereby ſpoil'd. He takes Notice alſo, That on the Top of *Sumboe-Monk*, the Air is ſo extraordinary cold in the hotteſt Day of Summer, that the People who climb it for Fowl are ſcarce able to endure it; and the Fowl which haunt and breed there, have nothing almoſt but Feathers. And ſince the Saltneſs of the Water about *Feroe*, tho' in perpetual Motion, occaſions for moſt part a temperate Winter, he thinks the Coldneſs of the Air upon this Rock does not proceed from the continual Motion of the Stream, but rather from a Magnetick Virtue in the Rocks;

Digitized by Google

Rocks; and this he takes also to be the Cause why Ships are so easily brought into that Danger: But for the better understanding of the Form and Nature of this Whirlpool, he annexes the Figure of it. One may justly wonder, after such a frightful Account of the Danger that Vessels run by coming near it, how so particular a Description of it could be taken; but our Author informs us, That when the Weather is calm, the Sea still, and the Stream in the Reflux, the Inhabitants venture to fish upon it, and to climb the Rock.

On this Occasion he enters into a Dissertation against several Authors as to the Cause of those Whirlpools, and explodes the Notion of such as ascribe them to Abysses or Bottomless Pits in the Sea, which they think to be also the Causes of Ebbs and Floods. He takes Notice of what *Athanasius Kircher* says, *Hydrog. Lib.* 3. of the famous Whirlpool under *Norway*, called *Maske-Strom*, *viz.* That it is a Gulph into which the Sea runs down under the Land of *Norway*, and comes out again in the *Sinus Bothnicus*, or Bay of *Botthen*; and *Herbinius*, in his publick Dissertation at *Copenhagen*, seems to be of the same Mind: But our Author says, they are misguided by uncertain and false Relations; for this Whirlpool lies under the Land, between two Islands, where the Bottom rises like that of the Whirlpool of *Feroe*, and does not descend in deep Cavities. He adds, That *Kircher*, in his *Tabula Geographica Hydrographica*, describes many such Gulphs or Whirlpools; all of which are found near the Continent, or between Islands, as those of *Scylla* and *Charybdis*, betwixt *Sicily* and the Point of *Calabria*, where there stands a high Rock in the middle of the Stream, like the *Monk* of *Sumboe*, which *Jacobson* says are Beacons set up by God to warn Seamen of their Danger. He takes Notice also, That *Petur Clausen*, in his Description of this Whirlpool in *Norway*, says, the Water runs about in such a boisterous manner, that the Noise is heard at some Leagues distance, which he takes to be a Proof that there's no Abyss to swallow the Water, since the deepest Water makes the least Noise; therefore he takes the Noise, and turning round of the Water, to proceed from its pressing through a streight Passage betwixt two Lands, and such a Ground at Bottom as that of *Feroe*, which he says is further prov'd by this, That when whole Trees come into that *Vorago*, they are thrown up again, with their Roots, Branches and Bark, tore, by being whirl'd about among such circular Rocks, and many such are thrown ashore on *Feroe*, which could not be were there any previous Gulph; for then the Hole would be large, the Water would still run round, and any Trees that were drawn in, would run hastily through without being tore. *Kircher*, to strengthen his Opinion, says, That in the middle of the Stream, near that high Rock, there's an Abyss by which the Water is swallow'd, and comes out again in the Bay of *Bothnia*. *Jacobson* answers, That were it so, the 10th Part of what it swallows would not come out again; whereas the Whirlpool throws up whatever comes into it, and the Stream that drives it out, carries it into the Main, from whence it comes driving to *Feroe* and *Greenland*, as is very well known. In like manner, what comes up again in the Bay of *Botthen*, is drove by the Stream to one of those Sea-Coasts, or else out into the E. Sea; and if the latter, then many of those Wrecks would be seen in the E. Sea, where no such Thing has yet been perceived. He is therefore of Opinion, That the *Vorago* in the Bay of *Botthen* is of the same Nature with that at *Feroe*, because *Olaus Magnus* mentions its making a boisterous Noise, which proceeds from such a Situation at Bottom, and the rapid Ebb and Flood thro' the long *Bothnick* or East Sea, which is not much perceiv'd, because of its Depth, and therefore it beats the harder upon the Circular Rocks at Bottom; and the like is perceiv'd in the Streight near the Isle of *Alland*, where the Ground lying shallow, it makes a terrible Noise, as is own'd by *Herbinius* in his Dissertation.

Their FOUNTAINS.

BUT to return to the Description of *Feroe*. Those Islands abound with Fountains of wholesome Water, of a good Taste; some of them on the Tops of the highest

Digitized by Google

higheſt Mountains, which run conſtantly in the greateſt Drought; ſo that there's ſcarce a Cottage but what has the Conveniency of a Spring or Brook, whoſe Water is generally cooler in Summer than Winter. They have one Medicinal Fountain in *Oſteroe*, near *Gote*, but 'tis not much us'd, becauſe hard to come at. Its Water is warmer in Winter than other Water, and keeps good a whole Year; from whence 'tis ſuppoſed to flow through a Vein of Brimſtone.

On *Suderoe*, near a Village called *Famoien*, there's a little Lake pretty high, on the Mountain that flows and ebbs with the Sea, and yet is freſh Water.

Their AIR.

IN Summer, 'tis temperately warm, not very hot at any time; yet the Heat is ſuch ſometimes, as to cleave their thin Mould to the very Rock. Their Winter is not exceſſive cold; and tho' the Land be under the 62 Deg. North Lat. it ſeldom freezes a Month together, nor does it produce any Ice in the open Inlets of the Sea; ſo that their Horſe and Sheep go in the Fields all Winter. *Jacobſon* thinks this is occaſion'd by the Saltneſs and conſtant Motion of the neighbouring Sea, which produces warm Vapours that temper the Air, and make it moiſt; ſo that melted Snow or miſſing Rain falls in the Vallies, when it freezes on the Mountains. Their moiſt Air and watery Clouds produce ſuch ſtormy Winds, as ſometimes tear up Stones from the Ground, and roll up the Earth on the Rocks like Sheets of Lead. Thoſe Storms are variable, according to the Gaps between the Tops of the high Mountains, where the Winds gather and preſs themſelves through with wonderful Force, when thoſe in the Vallies underneath have ſo calm an Air, that they can carry lighted Candles from Houſe to Houſe. Sometimes the Blaſts are ſo forcible, as if they would tear the Rocks, and contrary Winds meet betwixt them, being rebounded by the Rocks that jut out in the Paſſes, and occaſion terrible Whirlwinds, which wheeling about among the Hills, come down over the Inlets, and whirling round, run through them again a great way into the Sea, and endanger Mariners, who muſt preſently furl their Sails, or be overturn'd, as they ſometimes are tho' they do, eſpecially if the Veſſels be large; and they frequently bear down both Men and Horſes in the Vallies: But the Inhabitants being forewarned by a terrible Noiſe betwixt the Rocks, alight from their Horſes, lie down flat, and catch hold of Graſs or Stones, till the Blaſt be over; but theſe Things happen ſeldom. *Jacobſon* tells a ſtrange Story of a Clergyman there, who, together with his Horſe, was blown over the Edge of a Promontory near *Sumboe* by ſuch a Whirlwind, but met by another ſtronger contrary Wind immediately, which blew him up again without any Hurt: Of this he is poſitive, tho' it ſeems incredible; but he aſcribes it partly to the Nature of thoſe Winds, and partly to a Miracle; yet he does not tell us what became of the Horſe. The ordinary Winds here are for moſt part W. and S. W. eſpecially in Spring and Harveſt; and thoſe Winds being very moiſt, 'tis uſually Rain and bad Weather on the Side of the Land where the Wind blows, while on the other Side 'tis fair and clear, which he aſcribes to the great Height of the Land.

The Summer not being hot, they have no Thunder then, but in Winter, when they have great Storms and Rain, which is the more terrible, becauſe all of them are turbulent in that Seaſon.

Their DISTEMPERS.

THeir Air being thus purged in Autumn, Winter and Spring, by ſtrong Winds and Thunder, they are ſeldom troubled with contagious Diſtempers, except they be brought in by Foreigners. They have no Agues, and ſuch as could not be cur'd of 'em elſewhere, have been freed of 'em as ſoon as they came hither. They never have the Small-Pox but when brought by Strangers, and then it infects whole Families, who are thereby reduced to a miſerable Condition, becauſe not able to help one another, and every body elſe avoids them,

as

Digitized by Google

as if they had the Plague, refuse to bury the Dead, or to come near the infected Village. He gives an Instance of his own Knowledge in 1651. A young Man from *Denmark*, who had lately had the Small-Pox, arriving there, gave his Shirt to wash, which infected the Woman that wash'd it. Others, that did not know the Disease at first, were infected by her; so that notwithstanding all their Precautions, the whole Islands were infected.

The Diseases proper to the Country are, a strong Rheum in Spring and Autumn, attended with a violent Cough and Spitting; a Head-ach, and Pain in the Limbs, that keeps 'em a long time in Bed, and some die of it. Their Medicine is sour Whey, as hot as they can drink it; and this Distemper does generally purge 'em of all the Flegm, and other Impurities contracted by their cold and moist Air.

A 2d Distemper, proceeding from the same Cause, is what they call the Hot Sickness, much like that which affects Soldiers in cold and moist Camps during the Winter. The Patient is hot, with acute Pains in the Head, that occasion Distraction and a Flux of the Belly in Summer. It consumes the Marrow of the Bones of such as die of it; but the greatest Part escape by the Providence of God, for they know no Remedy against it, nor is it so frequent as the other.

The 3d is the Scurvy, which affects Flegmatick People that don't stir much; nor are others easily preserv'd from it, because of the Moistness of their Air, and living so near the Sea. Their Medicine is New Milk alone, or with Scurvy-Grass boil'd in it.

Their 4th Distemper is the Leprosy, which *Jacobson* reckons near a-kin to the former.

The PRODUCT *of their Land.*

HE thinks some Mines of Copper and Iron might be found here, because the Rivulets which run down from the Hills in Summer are green in dry Weather, like Verdegrease. They have a small Quantity of Talk in the Northern Islands. They have two Sorts of Salt-Petre Stones, but not enough to yield any great Quantity of that Commodity. On the Shore there are found transparent Stones, so hard, that one may write upon Glass with them: They are white, or of a white mix'd with blue, and some of them yellow, and so well polish'd, that they serve to put in Rings. They grow in the Clifts, and are wash'd off by the Waves, but are not esteem'd by Jewellers. 'Tis thought they are a sort of Jasper. They lose their Colour when transported. Pearl Muscles, like those in *Denmark*, and *Moluca* Beans, are also found here. The ignorant People took them to be Stones, and thought the Kernel was another bred within them. They have also some Crystal, but so brittle, that it cannot be wrought.

They have no Trees but some low Juniper Shrubs and Willows, and when they planted Fruit-Trees, they did not succeed. Their Firing is Turf, some of which is so good, that it serves Smiths instead of Coal, of which they have some small Quantity, but in Places hard to come at. No Corn but Barly comes to Maturity here; but this yields 20 or 30 fold, so that they need none from abroad. They have abundance of fat Pastures, so that one of their small Oxen yields 100 Pounds of Tallow. Their best Pastures lie N. E. and N. and *Jacobson* thinks those Vallies are impregnated by the Nitre which the said Winds bring with the Rain and Snow, being also cover'd from the scorching Beams of the Sun by the neighbouring Hills. He observes, that in the two Months when there is almost no Night, the Corn and Grass grow but little here; but afterwards, when the Nights begin to lengthen, they grow more in a Night and Day than in 14 before, when so much expos'd to the Sun, tho' there be Rain at the same Time.

Their Herbs and Roots are such as are common to Gardens, *viz.* Lettice, Cresses, Pennyroyal, Coleworts, Turnips, Carrots, *&c.* They have 4 wild Herbs, which they esteem much, *viz.* 1 Plenty of Scurvy, besides Cresses, Beccabunge, and Sorrell, are all good against Scorbutick Distempers. 2. Great Quantities of Tormentil, which, having no Bark, serves 'em instead

Digitized by Google

ſtead of it to tan their Skins. 3. Angelica, which grows wild every where; and the Inhabitants eat the hollow Stalks before they grow to Seed, after taking off the outward Rind, and the long Filaments, as other People do Fruit; and in Time of Dearth they eat the Roots. 4. *Radix Rhodia*, which they call Hielpe Rod, from whence they diſtil a Water in Smell and Taſt like that of Roſes, and ſerves for the ſame Uſe.

Their Cattle are Kine, Horſes, and Sheep. He is thought a great Farmer that has 20 of the former. They go in the Fields all the Winter, except the Snow be very great. They are of a ſmall Size, and fat in Proportion to their Paſture. Their Horſes are little, but ſtrong, ſwift, and ſure Footed, tho' without Shoes; ſo that the People think themſelves more ſecure upon the Rocks and Hills on Horſeback, tho' they ride a good Pace, than on Foot. They breed them to hunt wild Sheep, which they ſometimes graſp with their fore Feet when they come up with them, and run without Fear over Rocks and Hills after them, with their Maſters on their Backs. They keep their tame Sheep in ſeparate Incloſures, divided by Ditches. Their Flocks are from 100 to 150, and ſome Farmers have from 200 to 500, divided into ſmaller Flocks, that feed always in the ſame Ground. They loſe many of them in hard Winters, and have no other Fence but Earthen Dikes to ſhelter them from the N. Wind. Sometimes in a great Snow they gather themſelves cloſe in the open Fields, where they are cover'd quite over, and if not found out by a Damp which riſes from the Snow above them, they are loſt for a Month together ſometimes, and eat the Earth about them, and the Wool off one another; but this ſeldom happens, for the Danger of it makes the Inhabitants look after them carefully, and when they find them under the Snow, they open a Paſſage for them, or have Wethers with every Flock, which being ſtronger than the reſt, break a Paſſage for them; but they have no Hay, or any thing elſe to relieve them, than the Graſs and Roots they dig from under the Snow. Their Paſtures are not ſo good as formerly, which proceeds, ſays our Author, from the Decay of Nature; but he ought rather to aſcribe it to their being over-ſtock'd, and not cultivated. If they be not carefully look'd after, they fall many times in great Numbers from the Clifts, cover'd with Snow, into the Sea, as they ſeek their Food.

They ſhear their Sheep in the Spring, take their Lambs from them in the Autumn, and incloſe them in Fields near the Sea with Stone Fences. They breed their Dogs to hunt the Sheep and Lambs ſo dexterouſly, that they will catch any they point out to them without biting them, but keep them down till their Maſters come. Theſe Dogs are ſhaped much like Greyhounds, and when well trained, yield as much as a Cow. Moſt of their Sheep are white in the N. Parts, and black in the S. *Jacobſon* aſcribes this to the Vapours of the Sea, to which thoſe Iſlands lie moſt expoſed on the S. or rather to the Nature of the Soil, which he thinks is full of Brimſtone or Salt-Petre. The chief Riches of the Inhabitants conſiſt in their Sheep.

Their FOWL.

THey have great Numbers both of Land and Sea Fowl, which ſerve them for Food. Some of them ſtay all the Year, and others fly away in the Winter. Thoſe that ſtay are Doves, Hares, Grellings, and Snow-Fowls. They have alſo Owls, Sparrow-Hawks, Crows, and Ravens. The latter are ſo deſtructive to the young Lambs, that they have a Law, obliging every Man who does not bring one of their Beaks to the Seſſion-Houſe at a certain Seaſon of the Year, to pay 2½ *d.* They have white Ravens, and ſome half white, half black, which they teach to ſpeak after cutting their Tongue-ſtring. They have a Fowl called a *Teale*, that lives both by Land and Water, and being a great Enemy to the Ravens, is upon that Account cheriſh'd by the Natives.

The Water-Fowl which ſtay conſtantly here, are ſeveral ſorts of Ducks, Plovers, Eiders, Maws, and Teiſters. The latter is good Meat, changes its Colour in Winter, and affords good Down. They have another

Digitized by Google

ther called *Imbrim*, larger than a Gooſe: It is never found on Land, for its Wings are ſo ſmall, that it cannot fly, and its Feet are only made for ſwimming. It has a Hole under each Wing, capable of holding an Egg, where they ſuppoſe it hatches its Young, which are eaſily allured to come near the Land, by waving a Piece of white Linen to them, and then the People ſhoot them. *Liomen*, another Water-Fowl, much like the *Imbrim*, comes hither in Summer, and is eaſily caught when on Shore, becauſe they can neither run nor fly well: It builds on the Banks of Freſh Water, ſo as its Bill may reach it without moving from its Neſt, where it continues till it hatches its Eggs, tho' the Water ſometimes overflows them. *Garfugell*, another Water-Fowl, has little Wings, ſo that it cannot fly, but walks upright: His Colour is a ſhining Black, except a little White under the Belly, and a white Circle round its Eyes, which look like Spectacles. They have alſo three ſorts of Wild-Geeſe, one Reddiſh, and the other two Grey; but the one ſort leſs than the other. They come hither in great Numbers in the Summer, and keep in Freſh-Water Lakes, where the Inhabitants hunt them in Boats, and take many. Swans come hither in the Spring, make no great ſtay, but proceed to other Countries. Great Numbers of other Birds come at the ſame time, of which the Inhabitants make much Profit. The chief of them is the *Sule*, or *Gentleman*: They come only to one little Iſland, and are very good Food. They have other eatable Sea-Fowls in great Quantities, ſuch as the *Skrabe*, *Lunde*, *Lumvifve*, the *Sea-Dow*, &c. which come and go at certain Seaſons; and tho' each of them breed but one *per Annum*, and are more ſought for than any other, ſo that 100000 of them are taken in a Year, yet they are ſo numerous, that they darken the Sun like a Cloud, and make ſuch a Noiſe with their Wings, that they reſemble Thunder. The *Skrabe* digs its Neſt with its Beak and Claws under Ground, with ſeveral Turnings, where it hatches its Young, ſtays with 'em all Night, goes out to Sea in the Morning, and returns with Food in the Evening. The Inhabitants pull out the young ones with Hooks made on purpoſe, ſalt them up for Winter-Proviſion, and uſe their Fat for Lamps. They never kill the Dam, except ſhe be in the Neſt unknown to them, and ſhe returns to the ſame Neſt next Year, except they ſpoil it in ſeeking for the Young, which they avoid if poſſible. The *Lunde* are very numerous here: 'Tis ſomething bigger than a Pigeon, and has a ſtrong crooked Beak, and ſharp Claws. When a Raven comes to take them or their Young, it catches him under the Throat with its Beak, and graſps him about the Breaſt with its Claws, which makes the Raven fly away crying, till they come to the Sea, where he drops and drowns him; but ſometimes it is ſurpris'd in its Hole by the Raven, who devours it and its Young. This Bird builds its Neſt under Ground like the *Skrabe*, or under Stones, where it may be ſecure. The Inhabitants hunt them with little Dogs, or pull them out with Hooks, and ſometimes take them with Nets as they fly to or from their Neſts. They have another large Bird called a *Lumwife*, black on the Back, and white under the Belly: They lay their Eggs on the bare Cliffs by one at a time, and ſit ſo cloſe, that they touch one another. The Cocks bring them Meat till the young ones be hatch'd, and fit to be carried to Sea on the Dam's Back. The Inhabitants climb the Rocks where they build, with Ropes and Poles with Hooks on them, or are let down with Ropes by others; but frequently loſe their Lives in the Attempt. Sometimes the Fowlers, when the Weather is fair, ſtay 7 or 8 Days in the Rocks, where they ſhelter themſelves in Holes by Night, and have Meat let down to them by Ropes. They throw the Fowls into Boats, which lie beneath on purpoſe. Their Ropes are ſometimes 80 or 100 Fathom long, and 3 Inches thick: The Fowler makes the End of it faſt about his Waſte, and between his Legs; and 6 Men holding the Rope with a Piece of Wood on the Brink of the Rock, to prevent its being cut as it ſlides, let him down. There is another Line faſten'd to his Body, which he pulls, ſo as to let them know when to ſtop, or to let him down faſter or ſlower. He has a thick Seaman's Cap on his Head, to defend him from Stones that fall from the Rocks by the Motion of the Rope, which ſometimes are ſo big, that they kill him; ſo that knowing the Danger, they always

Digitized by Google

recommend themſelves to the Protection of God when they go about that Work. Their chief Danger is from thoſe Stones, but otherwiſe they think it a Diverſion; and thoſe who are expert, can ſwing themſelves from one Place of the Rock to another, where the Fowls ſit, which he kills with his Fowling-Staff; and when he meets with Cavities or other Places that are eaſy to be climb'd, he unties himſelf, and faſtens his Rope to the Rock till he have occaſion for it again. Their Manner of climbing up the Rocks is more dangerous, and is perform'd thus; They come in a Boat to the Foot of the Rock, and tying a Rope round the midd'e of one of their Number, they take a Pole of 5 or 6 Ells long, with an Iron Hook at the End of it, and putting the Hook under his Girdle, lift him up to ſome Place of the Rock where he can get footing; then they help up another in the ſame Manner, with each a Fowling-Staff in his Hand, and with a long Rope faſten'd about their Middles, they climb up as high as they can; and where they find Difficulty, the one helps the other up, by thruſting the Pole under him, and when he has got footing, he hales the other up by the Rope. Thus they proceed till they come to the Birds-Neſts, when one of them ſeeks a convenient Place where he can ſtand ſure, and holds the Rope while the other climbs about after the Birds, who if he chance to ſlip, the other, if ſtrong enough, hales him up again; but if otherwiſe, they fall together, and are killed. The Birds they catch they either throw into the Boat below, or tie them in a Bundle to the End of a Line, let down by ſome above, who hale them up; but faſten them to their own Girdles till they have a ſufficient Number to convey either one Way or t'other. When the Fowls are brought home, they eat Part of them freſh, ſalt up the reſt for Winter, and ſell their Feathers. Sometimes a ſingle Man will let himſelf down by a Rope faſten'd to a Stake, and climb up again in the ſame Manner, with the Fowls hanging at his Girdle; and in leſs difficult Places, they climb without Ropes, where one, not accuſtomed to it, would think they could find no manner of footing.

Beſides the Birds of Prey formerly mention'd, they have others called the *Swarthbagg*, the *True*, and the *Skue*. The *Swarthbagg* is as large as a Kite, black on the Back, and white every where elſe: He feeds upon other leſſer Birds. The *True* is alſo called Thief, becauſe he purſues other Birds, ſtrikes them till they drop the Meat from their Beaks, and catches it dexterouſly ere it fall to the Ground. The *Skue* is of the ſame Species, but as large as a Raven: It is very fierce in Defence of its Eggs or Young, flies directly at the Head of ſuch as paſs by its Neſt, and ſtrikes their Faces ſeverely; but the Inhabitants faſten a Knife upright on their Heads through their Caps, by which the *Skue* is killed when it falls down upon them with ſuch Vehemence.

Their FISHERY.

THeir Fiſhery was formerly ſo good, that the Inhabitants maintained themſelves by it alone; but it is now ſo much decayed, becauſe of the Peoples Wickedneſs, ſays *Jacobſon*, that they have not enough to ſupply their Neceſſities; ſo that the poorer Sort, who have no Arable Land, are frequently reduced to great Want; yet ſometimes they have abundance of Fiſh, eſpecially when Corn and Cattle fail. Their Sorts of Fiſh are Whales, Seals, Codd, Whitings, large Flounders, Place, Trouts, Sand-Flounders, and a ſmall Fiſh called Murr, reſembling our Pilchards, which ſometimes in Autumn fill their Creeks, where the poor Children take as many as ſerve themſelves and their Parents from Meal to Meal; for having no Salt to cure them, they provide no further. Their Codd are found in Places of the Sea call'd Meads, which lie off at certain Points of the Land, where the Fiſhermen ſuppoſe there are Freſh Water Springs at Bottom. Their Seals haunt the Inlets, and are of different Sizes; ſome of them as big as Cows: They ſleep on Out-Rocks, under Promontories, where Boats cannot reach them; and in *September*, when they bring forth their Young, they retire into Caves under the Rocks. The Natives ſometimes ſhoot them, and at other Times catch them with Nets and Dogs, who being trained to it, ſwim to them againſt the Wind, that the Seals may not ſmell them, and catching them

Digitized by Google

them fast by the Throat, hold them till their Masters come up and kill them. The other Way of taking them, is by going in with Boats to the Mouth of the Caves, where they bring forth their Young, and rowing in as far as they can, leap out, some carrying Candles to see where they lie, and others with Clubs kill Hundreds of old and young, but not without Danger from the old He-ones, and likewise from the Waves. When they kill them, they hale them out, eat their Flesh, melt Part of their Fat into Train-Oil, salt up Part of it for Food, and make Shoes, *&c.* of their Skins.

Their Whales are of several Sorts; one is called a *Grind Whale*, because of Marks upon them resembling Grates. The biggest is not above 5 Ells long, and the young ones an Ell and a half: They come in great Numbers under the Land when the Weather is dark or foggy. When any Fishermen see them, they make Signs to all the other Boats, who come presently together, and drive them in towards the Land, by shouting and throwing Stones at them. They send a Man ashore at the same time, to give Notice to the People by making a Fire, who come with their Boats from all the Islands to the Place where they see the Fire or Smoak; and bringing their Whale-Spears with them, drive the Whales to an Inlet or Creek, where there are good Whale-Banks or Flat-Sands, and there kill them. The Boats divide themselves into two Companies, one of which attacks them, and the other draws up in Form of a Half-Moon, to prevent their Escape to Sea; and other People with Whale-Spears on the Shore wade in as far as they can, and help to kill them. Sometimes they break or overturn the Boats with their Tails, by which Men are now and then lost, and many of the Whales escape. When they have killed as many as they can, they hale them on Shore. The Tythe is first taken, then one is allow'd to him that first saw them, and the rest is divided into two Parts, one for those that took them, and the other for the Owner of the Land where they are taken. Sometimes they are brought in with the Tide, and run on the Sands in a dark Night, where the People find 'em in the Morning.

The Inhabitants melt Part of the Fat into Train Oil, and salt up the rest for Bacon, with a black Salt made of the Ashes of burnt Sea-Weeds, which preserves it very well, so that it is scarce to be discerned from Bacon. Other Part of the Fat they use instead of Butter. The Flesh, when dry and fresh, resembles Beef: Part of it they cut into long Pieces, and dry in the Wind. Foreigners pickle part of the Tail, which tasts like Neats-Feet, and therefore the Inhabitants call those Whales *Sea Kine*. *Jacobson* mentions a Creature called a *Sea-Dog*, which sometimes drives those Whales ashore. His upper Parts above Water resemble those of a large rough Spaniel. There is another Sort called *Doglins*, about 7 or 8 Ells long, and 2 Ells broad where thickest. A small Number of them come every Year into a Haven in *Suderoe*, where the Fishermen drive them into an Inlet if the Weather be boisterous; but if it be calm, they are so tame, that they suffer the Fishermen to come up to them, and fasten a Rope through the Fat of one of their Eye-lids, by which they hale them ashore, and kill them with Whale-Spears. They are not so good Meat as the other, and if one eat of their Fat, it not only pierces the Pores of their Body, but their Clothes, makes 'em look yellow, and to smell strong. They have other Whales, called the *Roar* and *Witch* Whale, which being large and dangerous, the Inhabitants dare not meddle with them, for they play about the Boats, and sometimes rise under and overturn 'em: To prevent which, the Natives bore a Hole in the Head of their Boat, put *Castoreum* into it, and stop it up. Others inclose it in a Piece of Wood fasten'd to a Fish-Bone, and if they throw that Piece of Wood upon any of those Whales, or if they do but smell the *Castoreum*, they sink immediately. Our Author says, he knows by Experience, that Men, who could swim very well, have immediately sunk when they had *Castoreum* about them, and quotes *Bartolinus's Centuries of Anatomical History*, *Cent.* 2. *Hist.* 17. to confirm it. He adds, That the Inhabitants say Juniper Wood performs the same thing; and he is of Opinion, That *Asa-Fœtida*, and other Things made use of to expel the dead *Fœtus*, will have the same Effect. But the Truth of

Digitized by Google

these Things, and of the Appearance of a Mermaid on those Coasts, in such a Form as we usually paint 'em, must be submitted to the Readers Judgment; for tho' our Author writes with an Air of Probity, he seems in many Things to be too credulous.

Of the Time of Peopling those Islands.

Jacobson says, from *Sturleson's Chronicle* of *Norway*, That they were first inhabited about 868, by People that fled from *Norway* in the Time of *Harald Pulchricomus*, who first reduced all the little Princes of *Norway*, and brought that Country under one Monarch. He thinks that *Jempteland*, *Island*, *Orkney*, and *Schetland*, were planted about that Time by others who fled on the same Account. These Islands were said to have been first discover'd by a Pirate of *Norway*; but there is no certain Account to be had of those Things, because their Publick Papers were carried away by Pirates above a hundred Years ago. Authors differ about the Etymology of the Name; but *Jacobson* thinks they were called *Feroese*, from the Word *Feroier*, which, in their Language, signifies Ferries: This is not improbable, because of the many Streams betwixt the Islands, which they are constantly oblig'd to ferry over.

He says, That the chief Men from *Norway* divided the Islands betwixt themselves and their Followers, who became their Tenants. Their Government was at first a Sort of Aristocracy, under their Leaders and their Successors. Many of the People say their Fore-Fathers had great Estates, but there is no such Thing now; for some were afterwards divided among the Children of the Chief Men, others were forfeited when the Islands were reduc'd by the Kings of *Norway*, and Part were given to Churchmen, according to the Superstition of the Times, for Pardons and Dispensations to eat Flesh in *Lent*; from which the People could not well abstain, because their other Provisions were short; and all those at the Reformation were annex'd to the Crown, so that now the King of *Denmark* is Proprietor of most of the Country. And the Lands reserv'd by the Owners are divided into such small Parcels by their Heirs, that the Freeholders are much poorer than the King's Farmers.

There's no History of the Succession of their first Chiefs; but 3 or 4 of them seem to have been the principal Ru'ers, and contending for the Superiority, were guilty of many Oppressions, which made it easy for the King of *Norway* to reduce them. The first was *Olaf Haraldson*, call'd the *Holy*, who by fair Promises procur'd their Submission; but taxing them high afterwards, they revolted. He brought the Chief of them again to Submission by Presents; yet they killed those who came to demand his Tribute. Thus they liv'd independent till about *A. C.* 1100, in the Time of King *Sigurd*, called the *Hierosolimite*, when they had Bishops and Governors planted amongst them. Since that Time, some of the chief Men of *Feroe* have been employed by the Kings of *Norway*, and called to their Assemblies of States. When *Norway* came under the Crown of *Denmark*, those Isles did the like. Their Records being lost, as before mention'd, there's no History of any remarkable Actions perform'd by the Inhabitants, except a few, of which *Jacobson* gives a Romantick Account. The chief, of whom there is any Certainty, is, *Magnus Heinson*, a great Sea-Captain, who performed many brave Exploits in the Reigns of *Frederick* II. and *Christian* IV. of *Denmark*. In the Time of the latter he was executed, upon a false Accusation by some that envy'd him; but his Innocence appearing afterwards, he had Justice done to his Memory, and in 1590 his Corps was taken up, buried with great State, and a pompous Epitaph put on his Tomb

These Islands are frequently invaded by Pirates of all Nations; but *Christian* IV. built a Fort at *Thorshaven* for the Defence of that, which is their chief Town.

Their Manners and Customs.

Jacobson says, They are humble, civil, courteous to Strangers, whom they entertain *gratis*, and allow 'em Carriages from Place to Place; but are troubled with few of them. They are charitable to the Poor, tho'

Digitized by Google

tho' there is no great Inequality among 'em as to Riches, which consist chiefly in Cattle. They generally make no further Provision than for their present Necessities, and think that every Year will bring Provisions for it self. There's scarcely any Theft among 'em, but when the poorer Sort steal now and then some Food, or a Pewter Spoon, which they melt down into Iler-Rings for Women's Bodice; but they will not meddle with Silver or Gold, because they know not how to alter the Form of it.

They are temperate in their Diet, and keep their Beer to treat their Guests and their Ministers; but at *Christmas* they are pretty jovial. None but the poorer Sort are given to Excess in Brandy. Their Diet is frugal, without Bread, Beer, or Salt, for most part; but according to the Season of the Year, they live upon Flesh, Milk, Fish, and Gruel. They dry their Flesh and Fish by hanging them in Wind-houses, made up of Half-Dales, 2 Inches from one another, that the Wind may go through 'em; and their Fish thus prepared are transported to other Countries. They salt some Flesh which they dry in the same manner, and eat when 'tis a Year old: 'Tis pretty savory, but hard of Digestion. They are not very nice in their Cookery, for they boil their dry'd Meat in Water, and put a little Barley-Meal in the Broth, with some of the Fat that drops from the Flesh as it dries, which makes it when cold like Pease-Pottage, in which they put a little Vinegar; or when they have not Flesh enough, a little preserv'd Tallow, which they boil in the Pottage.

They preserve their Tallow thus: When 'tis fresh, they roll it in little Pieces, and let it rot a little; then they cut it small, half melt it, and cast it out afterwards into great Pieces of 36 Pound each, which they put in Holes dug in the Ground, to keep it moist, where the longer 'tis kept, 'tis the better; and when 'tis old, it cuts and tasts like old Cheese. They prepare this every Year, and use it instead of Butter. The Quantities of it are according to their Number of Cattle. This they call their hidden Treasure, because the Pyrates do not know where to find it. The poorer Sort use the Fat of Whales instead of it.

They are frugal in House-keeping, give certain Portions of Meat to their Servants. Their Men have twice as much as their Maids, and they prescribe them their Work accordingly. Every Morning they weigh out two Pound of Wool for them to spin and knit that same Day into a Pair of coarse Stockings, and weigh their Work against Night. This is Part of the Goods they export. Their Clothes are always of coarse Flannel, and of one Fashion; but they have a finer Sort for Church and Market. Their Coats are short and wide, and they seldom wear Linen. The Women's Clothes are all of one Fashion for Rich and Poor, being Bodice and Petticoats sew'd together without Skirts; but their Petticoats are plaited. They have Cloth for Holidays, and chiefly affect a dark blue Colour, and some red. They have Fringes at the Ends of their Sleeves, and the richer Sort have black Velvet sew'd on red Cloth for their Trimming. They wear large Stomachers, adorn'd with Silk Fringes, Ribbons or Lace, on the upper Part, and under their Chin. Through the Stomacher they thrust a little Piece of Silver-gilt, of an oblong square Form, with Buckles and gilt thin gingling Plates hanging at it. The poorer Sort have 'em of Copper, and Girdles of the same. The Maids go bare-headed, with their Hair plaited, and the married Women wear red knit round Caps, much like the *Scots* Bonnets. The Women's Shoes are of Sheep-Skins, and the Men's of Neats Leather tann'd. They have but one Sole, are a little sew'd together about the Toes and Heels, which they fasten with Strings behind, and tie them above the Ancle.

Their Bedding is Hay, with a little Flannel spread over it. They all make their own Clothes, are fit enough for such Handycrafts as they need, and make Boats much better than those of *Norway*. The Women, besides coarse Flannels, weave much fine Bed-Clothes of several Colours, fine Stockings, and Woollen Waistcoats, and dye all themselves. They have a sort of Red which they call a Cork Colour, that none else can imitate. They are not inclin'd to unprofitable Pastimes; but at their Weddings, and at *Christmas*, use plain Dances, holding one another by the Hand, and singing Ballads in Praise of their Cham-

pions

Digitized by Google

pions. On Holidays they ſing Pſalms, and at vacant Hours play at Chels, wherein both Sexes are expert. They are naturally inclin'd to obſerve the Stars, eſpecially *Bootes*, by which they know the Hours in Winter Mornings to direct them in their Work. They know the Courſe of the Moon by the Increaſe and Decreaſe of the Sea, and by this compute their Fix'd and Moveable Feaſts very exactly. Their Language is that of *Norway*, mix'd with *Daniſh*; but the S. and N. Iſles differ in Dialect. They live long, *viz.* to 80, 90, and ſome of them to above 100 Years of Age. *Jacobſon* inſtances in one *Eraſmus Magnuſon*, who at 90 married a young Woman, by whom he had 5 Children, and liv'd till 110. To obviate Suſpicion of her being unchaſt, he tells us ſhe had always a good Reputation, and that the Man was of a vigorous Conſtitution.

Of their GOVERNMENT.

IT relates chiefly to the Adminiſtration of Juſtice, Regulation of Trade, and Proviſion for the Poor. Their chief Governors were the King's Bayliffs; but now ſome Perſon of Honour from *Denmark* has uſually that Truſt, and appoints a Deputy, with Sheriffs under him, to take Care of Juſtice and Trade. The Iſlands are divided into 6 Diſtricts, with a Sheriff in each, who determines ſmall Cauſes; but great ones are referred to the Court called the *Seſſion*, which is kept at *Thorſhaven* in *Stromoe* once a Year, where the Governor's Deputy preſides. They have alſo a Yearly Synod of the Clergy, who, with their Provoſt, meet at the ſame Place, and determine Church-Cauſes. The Deputy alſo preſides in this Court. They have alſo a Spring Seſſion in every Diſtrict once a Year, where the Deputy alſo preſides, aſſiſted by the 6 Sheriffs, and a Sworn Recorder. Cauſes are determin'd here by the Provincial Judge, with 6 Sworn Men for every Diviſion, and a Recorder, who regiſters what's done. The Clergy do alſo attend, for they preach and ſing Pſalms in the Forenoon, and keep the Court in the Afternoon. The firſt Day of the Seſſion the Clergy are called in, becauſe what relates to the Publick is then conſider'd. Private Cauſes are determined the following Days, and at the End of the Seſſion the Clergy is call'd again, to know if any publick Matter remain to be conſider'd, and if not, the Court is diſſolv'd; the Provincial Judge aſſuring the People of his Majeſty's Protection, if they pay their Tribute, to which they give Conſent by clapping their Hands; and in the Evening the Court and the Clergy make merry in the Seſſions-Houſe, by drinking the King's Health, *&c.* with a ſet Speech, ſing a ſhort Latin Hymn alternately, drink one anothers Health, and then break up.

They have a particular Law, call'd *The Sheep Ordinance*, conſiſting of 9 Articles, relating to the Management of their Sheep, and aſcertaining their Property in them, and the Incloſures where they feed. 'Tis very ancient and equitable, and ſhews the Simplicity of thoſe Times: It bears Date in 1040, was granted by *Hagen* Duke of *Norway*, Son to King *Magnus*, and renewed by *Chriſtian* IV. of *Denmark*.

Their TRADE *and* POOR.

THey formerly had trading Veſſels of their own; but being unskilful in Commerce, K. *Frederick* II. appointed a Company to furniſh them with Neceſſaries, and the *Feroe* Men were only to trade with them. The *Hamburghers*, and thoſe of *Bergen* in *Norway*, were formerly allow'd to trade thither. Their Commerce is by bartering one Commodity for another; theirs are Skins, Feathers, Tallow, Train-Oil, Fiſh, and Stockings, of which they tranſport annually 60000 Pair. The King's Revenue is paid in Skins, Butter, and Tallow, and his Farmers have an Inventory of ſo many Sheep and Kine, which are called the King's, and they pay him a certain Rate beſides for their own. The Lands of the other People are divided into ſuch ſmall Parcels, that they can hardly live on them. Their Poor and their Lepers are provided for by a 4th Part of the Tythes, and the Charity of the other Inhabitants; and their Lepers have a particular Place aſſign'd 'em to live in, with Ground for their Cattle. This Diſtemper is occaſion'd by the moiſt Air,

Digitized by Google

Air, and ill Diet of the poorer Sort, which is Flesh or Fish half rotten in the Winter, and Milk and Fresh Fish, without any Salt, in the Summer. The Infection is long before it discovers it self; so that the Unclean frequently marry with those that are not, without knowing themselves to be so. *Jacobson* observes, That some of the Children of those who marry so are infected, and others not; and they seldom separate, till the Magistrates oblige them to it. The sound Person frequently escapes; whereas others of the same Constitution are soon infected by them, after a little Conversation.

Their RELIGION.

CHristianity was planted here by King *Olof Trygeson* about the Year 1000, but made no great Progress for some time; so that they had no Bishops till about 1200, who then had too large Revenues for the Time and Place, and bought the Office of the King of *Norway*. But since the Reformation, they have only had a Provost. Their Congregations are divided into 7 Districts, from 4 to 7 Parishes each, under the Care of one Priest; some of them at four Leagues distance one from another. The Parishes are 39 in all. The Churches are small, built with Dales, and cover'd with Stones on the outside. Their largest Church is at *Thorshaven*, which is built of whole Beams, and has a Steeple. The great distance of the Churches makes it difficult and dangerous for the Priests to perform their Function in the Winter; and those on the remote and little Islands are but ill serv'd, because of the Danger of passing the Streams, and the Clergy's being frequently detained in them by stormy Weather. Their Benefices are from 15 to 30 Gilders each, with a Proportion of Corn, Wool, Butter, and Fish, and a Free House, and one for their Widows. Their best Benefice, with all their Perquisites, is scarce above 100 Gilders *per Annum*; but they make it out with their Glebe and Cattle, and by knitting of Hose, in which they assist their Wives and Servants; and sometimes they have Presents from their Parishioners. They observe, besides the Sabbath, ordinary Holidays, and New Moons, three Days in *Ascension* Week, and three Days in *Michaelmas* Week. Since the Priests cannot always attend their Parishes, they appoint their Hearers to read Homilies, and sing Psalms on Holidays; and one that can read best, to do it in the Church on *Sundays*, for which they have a small Allowance. Tho' Popery prevail'd there as in other Places, yet they still kept the Fundamentals; as appears by a very ancient Hymn in their own Language, which treats of the Fall of Man, of the Corruption of Nature, of Redemption by Christ, of Regeneration, and of our Saviour's Birth, Life and Passion. They seem to have had it from *Iseland*, because there are many Words of that Language in it. By their Diligence in reading the Scriptures, and good Practical Books, they understand Religion better in general than the common People of *Denmark*, and have many of the Psalms and *Luther's* Catechism, with a short Explanation of it, by Heart. The Business of the Provost is to visit the Churches, and preach in 'em by Turns. They have but one School, which is at *Thorshaven*, where they learn to read and write; and those design'd for the Ministry, are taught Latin. The Priest of that Place is their Master, for which he has 70 Gilders *per Annum* from the King; and some of their Students are allow'd their Diet *gratis* in the University of *Copenhagen*, where they are bred up for Clergymen. *Jacobson* says, they were formerly much troubled with Spectres and Apparitions of several Sorts, from which they are not yet free. He gives an Account of several Persons who have been carried away for some Time by Evil Spirits to inaccessible Places, from whence they have come down again without any Hurt, and others of them have been killed. In such Cases their Relations have Recourse to Prayer, by which they are frequently recover'd. These Things he relates on his own Knowledge. He gives one remarkable Instance which happen'd in 1667, to one *Jacob Olufson*, in the 24th Year of his Age, who being sick a Bed, there appear'd one to him in shining Clothes, which filled the Room full of Light. He saluted the young Man, stroak'd him with his Hand, remov'd his Pains, and taught

Digitized by Google

taught him a certain Prayer, which he enjoin'd him to say three times a Day, and to teach the Country-People to do the like, in order to remove the Judgments which threaten'd them. He commanded him the first time he came to Church to kneel down on the Threshold, turn his Face from the Church, say that Prayer, and to teach the People to do the same with join'd Hands, and bow'd Knees, and to admonish them to forbear Cursing, Swearing, *&c.* and then vanish'd through the Roof. Upon this the young Man recover'd; and in 5 Days after it appear'd to him again, as coming down from the Sky in a Priest's Habit, red and white, with a red Cross on his Back, bid him not doubt but he came from God, and vanish'd. He appear'd to him a 3d time as he was a Bed, ask'd him, If he had spread abroad what he commanded him, and if he had seen any Signs in the Heavens? The young Man answer'd, No: But that others had seen two Suns, which the Apparition told him was a Sign they should begin to keep the *Sabbath* from *Saturday* at 12 in the Afternoon; and that when they went to Sea, they should sing the 23d *Psalm*, and vanish'd again. He appear'd to him a 4th time, told him he was St. *John*, who lay on our Saviour's Bosom at the Lord's Supper, and then vanish'd. He appear'd to him a 5th time: And these Things becoming public, and the young Man being of a good Conversation, many People were seduc'd, gave out that they had seen the like Visions, were disobedient to their Ministers, and not at all reform'd in their Lives. Upon this *Jacobsin*, the Provost, examin'd the young Man, sent Copies of his Confession about the Country, and order'd the Clergy to read it from their Pulpits, with his Censure upon it, and to exhort the People to seek no other Way of Worship but what was contained in the Word of God, and according to the Direction of the Civil Magistrate. The Provost, in his Explanation of the Catechism, did likewise take Care to fortify the People against such Delusions; and the next Year, that young Man being tempted to Fornication by the unclean Spirit, the Provost gave Notice of it, and of the Disturbances he had rais'd, to the Archbishop of *Zeeland*, who, according to the King's Order, commanded the said Person to be admonish'd, from the Word of God, of his Errors, and to be absolved from Censure if penitent; which was accordingly done: And thus an End was put to those Delusions. We have been the more particular in this, because of the Resemblance it bears to what has lately happened to those called *Camisars*, or *French* Prophets, here in *England*.

CHAP. XXII.

ICELAND.

WE gave a brief Account of this Country before, among other Places that lie near the North Pole; but ſince 'tis Part of the *Daniſh* Dominions, we ſhall give a further Account of it here.

As to its Situation, the Maſters of the Royal Fiſhery diſcover'd *Fournier's* Miſtake, who plac'd it from Lat. 64. to Lat. 68. and found by Obſervations, That its true Lat. is from 64 Deg. 25 Min. to 66 Deg. 5 Min. This they prove by Experience; for they found, that on the 11th of *December*, the Sun was above the Horizon in the moſt Northerly Places, which could not be, if the Lat. were 66 and ½. for the Sun is then in the Tropic of *Capricorn*, 90 Deg. from the Zenith of thoſe in that Lat. and muſt by Conſequence be under their Horizon that Day.

In the N. Part of this Iſland, while the Sun is in *Gemini* and *Cancer*, it never goes entirely below the Horizon for two Months, and one half remains above the ſame during the longeſt Days, from 10 at Night till 2 in the Morning, when it riſes quite above the Horizon; and about the Winter Solſtice, while the Sun is in *Sagittary* and *Capricorn*, the Nights are as long as the Days are in Summer. M. *De la Motte de Veyer*, in his Letter from *Copenhagen*, *December* 18, 1644. to M. *la Peyrere*, from the Authority of *Angrim Jonas*; Dr. *Wormius* and *Bleſkenius* gives this following Account: That 'twas formerly reputed fertile in Wheat, but now has none: That 'twas ſaid to be well ſtor'd with Wood for building Ships; whereas now there is nothing but low Shrubs; thô Roots of a vaſt Bulk are ſtill dug up in the Places where thoſe Foreſts are ſaid to have been, and the Timber of 'em is as black as Ebony. Their Firing is Turf, and vaſt Trunks of Trees are frequently brought thither on Shoals of Ice from the North, which helps them both for Building and Fewel; and when that Seaſon of the Year comes, the Inhabitants flock to the Shore in queſt of thoſe Shoales, which bring 'em not only Trees, but Stags, Foxes of ſeveral Sorts, Bears, Wolves, and what they call Unicorns. The Country is ſtrong and Mountainous, and that Foreigners tranſport and dry it to lay among their Clothes; yet their Beef is not good, and their Mutton rank; but they dry them in the Sun and Wind, which takes off the ill Taſt. They have abundance of clear and wholeſome Springs, ſome of which are nouriſhing like Beer. They have alſo Ponds and Lakes full of Fiſh, many Brooks and navigable Rivers. *Bleſkenius* mentions a Lake in the W. Part, which always ſmoaks, and yet is ſo cold, that it petrifies every thing put into it. What's ſtuck in the Ground, turns into Iron, ſo far as 'tis under Ground: That Part which is in the Water, turns into Stone; and the Part above Water, continues Wood. *Bleſkenius* ſays, he ſaw this tried, and that the Part which ſeemed to be Iron, when put into the Fire, burnt like Charcoal. He adds, That there's a Lake in the middle of the Iſland, the Exhalations of which kill Birds that fly over it. They have Springs ſo hot, that the Water burns one's Skin, and when ſet to cool, has a Sulphur

Digitized by Google

on its Surface. Near ſome of thoſe hot Fountains, there are very cold Springs, the Water of which being mix'd together in one Baſon by means of Pipes, make excellent Baths. *Bleſkenius* mentions another Spring, the Water of which taſts like Whear, and is excellent againſt the Venereal Diſtemper. They have no Minerals but Brimſtone, with which they abound, eſpecially in Mount *Hecla*, which not only ſends forth Flames, but alſo Torrents of Sulphureous Liquor that burn like Spirit of Wine, and thoſe Eruptions are commonly follow'd by vaſt Quantities of black Aſhes and Stones. The Iſlanders fancy they ſee Troops of Infernal Spirits carrying damn'd Souls thither, eſpecially after a Battle any where; and they take the Noiſe of the Shoals of Ice daſh'd againſt the Shore to be the Groans of Souls damn'd to exceſſive Cold, as thoſe carried to Mount *Hecla* are condemn'd to exceſſive Heat.

Their TRADE

CONſiſts in bartering one Commodity for another, *viz.* their own Product, which is Dry'd Fiſh, Butter, Tallow, Coarſe Woollen Cloth, Brimſtone, Foxes, Bears, Stags, and Wolves Skins, for Flower, Beer, Wine, Strong-Waters, Iron, Woollen and Linen Cloths. The *Germans*, when they arrive, ſet up their Tents, wherein they exchange Cloths and Toys for the *Iceland* Commodities. *Bleſkenius* reflects upon their young Women, and ſays, they proſtitute themſelves to Strangers for Trifles; but *Angrim Jonas* contradicts him in this, and alſo in the Story of their Sorcery and ſelling of Wind, which, according to him, is only their fore-knowledge of the Weather from the Diſpoſition of the Air, which if they find ſuitable to Strangers that are ready to ſail, they prerend to ſell to 'em by tying Knots in their Handkerchiefs, and muttering certain Words; but they fail in their Conjectures that Way more frequently than they hit.

Their ancient Religion, Government, Learning, &c.

EVery Diviſion of the Country had three chief Temples for Adminiſtration of Juſtice and Devotion, and a Bayliff called *Godorp*, *i. e.* Divine, to take Care of the Poor, and hinder their going into other Diſtricts, or being Licentious. They had Power to kill or geld them, to prevent their Multiplication, and to baniſh ſuch as married, and had not wherewith to maintain them. It was formerly divided into 4 Provinces, and each Province into ſeveral Diſtricts. They had once *per Annum* an Aſſembly of the Bailiwicks of each Province, which were ſummoned together by the Governor, who ſent ſmall Croſſes of Wood to every Bailiff, which he diſtributed to the Judges, and they to the Maſters of Families; or the Preſident ſent a Wooden Hatch to each of the Governors of the 4 Provinces, as a Sign to call a General Meeting of the States. Their chief Gods, while Pagans, were *Thor* and *Odin*, their *Jupiter* and *Mercury*, to whom they erected Temples and Altars, and ſacrific'd Men, by throwing them down from Rocks, or into deep Pits near their Temples, of which they had two chief ones at *Hole* and *Schalholt*, two Villages, where now they have their Biſhopricks. They decided all Controverſies by Duels, wherein the Vanquiſh'd, or he that refus'd the Challenge, loſt his Claim; and the Heirs of the Conquer'd had no other Remedy but to bring a large Bull or Ox to the Conqueror, which he was to kill with one Stroke; and if he fail'd, he loſt his Pretenſions.

They were ſo careful in their Annals, that they not only preſerv'd their own Hiſtory, but that of other Nations, according to *Angrim Jonas* and Dr. *Wormius*. They wrote their Hiſtories in Verſe, and their Poets were accounted Inſpired; or, in plain *Engliſh*, Sorcerers. Dr. *Wormius* gives us a ſtrange Inſtance of it, thus; When he was Vice-

Digitized by Google

Vice-Chancellor of the Univerſity of *Copenhagen*, an *Iceland* Student complain'd to him againſt one of his Countrymen, for writing a Satyr upon him that would ruin him, who being examin'd by the Doctor, and threaten'd to be puniſh'd as a Sorcerer, confeſſed that there was Witchcraft in it, tore it, and was reconcil'd to his Fellow-Student.

This People was anciently much addicted to Fables, of which they have a Mythology, called *Edda Iſlandorum*, that gives an Account of their fooliſh Opinions about the Creation, their ancient Hiſtory, *&c.*

They have no Towns, and indeed ſcarce Villages, for they build their Houſes at a great Diſtance from one another, for fear of Fire; and having no Roads, they travel by the Compaſs. Their Houſes are low, built of Wood, and ſometimes half under Ground, becauſe of the high Winds. They have no Window, but a Hole at Top, and are cover'd with Turf or Bark. They generally dwell near the Shore or Rivers, for the Conveniency of Fiſhing or Paſture; ſo that the Inland Country is almoſt deſert.

They have a Grammar-School, and a Preſs at *Hole*, where they print the Bible; but Paper is very dear there. The Inhabitants are great Players at Cheſs, and make their Men very curiouſly of Fiſh-Bones. Their Language is the pureſt Dialect of the *Runick* now extant. In their Chronicles, they deduce their Origine from the *Aſiatick* Prince *Odin*, formerly mentioned, and are as romantick in the Accounts of their Antiquities as other Northern People. By ſome it has been accounted the *Thule* of the Ancients.

Dr. *Paul Biornimi*, who reſided here, ſays, their Air is healthful, but ſoon ruſts Iron; that their Chronical Diſeaſes are the Cholick and Leproſy; and that they have no Phyſicians, but ſome Chirurgeons.

Their Weather is uncertain, and not always according to the Seaſon; for ſometimes they have Hail and Snow in the middle of Summer, with furious Winds. The Froſt does not penetrate above 4 Foot into the Earth in the Winter; ſo that Oil and Spirits of Wine don't freeze here.

The Doctor ſays, the Meteors he obſerv'd in this Country were the *Draco Volans*, and two Mock-Suns, with three Rainbows paſſing through them, and the true Sun.

The Sea flows about the Riſing and Setting of the Moon, and ebbs when ſhe is S. or N. In Autumn, the Tides riſe 20 Foot; but at other Times not above 16; and the greateſt Depth about the Coaſts is 80 Fathom. The Declination of the Compaſs here is to the N. W.

The Soil, as we find in our *Philoſoph. Tranſactions*, N° 3. is for moſt part Clay, and in ſome Places ſandy; but they have no Tillage. They have many ſorts of Birds in Summer, and in Winter Ravens, Wild-Ducks, and Swans. Their Horſe and Sheep live in Winter upon what Graſs they can ſcrape from under the Snow, and the Coraline Moſs, called *Muſcus Marinus*.

The Bread of the Inhabitants is Cod-Fiſh ground into Powder, and bak'd. Of this Fiſh they have two Sorts, one called *Stock-Fiſh*, or *Haberdine*, which they dry in the Wind, and heap up in great Poles, the other is *Huckettle*, a very large Fiſh, that yields abundance of Livers, of which the Inhabitants make Oil for their Lamps.

The chief Employment of the Inhabitants is Fiſhing, and making a coarſe Sort of Cloth of their Sheeps-Wool, or rather Hair. They make their Breeches, Boots, and Stockings, of Sheep-Skins, and their Shoes of Seal-Skins. They are infeſted with Eagles, that ſometimes carry off their Children; to prevent which, they put Collars of Bells about their Necks, the Noiſe of which frightens the Eagles, or gives them Notice when the Children are attack'd.

The King's Revenue is rais'd in Fleſh, Oil, Fiſh, coarſe Cloth, and Brimſtone, for which he ſends about 8 Ships every Year, who carry them Neceſſaries in Exchange for their Commodities. They are not allow'd to trade with any other People; yet the *Dutch* fiſh in their Harbours for Grampuſſes and *Du Barta'e*, a Baſtard-kind of Whale.

Digitized by Google

What we have to add concerning Mount *Hecla*, is, That it ſometimes throws out ſcalding Water, and Pummice-Stones ſo big, that 10 Men are not able to move them. *Angrim Jonas* ſays, That it throws out Aſhes ſome Hundreds of Miles, and that they are found ſometimes in *Norway*. The Springs that riſe in thoſe Sulphureous Grounds are ſo hot, that (according to thoſe Authors) the Stream of them will boil Beef hung over them in Kettles full of cold Water.

CHAP. XXIII.

GERMANY.

CLuverius, in the *Proemium* to his *Germania Antiqua*, gives us an Account how much of this Country was known to the ancient *Greeks* and *Romans*. He vindicates *Tacitus*, who is charg'd by ſome *Germans* to have writ many falſe Things concerning it, and owns, that they are obliged to him alone for the beſt Account of their Antiquity; without which, little of the ancient Writers could be underſtood. He takes Notice, That *Livy*, *Aſinius Quadratus*, and *Caius Plinius*, wrote much of *Germany*; but their Books are loſt, and tho' they were not, *Tacitus* being later, is much more exact.

He confutes thoſe who in their Commentaries on *Tacitus* think that he ſerv'd in *Germany* under *Flavius Veſpaſian*, and that he had ſeen the Eaſt Sea; and ſhews, that what he ſpeaks in the Places they quote, is meant of the *Romans* in general.

He afterwards ſhews from good Authorities, That the *Romans* might have a very exact Knowledge of all *Germany* in *Tacitus*'s Time, for they had carried their Arms thro' all the Country betwixt the *Rhine*, the *Elb*, the *Sale*, and the *Danube*; and for what was beyond the *Elb*, they might eaſily know it from the Inhabitants, among whom they had Gariſons; and they had the like Opportunity to know the Country by their Gariſons as far as the Confines of the *Daci* and *Sarmatæ*; and for that Part betwixt the *Elb*, the *Danube*, and the *Weiſſel*, and the *Sinus Cadanus*, now the Eaſt Sea, they might know it from *Marobodus*, the King of thoſe Parts in the Time of *Auguſtus* and *Tiberius*, who was 18 Years an Exile at *Ravenna* in *Italy*. He mentions other Opportunities that the *Romans* had to know thoſe Countries, by the Ambaſſadors which came to *Auguſtus* from the *Cherſoneſus Cimbrica*, &c. In *Nero*'s Reign, a *German* Knight was ſent for Amber to the Mouth of the *Weiſſel*, and the Shores of the *Æſtii*, now called the *Pruſſians*; the People of which Country, and the *Gothones*, not only uſed to bring Amber to *Pannonia*, and the Borders of *Italy*, in the Time of *Pliny* and *Tacitus*, but much more anciently, *viz.* in the Time of *Herodotus*. As to the Countries further N. in *Sweden*, *Norway*, *Finmark*, *Lapland*, and *Finland*, they were not only deſcribed by *Pytheas*, *Xenophon*, *Lampaſenus*, and others of the oldeſt *Greek* Writers, but diſcovered by the *Romans* in the Time of their firſt Emperors, as appears by *Tacitus* and *Pliny*. From all which he infers, That *Tacitus* had a very exact Knowledge of *Germany*, and juſtifies

Digitized by Google

juſtifies the Deſcription given of it in his Book. This he ſays is the peculiar Glory of the *Germans*, That they have an Account of their Antiquity and Progenitors by one who was a *Roman* Knight, had been honoured with many great Poſts, and was a grave, learned, and careful Author, who wrote his Book in the Beginning of *Trajan*'s Reign, about 100 Years after our Saviour's Birth.

Cluverius divides his Work into 3 Parts. The firſt gives an Account of the Situation of ancient *Germany*, with the Origine and Manners of the People: The 2d treats of *Germany* on this Side the *Rhine*; and the 3d of that Part beyond it. He makes uſe of the *Roman* Miles for his Dimenſions, and reduces the *Greek* Stadia into that Meaſure; upon which he has a learned Diſſertation.

For the better underſtanding of what he ſays, he tells us, that he follows the *Roman* Cuſtom, who call'd that Part of the Country on our Left Hand as we come down the *Rhine*, *Cis-Rhenana*, and that on the Right *Trans-Rhenana*.

In his 2d Chapter, he informs us, That the Ancients called the *Germans*, *Gauls*, *Spaniards*, and *Britains*, by the Name of *Celto-Scytha*, and ſome extended the Name as far as the River *Oby*, which ſeparates *Aſia* and *Europe*.

In his 3d Chapter, he confutes *Bodin*, who alledges, That the Name of *Celtica* was peculiar to *Gaul*; That the *Gauls* came from the *Greeks*, and the *Germans* from the *Gauls*. He takes Notice likewiſe of other falſe Opinions about the Origine of the *Germans*.

In his 4th Chapter, he alledges, That *Aſchenaz*, *Noah*'s Grandſon, with his Poſterity, Peopled *Celtica* after the Deluge, *viz.* *Illyricum*, *Germany*, *Gaul*, *Spain*, and the *Britiſh* Iſlands; and this he endeavours to prove from *Geneſis*, and the Authority of *Joſephus*, and other *Jews*: But this is juſtly exploded by the learned Dr. *Nicholſon*, now Lord Biſhop of *Carliſle*, in his Account of *Germany* in *Pitt*'s Atlas; and he thinks this Miſtake proceeded from the Miſunderſtanding of an ancient Tradition in the Northern Countries, That theſe Parts of the World were peopled by *Ar* and his Poſterity, by which the Doctor thinks the Ancients meant no more, but that their Anceſtors were brought into *Europe* by ſome great *Aſian* Captain.

Cluverius, in his 5th Chapter, ſays, The *Illyrians*, *Germans*, *Gauls*, *Spaniards*, and *Britains*, had all one Language, and differ'd only in Dialect, which he urges as an Argument that they were all of the ſame Origine. We refer the Curious to the Book it ſelf for his Authorities.

In his 6th Chapter, he endeavours to prove the Identity of their Language by the Names of the People, and the proper Names of Perſons.

In his 7th Chapter, he attempts the ſame from their Agreement in the Names of their Towns and Villages.

In the 8th Chapter, he urges it further from their Agreement in the Names of Things, which are ſtill retained in the *German* Tongue; and on this Occaſion he treats of the Antiquity of the *German* or *Celtick* Language, which he thinks to be one of thoſe that had their Origine at the Confuſion of *Babel*, and explodes the Opinion of ſuch as would derive this and all other Languages from the *Hebrew*.

In his 9th Chapter, he treats of the Name of *Celtæ*, and of the Diviſion of ancient *Celtica* into the Names of *Spaniards*, *Gauls*, *Britains*, *Illyrians*, and *Theutiſci*, and likewiſe of the true Origine of the Nation, and of the Name of the *Theutiſci*, where he ſhews that *Germany* is a Foreign Word, and was not uſed by the ancient Natives, but invented by the *Gauls*, and given to ſuch of the *Celtæ* as firſt paſſed the *Rhine* into their Country.

He next enquires into the Origine of the Name of *Deutſchen*, or *Teutſchen*, which ſome derive from their ancient God called *Tuiſto*, mentioned by *Tacitus*, whom the ancient *Germans* fancied to have ſprung from the Ground, and with his Son *Mon* to have founded their Nation. He confutes the Opinion of thoſe who think that *Tuiſto* is derived from *Aſchenaz*, and takes Notice, That moſt of his Countrymen derive the Name from *Teuto*, a King or great Man, who commanded their Anceſtors; and after a long and learned Diſſertation, he thinks that by *Theut* they meant GOD, the firſt Creator of all Things, becauſe of the Affinity it has with the Word ΘΕΤΟ, which

was

was made uſe of by the *Egyptians*, and the ancient *Celtæ*, who derive their Origine from them, and call their God *Mercury* by this Name. Here he takes Notice, That ΘΕΟC was the common Name which all Nations gave to the Creator, but was differently pronounc'd according to their ſeveral Idioms; ſome calling it ΘΕΟC, others ΣΕΟC, Ζεὺς, and Δεὺς, from whence the Latin *Deus*; and the ancient *Germans* having ſome Knowledge of the Creation by Tradition, and of the Formation of *Adam* from the Earth, who in their Language, as well as in that of the *Egyptians*, was called *Man*. He takes him to be meant by the old *German* God *Mannus*, whom the Ignorance of Poſterity confounded with the Creator. He is not without Suſpicion however, that *Tacitus* may have miſunderſtood the old *German* Songs and Traditions about thoſe Things. He is in doubt about the Origine of the Word *Celtæ*, and thinks it might ſignify the ſame Thing after the Diſperſion at *Babylon*, as *Aſchenaz* did before it; but Dr. *Nicholſon* well obſerves, That *Verſtegan* derives it from the *Greek* Word Κέλητες, Light Horſemen; and that *Celt* in *Welch*, a Dialect of the *Celtic*, ſignifies God, which he thinks as good a Derivation as that of *Cluverius*, who derives *Goth* from *God*, and *Teutſch* from *Teut* or *Theut*; ſo that nothing can be determined from thoſe Etymologies.

In his 10th Chapter, he ſays, thoſe People were by the *Gauls* firſt called *Germans*, when they paſſed the *Rhine* about the Year of the World 3624 into *Gaul*; that the *Romans* learned this Name from the *Gauls*, and the *Greeks* had it from the *Romans*. He confutes thoſe, who ſay the *Germans* in general were anciently called *Gauls*, and the *Gauls Germans*; but owns, that thoſe who inhabited that Side of the *Rhine* next to *France*, were promiſcuouſly called *Germans* and *Gauls*.

In his 11th Chapter, he treats of the Extent of ancient *Germany*, and of its Boundaries; and aſſerts, that it was larger than all the other Parts of *Celtica* together. He confutes the Error of thoſe, who, following *Ptolomy*, think the Name of *Germany* is much further extended now than 'twas anciently; and prefers the Authority of *Tacitus*, who knew it much better than the *Egyptian* Geographer; and ſays, *Germany* was ſeparated from the *Gauls*, *Rhetii*, and *Pannonii*, by the *Rhine* and *Danube*; from the *Sarmatæ* and *Daci*, by mutual Fear or Mountains; and that the reſt was encompaſſed by the Ocean with great Bays, and vaſt Iſlands: That is, ſays *Cluverius*, *Germany* was ſeparated from the *Gauls* by the *Rhine*; from *Rhætia*, *Noricum*, and *Pannonia*, by the *Danube*; from the *Sarmatæ*, who inhabited *Moſovia*, *Lithuania*, and *Ruſſia Minor*, by mutual Fear, becauſe on that Side it had no certain Boundaries by Rivers or Mountains; but from the *Sarmatæ Jazyges*, who dwelt betwixt the *Danube* and the *Theyſſe*, 'twas ſeparated by thoſe Mountains which *Ptolomy* calls *Sarmatici*, that reach from *Vacia*, a Town in *Hungary* on the Banks of the *Danube*, to the Heads of the Rivers *Granus* and *Vagus*; and from the *Daci*, who dwelt beyond the *Theyſſe*, on the Left Side of the *Danube* in *Tranſilvania*, Part of *Hungary*, and other Countries towards *Pontus*, by the Mountains of *Crapack*; yet *Cluverius* ſays, the *Germans* formerly dwelt beyond thoſe Mountains to the N. and E. as far as the Mouths of the *Danube* and *Pontus*; and towards the N. the Boundary was the Ocean, which encompaſſes *Norway*, *Sweden*, *Finmark*, *Scritofinnia*, *Biarmia*, *Lapland*, and *Finland*, which he undertakes to prove were all Part of ancient *Germany*, and by Conſequence that modern *Germany* is not a third Part ſo large. He ſupports his Opinion by the Authority of *Solinus*, *Cæſar*, *Strabo*, and *Pliny*. He takes Notice, That tho' the *Rhine* was accounted the Weſtern Boundary of *Germany* by moſt Authors, yet *Mela* extends it to the *Alps*, and *Agrippa* the like; but they fell into this Miſtake becauſe thoſe Parts were inhabited by ſome of the *Celtæ*, who were of the ſame Language and Origine with the *Germans*. He takes Notice, That *Agrippa*, when he makes the Length of *Germany* from the Ocean to the *Alps*, including *Rhætia* and *Noricum*, to be only 686 Miles, he underſtands it only of the Continent from Cape *Scagen*; for the reſt of the Country beyond the *Sinus Codanus*, he reckon'd among the Iſles. He adds, That *Ptolomy* might very well call this vaſt Tract of Ground, *Great Germany*, ſince 'twas the largeſt of all the Countries in *Europe*, except *Sarmatia*; but he obſerves, That *Ptolomy* ſeems to have called it ſo, to diſtinguiſh it from

Digitized by Google

from *Leſſer Germany*, on the Side of the *Rhine* next *Gaul*.

The CLIMATE *and* SOIL.

IN his 12th Chapter, he gives us an Account of their Climate and Soil; and in Anſwer to *Tacitus*'s Character of it, That the Soil was rugged, the Air ſharp, and the Country uncultivated, and of an unpleaſant Aſpect; he ſays, That 'twas ſo compar'd with *Greece*, *Italy*, *Spain*, and other Countries under a milder Climate; yet in the more Southerly Parts, about the *Danube*, the Climate is as mild as that of *Italy* about the *Po*. He thinks that *Tacitus* meant it chiefly of thoſe Parts about the Mouth of the *Rhine*, *Ems*, *Weſer*, *Elb*, &c. where the *Romans* had long Wars.

For the Soil, *Tacitus* ſays, That tho' the Face of it differ now and then, yet in general 'tis either cover'd with Woods, or filled with Lakes and Marſhes, is lower towards *Gaul*, and higher (*Verticoſior*, and not *Ventoſior*) towards *Noricum* and *Pannonia*. *Mela* gives much the ſame Account. The Country, ſays he, is full of Rivers, abounds with rugged Mountains, and is for moſt part unpaſſable, becauſe of Woods and Marſhes. *Cluverius* corrects *Tacitus* here, and ſays, according to Truth, That the Country towards *France*, from the Source of the *Danube*, or the Lake of *Conſtance*, to the River *Rora*, is Mountainous enough; and there are likewiſe high Mountains lower towards *Mentz* and *Bonn*, and the Country is more Mountainous where the *Trybochi*, *Sequani*, and *Rauraci*, formerly People of *Gaul*, inhabited, than it is towards *Noricum*. Therefore the Country may more properly be ſaid to be low in *Cleves*, *Gelderland*, thoſe Parts of *Holland* beyond the *Rhine*, *Freezland*, *Weſtphalia*, the Dutchies of *Brunſwick* and *Lunenburg*, the Biſhoprick of *Bremen* and *Magdeburg*, *Holſtein*, *Jutland*, *Mecklenburg*, *Pomerania*, *Brandenburg*, and the *Leſſer Poland* on this Side the *Viſtula*. From hence Southward it grows hilly by degrees, and then riſes into high Mountains. 'Tis not eaſie to find in what Countries the Lakes *Sueſia*, *Meſia*, and *Melſiagus*, ſpoke of by *Mela*, are to be found; but *Cluverius* ſuppoſes it muſt be in *Brezland* and *Weſtphalia*, where there are great Lakes and Marſhes. He thinks at the ſame time, That *Tacitus* and *Mela* did not ſpeak of all *Germany*, but only of that Part betwixt the *Danube*, the *Rhine* and the *Weiſſel*, the *Germán* Sea, and the *Sinus Codanus*, now the *Baltick*.

What *Tacitus* ſays as to its being *Satis ferax*, he takes his Meaning to be, That it was fruitful in Corn, or Things ſow'd; *Satu*, not *Sat ferax*. He alſo corrects the reading in theſe Words, *Ut Pomaria conſerant, & Prata ſepiant, & Hortos rigent*, thus; *Nec enim cum uberitate Soli Labore contendunt, ut Pomaria conſerant, Hortos ſepiant, & Prata rigent*. The Meaning of which he takes to be, That the Country was fruitful enough, had the People underſtood or taken Care to manure it; and when *Tacitus* ſays, it would bear no Fruit-Trees, becauſe of the Coldneſs of the Climate; he proves from his own Words, that it was not meant of Apples, Pears, Nuts, or other Glandiferous Trees, with which the vaſt *Hercinian* Foreſt abounded, but of Olives, Almonds, Vines, Figs, Peaches, Prunes, *&c.* that were plentiful in *Italy*: And even as to Vines, the Induſtry of the modern *Germans* has fully proved the Miſtake; for half that Part of the Country deſcribed by *Ptolemy*, towards the S. produces Wine of ſeveral Sorts, particularly *Rhenish*, which is not only equal to, but preferable to ſome of the Wines of *Italy*; and the like Miſtake is now plain as to other Fruit-Trees which abound in *Germany*. 'Tis evident, that *Tacitus* was in the ſame Miſtake as to their Mines of Gold and Silver; for 'tis commonly known now, that they have many Silver Mines, and Gold was anciently found in the *Rhine*, of which the Pieces called *Rhenish*, *Rhenani*, are a ſufficient Proof; and 'tis known, that there's Gold now found in *Bohemia*, with ſeveral ſorts of Jewels: And whereas *Tacitus* ſays, their Cattle were ſmall, and look'd ill; he owns it to be true as to thoſe Northern Parts in *Weſtphalia*, &c. which were beſt known to the *Roman* Arms; but in the S. Parts it is otherwiſe. And whereas in *Ceſar*'s Time, the *Germans* us'd to buy Horſes from the *Gauls*, the *Germans* in many Countries do now make a great deal of Money by ſelling Horſes to the *French*: And *Cluverius* takes Notice of the Wild-Beaſts and Fowls in their Foreſts, of their

Digitized by Google

their Lakes and Rivers full of Fish, and of their Medicinal Springs and Baths, omitted by *Tacitus*. From all which together, 'tis apparent, That *Germany* abounds with many Things for Luxury, wants nothing that is neceſſary; and for Towns and Buildings, may compare with any other Country in *Europe*, except *Italy*.

Their Habitations, and Way of Removing Annually.

Cluverius, in his 13th Chapter, takes Notice of *Tacitus*'s Miſtake, in ſaying the *Germans* had no Towns, and did not love to dwell contiguous; for *Ceſar* in his Commentaries expreſly mentions their Towns, and 'tis very improbable that they were all deſtroyed after his Death; but he owns, from the Authority of *Velleius Paterculus*, *Dio*, and others, that thoſe Towns were nothing but Villages, and that the firſt great Towns were built there by the *Romans*. He confutes thoſe who, from the Authority of *Ptolomy*, that wrote about 60 Years after *Tacitus*, and mentions 90 Places in *Germany* beyond the *Rhine*, which he calls Πόλεις, or Towns, think they had great Cities in thoſe Days, for *Ammianus Marcellinus* frequently mentions the Wars beyond the *Rhine*; but ſays nothing of any Town, Caſtle or Fort, built by the *Germans*. Upon the whole, he ridicules the Vanity of thoſe who, from *Ptolomy*'s Authority, would maintain the Antiquity of this or that City beyond the *Rhine*; and ſays, there can be nothing in it, except they will own that there were Villages of the ſame Name with thoſe that are now Wall'd Towns. He proves next from *Tacitus* and *Seneca*, That the ancient *Germans* had at firſt no Houſes, but liv'd upon Herbs, and by Hunting, were clad with Skins, lay on the Ground, and hunted with Darts or Spears pointed with Bone for want of Iron, and were accompanied with their Women and Children, who ſhar'd in their Prey. At that Time they had no other Houſes, but under Thickets of Trees, or Boughs twiſted together. Afterwards they form'd a ſort of Villages by ſuch Fountains, Fields and Woods, as they thought fit, where their Habitations were not contiguous, but each Houſe had a ſeparate Space; and hence he obſerves, That the Names of moſt of the *German* Villages and Towns do ſtill end with *Wald*, *Feld*, *Brun*: In *Engliſh*, *Wood*, *Field*, *Burn*, or *Brook*; and to the Names of their Habitations, either the Name of the Proprietor, or the *German* Termination *Heim*, *Haus* or *Hauſen*, was added; in *Engliſh*, *Home* or *Houſe*; and this was common to all the Nations of the *Celtæ*, as appears by the Names of many Towns in *Italy*, *France*, *Spain*, and *Great Britain*, tho' the Inflexions be now varied according to the Cuſtom of the Times, as *Bergamo* in *Italy*, *Burgoſo* in *Spain*, &c.

Thoſe Houſes were not built with Stone, Mortar, or Brick, but made of Stakes twiſted with Branches, cover'd with Bark or Leaves, and of a ſquare Form: Of theſe, according to *Herodian*, were their Towns compos'd. The ſame Cuſtom is ſtill obſerv'd by ſuch as live in the Woods of *Bohemia* and *Thuringia*. In *Cæſar*'s Time, we find thoſe Houſes were cover'd with Straw.

Cluverius takes Notice afterwards from *Ceſar*, That they uſed ſuddenly to change their Habitations for want of Proviſion, becauſe they did not till their Ground, nor lay up Corn, but liv'd moſtly upon Cattle, and their Product of Milk and Cheeſe, and laying what Moveables they had in Carts, removed with them eaſily as they pleaſed. They had no Property or fix'd Portions of Land; but their Magiſtrates and Princes appointed every Year, in what Places and Proportions they thought fit, Lands for ſuch Tribes as dwelt together, and made them remove to another Place next Year. Their Reaſons were, That Part of the Ground ſhould always be fallow, and that the People ſhould be inur'd to Hardſhips, that they might be fit for War; whereas had they continued always in one Place, they would have built better Houſes, and by degrees have fallen into Luxury: For *Tacitus* ſays, That in ſome Places they plaiſter'd their Cottages with fine ſhining Earth, ſo as it reſembled Painting. *Cluverius* ſays, they did it with Clay of different Colours. Thus they liv'd in *Tacitus*'s Time. But about 130 Years after, when *Alexander Mammæa* and *Maximinus* were Emperors, it appears from *Herodian*, That near the *Rhine* they began to build with Stone and Brick; and

Mar-

Digitized by Google

Marcellinus says, That in the Reign of the Emperor *Conſtantinus*, their Houſes were built more nicely after the *Roman* Way. Beſides thoſe Cottages, *Tacitus* ſays, they had Caves or Dens under Ground, cover'd with Dung, where they liv'd, and laid up their Corn in Winter, and many times eſcap'd the Fury of their Enemies. They were ſo hardy, that moſt Part of 'em went naked, eſpecially their Youth; and their Men and Women, in the coldeſt Winters, had nothing but ſhort Mantles or Caſſocks of the Skins of Beaſts, or Rinds of Trees.

When they came to build Villages, we have heard already their Houſes were not contiguous, but built at a great Diſtance from one another, either becauſe they would avoid the Danger of Fire, or becauſe they did not underſtand the Way of Building. Here *Cluverius* has a curious Diſſertation upon the Word *Burgus*, the Name given to ſuch Villages by *Oroſius*, *Luitprandus*, &c. and he thinks it to be originally a *German* Word, ſignifying an Incloſure, becauſe thoſe Places were hedg'd about like Gardens, which is expreſſed by another *German* Word, *Taun* or *Tuyn*; from whence comes the *Engliſh* Word *Town*; but in Time this Word *Burg* came to be applied to ſuch only as we incloſ'd with Walls.

He comes next to the Deſcription of their *Pagi*, which he ſays were not Villages, as appears by that Sentence of *Tacitus*, *Eliguntur Principes qui jura per Pagos Viciſque reddunt*; *i. e.* Princes were choſen to adminiſter Juſtice in the Diſtricts and Villages; and from *Plutarch*, in the Life of *Numa*, who ſays, he divided the Land among his People into Parts, called *Pagi*. It appears alſo by *Cæſar*'s Commentaries, That large Countries or Diſtricts were called *Pagi*; for *Helvetia* is ſaid to be divided into 4 *Pagi*; but thoſe ancient *Pagi* were not ſo large; for *Tacitus* in ſeveral Places mentions many of them as belonging to inconſiderable People, particularly that the *Semnones*, a People of *Suevia*, had 100. *Cluverius* obſerves, That what the Ancients called *Pagi*, the modern *Germani* call *Gaw*, *Gew*, *Gow*. Hence *Briſgaw*, *Rhingaw*, &c.

Thoſe *Pagi* were ſubdivided, as *Tacitus* informs us, into what we now call Hundreds; *Eliguntur Principes qui jura per Pagos Viciſq; reddunt, Centeni ſingulis ex plebe Comites, Conſilium ſimul & Auctoritas adſunt*; i. e. Princes were choſen to adminiſter Juſtice in the Diſtricts and Villages, and had 100 of the People join'd with them to give them Advice, and to add to their Authority. And from the Latin Word *Centum*, the *Germans* derive their *Centem* and *Centengerichte*, which is the ſame with the *Engliſh* Hundred. And it appears by *Tacitus*, That they were ſummoned to War according to thoſe Hundreds.

Their STATURE *and* CONSTITUTION.

Cluverius, in his 14th Chapter, obſerves, That *Tacitus* thought the *Germans* to be an unmix'd People, becauſe their Habit of Body was much alike, being of a large Stature, with blue Eyes, and red or faircolour'd Hair. Their Courage was equal to their Stature, and their Language fierce and harſh. *Cæſar* in his Commentaries takes Notice, That they were much taller, and more robuſt, than the *Gauls*, and looked ſo fierce, that the *Roman* Soldiers at firſt were ſeized with ſo much Fear, that they could ſcarce endure their Looks. Here *Cluverius* obviates a common Miſtake, as if in thoſe Times the *Germans* had all been Giants, which aroſe from their being of a much larger Size than the *Gauls* and *Italians*, and much the ſame with the *Britains*; of whom *Strabo* ſays, he ſaw ſome at *Rome* who were half a Foot higher than the talleſt *Romans*; which by the Deſcription that *Tacitus* gives of the *Caledonians* or ancient *Scots*, *Cluverius* thinks to have been ſome of that Nation. He takes likewiſe Notice, That 'tis the Opinion of Natural Philoſophers, that the Northern People are ſo much larger and ſtronger than the Southern, becauſe the Heat of the Sun dries up the Moiſture of the latter; and this he takes alſo to be the Cauſe why the People of the North have a greater inward Heat than thoſe of the South: And he obſerves, That ſuch of the *Germans* as inhabit the moiſt Countries betwixt the *Scheld* and the *Elb*, are larger than the reſt. And whereas *Hippocrates* ſays, the People of the North look ill, becauſe they

Digitized by Google

are pale and lean; he ſays, 'tis true of Part of the *Swedes* and *Norwegians*, who are as much dry'd up by exceſſive Cold, as thoſe of the South are by exceſſive Heat. The fair Complexion of the *Germans*, *Goths*, and *Britains*, mentioned by the Ancients, is aſcribed to their Climate. But all this is only to be underſtood of the People in general; for there are Exceptions in every Country, and the *Romans* ſpoke only of thoſe Parts that were beſt known to them.

As to the Terribleneſs of their Voice and Countenance, taken Notice of by the Ancients, he ſays, 'tis ſtill obſervable in thoſe who live on the *Baltick*.

For their inward Diſpoſition, he quotes many of the Ancients, who ſay, they could endure a great deal of Hunger and Cold, but could not bear Thirſt or Heat, which made them not ſo good Soldiers when they came into warmer Climates.

To what *Tacitus* and other Authors ſay, That their huge Bodies were only fit for a ſhort Attack, and that they could not endure Fatigue or Wounds; *Cluverius* oppoſes *Caſar*, *Mela*, and *Seneca*, who ſay, That from their Infancy they were accuſtomed to Fatigue and Hardſhip; That the Men were very ſtrong and ſwift, and ſpar'd neither Man or Beaſt that came in their Way; That the young Men harden'd themſelves by Hunting, and the more Horns of the Wild-Beaſts they had killed they brought to the Publick, the more they were eſteemed, ſays *Caſar* in his Commentaries. *Mela* adds, That they exercis'd their Strength and Courage by War and Hunting; That before they came to the Age of Puberty, they went naked in the greateſt Cold: And *Seneca*, in his Book *De Ira*, ſays, There was nothing more courageous than the *Germans*; no People more fierce in an Attack; and no Nation delighted more in Arms, in which they were bred up, and neglected almoſt every thing elſe: That no People could better endure Fatigue, moſt of 'em being without Clothes or Houſes; ſo that the greateſt Advantage other Nations had of them, was their too great Fury, and want of Diſcipline.

Their DEGREES *and different* RANKS.

Cluverius, in his 15th Chapter, ſays, ancient and modern Authors agree, That they were divided into 4 Ranks, *viz.* Nobles, Freemen, *Liberti*, or thoſe that had been manumitted, among whom were reckoned their Children, called *Libertini*; and the 4th Sort was Servants: For this he quotes *Tacitus*, and *Adamus Bremenſis*, who adds, That 'twas Death for any of them to marry but with thoſe of their own Rank. *Cluverius* owns, That this Cuſtom was much obſerv'd in *Germany* in his own Time, not by Vertue of any ſuch Law, but becauſe the Nobility reckon'd 'twas a Diſgrace for them to marry with thoſe of a lower Rank. He is of Opinion, That the Nobility were firſt raiſed to that Dignity for their Valour in War, which he ſupports by the Saying of *Tacitus*, That they choſe their Kings from among their Nobility, and their Captains from among their Valiant Men: Therefore he thinks, that when any of the common Sort ſignaliz'd their Valour, ſo as to be made Commanders, they were made Noble at the ſame time. He takes Notice, That in his Time, Princes conferr'd the Order of Nobility upon People for Money; but they were ſo much deſpiſed by the ancient Families, that they ſcorn'd to converſe with them. He ſays, The ancient *German* Nobility had their Seats generally apart from Villages and Towns, becauſe they reckon'd it a Degradation to live in Towns, and be ſubject to their Laws. They were called by the general Name of *Adel*, and by modern Latin Authors *Adelingi*.

The next Order was the *Ingenui* or *Liberti*, in their Language *Friling*, *i. e.* Freemen, ſo called, becauſe they were not ſubject to the Nobles, but liv'd according to their own Cuſtoms, as Citizens do now; and becauſe they liv'd in Burgs or Towns, they were called *Burgers*: Out of them thoſe Councils were choſen from the ſeveral Hundreds, that aſſiſted the Princes in adminiſtring Juſtice.

That

Digitized by Google

That we may the better understand what their *Liberti* or manumitted People were, he first gives us an Account of their Servants, from whence they had their Rise; and those he informs us, from *Tacitus*, were of two Sorts: The first were either taken in War, or such as were oblig'd to serve when they lost their Liberty at Game; for he observes, That the *Germans* were so much addicted to play at Dice, that when they had lost all, they would play away their own Liberty, and the Conqueror being asham'd of such a Victory, commonly sold that Sort of Servants to others. The 2d Sort were not appointed to their several Stations in the Families of their Masters, as now; but every one had his own House, and his Proportion of Corn and Cattle assigned by his Master to manage for his Use, and the Houshold-Service was perform'd by their Wives and Children. *Seneca* takes Notice in his 47th Epistle, where he speaks of *Varus*'s Defeat by the *Germans*, That they made many of the Noble *Romans* whom they took, Shepherds, or such kind of Servants as last mentioned, who in the *German* Language are called Boors or Husbandmen: And he observes, That the *German* Nobles, especially such as live on the *Baltick*, make an Estimate of their Wealth according to the Number of such Boors, whom they use like Slaves.

From these Sorts of Servants came their *Liberti*, or manumitted People, whose Condition was not much better than that of Servants, because they were still obliged to serve their Masters, and look after their Houshold Affairs: So that 'twas only a Step towards Freedom, which their Children called *Libertini*, obtained as the Reward of the Valour, or some other remarkable Service of their Parents.

Their Way of Dressing, Apparel and Bedding.

Cluverius, in his 16th Chapter, gives an Account from *Tacitus*, That as soon as they awak'd, which was generally by Break of Day, they wash'd themselves all over, and in Winter-time in hot Water; after which they eat: But tho' this was their daily Practice, *Pliny* says, they were very nasty, because they anointed themselves with Butter. It has been mentioned before, that their Hair was generally fair or red; and they made use of Art to make it more so, and particularly of a Lye of Lime and Soap, or with the Ashes of Beech and Goats-Dung, which sometimes they made up in a Liquor, and sometimes into Balls; to which *Martial* alludes when he mentions the *Spuma Batava*, the *Spuma Caustica*, and the *Mattiaca Pila*. He observes, That the Men practis'd this more than the Women, because they thought their red Hair made them terrible to their Enemies: For the same Reason they delighted in long Hair, which they sometimes ty'd backward in their Necks; and such as were Leaders in War, ty'd it in a Bundle on the Top of their Heads, that they might be the more conspicuous, By these Methods they made their Hair so thick, that it resembled the Manes of Horses; for sometimes they cover'd their Shoulders with it, curl'd up in Locks. *Diodorus* says, some of them shav'd their Beards, others let them grow; but the Nobles shav'd their Cheeks, and kept long Mustachoes, which mix'd with their Meat and Drink, and they comb'd them with a great deal of Care; but they did not tie up their Hair, or shave their Faces, till they had given Proofs of their Valour; so that those who wore it otherwise, were reckon'd mean and cowardly.

As to their Clothes, they went naked till they arrived at the Age of Puberty, which they reckon'd about 20; after this their Habit was a Cloak or Mantle, fasten'd with a Buckle, for which the poorer Sort made use of a Skewer; but in the House they went for most part naked. The better Sort wore Skins of Wild-Beasts, with the Hair outward, which cover'd only their Shoulders, and the Heads and Horns they wore upon their own Heads. The Men and Women wash'd promiscuously in the Rivers. They reckon'd Venery very disgraceful before the 20th Year of their Age; but after that they were not accounted very modest. Those who liv'd next the *Rhine*, were more nice in their Habits; but such as liv'd in remoter Parts, were more negligent. The richer Sort painted or dy'd those Skins of Wild-Beasts, and sometimes sew'd Pieces upon them of several Colours, resembling Spots. Their Women

Digitized by Google

had Mantles of Linen, with Purple Stripes. *Cluverius* ſays, That in his Time thoſe who liv'd on the *Baltick* had ſtill ſome of thoſe ancient Sorts of Veſtments of various Colours, compos'd of the Skins of wild Beaſts and Sea-Monſters, being a ſort of a Cloak that came as low as their Ankles, which they wore at Feſtivals. The Poor had a meaner ſort, and the Rich a finer, with a kind of Silver Buttons down their Breaſts, and ſome of them adorn'd with Pearl. Their Habit call'd *Rhenones*, *Cluverius* thinks to have been a ſort of Coat without Sleeves, which cover'd them before and behind as low as their Navel and Buttocks. It was made of the Skins of Beaſts, with the Hair outward, and could turn Rain.

Their *Saga*, *Cluverius* takes to have been a ſort of Rugs or Plades of a ſquare Form, much like thoſe wore by the Highlanders and native *Iriſh*, but ſhorter; ſo that they came no lower than their Middle. Theſe were alſo of different Colours, ſo as to reſemble Skins of Lions, Tygers, Leopards, and other wild Beaſts; and they wore the rough Side outward. He thinks they were of two Sorts, one rough and heavy, and the other ſmooth and light: The latter was ſtrip'd and flower'd, and made uſe of in Summer, or in War. He diſtinguiſhes betwixt thoſe of the Freemen and Nobles; thoſe of the former were only ſtrip'd, or had Spots of divers Colours, as the Weaver pleas'd; but thoſe of the latter had the Arms of the Nobles, ſuch as they carried in their Shields, not ſuch as are now in uſe, which frequently repreſent entire Beaſts or Fowls, and ſometimes Landskips, but only Colours diſtinguiſh'd by Squares; and thoſe Coats which have nothing but plain Colours, are now reckon'd the moſt ancient. The Colours were generally of two ſorts, plac'd alternately, and they choſe them ſo as they thought ſuited beſt. *Herodian* ſays, That ſuch of 'em as liv'd next the *Roman* Provinces had Gold and Silver interwoven in their Garments.

They had another ſort made of the inner Rinds of Trees, which were moſt uſed by thoſe who liv'd in Woods, Servants, and poor People. This Rind ſeems to be that we call Baſts.

Tacitus ſays, the Rich were diſtinguiſh'd by their Habit, which was not a looſe Garment like that of the *Sarmatæ* and *Parthi*, but ſo cloſe as to ſhew all the Lineaments of their Bodies, ſo that he thinks they reſembled cloſe Doublets with Breeches, and were made of Linen or Skins, but not long enough to cover their Nakedneſs. He ſays, That in his Time the common People of *Franconia* wore their Garments ſo cloſe, that they ſeem'd to be ſew'd to their Skins. The Shoes of the ancient *Germans* were made of Hides, with the Hair outward, and tied about their Ankles, ſuch as are ſtill us'd by ſome of the Northern People. They were wore only by the richer Sort; but the Poor went bare-foot, or made Shoes of Bark.

For Ornaments, they wore Chains about their Necks like the *Gauls*, Bracelets about their Arms, and Rings upon their Fingers; but their Rings were of Iron until they had kill'd an Enemy. So much for the Habits of their Men.

The Women's Apparel was much the ſame, but more looſe, and moſt of Linen, which *Cluverius* thinks to be what we call Smocks: They were very ſhort, and had Purple Stripes: They were not ſo careful of their Hair as the Men, but wore it looſe about their Shoulders, or ſometimes ty'd behind. He adds, That the People in general were very naſty; and that there was no Difference, as to their Education, betwixt Maſter and Servant; and that they and their Cattle lodg'd under the ſame Roof, and lay upon the ſame Floor, till Age made a Diſtinction betwixt the Freemen and Slaves. They had no Seats, but ſometimes Skins, Rugs, or Graſs, under them; and their Bedding was Bear-Skins, Leaves of Trees, or Graſs, and their Covering was what they wore by Day, which was very ſlovenly, becauſe they anointed themſelves with Butter, and in cold Weather ſat frying all Day by the Fire.

Their Diet *and* Banquets.

Cluverius, in his 17th Chapter, ſays from *Cæſar*, That they had not much Corn; and the greateſt Part of their Proviſion was Milk, Cheeſe, and Fleſh. *Tacitus* adds, That they had Veniſon, wild Apples, and curdled Milk, which *Cluverius* thinks

thinks to have been Butter, their choiceſt Dainty. *Pliny* ſays, Their chief Corn was Barley and Oats, of which they made Bread and Pottage. 'Tis obſerv'd of the *Fenni*, who liv'd in the moſt Eaſterly Parts of *Germany*, That they were a very barbarous People, miſerably Poor, had neither Arms, Horſes, nor Houſhold-Goods, but liv'd upon Herbs and Wild-Apples. They made their Butter of all ſorts of Milk; but the fatteſt was that of Sheeps-Milk; and when they took the Butter from it, they boil'd it, and that which ſwimm'd on the Top they call'd a Syllabub. They ſometimes eat their Fleſh raw, and preſs'd it in the Hide or Skin with their Hands and Feet when 'twas cold, in order to heat it again; and *Poſidonius* ſays, they ſometimes roaſted or boil'd it. *Cluverius* is of Opinion, That the ancient *Germans* made uſe of Hogs-Fleſh ſalted, as they do now in *Weſtphalia*, which is famous for Hams. *Tacitus* mentions a great Battle betwixt the *Catti* and *Hermunduri*, People of *Germany*, about a River in their Confines, whoſe Water poured upon burning Wood produced Salt.

Their Drink was Milk, and a ſort of Ale or Beer made of Barley or Wheat, which *Tacitus* ſays had ſome Reſemblance of Wine: And *Poſidonius* ſays, they had alſo Wine, which muſt be underſtood of thoſe Parts on the *Rhine*, and that border'd on *France*.

Their Way of Eating, according to *Tacitus*, was ſeparately, each in their own Place, ſitting on the Ground upon the Skins of Wolves or Dogs, Graſs or Hay, round the Fire, and every one had their Joint; which is no Wonder, ſays *Cluverius*, ſince, beſides Bread, they had nothing elſe for Dinner and Supper; and what remained, they eat cold afterwards. The Veſſels they drank out of were of Wood, or Earthen-Ware made like Pots; but their Princes, and ſuch as had been Ambaſſadors, had Veſſels of Plate, which had been preſented them; and ſome of them had Horns of Beaſts tipp'd with Silver, which they made uſe of at their Banquets. *Poſidonius* ſays, When they were invited to a Feaſt, they ſat in a Circle, which *Cluverius* rather thinks was a Semi-Circle: The chief Perſon ſat in the middle, and next to him the Maſter of the Feaſt. Every one had his Table, (which, according to *Cluverius*, was a Three-footed Stool) brought in cover'd with Victuals; and if they were People of Note, thoſe who bore their Targets, ſtood behind and ſerv'd them; but ſuch as carried their Spears, ſat down at the ſame time over againſt them, for they always had their Arms with them: But in their own Families, the Children of both Sexes ſerv'd them naked. The beſt Meſſes they gave to the chief Gueſts. He thinks from thoſe Words of *Tacitus*, *Septa pudicitia agunt*, &c. That the Women were alſo invited to thoſe Feaſts, and behav'd themſelves modeſtly. He obſerves in general, That they were very much addicted to Eating and Sleeping, and prodigal in their Entertainments.

Their Employments, Riches, Manufactures, *and* Navigation.

Tacitus ſays, That moſt of their Employment was in Hunting, and Military Affairs; and at other times their ſtouteſt Men left the Management of their Buſineſs to Women, old Men, and the weakeſt of the Family, and ſpent their Time in Eating, Sleeping, and Gaming. They had little Trade in *Cæſar*'s Time, except among thoſe who liv'd upon the *Rhine*, and that conſiſted rather in ſelling what had been given them in Preſents, as Horſes, Arms, Trappings, and Chains, or what they had taken from their Enemies, than in buying any thing. A few of them however traded in Wine. *Tacitus* ſays, They had no Silver or Gold Coin but what was *Roman*, and that was only in the bordering Countries; for the innermoſt Provinces dealt in the old Way of Barter. They lov'd Money however, eſpecially thoſe Pieces call'd *Serrati* and *Bigati*; and would ſell Peace at any time to the *Romans*; but thoſe beyond the *Rhine* would ſuffer Merchants to bring no Wine or other Commodities among 'em, that might nouriſh Luxury, or make them effeminate.

All ſorts of 'em lov'd to ſwim, and they taught it their Horſes, ſo that they would croſs the *Rhine* in Troops together. This prov'd fatal to them when they invaded *Italy*, where the Rivers being more rapid than in *Germany*, Multitudes of them were drown'd

drown'd in attempting to ſwim them on Horſeback. We have heard already, That they had but little Tillage, and this, with their other Domeſtick Labour, they follow'd by Turns; for thoſe who ſtay'd at home one Year, went to War the next, *Tacitus* ſays of them in general, That they hated Peace abroad, and lov'd Sluggiſhneſs at home.

Cluverius is of Opinion, That they had ſuch Trades among 'em as were neceſſary for building Houſes, making Chariots and Cars for War, Clothes and Arms, and particularly Swords, Spears, Bucklers, and Helmets; the latter of which they made very artfullly, to reſemble the Heads of Wild-Beaſts.

As to Navigation, *Tacitus* ſays, the *Suiones*, now the *Swedes*, and ſuch as liv'd on the *Baltick*, underſtood Sailing, and had many Ships, with which they ſail'd in the Northern Ocean as far as *Iceland*. Thoſe who liv'd about the Mouth of the *Rhine* and *Elb* had likewiſe Veſſels, with which they infeſted the Coaſts of *France* and *Britain*. This *Cluverius* aſcribes chiefly to the *Saxons*, who he ſays came firſt from *Holſtein*, drove thoſe People that were newly call'd *Franci* from the Countries betwixt the *Elb* and the *Rhine*, and with the Remains of 'em, that ſtill liv'd about the Mouth of the latter, invaded the neighbouring Coaſts of *France*, *viz.* the *Franci* by Land, and the *Saxons* by Sea, as he proves from *Marcellinus*, *Claudian*, the *Notitia Imperii*, &c.

Sidonius ſays, The *Saxons* were very expert Seamen, ſo that every one of 'em that tugg'd at the Oar, look'd like an Arch-Pyrate; for they commanded, obey'd, taught, and learn'd to play the Pyrate all together. He adds, That they were well acquainted with the Sea, deſpis'd the Dangers of it, and would venture among the Rocks and raging Waves. *Cluverius* ſays, the *Engliſh*, *Dutch*, *French* and *Spaniards*, learn'd Navigation from the *Saxons*: And hence it is, that moſt of the Sea-Terms are ſtill *German*. He thinks their Veſſels were made of Withs or Twigs cover'd with Skins. They us'd no Sails, but Oars; and the Ships of the *Suiones*, according to *Tacitus*, had Sterns at both Ends, and their Oars ſo diſpos'd, that they could row either Way upon Occaſion.

Their VIRTUES *and* VICES.

THey had no Learning, yet adminiſtred Juſtice according to their own Cuſtoms, rewarded the Good, and puniſh'd the Bad, by the Light of Nature; ſo that *Tacitus* ſays, Good Manners were of more Force with them, than good Laws with others: But *Ceſar* in his Commentaries ſays, That their Cities or Communities glory'd moſt in having large Waſtes about 'em, and reckon'd it true Valour to drive out their Neighbours. Depredations without their own Boundaries were not accounted diſhonourable, but valued as proper to improve their Youth, and to prevent Sluggiſhneſs; and all of the ſame Community were reckoned a-kin, and would be ſure to have the ſame Friends and Enemies with their Kindred, and liv'd together in Tribes, which *Tacitus* reckons was a great Incitement to their Valour. They were ſo much eſteem'd for their Fidelity, that *Cluverius* ſays, moſt of the *Roman* Emperors, from the Time of *Auguſtus*, preferr'd them for their Guards to all other People: And *Tacitus* gives this as an Inſtance of their Fidelity to their Promiſes and Truſt, That when they had play'd away their own Liberty, they would willingly ſubmit to Servitude; and thoſe who were young and ſtrong, would ſuffer themſelves to be bound and ſold by thoſe who were old and weak. Here *Cluverius* anſwers an Objection from *Strabo*, That they betray'd and annoy'd thoſe who truſted them, and broke their Contracts, by alledging, That they were very faithful in obſerving ſuch Contracts as they made voluntarily with their Friends; but did not think themſelves obliged to keep ſuch Promiſes as were extorted from them by ſuch as endeavour'd to ſubdue them. And whereas many Authors call 'em Cruel, Fierce, Unmerciful, and Proud, he proves from *Melo* and *Tacitus*, That they were civil to their Gueſts, merciful to ſuch as ſubmitted, or fled to them for Refuge, and reckon'd it the greateſt of Crimes to betray them, or ſuffer them to be injur'd.

He comes next to their Bounty, Civility, and Hoſpitality, and ſays with *Diodorus* and *Taci-*

Digitized by Google

Tacitus, That Strangers were liberally entertained by them, according to their Ability. They would invite them kindly to their Feasts, attend them from one Place to another, and reckon'd it a Crime to deny Lodging to any body. *Julianus Cæsar*, in *Misopogone*, commends them much for their Friendship, and says, they know nothing of Flattery, but were free, just, and plain.

Their Gravity he ascribes to their Martial Temper, and being constantly in War; which is represented thus by *Diodorus*, That their Aspect was terrible, their Language harsh, their Words few, and their Way of Speaking obscure.

For their Temperance, it was not so much in Eating and Drinking, as in Venery. *Cluverius* owns, That in his Time their Excess of Drinking was still too much in use; and that Lasciviousness had also gain'd Ground upon them: Yet in the Inland Parts of the Country they were rather more chast than neighbouring Nations, and hated obscene Discourse. He is at some Pains to vindicate them from being addicted to unnatural Lust, which he charges home upon the *Gauls* and *Romans*. And though he owns, That some of the ancient *Germans* might be infected with it, yet he shews from *Tacitus*, That they punish'd it as a capital Crime; and that as they hang'd Traitors and Deserters, they drown'd Cowards, and such as abus'd their Bodies, *Corpore infames*.

On this Occasion, *Cluverius* rejects *Lipsius*'s putting *Torpore* instead of *Corpore*, because that Crime is charg'd upon the *Celtæ* in general, by many great Authors; but he imputes it chiefly to that Part of them call'd the *Gauls*, who learn'd it, together with the Use of Letters, from the *Greek* Colony that settled at *Marseilles*; and as a Proof that the *Germans* abhorred this Crime, he instances in the *Bottavi*, who rebell'd because the *Romans* abus'd their Youth in that Manner.

For the Vices of the ancient *Germans*, we have heard before, That they accounted Robbery without their own Bounds no Crime: And *Cluverius* owns, That they reckon Drunkenness to be no Reproach. *Pliny* says, they would drink two Days and two Nights together, without stammering in their Speech, vomiting, or easing Nature any other way; and that they drank large Bumpers without Breathing: But *Cluverius* endeavours to extenuate this Fault, by charging it also upon other Nations.

We have heard already, That they were given to Idleness, when they were not at War; which *Cluverius* says was the Fault of most Warlike Nations, and instances in the *Thracians*, quoted by *Herodotus*, who looked upon idle Men to be the most honourable, and upon Husbandmen to be the most contemptible People of the World.

Tacitus and *Diodorus* charge the *Germans* with Pride, Boasting, Vanity, Passion, and being apt to quarrel. *Cluverius* ascribes those Things to their Valour and Stoutness; and says, that 'tis common to all Nations to over-value themselves: That most People of *Europe* have learn'd to outdo the *Germans* in Boasting; and that his Countrymen don't keep Malice, but love to decide their Quarrels off hand.

Their Marriages, *and* Conjugal Love.

Tacitus says, they were almost the only Barbarians who contented themselves with one Wife apiece, except a few, who had more; and those they had rather as a Mark of Nobility, than to satisfy their Lust. He also observes, That amongst some of them, Virgins were only allow'd to marry; and that no Woman married a second time. We have heard before, That they reckon'd it base to lie with Women till they were 20 Years of Age; and that this Abstinence contributed to the Strength and Tallness of themselves and their Children. *Cluverius* says, the same was observ'd in his Time; and that young Men generally liv'd unmarried till above 20. It was not their Custom for Women to bring Portions to their Husbands, but, on the contrary, the Husbands gave Portions or Gifts to their Wives, which were approv'd by the Parents and Kindred that were present at making the Match; and those Gifts were not accommodated to please the Women's Vanity, being Cattle, Horses, with their Furniture, Bucklers, Swords, and Spears; and on the other Hand, the Women gave something of Arms to their Husbands. These were their

Mar

Digitized by Google

Marriage-Ties, their Sacred *Arcana*, and their Conjugal Gods, that the Women might alſo be inſpired with Courage, and reckon themſelves obliged to ſhare with their Husbands in their Dangers and Labours, and be their Companions in War and Peace. This was the Meaning of the Yoke of Oxen, their Horſes and Arms, they preſented to one another, as a Token that they muſt live and die together; and thoſe Arms they accounted honourable to tranſmit to Poſterity. This was a great Incitement to their Valour, for their Families accompanied them in War; ſo that their Troops were not form'd by Chance, but of their Tribes and Kindred; and their Wives and Children were ſo near when they fought, as they could hear their Cries. Theſe they reckon'd the beſt Witneſſes of their Valour, and Publiſhers of their Praiſe; and their Mothers and Wives number'd and ſuck'd their Wounds without Fear. Their Women did ſometimes behave themſelves gallantly in Sieges and Battles, and by their Intreaties and Tears, and repreſenting to 'em the Shame and Miſery of having them and their Children led Captive, did many times oblige them to renew the Battle, when they were ready to fly; for the Thoughts of that was more terrible to 'em than their own Danger; and the Courage of thoſe Communities was generally greateſt, among whom Noble young Women commanded. *Tacitus* gives an Inſtance of their Conjugal Love in *Arminius*, whoſe Wife being taken, he went about like a Madman, inciting the People to take Arms againſt *Cæſar*; for he could not endure to think of his Wife's Captivity. *Cluverius* takes Notice alſo from *Tacitus* of the Modeſty of their Women; that they were not debauch'd by Feaſting, Plays and Shews; the latter of which the ancient *Germans* valued ſo little, that when two Princes of the *Friſii* went on an Embaſſy to *Rome*, and were brought into *Pompey*'s Theatre, they took no Delight in the Play or Shews, but enquir'd who were the Knights and Senators. *Cluverius* thinks the Women's Ignorance of Letters contributed much to their Modeſty, and gives this for his Reaſon, but how ſolid, let the Reader judge, That a Letter will not bluſh; and that by this Means young Women and Matrons have been frequently debauch'd, by thoſe who would otherwiſe ſcarce have had the Confidence to ſpeak to them.

Their Child-bearing, Education, Kindred, *and Way of* Inheriting.

Cluverius thinks what *Strabo* ſays of the other *Celtick* Nations was common to the *Germans*, *viz.* That the Women made no great Account of the Pains of Child-bearing, and that the common Sort went about their Buſineſs as ſoon almoſt as they brought forth; That they waſh'd their Infants immediately in ſome Fountain or Stream, cover'd them but ſlightly, and inur'd them to Cold and Hardſhip from their very Birth, which they thought contributed to their Health and Strength. He gives ſeveral Inſtances of poor Women, who, being taken with their Pains while at Day-Labour, retir'd to a Buſh, brought forth their Young, wrapped them up, and return'd to their Labour again, leſt they ſhould loſe their Day's Wages. *Galen*, in his Book *De Tuenda Sanitate*, expreſly mentions the *Germans* as treating their Infants thus. *Julianus Cæſar*, in his Epiſtle to *Maximus*, ſays, The *Celtæ* threw their New-born Infants into the *Rhine*; That the Men could not be with-held from doing this by the Tears and Intreaties of their Wives, or their other Relations, who pretended the Danger of the Child, or were afraid for the Reputation of the Women, becauſe they fancied, that if the Child were ſpurious, the River would carry it down; but if otherwiſe, it would ſwim, and then they deliver'd it again to the Mother. *Cluverius* thinks that this, if true, was only practis'd by the *Gauls*, who liv'd on the *Rhine*, becauſe *Tacitus* makes no Mention of it in his Deſcription of the *Germans*; and he is not without Suſpicion, that *Julian* may have been impos'd upon in this, becauſe he ſays he had it only by Report; and that it proceeded from their Cuſtom above-mentioned, of dipping their Children in cold Water as ſoon as born. When *Tacitus* ſays, That they thought it a Crime to limit the Number of their Children,

Digitized by Google

dren, or to kill any of them, he takes his Meaning to be, That they did not abſtain from the Marriage-Bed, or deſtroy them, as was practis'd by ſome of the Eaſtern Nations, when they had more than they could maintain: And when he ſays, That they did not truſt them to their Maids, or to Nurſes, he takes it to be meant of thoſe of Quality, for others had no Servants. As to their Education, they made no Diſtinction betwixt Servants and Children, till the latter came to the Age of Puberty, which *Cluverius* ſays was obſerved in his own Time in the Northern Parts of *Germany*, where 'twas reckon'd a Diſgrace to carry their Children with them to Banquets, *&c.* till that Age; and this hard Way of Education, and breeding 'em to work in their Domeſtick Affairs, contributed to their Strength, Stature, and Virtue. They did not allow them to go to War till the Age of Manhood; but taught 'em the Uſe of Arms, to ſwim, and to ride, from their Youth.

Then as to their Kindred, and Way of Inheriting, *Tacitus* ſays, Uncles ſhew'd the ſame Reſpect to the Children of their Siſters, as if they had been their own; That ſome of them looked upon this as a more ſacred and ſtrict Tye of Blood, and therefore would rather have ſuch for Hoſtages than others, becauſe they looked upon 'em to be under a double Obligation to the Family. *Cluverius* thinks the Reaſon was, becauſe they reckon'd the Kindred by the Mother's Side. As to their Way of Inheritance, every one was ſucceeded by his own Children, without a Will, which *Cluverius* ſays was needleſs among a People ſo ignorant of Fraud. They had a Regard however to Primogeniture in every thing but Horſes and Arms, which fell not to the eldeſt, but to the braveſt of the Sons. If they had no Children, the next of Kin ſucceeded, as Brothers and Uncles of both Sides. The ancient People valued themſelves on the Number of their Poſterity and Kindred; the Want of which was reckon'd a Diſgrace. Their being thus link'd in Affinity, and living in Tribes and Kindreds together, was the Reaſon of their having the ſame Friends and Enemies, and their eſpouſing one another's Quarrels, in which 'twas accounted a Crime to deſert their Friends; and the Chiefs of each Tribe or Rank of People were their Captains.

Their RELIGION *and* WORSHIP.

Cluverius contradicts *Cæſar*, who ſays, they had no Druids to preſide in their Worſhip, or offer Sacrifice; and thinks the contrary plain from what he himſelf ſays afterwards, *viz.* That they only reckon 'em to be Gods whom they ſee, and of whoſe Help they are ſenſible, *viz.* the Sun, *Vulcan*, and the Moon; and that they had not ſo much as heard of the reſt. He ſupports his Opinion by the Authority of *Cicero* and *Dionyſius Halicarnaſſenſis*, who ſay, There was no Nation or People but what had ſome Knowledge of the Gods without being taught it; and ſince the *Celtæ* had their Religion from the *Egyptians*, and that the *Germans* were the far greater Part of the *Celtæ*; and ſince *Cæſar* owns, that the *Gauls* worſhipped *Mercury*, *Apollo*, the Moon, and *Minerva*, he doubts not but the *Germans* did the like. This he aſcribes to *Cæſar*'s Ignorance of *Germany*, of which he knew very little, but that Part on the *French* Side the *Rhine*. *Tacitus* ſays plainly, That they chiefly worſhipped *Mercury*, and on certain Days offer'd him Humane Sacrifices. They alſo ſacrific'd to *Mars*, *Hercules*, and *Iſis*; and the *Naharvali*, a *German* People, ſacrific'd to *Caſtor* and *Pollux* in a Grove, where a Prieſt in Woman's Habit preſided. *Cluverius* adds, That 'tis evident they did not learn this from the *Gauls* after *Julius Cæſar*'s Time, becauſe they were in continual War with them: And *Tacitus* ſays, That after the Defeat of *Varus*, the *Germans* beyond the *Rhine* ſacrific'd many of the *Roman* Officers to their Gods in the neighbouring Groves; and that the *Hermanduri* ſacrific'd the Captive *Catti* to *Mars* and *Mercury*, the ancient Cuſtom of the *Celtæ* and the *Gauls*, as *Cæſar* himſelf obſerv'd; and he thinks the Antiquity of the *German* Worſhip, and that they had it from the *Jews* or other Eaſtern Nations, to be very well prov'd by that Saying of *Tacitus*, That they held it unlawful to draw the Images of any of their Gods upon their Walls, or to reſemble 'em

Digitized by Google

to any thing of a Humane Shape; and if they did not name their Gods, it was common to them with others: And *Lucan* obſerves the ſame of the *Jews*, ---- *Dedita Sacris Incerti Judæa Dei*; *i.e.* The *Jews* were addicted to the Worſhip of an uncertain or unknown God.

Their Prieſts, *Orders of* Wiſe Men, *with their Diſcipline and Names.*

Cluverius proves from *Tacitus*, That they had Prieſts, without whoſe Order it was not lawful to puniſh any Man; and that they had white Horſes in their Woods, which they never put to any Labour, but when they were yok'd to the ſacred Chariot: The Kings, Princes and Prieſts, follow'd them, and obſerv'd their Neighing and other Noiſe as Omens. They thought the Prieſts to be the Servants of the Gods, and to know their Mind. Their Authority was great in making Peace or War, and they aſſiſted in Publick Councils as Interpreters of the Law.

Beſides thoſe Prieſts who explained their Omens, they had Women whom they conſulted as Oracles, thô they did not flatter or worſhip 'em as Goddeſſes, ſays *Tacitus*; among whom *Velleda*, *Aucinia*, and *Gauna*, were famous, and had Preſents made them both by the *Germans* and their Enemies, and therefore are mentioned by ſome *Roman* Authors to have commanded many People, which *Cluverius* underſtands to be meant only of their conſulting them, becauſe the Princes and People were at Liberty to make Decrees in Publick Councils without their Advice; yet the Prieſts and they both attended their Armies, and had greater Reſpect paid them than the Princes, becauſe of the Opinion they had of their knowing the Mind of the Gods. *Cæſar* likewiſe makes Mention of *German* Matrons who attended their Armies, and enquir'd by Lots and Divinations whether their Expeditions would be ſucceſsful; but *Cluverius* thinks it to be meant only of thoſe Propheteſſes. He ſays, there's no Certainty by what Name the *Germans* call'd their Prieſts; but ſince *Dry* in the *Saxon* Tongue ſignifies a Magician or Wiſe Man, he fancies *Druids*, the Name of the *Gauliſh* and *Britiſh* Prieſts, may be derived from it; and that the *German* Prieſts had the ſame Freedom from Taxes and War that they had, and Lands, *&c.* allow'd them for a Maintenance; That their Diſciples were thoſe of the firſt Rank; and that they taught 'em their Philoſophy and Religion in Dens and Groves, *viz.* The Immortality of the Soul, and Tranſmigration, *&c.* with ſomething of Aſtronomy, Hiſtory, and Geography; and exhorted 'em to Virtue, and a Contempt of Death. Their Inſtructions were contained in Verſe, and never committed to Writing; ſo that they were 20 Years or more in learning it. He adds, That there was one Chief Druid among them, who preſided over the reſt. When he died, they choſe another in his Place, and ſometimes fought for the Poſt. He thinks the Prieſt of the *Chatti*, mentioned by *Strabo* in *Germanicus*'s Triumph, was of this Sort.

In the following Chapters, he endeavours to prove from the Authority of *Macrobius*, in his Saturnals, That all the ſeveral Names of the Heathen Gods referred to the Sun, and of their Goddeſſes to the Moon; That *Vulcan* was the ſame with *Mars* and *Hercules*; and that the ancient *Germans* worſhipped one God, and three Perſons, under the Names of *Sun*, *Moon*, and *Fire*: But his Arguments to prove it, ſeem to have more of Reading and Speculation, than Solidity. The like may be ſaid of his Endeavours to prove, that they had ſome Knowledge of the Creation of the World, and of Angels, of their Fall, of the Creation and Fall of Man, of the Flood, and the End of the World; or if they had, it ſeems to have been nothing more but ſuch dark Hints of thoſe Things as we find in the Heathen Poets. He thinks, that till the Time of the *Romans*, they had no other Temples than Groves, with Fountains, which they accounted ſacred; but built ſome afterwards by their Perſwaſion and Example. *Tacitus* ſays, they worſhipped a Goddeſs called *Hertha*, (which *Cluverius* takes to be the Earth, as their common Mother:) She had a Grove dedicated to her in an Iſland, with a Chariot drawn by two Cows, and cover'd with Cloth, which none but the Prieſt had Leave to touch. They fancied her to be in

Digitized by Google

in this Chariot, followed her with great Veneration; and while she was carried about the Country, they abstain'd from War and Labour, and kept a Festival, till the Priest told them she was weary of Humane Converse, and return'd her to her Temple and Grove, when they fancied the Chariot and all sunk into a secret Lake. *Adamus Bremensis* says, The *Saxons* and *Swedes* worshipped God by Trees and great Trunks, which they called *Irminsul*, *i. e.* a Column, that supported all Things, which agrees with what *Cæsar* says in his First Book *De Divinatione*, That Images were first made use of by the Advice of Wise Men, which, when the People worshipped, they thought the Gods themselves to be present; and this Superstition was afterwards augmented by Painters, Poets, and Carvers.

In his 35th Chapter, he treats of the Habit, Worship, and Rites made use of by their Priests. We have heard before, that they us'd to sacrifice their Captive Enemies, from whence those Sacrifices were called *Hostiæ & Victimæ*, as *Ovid* tells us, *Fast. Lib.* 1.

Victima quæ cecidit dextra victrice, vocatur:
Hostibus à domitis Hostia nomen habet.

Strabo says, their Habits were white, according to the Custom of other Heathen Priests, as we find in *Ovid*, *Virgil*, *Diogenes Laertius*, *Silius Italicus*, &c. *Cluverius* says, they also sacrificed all sorts of Beasts, which, as well as the Priests, were crown'd with Garlands; and that they erected Altars of green Turf in the consecrated Places of their Woods, which were hedg'd about; and those were their *Sacra Penetralia*, and Temples. The Priests pour'd Wine, or some other Liquor, betwixt the Horns of the Sacrifice, and taking hold of the Hair of its Head with his Left Hand, called upon their Gods while he poured out the Liquor; and the People bowing down their Heads, begg'd Pardon for their Sins in the mean time. *Cluverius* says, the *Germani*, as well as *Gauls*, us'd to sacrifice Malefactors, which they thought was very grateful to the Gods; and those who were in Danger by grievous Distempers, or in Battle, us'd to offer such Sacrifices, or to make Vows that they would; and if Criminals could not be found, they would offer up innocent Persons. The Priests told 'em, That nothing else would prevail with the Gods to save the Life of a Man. When they made such Sacrifices, they us'd to look into the Intrails of the Person sacrific'd, in order to know what was to come, or judged of it by the Convulsion of the Members, or the Flowing of the Blood of the Person sacrificed. Those were the Sacrifices they offer'd when they consulted their Gods; and they had others of the like Nature when they made Vows for obtaining what they desir'd, which they called *Sacrificia Votiva*, and in these they offer'd up whatever Animal they took in War, and us'd either to hang them upon such Trees as were next to their Altars, or throw them into Ditches, and among Brambles, adding broken Weapons, or the Limbs of Horses. Thus when *Varus* was defeated, they sacrific'd the *Roman* Tribunes and Centurions; and the *Saxon* Pyrates us'd to sacrifice the Tenth of their Captives in the same manner by Lot, and put them to Death by cruel Torments, which they preferr'd to Ransoms. *Cluverius* is of Opinion, That when they sacrific'd the Blood only, which they call'd the Soul, they eat the Bodies both of Men and Beasts. Wherever the *Romans* prevail'd, they abolish'd the Order of those bloody Priests, and their barbarous Sacrifices.

In his 36th Chapter, he gives an Account of their Divinations by Auspices, Lots, &c. from *Tacitus*: They us'd to break off Twigs of Fruit-Trees, cut them in small Pieces, and distinguishing them by Marks, throw them at random upon a white Cloth; and praying to their Gods, and looking up to Heaven, took them up three times, and made their Conjectures according to the Marks they had put upon them before. If they thought their Designs forbid, they consulted no more that Day; but if allow'd, they consulted again, and observ'd likewise the Chirping and Flying of Birds; and we have heard before, that they also observ'd the Neighing of Horses, which they kept in the Woods on purpose. They had also another Way of Divination, which was, to make the first Captive they took from their Enemies fight with his own Country-Weapons against one

Digitized by Google

of their own Men, whom they chose on purpose, and determin'd of the Event according as either of them happen'd to be Conqueror.

Their Forms of GOVERNMENT.

Cluverius, *Cap.* 38. gives us an Account of their Democratical Form, with a Prince at the Head of the Administration; and shews us from *Tacitus* and *Cæsar*, That they chose their Kings on Account of their Nobility, and their Generals on Account of their Valour; That their Kings had no unlimited or absolute Power, and their Generals commanded rather by Example, than in a Despotical Manner; and if they were expeditious, brave, and appear'd undaunted-ly at the Head of the Army, they admir'd 'em. The usual Time of their publick Assemblies was at New or Full Moon; but they had so much Liberty, that sometimes they would be 3 Days in coming together. When they met, they sat down with their Arms, and Silence being enjoin'd by the Priests, who at that Time had a Power to force them to it, the King or Prince, and such as were most noted for their Age, Nobility, Valour or Eloquence, were heard; but rather by Way of Argument and Perswasion, than by Way of Command. If what was propos'd displeas'd them, they rejected it with a Noise; but if it pleas'd them, they clash'd their Arms together.

Cæsar says, That *Ambiorix*, one of the *German* Kings on this Side the *Rhine*, told the *Romans*, That he attack'd their Camp not of his own Accord or Judgment, but by the Order of the Community; and that the Nature of his Government was such, that they had as much Power over him, as he had over them: From whence *Cluverius* infers, That the principal Authority lay in the Democracy; and that the Power of the King consisted rather in Perswading, than Commanding. Their Kingdoms or Principalities were generally confin'd to narrow Limits; and some of them had more Power than others, especially those of the *Suiones*, now the *Swedes*. In their Councils, tho' they had distinct Orders, yet they had all a like Authority in Things which concern'd the whole Community. In those Councils they determin'd Matters of Life and Death; and chose the Princes who administred Justice in the Districts and Villages, and their Kings could do nothing of Moment without them in Peace or War. The Government of the *Belgæ*, or People of *Lower Germany*, was, according to *Strabo*, Aristocratical for most part; and 'tis to be observ'd, That he extends the Limits of this People as far as *Britany* in *France*. He says, the *Eburones*, a *German* People, chose a Prince and a General every Year. *Cluverius* observes, That *Cæsar* calls those Princes, whom *Tacitus* calls Senators. Their Revenues consisted in Corn and Cattle, given them by the People for supporting their Dignity, and entertaining those who attended them; for they had no Guards, but Voluntiers, to whom they gave Part of the Spoil that they took in War. *Cluverius* says, the Name of King was very improperly given to those Princes by the *Romans*, since they were no other but the First or Chief of the Community, in the *German* Language called *Herssen*, to which the Latin Word *Princeps* answers better than *Rex*; and it appears from *Tacitus* and other Authors, that they were Elective, and not Hereditary.

Cluverius, in his 39th Chapter, gives an Account of their Democracies, which were without Princes. These, he says, consisted not of Nobles, but of the Common People, called Burgers or Freemen. This he supports by the Authority of *Tacitus* and *Cæsar*, who say, That in Time of Peace they had no Common Magistrate; but the Princes or Senators, who were chosen in their Councils, administred Justice, and determin'd Controversies by the Consent and Authority of a Council chosen from the Hundreds; but were not attended by Voluntiers instead of Guards, as the Princes formerly mention'd.

In his 40th Chapter, he gives an Account of the Monarchies and mix'd Governments among the *Germans*. The first Instance he gives is among the *Suiones*, formerly spoke of, who he said honour'd Riches, and were govern'd by one Person, not in a precarious Manner; nor did he trust the People promiscuously with Arms, like the rest of the *German* Princes, but kept them shut up in an Arsenal, under the Guard of a Servant, because the Sea defended his Country

Digitized by Google

try from ſudden Incurſions by Enemies; and he did not think it his Intereſt, according to *Taciſus*, to truſt any of a higher Rank with the keeping of the Arms. *Cluverius* obſerves, That theſe People were neither ſo famous for Valour nor Probity as the reſt of the *Germans*, which he imputes to their Slavery, that was ſo much the more abominable, as 'twas voluntary; and that they made Riches the Qualification in the Perſon whom they choſe to be their Monarch. He informs us from *Adamus Bremenſis*, That they grew weary of this ſort of Government at laſt, reſum'd their Liberty, and choſe themſelves Kings, who govern'd by the Advice of the People, and were obliged to confirm what they agreed upon; but in Time of War, they were very obedient to their Kings, or to him whom he appointed General. The 2d Inſtance is that of *Marobodaus*, from *Velleius Paterculus*, who deſcribes his Power to have been much the ſame with that of the abſolute Kings of the *Swedes*; ſo that he ſubdu'd moſt of his Neighbours, and enlarg'd his Empire betwixt the *Danube*, the *Elb*, and the *Weiſſel*, and became not only terrible to his Neighbours, but formidable to the *Romans*; yet at laſt growing hateful to his own People for his Tyranny, they drove him from his Throne.

Cluverius's Inſtance of a mix'd Government is in the *Gothones*, who liv'd betwixt the *Oder*, the *Weiſſel*, and the Eaſt Sea. Their Kings had more Power than was common to thoſe of the other *Germans*, but were under Reſtrictions by Laws; ſo that their Government was a Mixture of Democracy and Monarchy, like that ſet up by the *Swedes*, when they grew weary of the abſolute Power of their Princes.

In his 41ſt Chapter, he treats of the Leagues of thoſe Democratical Governments among themſelves for mutual Defence, againſt powerful Factions at home, or Enemies from abroad. They generally choſe ſome Man of Eminency, to whom they gave Authority to determine Controverſies, and to defend the Poor againſt the Rich, and their Enemies abroad; but if they ſuffer'd the People to be oppreſſed or circumvented by others, they loſt their Authority. *Ceſar* calls ſuch of thoſe leſſer Governments as put themſelves under the Protection of the greater, *Clientele*; and *Cluverius* explains this by the Inſtance of *Hamburg*, which put it ſelf under the Protection of the King of *Denmark*, and of *Aix la Chapelle* under that of the Duke of *Juliers*; which he ſays is the ſame with being *in Clientela*, *in Amicitia*, or *in Fide*, in the Latin Dialect.

Their Councils, Judicatures, *and* Puniſhments.

Cluverius obſerves from *Taciſus*, That their Councils were of two Sorts; one for greater, the other for leſſer Affairs. The latter were determin'd by the Princes, with the Councils of the Hundred; the greater by the General Council of the People and Princes; the Method of which we have heard before. He obſerves from the ſame Author, That during thoſe great Councils they had large Entertainments, wherein they diſcours'd of reconciling Differences, of making Alliances, of chuſing Princes, and of making Peace and War, becauſe they thought People were agreſt then to tell their Minds freely, or to be animated to great Undertakings; and what was treated of then, they conſider'd again next Day. On this Occaſion *Cluverius* corrects the Reading of that Place of *Taciſus* where he ſays, *Geniti non aſtute, nec callida, aperit adhuc ſecreta Poſteris, Licentia Loci. Ergo detectus & nuda omnium mens poſtero die retractatur*, &c. Thus for *aperit adhuc*, he puts *aperit tunc*; and the Word *Ergo* he explains by *Caterum*, *Cæterò*' or *Porrò*, and gives ſeveral Inſtances in the ſame Author where it muſt be underſtood in that Senſe. Then for their Puniſhments, they were diſtinguiſhed into Civil and Criminal; the former were puniſh'd by Fines, that were divided betwixt the Prince and the Community, and the latter by Death; Traitors and Deſerters they hang'd; Cowards, and ſuch as were guilty of unnatural Luſt, they drown'd in Lakes or Marſhes, and threw a Hurdle over them. Adultereſſes were puniſh'd at the Diſcretion of their Husbands, who cut off their Hair, ſtripp'd them naked, drove them

Digitized by Google

them out of the House before their Kindred, and whipp'd them through the Village. For this Crime there was no Remission; and how young, beautiful, or rich soever such Criminals might be, no body would ever marry them after.

Their Way of making War, *and* Military Discipline.

Tacitus says, if they had Peace at home, their Youth of Quality went to Armies abroad, and would rather spend their Blood in War, than their Sweat in Labour. They were bred to the Use of Arms from their Infancy, and never went about any publick or private Business without them. We have heard before, that their Communities reckon'd it honourable to have as much waste Ground about them as they could, and to drive their Neighbours at as great a Distance from them as possible; and the more any Man signaliz'd his Valour, the more Respect he had in their Councils and Publick Entertainments; so that all their Nobility ow'd their Rise to their Valour. When Enemies invaded their Country, they used to withdraw to Woods and Mountains, sally out upon them, and surprise them in Passes; but afterwards, as we find in *Velleius Paterculus*, and *Tacitus*, they became almost equal to the *Romans* in Discipline, especially the *Catti*; but their chief Strength consisted in Foot, for their Horse were better at Attacks than a Standing-Battle.

Their Arms of Defence were few: Coats of Mail and Helmets were scarce to be found but among their Leaders; so that at first they fought either naked, or with a short light Garment, as formerly described; but their Horsemen in general had no Clothes. Such Coats of Mail as they had were made of raw Skins, and chiefly to cover their Breasts, which they afterwards fortified with Iron Rings. When they came to wear Helmets, they had them of Iron, resembling the Heads of Wild-Beasts with Horns, or of Birds, to which *Plutarch* says they affixed Crests of Feathers.

Their Arms of Offence were a Buckler, Sword, Spear, or Dart. *Tacitus* says, their Bucklers were very long; and *Diodorus*, that they were as tall as themselves; so that when the *Romans* fought them, they endeavour'd to get their Bucklers from 'em, after which they were soon put to flight. *Tacitus* says, those Bucklers were made of Withs twisted together, or of thin painted Boards, and of no great Breadth; but the *Gothuns* had round Bucklers finely painted, and some had them of Brass, in Form of Wild-Beasts; but *Cluverius* thinks these were only the Princes, who thereby represented the Arms of their Families, as sometimes they did by the Painting upon 'em; and when they were used with their Consent by Men of less Quality, they had only the Half, or some Part of a Beast, in Colours different from those of the Princes, that the latter might not be depriv'd of their Dignity; but Time has now made those Things common.

At first, few of them had Swords, except the Nobles, but made use of Spears and Darts; and when they came to use Swords, they had them very large, with two Edges, but without Points, and wore them by their Right Side: Some hang'd them upon their Shoulders, and others gird'd them to their Thighs in Scabbards of Leather. Their Girdles and Belts were of Leather, and very broad; the better Sort had them set with Iron Studs, and the Princes with Silver or Gold, after they made Incursions into *Italy* and *France*. Their other Arms were Lances of various Forms; the chief of which *Cluverius* thinks to have been like our Partisans, Spears or Pikes both short and long, Darts, Bows, and Arrows pointed with Horn or Bone, and some of them had great Clubs.

Their Way of Fighting.

Cluverius thinks, they used Chariots in War, as well as the *Gauls* and *Britains*; tho' *Roman* Authors say nothing of it. *Cæsar* says, they used to fight on Horseback, tho' their Horses were not good. They alighted very often to fight on Foot, and their Horses were so train'd, that they would stay where they left them, but were not manag'd for Battle like the *Roman* Horse;

Digitized by Google

Horſe; yet ſometimes they lin'd their Horſe with Foormen, who were ſo nimble, that they would catch hold of the Horſes Manes, and charge or retire as ſwift as they; and at other times they took the Foot behind them; for their greateſt Confidence was in their Infantry, who would catch hold of their Enemies Spears, and pull them off their Horſes, or get in with them, and wound them ſo, as to make them throw their Riders. They deſpis'd Saddles and Stirrups; but adorn'd their Horſes with fine Trappings.

Their Way of Declaring War, Chuſing their General and other Officers, and their Authority.

THoſe who had abſolute Kings, War was made by their Authority, and they either led them themſelves, or appointed a General. How Peace and War was made in mix'd Governments and Democracies, we have heard already. In the former their Prince was General, and in the latter they choſe one; and when elected, he was ſet upon a Buckler, carried betwixt Men's Shoulders, and turn'd three times round; and from the Nature of his Office was called *Heerzog*, *i. e.* Leader of the Army, which anſwers the Latin Word *Dux*, and our Duke. The reſt of the Commanders were the Princes of the Diſtricts, who formed a Council of War, and aſſiſted him in governing the Army. The General and each of them had their Companions, *Comites*, the chief Men of the Diſtricts; and when they came to fight, it was reckon'd diſhonourable for a Prince to be exceeded in Valour, and for them not to equal him; ſo that the Prince fought for Victory, and they for the Prince. *Tacitus* ſays, theſe Princes had Embaſſies and Preſents ſent them, and frequently put an end to the War meerly by their Fame. This was their Way of making War; but when they went upon Depredations out of their own Boundaries, if any of the Princes in Council offer'd to be their Leader, the Multitude, if they lik'd him, follow'd him; and ſuch as did not, were look'd upon as Traitors or Cowards.

Their Way of Levying Men, and their Pay.

CÆſar ſays, That all who were of Age were ſummoned to the Armed Council, which *Cluverius* thinks to be underſtood only of Democratical Governments; for the *Suevi*, or *Catti*, the moſt Warlike People in *Germany*, who had 100 Diſtricts under them, ſent every Year ſome Thouſands of Men out of their own Country to War, and they return'd next Year to manure the Ground, when others went in their room; by which, 'tis plain there muſt have been a Levy.

We heard before, That none were reckon'd fit for Arms or publick Converſation till they were 20 Years of Age, and approved of by the Community in Council, when the Prince, ſome of the Leaders, the young Man's Father, or ſome Kinſman, gave him a Buckler and Spear: After which, they were not diſcharged from Military Service till Age made them uncapable of it.

As to their Pay, *Cluverius* thinks, that in Democracies they had none, all being equally obliged to arm for the Defence of their Country; but ſuch as ſerv'd under Princes, and attended them, had their Maintenance allow'd them.

Their Generals and Princes preferr'd ſuch of their Companions, *Comites*, as were moſt noted for their Valour; and he that had the greateſt Retinue of ſuch was moſt valued, and had Embaſſies and Preſents ſent him by his Neighbours who had any War. Thoſe *Comites* who deſerted their Prince in Battle, or ſurviv'd him in it, except they obtain'd the Victory, were reckon'd infamous for ever; therefore their greateſt Oath was to defend him, and to aſcribe the Glory of their braveſt Actions to him. *Marcellinus* ſays, That when *Chodomarius*, one of the *German* Kings, ſurrender'd himſelf to the *Romans*, 200 of thoſe *Comites* who attended him did the like; and offer'd themſelves to be bound, accounting it diſhonourable to outlive the King, or not to die for him if Occaſion required. *Cluverius* ſays, That thoſe *Comites* were next in Dignity to the Generals or Princes, and were the ſame with

Digitized by Google

with those now call'd *Graves* or *Grevet*, and much the same with the *French* Counts, and our Earls or Peers: But he observes, That the Title of Duke is higher in *Germany* than that of Prince, contrary to the Custom of most other Countries. Those *Comites* were instead of Guards to Princes; and they themselves had Numbers of Freemen who attended them in Battle, serv'd them also instead of Guards, and were those whom the *Romans* call'd *Ambacti*. They were the Persons mention'd by *Posidonius*, who at publick Entertainments carried their Lords Spears, and sat down to Dinner at the same Time with their Masters in an opposite Circle.

Their Military Ensigns, *and* Musick.

Tacitus says, they brought their Military Ensigns out of the Groves when they came to fight; for at other Times they laid them up as sacred in those consecrated Places. They were the Images of Wild Beasts: And *Cluverius* thinks some of them did also represent Birds, like those on the Crests of their Helmets; and that they were not painted, but made of Wood or Iron, as those of the *Persians* and *Romans* were of solid Gold or Silver. He thinks they had also large Standards or Banners, which he takes to be meant of the *Signa*, which *Tacitus* distinguishes from the *Effigies*.

They had also Trumpets of Brass, which *Tacitus* says made a shrill and warlike Noise. They were of a crooked Form; and they seem likewise to have had something like a Bagpipe: But *Cluverius* says, there's nothing certain concerning their Military Instruments of Musick.

Their Way of Encamping, *Times of* Fighting, *and Order of* Battle.

Cluverius thinks, from what *Mela* and *Pliny* say of the Encampments of the *Cimbri* on the *Baltick*, That the ancient *Germans* used to fortify their Camps with Intrenchments and Ditches; but 'tis certain, that they used to intrench themselves with their Carts and Waggons, in which they plac'd their Women and Children behind their Army when they came to engage, and retir'd to them on occasion; when their Women would assist in defending them with as great Bravery as the Men, and would sometimes cut off those who fled too early, and animate the Men to renew the Battle, as has been mention'd already. The *Roman* Authors give Instances of the Women's defending those Intrenchments, after the Army's being defeated; and that, rather than expose their Chastity, they have kill'd themselves and their Children in those Intrenchments. *Cluverius* says, the *Germans* still use such Intrenchments on Occasion. And we find them mention'd in the Rebellion of the Boors, excited about the Time of the Reformation, by *John* of *Leyden*, *Thomas* of *Munster*, and other Enthusiasts.

We have formerly heard, That they chose the Full and New Moon as the most auspicious Time to fight in, which is mention'd by *Tacitus* and others; but in case of Necessity, or when they were invaded, they would fight at any Time, without consulting their Soothsayers.

They us'd to draw up their Troops in Form of a Wedge, their Front resembling the sharp Point of a Greek Δ, which they themselves call'd a Swine's-Head, by which they threw so many Darts at once upon their Enemies, as frequently put them into great Disorder.

The Main of their Army was drawn up in such Bodies at equal Distances; but their Wings were drawn out in Length, something of an oblong Form; and they us'd to fight Back to Back, that they might face their Enemy on all Sides, covering themselves with their Targets. These Wedges were generally composed of different Tribes or Principalities; which *Tacitus* says was a great Incitement to their Courage, because they strove to outvy one another.

It

Digitized by Google

It has been formerly obſerv'd, that they put more Confidence in their Foot than their Horſe, and therefore interlin'd them, and poſted the choſen Men of each Hundred before their Horſe by Hundreds at a time, who, if they were worſted, retired to their Horſe. Theſe Hundreds generally led the Van; but in great Battles, ſuch as that fought by *Arioviſtus*, they were choſen out of all the Army, and their Troops of Horſe were equal in Number to thoſe Bodies of Foot. The firſt Ranks made uſe of Spears, and the others of ſhort Darts. The firſt Lines conſiſted of the Nobles, and other Chief Men, who wore Chains and Bracelets of Gold; and to prevent the breaking the Ranks of their Foot, thoſe on the Van were faſten'd to one another by their Belts; and every Body of Horſe and Foot had their own Enſigns and Standards, as *Tacitus* mentions in the Battle with *Civilis*, and his *Batavi*, the Anceſtors of the *Dutch*. The Battle being thus drawn up, their Rear was cover'd with their Carts and Waggons, that they might not think of flying; and the Women, as the Troops marched out, ſtood weeping upon thoſe Waggons, with their Hair diſhevell'd, exhorting the Soldiers to acquit themſelves bravely, and not to ſuffer them and their Children to be Slaves to the *Romans*. The Women carried likewiſe Refreſhments to the Army on Occaſion, and never fail'd to renew their Exhortations, that they would fight it bravely; and being likewiſe arm'd, would fall upon thoſe who fled, without ſparing 'em, tho their own neareſt Relations.

When all was ready for an Engagement, the General and other Commanders rode about to the ſeveral Bodies, made Speeches to them ſuitable to the Occaſion, put them in mind of the Bravery of their Anceſtors, and of their own Victories againſt their Enemies, as Arguments to raiſe their Courage, and to make them deſpiſe their Adverſaries. Some of their braveſt Men uſed to march out of their Ranks, and provoke ſome of their Enemies to ſingle Combats, and according to the Succeſs of thoſe Men, they looked for Victory or otherwiſe. *Cluverius* ſays, That before they engaged, they uſed to ſing Songs in Praiſe of valiant Men, and to dance; and when they fell on, they gave a great Shout, which was anſwered by their Women from the Carts, who continued ſhouting during the Battle to encourage the Men. The younger Sort, who had not been allowed to ſhave their Beards, were ſure to acquit themſelves bravely, that they might have that Privilege; and 'twas accounted a great Honour for them to return beſmear'd with their Enemies Blood, or with any of their Arms.

Their Way of Beſieging Towns, and their Behaviour to thoſe they conquer'd.

Cluverius ſays, the ancient *Germans* knew nothing at firſt of beſieging Towns, by caſting up Intrenchments, or making uſe of Engines; but only ſurrounded them to ſtarve them out, or made their Attacks upon thoſe on the Walls, by throwing Stones and Darts, *&c.* They made their Approaches under that call'd a *Teſtudo*, a ſort of an Arch, to cover their Heads when they deſign'd to ſcale the Walls, which they uſed to do with great Fierceneſs, after having filled up the Ditches with Timber and Branches of Trees.

When they had defeated their Enemies, they were very intent upon the Plunder; for that, next to their own Defence, was the chief Cauſe of their making War, which frequently gave their Enemies Opportunity to eſcape, and ſometimes to rally. *Tacitus* ſays, they did not divide the Spoil equally, but every one catch'd what he could, and they feaſted for a Day or two together in the Field of Battle. We have heard before, that they us'd to ſacrifice their Captives and their Horſes to *Mars* and *Mercury*, and made Servants or Slaves of ſuch as they ſav'd. The Chief of their Priſoners they ſacrific'd on Altars of green Turf; but the reſt they hang'd, or threw into Holes dug in the Ground. The Heads of ſuch as were killed in Battle they fix'd upon Trees, and their Horſes and Arms they uſed to burn on vaſt Piles of Wood. When they returned home after Victory, they marched

Digitized by Google

in great Pomp, carrying the Heads of ſome of their Enemies hung about their Horſes Necks, and gave the Spoils, cover'd with Blood, to be carried in Triumph by their Servants. The Heads they hung up at their Doors; but thoſe of Quality they anointed with the Roſin of Cedar, kept them in Cheſts, and would ſhow them with great Oſtentation to their Gueſts or Strangers, and boaſt that they had refuſed ſo much Money for them. Some of them were ſo fond of ſuch Monuments of their own or their Anceſtors Valour, that they refuſed their Weight in Gold for them; and this they accounted Greatneſs of Mind, as *Diodorus* informs us.

Their FUNERALS.

Tacitus and *Diodorus* ſay, they uſed to burn the Corps of the Deceaſed on Piles of Wood; but thoſe of the Nobles, and of ſuch as had diſtinguiſhed themſelves by their Valour, were burnt with an uncommon or choice ſort of Wood. *Pliny* alledges the Cauſe of this to have been to prevent their Corps being taken up out of the Ground, as a Mark of Diſgrace by their Enemies; as *Sylla*, the *Roman* Dictator, order'd his to be burnt, leſt it ſhould have been taken up by way of Repriſal for what was done to the Corps of *Marius*. *Diodorus* ſays, the *Germans* being of *Pythagoras*'s Opinion, That their Souls were immortal, enter'd into other Bodies, and after ſome Time came to Life again, they uſed to throw Letters to their deceaſed Relations into the Funeral-Pile, having a Fancy they would read them; but this, if true, muſt be after they learn'd the Uſe of Letters from the *Romans* or the *Gauls*, for anciently they had no Learning, as we have heard already. *Tacitus* adds, That their Arms, and ſometimes the Horſes they made uſe of in War, were burnt with them: And *Procopius Goth. Lib.* 2. ſays, the *Heruli*, a People of *Germany*, were ſo barbarous, that ſuch of them as grew old or ſickly, were compelled by their Relations to deſire they might be ſent out of the World; upon which they were placed on the Top of a Pile, where one that was no Relation to them was order'd to kill them; then their Relations ſet Fire to the Pile, and ſuch of their Bones, *&c.* as remained unburnt, they buried; and if their Wives did not afterwards hang themſelves near their Husbands Grave, they were held infamous, and hated by his Relations. *Tacitus* ſays, their Sepulchres were made of Turf, for they deſpiſed pompous Tombs of Stone, *&c.* and reckon'd them burdenſome to the Deceaſed. *Cluverius* thinks, from what *Tacitus* ſays of *Arminius*, that the *Bards* compos'd Verſes, which were ſung at their Funerals, and afterwards in Remembrance of them; but the Mourning and Tears of the Men were ſoon over, ſays *Tacitus*, thò their Sorrow continued long; it being reckon'd honourable in Women to mourn for their deceas'd Friends, and for Men only to remember them.

CHAP.

CHAP. XXIV.

Ancient GERMANY *on this Side the* Rhine.

Cluverius begins with this Part of the Country, becauſe it was firſt poſſeſſed by the *Romans*, and therefore firſt deſcribed by their Hiſtorians. He informs us from *Cæſar*, *Tacitus*, and *Strabo*, That the *Tribocci*, *Nemetes*, and *Vangiones*, three *German* Nations, paſſed the *Rhine*, and expelled the *Mediomatrici*, who poſſeſſed the Country on this Side that River; but ſays, there's no Certainty as to the Time when this happen'd; but it appears they were in this Country before the Time that *Arioviſtus* was defeated by *Cæſar*, and that they were not ſubject to *Arioviſtus*, but either in League with him, or under his Protection.

In order to our better underſtanding what Parts of the Country they poſſeſſed, he gives us from the *Notitia Provinciarum* the following Account of the Diſpoſition of the *Roman* Gariſons in thoſe Parts.

Under the Government of the Commander of *Mentz*.

The Gariſons of the	*Pacenſium.*	*Saletione,*	now	*Seltz.*
	Menapiorum.	*Tabernis,*	now	*Rhein-Zabern.*
	Anderecianorum.	*Vico Julio,*	now	*Germersheim.*
	Vindicum.	*Nemetes,*	now	*Spires.*
	Martenſium.	*Alta-Ripa,*	now	*Altrip.*
	Secundæ Flaviæ.	*Vangiones,*	now	*Worms.*
	Armigerorum.	*Mogontiaco,*	now	*Mentz.*
	Bingenſium.	*Bringio,*	now	*Bingen.*
	Baliſtariorum.	*Bodobriga,*	now	*Bopart.*
	Defenſorum.	*Confluentibus,*	now	*Coblentz.*
	Acincenſum.	*Antonaco,*	now	*Andernach.*

By which it appears, that *Worms* was the chief Town of the *Vangiones*; therefore *Tacitus* is in the Right when he places them next to the *Treviri*. He adds, that *Spires* was the chief Town of the *Nemetes*, and *Straſburg* that of the *Tribocci*, and deſcribes the Boundaries of all of them together thus: On the E. they had the *Rhine*, from the ancient Boundaries of the *Mediomatrici* and *Sequani*, which was from *Burckem*, on the other Side the *Rhine*, to where the *Nava* falls into it at *Bingen*. On the S. they had the ſame Boundaries that divided the *Sequani* from the *Mediomatrici*; and from thence Weſtward the Ridge of Mountains, now called *Hondſruck*, which divide *Alſace* from *Lorrain*; and Northward, their Boundaries extended to *Keyſerſlauteren*, and from thence to the Place where the *Nava* falls into the *Rhine*. They were divided from one another

Digitized by Google

ther thus; the *Tribocci* were divided from the *Nemetes* by the River *Motra*, and the *Nemetes* from the *Vangiones* by the River *Lauter*.

The TRIBOCCI, he says, derived their Name from the Village of *Elsace*, now called *Zun-Dregen-Buchen*; in the old *Celtick* Tongue, *Thri-Buche*; *i. e.* Three Beach-Trees. They poſſeſſed half of *Upper Alſace* towards the N. and that half of *Lower Alſace* which lies next to it. The firſt Place of this Country from the Borders of the *Sequani*, taken Notice of in the *Itinerary*, is *Helellum*, now the Village *Elle*, ſo called from the River *Ill* or *Ell*; from whence comes the Name of *Elſace*, becauſe that River runs thro the Country. The next Place is *Strasburg Argentoratum*. Here *Cluverius* takes Notice of *Mercator's* Miſtake, in making *Spires Argentoratum*; and of *Scaliger's* Error, who ſays, that *Straſburg* was only a Village in the Emperor *Valentinian's* Time, ſince it was certainly a conſiderable Town long before *Ptolomy* wrote, who places the 8th Legion, called *Auguſta*, here; and 'tis evident, that it was a Town of great Note, from *Antonin's Itinerary*, and the Author of the *Tabula Itineraria*, who bound their Roads at it, and mark it as a great City.

The NEMETES lay N. from the *Tribocci*; and *Cluverius* proves by many Arguments, that *Nemetum*, by ſome called *Noviomagus*, now *Spires*, was their chief Town.

The VANGIONES were by the ancient *Germans* called *Thi-Wangen*, and their chief Town called *Brbtetomagos* by *Ptolomy*; by others, *Borgetomagos*, *Bormitomagus*, and *Bromitomagus*; and by the *Romans*, *Vormitomagum*, was *Worms*.

The next Town of Note obſerved here is *Bouconia* or *Bonzonia*, now *Oppenheim*, then *Magontiacum*, now *Mentz*, one of the ancienteſt on this Side the *Rhine*, built, as *Cluverius* thinks, many Years before our Saviour's Birth. He ſays, it was enlarged and made a Town by *C. Druſus Nero*, but was a Village long before. It was afterwards made the Head Quarter of the *Roman* Generals in thoſe Parts, who was therefore called *Dux Magontiacenſis*.

Next to them lay the TREVERI, by ſome called *Treviri*, who, according to *Tacitus*, boaſted of their being originally *Germans*, and not ſluggiſh *Gauls*. Here *Cluverius* takes Notice of the many groſs Errors that Geographers and Hiſtorians have been led into by the Account *Cæſar* gives in his Commentaries, of the Battle betwixt himſelf and the *Germans* at the Confluence of the *Moſa* and the *Rhine*, becauſe they miſtook *Moſa* for the *Mateſe*; whereas it is the *Moſelle* which falls into the *Rhine* at *Coblentz*: Therefore *Cluverius* ſays, it ought to be read *Moſella*. This he proves from *Florus*, who, ſpeaking of the ſame Action, ſays, *Cæſar* paſſed the *Rhine* beyond the *Moſilla* on a Bridge of Boats, which he takes to have been writ for *Moſella* by the Miſtake of the Tranſcriber. But however that is, it appears plain from the Thing it ſelf, that it muſt have been the *Moſelle*. The chief Town of thoſe *Treviri* was that called by *Ptolomy Auguſta Trevirorum*, now *Treves* or *Trier* on the *Moſelle*. Some call it *Treveri*, others *Triviri*. *Tacitus* calls it *Colonia Treverorum*; and *Veſpaſian's* Coin has it *Colonia Aug. Treverer*; by which 'tis probable, a Colony was ſettled there by *Auguſtus*. *Mela*, in the Reign of *Claudius*, calls it *Auguſta*, and ſays, it was the richeſt Town of all *Belgica*. *Zoſimus*, in the Reign of *Conſtantine*, informs us, 'twas the largeſt Town on this Side the *Alps*; and *Ammianus Marcellinus* ſays, it was the Seat of the Emperors. According to *Cluverius*, the *Treviri* poſſeſſed thoſe Countries now called *Lower Wetterau*, betwixt the *Nava* and the *Moſelle*, all the Biſhoprick of *Treves*, the Dutchy of *Bullow*, the Juriſdiction of *Sedan*, the Land of *Maſcere*, the greater Part of the Dutchy of *Luxemburg*, and Part of the Biſhoprick of *Cologne*. The next remarkable Town of this Country is that which the *Romans* called *Confluentes*, now *Coblentz*, becauſe the *Moſelle* falls into the *Rhine* there; and the laſt Town of the *Treviri* on the *Rhine* is *Antunacum*, *Antonaco*, or *Antennacum*, now *Andernach*, where the *Romans* had a Camp. *Cæſar* takes Notice, that the *Treveri* were a very powerful People; that they exceeded all the reſt of *Gaul* in Horſe, (for he reckon'd their Country Part of *Gallia Belgica*,) and that they were very ſtrong in Foot. *Idelo* ſays, they were the moſt famous of the *Belgæ*.

Cluverius. German. Antiq. Lib. 2. *Cap.* 15. mentions the *Eburones*, *Condruſi*, *Segni*, *Ceræſi*, and *Pæmani*, who were the firſt that by

Digitized by Google

by one general Name were called *Germani*, according to *Cæsar*. The greatest Part of the EBURONES dwelt betwixt the *Maese* and the *Rhine*. *Cluverius* fixes their Boundaries thus: They had the *Rhine* on the E. by which they were divided from the *Ubii* above *Cologne*, and from the *Sigambri* below *Cologne*. On the S. they had the *Condrusi*, *Segni*, *Caræsi*, and *Pæmani*, from whom he divides them by a Line from *Bonne* to the Confluence of the Rivers *Maese* and *Urt*; and then from the *Maese* as far as *Namure*, they were bounded on the W. by the *Aduatici*, as appears by *Cæsar*; from whom *Cluverius* separates 'em by a Line from *Namure* to the Source of the River *Gete*, and then by that River till it fall into the *Demer* above *Diest*. On the N. they had the *Menapii*, from whom they were separated by a Line, that we must suppose to be drawn from the Confluence of the *Roer* at *Ordingen* on the *Rhine*: By all which it appears, that the *Eburones* possessed the greatest Part of the Country betwixt the *Rhine* and the *Maese*, and that the rest of their Boundaries lay betwixt the *Maese* and the *Gete*; so that their Country contained Part of the County of *Namure* betwixt that City and *Hannaw*; likewise Part of *Brabant*, in which are now the Towns of *Tunen*, *Hannuy*, *Landen*, *Leewe*, and *Hall*, and Part of the Diocese of *Liege*, which lie on the Right of the *Albia* and *Urt*, the greatest Part of the Dutchy of *Limburg* towards the N. the Territory of *Aix la Chapelle*, and the whole Dutchy of *Juliers*, except that Part where the Town of *Brug* en lies towards the N. and that where *Monjou* is towards the S. Here *Cluverius* corrects a Mistake of *Hubert* of *Liege*, who alledges, there was a Town called *Eburra* in the Neighbourhood of *Liege*, where *Ambiorix* had his Palace, and reign'd over all those People; for 'tis plain by *Cæsar*, that he only reign'd over half the *Eburones*, betwixt the *Aduatici* and the *Maese*; and that *Catuvolcus* govern'd the rest betwixt the *Maese* and the *Rhine*. *Ortelius*, in *Thesaur. Geograph.* falls into as great a Mistake, who will have *Eburonia*, mentioned by *Dio*, to be their chief Town; whereas it was their Country. He also refutes the Annals of *Liege*, writ by some fabulous Monks, who will have *Ambiorix* to be King of the *Tungri*, since their Name was not known in his Days. 'Tis plain from *Cæsar*, that the Castle *Atuatica* was the chief Place of the *Eburones*, which *Cluverius* says is that now called *Tongeren*. Upon the whole, *Cluverius* adds, That the *Condrusi*, *Segni*, *Caræsi*, and *Pæmani*, who, with the *Eburones*, promis'd 40000 Men against the *Romans*, liv'd betwixt the *Eburones* and *Treviri*, in Part of the Diocese of *Cologne*, where are now the Towns of *Cronenburg*, *Blankenheim*, *Arenburg*, *Hilnen*, *Koningsfield*, *Brisich*, *Zinsich*, *Meckum*, *Rheinbach*, Part of the Dutchy of *Juliers* about *Munstereifel*, *Gemund*, and *Monjou*, Half the Dutchy of *Limburg*, where the Town so called lies, Part of the Dutchy of *Luxemburg* about *Durhuy*, *Marche*, *Rachfort*, *Huy* and *Chinay* in the Diocese of *Liege*, the *Spaw*, famous for its Medicinal Waters, and Half the County of *Namure* on the Right of the *Maese* about *Dinant*.

N. from the *Eburones* lay the MENAPII, who were likewise of *German* Origine, because they liv'd betwixt the *Rhine* and the *Scheld*: For *Pliny* says, the Counties betwixt the Promontory of the *Cimbri* and the *Scheld* were possessed by *Germans*. Their Boundary on the S. was *Diest*: They were separated from the *Atuatici* by the *Demer* and *Rupelle* to the Confluence of the *Scheld*; so that they inhabited a great Part of *Brabant* betwixt the *Maese*, the *Demer*, and the *Scheld* and *Zealand*, Part of the Borders of *Holland* about *Sevenbergen* and *Gertrudenburg*, Part of *Gelderland* and *Cleve* on this Side the *Rhine*, Part of the Diocese of *Cologne* about *Ordingen*, *Nuys*, and *Sunz*, and Part of the Dutchy of *Juliers*: But a great deal of their Country being barren, we are not to wonder that, tho' it was large, they offer'd no more than 17000 Men against the *Romans*; whereas lesser Countries, that were better inhabited, offer'd greater Numbers.

Cluverius is of Opinion, That the AMBIVARITI, mention'd by *Cæsar* and others, who by some are placed about *Antwerp*, from whence they would derive its Name, are the same with the *Aduatici*, but their Name mistaken by Copiers. 'Tis plain from *Cæsar's* Commentaries, that the Borders of the *Menapii* were full of Woods and Marshes. The Woods he takes to be Part of that called the Forrest of *Ardenna*, and the Marshes to be those on the Confines of *Gelderland*.

Digitized by Google

derland and *Brabant*, commonly called the *Peele*. He corrects *Strabo*'s Miſtake, who thought they were near *Druſus*'s Ditch on the River *Iſſel*; for that Part of the Country was poſſeſſed by the *Batavi*. He likewiſe corrects the Error of a *Dutch* Geographer, who, by miſtaking *Strabo*, places *Amſterdam* in the Country of the *Menapii*.

The UBII.

IN *Caſar*'s Time, they liv'd beyond the *Rhine*; but in *Auguſtus*'s Reign, they were brought to this Side, and inhabited that Country betwixt *Mentz* and *Cologne*. 'Tis not very clear for what Reaſons they were tranſported; but *Cluverius* thinks, that being ſubdued by the *Romans*, they at laſt took them into their Friendſhip, becauſe they were a mighty and a flouriſhing Nation, and tranſported them for the Defence of their Dominions on this Side, and to deliver them from the Incurſions of the *Suevi*, the moſt powerful People of *Germany*, with whom they had conſtant War. Their Boundaries were the *Rhine* on the E. On the N. a Line from the Mouths of the *Roer* and *Maeſe* to the *Rhine*, and the Town of *Ordingen*. On the W. the *Roer*, from its Mouth to the Town called *Niderheimbach*; from thence a Line to the Town of *Kerpent*; and on the S. the River *Obrinca*, by which they were ſeparated from the *Treveri*, as by the Boundaries above-mentioned they were from the *Menapii* and *Eburones*, into Part of whoſe Dominions they were tranſported; ſo that they poſſeſſed moſt of the Biſhoprick of *Cologne*, and of the Dutchy of *Juliers* on the Right Side of the *Roer*. Their chief Town was that called *Ubiorum Oppidum*, now *Cologne*, which *Cluverius* thinks was built in the Time of *Auguſtus*, 35 Years before our Saviour's Birth, and called *Colonia Agrippinenſis*, from *Julia Agrippina*, Daughter to *Germanicus*, and Wife to *Claudius*, about 15 Years after our Saviour's Birth. She planted a Colony, and ſettled *Veterans* there; and though they were *Germans*, having put themſelves under the Protection of the *Romans*, they choſe the Name of *Agrippinenſis*, according to *Tacitus*. Their next Town for Antiquity and Note was that called *Ara Ubiorum*, which *Cluverius* proves to be *Bonn*. The Reaſon of the Name he knows not; but rejects their Opinion, who, from a Coin of *Auguſtus*, think it was called *Julia Bonna*; for he looks upon that Coin to be counterfeit. Their other Towns were, *Noveſium*, now *Nuys*; *Durnomagum* and *Burungum*, now *Durſmagen* and *Wuringen*; *Gelduba*, now *Gelder*; *Juliacum*, now *Juliers*; *Tiberiacum*, now *Berchem*.

The GUGERNI,

BEfore they came on this Side the *Rhine*, were called *Sicambri*; and when they were tranſported, poſſeſſed great Part of that now called the Dutchy of *Cleve*, Part of the Dutchy of *Gelder* beyond the *Maeſe*, and of the Dutchy of *Juliers* about *Brugge*. *Cluverius* thinks, they came hither in the Time of *Auguſtus*, becauſe *Sueton* ſays, that he brought over the *Suevi* and *Sicambri*, who ſubmitted to him, and planted them on the next Banks of the *Rhine* about the 35th Year of his Reign, and 8 before our Saviour's Birth. The oldeſt Place mentioned in their Country by *Tacitus*, is that called *Vetera Caſtra*, which, by *Antonin*'s *Itinerary*, *Cluverius* takes to be *Santen* in the Dutchy of *Cleve*. The next Town is *Calenum*, now the Village of *Kalenhuſen*, two Miles below *Ordingen*; ſo that *Simler* was miſtaken, in ſaying it was *Gelder*; and *Lazius* yet more, who would have it to be *Cleve*, ſince the contrary appears from the *Itinerary*. *Aſciburgium*, mention'd by *Tacitus*, is a ſmall Village now called *Aſburg*, betwixt *Nuys* and *Santen*. *Colonia Trajana* he takes to be *Kellen*, within a Mile of *Cleve*, and not *Keiſerſward*, as *Ortelius* would have it: And he thinks, from the Ruins of this Colony, the Town of *Cleve* in the Neighbourhood had its Original, which ſeems to be plain from the *Itinerary*.

The SUNICI,

BEfore they came over the *Rhine*, were called *Chatti*; and *Cluverius* thinks, they were tranſported much about the ſame time with the *Gugerni* into the Country betwixt the *Maeſe* and the *Roer*. The noted Places in their Country, mentioned by the An-

Digitized by Google

Ancients, are *Thenduruum*, now *Tudder*, in the Dutchy of *Juliers*. *Coriovallum*, now *Falckenburg*, betwixt *Tongeren* and *Cologne*.

The TUNGRI

WEre at firſt divided into the *Eburones*, *Condruſi*, *Segni*, *Caraſi*, and *Pæmani*, ſpoke of before; but afterwards call'd by the common Name of *Germani*. There's much Debate among the Learned about that Place of *Tacitus*, where he ſays, *That the Name of* Germani *was New, and given to thoſe who firſt paſſed the* Rhine, *drove out the* Gauls, *and were ſometimes called* Tungri, *and ſometimes* Germani; but in the Copy printed at *Bamberg* and *Bononia* in 1472, 'tis ſaid, *They are now called* Tungri, *but then* Germani; *ſo that the Name of the Nation, but not of the People, began to gain Ground by degrees, and they were all called by the new Name at firſt by the Victor or Conquerer out of Fear, and then by themſelves.* *Cluverius*, after a Learned Diſſertation upon this Period, which has ſo much puzzled Interpreters, rejects the Amendments and Commentaries of *Lipſius* and others, and ſays, it ought to be read thus; *Ut omnes primum Victores à victis ob metum, mox à ſeipſis inventa nomine vocarentur*; *i. e.* That all the Conquerors, when they had expelled the *Gauls*, were out of Fear by thoſe *Gauls* called *Germani*; but afterwards, by a new invented Name, they called themſelves *Tungri*. Here he obſerves, That the Name of *Germans* was older than that of the *Tungri*, and mentioned by *Cæſar*, who takes no Notice of the latter; and 'tis probable, that he learn'd this Name of *Germans* from the *Gauls*; whereas the *Germans* called themſelves in general *Teutiſci*: So that *Tacitus*'s Meaning is, That the Name *Germani* was neither the ancient nor the true Name of the People beyond the *Rhine*, but was given them by the *Gauls*, when that Part of them, afterwards called the *Tungri*, paſſed the *Rhine*. Therefore *Cluverius* rejects the Opinion of *Strabo*, who thinks, this Name was given them as if they had been *Germani* or Brothers to the *Gauls*, becauſe they were like them in Fierceneſs, Stature and Complexion, and derives the Name from the ancient *German* Words *War* and *Man*, importing that they were a Warlike People, as the *Gauls* found to their Coſt; but becauſe they could not pronounce the *W*, they chang'd it into a G, and ſo pronounc'd it *German*. He adds, That the *Tungri*, after they had this new Name, and were form'd into a new Community, poſſeſſed the ſame Countries as they did when called by the 5 diſtinct Names formerly mentioned, until they were mix'd with the other People that were afterwards brought over the *Rhine*, as we juſt now heard, and were obliged by the *Romans* to give Way to them. Their chief Town was *Tongeren*, as has been already ſaid, which was ſecond in Dignity to *Cologne*, as appears by *Marcellinus*.

The ADUATICI,

AFterwards called *Bethaſii*, border'd upon the *Menapii* and are ſaid by *Cæſar* to be of *German* Extract: They were the ſame with thoſe called *Atuatici*; and *Cluverius* thinks, they derived their Name from the *German* Word *Afwack*, which ſignifies to take off or diminiſh, as they did the Dominions of their Neighbours when they ſeized them. He fixes their Boundaries thus; On the E. they had the *Eburones*, and extended in a Line from *Namure* to the Fountains of the *Gete*, and from thence along the River till it fall into the *Demer*. On the N. they had the *Menapii*, and the Rivers *Demer* and *Rupel*, till they fall into the *Scheld*. On the W. the *Scheld* to the Mouth of the *Dender*, from thence the *Dender* as far as *Aeth*; and from hence on the S. a Line to the *Sambre*, and the Town called *Fontaines*, which now contain a great Part of *Brabant* betwixt the *Gete*, *Demer*, and *Dender*, Part of *Flanders* as far as *Dendermond*, Part of *Hainault* about *Enghien*, *Hall*, *Soignies*, *Braine le Comte*, &c. and Part of the County of *Namure* on the Left of the *Sambre*. *Cæſar* ſays, they had many Towns and Caſtles, and mentions one Town he took from them which had 53000 People in it, and was very well fortified by Nature, being ſurrounded by high Rocks, and had but one Paſſage to it of about 200 Foot broad; but *Cluverius* owns, he cannot find where

Digitized by Google

where it ſtood, nor why theſe People were afterwards called *Bothaſii*. He finds two Towns mentioned in their Country, *viz.* *Gemblacum*, now *Gemblours*; and *Perviciacum*, now *Pervis*.

The NERVII

HAD the *Bothaſii* on the N. and are called *Germans* by *Strabo*. *Cluverius* ſays, their Boundaries were from the *Maeſe* and the Monaſtery of *Dellain* to the Town of *Verinins*, from the Fountains of the *Sambre* to *Crevecœur* on the *Scheld*. On the W. they had the *Scheld* as far as *Cambray*, and from thence they extended as far as the Mouth of the *Scarp*; ſo that they poſſeſſed Part of the County of *Namure* betwixt the *Maeſe* and the *Sambre* with *Namure* it ſelf; the Country called *Lower Burgundy* betwixt thoſe Rivers, the greateſt Part of *Hainault*, Part of *Picardy*, and the Town of *Cambray*, with Part of that Dioceſe. Their chief Town was *Bagacum*, now *Bavay* in *Hainault*.

The Centrones, Grudii, Levaci, Pleumoſii, *and* Gorduni, *all afterwards called* Sueconi.

THey were, according to *Cluverius*, of *German* Original, ſubject to the *Nervii*, and liv'd in that Part of *Flanders* where are now the Towns of *Armentiers*, *Liſle*, *Tournay*, *Audenard*, Part of the Towns of *Aelſt* and *Ghent*, and Part of *Hainault* betwixt *Aeth* and the *Scheld*. They are mentioned by no Author after *Ceſar*, nor are any of their Towns mentioned by *Antonin* and the *Notitia Imperii*, but *Tunacum* or *Tornacum*, now *Tournay*.

The Toxandri, *or* Taxandri.

Cluverius ſays, they were *Germans*, and inhabited the Country now called *Zealand*. He maintains this by many Arguments againſt *Ortelius*, and the other *Dutch* Geographer formerly mention'd; and thinks it plain, becauſe *Pliny* ſays, the *Toxandri* inhabited the Places beyond the *Scheld*. *Cluverius* fixes their Boundaries thus: On the W. they had the Ocean; On the N. the old Channel of the *Maeſe*, by which they were ſeparated from the *Batavi*; And on the E. and S. the Rivers and Currents of the Sea, by which they were ſeparated from the Continent. He thinks from *Ceſar*'s ſaying, That the People did themſelves in thoſe Iſlands, *Quæ Fluctibus efferuerunt*; that *Zealand* was formerly join'd to the Continent, but ſeparated from it by the Tides. He obſerves, That the *Roman* Authors mention no Towns in thoſe Iſlands, becauſe they had none in their Time; for *Middleburg* and *Flyſhing* were built long after.

The BATAVI

LAY N. from the *Taxandri* and *Menapii*, in that Part of the Country towards the W. and E. where the Sea and the *Rhine* end the Boundary of *Gallia Belgica*. *Cluverius* ſays, the *Batavi* were the nobleſt and the ſtouteſt of all the *Germans* on this Side the *Rhine*; and that the Learned are very much divided about the Place where they liv'd, wherein the *Netherlanders* and the *Hollanders* themſelves have been much miſtaken. As to their Origine, *Pliny* and *Tacitus* ſay, they were *Germans*, and the latter derives 'em from the *Catti*, being driven from home by a Domeſtick Sedition. When this happened, is not certain, no more than the Reaſon of their Name. *Dio* thinks, 'tis derived from the Iſland *Batava* or *Batavia* on the *Rhine*, now called the *Betuwe*. The Situation of this Iſland, according to *Zoſimus*, was from the Diviſion of the *Rhine* to the Sea. *Tacitus* ſays, the *Rhine* continues in one Channel, except that it makes ſome ſmall Iſlands, till it come to the beginning of the Country of the *Batavi*, where 'tis divided into two; but keeps its Name and its rapid Courſe in that which is next to *Germany*, till it fall into the Ocean; but that which is next to *France* is broader, runs more ſlow, changes its Name into the *Vahalis*, and a little after into that of the *Maeſe*, and falls with it into the Sea by a vaſt Mouth. This makes it plain, that the Iſland of the *Batavi* begins not far from *Cleve*.

Digitized by Google

Cleve, at the Fort commonly called *Schenckenſchans*; and that *Tacitus*'s Deſcription is more exact than that of *Cæſar*. The Length of this Iſland, to the Village called *Gravefande* at the Mouth of the *Maeſe*, is 83 Miles. He takes Notice of *Strabo*'s Miſtake, who ſaid, That the *Foreland* of *Keut* might be ſeen from the Mouth of the *Rhine*; and of thoſe who would ſupport his Authority, by alledging, That a great Part of the Country has been overflowed ſince that Time, which muſt be no leſs than 40 Miles, if it be allowed that *Cæſar* meaſured the Length of the Iſland from the Confluence of the *Maeſe* and the *Vahalis*; and yet even in that Caſe, it had been impoſſible to ſee *Kent* from the Mouth of the *Rhine*; ſo that *Strabo*'s Miſtake proceeded from his apprehending that *Iccium* or *Geſoriacum*, from whence Ships us'd to ſail from *France* to *Britain*, was near the Mouth of the *Rhine*. Beſides, 'tis plain, that the Iſlands on the Coaſt of *Freezland* are the ſame as they were in *Auguſtus*'s Age; ſo that 'tis no way probable that ſo much of the Country has been overflowed at the Mouth of the *Rhine*. *Cluverius* in the next place takes Notice of both Sides of the Iſland of the *Batavi*, of which the one is bounded by the *Vahalis* and the Mouth of the *Maeſe*, and the other by the middle Channel of the *Rhine*; and on this Occaſion deſcribes the old Channels of thoſe Rivers, and how they came to be chang'd by Inundations, *&c.* He afterwards confutes the Miſtake of thoſe who extend the Iſland of the *Batavi* to the River *Iſſel*, and the Lake *Flevus*; and then gives an Account of the Land poſſeſſed by the *Batavi* betwixt the *Vahalis* and the *Maeſe*, and of the People called *Caninefates*, who inhabited Part of the Iſland of the *Batavi*. He thinks them to be of the ſame Origine, and that they came thither much about the ſame Time. He afterwards proves againſt *Junius*, that the *Batavi*, thô of *German* Extract, were reckon'd to belong to *Gallia Belgica*; and that the middle Channel of the *Rhine* was the Boundary between *Germany* and *Gaul*. Their remarkable Places were, that called *Batavorum Oppidum*, now *Batenburg*; according to *Cluverius*, *Noviomagum*, now *Nimmeguen*, firſt mentioned by *Antonin*, and the *Tabula Itineraria*; *Arenacum*, now *Arnhem*; *Batavodurum*, now *Duerſtede*; *Grinnes*, now *Rhenen*; *Vada*, now *Wageningen*: But he thinks all of them, except *Batavodurum*, have chang'd their Situation to the other Side of the River.

Cluverius having thus accounted for the *Germans* who dwelt on this Side the *Rhine*, and their Boundaries, he tells us, that this Country was divided into *Germania Superior* and *Inferior*, afterwards called *Germania Prima* and *Secunda*; and the Inhabitants of both are called ſometimes *Germani*, and ſometimes *Gauls*, by the *Roman* Authors, which is plain both in *Cæſar* and *Tacitus*.

He comes next to treat of their Woods, Mountains and Rivers. The Forreſt of *Arduenna* is frequently mentioned by *Cæſar* and others. In the Sixth Book of his Commentaries, he ſays, 'tis above 500 Miles in Length; but this does not agree with the Boundaries he aſſigns it betwixt the *Rhine* and the *Maeſe*, from the middle Borders of the *Treviri* to the Confines of the *Rhemi*, which *Cluverius* ſays is not above 120 Miles. He takes Notice, that *Cæſar* afterwards extends it further to the *Scheld*, and the Borders of the *Morini*; from which to *Coblentz*, and the utmoſt Boundaries of the *Treviri*, is about 160 Miles. *Strabo* makes it much longer and broader; for he ſays, it reach'd in Length from the Borders of the *Treviri* as far as the *Atrebates* and the *Britiſh* Ocean, and in Breadth as far as *Zealand* and the *German* Ocean; but *Cluverius* corrects both their Miſtakes, and ſays, that from E. to W. from *Coblentz* to the *Britiſh* Ocean, it was 240 Miles in Length; and the Breadth from S. to N. from the Borders of the *Mediomatrici* to that Branch of the *Rhine* called the *Vahalis*, is 150. He ſays, there were many Remains of it in his own Time, eſpecially in *Wetteravia*, the Biſhopricks of *Treves* and *Liege*, the Dutchy of *Luxemburg*, and on this Side the *Maeſe*; and that in part it retained its old Name, being called *L'Ardenne* by the *Picards* and *Wallons*; and he obſerves, that among the old Geographers and Hiſtorians, it paſs'd by different Names, according to the ſeveral Countries through which it went.

He gives us an Account next of the Forreſt *Voſega* or *Vaſaga*, and of the Mountain *Voſego*, from whence it had its Name: It

lay S. from *Arduenna*, and reached from the Fountain of the *Maese* to beyond *Strasburg*. He thinks the Country called *Wasgaw* in *Germany* has its Name from it. Part of the Ridge of Mountains on which it lay, and ſeparate *Burgundy* from *Lorrain*, are now called the Mountains of *Burgundy*. The remarkable Rivers taken Notice of by the Ancients, who treat of *Germany* on this Side the *Rhine*, are, the *Rhine* it ſelf; *Hellus*, now the *Ill*, which runs through *Alſace*; *Nava*, now the *Nahe*; *Moſella*, now the *Moſelle*; *Sura*, now the *Saur*; *Pronæa*, now the *Pruin*; *Nemeſa*, now the *Niems*; and *Aliſontia*, now *Alſitz*; *Gelbis*, now the *Kiel*; *Leſura*, now the *Leſar*; *Salmona*, now the *Salm*; *Drachonus*, now the *Traen*; *Erubrus* or *Erubris*, now the *Rober*; *Sarravus*, now the *Saar*; *Abrinca*, now the *Are*; *Moſa*, now the *Maeſe*, into which on the Left Side falls *Sabis*, now the *Sambre*. The laſt of them is *Scaldes* or *Scaldis*, now the *Scheld*.

CHAP. XXV.

Ancient GERMANY *beyond the* Rhine.

Cluverius, German. Antiq. Lib. 3. comes next to deſcribe that which the *Romans* called *Germania Tranſrhenana*, which he ſays was the Mother of all the *German* Nations. The ancient Authors which give any Light into this Matter, are, *Strabo*, *Pliny*, *Tacitus*, and *Ptolomy*. He obſerves, the two former are very confus'd; therefore he chuſes rather to follow the latter, eſpecially *Tacitus*, who divides *Germany* into 3 Principal Parts. The firſt is that which lies betwixt the Rivers *Rhine*, *Sale*, and *Elb*, the *German* Ocean, and the Eaſt Sea, which he calls *Mare Suevicum*. The 2d is betwixt the *Sale*, the *Elb*, the *Weiſel*, the *Danube*, and the North Sea; all which he calls by the Name of *Suevia*. The 3d is beyond the *Weiſel* and the *Baltick*, to the Borders of the *Sarmata*. *Cluverius* follows his Order, for the better underſtanding of his Book, which, as was ſaid before, is much the beſt Account that any of the Ancients gave of *Germany*.

The HELVETII.

Tacitus and *Dio* ſay, That the *Helvetii*, a People of *Gaul*, did formerly inhabit that Part of *Germany* betwixt the *Hercinian* Forreſt, the *Rhine*, and the *Main*; and that the further Parts were poſſeſs'd by the *Boii*, who were likewiſe *Gauls*; ſo that *Cluverius* ſays, the *Helvetii* had the *Rhine* on the W. the *Main* on the N. the Mountains and Woods of *Bohemia* on the E. and the *Danube* on the S. *Ptolomy* mentions the Deſart of the *Helvetii* about the Fountains of the *Neckar* and *Danube*. The Time when they came into *Germany*, *Livy* tells us was about the 150th Year of *Rome*, which is 600 before our Saviour's Birth. *Cluverius* obſerves, That the *Alpium Juga*, mention'd by *Ptolomy*, near which the *Helvetian* Deſart lay, is not the *Alps*, properly ſo call'd, but thoſe Mountains which lie E. of the Fountains of the ſaid Rivers. 'Tis not certain how long the *Helvetians* kept that Country,

Digitized by Google

try, nor who expelled them; but he thinks it was the following People.

The Marcomanni, Seduſii, *and* Harudes.

Cluverius ſays, they firſt poſſeſſed the Banks of the *Rhine*, and afterwards, according to *Velleius Paterculus*, remov'd to *Bohemia*, under the Conduct of their Prince *Marobodus*. He thinks, the *Marcomanni* inhabited firſt the Dutchy of *Wirtemberg*, that Part of the Palatinate betwixt the *Necker* and the *Rhine*, *Briſgaw*, and that Part of the Dutchy of *Swabia* betwixt the Fountains of the *Danube* and the Town of *Gundelfing*: That the *Seduſii* liv'd betwixt the *Cokar*, and the *Necker* on the S. the *Rhine* on the W. the *Main* on the N. as far as *Bamberg*, &c. and in Part of the *Palatinate* and *Franconia*; and the *Harudes* dwelt in the upper Parts of the *Palatinate* and *Franconia*, the Country of *Nuremberg*, and Part of *Swabia*. *Arioviſtus* was King of all thoſe People, and defeated by *Cæſar* before *Marobodus*'s Time.

The Gauls *who poſſeſſed the* Agri-Decumani, *betwixt the* Rhine *and the* Danube, *and afterwards called* Alemanni, *and* Alamanni.

Tacitus ſays, the pooreſt and boldeſt of the *Gauls* paſſed the *Rhine*, and poſſeſſed thoſe Lands which *Cluverius* thinks to be the ſame where the *Marcomanni*, &c. dwelt, before they removed to *Bohemia*; but does not agree with *Lipſius*, that thoſe Lands were called *Decumani*, becauſe they were obliged to pay the Tenth of the Profits; yet he gives no Reaſon why they were ſo call'd himſelf, thô it be plain, that the *Romans* did lay ſuch a Tribute upon their People, and perhaps might have demanded it of the *Marcomanni*, &c. before they removed under *Marobodus*, who, as *Velleius Paterculus* ſays, carried off his People at a great Diſtance from the *Romans*, becauſe they were more powerful in Arms. As to the *Alamanni*, *Vopiſcus* and *Euſtathius* diſtinguiſh them from the *Germans*, but make them their Neighbours; and *Cluverius* is of Opinion, that *Tacitus* gives a very good Reaſon for the Name, when he ſays, *Leviſſimus quiſque Gallorum, & inopia audax, dubiæ poſſeſſionis ſolum occupavere*. By which it appears, they were not any one ſort of the *Gauls*, but a Mixture of the pooreſt and boldeſt People of that Name, who ſeiz'd thoſe Lands, and therefore were called *Alemannen* by the *Germans*, as if they would ſay they were a Mixture of all ſorts of People: And ſince *Strabo* mentions the *Alemanni* from *Aſinius Quadratus*, who liv'd much about the Time of this Tranſmigration, 'tis a ſtrong Preſumption, that theſe were the People who were firſt called by that Name. This happened about 15 Years before our Saviour's Birth, and in Proceſs of Time they came to be accounted real *Germans*. This then, ſays *Cluverius*, is the ancient *Alemania*, and theſe the old *Alemanni*, who being ſubject at firſt to the *Romans*, turn'd afterwards their fierceſt Enemies, and join'd with the reſt of the *Germans* to recover their Liberty.

The Catti, Chatti, Chaſſi, *and* Haſſi, *falſly called by* Cæſar, *and the Authors of that Time*, Suevi.

Cluverius proves by many Arguments, that *Cæſar* miſtook in calling thoſe People by that Name. His chief Reaſons are from their Situation, as being Neighbours to the *Ubii*; whereas *Tacitus* places the *Suevi* on the *Weiſſel*, the *Danube*, and the Borders of the *Sarmatæ*, as we heard before; and the *Catti* are placed afterwards in the Time of *Auguſtus*, *Tiberius*, &c. in the ſame Part of the Country where *Cæſar* places his *Suevi*. It likewiſe appears, that the *Catti* were one of the greateſt and moſt Warlike People in *Germany*, from the Character that *Tacitus* gives of them. Upon the whole, *Cluverius* aſſigns the ancient *Catti*, the Country now called *Thuringia*, all *Heſſe*, the whole Dutchy of *Grubbenhag*, half the Biſhoprick of *Paderborn*, which lies upon the *Weiſſer*, the Abbacy of *Fulda*,

Digitized by Google

and Part of the Dutchies of *Franconia* and *Coburg*. He eaſily accounts for the Change of the Name of *Chatti* into *Heſſi* and *Heſſen*, by the ſeveral Dialects of the *German* Tongue. The chief Town of *Heſſe*, now called *Heſſe-Caſſel*, he takes to be the ancient *Caſtellum Chattorum*, one of thoſe built by *Druſus Germanicus*, on the Left Bank of the *Fulda*.

The UBII

WEre Neighbours to the *Catti*, as appears from what is ſaid above; and before they were drove over the *Rhine* by them, poſſeſſed the Countries now called *Wetteraw* and *Weſterwald*, with that Part of *Heſſe* where now lie the Towns of *Marpurg* and *Gieſſen*. They were allow'd to fix themſelves in the Dioceſe of *Cologne* by *Auguſtus*, 37 Years before our Saviour's Birth.

The MATTIACI.

CLuverius takes Notice, That this People are ſaid by ſome modern Geographers to have inhabited *Zealand* and the neighbouring Iſles, and others place them upon the River *Iſſel*; but he ſhews their Miſtake from *Tacitus*, who ſays, the *Mattiaci* liv'd beyond the *Rhine*. He adds, That they were Part of the *Catti*; and that the *Mattium Catterum*, mention'd by *Tacitus* and *Pliny* to be beyond the *Rhine*, is now *Marpurg* in *Heſſe*, *quaſi Matburg*; ſo that their Country was *Wetteravia*, and Part of *Heſſe*. This appears yet more plain from the *Aquæ Mattiacæ*, and Warm Baths, mention'd to be beyond the *Rhine* by *Tacitus*, now called *Wisbaden*, in the Country of *Heſſe*, not far from *Marpurg*: And *Cluverius* thinks, the *Bucinobantes*, mentioned by *Marcellinus* to lie over againſt *Mentz*, had their Name from *Wisbaden*, it being uſual for the *Romans* to change the *German* W into B, and to give *Latin* Inflections to *German* Words.

The JUHONES.

THey are mentioned by *Tacitus* in his Annals on a remarkable Occaſion, *viz.* That a Fire broke out from the Ground, and deſtroyed great Part of their Country. *Cluverius* refutes thoſe who would place them in *Weſt-Freezland*, or about *Huy* on the *Maeſe*; for it appears, that they were Neighbours to the *Catti*, and probably Part of them, but had ſubmitted to the *Romans* when *Tacitus* wrote. Their Country, he ſays, was half the S. Part of the Dutchy of *Bergen*, and that now called *Weſterwald*.

The SIGAMBRI.

CÆſar ſays, they lay N. of the *Ubii*: They are ſometimes called *Sicambri*, and *Sugambri*. *Cluverius* takes Notice of *Strabo*'s Miſtake, in extending their Country to the Ocean, and aſſigns their Boundaries thus; That they dwelt in a Line from the Diviſion of the *Rhine* at *Schenkenſchans*, to the Fountain of the River *Bercola*, and in another from thence to the River *Luppia*, as far as the Town called *Lunen*, and from thence to the Head of that River; ſo that their Country was a great Part of *Weſtphalia* betwixt the River *Luppia* and the Borders of *Heſſe*, half the Dutchy of *Bergen*, all the County of *Mark*, and that Part of *Cleve* which lay beyond the *Rhine*. Their chief Places taken Notice of by *Roman* Authors, are, *Caſtellum Aliſo*, which *Cluverius* ſays is the Village now called *Elſen*; and *Luppia*, now *Lippe*.

The Tencteri, Uſipites, *or* Uſipii.

CLuverius ſays, they ſucceeded the *Sigambri*, being expelled by the *Catti*, as Cæſar informs us, and were received by the *Sigambri*, who removed afterwards to the other Side the *Rhine*; but the *Tencteri*, &c. ſubmitted to the *Romans*.

The Marſi *and* Marſaci, *or* Marſatii.

THey had the *Sigambri* on the N. and *Cluverius* ſays, liv'd in that Part of *Weſtphalia* which lies betwixt the Towns of *Munſter* and *Paderborn*, in the Time of *Auguſtus* and *Tiberius*. They aſſiſted in deſtroying

Digitized by Google

ing *Varus*'s Legions, for which they were afterwards invaded by *Tiberius*, who laid waſt their Country, with the famous Temple of *Tanfana*, at that Time the moſt noted in thoſe Parts of *Germany*. *Cluverius* thinks, the *Marſaci* were Part of the *Marſi*, but ſtaid in the Country when the reſt fled before the *Romans*. The *Marſi* were one of the moſt conſiderable and ancient of the *German* Nations; and upon their retiring before the *Romans*, extended their Limits from *Coesfeld* Southward to the *Rhine*, where the *Vahalis* ſeparates from it, and along the *Rhine* to *Batavodurum*, now *Durſtede*; then Weſtward to *Hattem*, and from thence Eaſtward to *Bercula*, where it falls into the *Iſſel*, and along *Bercola* to *Coesfeld*.

The TUBANTES.

THey were a ſmall People, and therefore ſeldom mentioned by the Ancients. *Cluverius* corrects their Miſtake who place them in that Part of *Over-Iſſel* called *Twente*, and rather thinks they liv'd in that Part of the Country now called *Benthem*.

The BRUCTERI

WEre Neighbours to the *Marſi* and *Tencteri*, according to *Tacitus*. *Cluverius* thinks they inhabited the Countries of *Zutphen* and *Benthem*, *Saland* and *Twente*, Part of *Drent*, and of the Dutchy of *Cleve*, and ſome Part of *Weſtphalia*. Moſt of 'em were deſtroyed by the *Romans* under *Trajan*; but the Remainders of 'em recover'd, and grew formidable to the *Romans*. *Cluverius* is not poſitive where they inhabited then, but thinks it was in the *Wetteraw*.

The Chamavi *and* Angrivarii.

THey are mentioned by *Tacitus* in the Reign of *Nero*, before *Cæſar*'s Expedition into *Gaul*: They liv'd on the Bank of the *Rhine*, and in *Tacitus*'s Time did, together with the *Angrivarii*, poſſeſs the Country of the *Bructeri*. The *Angrivarii* aſſiſted *Arminius* in his famous Battle againſt *Cæſar*, which *Cluverius* thinks was betwixt *Minden* and *Oldendorp*, and that their Country was Part of the County *Schawenburg* on the Right of the *Weſer*, half the S. Part of the Biſhoprick of *Minden*, the greateſt Part of the Biſhoprick of *Oſnabrug*, the N. Part of the County of *Tekelburg*, and Part of the County of *Ravensberg* about the Caſtle of *Lemburg*. He likewiſe thinks, that Part of them reached into the old Dominions of the *Tubantes*, as far as the Town called *Engeren*, which he thinks keeps ſome Remembrance of their Name. He is of Opinion, that the *Chamavi* liv'd betwixt the Rivers *Luecla* and *Ems*, and Part of the County of *Lingen*, and the N. Part of the Biſhoprick of *Oſnabrug*.

The Dulgibini *or* Dulgumnii, *and the* Chaſvari *or* Caſſavarii, Chattuarii, *and* Cattuarii.

THey are mentioned by *Tacitus*. *Cluverius* thinks, they liv'd in Part of the Country of *Lemgow*, and that the Limits of both theſe People were, on the S. the Confluence of the *Weſer* near *Remen*, and then a Line from the Town of *Melle* to *Bentlage* and the *Ems*; on the W. the Confluence of the *Ems* and *Loeda*; on the E. the *Laeda* to the Head of that River, and a Line from thence to *Remen*. *Cluverius* thinks they were in the Battle againſt *Varus*, being then Subjects to the *Cheruſci*.

The Anſibarii, Ampſibarii, *or* Amſivarii.

THey are mentioned by *Tacitus* to have been expelled by the *Chauci*, and to have removed near the *Rhine*; and that their ancient Country was half the N. Part of the Biſhoprick of *Minden*, the County of *Deepholt*, moſt of the County of *Hoy* on the Left of the *Weſer*, and the little Country called *Stading*. When they were drove out by the *Chauci*, they ſeized the Country formerly poſſeſſed by the *Friſii*, and ſubmitted to the *Romans*; but demanding more Land from them to inhabit, it was deny'd them; upon which they rebell'd, and moſt of them were cut off. On this Occaſion

Tacit.

Digitized by Google

Tacitus mentions a noble Saying of their General *Bojocalus*, who had ſerv'd long under the *Romans*, and deſerv'd better Treatment, That if they would not allow them a Place to live in, they could not refuſe them a Place to die in; and joining Battle, was defeated. The Remainders of them are mentioned afterwards with great Fame. *Cluverius* thinks they ſucceeded the *Angrivarii* and *Dulgibini* in their Poſſeſſions.

The FRISII.

THey are mentioned by *Tacitus* as a great People, divided into *Majores* and *Minores*. They were bounded by the *Batavi* on the S. by the *Marſi* on the N. E. by the *Ems* on the S. E. and by the Ocean on the W. and N. ſo that they poſſeſſed the greateſt Part of *Holland*, and the Province of *Utrecht*. *Cluverius* ſays, half the Towns of *Leiden*, *Waerden*, and *Utrecht*, are in the ancient Country of the *Friſii*, as is Part of *Gelderland* about *Harderwick* and *Elburg*, Part of *Over-Iſſel* about *Campen*, &c. and all *Weſt-Freezland* as far as the *Ems*: And hence it comes, that *North-Holland* goes ſtill under the Name of *Freezland*, and the Towns there carry the Arms of that Country. *Cluverius* thinks, that the *Friſii Majores* liv'd in the E. Part of the Country, and the *Minores* in the W. and that the Boundary betwixt them was the River *Vecta*, which falls into the *Snyder* Sea. On this Occaſion *Cluverius* takes Notice of the *Foſſa Druſiana*, ſo famous in Hiſtory, now call'd *Druſus*'s Ditch. The Reaſon why he dug it, was, That he might thereby bring his Fleet with his Army from the upper Part of the *Rhine* into the Lake and Ocean, to attack the *Friſii* and *Cauchi*, as we are inform'd by *Tacitus*. *Cluverius* corrects *Suetonius* here, for calling this Ditch a new and vaſt Work in the Time of *Germanicus*, ſince it was begun by his Father *Druſus*, and reached only 8 Miles, *viz.* from the Village of *Iſſelvort* to the Town of *Doesburg*. For our Author's Learned Diſſertation on this Ditch, the ſeveral Channels of the *Rhine*, and the Lake *Flevus*, &c. with the Corrections of Geographers on that Head, we refer to the Book it ſelf.

The Chauciſi, Cauchi, *and* Cauci.

TAcitus ſays, they border'd on the *Friſii*, liv'd along the Coaſt, and were bounded by ſeveral other People. *Cluverius* ſays, they poſſeſſed the Biſhoprick of *Bremen*, *Eaſt-Freezland*, the Counties of *Oldenburg*, *Delmenhorſt*, *Diepholt*, and *Hoy*, on this Side the *Weiſſer*, with the North Part of the Biſhoprick of *Minden*. They were divided into *Majores* and *Minores* by *Pliny*. *Ptolemy* ſays, the *Minores* liv'd betwixt the *Ems* and the *Weiſſer*, and the *Majores* betwixt that River and the *Elb*; and *Tacitus* the quite contrary, which *Cluverius* approves. *Tacitus* ſays, they were a very great and valiant People. Here *Cluverius* corrects *Paterculus*'s Miſtake in extolling *Tiberius*'s Expedition too much, and alledging, that he carried his Fleet 400 Miles from the *Rhine* to the *Elb*, up almoſt to its Fountains, which, if it were true, is no more than 300 Miles, and the greateſt Diſtance between the *Rhine* and the *Elb* is no more than 240; ſo that he thinks *Tiberius*'s Fleet came no further than the Town of *Stade*: So that if *Tiberius* marched 400 Miles, he muſt have taken vaſt Circuits, which *Strabo* and others not obſerving, make Countries much larger than they are; for if one go the neareſt Way by Land from the *Rhine* to the *Elb*, 'tis not above 180 Miles.

The Cheruſci, *and their Dependents*, *the* Campſani, Cathulci, *or* Cathulcones.

TAcitus ſays, they lay N. E. from the *Chauciſi*, were a great and valiant People, and join'd with *Arminius* againſt the *Romans*. *Cluverius* ſays, they poſſeſſed all the Biſhoprick of *Erden*, the Dutchies of *Lunenberg* and *Brunſwick*, the two Biſhopricks of *Hildeſheim* and *Halberſtat*, the County of *Schonenberg*, that Part of the Biſhoprick of *Magdeburg* on this Side the *Elb*, the *Old Mark*, the County of *Danneberg*, and Part of the Dutchy of *Lawenberg* on this Side the *Elb*.

The

Digitized by Google

The remarkable Places in this Country mentioned by *Roman* Authors, are, the *Teutoburgienſis Saltus*, and *Teutoburgium*, now *Dietmelle*, near which *Varus* and his Army were ſurpris'd and cut off; *Mons Melibocus*, now *Der Harz*; *Silva Herculi Sacra*, now the Wood betwixt *Minde-Strathagen* and *Bokenburg*. The *Campſani* particularly liv'd betwixt *Brunſwick* and *Wernigerode*; the *Catthulcenies* betwixt the Towns of *Luneburg* and *Duneburg*.

The Franci, *and* Francia.

Cluverius, before he come to deſcribe the *German* Nations beyond the *Elb*, thinks it proper to give an Account of the *Franci* and *Francia*, and produces very good Authorities to prove, that moſt of thoſe People already mentioned to have liv'd betwixt the *Rhine* and the *Elb* towards the Ocean, were afterwards called by the general Name of *Franci*. 'Tis plain from *Gregory* of *Tours*, *Lib.* 1. *Cap.* 9. that the *Bructeri*, *Chamavi*, *Anſivarii*, and *Chatti*, were by *Sulpitius Alexander* call'd *Franci*; and in the *Tabula Itinuraria*, the *Chauci*, *Ampſivarii*, *Cheruſci*, and *Chamavi*, are call'd *Franci*, and their Country *Francia*. It appears alſo by *Claudian*, that that Part of *Germany* betwixt the *Rhine* and the *Elb* was called *Francia*, and the People *Franci*. The Boundaries of this Country were, on the W. the *Rhine* and the Ocean; on the N. the Ocean; on the E. the *Elb* and *Sala*; but their Boundaries on the S. and how they were divided from the *Alemanni*, are not ſo plain. *Freherus* is of Opinion, that the Boundary betwixt *Francia* and *Suevia*, in the Emperor *Gratian*'s Time, was the *Neckar*; but *Cluverius* corrects his Miſtake, and proves it to have been the River *Lone*, and the Mountains called *Fogelsberg*.

He comes next to enquire into the Reaſon of the Name, and thinks it proceeded from their uniting together againſt the *Romans*, in order to recover their Liberty, according to the Example of *Alemanni*, formerly mentioned; and that the Word *Franc* ſignifies *Free*. The Remembrance of the Name is ſtill continued in *Germany* beyond the *Main*, where the People are called *Franken*, which ſignifies *Freemen*, and the Country *Frankenland* or *Franconia*. They have ſtill a Proverb in *Germany*, *As free as Franks*, or, *The Free Franks*, which *Cluverius* ſays had its Riſe from this Confederacy to recover their Freedom. The Time he takes to have been ſoon after the *Alemanni* rebelled againſt the *Romans*; for the Emperor *Probus*, who liv'd about 58 Years after *Caracalla*, is ſaid by ſeveral Writers to have made War againſt the *Franks*. This *Cluverius* ſays is the true and ancient *France*, and theſe the ancient *French*, who entring that Part of *Gaul* now called the Iſle of *France*, at laſt gave the Name to the whole Country. Here *Cluverius* corrects the Miſtakes of *Paulus Emilius*, *Sigibertus* and *Adrianus Junius*; the former, becauſe he ſays the Emperor *Valentinian* firſt called them *Francs*, which in the *Attick* Dialect ſignifies Fierce; and the latter, becauſe he alledges, that the *Franci* were the Inhabitants of *Batavia*, and peculiarly called by the Name of *Germani*, from a Place in *Strabo*, which he miſtakes. He adds, that *Auſonius* and *Martial* make uſe of Poetical Licence, when the former diſtinguiſhes betwixt the *Franci* and other *Germans*; and the latter, when he diſtinguiſhes betwixt them and the *Catti*.

The Foſi, *or* Saxons, *and Two Countries called* Saxony.

Tacitus is the only Author who mentions the *Foſi*, and ſays, they were Neighbours to the *Cheruſci* and *Cimbri*, and liv'd betwixt them. *Cluverius* is of Opinion, that inſtead of the *Foſi* mentioned by *Tacitus*, we ſhould read *Saxoni*; but his Arguments for it ſeem not to be concluſive enough. *Geſippus* mentions *Saxonici*, and ſays it was inacceſſible, by reaſon of Marſhes, *&c.* but *Cluverius* has no great Opinion of that Author. He is poſitive however, that the *Foſi* were the ſame whom *Ptolomy* and other Authors did afterwards call *Saxones*, and ſays, they inhabited *Holſtein*, and Part of the Dutchy of *Sleſwick*. *Tacitus* ſays, moſt of them were deſtroyed in their War with the *Catti*; yet they recover'd again, and became a formidable People, which muſt be own'd to be true, if they were the ſame

Digitized by Google

ſame with the *Foſi*. They afterwards paſſed the *Elb*, and drove out the *Francs* who liv'd on this Side of it: After which the Country as far as the *Rhine* was, according to *Cluverius*, called *Saxony*.

The CIMBRI.

Tacitus ſays, the *Cimbri* lay next to the *Saxons*; and *Ptolomy* ſays, they poſſeſſed that called *Cherſoneſus Cimbrica*. *Cluverius* ſays, modern Geographers miſtook this *Peninſula* for the Country betwixt *Lubeck* and *Hamburg*. *Strabo* miſtook by placing the *Cimbri* on this Side the *Elb*, becauſe the *Roman* Writers confounded the Accounts of their Actions with the People on this Side that River. *Cluverius* takes Notice, that ſome of the ancienteſt Writers related many fabulous Things of the *Cimbri*, as, that it was a Name the *Germans* gave to Robbers, as *Plutarch* ſays; and *Nicephorus*, *Gregorius*, and others, fancied they came from *Aſia* into *Scythia*, and from thence into *Germany*, &c. and confounded them with the *Cimmerii* near *Pontus*, of whom the *Greeks* talk ſo much. In *Tacitus*'s Time they were inconſiderable, tho' formerly he ſays they had been great and famous, and had War with the *Romans* when *Cæcilius Metellus* and *Papirius* were Conſuls. *Cluverius* rejects their Opinion who think the great Camp of the *Cimbri*, mentioned by *Tacitus*, was that in the *Peninſula*, now called *Damen-Wark*, and ſays it was either in *Italy* or *Gaul*. He thinks, the Country which *Ptolomy* places betwixt the *Saxons* and the *Cimbri*, is that now called *Jutland*. *Ptolomy*'s Six People that he places in the *Peninſula*, *Cluverius* fixes thus; the *Sigulones* in that now called *Wenſuſſel*; and he ſays, they were the moſt Northerly of the Remainders of the *Cimbri*. The *Funduſi* had a Lake on the N. and the Iſthmus between that Lake and the Sea, where the Village *Silkirck* now ſtands. On the W. they had the Sea as far as the Village of *Hemberg*, and from thence they reached in a Line Southward to the Village *Hald*. On the E. they had a River and a Lake. The *Chali* had the *Funduſi* on the N. on the E. the *Baltick*; on the W. the Ocean; on the S. the River which falls into the Sea near *Holm*; and then lay on a Line from the Head of that River to the Town called *Horſens*, from whence a Bay of the *Baltick* was their Boundary. The *Gobandi* had the *Chali* on the N. the Rivers *Nipſa* and *Tobeſket* on the S. the two Seas above-mention'd on the W. and E. The *Sabalingii* had thoſe two Rivers on the N. the ſame Seas on the W. and E. and the Iſthmus on the N. and *Cluverius* ſays, that at this Day the Country lying on the Lake is called *Salling*, which he thinks comes from the *Sabalingii*.

The Iſlands on the Coaſts of the Cimbri Saxons, Chauſi *and* Friſii.

Pliny takes Notice of 23 Iſlands on thoſe Coaſts that were known to the *Roman* Arms; the chief of which mentioned by him are, *Burchana*, now *Borchum*, before the Mouth of the *Ems*; *Fabaria*, now *Boonbuys*; *Gleſſaria*, by ſome thought to be *Ameron*; but *Cluverius* thinks 'tis that called the *Strand*, which he takes to be derived from *Auſtrania*, one of its Latin Names; *Actania*, now *Silt*. *Cluverius* ſuppoſes that thoſe Iſlands were made by Irruptions of the Ocean, and that more of them were known to the *Romans*, becauſe *Tacitus* ſays, the *Roman* Fleet ſuffered great Loſs among 'em as they ſet Sail from the *Ems*, being overtaken by a Storm.

The Ancient Suevia.

Cluverius obſerves, that 'twas eaſy to find out the Boundaries of the other *German* Nations mentioned by *Tacitus*; but that it would be difficult to find out thoſe of the *Suevi*. *Tacitus* ſays, they poſſeſſed the greater Part of *Germany*, and were divided into ſeveral Nations of different Names; but *Suevi* was their general Name. *Strabo* agrees with *Tacitus*, ſays they were poſſeſſed of the greateſt Part of *Germany*, and divided into 14 ſeveral People. *Cluverius* ſays, they poſſeſſed the Countries following, viz. Part of modern *Suevia* or *Swabia*, where are the Towns of *Dinkelſpiehl*

ſpithel and *Nordlingen*, the *Upper Palatinate*, *Voitland*, *Upper Miſnia*, *Upper Saxony*, *Bohemia*, Part of *Auſtria* beyond the *Danube*, Part of *Hungary* as far as the *Sarmatian* Mountains, *Moravia*, *Sileſia*, *Luſatia*, *Poland* on this Side the *Weiſſel*, the Marquiſate of *Brandenburg*, excepting that Part on this Side the *Elb*, *Pomerellia*, *Pomerania*, the Dutchy of *Mecklenburg*, Part of *Denmark*, called now *Blekin*, *Skane* and *Halland*, *Sweden*, *Norway*, *Weſtern Bothnia*, *Finmark*, *Scritefinnia*, *Lapland*, and *Biarmia*. *Cluverius* ſays, the Names of the different Nations that inhabited *Suevia*, as he finds them in *Tacitus* and other Authors, are as follow: On this Side the *Baltick*, the *Hermunduri*, *Narifci*, *Marcomanni*, *Quadi*, *Marſingi*, *Barii*, *Semnones*, *Lygii*, *Burgundiones*, *Gothones*, *Lemovii ſive Heruli*, *Rugii*, *Carini*, *Langobardi*, *Deuringi*, *Caviones*, *Angli*, *Varini*, *Eudoſes*, *Suardones*, *Nuithones*, to whom were added the *Oſii* and *Gothini*, that were Strangers. Beyond the *Baltick*, liv'd the *Sitones* and *Suiones*, a great People, alſo divided into ſeveral Nations. Theſe were their Boundaries in the Time of *Tacitus*, as they were before in the Time of *Auguſtus Ceſar*; ſo that *Strabo* is in the wrong to think that they called themſelves by that Name when they came into *Bohemia*, for 'tis plain they were call'd ſo long before. *Cluverius* thinks there's little Certainty as to the Reaſon of the Name, or why ſo many People ſhould call themſelves by it. He takes Notice, that the vaſt Mountains which ſeparate *Sweden* from *Denmark*, are called *Scve* by Latin Authors, and that the ancienteſt of them mentioned the *Suiones* or *Sueones*, a great People that dwelt about them; and *Ptolomy* mentions a River called *Suevus*, which falls into the *Baltick*; but whether the People gave Name to them, or they to the People, is not certain. He takes Notice, that *Strabo* calls them Συηβοι, and deſcribes their particular Countries as follows.

The Semnones.

Tacitus ſays, they accounted themſelves the nobleſt and moſt ancient of the *Suevi*. *Cluverius* refutes thoſe who would have them called *Semnes*, becauſe they are once found by that Name in *Velleius Paterculus*, which he thinks happen'd meerly by the Neglect of the Copier, who was better acquainted with the *Galli Semnes*. *Tacitus* ſays, they had 100 *Pagi* or Diſtricts; ſo that their Country was large, comprehending Part of *Leſſer Poland* betwixt the *Vart* and the *Oder*, the Dutchy of *Creſſin*, the Country of *Sternberg*, Part of *Sileſia* about *Glogaw*, *Luſatia*, Part of the Marquiſate of *Brandenburg* about *Francfort* on the *Oder*, the Principality of *Anhalt*, and Part of *Upper Saxony* and *Miſnia* beyond the *Elb*. He thinks, that *Somnewald* in the Country of *Sternberg*, and *Somnenberg* on the *Vart*, were anciently called *Semnenwald* and *Sonnenwald* from thoſe People.

The Langobardi

Liv'd N. of the *Semnones*, were few, but valiant. *Cluverius* takes Notice, that *Proſper*, *Sigebertus*, *Diacnus*, and other Writers of the middle Age, ſay many fabulous Things of them, particularly that they liv'd in *Norway* and *Sweden*, and were called *Winili*; but coming into *Germany* in the Time of the Emperor *Theodoſius*, were called *Langobardi*, from their long Beards; but *Strabo* mentions them long before that Time. Their Country was the old Marquiſate of *Brandenburg*, with half the County of *Danneberg*.

The Deuringi, Caviones, Angli, Varini, Eudoſes, Suardones, *and* Nuithones, *were join'd in one Body.*

SEparately they were not very ſignificant; but altogether were very conſiderable, and went continually arm'd, except on Holidays, when they worſhip'd their Goddeſs *Hertha*. They all liv'd near the Sea.

The *Deuringi* are alſo call'd *Reudigni* and *Redigni*, and by later Authors *Toringi*, *Thoringi*, *Turingi*, and *Thuringi*, and are now called *Doringer* and *Toringer* by themſelves. They came into *Thuringia* in the Time of *Procopius*; but their ancient Country was betweeen the *Elb* and the *Baltick* and they were Neighbours to the *Angli* and *Varini*, in that Part of the Marquiſate of *Brandenburg* where

Digitized by Google

are now the Towns of *Havelberg*, *Ruppin*, and *Prutzwalk*.

The *Caviones* or *Aviones*, and by some called *Chaibones*, liv'd in Part of the Marquisate of *Brandenburg* about *Dalmin*, and Part of the County of *Dancberg*, and the Dutchy of *Mecklenburg*.

The *Angli*, the Predecessors of the *English*, possessed half the Dutchy of *Lunenburg* on the right Side of the *Elb*, and the Western Part of the Dutchy of *Mecklenburg*. *Ptolomy* mistakes when he places them on this Side the *Elb*, and makes them Neighbours to the *Semnones*. *Cluverius* thinks, that *Ptolomy* wrote the Name wrong when he calls them Αγγίλοι. The *Germans* call them the *Angelen*. Their Name is still retained in the *Cherſoneſus Cimbrica* in that Country called *Angelen* or *Anglen*, betwixt *Sleſwick* and *Flensberg*, whither they remov'd after *Tacitus*'s Time by Force, as 'tis ſuppos'd. *Cluverius* ſays, they were either Part of the *Saxons*, or under their Protection; from whence in latter Ages they were called *Anglo-Saxones*.

The *Warini*, *Werini*, or *Varni*, and by ſome called *Varinni* and *Varinna*, liv'd in Part of the Dutchy of *Mecklenburg* about *Roſtock* and *Guſtraw*, and Part of *Pomerania*. *Cluverius* thinks, the River *Warne*, and the Town of *Waren*, ſtill retain their Name.

The *Eudoſes* liv'd in Part of *Pomerania*, about *Barth*, *Stralſund*, *Gripeſwalde*, &c. and the Iſle of *Uſedom*.

The *Suardones*, by *Ptolomy* corruptly called Φαραδηνοὶ, liv'd in Part of *Pomerania* about *Stettin*, and Part of the Dutchy of *Mecklenburg* betwixt the Lake *Tuly* and the River *Havel*.

The *Nuithones* liv'd in Part of the Marquisate of *Brandenburg*, about *Prentzlow*, *Angermund*, &c. Part of the Dutchy of *Mecklenburg* about *Furſtenſee*, and Part of *Pomerania* about *Gartz*. *Cluverius* thinks, the Iſle of *Rugen* in the *Baltick* contain'd the Sacred Wood dedicated to *Hertha*. In that Part of the Iſland call'd *Jaſmund*, near the Cape called *Stubbenkamer*, there is a very thick Wood, in which there is a mighty deep Lake of black Water, which abounds with Fiſh; but the Inhabitants ſay, 'twill neither bear Boats or Nets. *Cluverius* ſpeaks of an odd Paſſage that happen'd there in his own Time, *viz.* Some People carried a Boat to that Lake, and return'd next Day with Nets, in order to have fiſhed; but, to their great Amazement, miſſed their Boat, which at laſt they ſaw on the Top of a tall Beach-Tree; and asking which of all the Devils had hung it there, they heard a Voice, but ſaw no body, which ſaid, *It was not all the Devils, but only I and my Brother* Nicholas: Upon which *Cluverius* makes this Remark, That the unclean Spirit, being angry that his Worſhip ſhould be aboliſh'd where Idolatry was perform'd of old, does ſtill love to play his Tricks there: But this, with the Story it ſelf, we ſubmit to the Reader's Judgment. *Helmoldus* ſays, That long after Chriſtianity took Footing there, the People paid a Superſtitious Veneration to that Wood. The barbarous Inhabitants uſed to conſult the Devil in this Place, and to ſacrifice Chriſtians to him.

The Hermunduri, *and later* Suevia.

HAving given an Account of the *Suevi* who dwelt beyond the *Elb*, *Tacitus* comes to deſcribe thoſe who liv'd on this Side as far as the *Danube*. *Cluverius* ſays, their Country was the Principality of *Anhalt*, Part of the Dutchy of *Saxony* betwixt the *Saal* and the *Elb*, all *Miſnia* on this Side the *Elb*, all *Voitland*, Part of the Dutchy of *Coburg*, and about *Culmbach*, *Cronach*, &c. now ſubject to the Elector of *Brandenburg*, Part of *Franconia* on the Left Side of the *Main* about *Bamberg* and *Forchaim*, Part of the *Upper Palatinate* about *Nuremberg*, and Part of the Dutchy of *Swabia* about *Nordlingen*. He differs with *Tacitus* as to the Extent of the *Hermunduri*, and does not think their Country reached to the Head of the *Elb*, whoſe Riſe is from a Mountain in the Confines of *Sileſia*, in the furtheſt Part of *Bohemia*, to the South-Eaſt, near the Town of *Smidberg*, which is ſituated in a Valley commonly called the *Devil's Ground*. He infers from the Account *Tacitus* gives of the Retreat of *Marobodus*, after his Defeat by *Arminius*, over the Hills into the Country of the *Marcomanni*, the Battle

Battle to have been fought on the Borders of the *Hermunduri* and *Marcomanni*, near the Towns of *Zuriche* and *Chemnitz* in *Miſnia*. Therefore if the Borders of the *Marcomanni* were the Hills near the Towns of *Aunsberg* and *Mariaberg*, it cannot be that the Borders of the *Hermunduri* were extended beyond thoſe to the true Fountain of the *Elb*: Nor is it to be ſuppoſed that the Battle was fought on the Right Side of the *Elb*, in the Borders of the *Semnones*, for they were Enemies to *Marobodnus*; and 'tis plain from *Tacitus*, that the War he managed was Defenſive, and not Offenſive: Therefore he thinks *Tacitus*'s Miſtake proceeded from taking the Fountain of the *Moldaw* to be that of the *Elb*; and *Ptolomy*'s Error ſeems to have proceeded from the ſame Cauſe. *Cluverius* takes Notice, that the Name of theſe People is alſo miſtaken by *Strabo* and *Ptolomy*; the former calls them Ὑμμορδοῆς, inſtead of Ἐμμορδοῆς, and *Ptolomy* calls them Ἀμορδοῖοι; whereas the Situation ſhews 'em to be the *Hermunduri*: But an Age or two after *Tacitus*'s Time, when the *Alemanni*, *Franci*, *Saxons*, and the Nations of the *Suevi* beyond the *Saal* and the *Elb*, the *Gothi*, *Burgundiones*, *Vandali*, *Quadi*, and *Marcomanni*, began to be famous by their different Names, the *Hermunduri* alone were called *Suevi* by the *Romans*, and their Country *Suevia*; becauſe, as *Cluverius* thinks, that, next to the *Alemanni* and *Franci*, who liv'd on the *French* Side the *Rhine*, they lay neareſt to the *Romans*; and at laſt, when all the *Alemanni* left *Germany*, the *Suevi* ſucceeded into their Dominions, which from them was called *Suevia*, and now *Swabia*, and by the *Germans* *Schwabenland*.

The Nariſci, Nariſti, *or* Nariſtæ, *afterwards called* Armalauſi.

Tacitus ſays, the *Nariſci* liv'd on the Banks of the *Danube*, betwixt the *Hermunduri* and *Marcomanni*, in that Part of the Country, ſays *Cluverius*, now called the *Upper Palatinate*, and the Landgraviate of *Leuchtenberg*, and in the *Tabula Itineraria* were afterwards called *Armalauſi*; but why, is not ſaid.

Boiohæmum, *and its Inhabitants the* Boii *and* Marcomanni.

'TIS not certain what *German* People firſt inhabited this Country; but *Tacitus* ſays, the *Boii*, a *French* Nation, removed thither, which, according to *Livius*, was when *Tarquinius Priſcus* reign'd at *Rome*; and from them the Country was called *Boiohæmum*, now *Bohemia*. Here *Cluverius* takes Notice of *Cæſar*'s Miſtake in placing the *Volcæ Tectoſagæ* in the *Hercinian* Forreſt, ſince *Livy* places them in *Gallia Braccata*, or the Province of *Narbon*; and ſays, 'twas the *Celtick Gauls* who ſent a Colony to the *Hercinian* Forreſt, which ſurrounds *Bohemia*; and the *Boii* were afterwards expelled by the *Marcomanni*, as *Tacitus* informs us, but came in Time to be called *Bohemi* from their new Country. *Cluverius* thinks, that *Ptolomy*'s *Marobudum* is what we now call *Pragus*. The *Marcomanni* are much applauded for their Valour by *Tacitus*, and other *Roman* Authors.

The QUADI.

MOdern Geographers place them in *Sileſia*; but *Cluverius* proves that it was *Moravia*, becauſe the River *Marus*, ſaid to be in that Country by *Pliny*, is what the *Germans* call *Maren*, and the Natives *Morawa*. Their Towns mentioned by *Ptolomy* are, *Eboreduunm*, now *Brin* or *Brun* in *Moravia*; *Eburum*, now *Olomutz* or *Olmitz*; *Medoſtanum*, now *Znaim*; *Celemantia*, now *Kalmintz*.

The Gothini, Marſingi, Oſi, *and* Burii,

ARE mentioned by *Tacitus* to be bounded by the *Quadi* and *Marcomanni* on one Side, and by a Ridge of Mountains on the other. The *Gothini*, according to *Cluverius*, liv'd in Part of *Poland* about *Tarnowitz*, *Jablakow*, &c. in Part of *Sileſia* about *Teſchen*, *Freiſtat*, *Frideck*, &c. and Part of *Mo-*

ravia about *Mezyrzec* and *Haliſſow*. They are by *Dio* called *Kotinui* and *Cotini*. The *Oſi* liv'd in Part of *Sileſia* about *Oppeln*, *Little Glogaw*, *Ratibor*, &c. and Part of *Poland* about *Dlugoſzyn*, &c. *Ptolomy* mentions *Parienna*, a Town in this Country, now *Parn*, near the Head of the *Oder* in *Moravia*. Beyond the *Oſi*, betwixt *Boh.mia* and the *Lygii*, liv'd the *Marſingi* and *Burii*, which, according to *Cluverius*, was in the beſt Part of *Sileſia* about *Breſlaw*, and the County of *Glacen*. They are call'd by *Ptolemy*, Μαρσιγοι, and by *Æthicus*, *Marsiani*. The *Burii* liv'd in Part of *Sileſia* about *Prauſnitz*, &c. and in Part of *Poland* about *Krzepice*, *Radomsko*, and as far as *Jutroſzyn*. *Ptolomy* mentions *Calisia* in this Country, now *Kalisz* in *Poland*.

The Lygii, Ligii, Lugii, Lugi, *or* Lugiones.

Tacitus ſays, they were a numerous People, and liv'd beyond the Ridge of Mountains which divided *Suevia*. *Æthicus* calls them *Langiones* by a Miſtake. *Cluverius* ſays, they were bounded by thoſe Mountains and the River *Weiſſel* from the Town of *Oſwieczym* to the Town of *Bydgoſcz*, which makes now a conſiderable Part of *Poland*. They were divided into ſeveral People; the Chief of which were the *Arii*, *Helvecones*, *Manimi*, *Elyſi*, and *Naharvali*; and *Ptolomy* mentions the *Lugi Diauni*.

The Gothones *or* Gotones, Gutones, Guttones, Gythones, Gothi, *and* Gotthi, *and likewiſe the* Gepidæ.

Tacitus ſays, the *Gothones* liv'd N. of the *Lygii*; *Cluverius* ſays, their Country was that now called *Pomerellia*, and thinks it not improbable that the Village called *Goorland*, on the hither Bank of the *Weiſſel*, over againſt the middle of the great Iſland, may have derived its Name from them. He has a long and learned Diſſertation to prove that the *Gothones* inhabited the Coaſt of the *Baltick*, and were the ſame People which latter Ages call'd the *Gothi* and *Gotthi*; notwithſtanding that *Sidonius*, *Claudian*, *Auſonius*, *Jornandes*, *Procopius*, *Oroſius*, St. *Jerome*, *Spartian*, and others, will have the *Goths* to have been deſcended from the *Getæ*, mentioned by the Greek Authors, whom the Latins called *Daci*. His chief Reaſon is, that none of the Ancients did ever reckon the *Getæ* or *Daci* among the *German* Nations; whereas 'tis plain the *Goths* were, both by their Cuſtoms and Language, which nobody ever deny'd. He proves from good Authority, that the *Getæ* were always reckoned a People of *Thracia*; whereas the *Goths* were ever accounted Part of the *Celtæ*. He takes Notice, that *Jornandes*, who was a Biſhop of the *Goths* in the Time of the Emperor *Juſtinian*, did very improperly entitle his Book, *De Rebus Geticis*, when his Subject was the Affair of the *Goths*; and he was as much out in calling their Country *Dacia*; but was led into this Miſtake by *Ablabius* and *Dexippus*, who wrote of the *Goths* before him, and deriv'd them from *Norway* and *Sweden*; and other Authors following his Pattern, brought the *Lombardi*, *Franci*, *Saxones*, and *Alemanni*, likewiſe from thence. He charges *Jornandes* with quoting the Teſtimonies of *Ptolomy* and *Juſtin* unfairly, and perplexing *Strabo*'s Hiſtory of the *Getæ*; and upon the whole concludes, that the *Gothi* were the ſame *German* People which the Ancients called *Gothones*, &c. and the old *Germans*, *Thi-Gotan*; from whence he will have the Latins to have formed the Word *Gothi*, as from the *Friſiones* they derived *Friſii*; from the *Francones*, *Franci*, &c. Another Argument he takes from *Jornandes*'s own Hiſtory, who thô he brings the *Goths* from *Scandia* before the Time of *Hercules* and the *Trojan War*, he owns that they did for ſome time inhabit about the Mouth of the *Weiſſel*, and made War upon the *Vandals*, under their Leader *Bericus*. He thinks there's ſome Truth in what he ſays, that Part of the *Goths* paſſed the *Weiſſel*, and marched as far as the *Palus Mœotis*, under *Filemer*; and that others of them ſtaying on this Side the *Weiſſel*, made War on the *Burgundiones*, and other neighbouring People, under *Faſtida*, and purſued the reſt over the *Weiſſel* into *Dacia*. He thinks they are alſo miſtaken who ſuppoſe that the *Osin*, which the

the *Goths* passed, was the River *Obi* betwixt *Europe* and *Asia*, since 'tis plain *Jornandes* takes it to be the *Vistula* or *Weissel*, which he makes the Boundary betwixt *Scythia* and *Germany*; and owns, that Part of the *Goths* who ſtay'd on this Side that River made War upon their Neighbours the *Burgundians*, &c. As for their Expedition to the *Palus Maotis* and *Black Sea*, 'tis mentioned by *Ablabius* and *Stephanus*; but he takes Notice, that they no where ſay they were formerly called *Getæ* or *Daci*; therefore he thinks it credible, that after *Tacitus*'s Time they marched towards the S. E. to the Lake of *Maotis*, and that they returned towards the S. W. to the *Boriſthenes* and *Pontus*, and the Borders of the *Getæ*, where they ſettled; and being diſtinguiſhed into two Nations, thoſe who liv'd Eaſtward towards *Pontus* were call'd the *Eaſtern Goths*, *Oſtro-Gothæ* or *Oſtro-Gothi*; and thoſe who liv'd towards *Germany* Weſtward, were called the *Weſtern Goths*, *Weſe-Gothæ*, *Weſe-Gothi* or *Veſe-Gothi*; and *Sidonius* only calls them *Veſi*. How they came afterwards to make their Irruptions into *Thracia*, *Illyricum*, *Italy*, *France* and *Spain*, and Part of them likewiſe into *Bithynia*, *Phrygia*, and other neighbouring Countries, is accounted for at large by *Jornandes* and others. We leave the Reader to his own Judgment, whether *Cluverius*, or the *Swediſh* and *Daniſh* Hiſtorians, who pretend the *Goths* came from their Countries, be in the right: 'Tis certain, that if the Names of Places which have ſome Reſemblance to that of the *Goths* be a good Argument, the *Danes* and *Swedes* have more to ſay for their Opinion than he has for his; not is it any way improbable that the *Gothones*, whom he places on the Coaſt of the *Baltick* about the Mouth of the *Weiſſel*, might firſt come from the *Getæ* on the other Side the *Baltick*; but it muſt be own'd that the *Goths*, who afterwards made ſo great a Noiſe and Figure in the World, ſeem to be more immediately deſcended from the *Gothones* on this Side the *Baltick*.

Jornandes ſays, the *Gepidæ* were originally *Goths*, which *Cluverius* does not contradict, tho' he looks upon his Original of the Name to be fabulous.

The Northern *Eridanus* mentioned by the Ancients, *Cluverius* takes to be the River *Rodaune*, which falls into the *Weiſſel* near *Dantzick*, and by Miſtake was given to the *Weiſſel* it ſelf; and he proves that *Dantzick* is the Place which was famous for the Trade of Amber in the Time of *Herodotus*, &c. He thinks the Latin Name *Gythonium* or *Godanium* to be derived from the Word *Thautonium*, and ſays, 'tis mentioned by the Name of *Gedanum* in an ancient Charter granted in the Year 1209 by the Duke of *Caſſubia*, and that it is more ancient than any other Town in the North; but this muſt be taken with ſome Grains of Allowance, becauſe 'twas the Place of his Birth.

The Lemovii, *called alſo* Heruli, *with the* Rugii, Sidini, *and* Carini.

Tacitus ſays, the *Lemovii* dwelt W. from the *Gothones*, and beyond them the *Regii*. *Cluverius* ſays, the latter inhabited a great Part of *Pomerania* from *Sturgard* to *Coſlyn*, and a ſmall Part of the Marquiſate from *Tramberg* to *Stolpiſtburn*. The Iſle of *Rugel* derives its Name from them. The Town *Rugium*, mentioned here by *Ptolomy*, is now called *Regiwald*. *Ptolomy* calls them by Miſtake *Rutilii*, and later Writers *Rugii* and *Regi*. They were divided into two People, and Part of them afterwards removed to the Banks of the *Danube*, from whom the Country called *Rugiland*, betwixt *Tranſilvania* and the *Danube*, had its Name.

The *Lemovii* were ſeparated from them by the River *Vipar*, poſſeſſed a great Part of that Country now called *Caſſubia*, in the middle of which ſtands the Town of *Lemburg*; from thence they reached to the Sea called *Pontus* and *Heel*, and into Part of *Pomerania* about *Stolpe*. Later Writers join the *Heruli* with them in their Wars; ſo that 'tis probable they were their Neighbours. Some call them *Eruli*. *Cluverius* thinks they might derive their Name from the *Peninſula* called *Heel*, at the Weſtern Mouth of the *Weiſſel*, from whence, according to the *German* Dialect, they were called *Helur*, by the Greeks *Heluri*, and by Tranſpoſition of the Letters *Heruli*.

The

The *Sidini* liv'd S. of the *Rugii*, in Part of the Marquisate and *Pomerania*. *Ptolomy* mentions the Town *Viritium* here, betwixt the *Suevi* and the *Weissel*, now called *Peritz*.

The *Carini* had the *Rugii* on the N. and liv'd in Part of the Marquisate and *Poland*, betwixt the River *Tragus* and *Guda*.

The Burgundiones, Burgundii, *or* Burgundi.

Cluverius thinks they were not mentioned by *Tacitus*, because they were then inconsiderable; yet they were mentioned by *Pliny* before him, and became afterwards famous among Writers of the later Ages. *Cluverius* says, their ancient Country was in Part of *Poland*, from *Gnesna* to the Lake *Gopla*; but in the Time of the Emperor *Probus*, *Zosimus* mentions them to be seated on the *Rhine*. *Ptolomy* commits many Mistakes, says *Cluverius*, both as to their Name and Situation; for he places them in *Sarmatia*, and calls them sometimes *Fragundiones*, and at other times *Burgundiæ* and *Bagundæ*. *Marcellinus* says, they were an Offspring of the *Romans*, left in *Germany* by *Drusus* and *Tiberius*, and is followed in this by *Orosius* and *Isidorus*; but *Cluverius* rejects this, and thinks, that after they came to the *Rhine* in the Time of *Probus*, they enlarged their Habitations into that now called *Burgundy*. He informs us from *Marcellinus*, that they first came into the Country of the *Catti*; and *Procopius* says, they liv'd S. of the *Thuringi*. *Marcellinus* mentions the Boundaries of the *Alemanni* and *Burgundi* to have been distinguished from one another by Stones set up in the Country called *Capellatium* or *Palæ*, which some will have to be the *Palatinate*; but *Cluverius* thinks it was about the Town of *Stain*, in the Borders of the *Catti*; and when the *Alemanni* went into *Rhetia* and *Helvetia*, the *Burgundiones* succeeded them, and from thence removed into *Gaul* upon the Irruption of the *Goths*, who destroyed many of them, as *Eumenius* informs in his *Genethliacon* of *Maximianus*.

The Northern *Ocean*, *which bounds* Germany *on the North*, *and its great Bay called* Codanus *by* Mela *and* Pliny, *and* Mare Suevicum *by* Tacitus, *and that Part of it called* Venedicus Sinus *by* Ptolomy.

Tacitus seems to have known but little of this Part of *Germany* beyond what he calls the *Mare Suevicum*, and mentions only two Sorts of People in it. *Pliny* calls that Part of the Ocean from the Mouth of the *Rhine* to the Promontory *Rubeis*, now *Norscoping*, the *German* Ocean. The large Bay of that Ocean mentioned by *Tacitus*, and other *Roman* Authors, is that now called the *Baltick* or East-Sea. It was by some of those Authors called *Germanicus Sinus*, and by others *Mare Suevicum*, from the *Suevi*, who inhabited the *Peninsula* of this Sea, and Part of the Continent of *Germany*. In this *Peninsula* they plac'd the huge Mountain *Sevo*, the Ridge of Mountains that separate *Norway* from *Sweden*, and are now called by several Names, *viz.* the *Skerr*, the *Sulo*, and *Dofrafiel*, which are 360 Miles in Length from the Mouth of the *Albis* or *Elbe* to the Promontory of the *Cimbri*. The Form of this Bay was not known to those ancient Writers, as it now appears to be; for they thought it had a Communication with the *Winds Sea*, and that *Scandinavia* was an Island, nor was it possible for them to know it better, since the *Roman* Navy sail'd no further N. than the *Promontorium Cimbrorum*, now called Cape *Skagen*. The *Sinus Venedicus*, *Cluverius* takes to be that Part of the Bay betwixt the Mouths of the *Weissel* and the *Narva*.

Of Scandinavia, Scandia, *or* Scanzia, *called by the old* Greek *Authors* Baltia, *and* Basilia, *and likewise of* Finningia.

Those vast Islands mentioned by *Tacitus* to be in this Part of the World, were the same which *Pliny* call'd *Scandinavia* and *Finnin-*

Digitized by Google

Finningia; but he took *Baltia* or *Baſilia* to have been a diſtinct Iſland from *Scandinavia*, by not adverting to the Greek Authors, and therefore is very confus'd in his Account of them. Upon the whole, *Cluverius* ſays, That by thoſe Iſlands they meant that vaſt Tract of Ground which lies now betwixt the *White Sea* and the *Baltick*, that includes *Lapland*, *Biarmia*, *Finmarchia*, *Norway* and *Sweden*, with Part of *Bothnia* and *Denmark*; and the many Iſlands they mention without Names, are thoſe which lie all along that Coaſt. He thinks the whole Country was called *Scandia* and *Scandinavia*, from that Part of *Denmark* which the Natives call *Scaane*, and the Latins *Scania*. He takes Notice of a great Error in *Ptolomy*, who reckon'd that nothing belong'd to *Germany* beyond the *Sinus Codanus* or the *Baltick*; and this led many others into the ſame Error, as *Pliny*, *Solinus*, and *Dicuil*.

Before the Names of *Scandia* and *Scandinavia* were known to the *Romans*, the *Greeks* called the Country *Baltia* and *Baſilia*, as we find by *Pliny* and *Solinus*; and from hence the *Belt* and *Baltick* Sea derived their Names.

As to *Finningia*, *Cluverius* takes it to be what now called *Finnia*, *Eaſt-Bothnia*, and *Corelia*, the Country of the *Fenni* and *Finni*, now the *Finlanders*.

Here *Cluverius* has a Diſſertation concerning the *Thule* of the Ancients, and offers many Arguments to prove it to be what we now call *Iſland*. He confutes *Ortelius*, who will have it to be the Coaſt of *Norway* that lies over againſt *Scotland*, by very ſolid Arguments; but ſince *Pytheas* and *Pliny* reckon it to be one of the *Britiſh* Iſlands; and *Tacitus*, when ſpeaking of the *Romans* ſailing round *Britain*, and having firſt diſcovered the *Orkney* Iſlands, immediately adds, that they diſcovered *Thule*, which was hid from them before by the Winter and the Snow, it can ſcarce be poſſible that *Iſland* can be what the *Romans* called *Thule*, for it lies at too great a Diſtance from the *Orkneys*; and thoſe Seas were too dangerous and too little known for the *Romans*, who, as appears by *Tacitus*, made more uſe of Oars than of Sails in this Expedition to have ventur'd into. But we refer the Reader to what *Cluverius* himſelf ſays, and to our former Diſſertation on *Thule*, and leave him to his own Judgment, with this one Caution, That as the Ancients called the utmoſt of their Diſcoveries in the Northern Seas, *Thule* wherever it was, and removed it further N. according as their Diſcoveries extended that Way, 'tis probable that *Solinus* and others, upon whom *Cluverius* builds ſo much, might afterwards give the Name to *Iſland*, or other Iſles which they then had an Account of to lie further N. But 'tis plain that by *Mela*'s Deſcription of it, as lying oppoſite to the Coaſt of the *Belgæ*, from the Length of the Days there in Summer, the Largeneſs of the Country, and the People's Way of living, that Dr. *Wallace* ſeems to have Reaſon for making it the N. E. Coaſt of *Scotland*, or that at leaſt *Sebetland* bids fairer for it than *Iſland*, ſince either of thoſe Places might have been ſeen by the *Roman* Navy when they were in the Neighbourhood of the *Orcades*; whereas 'twas impoſſible for them to ſee *Iſland*, or any Thing near it at that Diſtance.

The leſſer Iſles betwixt Thule *and* Germany, *and thoſe in the* Baltick.

Cluverius ſuppoſes thoſe called the Iſles of *Feró* to be the *Gleſſaria* or the *Electrides Inſulæ* of the Ancients; but with how little Reaſon, will appear by our Deſcription of thoſe Iſlands, and by comparing it with his own Deſcription of the Coaſt of the *Baltick*, and his poſitive Aſſertion, that *Dantzick* was the chief Place from whence the Ancients fetch'd their Amber: But he juſtly corrects *Mela*'s Miſtake in placing the *Acmonæ*, *Æmodes* or *Hemodes*, in the *Baltick*, ſince 'tis very probable they are thoſe now called the Iſlands of *Feró*. *Mela*'s *Codanonia* he takes to be *Daniſh Zealand*, which was poſſeſſed by the *Teutoni*, and the moſt fruitful Iſland in thoſe Parts. He thinks they were called promiſcuouſly *Teutones* and *Dani*, from the Words Θευθ and Δαν, the Name by which he ſays thoſe People called God: But we have obſerved before, that this ſeems to have more of Fancy than Solidity, and that they rather derived their Name from the *Sinus Codanus*, upon which they

Digitized by Google

they inhabited, from whence they were at first called *Codani*, and afterwards *Dani*; and since *Cluverius* owns that they call themselves *Danske*, 'tis not improbable that the Town of *Dantzick*, which lies on this Side the same Bay, may also derive its Name from thence.

Of the Suiones, Helleviones, Scanii, Gutæ, Lappiones, Scritofinni, Marchiofinni, *and* Sitones *or* Nortmanni, *who inhabited* Scandinavia *or* Scandia.

Tacitus mentions the *Suiones* and the *Sitones* as the Inhabitants of *Scandinavia*. *Cluverius* assigns the Mountain *Sevo* as the Boundary betwixt them; so that the *Sitones* inhabited *Norway*, *Finmark*, and *Scritofinnia*; and the *Suiones*, *Lapland*, *Biarmia*, *West-Bothnia*, *Swedeland*, *Gutia*, with *Bleking*, *Skane* and *Halland*, and Part of *Denmark*. He is of Opinion, that the *Swedes* derive their Name from the *Suiones*. The *Helleviones* he thinks inhabited the Country now called *Halland*, from whence he supposes it derived its Name. The *Gutæ* or *Guti* liv'd in *Gothland*, which the Latins call *Gothia*. The *Scanii* some take to have been Part of the *Helleviones*; but he rather thinks they liv'd S. of them, and were so great a People, that the whole Country was from them called *Scandia*. The *Lappiones* are those called the *Lapplanders*, and the *Scritofinni* seem to be those now called the *Finns* or *Finlanders*, and that the *Marchiofinni* were of the same People. The *Nortmanni* inhabited that now called *Norway*. All of 'em comprehended by *Roman* Authors under the Names of *Suiones* and *Sitones*.

The East Side or Boundary of Ancient Germany.

Tacitus says, the *Germans* were separated from the *Sarmatæ* and *Daci* by mutual Fear and high Mountains, and calls those *German* Nations who dwelt beyond the *Baltick*, the *Weissel*, and the Mountains of the *Daci* Eastwards, the *Fenni*, the *Æstii*, and the *Peucini* or *Bastarnæ*.

Cluverius begins with the latter. He says, *Bastarnæ* was the Name of the People in general, *Peucini* only of a Part, from a Mountain called *Peuce* in *Sarmatia*, according to *Ptolomy*. *Cluverius* fixes the Boundaries of those People thus: On the N. they had the River *Aper*, now *Wiepre*, that falls into the *Weissel*: From the Head of that River they reached in a Line to the Lake *Ammadoce*, near *Kiow* in *Poland*; from thence they had the River which rises out of that Lake near the Town *Zarobe*, till it falls into the *Dniester*; then that River. On the E. they had the *Mare Ponticum*, now the *Black Sea*, and the Mouth of the *Ister* or *Danube*. On the S. they had that River, tho' some of them, according to *Strabo*, liv'd beyond it to the Mouth of *Hierasus*, now *Pruth*, and along that River to the *Carpathian* Mountains, as far as the Head of the *Weissel*. On the W. they had the Mountain *Asiburgium*, now *Tatari* in *Poland*, as far as the Town *Osmiecxym*; and from hence they were bounded by the *Weissel* till the *Wiepre* falls into it.

The *Peucini*, properly so call'd, were those who inhabited the Ile of *Peuce*, now call'd the Ile of *Serpents*, and the neighbouring Borders of the *Tyhalli* and *Gete*. *Cluverius* takes Notice, that those two People were divided into others of different Names, as the *Sidones*, who liv'd near the *Weissel*; the *Burgiones* or *Visburgi*, who liv'd near them towards *Bohemia*; and the *Carpiani*, who liv'd near the *Carpathian* Mountains. *Cluverius* thinks they were afterwards drove into *Transilvania* by the *Sarmatæ*, because the *Transilvanians* do now speak *German*, and that the Remainder of them might accompany the *Goths* into *Italy* and *Gaul*. They are spoke of by all Authors as a Warlike People. The chief Towns mentioned by *Ptolomy* in their Dominions are, *Carrodunum*, now *Lemberg* in *Russia Minor*; *Matonium*, now *Camenitz* in *Podolia*; *Vibantvarium*, now *Bar* in the same Country; *Eratum*, now *Row* in *Moravia*.

The

The Venedi *and* Æstii.

Tacitus doubts whether the *Venedi* were *Germans*; but *Cluverius* thinks it plain from *Ptolomy* they were, and that they liv'd at first on the River *Weissel* in Part of *Courland*; but afterwards extended their Dominions further, because they are said to have had the *Finni* on the N. and the *Bastarna* on the S.

The *Æstii*, *Cluverius* places in *Livonia*, *Prussia*, and *Samogitia*, Part of *Lithuania* on the Left of the *Memel* as far as *Nur*, and Half of *Massovia* on the Right of the *Weissel*. They were divided into several People, *Scyri*, now the *Prussians*, and the *Hirri*, now the *Livlanders*.

Having thus gone through the several Nations that inhabited ancient *Germany*, *Cluverius* in the next Place gives an Account of the Five People into which *Pliny* divides the *Germans* in general, *viz.* the *Vindili* or *Vandali*, by some called *Vandalii*, *Vindelici*, *Winili*, *Vindili*, *Vindule*, *Vuuli*, *Winuli*, *Vandali*, *Vindali*. *Pliny* mentions only the *Burgundiones*, *Varini*, *Carini*, and *Guttones*, to be Part of the *Vandals*. *Cluverius* adds the *Lemovii*, *Heruli*, *Rugii*, *Sidini*, *Suardones*, *Eudoses*, the *Angli*, *Cavionæ*, *Theuringi*, *Naithones*, and *Langobardi*, as belonging to them.

The 2d are the *Ingævones*, to whom *Pliny* reckons the *Cimbri*, *Teutoni*, and the Nations of the *Chauci*, to have belong'd. *Cluverius* adds from other Authors the *Foli* or *Saxons*, and in *Scandinavia* the *Scondii*, *Hilleviones*, *Gutæ*, *Suiones*, *Sitones*, *Marchiofinni*, *Scritofinni*, and *Luppiones*.

The 3d are the *Istævones*, to whom belong'd the *Sicambri*, the *Herminones*, who dwelt in the Inland Countries, of whom the *Suevi*, *Hermunduri*, *Chatti*, and *Cheruſci*, were Part, according to *Pliny*; but *Cluverius* reckons the *Frisii*, *Bructeri*, *Angrivarii*, *Ansibarii*, *Chammavi*, *Dulgibini*, *Marsi*, *Tubantes*, *Marsacii*, *Sicambri*, *Ubii*, and who succeeded them, the *Ufipii*, *Tenctteri*, *Juhones*, *Mattiaci*, besides in ancient Times the *Marcomanni*, *Hasdingi*, and *Sedusii*.

The 4th were the *Herminones* or *Herminones*, to whom *Pliny* says belong'd the *Suevi*, *Hermunduri*, *Chatti*, and *Cherusci*. *Cluverius* says, That under the Name of *Suevi* must be comprehended the *Semnones*, *Marcomanni*, *Quadi*, *Marsingi*, *Burii*, and *Lugii*.

The 5th were the *Peucini*, called also *Bastarnæ*, whose several Divisions we mention'd before. *Cluverius* thinks, the *Æstii* are not to be reckon'd to any of these Five Sorts.

Of the Hercinian, *and other Forrests in* Germany *beyond the* Rhine.

THE *Hercynia Sylva*, or *Hercynius Saltus*, is famous among the ancient *Roman* and other Authors. *Cæsar* says, it was 9 Day's Journey in Breadth, and 60 in Length, according to the then Computation of the Inhabitants; and that it began at the *Rhine*, in the Borders of *Helvetia*, went along the *Danube* to the Borders of the *Ducs*, and then by Turnings and Windings went thro many Countries. *Cluverius* says, That in his Time there went one continued Forrest thro most Part of the Marquisate of *Brandenburg*, *Lusatia*, *Prussia*, *Poland*, *Lithuania*, and *Muscovy*; but whether it was called by that Name as far as the River *Oby*, the utmost Boundary of *Europe*, he doubts, any more than the Forrests *Ardenna* and *Vosgus*, which bounded upon the *Hercynian* Forrest, the *Rhine* coming between them; therefore he thinks the Name *Hercynia* was proper only to that Part of it in *Germany*.

It was branched out into several Forrests, as those called *Sylva Martiana*, now the *Black Forrest*. *Tacitus* and *Claudian* mention Woods near the *Rhine*, near the *Bructeri*, now *Spessard* and *Westerwald*; the *Gæsa Sylva*, now *Hesserwalde* in the Duchy of *Cleve*, near the Borders of *Munster*; the *Lucus Tanfanæ*, near *Bemhemerberg* in *Westphalia*; the *Lucus Baduhennæ* in *Westfriesland*; the *Lucus Herculis* about *Minden* on the *Weiser*; the *Sylva Cabreta* in *Thuringia* and *Voitland*, now called the *Duringerwald*; the *Hercynius Saltus*, that which encompasses *Bohemia*, now called the *Behmerwald*, and was properly the *Hercynia Sylva*; the *Luna Sylva*, upon the Mountains towards the Head of the River *Morava* in *Moravia*; the *Lucus Castoris & Pollucis* in *Silesia*; and the *Lucus Sacer*, formerly mentioned

stoned in the Country of the *Semnoni* upon the *Oder*.

The Parts of this Forrest remaining in *Cluverius*'s Time, were, that called the *Black Forrest*, betwixt the Fountains of the *Danube* and the Lake of *Constance*; the Forrest of *Ausbach*, betwixt *Norimberg* and the Head of the *Tauber*; *Steyger* Forrest, betwixt *Wirtsberg* and *Bamberg*; the *Othonia Sylva*, or *Odenwald*, betwixt *Heidelberg* and *Francfort*; the Forrest of *Spessard*, betwixt the *Main* and the River *Bint*; that called the *Westerwald*, betwixt the *Lone* and the *Siga*; that called the *Harz*, in the Dutchy of *Brunswick*; that called the *Thuringer* Forrest in *Thuringia*; and that above-mentioned, which encompasses *Bohemia*; besides abundance of large Forrests in *Westphalia*, the Dutchy of *Lunenburg*, *Pomerania*, the Marquisate of *Brandenburg*, and *Silesia*.

Vindelicia, *and* Noricum, *Part of the ancient* Illyricum.

Cluverius gives likewise a Description of those Countries, because the present Inhabitants are descended of the ancient *Germani*. On this Occasion he shews, that all the Inhabitants of the *Alps*, the greatest Part of whom are *Vindelici* and *Norici*, were once called *Tauisci*. He likewise observes, that tho the *Vindelici* were a different People from the *Rheti*, yet all their Country, after the *Romans* had subdued the People, betwixt the *Danube* and *Italy*, was called *Rhætia*, from the *Rhine* or Lake of *Constance* to the River *Inn*, which was the Boundary betwixt the *Vindelici* and *Norici*, as the River *Lech* was that betwixt the *Vindelici* and *Rheti*, who came originally from *Italy*; and tho the Country from thence to the Lake of *Constance* was called *Rhætia Prima*, yet the *Vindelici* inhabited the Country from the Head of the *Danube* all along the River, till the *Inn* falls into it, as appears by *Strabo*. The *Vindelici* then had the Lake of *Constance* on the W. the *Danube* on the N. the *Inn* on the E. but how they were divided from the *Rhæti* on the S. is not so certain. They were divided into several People: Those called the *Licates* or *Licatii* liv'd on the River *Lech*; the *Brigantii* reach'd from the Town of *Bregenz*, from them called *Brigantium*, to *Ratisbon* and *Ffulmdorf*. The *Æstiones* liv'd betwixt the *Licatii* and the *Brigantii*, in the Vallies on the River *Iller*; so that their Boundary on the S. seems to have been the River *Brigenz*, and the Mountains which lie betwixt the *Lech* and the *Inn*, as far as the Head of the *Iser* and the Town of *Inspruck*. The Towns mentioned by ancient Authors in this Country are, *Augusta Vindelicorum*, now *Augsburg*; *Brigantium*, now *Bregentz*; *Campodunum*, now *Kempten*; *Celius Mons*, now *Kelmuntz*; *Gautia*, now *Guntzberg*; *Rostrum Nemaviæ*, now *Memmingen*; *Jovavum*, now *Saltzburg*; *Isinisca*, now *Munichen*; *Reginum*, or *Castra Regina*, now *Ratisbon*; *Castra Batava*, now *Passaw*.

NORICUM.

THE *Norici* were also divided into several People, *viz.* the *Alauni*, *Ambisontii*, *Ambidrani*, and *Ambilici*; but nothing certain can be determined as to their Situation, nor indeed of the Boundaries of *Noricum*, any otherwise than from the noted Towns observ'd in it by the Ancients; from whence *Cluverius* fixes its Boundaries thus: The Rivers *Inn* and *Danube*, the Mountain *Getius*, now *Culmberg*, as far as the Town of *Celeia*, now *Cilley*, and the Confluence of the *Save* and *Sana*; then the Mountains from the said Confluence, which run W. to the Head of the *Sana*; then betwixt the *Save* and the *Drave* to the Head of the River *Narisus*; then N. towards the Head of the River *Pel*; from thence W. to the Valley *Inchiaro*, and by a Line through the middle of that Valley Westward to Mount *Setius*, and from thence to the Head of *Rienz*, then by that River to the Village of *St. Lawrence*, and the Confluence of the River *Aich*; and from thence by another Tract of Mountains, Part of the *Alps*, as far as *Inspruck*. The most remarkable Towns taken Notice of by the Ancients in this Country are, *Vindobona* in *Pannonia*, on the Frontiers of it, now *Vienna*; *Boiodurum*, now *Instat*; *Jovavum*, now *Saltzburg*; *Bedaium*, now *Bamberg*: So that upon the whole, *Noricum* comprehended a great Part of *Austria*, the W. Part of *Stiria*, *Carinthia*, *Upper*

Digitized by Google

Upper Carniola, the Archbishoprick of *Salsburg*, Part of *Upper Bavaria*, and Part of *Tirol*.

We have insisted more at large upon Ancient *Germany*, than some perhaps may think consistent with our Design; but hope it will easily be pardon'd, when our Reasons are known, which are, 1. That the ancient Geography and History of this Country is done in Folio, with a great deal of Judgment and Care, by the famous *Cluverius*, who has improv'd what *Cæsar*, *Tacitus*, *Strabo*, *Ptolomy*, and other ancient and modern Historians and Geographers, have said on those Subjects by his own Reading, and curious Observations, wherein he has corrected the Mistakes of the *Romans* and others in History and Geography, and illustrated many difficult Passages, which have puzzled the ablest Criticks. 2. Because 'twas a Country of vast Extent, and a Scene of many and great Actions. 3. Because 'twas the Seat of many People of different Denominations, and under various Forms of Government; therefore 'twas necessary to fix the Boundaries of each of those People, in order to understand the *Roman* History, and the Seat of their War from Time to Time with those many different Nations; without which, those valuable Pieces of ancient History were neither so pleasant nor intelligible as now they may be, not only to Youth who read them in Schools, but even to those of riper Years, whose Time and other Circumstances have not allowed them to attain a sufficient Knowledge of Geography for understanding those Authors. 4. Because most Nations in *Europe*, and particularly we in *Great Britain*, have either been Peopled from thence, or subdued by their Armies, and subjected to their Form of Government, as happened to this Island by the *Saxons*, to *Gaul* by the *Franks*, and to *Spain*, *Italy*, &c. by the *Goths* and *Vandals*; so that the Antiquities of *Germany* illustrate those of most Parts of *Europe*.

CHAP. XXVI.

Modern GERMANY.

Their HUMOURS, MANNERS, *&c.*

DOctor *Nicholson*, in his Elaborate Account of this Country, in his Second Volume of *Pitt's Atlas*, takes Notice of *Seneca's* Observation, That Men of an extraordinary Size have commonly narrow Souls, and gives this as his Reason, *Because great Abilities of Body and Soul are too much for one Man*: Tho every one may know from his own Observation, that this Rule is false; yet 'tis very probable, as the Doctor says, that this Consideration prevailed with some old Historians to represent the *Germans* as a dull Phlegmatick People; and even some of the Moderns, particularly our own *Heylin*, *Joseph Scaliger*, and others, have been guilty of this Mistake, when they alledge, That in order to bring the *Germans* to a good Temperament, *their Lead must be mix'd with the Quicksilver of* France, without considering, that the *French* stand in as much need of *German* Lead, as the *Germans* do of *French* Quicksilver. But as

all those National Reflections are invidious, and generally founded on Prejudice, 'tis plain by the Writings and Inventions of the *Germans*, that their Genius is very good when duly cultivated.

Some Writers charge them in general with being given to Drink, from whence they have formed a Proverb, *Germanorum bibere est vivere*; i. e. That the chief Delight of a *German* is to drink. This Fault is perhaps too common there, as well as in some other Countries: Nor does *Cluverius*, their Countryman and Advocate, altogether excuse them from it; yet this Charge admits of a Restriction, for there are many sober People in that Country; tho' the Sharpness of their Air, and the Largeness of their Size, which they commonly alledge in their Defence, makes more Liquor necessary for them than for other People, who differ in Climate and Stature. *Melanchton* us'd to complain of their Excess in Eating, and said, *We* Germans *eat our selves sick and to Hell*; tho' Gluttony be not so common there as Drunkenness. They are much given to drinking Healths, and 'tis usual for them to present Strangers at Table with a large Vessel of Drink, which they are obliged in Civility to take off at one or more Draughts to the Health of their Landlord; and they frequently spend some Hours at Dinner and Supper, but not so much in eating as drinking Healths. Those that have created an Intimacy by being drunk together, they call *Trinck-bruder*; but we wish there were no Pot-Companions elsewhere.

Their *Diet* is Beef, Mutton, Venison, Bacon, Fowls, Fish, *&c.* as with us; but not generally serv'd up in such large Quantities. From *Michaelmas* almost to *Easter*, they eat abundance of Snails boil'd in the Shells, and People of Quality have Snail-Houses on purpose in their Orchards or Gardens. Their Drink is Beer of several Sorts, some very bitter, and some very sweet, according to the Customs of several Countries. They have also abundance of Wine of different Sorts, of which Rhenish is the chief.

They are still valued for their *Integrity*, for which *Tacitus* commended them of Old, insomuch that a modern *French* Writer says, *A* German's *Word is as good as another Man's Bond*: And when the *Germans* would express one among themselves that hates Flattery and Dissimulation, they say, *He is Germano hearted*.

They likewise retain the *Hospitality* of their Ancestors, are very free in entertaining Strangers; and except in Time of War, their Roads are not much pester'd by Highwaymen.

Their *Valour* is unquestionable, which makes *Willichius* give them this Character, That they are only to be overcome by their own Countrymen. And 'tis observ'd, That *Gustavus Adolphus* could never have made such a Progress in *Germany*, had he not been join'd by the *Saxons* and *Brandenburgers*. The greatest Impressions the *French* have made upon them has been by the Conjunction of *German* Princes, who fell in with the Interest of *France*, or by *German* Soldiers who chose that Service, because the Pay was better than their own. Their common People are bred hard, which enables them to bear the Fatigues of War; but there have been frequent Instances of their being apt to mutiny for want of Pay, which makes some Authors charge them with being mercenary. *Frederick* Elector *Palatine*, King of *Bohemia*, and Father to the Electress *Sophia* of *Hanover*, had a fatal Instance of this, when the greatest Part of his Army at the Battle of *Prague* threw down their Arms, and cry'd out for Money, which lost him the Battle and his Crown. Dr. *Nicholson* urges as a very good Proof of their Valour, that none of their potent Neighbours have hitherto been able to wrest the Imperial Crown from them. They were about an Age or two ago reckoned to have fallen under a Decay as to Martial Discipline; but the many great Generals they have bred within these last Hundred Years, Princes, as well as others, have sufficiently taken off that Imputation.

The chief *Recreation* among those of Quality in Summer, is hunting the Deer and Wild-Boars, with which their Forests abound; and 'tis customary in the Courts of Princes to hang up the Pictures of such great Boars as they have killed. In Winter, when the Snow is thick, they have a Custom of riding round the Streets in Sledges, form'd much like the *Roman* Triumphal Chariots, drawn by a Horse with rich

Digitized by Google

rich Trappings, ſet off with great Numbers of little Bells, and Feathers of ſeveral Colours. At home they are much given to play at Cheſs, and are very expert at it. In their Language they call it *Schachſpiel*, which Dr. *Nicholſon* obſerves, ſignifies the ſame with the *Latrunculorum Ludus* of the Latins. The Learned Prince *Auguſtus*, late Duke of *Brunſwick Wolfenbuttel*, who publiſh'd an accurate Explication of *Trithemius*'s Cryptography, under the borrow'd Name of *Guſtavus Selenus*, wrote an incomparable Treatiſe concerning this Game in *German*, with an Account of its Original, Progreſs and Laws.

The *Germans* are ſo much addicted to Travel, and their Nobility affect ſo much to appear at Foreign Courts with Retinues anſwerable to their Qualities, that their Writers complain it does very much impoveriſh their Nation, and carries out Annually more Money than is produced by their Silver Mines. On this Account the Author of a late Book, Entituled, *Itinerarium Germaniæ Politicum*, adviſes his Countrymen not to travel out of their own Country except on Publick Occaſions; and indeed, conſidering the many Princes Courts, the great Number of large Cities, their numerous Univerſities, and the many Rarities they have at home, there ſeems to be but little Occaſion for their travelling, either to learn good Breeding, or to ſatisfy their Curioſity. Except in great Towns, and on the chief Rivers, their Accommodations for Travellers are not extraordinary, eſpecially for Lodging; for in many Places they have nothing to lie on but Straw, and that in a common Room altogether; thô in other Places they lie commonly betwixt two Feather-Beds, with the Sheets ſtitch'd to them. The Vulgar ſeldom have any Chimnies but in their Kitchin, and in Winter commonly live in their Stove-Rooms, which they heat to what Degree they pleaſe; but the Smell and the Heat of thoſe Stoves is frequently very troubleſome to Strangers, and apt to make their Heads ake. Their common Way of Travelling is in open Poſt Waggons, which are neither Expeditious, nor a Fence againſt ill Weather. Their cover'd Waggons are better for that, but ſlow.

Their Women in general are of a tolerable Complexion, but more corpulent than moſt of their Neighbours, except the *Netherlanders*. They are very obſequious to their Husbands, have leſs Command in their Houſes than *Engliſh* and *French* Women, and are not allow'd the upper End of the Table. They account it rude here to ſalute any Woman with a Kiſs, except they have been bred in ſuch Countries where 'tis practis'd; ſo that their Way of Greeting is by a mutual Touch of the Hand.

Their Marriages and Funerals are very expenſive, ſo that ſometimes an ordinary Man is ſcarce able to recover the Charge of his Father's Funeral, or of his own Wedding, in 7 Years. The Entertainment frequently laſts a Month, during which they keep open Houſe, and ſend the Bell-man about to invite all their Neighbours, who uſually ſend in Wine, or ſome other Proviſions.

Brietius gives this Character of the *Germans*, That they are generally believ'd to be too much addicted to Drunkenneſs and Gluttony, and that the latter was the Fault of thoſe who liv'd in the Northerly Places of that Country; but he is far from *Heylin*'s Satyr, who alledges, That during their Feaſts, they think it no Diſgrace to empty their over-charg'd Stomachs in one another's Laps, or to piſs under the Table; and that even their greateſt Princes, beſides what Exceſs they are guilty of themſelves, have Drinking-Champions to anſwer all Challenges, and to challenge all Comers; and that they look upon it as a Point of State to contend who ſhall have the largeſt Veſſels in their Cellars. But we return to *Brietius*, who, thô a *French* Jeſuit, has ſo much Juſtice as to own their Hoſpitality and Civility to Strangers, and that their common Innkeepers are very faithful to their Gueſts; That their Women are very chaſt, and Adultery ſeverely puniſh'd among them; That they carefully obſerve keeping to their own Ranks when they marry, and will not readily ſtoop to a Match below their Quality. Dr. *Heylin* is more juſt in taxing their Vanity, than in other Parts of their Character; for 'tis certain, that by deriving the Father's Title to all the Children, ſo that if he be a Duke,

all

Digitized by Google

all the Sons are Dukes, and all the Daughters Dutcheſſes, together with dividing the Eſtate among the Males, does very much increaſe and impoveriſh their Nobility; ſo that at one time there were no leſs than 17 Princes of *Anhalt*, and 27 Counts of *Mansfield*, who had little elſe to live on but their Sword: Yet none of this poor Nobility will ſuffer their Children to match below their Degree; and if they do, think it a juſt Cauſe to diſinherit them: Yet it has this Conveniency, That it preſerves their Blood from baſe Alloys, and keeps up a Greatneſs of Mind and Spirit. *Brietius* obſerves, That they are much inclin'd to Muſick, and have a native Genius for it; That they are better in the Field, than in defending of Towns, being eaſily overcome in the latter by the Tears of their Wives and Children; whereas in the Field they frequently fight till one of the Armies be deſtroyed; but are impatient under want of Proviſions and Pay, which makes their Armies to moulder away very ſpeedily.

Their LANGUAGE.

FOreigners who are too lazy or too dull to learn it, eſpecially ſuch as are accuſtomed to a ſofter Pronunciation, do generally cenſure it as rough and barbarous; ſo that the *French* ſay, 'tis fitter for Mechanicks than Gentlemen; and a *Spaniſh* Miniſter once told a *German* Ambaſſador, That his Language reſembled Thunder, and he fancy'd that God forbad *Paradiſe* to our firſt Parents in that Dialect; to which the *German* reply'd, That was true; but the Devil tempted *Eve* in *Spaniſh*. *Pomponius Mela* obſerv'd long ago, That *German* Names were not fit for *Roman* Mouths; from whence 'tis that we meet with ſuch monſtrous Words in *Roman* Authors, when they attempt to give *German* Names Latin Inflections; and the ſame is the Cauſe why 'tis ſo hard for *French*, *Italians*, or *Spaniards*, to learn *High Dutch*. It muſt be own'd however, that 'tis a noble and manly Language, but fitter for War than Courtſhip. Dr. *Nicholſon* thinks *Tacitus* was miſtaken in aſſerting, That the ancient *Germans* had not the Uſe of Letters, becauſe *Runick* Inſcriptions have been lately found in the *Daniſh* Dominions upon Monuments erected there before *Tacitus*'s Days. For this, we refer to our Account of *Denmark*, and ſhall only ſay, That tho' *Wormius* thinks the Uſe of Letters to be very ancient there, he is poſitive they were not common. Dr. *Nicholſon* thinks the Latins borrowed the Word *Litera*, as they did many others, from the ancient *Germans*; and that it was derived from the old *Teutonick* Word *Lett* or *Litt*, which ſignifies a Member or Part, as a Letter is of a Word. *Duret* thinks, the *Gothick* Alphabet is the oldeſt in the World, and a Copy of the firſt that ever was invented. He does not mean that made uſe of by *Wulphilas*, Biſhop of the *Goths*, in his Verſion of the Goſpels, but the *Runick* Character in Form of a Staff, which they made as the Foundation of whatever they were to write, and croſs'd and turn'd it as Occaſion requir'd; and hence the *Germans* uſually call a Letter a *Buchſtab*; *i. e.* a Staff, made uſe of in Books; but thoſe Characters were laid aſide, as has been formerly mentioned, by the *Germans*, when they turn'd Chriſtians, becauſe they had been abus'd in Sorceries and Inchantments; and Mr. *Scheringham* thinks with Reaſon, that the *Engliſh-Saxon* Character was invented on the like Occaſion.

Here Dr. *Nicholſon* takes Notice of the Queſtion among Philoſophers, Whether Words have their Signification from their natural Import, or from the Will of the firſt Author? *Plato* thought, That he that gave every Being its diſtinct Name, ſuited the Word to the Nature of the Thing; and *Bibliander* fancies, that *Adam* obſerv'd this Rule, when he gave every Thing its Name. The Learned have obſerv'd a great Analogy betwixt the Greek and Latin Words, which expreſs the Voices of Birds and Beaſts, and the Words themſelves, as *Μυκάομαι*, *Ογκάομαι*, *&c.* in Greek; and *Boare*, *Mugire*, &c. in Latin; but no Language is more obſervable for this than the *German*, who ſay, the Ox, *Boelkt*; the Bear, *Brummet*; the Sheep, *Bleeket*; the Swine, *Gruntſzet*; and this is alſo obſerv'd of the *Engliſh* by the famous Dr. *Wallis* in his Grammar.

Dr. *Ni-*

Dr. *Nicholſon* ſays with Reaſon, That a multitude of Monoſyllables is one of the greateſt Arguments of the Antiquity of a Language, becauſe we cannot imagine them to be derived from any Primitive further off, or to be a Corruption of ſo many Words in Foreign Languages. *Stevin*, an ingenious *Dutchman*, has reckon'd 2170 primitive Monoſyllables in the *Dutch*, thô the Number, ſays Dr. *Nicholſon*, might be carried much higher; whereas he can find not above 163 in Latin, and 165 in Greek. The Dr. obſerves further, That many of the *High-Dutch* Primitives are turn'd into Diſſyllables, that formerly were but one, as *Vater*, *Mattel*, &c. that were anciently writ *Vaer*, *Mael*, &c. and that there are 23 principal Terminations in the *German*, which, thô they ſignify nothing of themſelves, yet when added to another Word, do very much alter its Signification, of which the *Engliſh* has retained many, as *Er* in *Bayer*, *En* in *Golden*, &c. by which the *German* Tongue is made very copious, and, as Doctor *Nicholſon* thinks, exceeds the Greek. Some of the *Germans* have of late much corrupted their Language, by giving *French*, *Italian*, and *Latin* Words, *German* Inflections; yet they pay ſo much Reſpect to their own Language, that they always write and print foreign Words in different Characters.

'Tis difficult to reckon up the ſeveral Dialects of the *German* Tongue, if it be conſider'd that the old *Britiſh*, *Engliſh*, *Daniſh*, *Sweediſh*, *Norwegian*, *Iſlandic*, and *Low-Dutch*, with their inferior Dialects, as well as thoſe of *Upper Germany*, are all derived from it. Beſides the Remainders of it left in thoſe Countries further E. where they formerly inhabited, *Buſbequius* found a great deal of it in the *Cherſoneſus Taurica*, now *Crim Tartary*; and others ſay, there are Fragments of it in *Perſia*. Dr. *Nicholſon* ſays, 'tis uſually divided into two principal Dialects, called the *Saxon* and *Francic*. *Brietius* ſays, 'tis divided into three, *viz.* the *Teutonick*, *Saxon*, and *Daniſh*. The *Saxon* is ſubdivided into Upper and Lower, *viz.* that which is ſpoke on this Side and beyond the *Main*. The *Saxon* is reckon'd to come neareſt the ancient *Celtick*, and the Inhabitants have always valued themſelves on that Account, and ſay, 'tis better than what is ſpoke in *Miſnia* and *Auſtria*. 'Tis generally agreed on, that the beſt *German* is now ſpoke at *Hall* in *Saxony*, and its Neighbourhood; and the *Germans* themſelves always write in the *High-Dutch* Dialect, which is an Argument that they eſteem it the beſt. *Aventinus* ſays, *Charles the Great* compos'd a *High Dutch* Grammar out of Rules he collected from old Genealogical Ballads; but *Trithemius* ſays, he found the Undertaking too great, and never finiſh'd it. In 1273, the Emperor *Rudolph* I. publiſh'd a Decree, ordering the Lawyers to draw up their Inſtruments and Pleadings in that Language; which being confirmed by *Maximilian* I. in 1512, brought this Tongue into Repute, not only in the Empire, but in the Northern Kingdoms; ſo that their beſt Scholars have ſince been at Pains to cultivate the Language. Several other Grammars were writ by Learned *Germans*, which are now all loſt. *Sleidan* ſays, *Luther* was a great Maſter of the *German*, which makes his Tranſlation of the Bible into that Language ſtill highly valuable. *Schottelius*, formerly Counſellor to the late Duke of *Brunſwick Wolfenbuttel*, has given the beſt Account of this Language in ſeveral Tracts writ on this Subject, which were printed at *Brunſwick* in 4° in 1663. *Dueſius*, in the Preface to his *German* Grammar, ſays, few of their Nobility are able to write it right, which is ſuppoſed to proceed from their want of a good Dictionary in their own Tongue, thô ſeveral Attempts of this Nature have been made. Dr. *Nicholſon* ſays, with very much Reaſon, That a competent Knowledge of this Language is very neceſſary for an *Engliſh* Antiquary.

Their LEARNING.

THO' *Tacitus* ſays, the *Germans* were utterly ignorant of Letters, the *Runick* Monuments and Inſcriptions formerly mentioned prove the contrary; yet the Hiſtories and Lives of their great Men were not then committed to Writing, but only repeated in *Doggrel* Verſe by their Bards. Their Prieſts, as was ſaid before, conceal'd their Letters and Principles of Learning from the Commons. Thus Affairs continued till they were acquainted with the

Romans,

Romans, especially in the Time of the Emperor *Adrian*, when many Schools were erected in *Germany*, in which their young Gentlemen were taught to speak and write Latin; and even the *German* Soldiers ordinarily return'd from the *Roman* Camp Masters of their Language and Manners; but most of those Schools were about the *Rhine*, so that the Northerly Parts had not this Education. *Dagobert* and *Charles the Great* founded many Schools in this Country, where the *High-Dutch* Tongue was first reduc'd to Writing and Rules. It was long before they could effect this, so that for many Years they were obliged to write their Proceedings at Law, and even the Rudiments taught in Schools, in Latin. As soon as the *Germans* got their Language regulated, they applied themselves to study the Liberal Arts, so that in a short Time many Universities were founded there. *Charles the Great* built 24 *Gymnasia*, or great publick Schools, many of which afterwards became Universities. *Justus Lipsius* affirm'd, That in his Days, there were more Universities in *Germany* than in all *Europe* besides. There are above 30 Universities, besides *Gymnasia*, in this Country, most of which have great Numbers of Students. When the Emperor *Charles* IV. who was also King of *Bohemia*, had founded an University at *Prague*, and gave the same Privileges to Foreigners that he gave to the *Germans*, the City was so over-stock'd with Students, that it oblig'd him to retrench his Favours to Strangers by a Decree: So a Week after it was put in Execution, 24000 Scholars left *Prague*, and 16000 more soon followed them; so that this one University had then more Students than all *Europe* besides. In 1409, *John Huss* had 44000 Scholars under his Rectorship.

Before the Reformation, the Priests found that Ignorance was more their Interest than Learning; upon which they discouraged it by all possible Means; so that when Learning began to revive in *Europe*, those Monks and Priests did all the Mischief they could to those concern'd in it, and accus'd those of Heresy that were more Learned than themselves. On this Account the ignorant Monks pick'd a Quarrel with the Learned *John Reuchlin*, and branded him for a Heretick. When the Reformation began, those Monks made it their Business to bring the Learned into that Quarrel against *Lucher*, which had the contrary Effect, and occasioned most of them to side with him.

They have many Learned Societies in *Germany*, as we are inform'd by the Book, called, *The Present State of that Country*. The first is that called the *Fruitful Society*, or Order of the *Palm*, instituted by *Ludovicus* Prince of *Anhalt*, and 3 Brothers of the *Saxe-Weimar* Family, in 1617, for the Advancement of the *High-Dutch* Language. The Prince himself was chosen President of the Society, and made an Order, That its Protector should always be a Prince. The Emblem of this Society is an *Indian* Palm or Coco-Tree, with this Motto, *All for Improvement*.

2. The *Collegium Naturæ Curiosorum* was establish'd in 1670, in Imitation of the Royal Society of *England*. Dr. *Johannes Laurentius Bauschius*, a Learned Physician, engaged several Learned Men in it for the Improvement of Natural Philosophy and Physick. He was the first President; and his Successor Dr. *Johannes Michaelis Fehr*, by a publick Epistle, invited the most Learned Physicians in *Europe* to be Members of it, and publish'd their Orders. The first Annual Volume of their Observations and Improvements was publish'd under the Title of *Annus Primus Ephemeridum Medico Physicarum Germanicarum Curiosorum*. This College was taken into the Emperor's particular Protection, had several Privileges granted 'em, and was permitted to take the Name of *Societas Leopoldina*. The *Præses* and Directors of those Ephemerides are generally some of the Emperor's Body-Physicians, Counts Palatine and Nobles of the Empire.

3. The Imperial Historical College was first projected by the Learned Physician Dr. *Christianus Franciscus Paullinus* at *Isenach*, his native City, after he had been long engag'd in Historical Studies by *Christophorus Bernardus*, Bishop of *Munster*, who oblig'd him to compleat the *Chronicon Corbejense* from Authentick Monastical Antiquities. He acquainted the Publick with his Design in a short Essay, call'd, *Delineatio Collegii Imperialis Historici*. The End of this Society is to form a compleat History of *Germany*, from

from the ſcatter'd and obſcure Monuments of Antiquity; in order to which, each Member is to collect and impart the Hiſtory of his own Country. Many of the Learned have already enter'd themſelves Members of this Society. The famous *Job Ludolphus*, Counſellor to the Emperor and Elector of *Saxony*, and Reſident at *Francfort* on the *Main*, was choſen Preſident, and Mr. *Von Neſſel* or *Niſſelius*, the Imperial Library-Keeper, who died in 1700, was Vice-Preſident. *Ludolphus* began a *Prodromus Annalium Germanicorum*. The Profeſſor Dr. *Joannes Ulricus Pregizer*, Counſellor to the Duke of *Wirtemberg*, and Judge of *Tubingen*, hath undertaken the Firſt Century; and Dr. *Jacob Otti*, Counſellor of *Ulm*, and of ſeveral Free Cities, has promiſed the Second.

4. The College of Maſters of Arts was firſt propos'd by *Erhardus Weigelius*, Imperial Counſellor and Profeſſor at *Jena*, in order to adjuſt the Differences betwixt the Old and New Stile, and to find out ſpeedy Remedies againſt all the Inconveniencies reſulting from thence. *Weigelius* died in *March*, 1699.

5. Several Learned Men at *Leipſick* form'd a Society by the Encouragement of the Elector of *Saxony*. They obſerv'd, That the Tranſactions of the *Royal Society* of *England* were only about Mathematical Subjects, Natural Philoſophy, Anatomy, and Medicine; and that the *Societas Naturæ Curioſorum* deſign'd only the Improvement of Natural Philoſophy, and Phyſick. Upon this they agreed, That their *Acta* and Obſervations ſhould be more general, and not confin'd to particular Parts of Learning. They alſo reſolv'd, That their *Acta* ſhould be writ in Latin. In *January*, 1682, they publiſh'd their firſt Eſſay, under the Title of, *Acta Eruditorum Lipſiæ Publicata*, and ſtill continue to oblige the Publick with it.

The *German* ſtudy hard, and the Hebrew is no where ſo generally underſtood as in this Country; ſo that many of them attain to a great Perfection in that Language. The *Germans* are accus'd by Foreigners of Printing too much, and ſometimes Trifles, as the State of a Queſtion, or a few common Places collected out of the Writings of their Cotemporaries. They likewiſe publiſh Millions of Suppoſitions and Diſputations, which over-ſtock the Fairs at *Francfort* and *Leipſick*. One Reaſon why they publiſh thoſe Philoſophical Pamphlets, is, to hinder every poor Fellow from taking Degrees, ſince no Man can be a Graduate in *Germany*, who has not publiſh'd one ſuch Diſputation at leaſt; and another Reaſon is, to maintain their numerous Preſſes.

The Inventions *of the* Germans, *and their Skill in* Mechanicks.

IT muſt be own'd, that the *Germans* are great Maſters at Mechanicks, Chymiſtry, Natural Philoſophy, Phyſick, and Mathematicks; and they claim the Honour of inventing Printing and Gunpowder.

The latter thus: *Albertus Magnus*, a *Dominican* Friar, having firſt practis'd Chymiſtry in *Germany*, many of the Religious Orders there addicted themſelves to that Study; among the reſt, one *Barthold Schwartz*, a *Franciſcan* Friar, made great Advances in this Art; and having one time mix'd ſome dry'd Earth, Sulphur, Salt-Petre, with other Ingredients, in an Earthen Crucible, and plac'd it over a Fire, in order to ſome Preparation, the Crucible ſoon broke in Pieces with a great Noiſe. This ſurpris'd him at firſt; but having repeated it frequently after, he began to think that it might be improv'd to a greater Advantage; upon which he caus'd a long Iron Pipe to be made, with a Touch-hole, filled it with this Mixture, put ſmall Stones above it, and ſetting Fire to the Touch-hole, the Stones were thrown out with a great Noiſe and Violence. This happened about 1330. Some Time after the *Germans* communicated this Secret to the *Venetians*, when they were beſieged by the *Genoeſe*; and the *Venetians* afterwards, by the Help of Guns, took from the *Germans* the Cities of *Verona*, *Padua*, &c. which they ſtill retain. Some Time after, the *Jews*, who were always numerous in *Germany*, out of Spight to Chriſtianity, communicated this Secret to the *Turks*, for which the *Muſcovites* hated the *Jews*, and prohibited them to trade in their Dominions. The Merchants on the *Baltick* were the firſt that us'd Guns at Sea. In 1347, the *Engliſh* took *Calais* from the *French* by the Help of Guns. Dr. *Plot*, in his *Natural*

Digitized by Google

tural Hiſtory of Oxfordſhire, thinks that *Roger Bacon*, a *Franciſcan* Friar, ſometime Fellow of *Merton* College in *Oxford*, invented Gunpowder before *Schwartz*, becauſe of an Epiſtle directed by this Friar *ad Pariſienſem*, in which he ſpeaks of a Mixture of Salt-Petre, Sulphur, and Coal-Duſt, by which he could make a Fire that would burn at what Diſtance he pleas'd, and cauſe Thunder and Lightning in the Air, more terrible than that produc'd by Nature: That this kind of Fire could deſtroy a City or an Army; and that the Flame burſt out with unſpeakable Noiſe. Dr. *Dee*, in his Annotations on that Epiſtle, is of the ſame Opinion, and thinks that he conceal'd the Invention, becauſe he knew how deſtructive it would prove to Mankind; and that his Skill in Mathematicks had made ſome of his ignorant Acquaintance take him for a Conjurer, and commit him to Priſon; ſo that had he diſcover'd this Invention, their Jealouſy had been heighten'd. This was 100 Years before *Schwartz*'s Invention.

Dr. *Nicholſon* thinks, the *Germans* have no good Claim to the Invention of Clock-work; thô he acknowledges, that none have improv'd it more. *Severinus Boetius*, a famous *Roman* Philoſopher, is the firſt mentioned by Latin Authors as the Contriver of an Engine of this kind. *Theodorick*, King of the *Goths*, wrote a Letter to this *Boetius*, to beg a Clock of him for his Brother-in-Law, *Gundibald* King of *Burgundy*; in which Letter he calls his Contrivance, *Machinam Mundo gravidam, Cœlum Geſtabile, Rerum Compendium*; *i. e.* a Machine that contain'd the Univerſe within it, a Portable Heaven, a Compendium of the whole World.

The Emperor *Charles* V. and King *James* I. had both Watches in the Jewels of their Rings, which were made in *Germany*. In the Town-Hall of *Prague*, there is a Clock that ſhows the Annual and Periodical Motions of the Sun and Moon, the Names and Numbers of the Months, Days, and Feſtivals of the whole Year, the Time of the Sun's Riſing and Setting, the Riſing and Setting of the Signs of the Zodiac, and the Moon's Age, with its ſeveral Aſpects. In the Elector of *Saxony*'s Stable at *Dreſden*, there is a Saddle with a gilded Head in the Pommel, with Eyes continually moving, and in the hinder Part a Clock, that ſhows exactly the Hour of the Day; but the moſt famous in its kind is the great Clock of *Straſburg*, of which we ſhall ſpeak when we come to the Deſcription of that City. *Tycho Brahe* tells us, That *William* Landgrave of *Heſſe* ſpent much Time to contrive a Way to regulate the Motions of Clocks and Watches; but we have no Account of his Succeſs.

The *Germans* have far outdone the reſt of *Europe* in ingenious Knacks of Art. A *German* not long ago preſented the Landgrave of *Heſſe* with a Bear and a Lion of pure Gold, hollow within, each of the Length of a Man's middle Finger; every Part of them was proportionable, and both together weigh'd no more than a *French* Crown. The moſt curious Man in this kind that ever *Germany* bred, was *Johannes Regiomontanus*, who made a Wooden Eagle, which flew an *Engliſh* Mile out of Town to meet the Emperor *Maximilian* when coming to the City of *Nuremberg*, and return'd back with him to his Lodgings. This is related by *Kerſherman*, and *Peter Ramus*. The latter alſo tells us, That *Regiomontanus* having invited ſome Friends to an Entertainment, he threw an Iron Fly from his Hand to divert them, which flew round the Room, and return'd to him again. The *High-Dutch* are generally well skill'd in Engraving, Painting, Cutting of Seals, Iron-work, and Joyners-work.

The *Germans* challenge the Invention of Printing, and ſay, this Noble Art was invented at *Straſburg* in 1440, by *John Gottenburg*, an Alderman of that City, and afterwards perfected by him at *Mentz*. In the Publick Library at *Baſil*, they ſhow ſeveral Books printed with the firſt Characters, invented by *Gottenburg*, ſuch as are now us'd, but not ſo exact. The ſtrongeſt Argument the *Germans* have, is from the Character in which the firſt Latin Books were printed, which is much the ſame now us'd by the *Germans* in their ordinary Writing; for it is probable, ſay they, if any other People had invented Printing, that they would have us'd the Characters of their own Country. The *Hollanders* diſpute this Invention with the *Germans*, and aſcribe it to one *Laurence Coſter*, a Citizen of *Haerlem*, who walking one Night in an adjoining Wood, cut

Digitized by Google

tut ſome Pieces of the Bark of a Tree into Letters, and printing ſome Characters upon Paper with 'em, taught his Grand-Children their Alphabet by this new Contrivance; but obſerving it to be capable of further Improvement, he advanc'd, and within a few Days printed off ſeveral Sentences from divers Authors. *Hadrian Junius* ſays, he ſaw the firſt Book that *Coſter* printed, in which 'twas obſervable, that the Paper was not printed on both Sides, but two Leaves were glued together, to avoid the Deformity of vacant Pages; then he changed his Beechen Letters to Leaden ones, and thoſe afterwards into Tin. This done, he contriv'd the glutinous Ink, now made uſe of in all Preſſes. The Houſe where he liv'd is ſtill to be ſeen near the Market-place in *Haerlem*. On the Front of his Houſe there was formerly engraven his Picture, with ſome Verſes in Commendation of him. The Magiſtrates have in their Cuſtody a Specimen of his firſt Eſſay. *Angelus Rocha*, who publiſh'd an Account of the *Vatican* Library in the Days of *Sixtus Quintus*, tells us, That *Aldus Junior*, a Learned Antiquary, ſhew'd him a Copy of *Donatus*'s Grammar printed on Vellum, in the firſt Page of which were theſe Words; *Johannes Fauſtus Cives Moguntinus, Avus Maternus Johannis Schoeffer, primus excogitavit Artem imprimendi, Typis Aereis quos deinde Plumbeos invenit, multaque ad poliendam Artem adjecit Filius ejus Petrus Schoeffer, impreſſus autem eſt hic Donatus & confeſſionalia primo omnium, A. D.* 1450. *Admonitus certe fuit ex Donato, prius Hollandia impreſſo in Tabula Inciſâ*: In which Words *Mariangelus Accurſius* aſſures us, (for the ſame Author ſays 'twas his Hand) That the firſt Man who printed Books in *Germany* with Molten Types, had the firſt Hint of it from *Holland*. The old Chronicle of *Cologne*, writ in 1496, confirms this, That the firſt Hint was from *Holland*, where *Donatus* was printed before *Gottenburg* printed any at *Mentz*; and moſt of the *German* Hiſtorians grant, That the firſt Printing with Wooden Cuts was by this *Coſter* of *Haerlem*; but alledge, that compoſing from different Letters was the Contrivance of *Gottenburg*.

The *Hollanders* ſay further, That after *Coſter* had improv'd his new Art ſo far as to print with Tin Letters, he took more Servants into the Houſe, and among them one *John*, whom *Junius* thinks to be the *Johannes Fauſtus* before mentioned, who had the Myſtery of this Art communicated to him, upon his taking an Oath of Secrecy. This *John* applied himſelf ſo much to the Buſineſs, that he underſtood it as well as *Coſter* himſelf; and on *Chriſtmas-Eve*, when moſt of the Family were at a Proceſſion, he carried off, with the Aſſiſtance of another that he had ſuborn'd, as many Caſes of Letter as they were able, and going to *Amſterdam*, printed ſmall Books and Pamphlets privately; from thence they removed to *Straſburg*, and communicated their Art to *Gottenburg*, who carrying on the Work at his own Charge, had the Honour to be accounted the firſt Printer in the World: At laſt they ſettled at *Mentz*, where they kept open Shop, being out of Danger of being proſecuted by *Coſter*. The firſt Book they printed in this City, was *Alexander Gallus*'s Grammar, with *Peter Hiſpanus*'s ſmall Grammatical Tracts annexed. There is in the Library of *Oxford* a Copy of *Tully*'s *Offices*, printed by this *Fauſtus* on Vellum, and at the End of it theſe Words in Red Letters, *Preſens Marci Tullii clariſſimum Opus, Johannes Fauſt, Moguntinus Civis, non atramento, non plumali canna, neque aereo, ſed Arte quadam perpulchra, Petri manu Pueri feliciter effecti finitum in* 1465. *Junius* ſays, he has often heard his Maſter *Nicolas Gale* ſay, That an old Bookſeller, who had been Servant to *Coſter*, and Chamber-fellow with this *Fauſtus* that cheated him, told him the Story often with ſuch a Vehemency of Paſſion, as commonly brought Tears from his Eyes; and that he was reſolved to undeceive the World, but did not live to perform his Promiſe. Theſe are the Arguments on both Sides; the Reader may determine as he pleaſes.

The *French* likewiſe pretend to the Honour of this Invention; but upon no better Foundation, as *Wimpheling* informs us, than that this Art was firſt made publick at *Rome* by one *Uldaric Halm*, a *German*, who by Latin Writers is called *Uldaricus Gallus*; *Halm* being the *German* Name for a Cock, which gave the *French* Occaſion to apply the Appellative *Gallus*, as if he had been one of their Country; tho' if it were ſo, it will imply no more, than that he was the firſt who publiſh'd that Art in *Italy*.

Digitized by Google

Boterus, who is followed by some modern Authors, alledges, the *Chinese* had this Art above 1000 Years before us in *Europe*, and communicated the same to one *Marcus Venetus*; but had it been so, that Gentleman would in all probability have brought it into *Italy*, that his own Country might have had the Honour of being the first Teachers of the Art in *Christendom*; but there is so little Foundation for this Story, that *Boterus* himself confesses, that this Invention, as well as that of Guns and Clocks, is owing to the *Germans*.

This Art was brought over to *England*, according to *Stow*, in 1471, by one *Caxton*, and Printing was first us'd in *Westminster-Abbey*; but it appears, that it was practis'd before that Time, by a Copy of St. *Jerome's* Exposition of the Apostles Creed, preserved among the Archives of the University of *Oxford*. It is printed on Paper, and ends thus; *Explicit Expositio Sancti Jeronimi in Symbolo Apostolorum ad Papam Laurentium. Impressa Oxonie & finita in* 1468, 17 *die Decemb.* Mr. *Wood*, in his Antiquities of the University of *Oxford*, informs us, That *Robert Turner*, Master of the Wardrobe to King *Henry* VI. first brought over Printing to *England* from *Haerlem*. The King furnish'd him with Money, by which he brib'd *Frederick Corsellus*, who wrought at the Press, to come over with him to *England*, which he did, and set up a Printing-Press at *Oxford*, where they guarded him, lest he should make his Escape before he had perform'd his Promise. Not long after, Presses were set up at *Worcester*, *Westminster*, and *St. Albans*. The oldest Book printed at *Westminster* is *Caxton's* Chronicle, publish'd in 1480.

The RELIGION *of the Modern* Germans.

THis Country was converted at several Times, as Dr. *Nicholson* informs us; so that almost every Province had their different Apostle. *Theodoret* thinks our Saviour's Apostles preached here, and some name the Apostle St. *Thomas* in particular. *Irenaus* and *Tertullian* mention the *German* Church; so that 'tis probable, that what Part of *Germany* was subject to the *Romans*, may have had Christianity in the Second Century. The Papists are now asham'd of the Legend of St. *Ursula*, and her 11000 Virgins; therefore in their Kalendar they only mention *Ursula cum Sociis*. 'Tis said, there were two *German* Bishops present at a Council held by *Constantine the Great*, in 314.

Bleau, in his Volume of the *Atlas* which contains *Scotland* and *Ireland*, gives an Account, That several Men from *Scotland* converted many Parts of *Germany*: The first was St. *Rupert*, Son to a King of *Scots*, who in the 6th Century converted *Theodo*, Duke of *Bavaria*, with his Nobles, and baptiz'd them at *Ratisbon*; after which he converted the neighbouring Countries, founded the City of *Saltzburg*, and was the first Bishop there, as appears by the Records of that City, printed by *Hen. Canisius*, *Tom.* 4. *Antiq. Lection.* Much about the same Time *Columbanus* and *Gallus*, two *Scots*, converted *Swabia*; after which *Columbanus* went to *Italy*, and *Gallus* stay'd in *Switzerland*, and founded the Monastery of St. *Gall*, which gave Rise to the Town of that Name, as is mentioned by *Jonas*, in the Life of *Columbanus*, *Bede*, *Wallafridus Strabo*, and *Canisius*.

Soon after *Kilianus*, with two other *Scots-men* sent by the Pope, converted *Gosbert* Duke of *Franconia*, with his Court and Country, and was the first Bishop of *Wurtzburg*; but afterwards martyr'd with his Companions, for reproving the Duke for his Incest, as appears by the Coin of the Bishop of *Wurtzburg*, which has still St. *Kilian's* Effigies stamp'd on it, as *Canisius* and *Surius* tell us.

Not long after this, in the Time of *Pipin* and *Charlemain*, *Bonifacius*, a *Scots-man*, as *Marianus* and *Trithemius* tell us, converted *Hesse*, *Thuringia*, *Westphalia*, and *Saxony*: After which he was made Archbishop of *Mentz*, and founded the Bishoprick of *Aichstadt*, and several others, with the Monastery of *Fulda*, of which *Scots-men* and *Germans* were indifferently made Abbots till very lately. This *Boniface* is generally reckoned to be the chief Apostle of the *Germans*, as *Willibald* his Disciple says in his Life, which we have an Account in *Canisius*, *Surius*, *Serrarius*, and others.

In that same Century, *Patto*, a *Scots-man*, planted Religion further in *Saxony*, was made Bishop of *Verden* in *Westphalia*, as *Kant-*

Digitized by Google

Krantzius tells us, wherein he was succeeded by several of his Countrymen, being himself a Martyr: And that same Author informs us, That one *John Scot* was made Bishop of *Mechlenburg*, and afterwards a Martyr.

In the Year 1000, *Colemannus*, said to be Son to a King of *Scots*, converted *Austria*, where he was martyr'd. His Relicks were kept in the Monastery of *Melch*, about 12 Leagues from *Vienna*, as *Surius* tells us in his Life; and *Baronius* says the same in his Annals.

Argobastus, a *Scots-man*, converted *Strasburg*, where he was succeeded by *Florence*, one of his Countrymen, who was Bishop there, as *Surius* and others inform us. *William*, Brother to *Achaius* King of *Scots*, founded the Monastery of St. *James* at *Ratisbon*, St. *Martin* at *Cologne*, St. *Giles* at *Norimberg*, another at *Aix la Chapelle*, and St. *Peter's* at *Ratisbon*, which were mostly possessed by his own Countrymen, who were in great Esteem with *Charlemain*. The last of those they possessed was that of St. *James* at *Ratisbon*, whose Abbot was Inspector of all the rest, till the Time of the late *German* Civil Wars. The *Scots* also founded the Monastery of St. *James* at *Wurtzburg*, and another at *Erfurd*. They had also a Monastery at *Vienna*, founded by *Henry* Duke of *Austria* in 1167, which continued in their Hands till the Time of the Emperor *Ferdinand* II. They had likewise one at *Constance*, one at *Memmingen* in *Bavaria*, another at *Eichstat*, one at *Kellam*, all in that Country; and another at *Paderborn*, which was founded about the Year 900, besides many others, as appears by a Letter from *Robert Strachan*, a Native of *Dundee*, and a *Benedictine* Monk, writ from *Vienna* the 10th of *November*, 1641. to the Lord *Scots-Tarbat*, who publish'd the Account of *Scotland* in *Bleau's* Atlas, to whom he promis'd a larger Account in a Book, Entituled, *Germania Christiana*; but whether he liv'd to perform it, we know not.

Buchanan and *Lesly* say, *Charlemain* desired *Achaius* K. of *Scotland*, with whom he had a League, to send many Learned Men to instruct the *French* and *Germans* in Religion and Learning, their own Priests being then so ignorant, that they us'd these Words in Baptism, *Ego baptizo te in Nomine Patrua, & Filia, & Spiritus Sancta*; and that in Gratitude to the *Scots*, who founded so many Monasteries in *Germany*, it was order'd, That none but *Scots-men* should be Abbots of those Monasteries. The same is confirmed by *Marianus*, *Scotus*, *Trithemius*, &c.

Dr. *Nicholson* informs us, That in the 8th Century, *Egbert* Archbishop of *York* sent *English* Missionaries to convert the *Germans*; but many of them are the same claimed by Mr. *Strachan*, as above, for *Scots-men*; so that it is very probable there was a Mixture of both. *Charles the Great* by this Means brought the *Saxons* at last to embrace Christianity, tho' not without much Bloodshed.

The Reformation began in 1517. Upon this Occasion, the Archbishop of *Mentz*, being to pay the Court of *Rome* a greater Sum than he could raise in his own Territories, got Leave from the Pope to make it up, by selling Indulgences thro' the Empire for a Pardon of Sins past, present, and to come, and employed one Friar *Tetelius* as his Agent. *Luther* protested against this, and afterwards publickly oppos'd 'em, tho' *Tetelius* threaten'd him with Excommunication; but those Threats were so far from making any Impression on *Luther*, that in *Wittemberg* and *Leipsick* he publickly impugned the Pope's Power to grant such Indulgences, and maintain'd many Disputes in the University of *Leipsick* against the Popish Party, who, when they could not answer his Arguments, call'd him a Heretick, and forbad any to hear him under Pain of Excommunication; but the Elector of *Saxony* declaring for him, counterpois'd their Threats. The Elector's Example was followed by the Dukes of *Brunswick* and *Lunenburg*, *Wirtenberg*, *Mecklenberg*, and *Pomeren*, the Marquis of *Brandenburg*, Landgrave of *Hesse*, and most of the Imperial Cities, who in 1529 gave in a joint *Protestation* to the Imperial Chamber at *Spires*, containing the Heads in which they dissented from the Church of *Rome*; from whence they had the Name of *Protestants*. In 1530, they gave in a Confession sign'd by them at *Augsburg*, which was from thence called the *Augsburg Confession*. After this, the Emperor *Charles* V. made War upon them, but after much Loss of Blood and Treasure, he was at last obliged to grant them a Toleration.

Digitized by Google

ration, and to authorize their Confeſſion at *Paſſau* in 1552, and in 1555 confirm'd it at *Augsburg*. In the beginning of the Reformation, *Luther* tranſlated the Bible into *High-Dutch*, and publiſh'd it all over *Germany*. He compiled alſo New Catechiſms for the Children.

About 1519, *Zuinglius*, a Canon at *Zurich* in *Switzerland*, was the firſt who in thoſe Parts diſſented from the Errors of the Church of *Rome*; and his Succeſs was ſuch, that his Doctrine ſpread as wide as *Luther*'s; and in 1526, the Maſs was aboliſh'd at *Zurich* by Order of the Senate; and in 1528, Images were deſtroy'd at *Bern*. The Differences betwixt *Luther* and *Zuinglius* about Conſubſtantiation, much hinder'd the Progreſs of the Reformation; they met at *Marpurg* in *Heſſe* to compoſe thoſe Differences, but in vain: So *Zuinglius*'s Party was call'd *Sacramentarians*, and that of *Luther*, *Ubiquitarians*, whoſe Party ſtill maintain their Credit in *Saxony*, as *Zuinglius* did in *Switzerland*. *Calvin* ſucceeded the latter, and to the Doctrines preach'd by his Predeceſſor, he added thoſe about Predeſtination, Free Will, Final Perſeverance, *&c.* which widen'd the Breach betwixt the *Lutherans* and *Calviniſts*. *Calvin*'s Doctrine prevail'd in *France*, *England*, *Scotland*, the *Netherlands*, a great Part of *Poland*, and many Provinces of *Germany*; whereas the *Lutheran* never reach'd much further than it was ſpread by *Luther* himſelf. The *Lutherans* at *Leipſick*, where they are very rigid, hate the *Calviniſts* as much as the *Turks*, inſomuch, that in the great Church there they have the Picture of the Devil, *Ignatius Loyola*, and *John Calvin*, in one Frame, with this Subſcription, *The Three great Enemies of Chriſt and the Chriſtian Religion*. In *Wittemberg*, *Abraham Calovius* was a great Supporter of *Luther*'s Doctrine; but many of the Univerſity were for the Opinions of *Calixtus* Junior, a Profeſſor of the Univerſity of *Helmſtadt*, who was eager for a Comprehenſion.

In the Kingdom of *Bohemia*, Arch-Dukedoms of *Bavaria*, *Auſtria*, and the Dukedom of *Lorrain*, the Territories of the Three Spiritual Electors, and other Biſhopricks which ſtill remain in the Hands of the Clergy, the Popiſh Religion is profeſs'd. There are ſtill ſome of the old *Huſſites* in *Bohemia*, but they are forc'd to conceal their Principles. *Lutheraniſm* abates daily in the Dominions of *Saxony* and *Brandenburg*, or *Pruſſia*, where *Calviniſm* obtains in its ſtead.

Puffendorf gives us the following Account of the Reformation, and Affairs of Religion, in *Germany*. In 1517, the Pope cauſed Indulgences to be ſold here in ſo ſcandalous a Manner, that the wiſer Sort began to be aſham'd of it. Wherefore *Martin Luther*, Doctor of Divinity, and Profeſſor in the Univerſity of *Wittenbergh*, had held a publick Diſputation againſt it, and being oppos'd by others, it alarm'd all the neighbouring Countries. *Luther* at firſt ſubmitted to the Pope's Deciſion; but being condemned by him, he appeal'd to a free General Council: And entring further into an Examination of the Pope's Authority, and having laid open ſome Errors and Abuſes which were crept in among them, his Doctrine was ſo much approved by ſome of the Princes and Free Imperial Cities, that they began to baniſh the Prieſts and Monks out of ſeveral Places, and to reduce their Revenues. And though the Emperor declar'd *Luther* an Out-law at the Diet of *Worms*, and endeavoured by ſeveral Proclamations to put a ſtop to thoſe Proceedings; yet being engag'd in a War with *France*, and therefore not in a Capacity to apply himſelf in good earneſt to the ſuppreſſing of thoſe Things, *Luther*'s Party grew daily ſtronger.

Perhaps he was afterwards not very ſorry to ſee the Wound increaſe, that he might make the better Benefit of the Cure. A Proclamation being publiſh'd at the Diet of *Spier*, which was in no ways agreeable to the *Lutheran* Princes, they proteſted againſt the ſame; from whence they were called Proteſtants. Next Year they delivered a Confeſſion of their Faith to the Emperor at *Augsburg*, and entred into a Defenſive Alliance at *Smalkald*. *Luther* was againſt their taking Arms at firſt, as *Sleidan* informs us; but the Lawyers and Princes having ſatisfy'd him, that the Conſtitution of the Empire allow'd it in Caſe of Oppreſſion, he agreed to it. This League was renewed in the Year 1535, when a great many Princes and free Imperial Cities were received into it. This

League

Digitized by Google

League being a great Eye-ſore to the Emperor, he us'd all Means to diſſolve it: But the Proteſtants truſting to their own Strength, and ſtanding by one another, the Hoſtilities began on both Sides, and the Proteſtants brought into the Field 100000 Men, under the Conduct of *John Frederick* Elector of *Saxony*, and *Philip* Landgrave of *Heſſe*. Had they fallen immediately upon the Emperor, whoſe Forces were not then join'd, they might in all probability have worſted him; but having loſt the firſt Opportunity, the Emperor ſo ſtrengthen'd himſelf, that he forced the Proteſtants to quit the Field, and to diſband their Forces. He alſo cauſed a Diverſion to be given the Elector at home by his Kinſman *Maurice*; which had ſuch Influence upon the free Imperial Cities, that they were oblig'd to ſubmit, and pay conſiderable Fines. Next Year the Emperor fell into *Saxony*, and having defeated and taken the Elector near *Muhlberg*, he pronounc'd Sentence of Death upon him; which he chang'd to Impriſonment. *Philip*, Landgrave of *Heſſe*, having ſubmitted himſelf, was, contrary to Agreement with the Emperor, made Priſoner, whereby the Proteſtants in *Germany* were reduced to great Extremities. The Electorate of *Saxony* was given to *Maurice*, Duke of *Saxony*, who at laſt being reſolv'd, not to permit any longer that both Religion and Liberty ſhould be quite deſtroy'd, nor that his Wife's Father, the Landgrave of *Heſſe*, who upon his Parole had ſurrender'd himſelf to the Emperor, ſhould be detain'd a Priſoner; he fell ſo ſuddenly with his Forces upon the Emperor, that he was very near having ſurprized his Perſon at *Inſpruck*. *Henry* II. King of *France*, having alſo made an Inroad on the other ſide of *Germany*, ſurprized *Metz*, *Toul*, and *Verdun*. Upon which, King *Ferdinand*, the Emperor's Brother, interpoſing his Authority, a Peace was concluded at *Paſſau*, where the free Exerciſe of Religion was ſecured to the Proteſtants, till Matters could be better ſettled at the next Diet. The Landgrave was releaſed, as likewiſe *John Frederick*, the Elector, who had been diſmiſſed out of Priſon a little before by the Emperor. At laſt the Religious Peace in *Germany* was eſtabliſhed at the Diet at *Augsburg*, where it was provided, That neither Party ſhould annoy one another under the Pretext of Religion, and that ſuch of the Church-Lands and Revenues, as the Proteſtants had been poſſeſs'd of before the Peace concluded at *Paſſau*, ſhould remain in their Poſſeſſion.

But under the Reign of *Matthias*, the Ferment did ſo increaſe by degrees in *Germany*, that towards his latter Days they cauſed violent Convulſions. The Origin of this War, which laſted 30 Years, was this: In the Religious Peace formerly concluded at *Paſſau*, two Parties were only included, *viz.* the *Roman* Catholicks, and thoſe who adhered to the *Augsburg* Confeſſion, the free Exerciſe of Religion being forbidden to all others. But ſome of the States of the Empire, among whom the Chief were the Elector *Palatine* and the Landgrave of *Heſſe-Caſſel*, having ſince that time receiv'd the Reform'd Religion, commonly call'd the *Calviniſt*, the *Roman* Catholicks were againſt their enjoying the Benefit of the Religious Peace. Theſe on the other hand alledg'd, That they, as well as the reſt, did belong to the *Augsburg* Confeſſion, and that the whole Difference did only conſiſt in ſome few Heads: But the *Lutherans*, who ſtrictly adher'd to the Words of the *Augsburg* Confeſſion, were not for receiving them into the ſame Communion; though it was their Opinion, That they ought not to be proſecuted for the Differences that were betwixt them. But afterwards theſe controverted Articles were, by the Heat of ſome *Lutheran* Prieſts, explain'd in ſo different a manner, that the Name of a *Calviniſt* became as Odious to ſome of the *Lutherans*, as that of a *Roman* Catholick. The Papiſts taking hold of this Opportunity, careſſed the *Lutherans*, eſpecially thoſe in the Electorate of *Saxony*, unto whom they repreſented the *Calviniſts* as a People equally deſtructive to both Parties; whereby they hop'd to diſjoin the *Calviniſts* from the reſt, and after they had deſtroy'd them, to make the eaſier Work with the *Lutherans*. Thoſe therefore of the Reform'd Religion entred into a Confederacy for their Common Security; into which they receiv'd a great many other Proteſtant Princes, and ſo it was call'd the *Evangelical Union*. In Oppoſition

Digitized by Google

Oppoſition to this Confederacy, the *Roman* Catholicks made an Alliance among themſelves, which they called the *Catholick League*, whoſe Head was the Duke of *Bavaria*, a conſtant Rival of the Elector *Palatine*. There happen'd alſo ſome other Matters which had exaſperated both Parties, *viz.* That the Proteſtants had reduc'd a great many Church-Revenues after the Peace at *Paſſau*; That the Cities of *Aix la Chapelle* and *Donawert* had been very hardly dealt with; beſides ſeveral other Things, which were manifeſt Proofs of the Animoſities of both Parties againſt one another.

Both of 'em being thus exaſperated and prepared for War, the Flame quickly after broke out in the Kingdom of *Bohemia*. The *Bohemians* pretended, that the Emperor *Matthias* had taken from them their Privileges, and, raiſing a Tumult, threw three Perſons of Quality, who ſpoke in the Emperor's Behalf, at *Prague*, out of the Caſtle Windows, and immediately after enter'd with an Army into *Auſtria*. In the mean while *Matthias* died, whoſe Nephew *Ferdinand* (who alſo ſucceeded him in the Empire) the *Bohemians* had before his Death received for their King; but now alledging that he had broken the Contract made betwixt him and the Eſtates, they renounc'd him, and offer'd the Crown to *Frederick* Elector *Palatine*. This young Prince was perſwaded by ſome of his Friends, who were of an unſettled Spirit, and had not div'd deep enough into a Buſineſs of ſuch Conſequence to accept this Offer, before he had laid a Foundation ſufficient for ſuch an Undertaking: For the *Bohemians* themſelves were fickle and unfaithful; *Bethlem Gabor*, Prince of *Tranſilvania*, was unconſtant; *England* was not for meddling in the Matter; *Holland* was very backward in giving Aſſiſtance; and the Union which they chiefly rely'd upon, was a Body with a great many Heads, without Vigour, or any fix'd Reſolution. Beſides, *France* endeavour'd to diſſolve that League, as being not willing that the Elector *Palatine*, and the reſt of the Reform'd Religion, ſhould grow too potent, for fear, that in Time they might afford their Aſſiſtance to the *Huguenots*, whoſe Deſtruction was then in Agitation at the *French* Court. In the beginning of this War, the Affairs of *Ferdinand* looked with an ill Aſpect, becauſe *Bethlem Gabor*, Prince of *Tranſilvania*, fell into *Hungary*, in Hopes to become Maſter of that Kingdom; and there were alſo great Diſcontents among his Subjects in *Auſtria*: But he having recover'd himſelf by his Alliance with the Duke of *Bavaria*, the Elector *Palatine*, in that unfortunate Battle fought on the *White-Hill* near *Prague*, loſt at once all his former Advantages; for *Ferdinand* ſoon after reduc'd *Bohemia*, *Moravia*, and *Sileſia*, to Obedience. *Spinola* made an Inroad into the *Lower Palatinate*, which was deſerted by the Forces of the League, and the Duke of *Bavaria* obtain'd the *Upper Palatinate* and the Electoral Dignity. The Elector of *Saxony*, who had been very inſtrumental in reducing *Sileſia*, had for his Reward *Luſatia*, as a Fief of the Kingdom of *Bohemia*.

In the mean time the Marquis of *Durlach*, *Chriſtian* Duke of *Brunſwick*, Count *Mansfeld*, and ſome others, who were of the Elector *Palatine*'s Party, marched with their Armies up and down the Country; and the Emperor, under Pretence of purſuing them, ſent his Forces into all Parts of the Empire. Againſt theſe the Circle of *Lower Saxony* arm'd it ſelf, having made *Chriſtian* IV. King of *Denmark*, General of that Circle: But he having received a great Overthrow near *King's-Lutter* from *Tilly* the Imperial General, the Emperor over-run all *Lower Saxony*; and having obliged King *Chriſtian* to make Peace with him at *Lubeck*, he began to get Footing near the Coaſt of the *Baltick*.

The Emperor was ſo elevated with Succeſs, that he did not queſtion but for the future to be abſolute in *Germany*, and with that View publiſh'd a Proclamation, enjoining the Proteſtants to reſtore to the Catholicks all ſuch Church-Lands or Revenues as were taken from them ſince the Peace made at *Paſſau*. Under this Pretence he hop'd quickly to ſubdue the reſt of the Proteſtant Princes, not queſtioning but, after that, the Catholick Eſtates would eaſily be forced to ſubmit themſelves to his Pleaſure.

The Proteſtants, 'tis true, enter'd into a Defenſive Alliance at *Lipſick*, but without any great Proſpect of Succeſs, if *Guſtavus Adolphus*, King of *Sweden*, had not come

Digitized by Google

come to their Assistance. This King was induc'd to enter *Germany*, partly because the Preservation of his own State seem'd to depend on the Emperor's not getting firm Footing on the *Baltick*; partly because several of the *German* Princes had craved his Assistance; partly also because the Emperor had assisted the *Poles* against him in *Prussia*; and he stood in a good Correspondence with *France* and *Holland*, who were very jealous of the Greatness of the House of *Austria*. This King came with an Army into *Germany*, and drove the Imperial Forces out of *Pomerania*, and the neighbouring Countries.

In the mean time the Imperial General *Tilly* had quite destroyed the City of *Magdeburg*, and was upon his March against the Elector of *Saxony*, whom he did not question but to rout quickly: But King *Gustavus* having join'd his Forces with those of the Elector of *Saxony*, defeated *Tilly* in that memorable Battle near *Lipsick*, where the Emperor, at one Stroke, lost all the Hopes he had conceiv'd from the happy Success of his Arms during the Space of 12 Years before. From thence he marched on to the *Rhine*, where he made almost miraculous Progresses: But in Regard the Elector of *Saxony* had not so vigorously attacked the Hereditary Countries of the Emperor, the Emperor had thereby Leisure given him to raise another Army, under the Conduct of *Wallenstein*, against whom the King lay encamped for a considerable Time near *Nurenburg*; and afterwards in the Battle of *Lutzen*, tho his Army had gain'd the Victory, he himself lost his Life.

After his Death, his Generals and Confederates carried on the War, under the Conduct of *Axel Oxenstern*, Chancellor of *Sweden*, with indifferent good Success; but having received an entire Defeat in the Battle near *Nortlingen*, which they rashly engaged in, they lost all the Fruit of so many Victories. The Elector of *Saxony* having also concluded a Peace with the Emperor at *Prague*, which was extreamly disliked by the Protestant Party, the Emperor was now again in Hopes to drive the *Swedes* by Force out of *Germany*: But by the Valour and Conduct of their Generals, the *Swedish* Affairs began to look with a better Face; for they carried the War again into the Hereditary Countries of the Emperor. At last all Parties began to incline to a Peace; for the Emperor and the Princes of *Germany* were tired out with the War; *France* began to be divided at home by Commotions; *Holland* had made a separate Peace with *Spain*; and the *Swedes* feared that the *Germans*, of whom was composed the greatest Part of their Army, might at last grow weary of being instrumental in the Ruin of their native Country, or that one unfortunate Blow might chance to rob them of the Fruits of their former Victories: A Peace was therefore concluded at *Osnabrug* with *Sweden*, and at *Munster* with *France*; by Vertue of which the *Swedes* got a Part of *Pomerania*, *Bremen*, and *Wismar*, and Five Millions of Crowns for the Payment of their Forces. *France* kept *Brisac*, *Suntgaw*, a Part of *Alsace*, and *Philipsburg*. By this Peace, the Authority of the States of *Germany*, and the Protestant Religion, were establish'd at once, and the Emperor's Power confin'd within such Bounds, that he could not easily hereafter attempt any thing against either of them, especially since both *Sweden* and *France* had a free Passage left them, from whence they might easily oppose him, if he design'd to transgress those Limits.

The RELIGION *of the* Lutherans.

THIS is PER to be understood by their Confession of Faith, commonly called that of *Augsburg*, because it was presented in the Diet there to the Emperor *Charles* V. in 1530. by *John* Duke of *Saxony*, Elector; *George* Marquis of *Brandenburg*, *Ernest* Duke of *Lunenburg*, *Philip* Landgrave of *Hesse*, *John Frederick* Duke of *Saxony*, *Francis* Duke of *Lunenburg*, *Wolfgang* Prince of *Anhalt*, the Senate and Magistrates of *Nuremberg*, and the Senate of *Reutlingen*.

It was writ in haste by *Philip Melancthon*, as he himself confesses in his Apology; and therefore to explain it, there was added, 1. The *Saxon* Confession, writ in 1551, in the Synod of *Wittenberg*, where the Ministers of the Churches of *Saxony* and *Misnia*,

ma, and the Doctors of the Academies met, and subscrib'd it, as the Confession of *Augsburg*, repeated to be proposed to the Council of *Trent*. It was approved by the most Illustrious Princes of the House of *Brandenburg*, by the most Noble Counts of *Mansfelt*, the Ministers of *Strasburg*, and the Ministers and Doctors of the Churches of *Pomerania*, who all of 'em sign'd it. It was likewise approv'd by other Churches, and particularly commended by those of *Poland*, in that called their Consent or Reconciliation. 2. The Confession of *Wirtemberg*, which was proposed to the same Council of *Trent* in 1552, by the Ambassadors of the most Illustrious *Christopher* Duke of *Wirtemberg*, &c. Its excellent Preface gives an Account of the whole Matter. 3. The Confession of the most Illustrious Prince *Frederic*, Count *Palatine*, Elector of the Holy Empire. 4. The Confession of *Bohemia*, which is also called the Confession of the *Waldenses*, compos'd out of far more ancient Confessions, approved by *Luther* and *Melanthon* in 1532, and by the famous University of *Wittemberg*, and at last, by the Free Barons and other Noblemen of the Kingdom of *Bohemia*, offer'd in 1535 to the most Serene King *Ferdinand* V. The Reconciliation of the Article of the Lord's Supper, between the Ministers, who in both *Polands*, *Lithuania*, and *Samogitia*, profess the Gospel, both according to the *Augsburg* Confession, and the Confession of the *Waldenses* and *Helvetian* Churches, made in the General Assembly of *Sendomir* in 1570.

In the Preface to the *Augsburg* Confession, directed to the Emperor *Charles* V. they declare to his Imperial Majesty, That according to his Command, they gave it as the Confession of their Preachers and themselves, according as it had been preached in their respective Dominions from the pure Word of God; and that if the rest of the Electors, Princes and States, would likewise, in Obedience to his Imperial Majesty's Command, lay before him in their Diet their Opinions in Matters of Religion, they were ready to confer with them amicably, in order to an Agreement without Contention, that all Things may be regulated according to the Word of God: But if Matters could not be adjusted in the Diet, they were willing to appear in a Free General Council, to be called by the just Suffrages of the Empire, according to Custom; to which General Council, and his Imperial Majesty, they solemnly appealed in due Form of Law; and did likewise solemnly and publickly protest, That they neither intended, or could desert their Cause contained in the said Confession, except Matters could be amicably settled and reduced to Christian Concord, in such a General Council to be summoned by his Imperial Majesty: After which they exhibited their Confession, consisting of 21 Articles.

In the First, they agree to what the Council of *Nice* had declared concerning the Trinity, as to the Unity of the Divine Essence and the three Persons, *viz.* That it is one Divine Essence, which is called and is God, Eternal, Incorporeal, Indivisible, Infinite in Power, Wisdom and Goodness, the Creator and Preserver of all Things visible and invisible; and that nevertheless they were three Persons of the same Essence, Power, and Coeternal, the Father, the Son, and the Holy Ghost; and they declar'd, that they us'd the Word Person in the Sense it was made use of by Ecclesiastical Writers, not as signifying a Part or Quality in another, but which properly subsisted in it self. They condemned all the Heresies contrary to this Article, as the *Manichees*, who held two Beginnings, Good and Evil: Likewise the *Valentinians*, *Arrians*, *Eunomians*, *Mahometans*, and all such. Likewise the New and Old *Samosatenians*, who holding but one Person, disputed fraudently and impiously concerning the Word and Spirit, as if they were not distinct Persons; but that the Word signified the Vocal Word, and that the Spirit signified the Motion created in Things.

In the 2d they held, That since *Adam*'s Fall, all Men descending from him by natural Propagation, were born with Original Sin, which they understood with the Holy Fathers, and Orthodox and Learned Men of the Church, to be that Guilt by which all Men for *Adam*'s Fall were made liable to the Wrath of God, and eternal Death; and that it was the very Corruption of Humane Nature propagated from *Adam*; which Corruption contains the Want of Original Righ-

Digitized by Google

Righteouſneſs or Obedience, and Concupiſcence. And after a further Deſcription of Original Sin, wherein they agree with other Proteſtants, they condemn the *Pelegians* who deny Original Sin, and look upon the want of Original Righteouſneſs or Concupiſcence to be only indifferent Things, or at leaſt not condemn'd in their own Nature, and think that Man can ſatisfy the Law of God, and be juſtifi'd for his own Obedience.

In the 3d, they treat of our Saviour's Incarnation, and aſſert his Two Natures, the Divine and Humane in One Perſon, That he is true God and Man, Born of the Virgin, and did really Suffer, was Crucifi'd, Dead and Buried; that he might reconcile the Father to us, and be a Sacrifice for the Original and Actual Sins of Men; and conclude with his Deſcent, Reſurrection, *&c.* according to the Apoſtle's Creed.

In the 4th they aſſert, That in order to our obtaining theſe Benefits by Chriſt, *viz.* Remiſſion of Sin, Juſtification and Eternal Life, he gave us the Goſpel, which propoſes thoſe Benefits in the laſt Chapter of *Luke*, convinces us of Sin, and leads us to Chriſt as a Mediator, for whoſe Sake Pardon is given us freely; and Juſtification by Faith, by which we ought to believe and confeſs, that thoſe Things are given us for Chriſt's Sake who was made a Sacrifice for us, and pacifi'd the Father. Therefore, though the Goſpel requires Repentance, yet that forgiveneſs of Sin may be certain, it teaches, That 'tis given to us freely, and does not depend on the Condition of our Worthineſs; nor is given for the Sake of any of our preceding or following Works, for by that Means it would be uncertain.

When our Conſcience is under Terror, we can find no Work to pacify God's Wrath, but Chriſt is given to us, and propos'd as a Sacrifice of Propitiation; therefore this Honour muſt not be transferr'd to our own Works; for *Paul* ſays, *By Grace ye are ſaved.* Likewiſe, *Therefore 'tis of Faith that it might be by Grace, to the end the Promiſe might be ſure, i. e.* ſo the Forgiveneſs will be ſure when we know that it does not depend upon our own Worthineſs, but is given us for Chriſt's Sake, *&c.* Then they ſay, That Faith does not only ſignify the knowledge of the Hiſtory of Chriſt, but alſo the believing and aſſenting to this Promiſe, *&c.*

In they 5th they ſay, That Chriſt for this End appointed the Preaching of the Goſpel, becauſe it teaches Repentance and Remiſſion of Sins, *&c.* and condemn thoſe who ſay nothing of this Faith by which Forgiveneſs is receiv'd, but command Men to doubt whether it can be obtain'd, and ſay that this Doubt is no Sin, and that Men may obtain Forgiveneſs for their own Worthineſs: They likewiſe condemn thoſe Enthuſiaſts who fancy, That the Holy Spirit may be given, and be effectual without the Word of God; for which Cauſe they depiſe the Miniſtry and Sacraments, and ſeek for Illumination without the Word of God, and betake themſelves to their own Fancies, as the *Manichees* did of old, and the *German Anabaptiſts* did then.

In the 6th they aſſert, That when we are reconcil'd by Faith, that Righteouſneſs of good Works which God and Chriſt has commanded muſt neceſſarily follow, *If thou will enter into Life, keep the Commandments*; but ſince the Weakneſs of Humane Nature is ſuch that no Man can ſatisfy the Law, 'tis neceſſary to teach Men, that they muſt not only obey the Law, but how this Obedience pleaſes, leſt they fall into Deſpair when they underſtand that they cannot ſatisfy the ſame, *viz.* That this Obedience pleaſes not as it ſatisfies the Law, but becauſe the Perſon is reconcil'd in Chriſt by Faith, and believes that the Remains of Sin are pardon'd to him; but we are always to conceive that we obtain Remiſſion of Sins, and are pronounced Righteous, *i. e.* that we are freely accepted for Chriſt's Sake by Faith, and that afterwards our Obedience to the Law is pleaſing, and reputed a ſort of Righteouſneſs, and deſerves Reward; but our Conſcience cannot oppoſe our own Purity or Works to the Judgment of God, as the *Pſalmiſt* teſtifies, *Do not enter into Judgment with thy Servant, for in thy ſight ſhall no Man living be juſtified*: And Chriſt ſays, *When ye have done all, ſay that ye are unprofitable Servants*; yet after Faith, Obedience pleaſes, and is

reckon'd a sort of Righteousness, as *John* says, *Whosoever abideth in him, sinneth not*, 2 Cor. 1. 12. *For our rejoycing is this, the Testimony of our Conscience.* But this Obedience ought to resist our wicked Desires, and to be made more Pure by Spiritual Exercises; and we are to beware that we do nothing against our Consciences, for they who do so, and obey their corrupt Affections, St. *Paul* says, *Shall not inherit the Kingdom of God.*

In the 7th they teach, That there is one Holy Church to remain to the end of the World, and that the Church, properly speaking, is an Assembly of those who truly Believe and Obey him, though in this Life there will be mix'd with them many ill Men and Hypocrites till the Day of Judgment. The Signs of the Church are the pure and sound Doctrine of the Gospel, and the right Use of the Sacraments; and a Consent in the Doctrine of the Gospel; and the Administration of the Sacraments, is enough for the true Unity of the Church. Nor is it necessary that Humane Traditions or Rites should be every where the same, as *Paul* teaches us when he says, *One Lord, one Faith, one Baptism, and one God, the Father of all.*

In the 8th, they assert against the *Donatists* and such, That the Word and Sacraments may be effectual, by reason of God's Institution, and our Saviour's Command, though administer'd by ill Men.

In the 9th Article they say, That Baptism is necessary to Salvation, as a Ceremony instituted by Christ, that Grace is offer'd by it, that Infants are to be baptiz'd, by which they are receiv'd into the Favour of God, and become his Children, as our Saviour testifies, Matth. 18. 14. *'Tis not the Will of your Father which is in Heaven, that one of these little ones should perish.* On this Head they condemn the *Anabaptists*, who do not allow Infant-Baptism, and think that Infants may be sav'd without it, and out of the Church.

In the 10th they teach concerning the Lord's Supper, That with the Bread and Wine, the Body and Blood of Christ are truly exhibited to those who partake of the Lord's Supper; but the Edition of the Harmony of Confessions at *Geneva* in 1612, which we make use of, (and which is allow'd by all Parties to be the Compleatest and most Correct) says, that in another Edition of the *Augsburg* Confession 'tis express'd thus, That the Body and Blood of Christ are truly present, and distributed to those who partake of the Lord's Supper; and they disapprove those who teach otherwise.

In the 11th, concerning Repentance, they hold, That Remission of Sins is given to those who fall after Baptism at whatever time they are converted, and that the Church ought to give Absolution to such Penitents. Repentance, they say, consists of Two Parts: The First is, Contrition or Terror of Conscience, Acknowledgment of the Sin, of the Wrath of God, Grief for Sin, with an Abhorrence of it, and flying from it, according to *Joel* 2. 13. The Second is, Faith which is conceiv'd by the Gospel or Absolution, by which we believe that Sins are certainly remitted for Christ's Sake, which comforts our Conscience, and frees us from Terror; of which *Paul* speaks, when he says, *Being justified by Faith, we have Peace with God*, Rom. 5. 1. This ought to be follow'd by Obedience towards God, according to *Romans* 8. 12, 13. Therefore they condemn the *Novatians*, who would not absolve such as, having fallen after Baptism, repented. They likewise condemn those who say, That Remission of Sins is not given freely for Christ's Sake, but for the Sake of our Contrition, Love, and other Works; and teach Men to doubt during Repentance, whether they may attain Remission, and say this Doubt is no Sin. They also condemn those who say, That Canonical Satisfactions are necessary to avoid Eternal Punishments, and those of Purgatory, though they own that present Calamities may be alleviated by good Works, according to *Isaiah* 58. 7, 8, 9. They also reject Indulgences, which are only Pardons of fictitious Satisfactions. They condemn the *Anabaptists*, who deny, That Men once justify'd may again lose the Holy Spirit; and those who assert, That Men may attain such a Perfection in this Life, as not to sin any more.

In the 12th, they are for retaining private Absolution in the Church, though a particular Enumeration of our Faults be not necessary,

Digitized by Google

neceſſary, ſince that is impoſſible according to the *Pſalmiſt*, *Who can underſtand his Errors*.

In the 13th they ſay, The Sacraments are inſtituted not meerly to be Marks of Profeſſion among Men, but rather to be Signs and Teſtimonies of the good Will of God towards us, and are propos'd to ſtir up and confirm our Faith; ſo that in the Uſe of the Sacraments 'tis neceſſary we ſhould believe the Promiſes exhibited by them, by which we receive the promis'd Grace which the Sacraments ſignify; and on this Head they condemn that Phariſaical Opinion which overturns the Doctrine of Faith, and alledges, That Men are juſtify'd in the Uſe of the Sacraments, *ex opere operato*, and that without any good Motions or Inclinations of thoſe that partake of them.

In the 14th, they teach concerning Men in Eccleſiaſtical Orders, That none ought publickly to Preach or Adminiſter the Sacraments, except he be duly call'd, as *Paul* commanded *Titus* to appoint Elders in every City.

In the 15th they ſay, That ſuch Eccleſiaſtical Rites as have been appointed by Humane Authority, and may be obſerv'd without Sin, ought to be kept if they conduce to the Peace and good Order of the Church, as ſome Holy-Days, pious Hymns, and the like; but they ſay, That in theſe Matters the Peoples Conſciences are not to be burdened with ſuperſtitious Opinions; as if thoſe Humane Ordinances made us Righteous before God, deſerve Remiſſion of Sin, or are neceſſary towards Goſpel Righteouſneſs; but they are to be look'd upon as Things indifferent, and may be omitted when it can be done without Scandal; but they are faulty, who violate them ſo as to give Scandal, and raſhly diſturb the Peace of their Churches; but they reject Traditions which cannot be obſerv'd without Sin, as the Celibacy of the Clergy, and that wicked Opinion concerning Traditions and Vows, and other Parts of Worſhip deviſ'd by Humane Authority, as if they were Satisfactory for Sin, and deſerv'd Remiſſion, as unlearn'd Men have ſaid concerning Vows, and certain Faſts, *&c.*

In the 16th they ſay, concerning Civil Affairs, That lawful Civil Conſtitutions are good Works, and are the Ordinances of God, according to *Paul*, *Rom.* 13. 1. *The Powers that be, are ordain'd of God*; and therefore hold that Chriſtians may lawfully be Magiſtrates, exerciſe Judgment, determine Controverſies according to the Imperial and other Preſent Laws; puniſh Offenders according to Law, may make lawful War, legal Contracts, keep their Property, give Oath when required by the Magiſtrate, contract lawful Marriages, and follow lawful Trades: Therefore they condemn the *Anabaptiſts*, who forbid thoſe Civil Offices to Chriſtians, and ſuch as maintain that Evangelical Prefection conſiſts in abandoning Civil Offices, ſince that Perfection lies in the Motions of the Heart, the Fear of God, Faith, Love, and Obedience; for the Goſpel does not aboliſh Policy or Oeconomy, but commands them to be preſerv'd as the Ordinances of God, and that in ſuch Ordinances we ought to uſe Charity; therefore Chriſtians are neceſſarily oblig'd to obey preſent Laws and Magiſtrates, except when they command what is ſinful, in which Caſe they are to obey God rather than Man, *Acts* 4.

In the 17th, they aſſert their Belief of Chriſt's Coming to judge the World at the laſt Day, That he will raiſe all the Dead, give Eternal Life to the Godly, and condemn Devils and wicked Men to Eternal Puniſhment. On this Head they condemn the *Jewiſh* Opinion of the *Anabaptiſts*, who fancied that before the Reſurrection the Godly ſhall poſſeſs the Kingdoms of the World, and the Ungodly be every where deſtroy'd or ſuppreſs'd: For we know, ſay they, we ought to obey the preſent Magiſtrates, and not violently deprive them of their Authority, or diſſolve Governments by Sedition, becauſe *Paul* commands every Soul to be ſubject to their own Magiſtrate; for we know, that in this Life the Church is to be ſubject to the Croſs, and is not to be glorify'd in this World; as *Paul* ſays, *It behoves us in all Things to be conform to the Image of his Son*; therefore they condemn, and hold in Execration the diabolical Fury of the *Anabaptiſts*,

Digitized by Google

baptiſts, meaning *John* of *Leyden*, *Muncer*, and other *German* Enthuſiaſts at that time; they likewiſe condemn the *Originiſts*, who thought there would be an end of the Torments of Devils and damn'd Souls.

In the 18th they deliver their Opinion about Free Will, wherein they ſay, That Man's Will has ſome freedom as to Civil Juſtice, and loving Things ſubject to Reaſon, but has no Power without the Aſſiſtance of the Holy Spirit, as to Spiritual Righteouſneſs, becauſe *Paul* ſays, 1 Cor. 2. 14. *The natural Man receiveth not the things of the Spirit of God*: And Chriſt ſays, *Without me ye can do nothing*. But Spritual Righteouſneſs is effected by the Holy Spirit, and we receive that Spirit when we aſſent to the Word of God, to comfort our ſelves with it under Terror, as *Paul* ſays, *That ye may receive the Promiſe of the Spirit by Faith*: They own however, that Men who have the uſe of Reaſon, have the freedom of Will in Things relating to the preſent Life, whether Good or Evil, but ſtill ſubject to the Divine Government; but in Spiritual Things there is a neceſſity of the Spirit's Aſſiſtance; as *Paul* ſays, *The Spirit helps our Infirmities*. Therefore they condemn the *Pelagians* and others, who teach, That without the Holy Spirit, and by the mere Strength of Nature, we are able to love God above all Things, and to fulfil the Law as to the ſubſtance of the Acts, becauſe *Paul* ſays in the 8th of the *Romans*, *The carnal Mind is enmity againſt God, for 'tis not ſubject to the Law of God, neither indeed can be*: For tho' Humane Nature may in ſome Senſe govern it ſelf as to external Acts, as in abſtaining from Theft, Murder, *&c.* yet it cannot govern the inward Motions of the Mind, as to the true Fear of God, Confidence in him, Patience, Chaſtity, *&c.* without the Aſſiſtance of the Holy Spirit; yet they own it to be the Command of God, that we ought to reſtrain our carnal Inclinations by Reaſon and the Law, becauſe *Paul* ſays, *The Law is a School-Maſter to bring us unto Chriſt*; and alſo, *the Law was made for the Unjuſt*.

In the 19th, as to the Cauſe of Sin, they ſay, That tho' God creates and preſerves Nature, yet the Cauſe of Sin is the Will of the Devil and wicked Men, which turns it ſelf away from God to other Things againſt his Commandment; therefore Chriſt ſays of the Devil, *When he ſpeaks a Lie, he ſpeaks of his own*.

In the 20th, they Appeal to their Books to convict their Enemies of Slander, when they charge them with the Neglect of the Doctrine of Good Works: But take notice, That whereas for a long time there had been a great Silence in the Church about the principal Works, *viz.* the Exerciſe of Faith, and the Commendation of Civil Actions; and that moſt of their Sermons were taken up in the Praiſe of Humane Traditions, Holy-Days, Faſts, the Monkiſh Life, Friaries or Fraternities, Pilgrimages, the Worſhip of Saints, Roſaries, and other uſeleſs Parts of Worſhip. Now, by the Goodneſs of God, the Church was call'd back to that true and uſeful Worſhip which he approv'd himſelf, and requir'd they quote ſeveral Places of Scripture, where the Prophets bewail the calamitous State of the Church, wherein true Worſhip ſhould be extinguiſh'd, and that, in its ſtead, Humane Ceremonies and an Impious Confidence in them ſhould obtain; from which Error they call upon the Church to return to true Worſhip, and ſuch as are truly Good Works. They add, That it was very well known, that long before their Time, many good and learned Men did complain of the want of better Doctrine for the Comfort of People's Conſciences, and to make a better Diſtinction betwixt Works; and hereupon they condemn the Papiſts for placing Evangelical Perfection in a Monaſtick Life and Superſtition, and preferring Humane Traditions to the Commands of God; whereas they ſpoke ſo coldly of the Duties of Mens Vocation, Magiſtracy, Marriages, *&c.* that many grave Men began to doubt whether thoſe Things were pleaſing to God; therefore the Proteſtant Preachers did zealouſly teach both Faith and Good Works.

Of FAITH.

CONcerning Faith and Juſtification, they teach, That our Saviour gave us the Sum of the Goſpel in the laſt of *Luke*, where

where he commands Repentance and Forgiveneſs of Sins to be taught in his Name; and as the Command is univerſal, ſo is the Promiſe; for all Men are commanded to believe and come to Chriſt, and he will eaſe them of their Burdens: But thô Repentance be neceſſary, we are not to think that we are forgiven and juſtified for the Sake of that, or of any Works that go before or come after it, but freely for Chriſt's Sake; and this Benefit is to be receiv'd by Faith. This affords ſolid Comfort to our Minds under Terror, and has nothing of Sophiſm, Perplexity, or Abſurdity; nor is there any need of Diſputes in this Caſe about Predeſtination, or the like, for the Promiſe is univerſal; nor does it take away the Neceſſity of good Works, but excites us to them, as well as to Faith; for Remiſſion of Sins is not aſcrib'd to our good Works, but to Mercy; not that we ſhould do nothing, but rather that we may know how our Obedience pleaſes God, thô attended with ſo much Weakneſs. For want of this Knowledge, which nothing but Phariſaical Ignorance can condemn, formerly People, to eaſe their Conſciences, had Recourſe to the Monaſtick Life, and other Works, for Remiſſion of Sins, and Juſtification. To prove this Doctrine, they bring *Rom.* 3. 20. *&c. Rom.* 4. throughout. *Epheſ.* 2. 8. *&c.*

When therefore we ſay, That we are juſtified by Faith, we do not underſtand that we are made Righteous for the Worth of the Act it ſelf; but that we receive Forgiveneſs of Sins, and the Imputation of Righteouſneſs by Mercy through Chriſt, by Faith; and this Faith is not only a Knowledge of the Hiſtory, but a Belief of the Promiſe of the Mercy ſhew'd to us for Chriſt's Sake. They add, That by underſtanding Faith thus, *Paul* and *James* are reconciled; for when *James* ſays, *The Devils believe and tremble*, he means Hiſtorical Faith, which is common to them with wicked Men; but when *Paul* ſays, *Faith is imputed for Righteouſneſs*, he ſpeaks of our Confidence in the Mercy which is promiſed to us for Chriſt's Sake. They add, That this is no new Doctrine, but was taught by the Fathers, particularly by *Ambroſe*, *Auguſtine*, and the *Milevitan* Council.

Of Good Works.

1. WE join, ſay they, with the Doctrine of Faith, that of Good Works, *viz.* That in ſuch as are reconciled to God, Obedience to his Law is neceſſary; for the Goſpel teaches a new Life and Repentance; nor can Faith exiſt but with Repentance, becauſe it comforts us under our Sorrow and Terror for Sin; as *Paul* ſays, *Being juſtified by Faith, we have Peace with God*: And of Repentance, he ſays, *That our old Man is crucified with him, that the Body of Sin might be deſtroyed, that henceforth we ſhould not ſerve Sin.*

2. Among Good Works, the chief and higheſt Worſhip of God is Faith, which brings forth many other good Works, that cannot exiſt without it; for *Paul* ſays, *How ſhall they call upon him in whom they have not believed. Rom.* 10. 14. While we are in doubt whether God will hear us, and think God will reject us, we do not truly call upon him; but when we believe in his Mercy, we fly to him, love him, call upon him, hope in him, expect Help from him, and obey him in Afflictions, becauſe we know we are his Children, *&c.* Theſe Things are produced by Faith; whereas our Adverſaries would ſeem to magnify the Doctrine of Good Works, but ſay nothing of thoſe Spiritual Works, of Faith, of the Exerciſe of Faith in calling upon God in all the Affairs of our Life, our Councils and Dangers.

3. By this Faith, which comforts us in Repentance, we receive the Holy Spirit to govern and help us to reſiſt Sin and the Devil; and that we may more and more acknowledge our own Weakneſs; and that the Knowledge of God, his Fear and Faith, may grow in us, as *Paul* ſays, *That we are to be renewed in the Knowledge of God, after the Image of him that created us.*

4. This new Obedience pleaſes God, not by ſatisfying the Law, but becauſe they are reconciled to him thrô Chriſt; for there's no Condemnation to them that are in Chriſt, and we are not now under the Law, but under Grace. Our own Works cannot

Digitized by Google

cannot appeaſe the Wrath of God; but the Terrors of Sin and Death are to be overcome by Faith in Chriſt, the Mediator. On this Occaſion they reject the Pretenſions of the Monks to Perfection and Supererrogation; their ſaying nothing of apprehending Chriſt by Faith, and teaching us to truſt in our own Works. They add, That they themſelves taught, that ſuch as commit mortal Sins, are not juſt, becauſe God requires that we ſhould reſiſt our corrupt Affections.

5. We teach how Men may do good Works, *viz.* by believing and calling upon God for the Aſſiſtance of his holy Spirit to comfort and govern us, and to help us to perſevere in Truth and new Obedience; for thô Men may do Things that are outwardly good by their own Strength, yet without Faith they are in the Power of the Devil, who tempts them to Uncleanneſs, and fills their Minds with impious and blaſphemous Opinions. True Virtues are the Gift of God, Faith, Clearneſs of Judgment to diſcern Doctrines, ſuch Greatneſs of Mind as is neceſſary for thoſe who preach and profeſs the Goſpel, true Diligence in Governing the Church, true Humility not to covet Power, or be byaſſed by popular Love or Hatred, true Chaſtity, *&c.* Thoſe Heroical Virtues, *Paul* calls the Gifts of God, *Rom.* 12. To theſe Gifts, we muſt add our own Exerciſe of 'em for their Preſervation, and to deſerve an Increaſe. Thus, ſay they, it appears, that the Doctrine of Good Works is duly taught in our Churches; but how much Darkneſs and Confuſion there was formerly in this Doctrine, honeſt Men know well enough. People were not taught the Difference betwixt Humane Traditions and Divine Laws; how good Works pleaſe, accompanied with ſo much Weakneſs; and nothing was heard of that Faith which is neceſſary for Remiſſion of Sins: But theſe Things being thus explain'd, the Conſciences of good Men are comforted; they have a certain Hope of Salvation; they underſtand what true Worſhip is, how it pleaſes God, and in what Senſe 'tis meritorious.

In the 21ſt Article they ſay, That Invocation is due only to the Father, the Son, and the Holy Spirit; That God has propos'd his Son for our Mediator, and Prieſts to intercede for us; for his Sake alone our Prayers are heard, according to that of our Saviour, *John* 16. 23. *Whatſoever you ask in my Name, he* (the Father) *will give it you.* Likewiſe, *There is but one Mediator betwixt God and Man.* 1 *Tim.* 2. 5. On this Head they condemn the Invocation of Saints, thô they approve the reading of their Lives, provided the Inſtances be prudently choſen.

This, they ſaid, was the Sum of their Doctrine, which they judged to be according to the Prophets, Apoſtles, and the Catholick Church, and likewiſe to the *Roman* Church, as far as ſhe was known to approved Writers. They hop'd, that all good and learned Men would concur with them; for they did in no wiſe reject the Conſent of the Catholick Church, nor innovate any thing: That they did not patronize any Impious or Seditious Opinions, which had been condemned by the Catholick Church; nor embraced this Doctrine out of any ill Deſign, but meerly by the Authority of the Scripture, and the ancient Church: That it was evident a great many Abuſes had crept into the Church, which needed Reformation. To this End they earneſtly deſir'd a General Council, that had long been wiſh'd for by good Men, and which the Emperor had put them in Hopes of; and they intreated it might be made up of pious and good Men, who would conſult the Glory of Chriſt, and the Safety of the whole Church; for that was the cuſtomary and lawful Way of determining Eccleſiaſtical Differences, to refer them to Synods. This Cuſtom the Church had obſerv'd from the Time of the Apoſtles; and the excellent Emperors *Conſtantine* and *Theodoſius* made uſe of it, not only in Things that were not very doubtful, but even in the Caſe of abſurd Opinions; ſo that they would determine nothing without a Synod, that the Liberty of the Church in determining Opinions might be preſerved, which was an Example fit to be followed by the preſent Emperor, ſince they had changed nothing but according to the Pattern of the Primitive Church. They hop'd God had put ſuch an Opportunity into the Emperor's Hands, for the Reformation and Safety of the Church; and told him, That certainly

Digitized by Google

tainly God required it of him, that he ſhould make uſe of his Power for the Glory of our Saviour, and the Peace of the Church, to put a Stop to the barbarous and moſt unjuſt Cruelty, that was exercis'd every where with a wonderful Rage againſt pious and innocent Men, the Members of Chriſt. God had charged Princes with this as their chief Care, and therefore raiſed up *Cyrus* to deliver the *Jews* from Captivity, and *Conſtantine* to put an End to that extream Cruelty which was then exercis'd againſt Chriſtians; and they wiſh'd the Emperor would do the like.

For the Articles which they had exhibited were a manifeſt Evidence, that they taught nothing contrary to the Catholick Church, or that was Impious or Seditious: That they had indeed reform'd ſome Abuſes in External Traditions, wherein tho' there was a Difference, yet if the Doctrine and Faith continued pure, no Man ought to be accounted an Heretick, or Deſerter of the Catholick Church, for a Difference in Humane Traditions; becauſe the Unity of the Catholick Church conſiſted in an Agreement of Doctrine and Faith, and not in Humane Traditions, as to which there was always a great Difference among all the Churches in the World: Therefore they pray'd the Emperor not to liſten to the Slanders of their Enemies, for they had only reform'd ſuch Abuſes as were contrary to the Scripture, the ancient Canons, and the Example of the ancient Church, and deſir'd a fair Hearing. After which, they deliver'd in the Articles concerning the Abuſes, which they had reform'd in External Rites, as follows.

Of the Mass.

THey ſay, they were falſly charged with having aboliſh'd it, ſince they ſtill retain'd it with moſt of the uſual Ceremonies, except that they had mix'd ſome *German* Songs with thoſe in Latin, for the Inſtruction of the People; for Ceremonies were neceſſary to inſtruct the Unlearned, and that the handling of the Word of God might excite People to true Faith, Fear, and calling upon his Name; for *Paul* not only commanded to make uſe of a Language known to the People, but it had likewiſe been ſo appointed by Humane Law. They alſo aſſembled ſuch of their People, as were fit to receive the Sacrament, together, for that increas'd the Reverence and Religion of publick Ceremonies; and they admitted none till they were firſt examined. They alſo inſtructed their People in the Dignity and Uſe of the Sacrament, and what Comfort it propos'd to Penitents; that Men might learn both to fear and believe in God, to call upon his Name, and to expect good Things from him; which was the true Chriſtian Worſhip, and pleaſing to God, when they worſhip'd him thus in the Uſe of the Ceremonies. Hence they conclude, That the Maſs, by which they underſtood the Lord's Supper, was duly obſerv'd among them, and with greater Reverence and Gravity than formerly.

On this Occaſion they ſay, That for many Ages, good Men had complain'd of the Abuſe and Prophanation of the Maſs; for it could not be denied how much thoſe Abuſes had ſpread through all Churches, by what wicked Men it was celebrated, meerly for the Sake of their Belly, for it was too notorious to be diſſembled: That never any thing had been ſo much proſtituted for filthy Lucre, as the Maſs had been; tho' *Paul* had dreadfully threaten'd thoſe who us'd the Sacrament unworthily, when he ſays, *He that eats this Bread, and drinks this Cup unworthily, is guilty of the Lord's Blood.* And 'tis writ in the Decalogue, That he who takes the Name of the Lord in vain, ſhall not paſs unpuniſh'd. And as God had formerly puniſh'd the World for Idolatry, he would certainly revenge this horrid Abuſe of the Maſs with terrible Puniſhments: And perhaps it was for that Cauſe chiefly, that the Church in theſe latter Ages was ſo much puniſh'd with Blindneſs, Diſcords, Wars, and other Calamities; yet the Biſhops not only had ſuffered thoſe Abuſes, which they knew well enough, but were pleas'd with them, and laugh'd at them: Whereas now they begin too late to complain of the Calamities of the Church, tho' nothing elſe had occaſion'd ſuch Tumults but thoſe Abuſes, which were ſo open, that moderate Men

Digitized by Google

could no longer bear with them. Therefore they wiſh the Biſhops had before then, according to their Duty, reſtrain'd the Avarice and Impudence of the Monks and others, who having perverted the ancient Cuſtom of the Church, ſaid Maſſes only for Money.

They ſay, thoſe Abuſes proceeded from an Opinion, That the Lord's Supper was a Work, which being celebrated by a Prieſt, deſerv'd Remiſſion of Sins and Puniſhment, both to themſelves, and to thoſe who took it with them, and that meerly by the Act it ſelf, without any good Diſpoſition of Mind; and likewiſe, that being ſaid for the Dead, it deſerv'd Deliverance from the Pains of Purgatory. Thus they explain a Sacrifice, when they call the Maſs by that Name, *viz.* That it is a Work, which being done for others, deſerv'd a Remiſſion of Sin and Puniſhment; and thus they alledge an Oblation is made by the Prieſt for the Living and the Dead. This Opinion being receiv'd, they taught Men to ſeek thus for Remiſſion of Sins, and all ſorts of good Things; nor was it of any Importance by what ſort of Men thoſe Maſſes were ſaid, becauſe they taught that they were efficacious enough, without the good Diſpoſition of thoſe who us'd them. Then it came to be diſputed, Whether one Maſs ſaid for many, was as profitable as if every one had a Maſs ſaid for him? This increas'd both the Number and Gain of the Maſſes.

Therefore their Churches taught, That this Opinion of the Application and Merit of the Maſs was falſe and impious, by the following Arguments:

1. As they had ſhew'd above, becauſe Men obtain'd Forgiveneſs freely by Faith for Chriſt's Sake, and therefore it could not be obtained by the Work of another.

2. That Chriſt's Paſſion was a Sacrifice and Satisfaction for Original and Actual Sin, as appears by *Heb.* 10. 10. *&c. We are ſanctified by the Offering of Chriſt once for all.* A great Part of that Epiſtle is taken up in confirming this Doctrine, That it was only the Sacrifice of Chriſt which deſerved Remiſſion, and Reconciliation for others.

3. In the Inſtitution of the Supper, Chriſt does not command that the Prieſt ſhould offer for other Men alive and dead. By what Authority then could the Church appoint this as a Sacrifice for Sin, without God's Command.

'Tis ſtill more abſurd to apply the Maſs for delivering the Souls of the Dead, for 'twas appointed for a Remembrance; that is, that thoſe who took the Lord's Supper in Remembrance of the Benefits purchaſed by Chriſt, may be comforted, and have their Faith confirmed; ſo that 'tis not a Satisfaction for Puniſhment, but was inſtituted for the Remiſſion of Sins, *viz.* That by uſing it, we might be inſtructed in the Benefits we receive, and particularly of the Remiſſion of Sins by the Death of Chriſt. Therefore they condemn the Application of the Lord's Supper for the Deliverance of the Dead as a new and impious Piece of Worſhip, contrary to the Scripture.

4. A Ceremony without Faith in the New Teſtament deſerves nothing, neither to him that performs it, or to others, according to that of our Saviour: True Worſhippers ſhall worſhip the Father in Spirit and Truth. This is likewiſe prov'd by the 11th Chapter of the *Hebrews, That by Faith, Abel offer'd a more excellent Sacrifice than Cain.* Likewiſe, without Faith 'tis impoſſible to pleaſe God, which at once deſtroys the Doctrine of Merit *ex opere operato*, or by the Act it ſelf.

5. The Application of the Benefits of Chriſt is made by our own Faith, as appears by *Rom.* 3. 24, 25. *Being juſtified freely by his Grace, through the Redemption that is in Jeſus Chriſt, whom God hath ſet forth to be a Propitiation through Faith in his Blood, to declare his Righteouſneſs for the Remiſſion of Sins that are paſt, through the Forbearance of God*; and *v.* 28. *Therefore we conclude, that a Man is juſtified by Faith, without the Deeds of the Law.* So that when we take the Sacraments, the Application is made by our own Faith and Deed, and not by the Work of another; for if we had no Remiſſion but by the Maſs, our Faith muſt be transferred from Chriſt to the Act of the Prieſt, and ſo we could be at no Certainty.

Theſe Arguments, and many others, confute the Opinion of the Merit and Application of the Maſs for the Living and Dead; there-

Digitized by Google

therefore they apply to the Emperor, to deliver the Church from ſuch a dreadful Profanation and horrid Abuſe of the Lord's Supper.

6. The Inſtitution of the Sacrament is againſt this Abuſe, for there is no command there to offer up Sacrifice for the Sins of the Living and Dead; but we are commanded to take this Body and Blood in Remembrance of Chriſt's Benefits: And this Remembrance does not imply a meer Hiſtorical Repreſentation as on a Stage, as thoſe Men fancy, who defend the Merit *ex opere operato*; but implies, That by Faith we remember the Promiſe and Benefit comfort our Conſciences, and give thanks for it; for the principal End of the Inſtitution is, that our Faith may be rais'd and exercis'd, when we receive that Pledge of Grace; beſides the Inſtitution orders, that the Miniſters ſhould give or ſtretch out the Body and Blood of the Lord to others: This was the Cuſtom of the Primitive Church, 1 *Cor.* 11. 33. where the Apoſtle enjoyns, that when they come together to eat, they ſhould tarry for one another, that there may be a Participation of the Communion; therefore, they ſay, we have laid aſide private Maſſes as contrary to Chriſt's Inſtitution; but we Adminiſter on Holy-Days, and others, to ſuch as are found fit upon Examination, and the Ceremony is accompanied with Pious Sermons, as our Saviour appointed, wherein we inſtruct them of the Nature and Uſe of the Sacrament; whereas formerly nothing of that was done, nor any thing taught but the *Opus operatum*, nor was there any thing ſaid of Faith, or of the Comfort that redounds from it, but the Peoples Conſciences were tortur'd with extravagant Confeſſions. Thus our Adminiſtration appears to be agreeable to our Saviour's Inſtitution, and the Cuſtom of the Ancient Church, where the Sacrament was common, as *Chryſoſtome* informs us, when he ſays, That the Prieſt ſtood at the Altar, where he call'd ſome to the Communion, and kept off others; and by the Council of *Nice* 'tis evident, That one certain Perſon celebrated the Liturgy, as the *Greeks* call it, and ſtretch'd out to all the reſt the Body and Blood of the Lord. The Words of the Decree are thus, Let the Deacons receive according to order, after the Presbyters, the Holy Communion from a Biſhop or Presbyter, nor is there any mention of private Maſſes till *Gregory's* Time; but whenever the Ancients ſpeak of a Maſs, 'tis plain they ſpeak of one that was Common: Therefore ſay they, we hope the Practice of our Churches cannot be condemned. As to the reſt of the indifferent Rites we obſerve moſt of them, though we differ as to the frequency of the Maſs; and we find by the Tripartite Hiſtory, that in the moſt numerous Churches they had not Maſs every Day.

Of taking the SACRAMENT *in both Kinds.*

THIS they juſtify by our Saviour's Command, in *Matth.* 26. That of the Apoſtle, 1 *Cor.* 11. by the Authority of *Cyprian* and *Jerome*, and the Decrees of Pope *Gelaſius*, who condemn'd it as Superſtition not to take the Cup, and order'd that they ſhould either receive both or none, for it was a great Sacrilege to make a Diviſion of one and the ſame Myſtery. They make this Reflection upon withholding the Cup from the People, and not teaching them the true Uſe of the Sacrament; that the Mutilation of the Ceremony did perhaps ſignify, that the Goſpel concerning the Blood of Chriſt, *viz.* that the Benefit of his Death was thereby obſcur'd.

Of CONFESSION.

THey Complain, That the Doctrine of Repentance was obſcur'd by Divines and Canons, who tortur'd Peoples Conſciences with their perplex'd Diſputes, numberleſs Traditions and Injunctions, to tell all their Faults, and with their feign'd Satisfactions, which left them in perpetual Doubt, and obſcur'd the Benefits of Chriſt's Death; moſt of what they enjoyn'd not being Worſhip commanded by God, but vain Repetitions of Prayers, Invocations of Saints, Pilgrimages, and other Things of this Nature, by which they

overturn'd the true Doctrine of Repentance; as to which, good Men for many Ages have desir'd a Reformation; whereas without Sophistication we preach the Truth of the Gospel concerning Repentance, that Men may understand how they are to return to Christ; how they may obtain Forgiveness, and what Works and Worship are pleasing to God: Here they repeat what they had said before, as to the Nature of Repentance and Faith, and their retaining the true Use of Confession and Absolution, which their Enemies had obscur'd, and made dubious, by taking away from the Church the Ministry of the Gospel, or the Power of the Keys; whereas they taught, that an Enumeration of all our Sins to the Priest was impossible, and not commanded of God, as *Chrysostome* says on the *Hebrews*, "Let us not only be perswaded "that we have sin'd, and confess with "our Mouths, but from the bottom of "our Heart; and let us not only say, That "we are Sinners in general, but reckon up "our special Faults, not to betray our "selves to the Publick, or to accuse our "selves to others; but according to the "Prophet, to lay open our Lives before "God, and to confess our Sins to him. They add, That the Glosa in the Decrees concerning Repentance, *Distinct.* 5. owns, That Confession was appointed by the Church, but not by the Scripture; and that most of the Doctors were of that Opinion. Then, as to Canonical Satisfactions, they condemn them as what we are not oblig'd to, and as Things of no Efficacy for obtaining Forgiveness. In the Ancient Church they say, It was the Custom to impose a Mulct upon those who return'd to the Church after having fallen; from whence those Canonical Satisfactions took their Rise; not that the Ancients thought that Ceremony an Expiation of the Fault, but only made use of it to deter others from offending; but the Unlearned did afterwards alledge, That those Satisfactions absolv'd Men from the Sin, and deliver'd them from the Pains of Hell and Purgatory: But we teach, say they, That the necessary Fruits of Repentance, are Obedience, the Fear of God, Faith, Love, Chastity, and an intire Renovation of the Mind. Likewise, that Sins are frequently punish'd in this Life with Temporal Judgments, as in *David*, *Manasseh*, &c. and that those Punishments are mitigated by Good Works, and an Universal Repentance, as *Paul* teaches us, *If we judge our selves, we shall not be judged*; and thus God chang'd his Sentence against *Nineveh*, because of their Repentance.

Of the Difference of Meats, *and other such* Popish Traditions.

They say, in this Life there is need of Traditions, *i. e.* a Distinction of Places and Times, that all Things may be done with Order and Decency in the Church: Therefore the Church appoints the Times and Places for the Peoples assembling, and in those Civil Things has a Power of Tradition; but to this, Ignorant Men added superstitious Opinions without number, as *Augustine* and *Gerson* formerly complain'd; therefore they found it necessary to teach the People what they should think of Humane Traditions, for it was not in vain that our Saviour, and the Apostles, spoke so frequently of such Traditions; and admonish'd the Church to be prudent in their Determinations about 'em; whereas of late Ignorant Men had taught, that Ecclesiastical Traditions deserv'd Forgiveness of Sin, and were necessary for Gospel-Righteousness, and like the *Levitical* Ceremonies under the Law, could not be omitted without Sin, even when such Omission occasion'd no Scandal, by which they ascrib'd the Benefits of Christ's Death to Men's own Works, though *Paul* cautions us against it with so much Severity. 2. By those Traditions they obscur'd the Commands of God, to which they preferr'd them, and made Christianity wholly to consist in the Observation of certain Holy-Days, Rites, Fasts, Habits, &c. to which they ascribe Christian Perfection, without insisting upon the Relative Duties of People of all sorts, by which they brought Men to doubt whether their Civil Vocations, Marriage, Magistracy, &c. were pleasing to God, and occasion'd many to desert their Civil Duties with the Stations

Digitized by Google

tions that God had plac'd them in, and to retire into Monasteries, because they thought that was more pleasing to God, and deserv'd Remission of Sins. 3. They tortur'd Men's Consciences, by urging the Necessity of those Traditions, which were so innumerable, that the most diligent Man alive could not observe them; which *Gerson* says occasioned many Men to despair, and to kill themselves. Thus the Priests and Divines spent their Time in collecting those Traditions, and making Commentaries upon them, wherein they could not agree, which more and more perplex'd Men's Consciences; whereas at the same time they did not teach them one Word concerning Free Grace, Faith, Hope, of the Cross of Christ, and of Comfort of Conscience under Temptations; and totally laid aside the Scripture, and useful Doctrine, which have frequently been complain'd of by good Men, who found themselves hinder'd by such Brawls about Traditions, in seeking after a more useful Knowledge. Therefore, say they, we found it necessary to teach the People what they ought to think of Humane Traditions; not that they had any Design to destroy Ecclesiastical Authority, to detract from the Dignity of Bishops, or to dissolve the good Order of the Church, but to reprehend the *Jewish* Opinions; for our Opinion concerning Humane Ceremonies is, 1. That if they be such as contradict the Command of God, they are not to be observ'd, as that concerning Celibacy, *&c.* 2. For other Ceremonies which are in their own Nature indifferent, as Fasts, Holidays, Difference of Habits, and the like, that they do not deserve Forgiveness of Sins, nor constitute Righteousness or Christian Perfection, but may be omitted, except in Case of Scandal: For this, they quote *Rom.* 14. 17. *For the Kingdom of God is not Meat and Drink, but Righteousness and Peace, and Joy in the Holy Ghost*: Col. 2. 16. *Let no Man therefore judge you in Meat or Drink, or in respect of a Holy Day, or in the New Moon, or of the Sabbath Day*: Matt. 15. 11. *Not that which goeth into the Mouth defileth a Man*; where our Saviour excuses the Apostles for breaking the usual Tradition, and adds this memorable Sentence, *In Vain do they worship me, teaching for Doctrines the Commandments of Men.* Acts 15. 10, 11. *Why do ye tempt God, to put a Yoke upon the Neck of the Disciples, which neither our Fathers nor we were able to bear; but we believe, that through the Grace of the Lord Jesus Christ, we shall be saved, even as they.* So that the Apostle sharply rebukes them who burden Men's Consciences with such Observations, and calls it a tempting of God.; and 1 *Tim.* 4. 3. the Apostle calls forbidding to marry, and commanding to abstain from Meats, the Doctrines of Devils, because the Benefit of Christ's Death was ascrib'd to them, and they were enjoin'd as necessary; so that they wonder that Men were not mov'd with those Scriptures, but would still defend Superstitious Traditions: And here they say, That even Traditions concerning Things in their own Nature indifferent, as Meat, Clothes, *&c.* become impious, when they are enjoin'd as deserving Remission of Sin, as Things necessary, and as Parts of Worship or Duties; the immediate End of which is, that by them God may be honour'd: Therefore they thought it necessary, that such pestilent Opinions should be condemned by the Church; and for this Reason, unnecessary Humane Rites, as Difference of Meats, Monastical Habits, and such Superstitious Customs, were to be thrown off, as *Hezekiah* burnt the Brazen Serpent, when he saw it was worshipped by the People. But because Humane Society stands in need of Order, to that Political End some useful Ceremonies may be retained without Superstitious Opinions; *i. e.* That they be not looked upon as Worship, or necessary Things; That the People may know when they are to assemble in the Church, to Sermon, and Sacrament; and we likewise observe the Lord's Day, and other Holidays, and the usual Difference of Histories in our singing on the Day of our Lord's Birth, *Easter*, *Ascension*, *Pentecost*, &c. And our People love those Ceremonies the better, since their Consciences are deliver'd from Danger, and those unjust Impositions with which they were burden'd by the Monks and Canonists; and we teach them, that the End of those Institutions is Political, which right Interpretation makes 'em more grateful to moderate Minds: Therefore we say, That those Men are faulty who proudly

Digitized by Google

proudly and ſcandalouſly violate thoſe Ceremonies, *i. e.* who hinder the Miniſtry of the Goſpel.

This Liberty, ſay they, was not unknown to the Fathers; for which they quote *Irenæus*, who ſays, That Difference in Faſt-Days did not diſſolve Agreement in Faith. The *Tripartite* Hiſtory gives many Inſtances of Difference in Rites, and adds this excellent *Epiphonema*, *It was not the Mind of the Apoſtles to eſtabliſh any thing about Holidays, but to preach Godlineſs and a good Life.*

As to the Charge upon them, That they reject good Works, and the Mortification of the Fleſh; they complain of it as a Slander, for they taught the Neceſſity of good Works, as we have heard before: And as to true Mortification of the Fleſh, that conſiſts in bearing the Croſs, Dangers, Calamities, and Afflictions; and that Chriſtians are to mortify the Fleſh by Labour, Temperance, Meditation on Divine Things, and other ſuitable Exerciſes, leſt by Sloth or Fulneſs of Bread they be tempted to Sin, and that their Minds may be the more fit for Spiritual Exerciſe; but they are not to look upon thoſe Things to deſerve Remiſſion of Sin, or to be Satisfactory for it; and this Diſcipline ought to be perpetual, and not to be enjoin'd on all Men at certain Times. Concerning this Diſcipline, our Saviour ſays, *Luke* 21. 34. *And take heed to your ſelves, leſt at any time your Hearts be over-charged with Surfeiting and Drunkenneſs, and the Cares of this Life.* Likewiſe, *This kind of Devil goeth not out but by Prayer and Faſting*, Mark 9. 29. And *Paul* ſays, 1 *Cor.* 9. 27. *I keep under my Body, and bring it into Subjection.* Therefore we do not condemn Faſting, but only Superſtitious Opinions and Impoſitions on Men's Conſciences about it.

Of Prieſts Marriage.

THey ſay, That the Pope's Law about the Celibacy of the Clergy, has been the Fountain of greater Villany, Wickedneſs and Impurity, than can be expreſſed by Man; and being contrary to the Law of God, Nature, and the Goſpel, as alſo to the Conſtitutions of ancient Synods, there is no need of much Diſpute about it; and therefore they requeſt the Emperor to aboliſh that Tyrannical Law, by which the Clergy are more ſeverely and cruelly puniſh'd for marrying, than for the greateſt Crime, thô this Doctrine be cenſur'd by the Apoſtle as the Doctrine of Devils; and therefore neither the Pope's Laws, or the Vows of Celibacy, are to be pleaded againſt it, ſince it hath given Occaſion to ſuch luſtful Impurities, and other Villanies, as are enough to bring Judgments on the World; and that 'tis a miſerable Spectacle when Princes, who ought to be the Repreſentatives of God upon Earth, do not ſerve him, but the Fury of the Devil, by confirming horrid Sins, Idolatry, Luſt, and unjuſt Cruelty.

Of Monaſtical Vows.

THeir Doctrine concerning this, they ſay, will be better underſtood if the State of the Monaſteries be conſider'd, and how many Things are every Day committed in them againſt the Canons. In *Auguſtine's* Time, the Monaſteries were Free Colleges; but when the Diſcipline was corrupted, Vows were added, and many other Obſervations and Impoſitions, contrary to the Canons, as if Diſcipline could have been reſtored by a Priſon, which proved a Snare to People's Conſciences, eſpecially to Nuns, who being the weaker Sex, ought to have been more gently dealt with; and even thô the Canons would have allow'd them a Liberty, both Sexes were compelled to ſtay in the Monaſteries, thô they were ſenſible that they could not keep their Vows. This has been complain'd of many Ages ago by good Men, when they ſaw Youth of both Sexes thruſt into Monaſteries meerly for a Livelihood, which occaſioned many Scandals. Unto this, contrary to the Opinion of the firſt Monks, they added a ſuperſtitious Conceit, That thoſe Vows oblig'd them as much as the Vow of Baptiſm; That this ſort of Life deſerv'd Remiſſion of Sins, and Juſtification before God, more than obſerving his Commands, or the Rules of the Goſpel; and at laſt came to ſay, That the Monaſtick Profeſſion was better than Baptiſm, and deſerv'd

Digitized by Google

ſerv'd more than the Office of Magiſtrates, Paſtors, and others, who follow their lawful Vocations, as appears by their Books. Monaſteries were formerly Schools of Religion, where the Scriptures and good Diſcipline was taught, and from whence Paſtors and Biſhops were choſen; but now 'tis know to be ſo much otherwiſe, that there was no need to inſiſt upon it: Nor can we be charg'd, ſay they, with aggravating any thing, but only ſay this, that our Doctrine may the better be underſtood; which is, 1. That 'tis lawful to all Men, who have not the Gift of Continence, to marry, becauſe Vows cannot annul the Commands and Ordinances of God; which is, that to avoid Fornication every Man ſhould have his own Wife. 'Tis in vain for them to object their Vows; for the Canons teach, That in every Vow the Right of the Superior is excepted; therefore much leſs can thoſe Vows bind againſt the Law of God; and 'tis known that the Popes have ſeveral times diſpens'd with Vows, which proves that they judg'd there was an Equity neceſſary to be us'd in this Caſe: And the Canons reſciaded all Vows made before 15 Years of Age, and ſome of them forbid them before Eighteen. And *Auguſtine* ſays plainly, That Marriage cannot be diſſolv'd for ſuch Cauſes. We likewiſe teach, ſay they, That thoſe Vows are void, becauſe all ſorts of Worſhip choſen and appointed by Men, without the Command of God to deſerve Remiſſion of Sins and Juſtification, is Impious; as our Saviour ſays, *In vain do they Worſhip me by the Commandments of Men*; and *Paul* ſays, Gal 5. 4. *Whoſoever of you are juſtified by the Law, ye are fallen from Grace, and Chriſt is become of none Eff.ct to you.* They add many other Things, and particularly, That the Opinions of the Monks obſcure the Precepts and true Worſhip of God, by teaching, That they are only in a State of Perfection, ſince Chriſtian Perfection is to fear God, to believe that he is reconcil'd to us through Chriſt, to beg his Aſſiſtance in all the Duties of our Vocation, and to do good; but does not conſiſt in Celibacy, Begging, or a ſordid Habit; the teaching of which by the Monks, has occaſion'd many People to forſake their Wives and Children, their lawful Vocations, Poſſeſſions, and Publick Imployments, as if thoſe Things did not become Chriſtians. So that *Gerſon*, long ago, reprehended the Error of the Monks, and upbraided them with introducing a new Opinion; when in his Days they aſſerted, That the Monaſtical Life was a State of Perfection.

Of the POWER *of the* Church.

THere have been great Diſputes, ſay they, concerning the Power of Biſhops, in which ſome have very improperly join'd the Eccleſiaſtical Power with that of the Sword. From this confounding of the Two Powers, have proceeded many Wars and Commotions, while the Pope's relying on the Powers of the Keys, not only appointed new ſorts of Worſhip, and impos'd on Mens Conſciences by reſerving of Caſes and violent Excommunications, but alſo took upon them to diſpoſe of Kingdoms and Empires, which was complain'd of long ago by pious learned Men. We, ſay they, for the Eaſe of Mens Conſciences, found our ſelves oblig'd to ſhow the Difference betwixt Temporal and Eccleſiaſtical Power, and to teach, That both of them are by the Command of God to be reverene'd and honour'd, as the greateſt Benefits which God has given to Men on Earth. We believe, that the Power of the Keys, or the Power of Biſhops, is according to the Goſpel, the Command of God to preach the Goſpel, remit and retain Sins, and Adminiſter the Sacraments; for Chriſt ſent out his Apoſtles with this Command, *Mark* 16. 15. and *John* 20. 21, 22, 23. This Power is only exercis'd in preaching the Goſpel, and adminiſtring the Sacraments; therefore ſince the Eccleſiaſtical Power gives only Spiritual Things, and is exercis'd by the Miniſtry of the Word, it no more hinders the Political Adminiſtration than it does the Art of Singing, or any other Art; for the Political Adminiſtration has another Object than the Goſpel. Magiſtracy does not defend our Minds, but our Bodies and Eſtates againſt Injuries, and reſtrains Men by the Sword and bodily Puniſhments, ſo as they may obſerve Civil Juſtice;

Digitized by Google

Justice; therefore the Two Power are not to be confounded, Church-men have nothing to do with the Magistrate's Office, to dispose of Kingdoms, to abrogate Laws, to deprive the Magistrate of Obedience, to hinder their Judgments in Civil Matters, or to prescribe Laws to Magistrates, as to Forms of Civil Government; as our Saviour say, *My Kingdom is not of this World, who made me a Judge, or a Divider over you?* And *Paul* says, Phil. 3. 20. *Our Conversation is in Heaven:* And 2 Cor. 10. 4. *The Weapons of our Warfare are not Carnal, but Mighty through God, to the pulling down of strong Holds*, &c.

If Bishops have Power of the Sword, they have it not as Bishops by the Command of the Gospel, but by Humane Law from Emperors and Kings, for the Administration of the Temporal Estates, which is quite different from their Ministerial Function. For according to the Gospel, Bishops have no Jurisdiction as Bishops; that is, those to whom is committed the Ministry of the Word and Sacraments; but to remit Sins, to examine the Doctrine, to reject such as is contrary to the Gospel, and to exclude Persons, who are openly wicked, from the Communion of the Church, without any Humane Power, but by the Word: And in that Case the Churches are to give Obedience according to the Divine Command, according to that of our Saviour, *He that hears you, hears me*; but if they command any thing contrary to the Gospel, they are not to obey, as we find, *Matth. 7. Gal. 1. 2 Cor. 13.* If they have any other Power or Jurisdiction in determining Causes of Matrimony or Tithes, &c. 'tis only by Humane Law: 'Tis also controverted, whether Bishops have any Right to appoint any Ceremonies in the Church, and of making Laws about Meats, Holy-days, Degrees or Orders of Ministers: Those who ascribe that Power to them, alledges that Scripture, *I have still many things to say to you, which now you cannot bear; but when the Spirit shall come, he will guide you into all Truth*, John 16. 12, 13. They alledge also the Example of the Apostles; who commanded to abstain from Blood and Things strangled, and the change of Sabbath into the Lord's Day; and of this they boast much, because it was the Change of One of the Ten Commandments. But, as to the Question, we teach, That Bishops have no Power to appoint any thing contrary to the Gospel, as has been said already, and the Canons, *Distinct. 9.* say the same. Moreover, 'tis contrary to the Scripture to appoint or command Traditions, by the Observation of which we may deserve Remission of Sins, or make Satisfaction for them, for that is Derogatory to the Merits of our Saviour; for by this Means such a multitude of Traditions were brought into the Church, as overwhelm'd the Doctrine of Faith, &c.

Many Writers do likewise urge now-a-days, That the Worship of the *New Testament* ought to be like the *Levitical* Service, and that God has committed the ordering of this to the Apostles and Bishops; but they are deceiv'd by thinking that the Righteousness of the *New Testament* consists in the Observation of certain Rites, as it was under the Law; and hence they will have it, that such and such Meats defile us; that the not observing Canonical Hours is a mortal Sin, &c. That Sins in reserv'd Cases cannot be remitted, but by the Authority of him that reserv'd them; whereas the Canons speak only of the Reservation of Canonical Punishment, but not of the Reservation of the Fault: But whence have Bishops that Right of imposing Traditions upon the Churches to burden Mens Consciences? For we have clear Scripture against such Traditions, as are appointed either to deserve Remission of Sins, or as necessary for *New Testament* Righteousness, or to Salvation; for this they quote Col. 2. 16. *Let no Man judge you in Meat, or in Drink*, &c. And V. 20, 21, 22, 23. *If you be dead with Christ from the Rudiments of the World, why, as though living in the World, are you subject to Ordinances? Touch not, taste not, handle not. Which are all to perish with the using, after the Commandments and Doctrines of Men. Which things indeed have a shew of Worship in Will-Worship and Humility, and neglecting of the Body, not in any Honour to the satisfying of the Flesh.* *Titus* likewise plainly forbids Traditions, and our giving any heed to *Jewish* Fables, and Commandments of Men, that turn from the Truth: And Christ, in the 15th of

Digitized by Google

of *Matthew*, says of those who insist on Traditions, *Let them alone, they are blind Leaders of the Blind*: And he disapproves such kind of Worship, when he says, *Every Plant that my Heavenly Father hath not planted, shall be rooted up.*

As to the Lord's Day, and such Rites, they say, That 'tis lawful for Bishops or Pastors to make such Orders, that Things may be done orderly in the Church, as *Paul* ordered Women to be cover'd in the Church; and that the Prophets or Interpreters should be heard in Order. Such Orders are necessary in the Church for the Preservation of Love and Peace, that all Things may be done in Order, and without Tumult; but so as People's Consciences be not burden'd with an Opinion, That such Things are necessary to Salvation, and that they sin when they act contrary, without Offence to others; for no Man will say, That it was a Sin for a Woman to appear in Publick with her Head uncover'd, if it did not give Offence to others.

Such, say they, is the Observation of the Lord's Day, *Easter*, *Pentecost*, and such Holidays and Rites; for they who judge that, by the Authority of the Church, the Lord's Day was instituted for the Sabbath as necessary, are deceived. The Scripture grants, That the Observation of the Sabbath is now at Liberty; for it teaches, That the *Mosaick* Ceremonies, after the Gospel was revealed, were not necessary: And yet, because it was needful to appoint a certain Day, that the People might know when to meet, it appears that the Church appointed the Lord's Day for that purpose, which for this Cause seems to have been the more pleasing, that Men might have an Example of Christian Liberty, and know, that neither the Observation of the Sabbath, nor of another Day, was necessary.

There are prodigious Disputes concerning the Change of the Law, the Ceremonies of the New Law, the Change of the Sabbath; all which arise from a false Perswasion, That the Gospel-Worship must be like the *Levitical*; and that Christ committed to the Apostles and Bishops a Power to invent new Ceremonies necessary to Salvation. These Errors crept into the Church when the Righteousness of Faith was not clearly enough taught. Some alledge, That the Observation of the Lord's Day is not positively of Divine Right, but in a certain Manner; and they appoint Holidays so as it may be lawful to work on them: But these Disputes, say they, are nothing else but Snares to People's Consciences; and the Equity or Moderation of those Traditions can never be maintained, so long as the Opinion of their Necessity is inculcated. The Apostles commanded to abstain from Blood; yet those who do not observe that Command now, are not guilty of Sin, because the Apostles themselves were not willing to burden Men's Consciences with such a Servitude, but only forbad it for a Time, for avoiding of Scandal.

They add, That the Bishops might easily retain the People in lawful Obedience, did they not press them to observe such Traditions as they cannot in Conscience do. They say, they do not require that the Bishops, for the Sake of Concord, should sacrifice their own Honour, which yet were the Duty of good Pastors to do: They only require them to forbear their unjust Impositions, which are new, and contrary to the Custom of the Catholick Church; for many Humane Traditions have been chang'd in Time, as is plain from the Canons, without endangering the Unity of the Church: But if those Things cannot be obtained, they must rather obey God than Man. *Peter* forbids Bishops to Lord it over the Church; but they do not desire to take away their Power, but only request them to suffer the Gospel to be duly preached, and to release a few Observations that cannot be follow'd without Sin; but if they will not do it, they must be answerable to God for the Schism, which they occasion by their Obstinacy.

In the Conclusion, they say, these were the chief controverted Articles; and they could have mentioned many other Abuses, which for Brevity's Sake they omitted, and only insisted upon what they thought necessary, that it might be seen there was nothing received as to Doctrine or Ceremonies among them, which was contrary to Scripture, or the Catholick Church: And if any thing was wanting, they were ready to give the Emperor and the Diet a larger Information, God willing, according to the Scriptures.

Digitized by Google

We have been the larger in this Extract of the *Augsburg* Confeſſion, to ſatisfy the Deſires of ſome Gentlemen, who wanted a true Account of the Religion of the *Lutherans*, than which there is none more Authentick than this Confeſſion, to which they ſtill profeſs an Adherence; thô it be generally known, that many of 'em now are of another Opinion as to Free-will. 'Tis likewiſe valuable as being the firſt Confeſſion exhibited to the Emperor and Diet, with a Proteſtation by thoſe who were firſt called *Proteſtants* in the Empire, which afterwards became a general Name to all thoſe who ſeparated from the Church of *Rome*: And thô ſince they have come under different Denominations, yet their Doctrine is the ſame in the main with what's laid down in this Confeſſion. It may alſo be of Uſe to ſhew the Opinion of thoſe Noble Reformers as to ſeveral Points of Ceremonies and Government, about which we in theſe Nations have been ſo long and unhappily divided; which, thô it cannot be deciſive, as being humane, yet has its own Uſe, and if duly weigh'd, might be conducive to Moderation: But ſince, as we obſerv'd in the beginning of this Extract, that *Melanthon*, who wrote it, confeſs'd he did it in haſt; and that the Publiſher of this Edition of the *Harmony of Confeſſions* thought fit to add, for explaining it, the *Saxon*, *Wirtemberg*, *Palatine*, and *Bohemian* Confeſſions, with the Reconciliation of thoſe in *Poland* about the Supper of the Lord, who adher'd both to this and the Helvetick Confeſſion: We ſhall afterwards give a brief Account of thoſe Confeſſions, when we come to the reſpective Countries to which they belong, eſpecially as to ſuch Points wherein they differ from this, or explain it.

Their HISTORY.

THE *Germans* having no ancient Records of their own, the earlieſt Accounts we have of them is from the *Romans*, who inform us, That when they were over-ſtock'd with Inhabitants, they ſent away their ſupernumerary People. The Invaſion the *Cimbri* and *Teutones* made upon the *Romans* in the Days of *Marius* is very remarkable: They were reckoned to be 500000 armed Men, with a proportionable Number of Women and Children. This vaſt Multitude carried Deſolation along with 'em, and the *Romans* were afraid they would put an End to their Republick, which probably they might have done, their Numbers and Valour conſider'd; but by dividing their Army into two Bodies, *Marius* had a more eaſy Victory over them; ſo that they ſay, in one Battle he kill'd 100000, and took 60000.

We have little remarkable of them in the *Roman* Hiſtory till *Julius Cæſar*, who, after he had ſubdued *Gaul*, thought it would be impoſſible to preſerve his Conqueſts, unleſs he alſo ſubdued *Germany*. He was the firſt *Roman* General that paſs'd the *Rhine*, and his Pretext was, That they refus'd to deliver up ſome *German* Cavalry that had eſcap'd from him in one of his Victories over the *Gauls*. The *Germans* told him, The *Rhine* was the Boundary of the *Roman* Empire, and that he had no Buſineſs in *Germany*; upon which *Cæſar* made a Bridge over the *Rhine* in 10 Days, but found them ſo well intrench'd, that he thought not fit to attack them, repaſs'd the *Rhine*, and broke his Bridge, leſt the *Germans* ſhould follow him. In another Expedition he defeated them, and oblig'd ſome of them to be his Subjects and Allies, thô the Victory was dear bought.

Auguſtus continued the Deſign of conquering *Germany*, and *Tiberius* his General made ſome Progreſs in it; but the *Roman* Glory was conſiderably obſcured by *Arminius*, a mortal Enemy to the *Romans*, and a zealous Defender of the Liberty of his Country, who ſurpris'd 3 *Roman* Legions under *Varus*, and cut them in Pieces; which Diſgrace touch'd *Auguſtus* ſo ſenſibly, that he was often heard to cry out like a Mad-Man, *Varus, Reſtore me my Legions*. The famous *Germanicus* reveng'd this Loſs by a compleat Victory over the *Germans*, and made ſo great a Progreſs in *Germany*, that the Emperor *Tiberius*, who was ſuſpicious, thought it not ſafe to continue him as General in this War, for the Governors of this Province always made a great Figure; ſo that *Lentulus Getulicus*, who commanded in *Germany* after *Germanicus*, when *Tiberius* recall'd him, becauſe he was a Creature of *Sejanus*, then in Diſgrace, wrote to the Emperor,

Digitized by Google

peror, That the *Roman* Empire might content him; but as for himself, he would suffer no other General to come in his room.

After the Death of the brave *Arminius*, who was murder'd by his own Confidents for affecting a Monarchy, the *Romans* made greater Advances in *Germany*; but every Victory cost them dear; they were forc'd to dispute every Advantage they gain'd, and found it more difficult to keep their old Conquests, than to make new ones; for this Nation was so fond of Liberty, that they always revolted upon the least Opportunity. This made many of the Emperors take it for a Maxim, with Regard to *Germany*, Never to extend their Conquests beyond the *Danube*, and so hinder them from becoming too powerful on the S. of that River. The *Germans* were formerly very numerous, as appears by the vast Numbers of them cut off in Battles; for the Emperor *Probus* kill'd in several Encounters above 400000 of them, and obliged Nine of their Kings to come and beg Peace of him on very disadvantagious Terms. He was a great Enemy to the *Germans*, design'd to make that Country a Consular Province, and to build Forts every where to curb 'em, as he had already done upon the *Rhine*, the *Main*, and the *Neckar*; but Death prevented him.

The Emperor *Valentinian* resolv'd to subdue the *Quadi*, and to this End order'd a Citadel to be built in their Country. They complain'd of it; upon which the Work was discontinued for some time. Another Governor, who was entrusted with this Work, invited *Gabinius*, the Leading-Man of that Country, to an Entertainment, and kill'd him. The *Quadi*, enrag'd at this treacherous Action, made Reprisals upon the *Romans*, passed the *Danube*, and committed great Ravages in their Dominions. *Valentinian*, to revenge this, enter'd their Country, destroy'd all wherever he came with Fire and Sword, and swore he would exterminate them. After this, they sent Deputies to propose a Peace; but *Valentinian* was so enrag'd at the Sight of them, that by the Violence of his Passion he broke a Vein, which occasion'd such an Effusion of Blood, that it choak'd him.

After this, the *Romans* laid aside all Thoughts of conquering *Germany*; but the *Goths*, with other *German* Nations, and Northern People, invaded *Italy* in their Turn, ruin'd the *Roman* Empire, settled themselves in the several Parts of it, (which we shall give an Account of when we come to treat of the *Roman* Emperors) where they establish'd Limited Governments, with such Regulations as were proper to hinder Oppression and Arbitrary Power; for the *Roman* Arms had never prevailed so much among them, as to unsettle their former Methods of Government. Their being divided however into so many Governments, made it easier for the *Franks*, under the Kings of the *Merovingian* Family, to invade and reduce several of them; and at last *Charlemain* reduc'd all *Germany*.

This *Charles* was Son to *Pipin*, K. of *France*, and anointed and crown'd Emperor by Pope *Leo* III. on *Christmas-Day*, *A. C.* 800. He had before this rescued *Italy* from the Tyranny of the *Lombards*, took their King *Desiderius*, and annex'd his Dominions to the Kingdom of the *Franks*. Much about this Time ended his 30 Years War with the *Saxons*, then the most powerful People of *Germany*. His Pretence was, to oblige them to embrace Christianity; for wherever his Arms reach'd, he establish'd it, and erected Schools for that purpose. He had the Title of *Great*, both on Account of his Valour and Piety. He was at the same time Master of *Germany*, *France*, *Italy*, and Part of *Spain*. Most of the Provinces he committed to the Care of Governors, called *Marc-Graves*; but the *Saxons* were allow'd a greater Share of their ancient Liberty than the rest; and to keep them in Obedience, he founded many Episcopal Sees among 'em, that by their Influence they might be civiliz'd. *Charles* died in 814, in the 72d Year of his Age, and was buried at *Aix la Chapelle*, the chief Place of his Residence. He was succeeded by his Son

Lewis, sirnam'd the *Godly*, who was crown'd by Pope *Stephen* IV. at *Rheims* in *France*. He order'd the Bible to be translated into the *Saxon*, and Copies of it to be distributed among the Commonalty. He drove the *Saracens* from *Italy*, and worsted his Nephew *Bernard*, who design'd to make himself King of that Country; put out his Eyes, with those of some of his Followers, and condemn'd

condemn'd 'em to a Monaſtery. *Lewis* had three Sons by his Wife *Irmengarde*, viz. *Lotharius*, *Lewis*, and *Charles*. They rebell'd againſt their Father, took him Priſoner, and ſhut him up in a Monaſtery; but moſt of his Subjects taking Arms to reſcue him, *Lewis* ſubmitted to his Father, and begg'd Pardon. When the Emperor had got his Liberty, he marched with his own and his Son *Lewis*'s Forces againſt *Lotharius*, who had been deepeſt in the Rebellion, and died on his Way at *Mentz*, in the 27th Year of his Reign, and 64th of his Age, in 840.

He was ſucceeded by *Lotharius*, his eldeſt Son, in the whole Empire; for he turn'd his Brethren out of the Shares left them by their Father. *Lewis*, his Second Brother, had *Germany* for his Share, as far as it extends on this Side the *Rhine*; as alſo ſome Countries on the other Side, where the Vineyards were; ſo that he was the firſt that had *Germany* as an Independent Kingdom, ſays *Puffendorff*. *Lewis*, the youngeſt Brother, had *France*. *Lotharius* annex'd *Auſtraſia* to the *German* Empire, which from him was called in *High-Dutch*, *Loth-Reich*; and by the *French*, *Lot-Regne*, i. e. *Lotharius*'s Kingdom, now *Lorrain*. After he reign'd 15 Years, he abdicated the Government, and retir'd to a Monaſtery at *Treves*. In his Reign was the Female Pope *Joan*, under the Name of *John* VIII. as is evident from the concurring Teſtimonies of the Hiſtorians of that Age.

Lewis II. ſucceeded in 855, upon his Father's Reſignation: He was a Prince of wonderful Learning and Piety. He conquer'd and converted the *Sclavonians*: He defended *Italy* from the Inroads of the *Saracens*, and made good Proviſion for poor Widows and Orphans. He had a great Quarrel with the Court of *Rome* for electing a Pope without his Conſent. He reign'd 19 Years and 10 Months.

Charles the Bald, his Nephew, ſucceeded in 875. He was alſo King of *France*, but ſo mean Spirited, that he was cajol'd by the Promiſes and Money of Pope *John* IX. to come to *Rome* for his Coronation, and receive the Imperial Scepter from his Hand. He reign'd two Years, and was poiſon'd by one *Zedechias*, a *Jewiſh* Phyſician.

In 878, *Ludovicus Balbus* ſucceeded his Father *Charles*; but died in a Year and half after, and left the Crown to

Charles III. ſirnam'd the *Groſs*, from his Bulk and Fatneſs. By the Death of his two Brothers, all *Germany*, *France* and *Italy*, fell to him. He was the firſt that added the Year of our Lord to that of his Reign in publick Deeds. He became odious to his Subjects upon many Accounts, but chiefly becauſe he made a diſhonourable Peace with the *Normans*, and quitted to 'em that Part of *France* ſtill called *Normandy*. His Nobles depos'd him, and he died miſerably in a poor Village in *Swabia*.

In 888, *Arnulph*, natural Son to *Carloman* Duke of *Corinthia*, and King of *Bavaria*, was elected inſtead of *Charles*. In the beginning of his Reign, he had great Struggles for the Imperial Title with *Berengarius* Duke of *Friouli*, and *Guido* Duke of *Spoleto*, whom he defeated. He alſo ſtormed and took *Rome*; but was poiſon'd there by *Guido*'s Wife, and died in great Miſery, being eat up of Lice which the Poiſon bred in his Body.

In 900, his Son *Lewis* IV. a Child, was elected. He had conſtant War with the *Hungarians*, and was frequently defeated by 'em; ſo that a great Part of the *German* Nobility was cut off, which was chiefly owing to their own Diviſions. He died unfortunate, and with him the Family of *Charles the Great* was extinguiſh'd. During his Reign, the Pope ſet up one *Lewis* for Emperor in *Italy*, whom *Berengarius* King of *Lombardy* took Priſoner, and put out his Eyes.

In 912, after the Death of *Lewis* IV. the Princes of *Germany* proffer'd the Imperial Crown to *Otto* D. of *Saxony*, the wiſeſt Prince and beſt Soldier of his Time; but he declin'd it, becauſe of his Age, and gave his Intereſt to *Conrad* Duke of *Franconia*, who was choſen. In his Time the *Hungarians* ravag'd *Saxony*, *Thuringia*, *Franconia*, *Lorrain*, and *Alſace*, and forc'd him to a diſhonourable Peace. This Conduct having diſoblig'd many of the Princes, they made War upon him, and the Heir of *Saxony*, Duke *Otto*'s Son, was his greateſt and moſt ſucceſsful Enemy; yet by his Laſt Will he left the Empire to him for his Merit; and thus it was tranſlated from the *Carolingian* Family

Digitized by Google

mily to the *Saxons*. In his Reign the Dukes of *Lorrain*, *Swabia*, and *Bavaria*, endeavour'd to make their Poſſeſſions Hereditary, which he could not prevent.

In 919, *Henry* of *Saxony*, ſirnam'd the *Fouleoner*, becauſe he delighted in Fowling, was proclaimed Emperor. The Pope proffer'd to anoint and conſecrate him; but he refus'd it, ſaying, *He was Emperor by the Providence of God, and the Conſent of his People, which gave him a ſufficient Title; and they that thought that not good enough, might go to* Rome *for a better*. He bravely defended his Subjects from the *Hungarians*, who made a great Inroad, and demanded a Yearly Tribute, for which he ſent them, by way of Ridicule, a mangy Dog, defeated them near *Merſeburg*, and ſlew 80000 of them, for which he was called *Pater Patriæ*, the Father of his Country. In his Reign, the greateſt Part of the Cities on the *Rhine* were either built or wall'd. He conquer'd the *Serbes* and *Vandals*, a *Sarmatick* Nation, who were poſſeſſed of a great Tract of Land on the River *Elbe*. He drove them out of *Miſnia*, *Luſatia*, and the Marquiſate of *Brandenburg*. He was the firſt that inſtituted Sports and Turnaments; and order'd, that every 9th Boor ſhould remove his Family into a City, which ſhould be maintained by the Third of the Corn and Hay round it. He died of an Apoplexy in his Journey to *Italy*, after he had reign'd 7 Years and 6 Months.

In 936, his Son *Otho*, ſirnam'd the *Great*, ſucceeded. He had all the Princely Qualifications of his Father, compell'd *Harald* King of *Denmark* to own his Supremacy, and embrace Chriſtianity, ſubdued the *Sclavonians* and *Bohemians*, and forc'd *Boleſlaus*, the Prince of the latter, to turn Chriſtian. He was engaged in Civil Wars with many Princes, eſpecially with thoſe who pretended to be of the Race of *Charles the Great*, and laid Claim to the Imperial Crown. He defeated the *Hungarians* near *Augsburg*; after which they never attempted any more Incurſions. There had been great Confuſions in *Italy* for a long time; for ſometimes one, ſometimes another, uſurp'd the Sovereignty there, which obliged *Otho* to march his Troops thither, and poſſeſs himſelf of that Country. He married the Widow of *Lotharius* King of *Lombardy*, ſays the *Atlas Hiſtorique*, and brought the Tyrant *Berengarius* to ſubmit; but he revolted again during the Civil Wars of *Germany*, over-run *Italy*, and diſtreſſed Pope *John* XII. and the City of *Rome* ſo, as they ſent to *Otho* for Relief, who having deliver'd them from the Tyrant, they crown'd *Otho* King of *Italy* with the Iron Crown at *Milan*, proclaim'd him Emperor at *Rome*, forfeited *Berengarius* and his Poſterity, and the Pope and Senate ſwore Fealty to the Emperor, on Condition of his preſerving the Rights of the Holy See: After which Time, the Imperial Dignity and Crown of *Italy* were reckon'd Conſequences of being Kings of *Germany*. But the Pope ſoon after conſpired with *Albert*, Son to *Berengarius*, againſt him; and the Emperor marching again into *Italy*, the Pope and *Albert* fled to *Oſtia*; the *Romans* renew'd their Oath of Fealty, and promis'd never to elect a Pope without the Conſent of him and his Son. The Clergy and People pray'd him to call a Council, where *John* XII. was depoſed, and *Leo* VIII. choſe, who in the *Lateran* Council, where *Bennet*, whom the *Romans* had perfidiouſly choſen afterwards, was depoſed, confirmed to *Otho*, King of the *Germans*, and his Succeſſors, the Right of chuſing the Pope, as *Adrian* had granted to *Charlemain*, and to inveſt the Biſhops in his Dominions. *Otho* returning to *Germany*, was obliged to a new Expedition to puniſh the *Italians* for their Revolt, reſtor'd Pope *John* XIII. chas'd the *Greeks* out of *Italy*, for the Treachery of *Nicephorus Phocas* their Emperor; and retiring to *Germany*, died at *Merſbourg*, *May* 7. 974. in the 37th Year of his Reign, and 12th of his Empire. *Puffendorf* obſerves, That the frequent Revolts of the *Italians* was occaſioned by his having no Strengths in *Italy*, and little Revenues there, except Free Quarters for his Army. Chriſtening of Bells began in this Emperor's Reign.

His Son *Otho* II. with whom he ſhar'd his Government, ſucceeded. The Duke of *Bavaria*, his Couſin, inſtigated by ſome Biſhops, was proclaimed Emperor at *Ratiſbon*, but ſoon reduced: After which, *Otho* made War on *Lotharius* King of *France*, who invaded *Lorrain*, and defeated him near *Aix la Chapelle*. *Otho* afterwards enter'd *France*, and ravag'd the Neighbourhood of *Paris* with

Digitized by Google

with a potent Army; but was defeated in his Return, and had Advice at the ſame time, that the *Greeks* and *Saracens* had ſubdued Part of *Italy*, on which he made a Peace with *Lotharius*, by which he recover'd *Lorrain*. *Otho* marched into *Italy*, and enter'd *Rome*; but having murder'd their Chief Men and Magiſtrates, whom he invited to a Feaſt in the *Vatican*, the *Italians* abhorring this Cruelty and Treachery, abandon'd him at the Battle of *Baſentello*; ſo that his Army was routed, and he himſelf eſcaping in a Veſſel, was taken by Pyrates, from whom he got away by meer Chance; and as he was aſſembling an Army to retrieve his Diſgrace, he died at *Rome*, either of Grief, or by the Wound of a poiſon'd Arrow, that had never been well cur'd, the 8th of *December*, 983. in the 10th Year of his Reign.

His Son *Otho* III. ſucceeded at 10 Years of Age, thô his Uncle the Duke of *Bavaria* was his Rival. The Archbiſhops of *Mentz* and *Cologne* were his Tutors, and *Gerbert*, afterwards Pope *Silveſter* II. his Præceptor. *Creſcentius*, Conſul of *Rome*, made *Italy* to revolt ſome time after; upon which the Emperor marched againſt him, reduced the Country, and took him in *Adrian*'s Tower, now the Caſtle of *St. Angelo*; and Pope *John* XV. dying, made his Couſin *Bruno* of *Saxony* Pope, by the Name of *Gregory* V. at whoſe Requeſt he pardon'd *Creſcentius*, who, after his Return to *Germany*, deſign'd to make himſelf abſolute at *Rome*, under Pretence of aſſiſting the *Romans* to recover their Liberty. This oblig'd *Otho* to march thither with an Army: He beſieg'd *Rome*, which ſurrender'd, and *Creſcentius* was thrown Head-long from a Rampart. *Gregory* XV. being dead, *Otho* ſet up his Præceptor *Gerbert* in his room, and renewed the Privileges which *Charlemain* had granted to the See. After this, *Otho* return'd to *Germany*, went in Pilgrimage to *Poland* to ſee the Corps of St. *Adalbert*, and erected the Dutchy of *Poland* into a Kingdom. In his Return the Pope ſent him Word, That the *Saracens* had taken *Capua*, in Correſpondence with the *Romans*, who were grown weary of the *German* Government. This obliged him to repaſs into *Italy*, where he ſoon reduced the *Saracens*; but truſting too much to the *Romans*, who had again ſubmitted, and entring the City with a ſmall Retinue, they beſieg'd him in his Palace, from whence the Duke of *Bavaria* and Marquis of *Hetruria* contriv'd his Eſcape, while they amus'd the People with Terms of Accommodation. Upon this he re-enter'd the City with his Army, and puniſh'd the Mutineers ſeverely: After which, as he was returning to *Germany* to quell a Party that was forming againſt him, he died of Convulſions, occaſion'd by Poiſon, in *January* 1002, in the 32d Year of his Age, and 19th of his Reign, without Iſſue. *Puffendorf* ſays, he was poiſon'd by a Pair of Gloves preſented him by *Creſcentius*'s Widow, whom Dr. *Nicholſon* thinks he had us'd as a Concubine, and flatter'd her with Hopes of Marriage; but being diſappointed, ſhe took that Way of Revenge. Some ſay, he was the firſt who appointed the Emperor to be choſen by the Majority of Seven Electors.

His Couſin *Henry* II. D of *Bavaria*, was choſen in his Place, according to his dying Requeſt. The Marquis of *Ivrea* perſwaded the *Italians* to revolt, and defeated *Henry*'s Army, commanded by the Duke of *Saxony*, at the Foot of the *Alps*; but *Henry* defeated him next Year, and was crown'd at *Pavia*. The *Poles* enter'd *Germany* during his Abſence; but upon his Return, he forc'd 'em home. After this, he applied himſelf to make good Laws, to reform Abuſes, to eſtabliſh Biſhopricks, and other Religious Foundations, and to enrich the Clergy. His Friends were angry at this, alledging, he gave his Riches to thoſe who would make no good Uſe of them; and the Duke of *Bavaria* taking Arms againſt him, was ſubdued; but pardon'd and reſtor'd. Pope *Bennet* VIII. implor'd his Aſſiſtance againſt thoſe who had choſen the Anti-Pope *Gregory* VI. whoſe Party abandon'd him, and recall'd *Bennet*, upon the Emperor's defeating the Rebels. Near *Verona* he obtain'd a ſecond Victory over *Ardouin*, and went to *Rome*, where he was crown'd by the Pope, confirm'd all the Privileges of his See, reſerving only the Sovereignty of *Rome*, and the Power of ſending Deputies thither to receive the Complaints of the People. He reſtored them the Privilege of chuſing the Popes, allow'd them the Liberty to be conſecrated before they ſwore Fealty to the Impe-

Imperial Officers, and return'd to *Germany*; but was ſoon recall'd, defeated the *Greeks*, who had invaded *Italy*, chas'd them out of the Country, and in his Return had an Interview with *Robert* King of *France*, at the Confluence of the *Oiſe* and the *Maeſe*, where they made a League. He died the 17th of *July*, 1024. in the 52d Year of his Age, and 22d of his Reign, without Iſſue. Dr. *Nicholſon* ſays, he agreed with his Empreſs *Cunegonda*, that both of them ſhould preſerve their Chaſtity; and upon Suſpicion of her Fidelity, made her purge her ſelf by the Fiery Ordeal, which ſhe paſſed without Hurt, if we may believe the Legendaries. *Puffendorf* tells us, That *Echert* Landgrave of *Heſſe* contended with him for the Crown, but loſt his Life in the Quarrel: That he ſubdued *Boleſlaus* K. of *Poland*; and for his Munificence to the Clergy, was made a Saint. He is alſo called the Apoſtle of *Hungary*, becauſe he throughly converted that Nation; and he defeated the *Wendiſh* Armies, who over-ran much of *Germany*.

The Duke of *Franconia Conrad* the *Salique*, ſo call'd, either becauſe his Mother was a *French* Woman of *Charlemain*'s Poſterity, or becauſe he liv'd according to the *Salique* Law, being recommended by *Henry* on his Death-bed, ſucceeded, thô oppos'd by his Couſin *Conrad* the Younger. The *Saxon* Princes being angry that the Empire went from their Family, rais'd a War, which iſſued at laſt in the Ruin of both the Families. *Conrad* however ſubdued the Malecontents, went into *Italy*, accompanied by Prince *Henry* his Son, *Rodolph* King of *Burgundy*, and *Canute the Great* King of *Denmark*. He defeated the Rebels who oppos'd his Paſſage through the *Alps*, was crown'd King of *Italy* at *Milan*, and Emperor at *Rome*. While he was there, ſeveral Princes of the Empire took Arms to depoſe him. Upon his Return, he defeated them, pardoned ſome, and forfeited others. He alſo routed the *Friſons*, who had invaded his Country; and he acquir'd the Kingdom of *Burgundy*, which *Rodolph* III. Uncle to the Empreſs, had left to her Son Prince *Henry*, and defeated and kill'd *Eudes* Count of *Champagne*, Nephew to *Rodolph* by his Siſter, who claim'd it as neareſt of Kin. He routed the *Lombards*, who had rebelled, quieted all *Italy*, turn'd out *Pandolph* the Tyrant of *Capua*, and gave it the Prince of *Salerno*. He died at *Utrecht* the 4th of *June*, 1039. in the 15th Year of his Reign. *Puffendorf* ſays, he was alſo very ſucceſsful againſt the *Poles* and *Sclavonians*. Other Hiſtorians give him this Character, That he was quick in Council, bold in Execution, belov'd by the Princes, the Darling of the People, and the Welfare of the Commonwealth. He made a Law, That no Prince of the Empire ſhould invade any Province of it on Pain of Death.

His Son *Henry* III. ſirnamed the *Black*, ſucceeded, being Crown'd King of *Germany* 10 Years before by Conſent of the States. He defeated and took the King of *Bohemia*, who refus'd to own the Sovereignty of the Empire, and releas'd him upon ſwearing Fealty, and paying his Arrears of Tribute. He routed the *Hungarians*, who aſſiſted the *Bohemians*, reſtor'd their King *Peter*, and dethron'd the Uſurper they had ſet up in his ſtead. Having Peace at home, he endeavour'd to procure the like to the Church, then plagu'd with three Anti-Popes, *Benet*, who reſided at St. *John de Lateran*; *Silveſter*, at St. *Peter*'s; and *John*, at St. *Mary Major*. *Gratian*, a Prieſt, got them all three to renounce for Money, and was choſen himſelf by the Name of *Gregory* VI. but his Election not being Canonical, the Emperor prevail'd with him to reſign voluntarily at the Council of *Sturi*, having a Mind to recover the Right of Election himſelf. He thereupon aſſembled the Clergy, Senate, and People, in St. *Peter*'s Church, and nam'd his own Chancellor *Suidger*, Biſhop of *Bamberg*, whom they approved, and he was conſecrated by the Name of *Clement* II. He afterwards Crown'd the Emperor, who aſſiſted in a Council for aboliſhing Simony, the common Plague of the Church; and *Clement* died at *Bamberg* 9 Months after. *Bennet* IX. who repented his having depos'd himſelf, invaded the Chair; but was obliged to give Way to *Popon* Biſhop of *Brixia*, whom the Emperor got elected by the Name of *Damaſus* II. *Popon* reign'd but 23 Days, and *Bennet* reſum'd the Chair; but being odious for his ſcandalous Life, the Clergy and People ſent Deputies to the Emperor, who in an Aſſembly at *Worms* named *Bruno* of *Alſace*, Biſhop of *Toul*, his Couſin, to be Pope. *Bruno*, in his Way to *Rome*, being per-

ſwaded by *Hildebrand*, Prior of *Clun*, that his Election was not Canonical, becauſe it did not belong to the Emperor, but to the Clergy, Senate and People, to chuſe him freely, he went to *Rome* without any Marks of his Dignity; which Humility pleas'd the *Romans* ſo much, that they choſe him unanimouſly. In the mean time the Emperor made War on *Godfrey the Bold*, Duke of *Nether-Lorrain*, who took Arms againſt him for depriving him of *Upper-Lorrain*, in which his Father was inveſted by *Conrad the Salique*; but the Pope reconcil'd them. *Godfrey* diſſembled on his Part; therefore to ſpite the Emperor, and to make him jealous, he married his Siſter *Beatrix*, who was the Marquis of *Hetruria*'s Widow, without his Conſent: Upon this, *Henry* went with an Army, and took her from him, leſt ſhe ſhould have conſpired with her Husband to deprive him of the Crown of *Italy*; which ſo much enraged *Godfrey*, that he engaged his Couſin *Baldwin* of *Liſle*, Count of *Flanders*, to join with him againſt the Emperor, who died ſome Time after in *Saxony*, the 5th of *October*, 1056. in the 31ſt Year of his Age, and 18th of his Reign, leaving ſeveral Children by his ſecond Wife *Agnes*, Daughter to *William* Duke of *Aquitain*. Dr. *Nicholſon* ſays, he renewed the old Law, *That no Pope ſhould be created without the Conſent of the Emperor*.

Henry IV. his Son, ſucceeded. His Reign was long and unfortunate. He was but Six Years of Age when he came to the Crown, and thoſe entruſted with his Education neglected it. In his Minority, ſays *Puffendorf*, Church-men purchas'd Benefices at Under-Rates, and without Regard to Merit, which did the Empire much Miſchief. When he came of Age, he reſolved to make them give up thoſe Purchaſes, which brought upon him the Hatred of the Clergy. The *Saxons* were his great Enemies, becauſe he built Forts to bridle them, and ſeldom employ'd them in Offices. He communicated his Reſolutions to the Princes of the Empire but rarely, and was managed by Favourites of mean Birth. On this Account the *Saxons* made a long War upon him; but he vanquiſh'd them at laſt. Pope *Hildebrand* or *Gregory* VII. gave him more Trouble than all his other Enemies. This Pope and his Predeceſſors were vex'd that they and the Clergy ſhould be ſubject to the Emperor; and *Hildebrand* thought it the fitteſt Time to embroil his Affairs when he was in War with the *Saxons*, and hated by moſt of his Princes. Upon this the Pope made a Decree, That it was not in the Power of the Emperor, or of any Secular Prince, to diſpoſe of Church-Benefices, nor give Inveſtiture of Biſhopricks; and that it belong'd only to the Pope. He alſo ſummon'd the Emperor to appear at *Rome*, to anſwer for his Male-Adminiſtrations, on Pain of Excommunication. On the other hand, the Emperor declar'd the Pope unworthy of that Poſt, and deſign'd to depoſe him. Upon this, the Pope excommunicated him, and freed his Subjects from their Allegiance, which in thoſe Times of Ignorance and Bigotry prov'd fatal to the Emperor, deſtroy'd his Authority at once, and reduc'd him to great Extremities; for the greateſt Part of the Princes aſſembled at *Treves*, where they depos'd *Henry*; but left the Execution of the Sentence to the Pope's Pleaſure. So that to procure the Pope's Pardon, the Emperor made a Journey to *Italy* in the midſt of Winter; and when he arrived at *Canuſſo*, he conſented to the Penance of ſtaying there 3 Days in a ſharp Winter bare-footed, with his Wife and Son in the like Poſture, in a coarſe Woollen Habit, in the outer Court, and in an humble Manner to beg the Pope's Pardon and Abſolution, which at laſt he obtain'd: But this mean Behaviour made him deſpicable to his Subjects; upon which he endeavour'd to recover his Reputation, and reduce the Rebels in *Italy* to Obedience. To prevent this, many of the Princes of *Germany*, by the Pope's Inſtigation, elected *Rudolph* Duke of *Schwaben* Emperor, to whom the Pope ſent an Imperial Crown, with this Inſcription:

Petra dedit Petro, Petrus Diadema Rudolpho.

The Rock this Crown to Peter *gave,*
And Peter *gives it* Ralph *his Slave.*

But the *Bavarians*, *Franconians*, and the Countries adjacent to the *Rhine*, remained faithful to *Henry*. Thus a bloody War enſued, wherein *Rudolph* and the *Saxons* were vanquiſh'd in two Battles, and in the third *Rudolph* loſt his Life. After this, *Henry* conven'd

Digitized by Google

ven'd an Aſſembly of Biſhops, in which *Hildebrand* was depos'd, and the Anti-Pope *Clement* III. was elected. The Emperor took *Rome*, and baniſh'd *Hildebrand*: But the *Saxons* continued in their Rebellion, and *Hildebrand* a ſecond time excommunicated the Emperor, ſet up *Herman* Duke of *Luxemburg* in his ſtead, and after his Death *Echert* Marquis of *Saxony*. At laſt he ſtirr'd up the Emperor's Son *Henry* againſt his Father, whom he met, and deceitfully begg'd his Pardon; upon which the Emperor disbanded his Forces, and was treacherouſly made Priſoner and depos'd, in his Journey to the Diet at *Mentz*, with a ſmall Retinue. He died ſoon after in great Miſery, and ſo poor, that he begg'd a Prebendary of the Biſhop of *Spires*, in the Church which he himſelf had built and endow'd, which was deny'd him. He reign'd 50 Years, during which he is ſaid to have fought 66 great Battles, and generally obtain'd the Victory; which is more, as Dr. *Nicholſon* obſerves, than *Marcus Marcellus*, *Julius Cæſar*, or any other *Roman* General, could boaſt of.

In 1106, he was ſucceeded by his Son *Henry* V. who imitated his Father, in maintaining the Imperial Power againſt the Incroachments of the Pope. After he had ſettled Affairs in *Germany*, he marched an Army to *Rome*, to recover the Emperor's Right in nominating the Popes, and alſo to be crown'd there. Upon this, Pope *Paſchal* II. rais'd a great Tumult at *Rome*, in which the Emperor was ſo cloſely beſet, that he was obliged to fight for his own Safety; and having diſpers'd the Mob, made the Pope Priſoner, forc'd him to grant his Demands, and to confirm the Agreement with ſolemn Oaths and Execrations; but as ſoon as the Emperor return'd, the Pope declar'd the Agreement void, and ſtirr'd up the *Saxons* and Biſhops of *Germany* againſt him, with whom he had a tedious War; and ſeeing at laſt that there was no other Way to end thoſe Broils, he renounc'd his Right to the Inveſtiture of Biſhops in a Diet at *Worms*. This very much leſſen'd the Emperor's Power, and exalted that of the Pope. Some Hiſtorians obſerve, That at his Coronation, Part of his Sword was melted with a Flaſh of Lightning, thô the Scabbard was untouch'd... He reign'd 19 Years, died without Iſſue, and was buried at *Spires*.

Lotharius Duke of *Saxony* ſucceeded in 1125. He had *Conrad* Duke of *Franconia*, and *Frederick* Duke of *Swabia*, for his Rivals; but oblig'd them to ſubmit after a long War. The *Atlas Hiſtorique* ſays, This War was concluded by the Prudence of St. *Bernard*; after which the Emperor carried Pope *Innocent* II. with him, eſtabliſh'd him in the Chair, and was crown'd by him. He return'd to *Germany*, ſuppreſs'd a Rebellion in *Bohemia*, and defeated *Magnus* King of *Denmark*. He marched again into *Italy*, and reſtor'd Pope *Innocent*, who had been chaſed from *Rome* by the Anti-Pope *Anaclet*, with the Aſſiſtance of *Roger* of *Sicily* and the *Normans*; and having quieted that Country, he died in a Village on the *Alps* as he returned, the 30th of *September*, 1137, in the 13th Year of his Reign, leaving two Daughters, who were married to the Duke of *Bavaria* and the Landgrave of *Thuringia*. Dr. *Nicholſon* ſays, he reſtor'd the Civil Law in *Germany*, after it had been baniſh'd from thence 500 Years.

Conrad III. Duke of *Schwaben*, *Lotharius*'s Siſter's Son, was choſen about 4 Months after at *Coblentz*. His Election was oppos'd by *Henry* Duke of *Saxony* and *Bavaria*, and his Brother *Welff*, which occaſioned great Confuſion and Blood; but they being at laſt ſubdued, and Peace eſtabliſhed, he undertook a Croiſade into the *Holy Land*, where he was in great Dangers; for he was obliged to fight his Way through the *Saracens* before he could reach *Jeruſalem*, where he loſt the greateſt Part of his Army, by the Treachery of the *Greeks*, without doing any thing conſiderable. This obliged him to return home. He died the 15th of *February*, 1152, in the 13th Year of his Reign, as he deſigned to march into *Italy*. He is ſaid to have been the firſt Emperor that was elected by the Seven Electors. In his Reign, *Gratian*, a *Benedictine* Monk, made a Collection of the Canon Law, which was afterwards taught in the Univerſities of *Germany*.

Frederick I. Duke of *Swabia*, ſirnamed *Barbaroſſa*, becauſe of his Red Beard, ſucceeded. His Election was chiefly promoted becauſe a *Ghibelin* by his Father, and a *Guelph*

Digitized by Google

by his Mother, that he might reunite those two potent Families, which had so long disturbed the Peace of *Germany*. He was one of the greatest Princes ever *Germany* had, and bravely maintain'd the Rights and Grandeur of the Empire. He supported the Archbishop of *Magdeburg* against Pope *Eugene* III. and reduc'd the Towns of *Lombardy* that endeavoured to form themselves into Republicks in the Reign of *Lotharius*. He went to *Rome*, and was crown'd by Pope *Adrian* IV. whom he carried thither. The *Romans* being angry that they had no Share in the Ceremony, they besieged the Pope in the *Vatican*, because they thought he occasioned it; but the Emperor rescued and carried him to *Tivoli*. On his Return, he agreed the Quarrel betwixt the Archbishop of *Mentz* and *Herman* Count *Palatine* of the *Rhine*, who being the Aggressor, was sentenced to carry a Dog on his Shoulders from County to County; for Grief of which he died. *Frederick* assembled the States of the Empire at *Besançon*, where he received a haughty Letter from the Pope, intimating as if he had received the Sovereignty from him; upon which the Emperor and the States were so offended, that they commanded the Legates immediately to depart the Empire. The Pope dreading the Consequences, wrote another Letter, explaining the former, *viz.* That by the Word Benefice, he did not mean that the Emperor received the Crown from him as a Fief, but only that he reckoned his crowning him as a good Deed, which pleased the Emperor; but he soon had a greater Quarrel with the Pope, who could not bear that the Emperor should demand an Oath and Homage from all the Feudatories of the Empire, Ecclesiasticks as well as Seculars, and confirm'd them in their Possessions. The Pope sent 4 Cardinals to complain of it; but the Emperor maintain'd his Right, and offered to refer the Matter to Arbitrators, or otherwise to treat with the Senate of *Rome* about it. This provok'd the Pope, who look'd upon it as an Impeachment of his Authority, and design'd to have excommunicated the Emperor for it; but his Death prevented it. Most of the Cardinals following *William the Wicked*, K. of *Sicily*, chose the Cardinal of *St. Mark*, by the Name of *Alexander* III. but the Emperor's Party chose the Cardinal of *St. Cecilia*, by the Name of *Victor* IV. and the Emperor got his Election confirmed by the Council of *Pavia*. The Kings of *France*, *England*, *Sicily*, *Jerusalem*, *Hungary*, and *Denmark*, adhered to the former; but *Germany* and Part of *Italy* to the latter. The Emperor got him recogniz'd in a Diet at *Wurtzburg*, and passed the *Alps* to chastise the *Romans*, who called in Pope *Alexander*. He chased the *Greeks* out of *Ancona*, and taking *Rome*, got the Empress crown'd there. His Army being afflicted with the Plague, the opposite Party said it was a Judgment upon him. When he returned to *Germany*, most of the Towns of *Italy* made a League against him, repaired the Ruins of *Milan*; and to spight the Emperor, built a new Town, which they called *Alexandria*, in Honour of the Pope. The Emperor marched again to *Italy* to punish the Rebels; but was obliged to raise the Siege of *Milan*, and his Army was defeated, which was looked upon as a Punishment from Heaven for his continuing a Schism in the Church; so that he made Peace with Pope *Alexander*, promis'd him Obedience, and restored what belong'd to the See of *Rome*. Having ratified this Treaty at *Venice*, and married his Son to *Constance*, the only Daughter of *William* King of *Sicily*, he made an Expedition into the *Holy Land*, with the Kings of *England* and *France* (as some say) and most of the Princes of *Germany*, marched through *Hungary* and *Bulgaria*, enter'd *Asia*, defeated the Sultan of *Lycaonia*, chased the Sultan of *Egypt*'s Troops out of *Little Armenia*; but died, as he was pursuing his Conquests, of a Pleurisy he got by washing himself in the River of *Serre*, where some say he was drown'd, the 10th of *June*, 1190. in the 37th Year of his Reign. So far the *Atlas Historique*. *Puffendorf* says, That during the War of *Italy*, he levelled *Milan* with the Ground; but his Son *Otho* being taken by the *Venetians*, he was forced to make Peace. *Fox*, in his *Book of Martyrs*, Vol. 1. gives the Story of this Emperor at large, and of his Controversy with Pope *Alexander*, who at the Peace of *Venice* is said to have set his Foot upon the Emperor's Neck, when he kneeled to receive Absolution,

tion, abuſing thoſe Words of the Pſalmiſt, *Pſalm* 91. 13. ſaid, *Thou ſhalt tread upon the Lion and Adder, the young Lion and the Dragon ſhalt thou trample under Feet:* To which the Emperor anſwer'd, *Not to thee, but to Peter*; and the Pope reply'd, *Both to me, and to Peter:* But *Puffendorf* ſays, many take this to be fabulous; yet 'tis mention'd by ſeveral Popiſh Authors. Dr. *Nicholſon* gives him the Character of a Wiſe, Valiant, and Succeſsful Prince.

Henry VI. his Son, ſucceeded, being crown'd King of *Germany* at *Aix la Chapelle*, in his Father's Life-time. He receiv'd the Imperial Crown from Pope *Celeſtin* III. who, as *Puffendorf* ſays, when the Emperor was on his Knees to receive it, the Pope ſtruck it off again with his Foot, to denote his Power of giving the Crown, or taking it away. He defeated *Tancred*, natural Son to *Roger* King of *Sicily*, who diſputed that and the Crown of *Naples* with him, which fell to him in Right of his Empreſs, King *Roger*'s Daughter. *Henry* however recover'd both; but the Cruelty of the *Germans* made them revolt, and proclaim *Tancred*'s Son *William*. *Henry* went again into *Italy*, and amuſing *William* with ſharing the Dominions betwixt them, he had him ſeiz'd, put out his Eyes, gelded him, and put him to Death. *Henry* raiſed Men with the Money that *Richard* King of *England* was obliged to pay him when taken Priſoner in his Dominions, on his Return from the *Holy Land*, and conquer'd *Apuglia* and *Calabria*. He alſo obliged *Alexis Angelus*, Emperor of the *Greeks*, who had not an Army to oppoſe him, to pay a Tribute for the Outrages done to his Father and the Emperor *Conrad* in their March to the *Holy Land*. Hiſtorians ſay, he was ſo cruel, that for ſmall Crimes he would condemn Men to be thrown into the Sea, impal'd, roaſted, or to have a burning Crown of Fire faſten'd to their Heads with Nails. While he was preparing for an Expedition to the *Holy Land*, he died at *Meſſina* in *Sicily* of Poiſon, given him, as ſome think, by his Empreſs *Conſtance*, in the 8th Year of his Reign.

After *Henry*'s Death, there were great Diviſions in *Germany*, becauſe *Frederick* II. *Henry*'s Son, being only two Years old, his Uncle *Philip* pretended that the Adminiſtration was his Right, according to the Will of the deceaſed Emperor; but becauſe he would not ſubmit to the Pope, he was excommunicated, and the Pope perſwaded ſome of the Princes to elect *Otho* Duke of *Saxony*. Thus the Country was torn in Pieces; but moſt ſided with *Philip*. After a long War, an Agreement was propos'd, by which *Otho* was to marry the Daughter of *Philip*, and to ſucceed after his Death. The *Atlas Hiſtorique* ſays, *Philip* defeated *Otho* in two Battles, and was crown'd at *Aix la Chapelle* before this Agreement: But *Otho* having afterwards murther'd a Friend of *Philip*'s, he revok'd his Promiſe of giving him his Daughter; but promis'd to aſſiſt him in his Pretenſions to a Princeſs of *Poland*, wherein having alſo fail'd him, he ſurpris'd *Philip* in his Chamber after he had been let Blood, and murder'd him the 12th of *June*, 1208. Others ſay, he was aſſaſſinated by *Otho* Count of *Wittelſpach*.

Otho Duke of *Brunſwick* and *Lunenburg* ſucceeded, according to the Treaty with *Philip*, and put *Otho* of *Wittelſpach*, ſays the *Atlas Hiſtorique*, into the Ban of the Empire for murdering him. He delivered *Swabia* from the Tyrants that oppreſſed it, and order'd Juſtice to be done according to the Laws of *Charlemain*: But poſſeſſing himſelf of the Eſtates of Biſhops and Abbots who died, conferring the Publick Poſts of the Empire on Foreigners, and treating the Princes haughtily, he was univerſally hated. Pope *Innocent* III. excommunicated him for ſeizing the Lands of the Church, abſolv'd his Subjects from their Allegiance, and urg'd the *German* Princes to depoſe him: Upon which the King of *Bohemia*, the Dukes of *Auſtria* and *Bavaria*, the Landgrave of *Thuringia*, and others, aſſembling at *Bamberg*, choſe *Frederick* K. of *Sicily*, Son to *Henry* VI. who was proclaimed King of the *Romans* in his Infancy. He marched through *Italy* and Part of *Germany* without Reſiſtance, was crown'd at *Aix la Chapelle*, and confirmed in the Diet at *Francfort*, which caſt the Ballance on his Side; and *Otho* retir'd to *Brunſwick*, deſigning to have liv'd in Peace. But *Renaud* Count of *Bologna* went to him in Name of the Princes in League againſt *Philip Auguſtus* King of *France*, and engag'd him to take Part with them, on Condition that when they had made an End with *Philip*, they ſhould join him againſt *Frederick*. *John*

Digitized by Google

King of *England*, *William* Duke of *Brabant*, *Ferdinand* Count of *Flanders*, *Otho* Duke of *Limburg*, *Philip* Count of *Namure*, *Henry* Duke of *Lorrain*, *Renaud* Count of *Bologna* and *Dammartin*, with other Princes, were in this League. The King of *England* gave 'em a great deal of Money, and they were to attack *France* on the Side of the *Netherlands*, while the *English* landed in *Guienne*. King *Philip* sent his Son to make Head against the *English*, and he himself enter'd *Flanders*, took *Tournay*, and defeated the Allies, who had 120000 Men, near *Bovines*, and took the Counts of *Flanders* and *Dammartin*. *Otho* narrowly escap'd to *Brunswick*, whence he sent the Marks of the Imperial Dignity by his Brother *Henry* Count *Palatine* of the *Rhine* to *Frederick*, and died of Grief the 27th of *April*, 1218. without Issue; according to the *Atlas Historique*.

Frederick being thus peaceably possessed of the Empire, he granted in Favour of Pope *Innocent* III. who had been his Tutor, all the Lands taken from the See of *Rome* by his Predecessors, with the Sovereignty of them, reserving only Provisions and Forage for the Emperor's Troops when he came to *Italy* to be crown'd, or to assist the Pope. He called a Diet, where his eldest Son *Henry* was chosen King of the *Romans*; and making the Duke of *Bavaria* Governor in his Absence, he went to *Italy*, and was crown'd by Pope *Honorius*, having first renounc'd the Dutchy of *Spoleto* and *Tuscany* to the See of *Rome*, to whom, at the same time, he gave the County of *Fundi*. He drove the *Saracens* out of *Sicily*, depriv'd Count *Agnani*, and the Bishops who had revolted, and put others in their room. Pope *Honorius* pretended, that being his Vassal, he could not deprive the Bishops without his Consent, and commanded him to restore them immediately, on Pain of Excommunication. The Emperor answer'd, That as Emperor and King of *Sicily*, he was Sovereign Judge of his own Subjects, and even of Clergymen in Secular Affairs; and that he had rather lose the Empire, than make himself unworthy of it by such Meanness of Spirit. The Pope was provok'd with this Answer; but *Frederick* continued firm, got his eldest Son crown'd King of the *Romans*, and prepared to make War upon the Towns of *Lombardy*, who had league'd together to recover their Liberty. *John de Brienne*, King of *Jerusalem*, perceiving that this War would be prejudicial to him, mediated a Peace. The Emperor was absolv'd, and promis'd to go in a Year or two with all his Forces to the *Holy Land*. He call'd the States of the Empire together at *Cremona*, to exhort them to follow him; the Towns of *Lombardy* laid down their Arms at Pope *Gregory* IXth's Request, and contributed to the Expedition: The Croisado was preach'd every where; the Princes began to assemble; and when all was ready, the Emperor alledg'd, he was not prepar'd, or did so on purpose, because he apprehended *Sicily* would revolt; that Count *Agnani* would seize *Naples*; and his Enemies in *Germany* would take Advantage by his Absence: But the Pope pressed him so much, that he embarked at *Brindisium* with the Landgrave of *Turingia*; but falling sick after 4 Days Sail, he landed at *Otranto*, from whence above 40000 *Germans* went home. Upon this the Pope excommunicated him. The Emperor returning to *Naples*, wrote to all the Princes of *Europe* to justify himself, and to be aveng'd on the Pope, made the Counts *de Frangipani*, the Chief of the *Roman* Lords, Princes of the Empire, and enter'd the Territories of the Church to support the *Romans*, who had chased away Pope *Gregory*. He brought the Troops of the Towns of *Lombardy* against the Emperor; but the War was laid aside on the Emperor's sudden Resolve to go into the *Holy Land*, according to his Promise. He assembled the States of the Empire and *Sicily* at *Balette*, appointed Vicars of the Empire in *Germany* and *Italy*, sail'd the 11th of *August*, and arriv'd at *Acre* the beginning of *November*. The Pope, who had sollicited him to it before, now condemned the Enterprize, traversed him in every thing, forbad the Military Orders of *Palestine* to obey him, sollicited his Son the King of the *Romans* to rebel, and declare himself Emperor; reduc'd most Part of *Italy*, made the Towns of *Lombardy* to revolt, disbanded those who had taken the Cross to follow the Emperor, and wrote to the Sultan of *Babylon* to attack him. *Frederick*, notwithstanding all this traiterous Opposition, brought that Sultan to a Truce of 10 Years, restor'd several Towns to the Christians, was crown'd King of

Digitized by Google

of *Jeruſalem*, embark'd the 1ſt of *May*, 1229. and arrived at *Naples* the 30th. He forfeited the Knights Hoſpitallers and Templers of *Sicily*, chaſed *John de Brienne* out of *Apuglia*, ſeiz'd Part of the Dominions of the Church, inveſted *Rome* to frighten the Pope, and retired to *Capua*. Some Princes of the Empire effected a Reconciliation betwixt them; the Pope abſolv'd him, and promis'd to reſtore him to all his Rights in *Sicily*. The Emperor gave him a great Sum of Money, aſſiſted him to ſubdue the revolted *Romans*, and return'd to *Germany*, where he found ſuch Diſorders, that he deprived his eldeſt Son of being King of the *Romans*, ſentenc'd him to perpetual Priſon, and put the Duke of *Auſtria* into the Ban of the Empire. The Pope having enter'd into a League with the Towns of *Lombardy*, the Emperor repaſſed the *Alps* with 100000 Men, defeated the *Milanois* in Battle, conquer'd *Sardinia*, defeated the Forces of *Venice* and *Genoa*, ſeiz'd *Tuſcany*, and beſieged *Rome*, without valuing the Pope's Excommunication. Then began the Factions of the *Guelphs* and *Gibellins*, the latter being for the Emperor, and the former for the Pope, ſays the *Atlas Hiſtorique*; thô he mention'd them before in the Reign of *Frederick* I. *Blondo* and *Sigonius* ſay, theſe Factions roſe in the Empire of *Conrad* III. who favouring Pope *Anaclet* I. againſt *Innocent* II. his Son marched with his Army to a Place in *Italy* called *Gibelin*, from whence his Party were called *Gibelins*; and *Guelphe* Duke of *Bavaria* being one of the Generals on the other Side, the other Faction were called *Guelphs*, which ſeems to agree beſt with the former Story of *Frederick* I's Mother being a *Guelph* of the Houſe of *Bavaria*. Mr. *Fox*, in his *Book of Martyrs*, Vol. 1. is alſo of this Opinion. But to return to *Frederick*, Pope *Gregory* implor'd the Help of all Chriſtian Princes; but died of Grief a few Days after for the Defeat of his Fleet. *Celeſtin* IV. ſucceeded; but died in 18 Days. *Innocent* IV. came in his Place; and not thinking himſelf ſafe in *Italy*, fled to *France*, called a General Council at *Lions*, cited the Emperor to appear at it; and on his Refuſal, excommunicated him, and abſolv'd his Subjects from their Allegiance; thô moſt of the Princes of *Germany* held that the Pope had only the Right of crowning, but not of chuſing or depoſing the Emperor: Yet the Archbiſhop of *Mentz*, *Treves*, and *Cologne*, aſſembled at *Wurtzburg*, and elected *Henry* Landgrave of *Thuringia*, call'd the King of the Prieſts, who having defeated the Troops of *Swabia* and *Bavaria* that came to hinder his Election, was kill'd by an Arrow at the Siege of *Ulm*, and his Party choſe *William* Count of *Holland*, who taking *Aix la Chapelle*, by the Aſſiſtance of his Father-in-Law *Otho* Duke of *Brunſwick*, was crown'd there, while *Frederick* was employ'd in *Italy* againſt the *Guelphs*; and Fortune beginning to abandon him, thoſe of *Parma*, after two Years Siege, defeated his Army, and plunder'd his Camp; and the Pope's Legate having defeated his Son *Entius* in the *Bologneſe*, he retired to *Apuglia*, where he died of Poiſon, given him by *Mainfroi* Prince of *Tarentum*, his natural Son, the 13th of *December*, 1250. in the 54th Year of his Age, and the 32d of his Reign. Dr. *Nicholſon* ſays, he was Maſter of *Greek*, *Latin*, *German*, *Italian*, and the *Turkiſh* Languages, and underſtood moſt Arts and Sciences; was a Wiſe, Learned, and Brave Prince, and ſtood out 5 Excommunications. The Story of this Noble Emperor, and of his Controverſy with the Pope, whom he deſcrib'd to be the Anti-Chriſt, is at large in the Firſt Volume of the *Book of Martyrs*.

Conrad his Son was choſen King of the *Romans* at 8 Years of Age; but that Election not being every way formal, he was elected again 3 Years after at *Spires*. He govern'd the Empire with great Prudence in his Father's Abſence, and when he heard of his Death, he reſolved to defend his Rights againſt *William* Earl of *Holland*; but perceiving that his Rival had the Favour of the Great Men, and being unwilling to risk all, he thought beſt to ſecure himſelf of *Naples* and *Sicily*, his own Inheritance, march'd with an Army thither, obliged his Baſtard Brother *Mainfroi* to retire to *Tarentum*, and took *Naples* and *Capua*; but as he was preparing to reduce the reſt, he was poiſon'd by the ſaid *Mainfroi*, the 19th of *May*, 1254. in the 29th Year of his Age, and the 4th of his Reign. *Puffendorf* obſerves, That the Authority of the *German* Emperors in *Italy* was quite extinguiſh'd with *Frederick* II. and that it might not recover, the Pope gave the Kingdom of *Naples* to *Charles* Duke of

Digitized by Google

of *Anjou*, who, at his Inſtigation, caus'd young *Conradin*, Son to *Conrad*, who was taken in a Battle as attempting to recover his Right, to be cut off by the Hands of an Hangman, which put an End to the Race of the Dukes of *Swabia*.

William Count of *Holland*, after the Death of *Conrad*, having no Rival, receiv'd thoſe who had follow'd *Frederick* and *Conrad* into Favour, by which he eſtabliſhed Peace in the Empire. He deſign'd to have gone into *Italy* to be crown'd by the Pope, and to reſtore Peace alſo there: But the *Freezlanders* having revolted, and ravaged *Holland*, he marched againſt them, and having engaged too far, after ſome Advantage over them, he receiv'd a Blow on the Head with a Stone; and being entangled in a frozen Marſh, was kill'd with Spears, and buried in the ſame Place, in 1255.

After his Death, *Richard* Duke of *Cornwall*, Son to *John* King of *England*, was choſen by ſome of the Princes at *Francfort*. He arrived in *Germany* the 13th of *January*, 1257, and was crown'd at *Aix la Chapelle* the 2d of *May* following; but others of the Princes choſe *Alphonſus* King of *Caſtile*; and *Richard* having ſhew'd more Reſentment againſt thoſe who were not for him, than againſt his open Enemies, loſt his Intereſt, which, together with his want of Money, obliged him to return home, where he was killed before a Town which the Rebels had fortified againſt his Brother *Henry*, the 12th of *April*, 1271.

Alphonſus, ſirnamed the *Wiſe*, and the *Aſtrologer*, Son to *Ferdinand* III. of *Spain*, agreed to the Election, at the Pope's Inſtigation; but being ſlow in his Reſolves, he never enjoy'd the Empire. He is ſaid to have read the Bible 14 times, and ſpent 400000 Crowns upon Learned Men to compoſe the *Alphenſin* Tables, of which the *Jews* ſay, *Rabbi Iſaac Hazar* was the Chief. Hiſtorians give him the Character of a Prodigal, Cruel, Opinionative Man, and alledge, he was ſo blaſphemous, as to ſay, That had he been preſent at the Creation, he would have diſpos'd Things in better Order than they are. He died in 1284. in the 32d Year of his Reign, and was buried at *Sevil*.

Rodolph Count of *Habſburg*, a Caſtle, as ſome ſay, in the Country of *Argow*, or, as others, in the *Berſgaw*, was choſen Emperor in 1273, according to *Puffendorf*. Dr. *Micheliſius* and he obſerve, That from the Death of *Frederick* II. to this Time, which was 23 Years, there was ſcarce any thing but an *Interregnum*; during which, the Empire ſuffer'd extreamly by the ſeveral Competitors, and became a Theatre of Bloodſhed, Confuſion, and Robbery. In thoſe Wars, the great Families of *Swabia*, *Auſtria*, and *Thuringia*, were extinguiſh'd, and ſcarce any thing of Juſtice was adminiſtred. To put a Stop to thoſe Diſorders, ſeveral Princes and Cities on the *Rhine* leagu'd together, and choſe *Rodolph*, who was a Perſon of high Birth, deſcended from the Family of *Alſace*, which, ſays the *Atlas Hiſtorique*, was one of the moſt ancient and illuſtrious in *Europe*. He aggrandiz'd his Family, by giving them the vacant Fiefs of the Empire. By Conſent of the States, he made his youngeſt Son *Rodolph* Duke of *Swabia*, and gave his eldeſt Son *Albert*, *Auſtria*, *Styria*, *Carinthia*, and *Carniola*. He made excellent Laws for adminiſtring Juſtice, order'd all the Publick Acts and Pleadings, formerly writ in Latin, to be writ in *German*. He reduc'd *Ottocair* King of *Bohemia*, and all the other Rebels, with whom he fought 40 Set-Battles. He oblig'd all the Towns that held out againſt him to ſurrender, and demoliſh'd above 60 Caſtles in *Thuringia*, that ſerv'd for a Retreat to the Rebels. He refuſ'd to go and be crown'd at *Rome*, becauſe of the ill Conſequence it had to his Predeceſſors, alluding to that Saying of the Fox in the Fable, *Quia me Veſtigia terrent*, i. e. That he ſaw the Footſteps of many Beaſts that had enter'd the Lion's Den, but of none that had come out again; yet he manag'd Matters ſo, as not to break with the Pope. Some are of Opinion, that he might have reſtor'd the Empire to a more flouriſhing State, had he preſerv'd the Rights of it in *Italy*, as he did in *Germany*: But whether he look'd upon *Italy* as a foreign Country, whoſe Cuſtoms and Manners did not ſuit the *Germans*, or that he had a mind to make Money of it, for he is charg'd with Covetouſneſs, he ſold the chief Towns there, their Liberty, for conſiderable Sums, as *Florence*, *Genoa*, *Lucca*, *Bologna*, &c. reſerving only the Sovereignty to himſelf. To eſtabliſh his Intereſt in the Empire, he married his three Daughters to *Lewis* Count *Pala-*

Palatine of the *Rhine*, *Albert* Duke of *Saxony*, and *Otto* Marquis of *Brandenburg*. A Grandſon of *Albert* brought *Tirol* afterwards to the Family. *Puffendorf* and the *Atlas Hiſtorique* differ as to his Sons, for the latter makes *Albert* the youngeſt; thô 'tis more probable he was the eldeſt, both becauſe of the larger Dominions given him by his Father, and that he himſelf places him ſo in the Genealogical Chart or Tree of the preſent Imperial Family, who are deſcended from him. That ſame Author ſays alſo, That *Rodolph* propoſed his Son *Albert* to be choſen King of the *Romans*, which is a plain Proof that he was his eldeſt; but the States would not agree to it. *Rodolph* died in 1291. in the 70th Year of his Age, and the 18th of his Reign, and was buried at *Spires*.

Adolph Count of *Naſſau*, Son to *Adolph*, Grand Marſhal to *Rodolph*, was elected at *Francfort* Six Months after *Rodolph*'s Death, thô *Albert* laid Claim to the Crown; but the Electors being divided in their Votes, they left it to *Gerard* Archbiſhop of *Mentz* to name whom he pleas'd, and he choſe *Adolph* his Couſin againſt their Mind. He was a very brave Prince, and gain'd 5 Battles againſt the Duke of *Brabant*, which rais'd his Fame. He took Part with *Guy* Count of *Flanders*, who married *Philippine*, Daughter to *Edward* King of *England*, and on his Account declar'd War againſt *Philip* IV. of *France*. He took Pay of the King of *England*, and ſerv'd in his Army, which ſome thought below his Dignity; but *Puffendorf* ſays, he enter'd into a League with him againſt *France* for a Sum of Money, and on Promiſe that the *Engliſh* ſhould aſſiſt him to recover the Kingdom of *Arles*, which the *French* had ſeiz'd during the Troubles of *Germany*. On the other hand, the *French* ſided with *Albert*, and upon their Approach to the *Rhine*, the Archbiſhop of *Mentz*, who turn'd *Adolph*'s Enemy, becauſe he would not let him be Chief in the Management next to himſelf, aſſembled ſome of the Electors, depoſed *Adolph*, and choſe *Albert* in his ſtead. The *Atlas Hiſtorique* ſays, he bought *Thuringia* with the Money ſent him from *England* to raiſe Troops; but the People being unwilling to ſubmit to him, he oppreſs'd them, which heighten'd the Diſcontents againſt him. He was defeated and kill'd by *Albert* himſelf in a Battle near *Spires* in 1298.

Albert's Election being thus confirmed, he reduced the Eccleſiaſtical Electors who had leagu'd againſt him, and a ſolid Peace might have been made betwixt them, had it not been for the Arrogance of the Archbiſhop of *Mentz*, who ſaid, He had that in his Pocket by which he could chuſe another Emperor when he pleas'd. The Pope offer'd him *France*, and to depoſe *Philip the Fair*: But *Albert* knowing the Pope had no Right to do ſo, was ſo far from accepting it, that, as a Proof of the Friendſhip they had contracted at an Interview, he quitted *Philip* the Kingdom of *Arles*. *Albert* embroil'd himſelf with the *Swiſſers*, which was of ill Conſequence to him. He began with aboliſhing the Juriſdiction of their Clergy, who were very rich, and obliged the Nobles to do him Homage for their Eſtates; but the People being more jealous of their Liberty, and refuſing to follow the Example, he built Citadels to curb them, and order'd his Judges to puniſh little Faults with the utmoſt Severity: Upon which the People took Arms, demoliſhed his Caſtles, and in 1308 enter'd into a League for 10 Years. The Emperor prepar'd to reduce them with an Army; but was aſſaſſinated in the 10th Year of his Reign by *John* Duke of *Swabia*, his Nephew, whom he had cotvetouſly robb'd of his Dominions, on Pretence of being his Tutor. His Widow *Elizabeth* of *Corinthia* did afterwards build the Abbey of *Konigsberg*, in the Place where he was murther'd. He was ſaid to be a Prince of quick Parts; liberal to thoſe of Merit, and ſevere to Criminals. He made his Son *Rodolph* King of *Bohemia*; and endeavour'd in vain to ſubdue *Hungary*.

After his Death, *Philip* King of *France* aſpir'd to the Imperial Crown; but the Pope and Archbiſhop of *Treves* got *Henry* VII. Duke of *Luxemburg* choſen, a Prince Devout, Valiant, Wiſe, and of ſo even a Temper, that neither Proſperity nor Adverſity could change it. He married his Son to the Heireſs of *Wenceſlaus* King of *Bohemia*, redreſſed the Diſorders of the Empire, appointed his Son King *John* to govern there in his Abſence, and marched into *Italy* to re-eſtabliſh the Imperial Authority in that Country. He was crown'd at *Milan*, where

Digitized by Google

where he reſtor'd the *Viſconti*, and baniſh'd the *Turriani*. He reduc'd the other Towns, where he ſettled Lieutenants, who raiſed great Contributions to recruit his Army, which was leſſen'd by Diſeaſes. He deſign'd to have laid Siege to *Bologna*, *Florence*, and *Lucca*; but was obliged to march directly to *Rome*, where the *Guelphs* and *Gibelins* being of equal Strength, committed terrible Diſorders, and had bloody Conteſts; ſo that which Side ſoever got the Victory, bought it dear. *Henry* defeated thoſe who oppoſed his paſſing the *Tiber*, enter'd *Rome* at the Head of the *Gibelins*, the Chief of whom were the *Colonna's*, and the *Guelphs* retired to the *Vatican* and Caſtle St. *Angelo*, where not being able to force them, he was crown'd in the Church of *St. John de Lateran* by a Deputation from *Clement* V. who had removed the See to *Avignon*. He afterwards block'd up *Florence*, but could not take it, the Citizens being aſſiſted by the K. of *Naples*. The Pope endeavour'd to prevent a Rupture betwixt that K. and *Henry*; but offended the Emperor by his arrogant Letter, wherein he alledg'd, That both of them ought to ſubmit to him, becauſe of their Oaths. Upon this the Emperor broke with the Pope, declared War againſt *Robert* of *Naples*, forfeited him as a Vaſſal of the Empire, and gave the Kingdom to *Frederick* of *Sicily*, who promis'd to harraſs the Coaſts with his Fleet, while the Emperor marched to *Rome* by Land: But as he was in a fair Way to ſubdue his Enemies, a Monk poiſon'd him with a conſecrated Wafer. The Emperor perceiv'd it as ſoon as he had taken it, and adviſ'd the Monk to make his Eſcape; but Heaven would not ſuffer it; ſo that he was taken, flea'd alive, and put to Death in 1313. The Emperor was univerſally regretted. 'Twas thought the *Florentines* hir'd the Monk to poiſon him.

After his Death, there was an *Interregnum* for a Year, when ſome of the Princes choſe *Lewis* Duke of *Bavaria*, and others choſe *Frederick the Fair*, Duke of *Auſtria*, eldeſt Son to the Emperor *Albert* I. This Rivalſhip continued 7 Years, *Lewis* governing in *Upper Germany*, and *Frederick* in the *Lower*. They fought two Battles, one near *Eſſlingen* on the *Necker*, where Night parted them; the other near *Muldorf* in *Lower Bavaria*, where *Frederick* was taken and impriſon'd. He refuſ'd to make his Eſcape by the Help of Magick, but was ſet at Liberty after three Years, on his renouncing the Empire, and died in 1330. During this Controverſy, *viz.* in 1315, there happen'd ſuch a terrible Famine in *Germany*, *Poland*, and *Bohemia*, that many People eat their neareſt Relations, and the Wolves and other Beaſts of Prey could ſcarce be kept off by Weapons from ſetting upon Men to ſatisfy their Hunger. *Lewis* ſoon after this Victory was engaged in a new War with Pope *John* XXII. who diſputed his Election, becauſe made without his Conſent. The Emperor deſpis'd his Claim, ſent Aſſiſtance to the *Gibelins* in *Italy*, who forced the *Guelphs* to raiſe the Siege of *Milan*. Being willing to convince the Pope of his Error, he ſent Ambaſſadors to ſhew him the Vanity of his Pretenſions, and to deſire him to ſuſpend his Excommunication; but the Pope was obſtinate; and the Emperor, reſolute to defend his Title, publiſh'd a Manifeſto, to ſhew that he held the Empire of God alone. Having ſettled Peace in *Germany*, he marched to *Italy* in 1327, adjuſted Matters with the Chief of the *Gibelins*, was crown'd at *Milan*, reduc'd the *Tuſcans*, and was receiv'd at *Rome* with great Acclamations. The Pope was at *Avignon*, and could not perform the Coronation; therefore the Senate, Clergy and People, did it by Deputies, of whom *Sciarra Colonna* was the Chief. The Emperor, to revenge himſelf for *John* XXII's Excommunication, got him depos'd for Hereſy, ſentenc'd him to Death, and made an Order, That the Pope, as well as other Biſhops, ſhould reſide on his Cure, on Pain of Deprivation. *Peter Raynalouci*, a *Franciſcan*, was choſen inſtead of *John*, by the Name of *Nicholas* V. which brought Things to an Extremity, and, together with his heavy Exactions, loſt him the *Romans*, who curs'd him when he march'd from thence to beſiege *Florence*; but he was obliged to raiſe the Siege, to prevent *Piſa*'s falling into the Hands of his Enemies; and having ſettled Affairs there and at *Lucca*, to whom he recommended Pope *Nicholas*, he return'd to *Germany*, from whence he ſent Ambaſſadors to Pope *John* for a Reconciliation, and promis'd to ſatisfy him in every thing that was not againſt the Rights of the Empire; but the Pope gave a haughty Anſwer, and con-

Digitized by Google

continued inflexible. He died soon after; and *Lewis* in vain endeavour'd an Accommodation with *Bennet* XII. upon which the Princes of the Empire in a Diet declared the Empire Independent, and resolved to maintain the Rights of it. This was afterwards confirmed in a Diet at *Francfort*, made a perpetual Law, the Pope's Coronation declared unnecessary, and that it was Treason to say the contrary. *Bennet* continued obstinate, (tho he was for a Reconciliation himself) because he durst not disoblige his Party, and died soon after. *Roger* Archbishop of *Roan* succeeded, by the Name of *Clement* VI. and being a Creature of *Philip de Valois* King of *France*, he raised the Princes of *Italy* against the Emperor, excommunicated and depos'd him. *Lewis* offer'd to submit to any reasonable Terms for a Reconciliation; but the Pope propos'd such extravagant Conditions, that they were universally rejected; and the Diet sent him Word, That if he did not change his Measures, they would oppose him to the utmost. Upon this the Pope again excommunicated *Lewis* and his Adherents, and order'd the Electors to chuse the King of *Bohemia's* Son, otherwise he would dispose of the Empire as he thought fit. Having gain'd the three Ecclesiastical Electors, and the Duke of *Saxony*, they chose *Charles* Marquis of *Moravia*, the King of *Bohemia's* Son; but the Majority of the Princes declared the Election void; so that *Lewis* reign'd in Peace till the 11th of *October*, 1347. that he died of an Apoplexy as he was a Hunting, in the 63d Year of his Age, and 33d of his Empire. Some thought he was poison'd by *Isabel* of *Arragon*, Dutchess of *Austria*, because he carried the Empire from her Husband *Frederick*; but this was not believed. *Puffendorf* says, *Lewis* was the first who kept his Court always in his Hereditary Country out of his own Revenue; which Example was followed by succeeding Emperors, because the Revenues of the Empire, on which the Emperors us'd to maintain their Courts when they made their Progress as usual through the Empire, were much diminished by the Civil Wars. Dr. *Nicholson* says, That *Occam*, a Learned *English* Friar, told *Lewis*, That if he were protected, he could easily by his Writings overthrow all the Pope's Pretensions of Power over Princes, which animated the Emperor to oppose the See of *Rome*.

After *Lewis's* Death, Part of the Electors chose *Edward* King of *England*, who had acquir'd great Fame by his glorious Actions in *France*; but he refusing to accept it, they chose *Frederick* Marquis of *Misnia*, who sold his Pretensions to *Charles* IV. at which, being justly offended, they chose *Gunter* Count of *Schwartzenburg*, noted for Virtue and Bravery, the 2d of *February*, 1349. but *Charles* having corrupted some of the Princes, and *Gunter* falling sick of Poison, given him by *Charles's* Means, as was suspected, he resign'd the Empire, by the Advice of those who chose him, for 22000 Marks, and two Towns in *Thuringia*, and died at *Francfort* that same Year.

After his Death, *Charles* was confirmed by all the Electors, married his only Daughter to the Count *Palatine* of the *Rhine*, went to *Italy* to be crown'd by the Pope, and in a cowardly manner ruin'd the Authority of the Empire, which made the *Italians* despise and insult him, and refuse to let him into their Towns. He returned to *Germany*, where his Management was no better. He quitted the Kingdom of *Arles* to *France*, dismembred several other Parts of the Empire, corrupted the Electors to chuse *Wenceslaus* his Son King of the *Romans*, and sold the Towns of *Swabia* to the neighbouring Princes; so that 'twas said of him, *That in order to make the Imperial Eagle contemptible to all the World, he pluck'd off her best Feathers.* He is said to have established the Golden Bull, which regulates the Precedency and Prerogatives of the Electors. He united *Lusatia* and *Silesia* to *Bohemia*, his own Patrimony. He understood many Languages, had a charming Eloquence, and a great deal of Wit, but no Courage. He died at *Prague* in 1368 in the 32d Year of his Reign. *Puffendorf* says, he was depos'd by the Electors for his brutish Carelessness o the Empire; upon which he retired to *Bohemia* a considerable Time before his Death.

Wenceslaus King of *Bohemia*, his Son, succeeded; but being a weak Prince, he left the Management to his Ministers, and plunged himself in all sorts of Vice, so that he became odious and contemptible, the Government was dissolv'd, and every one liv'd as he pleas'd; the Princes incroach'd upon

Digitized by Google

their Neighbours and the Free Towns, which they obliged to ſubmit to them. *Wenceſlaus* was the *German Sardanapalus*; and that he might not be interrupted in his Debauches, retir'd often to Forreſts, where he ſpent Days and Nights in Senſuality. He ſold *Genoa* to the *French*, *Milan* to *Galeatius* their Viſcount, and would have ſold the whole Empire, had he found a Purchaſer. He thought every Hour loſt that was not ſpent in Drinking; ſo that he was judged unworthy the Name of Emperor. He was twice taken Priſoner, but eſcaped; and *Robert the Debonnaire*, Count *Palatine*, was choſen in his ſtead. Moſt of the Towns ſubmitted to him but *Nuremberg*, who offer'd 20000 Crowns of Gold to *Wenceſlaus* for their Freedom. He refus'd the Money, and, like a Brute, demanded only *Bacharach* Wine. He died of an Apoplexy and Grief, occaſion'd by the Revolt of the *Huſſites* at *Prague*, where they kill'd his barbarous Senators in 1418.

Upon his Death, *Robert* Count *Palatine* was confirmed. He put *Aix la Chapelle* into the Ban of the Empire, becauſe they would not ſubmit to him. It was ſome Time after his firſt Election e're all the Princes of *Europe* own'd him; ſo that *Wenceſlaus*'s Ambaſſadors were received at the Council of *Piſa* after he himſelf was depos'd; but after *Robert* oblig'd the Council to abſolve the Empire from their Oath to *Wenceſlaus*, he was univerſally acknowledg'd. He refus'd the Crown of *Bohemia*, thô offer'd him by the States. He marched into *Italy*, to reduce *John Galias* Duke of *Milan*, who revolted; but being abandon'd by the Pope and *Florentines*, he was defeated near the Lake *de Garda*, retir'd into *Trent*; and thô forſaken by the Arch-Duke of *Auſtria*, and the Archbiſhop of *Ments* and *Cologne*, he marched again as far as *Padua*; but the *Venetians* refuſing to join him, and the Troops ſent him by the *Florentines* not being enough to recruit his Army, he returned to *Germany*, to make War on the Archbiſhop of *Ments*, who broke all his Meaſures, died at *Oppenheim* in 1410, and was buried at *Heidelberg* in the Church of the *Holy Ghoſt*, which he founded.

After his Death, or, as ſome ſay, after the Abdication of *Wenceſlaus*, *Jodocus* or *Joſſe*, Marquis of *Moravia*, Brother to *Charles* IV. was choſen, but never crown'd. He was unfit for Government, and the only remarkable Thing he did, was to make a Law, That the States of the Empire might without Treaſon oppoſe the Emperor, if he did any thing againſt the Laws. *Puffendorf* ſays, That *Frederick* Duke of *Brunſwick* was choſen in his ſtead, before *Robert* Count *Palatine* above-mentioned; but in his Journey to *Francfort* was murther'd by Count *Waldeck*, at the Inſtigation of the Archbiſhop of *Ments*.

Sigiſmund King of *Hungary* and *Bohemia* was choſen after *Jodocus*, ſays the *Atlas Hiſtorique*, in 1411. He endeavoured to extinguiſh the Schiſm which had divided the Church for 38 Years. He reform'd the Government of the Empire, regulated their Taxes, and in 1415 made *Frederick* of *Zollern*, Burgrave of *Nuremberg*, Hereditary Elector of *Brandenburg*, for 40000 Florins of Gold, if the Emperor died without Male-Iſſue. He erected the County of *Savoy* into a Dutchy, in Favour of *Amedee* VIII. in 1416. and 7 Years after made *Frederick the Warlike*, Marquis of *Miſnia*, Elector of *Saxony*, vacant by the Death of *Albert* IV. the laſt of the Houſe of *Aſcanie*. He was an implacable Enemy to the *Huſſites*, but always defeated by them; ſo that at laſt he made Peace with them, as the only Way to eſtabliſh his Authority in *Bohemia*. He excited the Chriſtian Princes to arm againſt the *Turks*, who made a great Progreſs in *Europe*; but was defeated by them at *Nigebotb* in *Hungary*, thrô the Jealouſy and Forwardneſs of the *French* Auxiliaries, moſt of whom were cut off there, under the Conduct of *John* Duke of *Burgundy*, eldeſt Son to *Charles* VI. of *France*. In his Time, *John Huſſe* and *Jerome of Prague* were burnt at the Council of *Conſtance*, contrary to the Publick Faith given them by his Paſſport, which made the *Huſſites* take Arms under *Ziſca*, who cut off all that adher'd to the perfidious Council of *Conſtance*. *Sigiſmund* went thither to ſuppreſs them; but his Cruelty to thoſe of *Breſlaw* made the Citizens of *Prague* refuſe him Entrance; and *Ziſca*'s Reputation was ſuch, that the Emperor's Forces always fled at the Sight of his Troops, ſo that he defeated *Sigiſmund* in 14 Battles; and when *Ziſca* died, his Soldiers made a Drum of his Skin, thinking the

the very Sound of it would terrify their Enemies. *Sigiſmund* called the Council of *Baſle* to ſettle the Peace of the Church, went to *Italy*, and was crown'd at *Milan* and *Rome*; and the Succeſs of the *Huſſites* being on the Declenſion, he was crown'd at *Prague* in 1436, but died in 1438, in the 26th Year of his Reign.

Albert the Magnanimous, Duke of *Auſtria*, who was his Son-in-Law, ſucceeded firſt to the Kingdoms of *Bohemia* and *Hungary*, on a Treaty with the States, That he ſhould not accept the Empire, becauſe the *Huſſites* were afraid he would annul their Privileges, if he grew too powerful. He afterwards drove *Uladiſlaus* King of *Poland* out of *Bohemia*, which he had ſeiz'd, ſuppreſs'd the *Huſſites*, and depriv'd the *Bohemians* of the Right of electing their Kings. He obliged Sultan *Amurath*, the Grand Signior, to raiſe the Siege of *Belgrade*, which had laſted a Year; and defeated the Barons of *Bohemia*, who took Part with *Barba*, *Sigiſmund*'s Widow, and call'd *Caſimir* King of *Poland* to their Aſſiſtance. His being elected Emperor, over-aw'd thoſe who would have rebell'd in *Bohemia* and *Hungary*. He confirm'd the Council of *Baſle*, and endeavour'd to make Peace in the Church; but was diverted by a War againſt the *Turks*, who invaded *Hungary*; and as he marched againſt them, died of a Bloody Flux, occaſioned by his eating of Melons, in 1439, in the 2d Year of his Reign: Since which, the Empire has continued in the Houſe of *Auſtria*.

In 1440, *Frederick* III. called the *Pacifick*, eldeſt Son to his Kinſman *Erneſt* Duke of *Auſtria*, Chief of the Branch of *Stiria*, was elected Emperor. He dealt with the Council of *Baſle* to remove the Schiſm of the Church, and make Peace in *Chriſtendom*; and he made the *German* Concordat in Favour of the Church of *Germany*, which was ratified by Pope *Nicholas* V. in 1448. He publiſhed a new Edition of the Code about Fiefs, and made a good Uſe of Printing, which was invented during his Reign. He eſtabliſhed the Empire much as 'tis at preſent; but was attacked by Enemies in ſeveral Parts. He defeated the Duke of *Armagnac*, and drove him out of *Alſace* in 1444. but in 1452 was beſieged by *Huniades* in *Neuſtadt* in *Hungary*, becauſe he would not deliver to them *Ladiſlaus*, whom they had choſen to be King according to their Laws; ſo that he was forced to agree, that *Hunniades* ſhould be Regent of *Hungary*, *George Podiebrad* of *Bohemia*, and *Ulric* Count *de Cilley* of *Auſtria*; but the latter becoming odious to the People, was chaſed from his Government the Year after. *Ladiſlaus* King of *Hungary* being dead, he ſeiz'd *Auſtria* againſt the Will of *Albert the Prodigal*, his Brother, with whom he had Ten Years War, and proſcrib'd him at the Diet of *Ratisbon* in 1463. *Matthias Corvin*, King of *Hungary*, took *Vienna* from him in 1485. He formed the League of *Swabia* againſt the *Swiſſers*, which was called the *Buckler of St. George*, and demoliſhed ſuch Caſtles as ſerv'd for a Retreat to Robbers. He was accus'd of being ſo ſilent, that it paſs'd for a Queſtion, Whether he was alive or dead? He was ſo dilatory in reforming Abuſes, that he us'd to ſay it was not yet Time to attempt it. He loſt *Bohemia* and *Hungary* by his Avarice, in not laying out the Money that was neceſſary to ſecure his Poſſeſſion, and died *Aug.* 14, 1493. He married *Leonora*, Daughter to *Alphonſus* King of *Portugal*; from whence came the Union of the Houſes of *Spain* and *Auſtria*.

Maximilian I. his Son, elected King of the *Romans* in 1486, ſucceeded. He was dumb 'till almoſt 10 Years of Age, but then ſpoke ſo quick, that he could ſcarce be underſtood. He acquir'd the *Netherlands* by his Wife *Mary*, the only Daughter of *Charles the Terrible*, Duke of *Burgundy*, whom he married in 1478. He endeavour'd in vain to recover the Towns on the *Somme*, and the Dutchy of *Burgundy*, that *Lewis* XI. of *France* re-united to his Crown. He was taken by the Inhabitants of *Bruges*, but reſcued by the Valour of *Albert* Duke of *Saxony*. *Mary* of *Burgundy* dying, he courted *Anne* of *Brittany*; but was ſupplanted by *Cha.* VIII. of *France*, and married for ſecond Wife, *Blanche*, Daughter to *Philip* Duke of *Milan*, whoſe Money he employ'd in retaking Part of the Towns of *Auſtria* that had been ſeiz'd by *Mat. Corvin*, King of *Hungary*. In 1495, he made the famous Conſtitution at *Worms*, called the *Publick Peace*, to prevent the Deciſion of Controverſies in the Empire by the Sword, as formerly. At the ſame Time he inſtituted the Imperial Chamber, to put in force the Regulation his Father had made
